## Installing Additional Memory

Refer to the installation instructions accompanying the Netra t1 system.

1. Remove the system from the rack.
2. Remove the cover.
3. Slide and lift off the processor cover.
4. Unplug the serial and SCSI cables from the rear I/O board.
5. Remove the screws and washers from the base memory board.
6. Position the new spacers over the screw holes.
7. Position the additional memory board above the base memory board so that the connectors line up.
8. Insert the new, longer screws through both boards and the intervening spacers. See the memory board documentation for further information.
9. Replace the other components in the reverse order to that in which you removed them.

---

**Note** - It is recommended that the highest density memory module be fitted closest to the motherboard.
