July 2007

ORACLE®

Oracle Database Error Messages, 11*g* Release 1 (11.1)

B28278-01

Contents

Preface

This manual describes error messages that may appear while using products that are part of the Oracle Database. Each message listing in the manual contains the message statement, an explanation of the probable causes of the message, and a recommended action. If the message is a warning or indicates that an error occurred, the message listing indicates a corrective action.

Audience

Oracle Database Error Messages is intended for all Oracle users.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

http://www.oracle.com/accessibility/

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

Related Documents

For more information, see the Oracle Database documentation shipped with this release. Or, for information specific to the Oracle Database working on your host operating system, see your operating system-specific Oracle documentation (specific book titles vary by operating system) and system release bulletins, if available.

Many of the examples in this book use the sample schemas, which are installed by default when you select the Basic Installation option with an Oracle Database installation. Refer to *Oracle Database Sample Schemas* for information on how these schemas were created and how you can use them yourself.

Oracle error message documentation is available in HTML and PDF.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
`monospace`	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1

Using Messages

This chapter gives you general information and helpful tips about error messages. This chapter covers the following topics:

- Locating Message Documentation
- Accuracy of Messages
- Message Format
- Recognizing Variable Text in Messages
- Message Stacks
- Contacting Oracle Support Services
- Oracle Exception Messages
- Trace Files
- The Alert File

Locating Message Documentation

This section describes how to locate message documentation when given an error message.

Oracle error message documentation is available in HTML and PDF.

Oracle Database Messages

These messages are generated by the Oracle Database when running any Oracle program. This manual documents messages that are common across Oracle products and tools.

Product Specific Messages

These messages are specific to one product and are documented in manuals for that product. For example, if you are working with Oracle Enterprise Manager, you would need to refer to the messages contained in the *Oracle Enterprise Manager Messages Manual*.

Operating System-Specific Messages

These messages are specific to one operating system. A range of message code numbers are reserved for each operating system. For example, the range ORA-07500 to

ORA-07999 is reserved for DEC VAX/VMS messages; these messages are listed in the appropriate operating system-specific documentation.

The prefix of the message indicates where to find information about the message. For example, some messages in this manual have the prefix "ORA". If you encounter a message without a prefix, first check the manuals for the release of Oracle you are using, then check this manual.

Accuracy of Messages

The accuracy of the messages in this manual is our primary concern. Occasionally, an enhancement to a message is not incorporated into the Oracle software. Should you encounter a message generated on your system that differs from the message in this book, be assured the improved message text is usually incorporated in the next release of the software. If you should encounter a discrepancy, then please contact us using the information contained in the Reader Comment Form at the front of this manual.

Message Format

All messages displayed are prefixed by text that indicates which program issued the message. For example, the prefix "ORA" shows that the message was generated by the Oracle products. The location of messages in this book depends on the prefix of the message.

All messages are listed in order by the message code number. To look up a message, use the message code number.

Recognizing Variable Text in Messages

To help you find and fix errors, Oracle embeds object names, numbers, and character strings in some messages. These embedded variables are represented by *string*, *number*, or *character*, as appropriate. For example:

```
ORA-00020: maximum number of processes (number) exceeded
```

The preceding message might actually appear as follows:

```
ORA-00020: maximum number of processes (50) exceeded
```

Message Stacks

Occasionally, you may see a **message stack**. This is simply a series of related messages issued at different levels of Oracle.

The following message stack is a generic example:

```
ORA-06502: PL/SQL: numeric or value error
ORA-06512: at "SCOTT.VALUE_ERR", line 1
ORA-06512: at line 1
```

The following message stack is a VAX/VMS example:

```
ORA-01034: Oracle not available
ORA-07625: smsget: $MGBLSC failure
%SYSTEM-W-NOSUCHSEC, no such (global) section
```

In this example, notice that the message at the bottom of the stack is issued by the VMS operating system. Seeing the messages at each level in the system may help you trace the originating event. For example, in this case, Oracle may not be available simply because it has not been started, and consequently there is no system global area (SGA). If you need the help of Oracle Support Services, then be sure to report all the messages in the stack.

Contacting Oracle Support Services

Some messages recommend contacting Oracle Support Services to report a problem. When you contact Oracle Support Services, please have the following information available:

- The hardware, operating system, and release number of the operating system on which Oracle is running

- The complete release number of the Oracle Database (for example, release 9.2.0.1.0 or release 9.0.1.1.2)

- All Oracle programs (with version numbers) in use when the error occurred. For example, SQL*Net V2.0 or SQL*Forms V3.0

- If you encountered one or more error codes or messages, then the exact code numbers and message text, in the order they appeared

- The problem severity, according to the following codes:

  1 = Program not usable. Critical impact on operations.

  2 = Program usable. Operations severely restricted.

  3 = Program usable with limited functions. Not critical to overall operations.

  4 = Problem circumvented by customer. Minimal effect, if any, on operations.

You will also be expected to provide the following:

- Your name

- The name of your organization

- Your Oracle Support ID Number

- Your telephone number

Oracle Exception Messages

Oracle's extensive self-checking helps detect internal errors. Oracle uses the following catchall message for Oracle internal exceptions:

```
ORA-00600: internal error code, arguments: [number], [number], [], [], [], []
```

An actual message might appear as follows:

```
ORA-00600: internal error code, arguments: [1042], [3], [upilam], [], [], []
```

The message text can be followed by up to six arguments, which indicate the origin and attributes of the error. The first argument is the internal error number. Other arguments are various numbers, names, and character strings. Empty brackets may be ignored.

In addition to being returned to the user, internal errors are also written to the Alert file along with additional information about the event causing the message. The Alert

file also lists any trace files that may have been generated because of an internal error. See the following sections for descriptions of the trace and alert files.

If you receive an ORA-00600 message, report it to Oracle Support Services.

Trace Files

A trace file is created each time an Oracle instance starts or an unexpected event occurs in a user process or background process. The name of the trace file includes the instance name, the process name, and the Oracle process number. The file extension or file type is usually TRC, and, if different, is noted in your operating system-specific Oracle documentation. The contents of the trace file may include dumps of the system global area, process global area, supervisor stack, and registers.

Two initialization parameters are used to specify the location of the trace files.

- The BACKGROUND_DUMP_DEST initialization parameter specifies the location of trace files created by the Oracle background processes PMON, DBWR, LGWR, and SMON.

- The USER_DUMP_DEST initialization parameter specifies the location of trace files created by user processes such as SQL*Loader or Pro*C.

The Alert file also describes the location of trace files generated when internal errors occur. See the next section for a description of the Alert file.

You may need to format the trace file before using it to diagnose problems. To format a trace file, use the DUMPFMT utility, which is available on most systems and is described in your operating system-specific Oracle documentation. Oracle Support Services may ask you for a formatted trace file to help solve a problem.

> **See Also:** *Oracle Database Administrator's Guide* for more information about trace files

The Alert File

The Alert file is a log file that records information about internal errors and administrative activities, such as backups. When an internal error occurs, the message is sent to the terminal screen as well as written to the Alert file. Oracle also writes additional information about internal errors to the Alert file, such as the location and name of any trace files generated because of the error.

The name of the Alert file is operating system-specific. The location of the Alert file is the same as the location of the background process trace files. This location is specified by the BACKGROUND_DUMP_DEST initialization parameter. For more information, see your Oracle operating system-specific documentation.

If your system uses an operator's console, some messages from Oracle may appear on the console. All important messages are written to the Alert file as well as the operator's console. Because non-Oracle messages also appear on this console, the Alert file is a better record for tracing all Oracle administrative activity and errors than the console log.

The Alert file also records information about administrative activities, such as backups and archiving online redo log files.

> **See Also:** *Oracle Database Administrator's Guide* for more information about the Alert file

2

ORA-00000 to ORA-00847

ORA-00000: normal, successful completion

    Cause: Normal exit.

    Action: None

ORA-00001: unique constraint (*string.string*) violated

    Cause: An UPDATE or INSERT statement attempted to insert a duplicate key. For Trusted Oracle configured in DBMS MAC mode, you may see this message if a duplicate entry exists at a different level.

    Action: Either remove the unique restriction or do not insert the key.

ORA-00017: session requested to set trace event

    Cause: The current session was requested to set a trace event by another session.

    Action: This is used internally; no action is required.

ORA-00018: maximum number of sessions exceeded

    Cause: All session state objects are in use.

    Action: Increase the value of the SESSIONS initialization parameter.

ORA-00019: maximum number of session licenses exceeded

    Cause: All licenses are in use.

    Action: Increase the value of the LICENSE MAX SESSIONS initialization parameter.

ORA-00020: maximum number of processes (*string*) exceeded

    Cause: All process state objects are in use.

    Action: Increase the value of the PROCESSES initialization parameter.

ORA-00021: session attached to some other process; cannot switch session

    Cause: The user session is currently used by others.

    Action: Do not switch to a session attached to some other process.

ORA-00022: invalid session ID; access denied

    Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

    Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE_USER privilege.

ORA-00023: session references process private memory; cannot detach session

Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session"s database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

ORA-00024: logins from more than one process not allowed in single-process mode

Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

ORA-00025: failed to allocate *string*

Cause: Out of memory.

Action: Restart with larger sga heap.

ORA-00026: missing or invalid session ID

Cause: Missing or invalid session ID string for ALTER SYSTEM KILL SESSION.

Action: Retry with a valid session ID.

ORA-00027: cannot kill current session

Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

ORA-00028: your session has been killed

Cause: A privileged user has killed your session and you are no longer logged on to the database.

Action: Login again if you wish to continue working.

ORA-00029: session is not a user session

Cause: The session ID specified in an ALTER SYSTEM KILL SESSION command was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

ORA-00030: User session ID does not exist.

Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

ORA-00031: session marked for kill

Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

ORA-00032: invalid session migration password

Cause: The session migration password specified in a session creation call was invalid (probably too long).

Action: Retry with a valid password (less than 30 chars).

ORA-00033: current session has empty migration password

Cause: An attempt was made to detach or clone the current session and it has an empty migration password. This is not allowed.

Action: Create the session with a non-empty migration password.

ORA-00034: cannot *string* in current PL/SQL session

Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by "alter session disable commit in procedure")

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

ORA-00036: maximum number of recursive SQL levels (*string*) exceeded

Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

ORA-00037: cannot switch to a session belonging to a different server group

Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

ORA-00038: Cannot create session: server group belongs to another user

Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

ORA-00039: error during periodic action

Cause: An unexpected error occurred while executing a periodically invoked

Action: Check the error stack for detailed error information.

ORA-00040: active time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00041: active time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00042: Unknown Service name *string*

Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICE$ or add a new service using the DBMS_SERVICE package.

ORA-00043: remote operation failed

Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

ORA-00050: operating system error occurred while obtaining an enqueue

Cause: Could not obtain the operating system resources necessary to cover an oracle enqueue. This is normally the result of an operating system user quota that is too low.

Action: Look up the operating system error in your system documentation and perform the needed action.

ORA-00051: timeout occurred while waiting for a resource

Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

ORA-00052: maximum number of enqueue resources (*string***) exceeded**

Cause: Ran out of enqueue resources.

Action: Increase the value of the ENQUEUE_RESOURCES initialization parameter.

ORA-00053: maximum number of enqueues exceeded

Cause: Ran out of enqueue state objects.

Action: Increase the value of the ENQUEUES initialization parameter.

ORA-00054: resource busy and acquire with NOWAIT specified or timeout expired

Cause: Interested resource is busy.

Action: Retry if necessary or increase timeout.

ORA-00055: maximum number of DML locks exceeded

Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML_LOCKS initialization parameter and warm start.

ORA-00056: DDL lock on object "*string.string***" is already held in an incompatible mode**

Cause: An attempt was made to acquire a DDL lock that is already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

ORA-00057: maximum number of temporary table locks exceeded

Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY_TABLE_LOCKS initialization parameter and warm start.

ORA-00058: DB_BLOCK_SIZE must be *string* **to mount this database (not** *string***)**

Cause: DB_BLOCK_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB_BLOCK_SIZE parameter or mount a database that matches the value.

ORA-00059: maximum number of DB_FILES exceeded

Cause: The value of the DB_FILES initialization parameter was exceeded.

Action: Increase the value of the DB_FILES parameter and warm start.

ORA-00060: deadlock detected while waiting for resource

Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

ORA-00061: another instance has a different DML_LOCKS setting

Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances" INIT.ORA files specify the DML_LOCKS parameter as 0 or all as non-zero.

ORA-00062: DML full-table lock cannot be acquired; DML_LOCKS is 0

Cause: The instance was started with DML_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML_LOCKS not equal to zero, and reexecute the statement.

ORA-00063: maximum number of log files exceeded *string*

Cause: The number of log files specificied exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

ORA-00064: object is too large to allocate on this O/S (*string,string,string*)

Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

ORA-00065: initialization of FIXED_DATE failed

Cause: The FIXED_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

ORA-00067: invalid value *string* for parameter *string*; must be at least *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00068: invalid value *string* for parameter *string*, must be between *string* and *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00069: cannot acquire lock -- table locks disabled for *string*

Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

ORA-00070: command *string* is not valid

Cause: An invalid debugger command was specified.

Action: Type HELP to see the list of available commands.

ORA-00071: process number must be between 1 and *string*

Cause: An invalid process number was specified.

Action: Specify a valid process number.

ORA-00072: process "*string*" is not active

Cause: An invalid process was specified.

Action: Specify a valid process.

ORA-00073: command *string* takes between *string* and *string* argument(s)

Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

ORA-00074: no process has been specified

Cause: No debug process has been specified.

Action: Specify a valid process.

ORA-00075: process "*string*" not found in this instance

Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

ORA-00076: dump *string* not found

Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

ORA-00077: dump *string* is not valid

Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

ORA-00078: cannot dump variables by name

Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

ORA-00079: variable *string* not found

Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

ORA-00080: invalid global area specified by level *string*

Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area <level> as well as <extra> bytes for every pointer; <extra> must be a multiple of 4.

ORA-00081: address range [*string, string*) is not readable

Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

ORA-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstringstring*

Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

ORA-00083: warning: possibly corrupt SGA mapped

Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

ORA-00084: global area must be PGA, SGA, or UGA

Cause: An attempt was made to dump an invalid global area.

Action: Specify either PGA, SGA, or UGA.

ORA-00085: current call does not exist

Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

ORA-00086: user call does not exist

Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

ORA-00087: command cannot be executed on remote instance

Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

ORA-00088: command cannot be executed by shared server

Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

ORA-00089: invalid instance number in ORADEBUG command

Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

ORA-00090: failed to allocate memory for cluster database ORADEBUG command

Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

ORA-00091: LARGE_POOL_SIZE must be at least *string*

Cause: The value of LARGE_POOL_SIZE is below the minimum size.

Action: Increase the value of LARGE_POOL_SIZE past the minimum size.

ORA-00092: LARGE_POOL_SIZE must be greater than LARGE_POOL_MIN_ ALLOC

Cause: The value of LARGE_POOL_SIZE is less than the value of LARGE_ POOL_MIN_ALLOC.

Action: Increase the value of LARGE_POOL_SIZE past the value of LARGE_ POOL_MIN_ALLOC.

ORA-00093: *string* **must be between** *string* **and** *string*

Cause: The parameter value is not in a valid range.

Action: Modify the parameter value to be within the specified range.

ORA-00094: *string* **requires an integer value**

Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

ORA-00096: invalid value *string* **for parameter** *string*, **must be from among** *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00097: use of Oracle SQL feature not in SQL92 *string* **Level**

Cause: Usage of Oracle"s SQL extensions.

Action: None

ORA-00098: creating or mounting the database requires a parameter file

Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

ORA-00099: warning: no parameter file was specified

Cause: Even though no parameter file was specified, the instance was started.

Action: None

ORA-00100: no data found

Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. NOTE: If the application uses Oracle-mode SQL instead of ANSI-mode SQL, ORA-01403 will be generated instead of ORA-00100.

ORA-00101: invalid specification for system parameter DISPATCHERS

Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

ORA-00102: network protocol *string* **cannot be used by dispatchers**

Cause: The network specified in DISPATCHERS does not have the functionality required by the dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

ORA-00103: invalid network protocol; reserved for use by dispatchers

Cause: The network specified in the SQL*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

ORA-00104: deadlock detected; all public servers blocked waiting for resources

Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX_SHARED_SERVERS as the system will automaticaly start up new servers to break the deadlock until the number of servers reaches the value specified in MAX_SHARED_SERVERS.

ORA-00105: too many dispatcher configurations

Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

ORA-00106: cannot startup/shutdown database when connected to a dispatcher

Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

ORA-00107: failed to connect to ORACLE listener process

Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

ORA-00108: failed to set up dispatcher to accept connection asynchronously

Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support aynchronous operations.

Action: Contact your ORACLE representative.

ORA-00109: invalid value for attribute *string*: *string*

Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

ORA-00110: invalid value *string* for attribute *string*, must be between *string* and *string*

Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

ORA-00111: invalid attribute *string*

Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

ORA-00112: value of *string* is null

Cause: The attribute was specified with no value.

Action: Specify a non-null value.

ORA-00113: protocol name *string* is too long

Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

ORA-00114: missing value for system parameter SERVICE_NAMES

Cause: No value was specified for the SERVICE_NAMES system parameter, nor for the DB_NAME parameter.

Action: Add an SERVICE_NAMES or DB_NAME definition to the INIT.ORA file. By default, SERVICE_NAMES is the value of DB_NAME unless SERVICE_NAMES is explicitly specified.

ORA-00115: connection refused; dispatcher connection table is full

Cause: A connection request was refused by a dispatcher because the dispatcher cannot support any more connections.

Action: Connect to a different dispatcher, or use a dedicated server.

ORA-00116: SERVICE_NAMES name is too long

Cause: A service name specified in the SERVICE_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE_NAMES value (<= 255 chars).

ORA-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified

Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified

Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00119: invalid specification for system parameter *string*

Cause: The syntax for the specified parameter is incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00122: cannot initialize network configuration

Cause: ORACLE could not initialize SQL*Net version 2.

Action: Check the error stack for detailed information.

ORA-00123: idle public server terminating

Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

ORA-00125: connection refused; invalid presentation

Cause: The PRESENTATION in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the PRESENTATION specified in the TNS address.

ORA-00126: connection refused; invalid duplicity

Cause: The DUPLICITY in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the DUPLICITY specified in the TNS address.

ORA-00127: dispatcher *string* **does not exist**

Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D###" denoting an existing dispatcher process.

ORA-00128: this command requires a dispatcher name

Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [IMMEDIATE] "dispatcher name"

ORA-00129: listener address validation failed "*string***"**

Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

ORA-00130: invalid listener address "*string***"**

Cause: The listener address specification is not valid.

Action: Make sure that all fields in the listener address (protocol, port, host, key, ...) are correct.

ORA-00131: network protocol does not support registration "*string***"**

Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

ORA-00132: syntax error or unresolved network name "*string***"**

Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

ORA-00133: value of *string* **is too long**

Cause: The value specified for the attribute was too long.

Action: Use shorter names and keywords or remove unneeded blanks.

ORA-00134: invalid DISPATCHERS specification #*string*

Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00150: duplicate transaction ID

Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

ORA-00151: invalid transaction ID

Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

ORA-00152: current session does not match requested session

Cause: The current session is not the same as the session that was passed into a upixado() call.

Action: Check your application.

ORA-00153: internal error in XA library

    Cause: The XA library could not access thread-specific pointers.

    Action: Contact customer support.

ORA-00154: protocol error in transaction monitor

    Cause: The transaction monitor returned TMJOIN on an AX_REG call but the transaction was locally suspended.

    Action: Contact the transaction monitor customer support.

ORA-00155: cannot perform work outside of global transaction

    Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

    Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a NULL XID on an AX_REG call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set nolocal=f in the xa_open string or start a global transaction prior to attempting the work.

ORA-00160: global transaction length *string* is greater than maximum (*string*)

    Cause: An external global transaction ID with a too large length field was passed in.

    Action: Report the problem to your external transaction coordinator vendor.

ORA-00161: transaction branch length *string* is illegal (maximum allowed *string*)

    Cause: An external transaction branch ID with a length either too large or 0 was passed in.

    Action: Report the problem to your external transaction coordinator vendor.

ORA-00162: external dbid length *string* is greater than maximum (*string*)

    Cause: An external database name with too large a length field was passed in.

    Action: Report the problem to your external transaction coordinator vendor.

ORA-00163: internal database name length *string* is greater than maximum (*string*)

    Cause: An internal database name with a too large length field was passed in.

    Action: Report the problem to your external transaction coordinator vendor.

ORA-00164: distributed autonomous transaction disallowed within migratable distributed transaction

    Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

    Action: Roll back or commit the current distributed transaction first.

ORA-00165: migratable distributed autonomous transaction with remote operation is not allowed

    Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

    Action: None

ORA-00166: remote/local nesting level is too deep

    Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

ORA-00200: control file could not be created

Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

ORA-00201: control file version *string* incompatible with ORACLE version *string*

Cause: The control file was created by incompatible software.

Action: Either restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

ORA-00202: control file: "*string*"

Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-00203: using the wrong control files

Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

ORA-00204: error in reading (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00205: error in identifying control file, check alert log for more info

Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

ORA-00206: error in writing (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00207: control files are not for the same database

Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

ORA-00208: number of control file names exceeds limit of *string*

Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL_FILES parameter in the initialization parameter file, and restart Oracle. Delete usused files.

ORA-00209: control file blocksize mismatch, check alert log for more info

Cause: The block size in the control file header does not match the size specified in the DB_BLOCK_SIZE parameter.

Action: Look at the alert log for more information.

ORA-00210: cannot open the specified control file

Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

ORA-00211: control file does not match previous control files

Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

ORA-00212: block size *string* below minimum required size of *string* bytes

Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

ORA-00213: cannot reuse control file; old file size *string*, *string* required

Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

ORA-00214: control file "*string*" version *string* inconsistent with file "*string*" version *string*

Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistant set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

ORA-00215: must be at least one control file

Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

ORA-00216: control file could not be resized for migration from 8.0.2

Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00217: control file could not be resized for new record types

Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the contol file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00218: block size *string* of control file "*string*" does not match DB_BLOCK_ SIZE (*string*)

Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB_BLOCK_SIZE. This might be due to an incorrect setting of DB_BLOCK_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB_BLOCK_SIZE to match control file headers block size value.

ORA-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)

Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

ORA-00220: control file not mounted by first instance, check alert log for more info

Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

ORA-00221: error on write to control file

Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

ORA-00222: operation would reuse name of a currently mounted control file

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

ORA-00223: convert file is invalid or incorrect version

Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE_HOME environment variable is properly set.

ORA-00224: control file resize attempted with illegal record type (*string*)

Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD_TYPE parameter.

Action: Use a value for the RECORD_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

ORA-00225: expected size *string* of control file differs from actual size *string*

Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

ORA-00226: operation disallowed while alternate control file open

Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling cfileUseCurrent.

ORA-00227: corrupt block detected in control file: (block *string*, # blocks *string*)

Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the CREATE CONTROLFILE or RECOVER DATABASE USING BACKUP CONTROLFILE command.

ORA-00228: length of alternate control file name exceeds maximum of *string*

Cause: The specified filename, which was supplied as a parameter to cfileSetSnapshotName or cfileUseCopy, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

ORA-00229: operation disallowed: already hold snapshot control file enqueue

Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling cfileUseCurrent to release the snapshot control file enqueue.

ORA-00230: operation disallowed: snapshot control file enqueue unavailable

Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

ORA-00231: snapshot control file has not been named

Cause: During an invocation of cfileMakeAndUseSnapshot or cfileUseSnapshot it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling cfileSetSnapshotName.

ORA-00232: snapshot control file is nonexistent, corrupt, or unreadable

Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of cfileUseSnapshot.

Action: Call cfileMakeAndUseSnapshot again (or for the first time).

ORA-00233: copy control file is corrupt or unreadable

Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of cfileUseCopy.

Action: Before retrying cfileUseCopy, use the ALTER DATABASE BACKUP CONTROLFILE command and specify the same filename that was specified for cfileUseCopy.

ORA-00234: error in identifying or opening snapshot or copy control file

Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of cfileUseSnapshot, cfileMakeAndUseSnapshot, or cfileUseCopy.

Action: Re-create the snapshot or copy control file using cfileMakeAndUseSnapshot or ALTER DATABASE BACKUP CONTROLFILE, respectively.

ORA-00235: control file fixed table inconsistent due to concurrent update

Cause: Concurrent update activity on a control file caused a query on a control file fixed table to read inconsistent information.

Action: Retry the operation.

ORA-00236: snapshot operation disallowed: mounted control file is a backup

Cause: Attempting to invoke cfileSetSnapshotName, cfileMakeAndUseSnapshot, or cfileUseSnapshot when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

ORA-00237: snapshot operation disallowed: control file newly created

Cause: An attempt to invoke cfileMakeAndUseSnapshot with a currently mounted control file that was newly created with CREATE CONTROLFILE was made.

Action: Mount a current control file and retry the operation.

ORA-00238: operation would reuse a filename that is part of the database

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

ORA-00250: archiver not started

Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

ORA-00251: LOG_ARCHIVE_DUPLEX_DEST cannot be the same destination as string *string*

Cause: The destination specified by the LOG_ARCHIVE_DUPLEX_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG_ARCHIVE_DUPLEX_DEST, or specify a different destination with the ALTER SYSTEM command.

ORA-00252: log *string* of thread *string* is empty, cannot archive

Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

ORA-00253: character limit *string* exceeded by archive destination string *string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Retry the ALTER SYSTEM command using a string shorter than the limit specified in the error message.

ORA-00254: error in archive control string "*string*"

Cause: The specified archive log location is invalid in the archive command or the LOG_ARCHIVE_DEST initialization parameter.

Action: Check the archive string used to make sure it refers to a valid online device.

ORA-00255: error archiving log *string* of thread *string*, sequence # *string*

Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

ORA-00256: cannot translate archive destination string *string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the accompanying message stack for more detailed information. Then, retry the ALTER SYSTEM command using a different string.

ORA-00257: archiver error. Connect internal only, until freed.

Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is the destination device is out of space to store the redo log file.

Action: Check archiver trace file for a detailed description of the problem. Also verify that the device specified in the initialization parameter ARCHIVE_LOG_ DEST is set up properly for archiving.

ORA-00258: manual archiving in NOARCHIVELOG mode must identify log

Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

ORA-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive

Cause: An attempt was made to archive the current log of an open thread. This is not allowed because the redo log file may still be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, open the database so that instance recovery can recover the thread.

ORA-00260: cannot find online log sequence *string* for thread *string*

Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another sequence number, it might have been dropped, the sequence number

might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

ORA-00261: log *string* of thread *string* is being archived or modified

Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

ORA-00262: current log *string* of closed thread *string* cannot switch

Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread, and it is not possible to switch logs so another log is current. All other logs for the thread need to be archived, or cleared, and cannot be reused.

Action: Archive another log in the same thread first, or complete the clearing. See attached errors for the reason the switch cannot be completed.

ORA-00263: there are no logs that need archiving for thread *string*

Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

ORA-00264: no recovery required

Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

ORA-00265: instance recovery required, cannot set ARCHIVELOG mode

Cause: The database either crashed or was shutdown with the ABORT option. Media recovery cannot be enabled because the online logs may not be sufficient to recover the current datafiles.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-00266: name of archived log file needed

Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

ORA-00267: name of archived log file not needed

Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

ORA-00268: specified log file does not exist "*string*"

Cause: The given redo log file does not exist.

Action: Check the spelling and capitalization of the filename and retry the command.

ORA-00269: specified log file is part of thread *string* **not** *string*

    Cause: The given redo log file is not part of the given thread

    Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

ORA-00270: error creating archive log *string*

    Cause: An error was encountered when either creating or opening the destination file for archiving.

    Action: Check that the archive destination is valid and that there is sufficient space on the destination device.

ORA-00271: there are no logs that need archiving

    Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

    Action: No action required.

ORA-00272: error writing archive log *string*

    Cause: An I/O error occurred while archiving a redo log file.

    Action: Check that the output device is still available and correct any device errors that may have occurred. Also, make certain that sufficient space for archiving is available on the output device.

ORA-00273: media recovery of direct load data that was not logged

    Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

    Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

ORA-00274: illegal recovery option *string*

    Cause: An illegal option was specified for a recovery command.

    Action: Correct the syntax and retry the command.

ORA-00275: media recovery has already been started

    Cause: An attempt was made to start a second media recovery operation in the same session.

    Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

ORA-00276: CHANGE keyword specified but no change number given

    Cause: The CHANGE keyword was specified on the command line, but no change number was given.

    Action: Retry the command using a valid change number after the CHANGE keyword.

ORA-00277: illegal option to the UNTIL recovery flag *string*

    Cause: Only CANCEL, CHANGE and TIME can be used with the UNTIL keyword.

    Action: Correct the syntax.

ORA-00278: log file "*string*" no longer needed for this recovery

Cause: The specified redo log file is no longer needed for the current recovery.

Action: No action required. The archived redo log file may be removed from its current location to conserve disk space, if needed. However, the redo log file may still be required for another recovery session in the future.

ORA-00279: change *string* generated at *string* needed for thread *string*

Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

ORA-00280: change *string* for thread *string* is in sequence #*string*

Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

ORA-00281: media recovery may not be performed using dispatcher

Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

ORA-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER

Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

ORA-00283: recovery session canceled due to errors

Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00284: recovery session still in progress

Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00285: TIME not given as a string constant

Cause: UNTIL TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

ORA-00286: no members available, or no member contains valid data

Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

ORA-00287: specified change number *string* not found in thread *string*

Cause: The given change number does not appear in any of the online redo logs for the given thread.

Action: Check the statement to make certain a valid change number is given. Perhaps try to use the NEXT option for archiving logs.

ORA-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE

Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

ORA-00289: suggestion : *string*

Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG_ARCHIVE_DEST and LOG_ARCHIVE_ FORMAT. This message assumes that LOG_ARCHIVE_DEST and LOG_ ARCHIVE_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

ORA-00290: operating system archival error occurred. See error below

Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

ORA-00291: numeric value required for PARALLEL option

Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

ORA-00292: parallel recovery feature not installed

Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY_PARALLELISM parameter in the initialization file.

ORA-00293: control file out of sync with redo log

Cause: The redo log file and control file are out of sync because a non-current controle file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

ORA-00294: invalid archivelog format specifier "*string***"**

Cause: An invalid format specifier was found in the LOG_ARCHIVE_FORMAT initialization parameter. The only characters permitted following the % symbol are s, S, t, and T.

Action: Correct the initialization file and re-start the instance.

ORA-00295: datafile/tempfile number *string* is invalid, must be between 1 and *string*

Cause: An invalid file number was specified.

Action: Specify a valid datafile or tempfile number and retry the operation.

ORA-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST

Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB_FILES initialization parameter. This error occurs when doing recovery with Recovery Manager, and the instance has been started with a DB_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user"s RECOVER command.

Action: Re-start the instance with a higher value for DB_FILES.

ORA-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START

Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

ORA-00298: Missing or invalid attribute value

Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

ORA-00299: must use file-level media recovery on data file *string*

Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

ORA-00300: illegal redo log block size *string* specified - exceeds limit of *string*

Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

ORA-00301: error in adding log file "*string*" - file cannot be created

Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

ORA-00302: limit of *string* logs exceeded

Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

ORA-00303: cannot process Parallel Redo

Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

ORA-00304: requested INSTANCE_NUMBER is busy

Cause: An instance tried to start by using a value of the initialization parameter INSTANCE_NUMBER that is already in use.

Action: Either a) specify another INSTANCE_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

ORA-00305: log *string* of thread *string* inconsistent; belongs to another database

Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00306: limit of *string* instances in this database

Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

ORA-00307: requested INSTANCE_NUMBER out of range, maximum is *string*

Cause: The initialization parameter INSTANCE_NUMBER specified a number that was out of range.

Action: Change INSTANCE_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

ORA-00308: cannot open archived log "*string*"

Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

ORA-00309: log belongs to wrong database

Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00310: archived log contains sequence *string*; sequence *string* required

Cause: The archived log is out of sequence, probably because it is corrupted or the wrong redo log filename was specified

Action: Specify the correct redo log file; then retry the operation.

ORA-00311: cannot read header from archived log

Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00312: online log *string* thread *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00313: open failed for members of log group *string* of thread *string*

Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

ORA-00314: log *string* of thread *string*, expected sequence# *string* doesn''t match *string*

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00315: log *string* of thread *string*, wrong thread # *string* in header

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00316: log *string* of thread *string*, type *string* in header is not log file

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00317: file type *string* in header is not log file

Cause: This is not an archived log file.

Action: Find the correct file and try again.

ORA-00318: log *string* of thread *string*, expected file size *string* doesn''t match *string*

Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

ORA-00319: log *string* of thread *string* has incorrect log reset status

Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00320: cannot read file header from log *string* of thread *string*

Cause: The file is not available.

Action: Restore the log file.

ORA-00321: log *string* of thread *string*, cannot update log file header

Cause: Cannot write to the log file.

Action: Restore the access to the file.

ORA-00322: log *string* of thread *string* is not current copy

Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00323: Current log of thread *string* not useable and all others need archiving

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

ORA-00324: log file "*string*" translated name "*string*" too long, *string* characters exceeds *string* limit

Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

ORA-00325: archived log for thread *string*, wrong thread # *string* in header

Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00326: log begins at change *string*, need earlier change *string*

Cause: The archived log supplied for recovery was generated after the log that is needed. Can not yet use the log for applying redo.

Action: Find correct archived log.

ORA-00327: log *string* of thread *string*, physical size *string* less than needed *string*

Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

ORA-00328: archived log ends at change *string*, need later change *string*

Cause: The archived log supplied for recovery was generated before the log that is needed. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00329: archived log begins at change *string*, need change *string*

Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

ORA-00330: archived log ends at change *string*, need change *string*

Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

ORA-00331: log version *string* incompatible with ORACLE version *string*

Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00332: archived log is too small - may be incompletely archived

Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

ORA-00333: redo log read error block *string* count *string*

Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

ORA-00334: archived log: "*string*"

    Cause: Reporting filename for details of another error

    Action: See associated error messages

ORA-00335: online log *string*: No log with this number, log does not exist

    Cause: Reporting filename for details of another error

    Action: See associated error messages

ORA-00336: log file size *string* blocks is less than minimum *string* blocks

    Cause: The log file size as specified in create database is too small.

    Action: Increase the log file size.

ORA-00337: log file "*string*" does not exist and no size specified

    Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

    Action: Specify a size for the log file.

ORA-00338: log *string* of thread *string* is more recent than control file

    Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

    Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-00339: archived log does not contain any redo

    Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

    Action: Restore the correct log file.

ORA-00340: IO error processing online log *string* of thread *string*

    Cause: An IO error occurred on the named online log.

    Action: Restore accessibility to file, or restore file from backup.

ORA-00341: log *string* of thread *string*, wrong log # *string* in header

    Cause: The internal information in an online log file does not match the control file.

    Action: Restore correct file or reset logs.

ORA-00342: archived log does not have expected resetlogs SCN *string*

    Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

    Action: Supply the correct log file.

ORA-00344: unable to re-create online log "*string*"

    Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

ORA-00345: redo log write error block *string* count *string*

Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

ORA-00346: log member marked as STALE and closed

Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

ORA-00347: log *string* of thread *string*, expected block size *string* doesn"t match *string*

Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

ORA-00348: single-process redo failure. Must abort instance

Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

ORA-00349: failure obtaining block size for "*string*"

Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

ORA-00350: log *string* of instance *string* (thread *string*) needs to be archived

Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

ORA-00351: recover-to time invalid

Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

ORA-00352: all logs for thread *string* need to be archived - cannot enable

Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

ORA-00353: log corruption near block *string* change *string* time *string*

Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

ORA-00354: corrupt redo log block header

Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

ORA-00355: change numbers out of order

Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00356: inconsistent lengths in change description

Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00357: too many members specified for log file, the maximum is *string*

Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

ORA-00358: Too many file members specified, the maximum is *string*

Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

ORA-00359: logfile group *string* **does not exist**

Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

ORA-00360: not a logfile member: *string*

Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

ORA-00361: cannot remove last log member *string* **for group** *string*

Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

ORA-00362: member is required to form a valid logfile in group *string*

Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

ORA-00363: log is not the archived version

Cause: d by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

ORA-00364: cannot write header to new log member

Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

ORA-00365: the specified log is not the correct next log

Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

ORA-00366: log *string* of thread *string*, checksum error in the file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

ORA-00367: checksum error in log file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

ORA-00368: checksum error in redo log block

Cause: The redo block indicated by the accompanying error, is not vaild. It has a checksum that does not match the block contents.

Action: Restore correct file or reset logs.

ORA-00369: Current log of thread *string* not useable and other log being cleared

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

ORA-00370: potential deadlock during kcbchange operation

Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

ORA-00371: not enough shared pool memory, should be atleast *string* bytes

Cause: Init.ora parameter shared_pool_size is too small

Action: Increase the parameter value

ORA-00372: file *string* cannot be modified at this time

Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

ORA-00373: online log version *string* incompatible with ORACLE version *string*

Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00374: parameter db_block_size = *string* invalid ; must be a multiple of *string* in the range [*string..string*]

Cause: invalid value for db_block_size parameter

Action: adjust parameter and restart

ORA-00376: file *string* cannot be read at this time

Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

ORA-00377: Frequent backups of file *string* causing write operation to stall

Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

ORA-00378: buffer pools cannot be created as specified

Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

ORA-00379: no free buffers available in buffer pool *string* for block size *string*K

Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

ORA-00380: cannot specify db_*string*k_cache_size since *string*K is the standard block size

Cause: User specified the parameter db_nk_cache_size (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using db_cache_size (DEFAULT pool) (and db_recycle_cache_size, db_keep_cache_size if additional buffer pools are required). Do NOT use the corresponding db_nk_cache_size parameter for the standard block size.

ORA-00381: cannot use both new and old parameters for buffer cache size specification

Cause: User specified one or more of { db_cache_size , db_recycle_cache_size, db_keep_cache_size, db_nk_cache_size (where n is one of 2,4,8,16,32), db_cache_advice } AND one or more of { db_block_buffers, buffer_pool_keep , buffer_pool_recycle }. This is illegal.

Action: Use EITHER the old (pre-Oracle_8.2) parameters OR the new ones. Don"t specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

ORA-00382: *string* not a valid block size, valid range [*string..string*]

Cause: User specified a value for db_nk_cache_size where n is one of {2, 4, 8, 16, 32}, but nk is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

ORA-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero

Cause: User attempted to reduce db_cache_size to zero, or attempted to to reduce db_<n>K_cache_size to zero while there were still online tablespaces with blocksize <n>K. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set db_cache_size to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

ORA-00384: Insufficient memory to grow cache

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00385: cannot enable Very Large Memory with new buffer cache parameters

Cause: User specified one or more of { db_cache_size , db_recycle_cache_size, db_keep_cache_size, db_nk_cache_size (where n is one of 2,4,8,16,32) } AND use_indirect_data_buffers is set to TRUE. This is illegal.

Action: Very Large Memory can only be enabled with the old (pre-Oracle_8.2) parameters.

ORA-00386: use_indirect_data_buffers not supported

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00390: log *string* of thread *string* is being cleared, cannot become current log

Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00391: All threads must switch to new log format at the same time

Cause: An attempt to switch the current log of a single thread is not allowed because the compatiblity requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

ORA-00392: log *string* **of thread** *string* **is being cleared, operation not allowed**

Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00393: log *string* **of thread** *string* **is needed for recovery of offline datafiles**

Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptible, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

ORA-00394: online log reused while attempting to archive it

Cause: It has been detected that an online log that is being archived has been reused

Action: Cannot archive the logfile anymore since it has been overwritten

ORA-00395: online logs for the clone database must be renamed

Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log_file_name_convert initialization parameter

ORA-00396: error *string* **required fallback to single-pass recovery**

Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

ORA-00397: instance recovery process terminated with error

Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

ORA-00398: abort thread recovery due to reconfiguration

Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

ORA-00399: corrupt change description in redo log

Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00400: invalid release value *string* **for parameter** *string*

Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

ORA-00401: the value for parameter *string* **is not supported by this release**

Cause: The value specified cannot be supported by this release of the software.

Action: Choose an appropriate value, or remove the parameter value to use the default value.

ORA-00402: database changes by release *string* **cannot be used by release** *string*

Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

ORA-00403: *string* **(***string***) is not the same as other instances (***string***)**

Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

ORA-00404: Convert file not found: "*string***"**

Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessable.

ORA-00405: compatibility type "*string***"**

Cause: Reporting a type associated with another error.

Action: See accompanying error

ORA-00406: COMPATIBLE parameter needs to be *string* **or greater**

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00407: rolling upgrade from release *string.string* **to** *string.string* **is not allowed**

Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

ORA-00408: parameter *string* **is set to TRUE**

Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00409: COMPATIBLE needs to be *string* **or higher to use AUTO SEGMENT SPACE MANAGEMENT**

Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

ORA-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance

Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

ORA-00438: *string* Option not installed

Cause: The specified option is not installed.

Action: Purchase and install the option.

ORA-00439: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-00443: background process "*string*" did not start

Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

ORA-00444: background process "*string*" failed while starting

Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

ORA-00445: background process "*string*" did not start after *string* seconds

Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

ORA-00446: background process started when not expected

Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

ORA-00447: fatal error in background process

Cause: One of the background processes died unexpectedly.

Action: Warm start the system.

ORA-00448: normal completion of background process

Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

ORA-00449: background process "*string*" unexpectedly terminated with error *string*

Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

ORA-00450: background process "*string*" did not start

Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

ORA-00451: foreground process died unexpectedly
Cause: The foreground process for the new connection did not start.
Action: Reconnect to Oracle.

ORA-00452: foreground process unexpectedly terminated with error *string*
Cause: The foreground process for the new connection did not start.
Action: Reconnect to Oracle.

ORA-00453: backgroud process "*string***" is dead**
Cause: The background process that was being messaged was dead or its incarnation was invalid.
Action: Restart the background process.

ORA-00469: CKPT process terminated with error
Cause: The checkpoint process died
Action: Warm start instance

ORA-00470: LGWR process terminated with error
Cause: The log writer process died
Action: Warm start instance

ORA-00471: DBWR process terminated with error
Cause: The database writer process died
Action: Warm start instance

ORA-00472: PMON process terminated with error
Cause: The process cleanup process died
Action: Warm start instance

ORA-00473: ARCH process terminated with error
Cause: The archive process died
Action: Warm start instance

ORA-00474: SMON process terminated with error
Cause: The system cleanup process died
Action: Warm start instance

ORA-00475: TRWR process terminated with error
Cause: The system tracing process died
Action: Warm start instance

ORA-00476: RECO process terminated with error
Cause: The distributed transaction (two-phase commit) recovery process died.
Action: Warm start instance

ORA-00477: SNP* process terminated with error
Cause: A materialized view refresh process died
Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

ORA-00478: SMON process terminated due to error *string*

Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

ORA-00479: RVWR process terminated with error *string*

Cause: The RVWR process died

Action: Warm start instance

ORA-00480: LCK* process terminated with error

Cause: A system lock process died

Action: Warm start instance

ORA-00481: LMON process terminated with error

Cause: The global enqueue service monitor process died

Action: Warm start instance

ORA-00482: LMD* process terminated with error

Cause: A global enqueue service daemon process died

Action: Warm start instance

ORA-00483: During shutdown a process abnormally terminated

Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

ORA-00484: LMS* process terminated with error

Cause: A global cache service process died

Action: Warm start instance

ORA-00485: DIAG process terminated with error *string*

Cause: A global diagnostic process died

Action: Wait for process to restart

ORA-00486: ASMB process terminated with error

Cause: An ASM background process died.

Action: Warm start instance. Also check that ASM Instance is running.

ORA-00487: CTWR process terminated with error

Cause: The change tracking process died

Action: Warm start instance

ORA-00488: RBAL process terminated with error

Cause: The ASM rebalance coordinator process died.

Action: Warm start instance.

ORA-00489: ARB* process terminated with error

Cause: An ASM rebalance worker process died.

Action: Wait for process to restart.

ORA-00490: PSP process terminated with error

Cause: The process spawner died

Action: Warm start instance

ORA-00491: RMS0 process terminated with error

Cause: The RAC Management Process died

Action: None

ORA-00492: GTX* process terminated with error

Cause: A global transaction background process died.

Action: Warm start instance

ORA-00493: GMON process terminated with error

Cause: The ASM disk group monitor process died

Action: Warm start instance

ORA-00566: cannot request processor group - NUMA not enabled

Cause: Cannot start process in a requested processor group when the NUMA feature is disabled.

Action: Start the process without requesting a NUMA processor group.

ORA-00567: Requested processor group *string* is too large (maximum *string*)

Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group.

ORA-00568: Maximum number of interrupt handlers exceeded

Cause: User specified too many ^c handlers

Action: Remove some old handlers.

ORA-00569: Failed to acquire global enqueue.

Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED_POOL_SIZE, DML_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER_DATABASE_INSTANCES and PARALLEL_MAX_SERVERS initialization parameters.

ORA-00600: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: This is the generic internal error number for Oracle program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-00601: cleanup lock conflict

Cause: PMON process runs into lock conflict trying to recovery processes

Action: This is trapped internally, no action necessary

ORA-00602: internal programming exception

Cause: Internal programming exception

Action: Report as bug

ORA-00603: ORACLE server session terminated by fatal error

Cause: An ORACLE server session was in an unrecoverable state.

Action: Login to ORACLE again so a new server session will be created

ORA-00604: error occurred at recursive SQL level *string*

Cause: An error occurred while processing a recursive SQL statement (a statement applying to internal dictionary tables).

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00606: Internal error code

Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

ORA-00607: Internal error occurred while making a change to a data block

Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

ORA-00608: testing error [*string***] [***string***] [***string***] [***string***] [***string***]**

Cause: Internal error reserved for testing.

Action: call Oracle Support

ORA-00609: could not attach to incoming connection

Cause: Oracle process could not answer incoming connection

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00610: Internal error code

Cause: Oracle process started too late

Action: This error should never be seen by the customer. Contact Oraclce Support

ORA-00700: soft internal error, arguments: [*string***], [***string***], [***string***], [***string***], [***string***], [***string***], [***string***], [***string***]**

Cause: Internal inconsitency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

ORA-00701: object necessary for warmstarting database cannot be altered

Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

ORA-00702: bootstrap verison "*string*" inconsistent with version "*string*"

Cause: The reading version of the boostrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

ORA-00703: maximum number of row cache instance locks exceeded

Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

ORA-00704: bootstrap process failure

Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

ORA-00705: inconsistent state during start up; shut down the instance, then restart it
Cause: A previous attempt to start an instance was terminated.
Action: Shut down the instance completely, then restart it.

ORA-00706: error changing format of file "*string*"
Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.
Action: Make the file read-write or bring the file online and set the BLK0_ FMTCHG event.

ORA-00710: new tablespace name is the same as the old tablespace name
Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.
Action: No action required.

ORA-00711: new tablespace name is invalid
Cause: An attempt to rename a tablespace failed because the new name is invalid.
Action: Choose a valid new name and retry the command.

ORA-00712: cannot rename system tablespace
Cause: An attempt to rename the system tablespace failed.
Action: No action required.

ORA-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported
Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.
Action: No action required.

ORA-00721: changes by release *string* cannot be used by release *string*
Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.
Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

ORA-00722: Feature "*string*"
Cause: Reporting name of the feature for details of another error.
Action: See associated error message.

ORA-00723: Initialization parameter COMPATIBLE must be explicitly set
Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the intialization parameter must be explicitly set by the user.
Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

ORA-00724: ALTER DATABASE CONVERT command has been de-supported

Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string*

Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

ORA-00740: datafile size of (*string*) blocks exceeds maximum file size

Cause: The user specified datafile size exceeded maximum file size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00741: logfile size of (*string*) blocks exceeds maximum logfile size

Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00750: database has been previously mounted and dismounted

Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

ORA-00751: could not obtain resilvering status for file

Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-00752: recovery detected a lost write of a data block

Cause: A write of a data block to the storage are was lost during normal database operation or on the primary database.

Action: Flashback or restore from backup the database as described in the Backup and Recovery Manual.

ORA-00820: Specified value of sga_max_size is too small, needs to be at least *string***M**

Cause: The specified value of sga_max_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_max_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00821: Specified value of sga_target *string***M is too small, needs to be at least** *string***M**

Cause: The specified value of sga_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00822: MMAN process terminated with error

Cause: The Memory Management process died.

Action: Warm start instance

ORA-00823: Specified value of sga_target greater than sga_max_size

> **Cause:** The specified value of sga_target is greater than sga_max_size.
>
> **Action:** Increase sga_max_size to match up with sga_target or decrease sga_target to match up with sga_maxsize.

ORA-00824: cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings, see alert log for more information

> **Cause:** Unable to set SGA_TARGET or MEMORY_TARGET due to current parameter settings.
>
> **Action:** See alert log for more information.

ORA-00825: cannot set DB_BLOCK_BUFFERS if SGA_TARGET or MEMORY_TARGET is set

> **Cause:** SGA_TARGET or MEMORY_TARGET set with DB_BLOCK_BUFFERS set.
>
> **Action:** Do not set SGA_TARGET, MEMORY_TARGET or use new cache parameters, and do not use DB_BLOCK_BUFFERS which is an old cache parameter.

ORA-00826: cannot set SGA_TARGET or MEMORY_TARGET for an ASM instance

> **Cause:** SGA_TARGET or MEMORY_TARGET set for an ASM instance.
>
> **Action:** Do not set SGA_TARGET or MEMORY_TARGET.

ORA-00827: could not shrink sga_target to specified value

> **Cause:** Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.
>
> **Action:** Do not set sga_target to a value below the current value without first shrinking the individual SGA components.

ORA-00828: specified value of shared_pool_reserved_size inconsistent with internal settings

> **Cause:** Unable to set shared_pool_reserved_size to specified value if SGA_TARGET set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.
>
> **Action:** If possible, do not set shared_pool_reserved_size without setting shared_pool_size if SGA_TARGET set. Examine the alert log for information about current internal size of shared pool, and valid range of values for shared_pool_reserved_size.

ORA-00830: cannot set statistics_level to BASIC with auto-tune SGA enabled

> **Cause:** The user attempted to set statistics_level to BASIC with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with statistics_level set to BASIC.
>
> **Action:** Disable auto-tune SGA and try setting the statistics_level to BASIC again.

ORA-00832: no streams pool created and cannot automatically create one

> **Cause:** A database feature which needs STREAMS SGA was being used, however, the streams_pool_size parameter was not defined and the value of db_cache_size was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.
>
> **Action:** Please set the parameter streams_pool_size or set SGA_TARGET.

ORA-00837: Specified value of MEMORY_TARGET greater than MEMORY_MAX_ TARGET

Cause: The specified value of MEMORY_TARGET was greater than MEMORY_ MAX_TARGET.

Action: Set MEMORY_TARGET less than or equal to MEMORY_MAX_TARGET.

ORA-00838: Specified value of MEMORY_TARGET is too small, needs to be at least *string*M

Cause: The specified value of MEMORY_TARGET was less than the sum of the specified values for SGA_TARGET and PGA_AGGREGATE_TARGET.

Action: Set MEMORY_TARGET to at least the recommended value.

ORA-00839: SGA_TARGET cannot be modified to the specified value

Cause: The specified value of SGA_TARGET was not compatible with current settings of PGA_AGGREGATE_TARGET and MEMORY_TARGET/MEMORY_ MAX_TARGET.

Action: Set SGA_TARGET to be no more than the difference of MEMORY_ TARGET/MEMORY_MAX_TARGET and PGA_AGGREGATE_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

ORA-00840: PGA_AGGREGATE_TARGET cannot be modified to the specified value

Cause: The specified value of PGA_AGGREGATE_TARGET was not compatible with current settings of SGA_TARGET and MEMORY_TARGET/MEMORY_ MAX_TARGET.

Action: Set PGA_AGGREGATE_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and SGA_TARGET.

ORA-00841: MEMORY_TARGET not supported on this system

Cause: MEMORY_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

ORA-00843: Parameter not taking MEMORY_MAX_TARGET into account, see alert log for more information

Cause: The parameter was larger than MEMORY_MAX_TARGET.

Action: Set the parameter to a lower value than MEMORY_MAX_TARGET.

ORA-00844: Parameter not taking MEMORY_TARGET into account, see alert log for more information

Cause: The parameter was larger than MEMORY_TARGET.

Action: Set the parameter to a lower value than MEMORY_TARGET.

ORA-00845: MEMORY_TARGET not supported on this system

Cause: The MEMORY_TARGET parameter was not supported on this operating system or /dev/shm was not sized correctly on Linux.

Action: Refer to documentation for a list of supported operating systems. Or, size /dev/shm to be at least the SGA_MAX_SIZE on each Oracle instance running on the system.

ORA-00846: could not shrink MEMORY_TARGET to specified value

Cause: Attempted to shrink MEMORY_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY_TARGET to a value below the current value without first shrinking the individual memory components.

ORA-00847: MEMORY_TARGET/MEMORY_MAX_TARGET and LOCK_SGA cannot be set together

Cause: MEMORY_TARGET/MEMORY_MAX_TARGET was set to a non-zero value and LOCK_SGA was also set

Action: Do not set MEMORY_TARGET or MAX_MEMORY_TARGET if LOCK_SGA is set to TRUE.

3

ORA-00910 to ORA-01497

ORA-00910: specified length too long for its datatype

Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

ORA-00911: invalid character

Cause: identifiers may not start with any ASCII character other than letters and numbers. $#_ are also allowed after the first character. Identifiers enclosed by doublequotes may contain any character other than a doublequote. Alternative quotes (q"#...#") cannot use spaces, tabs, or carriage returns as delimiters. For all other contexts, consult the SQL Language Reference Manual.

Action: None

ORA-00912: input parameter too long

Cause: one of your input strings was too long

Action: shorten the input parameter length

ORA-00953: missing or invalid index name

Cause: An index name of the form [<identifier> .] <identifier> is expected but not present. If OIDINDEX clause, index name must be <identifier>

Action: Enter an appropriate index name.

ORA-00956: missing or invalid auditing option

Cause: AUDIT or NOAUDIT statement contains an invalid auditing option.

Action: Use a valid option.

ORA-00960: ambiguous column naming in select list

Cause: A column name in the order-by list matches more than one select list columns.

Action: Remove duplicate column naming in select list.

ORA-00962: too many group-by / order-by expressions

Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

ORA-00964: table name not in FROM list

Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

ORA-00965: column aliases not allowed for "*"

Cause: The statement is trying to alias the * expression in the select list which is not legal.

Action: Remove the alias.

ORA-00972: identifier is too long

Cause: An identifier with more than 30 characters was specified.

Action: Specify at most 30 characters.

ORA-00976: LEVEL, PRIOR, or ROWNUM not allowed here

Cause: LEVEL, PRIOR, or ROWNUM is being specified at illegal location.

Action: Remove LEVEL, PRIOR, or ROWNUM.

ORA-00977: duplicate auditing option

Cause: AUDIT or NOAUDIT statement specifies an option more than once

Action: Either use ALL with no other auditing options or make sure no option is listed more than once.

ORA-00980: synonym translation is no longer valid

Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons:

1. The target schema does not exist.

2. The target object does not exist.

3. The synonym specifies an incorrect database link.

4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

ORA-00981: cannot mix table and system auditing options

Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

ORA-00983: cannot audit or noaudit SYS user actions

Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions.

Action: Execute the statement again with a valid user.

ORA-00991: only MAC privileges may be granted to procedures

Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

ORA-01002: fetch out of sequence

Cause: This error means that a fetch has been attempted from a cursor which is no longer valid. Note that a PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. There are a number of possible causes for this error, including: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE

clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before reexecuting the statement.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Reexecute the statement after rebinding, then attempt to fetch again.

ORA-01010: invalid OCI operation

Cause: One of the following: 1) You attempted an invalid OCI operation. 2) You are using an Oracle client application linked with version 7.1 (or higher) libraries, the environment variable ORA_ENCRYPT_LOGIN is set to TRUE, and you attempted to connect to a version 7.0 (or lower) Oracle Server. 3) You are connected to a version 7.1 (or higher) Oracle Server, the initialization parameter DBLINK_ENCRYPT_LOGIN is set to TRUE, and you attempted to use a database link pointing to a version 7.0 (or lower) Oracle Server. 4) You are connected to a version 9.0.2(or higher) Oracle Server and you attempted to use a database link pointing to a version 9.0.1(or lower) Oracle Server for distributed autonomous transaction.

Action: For the above causes: 1) Do not use the invalid OCI operation. 2) If you do not wish to use encrypted connect passwords in your distributed database, set ORA_ENCRYPT_LOGIN to FALSE. If you wish to use encrypted connect passwords, you must upgrade all Oracle Servers to version 7.1 (or higher). 3) If you do not wish to use encrypted database links in your distributed database, set DBLINK_ENCRYPT_LOGIN to FALSE. If you wish to use encrypted database links, you must upgrade all Oracle Servers to version 7.1 (or higher). 4) Do not attempt distributed autonomous transaction on version 9.0.1(or lower) Oracle Server.

ORA-01016: This function can be called only after a fetch

Cause: Cursor in an invalid state.

Action: Make sure that the oci/upi function is called after fetch.

ORA-01019: unable to allocate memory in the user side

Cause: The user side memory allocator returned error.

Action: Increase the processes heap size or switch to the old set of calls.

ORA-01022: database operation not supported in this configuration

Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

ORA-01023: Cursor context not found (Invalid cursor number)

Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

ORA-01025: UPI parameter out of range

Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

ORA-01026: multiple buffers of size > 4000 in the bind list

Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

ORA-01027: bind variables not allowed for data definition operations

Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

ORA-01028: internal two task error

Cause: Received send long message but don"t have the cursor context.

Action: Report as a bug.

ORA-01029: internal two task error

Cause: Received a request to send the long again when there is no long

Action: Report as a bug

ORA-01030: SELECT ... INTO variable does not exist

Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

ORA-01031: insufficient privileges

Cause: An attempt was made to change the current username or password without the appropriate privilege. This error also occurs if attempting to install a database without the necessary operating system privileges. When Trusted Oracle is configure in DBMS MAC, this error may occur if the user was granted the necessary privilege at a higher label than the current login.

Action: Ask the database administrator to perform the operation or grant the required privileges. For Trusted Oracle users getting this error although granted the the appropriate privilege at a higher label, ask the database administrator to regrant the privilege at the appropriate label.

ORA-01032: no such userid

Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

ORA-01033: ORACLE initialization or shutdown in progress

Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

ORA-01034: ORACLE not available

Cause: Oracle was not started up. Possible causes include the following:

- The SGA requires more space than was allocated for it.

- The operating-system variable pointing to the instance is improperly defined.

Action: Refer to accompanying messages for possible causes and correct the problem mentioned in the other messages. If Oracle has been initialized, then on some operating systems, verify that Oracle was linked correctly. See the platform specific Oracle documentation.

ORA-01035: ORACLE only available to users with RESTRICTED SESSION privilege

Cause: Logins are disallowed because an instance started in restricted mode. Only users with RESTRICTED SESSION system privilege can log on.

Action: Request that Oracle be restarted without the restricted option or obtain the RESTRICTED SESSION system privilege.

ORA-01036: illegal variable name/number

Cause: Unable to find bind context on user side

Action: Make sure that the variable being bound is in the sql statement.

ORA-01037: maximum cursor memory exceeded

Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

ORA-01038: cannot write database file version *string* with ORACLE version *string*

Cause: Attempting to write datafile headers in an old format. The new format can not be used until after the database has been verified as being compatible with this software version.

Action: Open the database to advance to the new file formats, then repeat the operation. If the operation is required before the database can be opened, then use the previous software release to do the operation.

ORA-01039: insufficient privileges on underlying objects of the view

Cause: Attempting to explain plan on other people"s view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

ORA-01040: invalid character in password; logon denied

Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

ORA-01041: internal error. hostdef extension doesn"t exist

Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

ORA-01042: detaching a session with open cursors not allowed

Cause: An attempt was made to detach a seesio n which had open cursors.

Action: Close all the cursors before detaching the session.

ORA-01043: user side memory corruption [*string*], [*string*], [*string*], [*string*]

Cause: The application code corrupted some of the usr memory used by oracle

Action: Make sure that the application code is not overwriting memory.

ORA-01044: size *string* of buffer bound to variable exceeds maximum *string*

Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as: (element_size)*(number of elements)

Action: Reduce buffer size.

ORA-01045: user *string* **lacks CREATE SESSION privilege; logon denied**

Cause: A connect was attempted to a userid which does not have create session privilege.

Action: Grant the user CREATE SESSION privilege.

ORA-01048: Couldn"t find the specified procedure in the given context

Cause: The procedure user specified in deferred RPC doesn"t exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

ORA-01049: Bind by name is not spupportted in streamed RPC

Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: None

ORA-01051: deferred rpc buffer format invalid

Cause: The deferred rpc data in sys.def$_call is corrupted.

Action: Contact your customer support representive.

ORA-01052: required destination LOG_ARCHIVE_DUPLEX_DEST is not specified

Cause: A valid destination for parameter LOG_ARCHIVE_DUPLEX_DEST was not specified when parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was set to two.

Action: Either specify a value for parameter LOG_ARCHIVE_DUPLEX_DEST, or reduce the value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to one.

ORA-01055: Object datatypes not supported for bind or define in this mode

Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

ORA-01058: internal New Upi interface error

Cause: Attempt to delete non existant hstdef extension.

Action: Report as a bug.

ORA-01059: parse expected before a bind or execute

Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

ORA-01060: array binds or executes not allowed

Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

ORA-01061: cannot start up a V8 server using a V7 client application

Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

ORA-01062: unable to allocate memory for define buffer

Cause: Exceeded the maximum buffer size for current plaform

Action: Use piecewise fetch with a smaller buffer size

ORA-01070: Using an old version of Oracle for the server
    Cause: Using pre 7.0.10.1 version of oracle for server
    Action: Upgrade server to post 7.0.10.1 version

ORA-01071: cannot perform operation without starting up ORACLE
    Cause: Obvious
    Action: None

ORA-01072: cannot stop ORACLE; ORACLE not running
    Cause: Obvious
    Action: None

ORA-01073: fatal connection error: unrecognized call type
    Cause: An illegal internal operation was attempted.
    Action: Contact your customer support representative.

ORA-01074: cannot shut down ORACLE; inside a login session - log off first
    Cause: Obvious
    Action: None

ORA-01075: you are currently logged on
    Cause: Attempt to login while logged in.
    Action: None

ORA-01076: multiple logons per process not yet supported
    Cause: Obvious
    Action: None

ORA-01077: background process initialization failure
    Cause: Failure during initialization of ORACLE background processes.
    Action: Further diagnostic information should be in the error stack or in the trace file.

ORA-01078: failure in processing system parameters
    Cause: Failure during processing of INIT.ORA parameters during system startup.
    Action: Further diagnostic information should be in the error stack.

ORA-01079: ORACLE database was not properly created, operation aborted
    Cause: There was an error when the database or control file was created.
    Action: s to recreate the database or a new control file.

ORA-01080: error in shutting down ORACLE
    Cause: Failure during system shutdown.
    Action: Further diagnostic information should be in the error stack.

ORA-01081: cannot start already-running ORACLE - shut it down first
    Cause: Obvious
    Action: None

ORA-01082: "row_locking = always" requires the transaction processing option

Cause: "row_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

ORA-01083: value of parameter "*string*" is inconsistent with that of other instances

Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

ORA-01084: invalid argument in OCI call

Cause: The failing OCI call contains an argument with an invalid value.

Action: Use valid argument values. For more information, see the Programmer"s Guide to the Oracle Call Interfaces and the appropriate programming language supplement.

ORA-01085: preceding errors in deferred rpc to "*string.string.string*"

Cause: Errors were encountered when the named procedure was executed as a deferred remote procedure call.

Action: Correct the cause of the preceding errors.

ORA-01086: savepoint "*string*" never established

Cause: Trying to roll back to a save point that was never established.

Action: None

ORA-01088: cannot shut down ORACLE while active processes exist

Cause: Users are still logged into the instance.

Action: Either wait for all users to logoff or use SHUTDOWN IMMEDIATE.

ORA-01089: immediate shutdown in progress - no operations are permitted

Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running ORACLE instance, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01090: shutdown in progress - connection is not permitted

Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01091: failure during startup force

Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

ORA-01092: ORACLE instance terminated. Disconnection forced

Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

ORA-01093: ALTER DATABASE CLOSE only permitted with no sessions connected

Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

ORA-01095: DML statement processed zero rows

Cause: During a call to OTEX, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEX was halted at this point.

Action: None

ORA-01096: program version (*string*) incompatible with instance (*string*)

Cause: A program is trying to connect to an instance using a different version of code than the database was started with. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of code.

ORA-01097: cannot shutdown while in a transaction - commit or rollback first

Cause: Obvious

Action: None

ORA-01099: cannot mount database in SHARED mode if started in single process mode

Cause: Obvious

Action: None

ORA-01100: database already mounted

Cause: A database is already mounted in this instance.

Action: None

ORA-01101: database being created currently mounted by some other instance

Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

ORA-01102: cannot mount database in EXCLUSIVE mode

Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

ORA-01103: database name "*string*" in control file is not "*string*"

Cause: The database name in the control file does not match your database name.

Action: Either find the correct control file or change your database name.

ORA-01104: number of control files (*string*) does not equal *string*

Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

ORA-01105: mount is incompatible with mounts by other instances

Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

ORA-01106: database must be closed before dismounting

Cause: Obvious

Action: None

ORA-01107: database must be mounted for media recovery

Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

ORA-01108: file *string* is in backup or media recovery

Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

ORA-01109: database not open

Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

ORA-01110: data file *string*: "*string*"

Cause: Reporting file name for details of another error

Action: See associated error message

ORA-01111: name for data file *string* is unknown - rename to correct file

Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

ORA-01112: media recovery not started

Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

ORA-01113: file *string* needs media recovery

Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

ORA-01114: IO error writing block to file *string* (block # *string*)

Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

ORA-01115: IO error reading block from file *string* (block # *string*)

Cause: Device on which the file resides is probably offline

Action: Restore access to the device

ORA-01116: error in opening database file *string*

Cause: Usually the file is not accessible.

Action: Restore the database file.

ORA-01117: adding file "*string***" with illegal block size: ***string***; limit is ***string***

Cause: An attempt was made to add a database file with a block size that is greater than the maximum block size allowed.

Action: Retry the DDL command with a smaller block size.

ORA-01118: cannot add any more database files: limit of *string* **exceeded**

Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

ORA-01119: error in creating database file "*string***"

Cause: Usually due to not having enough space on the device.

Action: None

ORA-01120: cannot remove online database file *string*

Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

ORA-01121: cannot rename database file *string* **- file is in use or recovery**

Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

ORA-01122: database file *string* **failed verification check**

Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

ORA-01123: cannot start online backup; media recovery not enabled

Cause: An attempt to start backup of an on-line tablespace failed because media recovery is not enabled.

Action: Enable media recovery and retry this operation.

ORA-01124: cannot recover data file *string* **- file is in use or recovery**

Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is curently doing media recovery on the file.

Action: Do not do media recovery.

ORA-01125: cannot disable media recovery - file *string* **has online backup set**

Cause: An attempt to disable media recovery found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01126: database must be mounted in this instance and not open in any instance

Cause: Obvious

Action: None

ORA-01127: database name "*string*" exceeds size limit of *string* characters

Cause: Obvious

Action: None

ORA-01128: cannot start online backup - file *string* is offline

Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

ORA-01129: user"s default or temporary tablespace does not exist

Cause: The user"s default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

ORA-01135: file *string* accessed for DML/query is offline

Cause: Attempted to access a data file that is offline

Action: Bring the data file back online

ORA-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks

Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller the the size needed

Action: Create the file with a larger size.

ORA-01137: data file *string* is still in the middle of going offline

Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that is took it offline.

Action: Wait a bit and try to online the file again.

ORA-01138: database must either be open in this instance or not at all

Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the datbase in this instance, or close the database in the other instances.

ORA-01139: RESETLOGS option only valid after an incomplete database recovery

Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

ORA-01140: cannot end online backup - all files are offline or readonly

Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01141: error renaming data file *string* - new file "*string*" not found

Cause: An attempt to change a data file"s name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

ORA-01142: cannot end online backup - none of the files are in backup

Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01143: cannot disable media recovery - file *string* needs media recovery

Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

ORA-01144: File size (*string* blocks) exceeds maximum of *string* blocks

Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

ORA-01145: offline immediate disallowed unless media recovery enabled

Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

ORA-01146: cannot start online backup - file *string* is already in backup

Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

ORA-01147: SYSTEM tablespace file *string* is offline

Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA.The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

ORA-01148: cannot refresh file size for datafile *string*

Cause: An operating system or device error occurred when retrieving the file"s size. The device on which the file resides may have been offline.

Action: Restore access to the device.

ORA-01149: cannot shutdown - file *string* has online backup set

Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01150: cannot prevent writes - file *string* has online backup set

Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

ORA-01151: use media recovery to recover block, restore backup if needed

Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

ORA-01152: file *string* was not restored from a sufficiently old backup

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

ORA-01153: an incompatible media recovery is active

Cause: Attempted to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup . Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs is incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs

Action: Complete or cancel the other media recovery session or RMAN backup

ORA-01154: database busy. Open, close, mount, and dismount not allowed now

Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

ORA-01155: the database is being opened, closed, mounted or dismounted

Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

ORA-01156: recovery in progress may need access to files

Cause: Either media recovery or instance recovery is in progress. It may need the files this operation is being applied to.

Action: Wait for recovery to complete.

ORA-01157: cannot identify/lock data file *string* - see DBWR trace file

Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

ORA-01158: database *string* already mounted

Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

ORA-01159: file is not from same database as previous files - wrong database id

Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

ORA-01160: file is not a *string*

Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

ORA-01161: database name *string* **in file header does not match given name of** *string*

Cause: The database name given at the command line does not match the database name found in the file header.

Action: Chance are good that the database name specified at the command line is incorrect. Resolve the descepency, and resubmit the command. If you are attempting to change the database name, be sure to use the SET DATABASE option.

ORA-01162: block size *string* **in file header does not match configured block sizes**

Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache blocksizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-01163: SIZE clause indicates *string* **(blocks), but should match header** *string*

Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size (in bytes).

ORA-01164: MAXLOGFILES may not exceed *string*

Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

ORA-01165: MAXDATAFILES may not exceed *string*

Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

ORA-01166: file number *string* **is larger than** *string* **(** *string* **)**

Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

ORA-01167: two files are the same file/group number or the same file

Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control_files parameter in the init.ora file and see if a file is specified more than once. If all files

names appear to be unique, check to make sure that the actual control files themselves are unique. For example, in UNIX check for a symbolic or a hard link to another control file in the list.

ORA-01168: physical block size *string* does not match size *string* of other members

Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

ORA-01169: DATAFILE number 1 not found. Must be present

Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

ORA-01170: file not found "*string*"

Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existance of all files and then resubmit.

ORA-01171: datafile *string* going offline due to error advancing checkpoint

Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

ORA-01172: recovery of thread *string* stuck at block *string* of file *string*

Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

ORA-01173: data dictionary indicates missing data file from system tablespace

Cause: Either the database has been recovered to a point in time in the future of the control file or a datafile from the system tablespace was omitted from the create control file command previously issued.

Action: For the former problem you need to recover the database from a more recent control file.For the latter problem, simply recreate the control file checking to be sure that you include all the datafiles in the system tablespace.

ORA-01174: DB_FILES is *string* buts needs to be *string* to be compatible

Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB_FILES parameter to be compatible

ORA-01175: data dictionary has more than the *string* files allowed by the instance

Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db_files

ORA-01176: data dictionary has more than the *string* files allowed by the controlfie

Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more datafiles than that supported by the control file.

Action: Recreate the control file with a larger MAXDATAFILES.

ORA-01177: data file does not match dictionary - probably old incarnation

Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

ORA-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01179: file *string* does not exist

Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

ORA-01180: can not create datafile 1

Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

ORA-01181: file *string* created before last known RESETLOGS, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01182: cannot create database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

ORA-01183: cannot mount database in SHARED mode

Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

ORA-01184: logfile group *string* already exists

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

ORA-01185: logfile group number *string* is invalid

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

ORA-01186: file *string* failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01187: cannot read from file *string* because it failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01188: Block size *string* in header does not match physical block size *string*

Cause: A log file member given to CREATE CONTROLFILE is on a physical device that has a different block size than the device originally used to create the log.

Action: Move the file to a device with the correct block size or use the RESETLOGS option to CREATE CONTROLFILE.

ORA-01189: file is from a different RESETLOGS than previous files

Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

ORA-01190: control file or data file *string* is from before the last RESETLOGS

Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

ORA-01191: file *string* is already offline - cannot do a normal offline

Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

ORA-01192: must have at least one enabled thread

Cause: You must specify at least two logfiles from at least one thread at the create contolfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

ORA-01193: file *string* is not the same file seen at start of recovery

Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

ORA-01194: file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

ORA-01195: online backup of file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

ORA-01196: file *string* is inconsistent due to a failed media recovery session

Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

ORA-01197: thread *string* only contains one log

Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

ORA-01198: must specify size for log file if RESETLOGS

Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

ORA-01199: file *string* is not in online backup mode

Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

ORA-01200: actual file size of *string* is smaller than correct size of *string* blocks

Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

ORA-01201: file *string* header failed to write correctly

Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

ORA-01202: wrong incarnation of this file - wrong creation time

Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01203: wrong incarnation of this file - wrong creation SCN

Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01204: file number is *string* rather than *string* - wrong file

Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01205: not a data file - type number in header is *string*

Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01206: file is not part of this database - wrong database id

Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01207: file is more recent than control file - old control file

Cause: The control file change sequence number in the data file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-01208: data file is an old version - not accessing current version

Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01209: data file is from before the last RESETLOGS

Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01210: data file header is media corrupt

Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistancy of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

ORA-01211: Oracle7 data file is not from migration to Oracle8

Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration program MUST be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is NOT opened after migration utility is run.

ORA-01212: MAXLOGMEMBERS may not exceed *string*

Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

ORA-01213: MAXINSTANCES may not exceed *string*

Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

ORA-01214: MAXLOGHISTORY may not exceed *string*

Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

ORA-01215: enabled thread *string* is missing after CREATE CONTROLFILE

Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE

Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs

supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

ORA-01217: logfile member belongs to a different logfile group

Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

ORA-01218: logfile member is not from the same point-in-time

Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

ORA-01219: database not open: queries allowed on fixed tables/views only

Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database has been opened.

Action: Re-phrase the query to include only fixed objects, or open the database.

ORA-01220: file based sort illegal before database is open

Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Re-phrase the query to avoid a large sort, increase the values of the SORT_AREA_SIZE and/or SORT_AREA_RETAINED_SIZE initialization parameters to enable the sort to be done in memory.

ORA-01221: data file *string* is not the same file to a background process

Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it recieved when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

ORA-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string*

Cause: Attemping to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

ORA-01223: RESETLOGS must be specified to set a new database name

Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

ORA-01224: group number in header *string* does not match GROUP *string*

Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

ORA-01225: thread number *string* is greater than MAXINSTANCES *string*

Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

ORA-01226: file header of log member is inconsistent with other members

Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

ORA-01227: log *string* is inconsistent with other logs

Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistancy. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01228: SET DATABASE option required to install seed database

Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

ORA-01229: data file *string* is inconsistent with logs

Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01230: cannot make read only - file *string* is offline

Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01231: cannot make read write - file *string* is offline

Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01232: cannot start online backup - file *string* is being made read-only

Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

ORA-01233: file *string* is read only - cannot recover using backup control file

Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

ORA-01234: cannot end backup of file *string* - file is in use or recovery

Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

ORA-01235: END BACKUP failed for *string* file(s) and succeeded for *string*

Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

ORA-01236: Error *string* occurred during initialization of file header access

Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

ORA-01237: cannot extend datafile *string*

Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

ORA-01238: cannot shrink datafile *string*

Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

ORA-01239: database must be in ARCHIVELOG mode to use external cache

Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

ORA-01240: too many data files to add in one command

Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

ORA-01241: an external cache has died

Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

ORA-01242: data file suffered media failure: database in NOARCHIVELOG mode

Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01243: system tablespace file suffered media failure

Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01244: unnamed datafile(s) added to control file by media recovery

Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

ORA-01245: offline file *string* will be lost if RESETLOGS is done

Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

ORA-01246: recovering files through TSPITR of tablespace *string*

Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

ORA-01247: database recovery through TSPITR of tablespace *string*

Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

ORA-01248: file *string* was created in the future of incomplete recovery

Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

ORA-01249: archiving not allowed in a clone database

Cause: Attempting to archive an online redo log or enable archiving for a clone database.

Action: Do not attempt to archive from a clone. The archive log destination could easily be the same as the primary database destroying its archived logs. If archiving is needed then recreate database as not a clone.

ORA-01250: Error *string* occurred during termination of file header access

Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

ORA-01251: Unknown File Header Version read for file number *string*

Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

ORA-01252: cannot prevent writes - file *string* in recovery manager backup

Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

ORA-01253: cannot start online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

ORA-01254: cannot end online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

ORA-01255: cannot shutdown - file *string* in recovery manager backup

Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

ORA-01256: error in locking database file *string*

Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

ORA-01257: cannot reuse database file *string*, **unknown file size**

Cause: The size of the raw partion cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

ORA-01258: unable to delete temporary file *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01259: unable to delete datafile *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01260: warning: END BACKUP succeeded but some files found not to be in backup mode

Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

ORA-01261: Parameter *string* **destination string cannot be translated**

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-01262: Stat failed on a file destination directory

Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

ORA-01263: Name given for file destination directory is invalid

Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

ORA-01264: Unable to create *string* **file name**

Cause: Unable to create an Oracle managed file name.

Action: , if possible, and retry the command.

ORA-01265: Unable to delete *string string*

Cause: An error prevented the file from being deleted.

Action: See the subsequent error messsages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

ORA-01266: Unable to create unique file name

Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

ORA-01267: Failure getting date/time

Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

ORA-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE

Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

ORA-01269: Destination parameter string is too long

Cause: The value for DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

ORA-01270: *string* **operation is not allowed if STANDBY_PRESERVES_NAMES is true**

Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY_PRESERVES_NAMES is true.

Action: Set STANDBY_PRESERVES_NAMES false if the operation must be performed.

ORA-01271: Unable to create new file name for file *string*

Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

ORA-01272: REUSE only allowed when a file name is provided.

Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

ORA-01273: STANDBY_FILE_MANAGEMENT = AUTO needs COMPATIBLE = *string* **or higher**

Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

ORA-01274: cannot add datafile "*string*" - file could not be created

Cause: Automated standby file management was disabled, so an added file could not automatically be created on the standby. The error from the creation attempt is displayed in another message. The control file file entry for the file is "UNNAMEDnnnnn".

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY_FILE_MANAGEMENT to AUTO and restart standby recovery.

ORA-01275: Operation *string* is not allowed if standby file management is automatic.

Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY_FILE_MANAGEMENT was set to AUTO.

Action: Set STANDBY_FILE_MANAGEMENT to MANUAL if the operation must be performed.

ORA-01276: Cannot add file *string*. File has an Oracle Managed Files file name.

Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

ORA-01277: file "*string*" already exists

Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS "filename" command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

ORA-01278: error creating file "*string*"

Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS "filename".

Action: Check the error stack for more detailed information.

ORA-01279: db_files too large

Cause: db_files has been set too high to be supported by the system.

Action: Decrease the number of db_files.

ORA-01280: Fatal LogMiner Error.

Cause: An internal error has occurred inside LogMiner.

Action: None

ORA-01281: SCN range specified is invalid

Cause: StartSCN may be greater than EndSCN, or the SCN specified may be invalid.

Action: Specify a valid SCN range.

ORA-01282: date range specified is invalid

Cause: startTime may be greater than endTime. startTime or endTime may be greater than year 2110. startTime may be less than year 1988.

Action: Specify a valid date range.

ORA-01283: Options specified is invalid

   Cause: The specified options parameter is invalid for the procedure.

   Action: Specify valid Options parameter.

ORA-01284: file *string* cannot be opened

   Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

   Action: Ensure that the file and the directory exist and are accessible.

ORA-01285: error reading file *string*

   Cause: The file or directory may not exist or is inaccessible.

   Action: Specify valid file or directory. Make sure that file and directory are accessible.

ORA-01286: start interval required

   Cause: Options were supplied which require a starting time or starting SCN

   Action: Specify a starting interval (time or SCN).

ORA-01287: file *string* is from a different database incarnation

   Cause: The logfile is produced by a different incarnation of the database.

   Action: Add a logfile that is produced by the same incarnation.

ORA-01288: cannot apply this DDL to the Logminer Dictionary

   Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME_ZONE" is not supported by Logminer.

   Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

ORA-01289: cannot add duplicate logfile *string*

   Cause: The logfile specified has already been added to the list of logfiles.

   Action: Specify a different logfile.

ORA-01290: cannot remove unlisted logfile *string*

   Cause: The user attempted to remove a logfile that is not present in the list.

   Action: Specify a valid logfile.

ORA-01291: missing logfile

   Cause: Not all logfiles corresponding to the time or scn range specified have been added to the list.

   Action: Check the v$logmnr_logs view to determine the missing scn range, and add the relevant logfiles.

ORA-01292: no log file has been specified for the current LogMiner session

   Cause: No logfile has been specified for the LogMiner session.

   Action: Specify atleast one log file.

ORA-01293: mounted database required for specified LogMiner options

   Cause: Options were specified which required the database to be mounted

   Action: Specify different options or mount the database.

ORA-01294: error occurred while processing information in dictionary file *string*, **possible corruption**

Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

ORA-01295: DB_ID mismatch between dictionary *string* **and logfiles**

Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

ORA-01296: character set mismatch between dictionary *string* **and logfiles**

Cause: The character set of the database that produced the dictionary file is different from the charatcter set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

ORA-01297: redo version mismatch between dictionary *string* **and logfiles**

Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: None

ORA-01298: conflicting dictionary option

Cause: More than one dictionary source was specified or DDL_DICT_TRACKING was specified with DICT_FROM_ONLINE_CATALOG.

Action: None

ORA-01299: dictionary *string* **corresponds to a different database incarnation**

Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

ORA-01300: writable database required for specified LogMiner options

Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

ORA-01301: error writing to file during flat file build

Cause: Error writing to file during flat file build

Action: None

ORA-01302: dictionary build options missing or incorrect

Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

ORA-01303: subordinate process error: *number*. **Check alert and trace logs**

Cause: A process subordinate to this Logminer process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

ORA-01304: subordinate process error. Check alert and trace logs

Cause: A process subordinate to this Logminer process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

ORA-01306: dbms_logmnr.start_logmnr() must be invoked before selecting from v$logmnr_contents

Cause: A select was issued from v$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure.

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v$logmnr_contents view.

ORA-01307: no LogMiner session is currently active

Cause: A select was issued from v$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure. Otherwise, dbms_logmnr.end_logmnr() was called without a prior call to dbms_logmnr.start_logmnr() or dbms_logmnr.add_logfile()

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v$logmnr_contents view.

ORA-01308: initialization parameter utl_file_dir is not set

Cause: utl_file_dir is not set in the initialization file.

Action: Set utl_file_dir to the appropriate directory.

ORA-01309: invalid session

Cause: The specified Logminer session ID or session handle is invalid.

Action: Use a valid Logminer session ID or session handle.

ORA-01310: requested return type not supported by the lcr_mine function

Cause: The return type requested by the user is not supported by lcr_mine"

Action: Pick a return type supported by the lcr_mine function"

ORA-01311: Illegal invocation of the mine_value function

Cause: An attempt was made to use mine_value function on a column other than redo_value or undo_value columns of SYS.X$LOGMNR_CONTENTS or SYS.V$LOGMNR_CONTENTS fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine_value

ORA-01312: Specified table/column does not exist

Cause: The table/column specified in the lcr_mine call does not exist at the the specified SCN. The table/column definition has to exist at the start SCN specified for lcr_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

ORA-01313: LogMiner dictionary column type different from specified type

Cause: The return type specified for the column in lcr_mine call is different from the actual type of the column.

Action: Rewrite the lcr_mine invocation with the right return type.

ORA-01314: Name of the column to be mined should be a string literal

Cause: The fully qualified name of the column to be mined by the LogMiner functions should be string literal.

Action: If the fully qualified name of the column to be mined is a.b.c.d, enclose the column name in quotes as in "a.b.c.d".

ORA-01315: Log file has been added or removed during select

Cause: A redo log file has been added or removed while selecting on the v$logmnr_logs fixed view.

Action: Re-issue the SQL select statement on the v$logmnr_logs view.

ORA-01316: Already attached to a Logminer session

Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

ORA-01317: Not attached to a Logminer session

Cause: A command or procedure was issued which requires an attached Logminer session.

Action: Attach to a Logminer session before issuing the command or procedure.

ORA-01319: Invalid Logminer session attribute

Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

ORA-01320: Invalid Logminer dictionar attribute

Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

ORA-01321: No Logminer Dictionary for requested start SCN

Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start_logminer request with a start SCN for which a Logminer Dictionary is available.

ORA-01322: No such table

Cause: An non-existent table was supplied to Logminer include_src_tbl() or exclude_src_table().

Action: Re-issue with valid table name.

ORA-01323: Invalid state

Cause: A Logminer routine was called from the wrong state.

Action: None

ORA-01324: cannot add file *string* due to DB_ID mismatch

Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

ORA-01325: archive log mode must be enabled to build into the logstream

Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

ORA-01326: compatability of 9.0 or greater required to build into the logstream

Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

ORA-01327: failed to exclusively lock system dictionary as required by build

Cause: Other users are performing DDL operations.

Action: None

ORA-01328: only one build operation may occur at one time

Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

ORA-01329: unable to truncate required build table

Cause: The table may be missing, or locked by another user.

Action: None

ORA-01332: internal Logminer Dictionary error

Cause: Unexpected error condition

Action: Check trace and/or alert logs

ORA-01333: failed to establish Logminer Dictionary

Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictiony. Or add_log_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have beed added. The following query, run on the system which build() was run, can be helpful in identifying the requried files. select DICTIONARY_BEGIN, DICTIONARY_END, name from v$archived_log; Minimally a set of files beginning with one which has DICTIONARY_BEGIN = "YES" and all following log files through one marked DICTIONARY_END = "YES" must be added.

ORA-01334: invalid or missing logminer dictionary processes context

Cause: Unexpected internal error condition

Action: None

ORA-01336: specified dictionary file cannot be opened

Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

ORA-01337: log file has a different compatibility version

Cause: The logfile has a different compatibility version then the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

ORA-01338: Other process is attached to LogMiner session

Cause: Can not do this when other process is attached to LogMiner session.

Action: None

ORA-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary

Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

ORA-01340: NLS error

Cause: Could not load NLS package.

Action: None

ORA-01341: LogMiner out-of-memory

Cause: The LogMiner session requires more system resources than is currently available.

Action: Allocate more SGA for LogMiner.

ORA-01342: LogMiner can not resume session due to inability of staging checkpointed data

Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max_sga for the given LogMiner session and try again.

ORA-01343: LogMiner encountered corruption in the logstream

Cause: Log file is missing a range of scn values.

Action: Verify the contiguity of the scn range reprented by the log files added to LogMiner.

ORA-01344: LogMiner coordinator already attached

Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

ORA-01345: Must be a LogMiner coordinator process

Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

ORA-01346: LogMiner processed redo beyond specified reset log scn

Cause: LogMiner has detected a new branch with resetlogs scn information prior to redo already mined.

Action: Contact your customer support representative.

ORA-01347: Supplemental log data no longer found

Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

ORA-01350: must specify a tablespace name

Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of DBMS_LOGMNR_D.SET_TABLESPACE to include the name of a valid tablespace.

ORA-01351: tablespace given for Logminer dictionary does not exist

Cause: The tablespace name given as a parameter to DBMS_LOGMNR_D.SET_ TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_ TABLESPACE does not create a tablespace.

ORA-01352: tablespace given for Logminer spill does not exist

Cause: The tablespace name given as the parameter to DBMS_LOGMNR_D.SET_ TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. DBMS_LOGMNR_D.SET_ TABLESPACE does not create a tablespace.

ORA-01353: existing Logminer session

Cause: An attempt was made to execute DBMS_LOGMNR_D.SET_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS_LOGMNR.START_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS_LOGMNR_D.SET_TABLESPACE.

ORA-01354: Supplemental log data must be added to run this command

Cause: An attempt was made to perform an operation that required that supplemental log data be enabled.

Action: Execute a command such as ALTER DATABASE ADD SUPPLEMENTAL LOG DATA; and then reissue the command that failed with this error.

ORA-01355: logminer tablespace change in progress

Cause: The tables used by logminer are in the process of being moved to another tablespace.

Action: Wait until the move is complete and try again.

ORA-01356: active logminer sessions found

Cause: Logminer sessions are currently active.

Action: End all logminer sessions and retry.

ORA-01358: LogMiner version is less than mined dictionary version

Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

ORA-01361: global name mismatch

Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

ORA-01370: Specified restart SCN is too old

Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

ORA-01371: Complete LogMiner dictionary not found
    Cause: One or more log files containing the LogMiner dictionary was not found.

    Action: Add into LogMiner all log files containing the dictionary.

ORA-01372: Insufficient processes for specified LogMiner operation
    Cause: The number of processes requested by the caller can not be allocated

    Action: Increase number of parallel servers allocated to the instance

ORA-01373: insufficient memory for staging persistent LogMiner session
    Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR_MAX_PERSISTENT_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

    Action: Increase LOGMNR_MAX_PERSISTENT_SESSIONS and restart instance.

ORA-01374: _log_parallelism_max greater than 1 not supported in this release
    Cause: LogMiner does not mine redo records generated with _log_parallelism_ max set to a value greater than 1.

    Action: None

ORA-01375: Corrupt logfile *string* recovered
    Cause: A corrupt logfile has been recovered by RFS

    Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

ORA-01409: NOSORT option may not be used; rows are not in ascending order
    Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split accross two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

    Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

ORA-01411: cannot store the length of column in the indicator
    Cause: Tried to fetch a column of size more than 64K and couldn"t store the length of the column in the given indicator of size 2 bytes.

    Action: Use the new bind type with call backs to fetch the long column.

ORA-01412: zero length not allowed for this datatype
    Cause: The length for type 97 is 0

    Action: Specify the correct length.

ORA-01413: illegal value in packed decimal number buffer
    Cause: The user buffer bound by the user as packed decimal number contained an illegal value.

    Action: Use a legal value.

ORA-01414: invalid array length when trying to bind array

Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Sepcify a valid length.

ORA-01415: too many distinct aggregate functions

Cause: The query contains more distinct aggregates than can be processed. The current limit is 255.

Action: Reduce the number of distinct aggregate functions in the query.

ORA-01417: a table may be outer joined to at most one other table

Cause: a.b (+) = b.b and a.c (+) = c.c is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

ORA-01422: exact fetch returns more than requested number of rows

Cause: The number specified in exact fetch is less than the rows returned.

Action: Rewrite the query or change number of rows requested

ORA-01424: missing or illegal character following the escape character

Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, "%", or "_".

Action: Remove the escape character or specify the missing character.

ORA-01425: escape character must be character string of length 1

Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

ORA-01426: numeric overflow

Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

ORA-01429: Index-Organized Table: no data segment to store overflow row-pieces

Cause: No overflow segment defined.

Action: Add overflow segment.

ORA-01438: value larger than specified precision allowed for this column

Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column.

Action: Enter a value that complies with the numeric column"s precision, or use the MODIFY option with the ALTER TABLE command to expand the precision.

ORA-01451: column to be modified to NULL cannot be modified to NULL

Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

ORA-01453: SET TRANSACTION must be first statement of transaction

Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

ORA-01456: may not perform insert/delete/update operation inside a READ ONLY transaction

Cause: A non-DDL insert/delete/update or select for update operation was attempted

Action: commit (or rollback) transaction, and re-execute

ORA-01463: cannot modify column datatype with current constraint(s)

Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vise versa.

Action: Remove the constraint(s) or do not perform the offending operation.

ORA-01466: unable to read data - table definition has changed

Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

ORA-01469: PRIOR can only be followed by a column name

Cause: Attempting to specify "PRIOR <something>" where <something> is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

ORA-01470: In-list iteration does not support mixed operators

Cause: Constants of different types are specified in an in-list.

Action: Use constants of same type for in-lists.

ORA-01478: array bind may not include any LONG columns

Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

ORA-01479: last character in the buffer is not Null

Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

ORA-01480: trailing null missing from STR bind value

Cause: A bind variable of type 5 (null-terminated string) does not contain the terminating null in its buffer.

Action: Terminate the string with a null character

ORA-01481: invalid number format model

Cause: The user is attempting to either convert a number to a string via TO_CHAR or a string to a number via TO_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

ORA-01482: unsupported character set

Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

ORA-01483: invalid length for DATE or NUMBER bind variable

Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

ORA-01484: arrays can only be bound to PL/SQL statements

Cause: You tried to bind an array to a non-PL/SQL statement.

Action: None

ORA-01485: compile bind length different from execute bind length

Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: None

ORA-01486: size of array element is too large

Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: None

ORA-01487: packed decimal number too large for supplied buffer

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01488: invalid nibble or byte in the input data

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01489: result of string concatenation is too long

Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

ORA-01490: invalid ANALYZE command

Cause: Incorrect syntax specified

Action: Retry the command

ORA-01491: CASCADE option not valid

Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

ORA-01492: LIST option not valid

Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

ORA-01493: invalid SAMPLE size specified

Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

ORA-01494: invalid SIZE specified

Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

ORA-01495: specified chain row table not found

Cause: The specified table either does not exist or user does not have the proper privleges.

Action: Specify the correct table to use.

ORA-01496: specified chain row table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-01497: illegal option for ANALYZE CLUSTER

Cause: The FOR COLUMNS <column-list> clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

4

ORA-01500 to ORA-02098

ORA-01500: failure in getting date/time

    Cause: During create database or alter tablespace, there was a failure in getting the date and time.

    Action: Contact your customer support representative.

ORA-01501: CREATE DATABASE failed

    Cause: An error occurred during create database

    Action: See accompanying errors.

ORA-01502: index "*string.string*" or partition of such index is in unusable state

    Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

    Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

ORA-01503: CREATE CONTROLFILE failed

    Cause: An error occurred during CREATE CONTROLFILE

    Action: See accompanying errors.

ORA-01504: database name "*string*" does not match parameter db_name "*string*"

    Cause: The name in a database create or mount does not match the name given in the INIT.ORA parameter db_name.

    Action: correct or omit one of the two names.

ORA-01505: error in adding log files

    Cause: During create or alter database, error(s) occurred when adding new log files.

    Action: Check error stack for detailed error information.

ORA-01506: missing or illegal database name

    Cause: No db_name INIT.ORA aprameter was specified.

    Action: The database name must be given in the db_name INIT.ORA parameter.

ORA-01507: database not mounted

    Cause: A command was attempted that requires the database to be mounted.

    Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first

mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

ORA-01508: cannot create database; error in file "*string*" at line *string*

Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

ORA-01509: specified name "*string*" does not match actual "*string*"

Cause: The database name specified in ALTER DATABASE does not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database.

ORA-01510: error in deleting log files

Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

ORA-01511: error in renaming log/data files

Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

ORA-01512: error renaming log file *string* - new file *string* not found

Cause: An attempt to change a log file"s name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

ORA-01513: invalid current time returned by operating system

Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

ORA-01514: error in log specification: no such log

Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

ORA-01515: error dropping log group *string*: no such log

Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

ORA-01516: nonexistent log file, datafile, or tempfile "*string*"

Cause: An attempt was made to use ALTER DATABASE to rename a log file, datafile, or tempfile; or to change attributes of a datafile or tempfile (e.g., resize, autoextend, online/offline, etc.); or to re-create a datafile. The attempt failed because the specified file is not known to the database"s control file or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V$ table for a list of possible files.

ORA-01517: log member: "*string*"

Cause: Used to print member names

Action: See top level error for information

ORA-01518: CREATE DATABASE must specify more than one log file

Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

ORA-01519: error while processing file "*string*" near line *string*

Cause: CREATE DATABASE encountered a problem while processing specified file. The specified file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01520: number of data files to add (*string*) exceeds limit of *string*

Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

ORA-01521: error in adding data files

Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

ORA-01522: file "*string*" to be renamed does not exist

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

ORA-01523: cannot rename data file to "*string*" - file already part of database

Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

ORA-01524: cannot create data file as "*string*" - file already part of database

Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

ORA-01525: error in renaming data files

Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

ORA-01526: error in opening file "*string*"

Cause: CREATE DATABASE was not able to open the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01527: error while reading file

Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01528: EOF while processing SQL statement

Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01529: error closing file "*string*"

Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01530: a database already mounted by the instance

Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

ORA-01531: a database already open by the instance

Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

ORA-01532: cannot create database; instance being started elsewhere

Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

ORA-01533: cannot rename file "*string*"; file does not belong to tablespace

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

ORA-01534: rollback segment "*string*" doesn"t exist

Cause: During ALTER or DROP ROLLBACK SEGMENT, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

ORA-01535: rollback segment "*string*" already exists or given name has prefix _SYSSMU

Cause: Specified rollback segment already exists or given name starts with _SYSSMU.

Action: Use a different name. Note that _SYSSMU is an illegal prefix to an RBU segment.

ORA-01536: space quota exceeded for tablespace "*string*"

Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

ORA-01537: cannot add file "*string*" - file already part of database

Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01538: failed to acquire any rollback segment

Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter rollback_segments_ required, then startup in shared mode

ORA-01539: tablespace "*string*" is not online

Cause: Failed to either make a tablespace read only or offline because it is not online. A tblespace must be online before it can become read only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read only.

ORA-01540: tablespace "*string*" is not offline

Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

ORA-01541: system tablespace cannot be brought offline; shut down if necessary

Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

ORA-01542: tablespace "*string*" is offline, cannot allocate space in it

Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

ORA-01543: tablespace "*string*" already exists

Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

ORA-01544: cannot drop system rollback segment

Cause: Tried to drop system rollback segment

Action: None

ORA-01545: rollback segment "*string*" specified not available

Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to

drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in _corrupted_rollback_segments parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the _ corrupted_rollback_segments parameter.

ORA-01546: tablespace contains active rollback segment "*string*"

Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read only

ORA-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below

Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

ORA-01548: active rollback segment "*string*" found, terminate dropping tablespace

Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

ORA-01549: tablespace not empty, use INCLUDING CONTENTS option

Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

ORA-01550: cannot drop system tablespace

Cause: Tried to drop system tablespace

Action: None

ORA-01551: extended rollback segment, pinned blocks released

Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

ORA-01552: cannot use system rollback segment for non-system tablespace "*string*"

Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when

attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter rollback_segments to acquire private rollback segment. If this is a clone database being used for tablspace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

ORA-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated
Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

ORA-01554: out of transaction slots in transaction tables
Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters transactions, rollback_segments or rollback_segments_required, then startup again

ORA-01555: snapshot too old: rollback segment number *string* with name "*string*" too small
Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase undo_retention setting. Otherwise, use larger rollback segments

ORA-01556: MINEXTENTS for rollback segment must be greater than 1
Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

ORA-01557: rollback segment extents must be at least *string* blocks
Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

ORA-01558: out of transaction ID"s in rollback segment *string*
Cause: All the available transaction id"s have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id"s.

ORA-01559: MAXEXTENTS for rollback segment must be greater than 1
Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

ORA-01560: LIKE pattern contains partial or illegal character
Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

ORA-01561: failed to remove all objects in the tablespace specified
Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

ORA-01562: failed to extend rollback segment number *string*

    Cause: Failure occurred when trying to extend rollback segment

    Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintainence. Use the alter rollback segment offline command to take the rollback segment offline.

ORA-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC

    Cause: Did not use the keyword PUBLIC to identified public rollback segment

    Action: Use the keyword PUBLIC when identifying public rollback segment

ORA-01564: rollback segment is not PUBLIC

    Cause: The rollback segment segment identified is not public

    Action: Do not use the keyword PUBLIC when identifying private rollback segment

ORA-01565: error in identifying file "*string***"**

    Cause: An error occurred while trying to identify a file.

    Action: Check the error stack for detailed information.

ORA-01566: file specified more than once in ALTER DATABASE

    Cause: The list of files supplied to the command contained at least one duplicate.

    Action: Remove the duplicate file specification and retry.

ORA-01567: dropping log *string* **would leave less than 2 log files for instance** *string* **(thread** *string***)**

    Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

    Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01568: cannot set space quota on PUBLIC

    Cause: Trying to set space quota on a tablespace for PUBLIC.

    Action: If trying to grant system-wide or tablespace-wide space priviledges to all users, use GRANT RESOURCE [ON <tablespace>] TO PUBLIC.

ORA-01569: data file too small for system dictionary tables

    Cause: The datafile specified during creation of the database is too small to hold the system dictionary tables.

    Action: Recreate the database by specifying a larger file or more files.

ORA-01570: MINEXTENTS must be no larger than the *string* **extents currently allocated**

    Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

    Action: Specify a smaller MINEXTENTS value.

ORA-01571: redo version *string* **incompatible with ORACLE version** *string*

    Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

    Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current

software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

ORA-01572: rollback segment "*string*" cannot be brought online, *string* extents exceeded

Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

ORA-01573: shutting down instance, no further change allowed

Cause: Some process tries to make changes while the db is being shutdown

Action: None

ORA-01574: maximum number of concurrent transactions exceeded

Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter "transactions" , and then restart the system.

ORA-01575: timeout waiting for space management resource

Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

ORA-01576: The instance *string* is not enabled

Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

ORA-01577: cannot add log file "*string*" - file already part of database

Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01578: ORACLE data block corrupted (file # *string*, block # *string*)

Cause: The data block indicated was corrupted, mostly due to software errors.

Action: Try to restore the segment containing the block indicated. This may involve dropping the segment and recreating it. If there is a trace file, report the errors in it to your ORACLE representative.

ORA-01579: write error occurred during recovery

Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

ORA-01580: error creating control backup file *string*

Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

ORA-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated

Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rollbacked by the system, no more extension will be possible untill the next extent is freed up by rolling back or committing other transactions.

ORA-01582: unable to open control file for backup

Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

ORA-01583: unable to get block size of control file to be backed up

Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01584: unable to get file size of control file to be backed up

Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01585: error identifying backup file *string*

Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

ORA-01586: database must be mounted EXCLUSIVE and not open for this operation

Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

ORA-01588: must use RESETLOGS option for database open

Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

ORA-01589: must use RESETLOGS or NORESETLOGS option for database open

Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

ORA-01590: number of segment free list (*string*) exceeds maximum of *string*

Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

ORA-01591: lock held by in-doubt distributed transaction *string*

Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending_trans$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for

correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

ORA-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format

Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

ORA-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)

Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

ORA-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed

Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rollbacked by the system; increase the optimal size of the rollback segment.

ORA-01595: error freeing extent (*string*) of rollback segment (*string*))

Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

ORA-01596: cannot specify system in *string* parameter

Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

ORA-01597: cannot alter system rollback segment online or offline

Cause: Tried to online or offline the system rollback segment

Action: None

ORA-01598: rollback segment "*string*" is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01599: failed to acquire rollback segment (*string*), cache space is full

Cause: the amount statically allocated is not enough based on max_rollback_ segments parameter.

Action: For now take another rollback segment offline or increase the parameter max_rollback_segments

ORA-01600: at most one "*string*" in clause "*string*" of *string*

Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01601: illegal bucket size in clause "*string*" of *string*

Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01603: illegal grouping size in clause "*string*" of *string*
Cause: The grouping size was invalid for this parameter.
Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01604: illegal number range in clause "*string*" of *string*
Cause: The number range was invalid for this parameter.
Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01605: missing numbers in clause "*string*" of *string*
Cause: The numbers were missing for this parameter.
Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01606: gc_files_to_locks not identical to that of another mounted instance
Cause: The gc_files_to_locks parameters were different on two instances.
Action: Modify the INIT.ORA parameter gc_files_to_locks and restart.

ORA-01607: cannot add logfile to the specified instance
Cause: The limit on the number of instances supported by the control file has been reached.
Action: Use an instance name supported by the control file, or resize the thread record and/or checkpoint progress record secions of the control file.

ORA-01608: cannot bring rollback segment "*string*" online, its status is (*string*)
Cause: Could have been brought online before by DBA or left as a result of process crash.
Action: Check the status of rollback segment in undo$ or dba_rollback_segs

ORA-01609: log *string* is the current log for thread *string* - cannot drop members
Cause: A member of the current log for a thread cannot be dropped.
Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

ORA-01610: recovery using the BACKUP CONTROLFILE option must be done
Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.
Action: Perform recovery using the BACKUP CONTROFILE option.

ORA-01611: thread number *string* is invalid - must be between 1 and *string*
Cause: A thread number in a command is greater than the number of threads supported by the control file.
Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01612: instance *string* (thread *string*) is already enabled
Cause: An attempt was made to enable a thread that is already enabled.
Action: Either use this thread or enable another thread.

ORA-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.

Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

ORA-01614: instance *string* (thread *string*) is busy - cannot enable

Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

ORA-01615: instance *string* (thread *string*) is mounted - cannot disable

Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleany using the thread.

ORA-01616: instance *string* (thread *string*) is open - cannot disable

Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

ORA-01617: cannot mount: *string* is not a valid thread number

Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01618: redo thread *string* is not enabled - cannot mount

Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

ORA-01619: thread *string* is mounted by another instance

Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

ORA-01620: no public threads are available for mounting

Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

ORA-01621: cannot rename member of current log if database is open

Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

ORA-01622: thread number must be specified - default not specific

Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

ORA-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop

Cause: A thread"s current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

ORA-01624: log *string* needed for crash recovery of instance *string* (thread *string*)

Cause: A log cannot be dropped or cleared until the thread"s checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

ORA-01625: rollback segment "*string*" does not belong to this instance

Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: None

ORA-01626: rollback segment number "*string*" cannot handle more transactions

Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

ORA-01627: rollback segment number "*string*" is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01628: max # extents (*string*) reached for rollback segment *string*

Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

ORA-01629: max # extents (*string*) reached saving undo for tablespace *string*

Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

ORA-01630: max # extents (*string*) reached in temp segment in tablespace *string*

Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01631: max # extents (*string*) reached in table *string.string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01632: max # extents (*string*) reached in index *string.string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01633: Real Application Clusters Option needed for this operation

Cause: System doesn"t have Real Application Clusters configured

Action: Obtain Real Application Clusters option

ORA-01634: rollback segment number "*string*" is about to go offline

Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

ORA-01635: rollback segment #*string* specified not available

Cause: (same as 1545)

Action: (same as 1545)

ORA-01636: rollback segment "*string*" is already online

Cause: The instance is trying to online an already online RS

Action: None

ORA-01637: rollback segment "*string*" is being used by another instance (#*string*)

Cause: The instance is trying to online a RS already in use by another instance

Action: None

ORA-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database

Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the recovery_compatible parameter. If this happens when no recovery_compatible parameter has been specified then set it to the current software release.

ORA-01639: instance *string* has no thread assigned to it

Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

ORA-01640: cannot make tablespace read only with active transactions

Cause: Attempting to make a tablespace read only while there are active transactions in the database. All transactions must commit or rollback to insure that there is no undo for a tablespace before it can be made read only. This includes in doubt distributed transactions.

Action: Prevent any more transactions from being started. Putting the database in restricted mode usually helps. If there are any in doubt transactions they must also be resolved.

ORA-01641: tablespace "*string*" is not online - cannot add data file

Cause: Attempting to add a datafile to a tablespace that has been set to read only or offline.

Action: Make the tablespace online and read write then add the datafile.

ORA-01642: begin backup not needed for read only tablespace "*string*"

Cause: Attempting to begin or end a backup for a tablespace that has been set to read only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

ORA-01643: system tablespace can not be made read only

Cause: Attempting to set the system tablespace to read only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

ORA-01644: tablespace "*string*" is already read only

Cause: Attempting to make tablespace read only that is already read only.

Action: Leave tablespace read only, or make read write then make read only again.

ORA-01645: previous attempt to make read write is half complete

Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

ORA-01646: tablespace "*string*" is not read only - cannot make read write

Cause: Attempting to make a tablespace read write that is not read only. It may be either online or offline.

Action: Leave tablespace read write.

ORA-01647: tablespace "*string*" is read only, cannot allocate space in it

Cause: Tried to allocate space in a read only tablespace

Action: Create the object in another tablespace

ORA-01648: log *string* is the current log of disabled instance *string* (thread *string*)

Cause: An attempt to enable the thread failed after it was half completed. This log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log can not be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

ORA-01649: operation not allowed with a backup control file

Cause: An attempt is being made to perform a command that does not make sense when the control file is a restored backup.

Action: Wait until after the database has been opened and try again.

ORA-01650: unable to extend rollback segment *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01651: unable to extend save undo segment by *string* for tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-01652: unable to extend temp segment by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a temporary segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01653: unable to extend table *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01654: unable to extend index *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01655: unable to extend cluster *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01656: max # extents (*string*) reached in cluster *string.string*

Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01657: invalid SHRINK option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-01658: unable to create INITIAL extent for segment in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

ORA-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

ORA-01660: tablespace "*string*" is already permanent

Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

ORA-01661: tablespace "*string*" is already temporary

Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

ORA-01662: tablespace "*string*" is non-empty and cannot be made temporary

Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

ORA-01663: the contents of tablespace "*string*" is constantly changing

Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

ORA-01664: Transaction which has expanded the Sort Segment has aborted

Cause: Internal Error.

Action: Contact Oracle Support.

ORA-01665: control file is not a standby control file

Cause: Attempting to mount, recover or activate a standby database without a standby control file.

Action: Create a standby control file before attempting to use the database as a standby database.

ORA-01666: control file is for a standby database

Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

ORA-01667: cannot add any more tablespaces: limit of *string* exceeded

Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

ORA-01668: standby database requires DROP option for offline of data file

Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not

recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

ORA-01669: standby database control file not consistent

Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

ORA-01670: new datafile *string* needed for standby database recovery

Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

ORA-01671: control file is a backup, cannot make a standby control file

Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

ORA-01672: control file may be missing files or have extra ones

Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

ORA-01673: data file *string* has not been identified

Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

ORA-01674: data file *string* is an old incarnation rather than current file

Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

ORA-01675: max_commit_propagation_delay inconsistent with other instances

Cause: The max_commit_propagation_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max_commit_propagation_delay.

ORA-01676: standby file name convert of "*string*" exceeds maximum length of *string*

Cause: When the given file name is converted to the name used for the standby database, the converted name is bigger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_STANDBY_NAME_CONVERT or LOG_FILE_STANDBY_NAME_CONVERT to convert to a valid file name.

ORA-01677: standby file name convert parameters differ from other instance

Cause: The DB_FILE_STANDBY_NAME_CONVERT or LOG_FILE_STANDBY_ NAME_CONVERT initialization parameters are not the same as in other instances that already have the database mounted.

Action: Change initialization parameters DB_FILE_STANDBY_NAME_ CONVERT and LOG_FILE_STANDBY_NAME_CONVERT to match other instances.

ORA-01678: parameter *string* must be pairs of pattern and replacement strings

Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

ORA-01679: database must be mounted EXCLUSIVE and not open to activate

Cause: An attempt to activate a standby database was made when the database was not mounted EXCLUSIVE or was already open.

Action: Mount the database EXCLUSIVE and retry the ACTIVATE command.

ORA-01680: unable to extend LOB segment by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01681: max # extents (*string*) reached in LOB segment in tablespace *string*

Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01682: read-only DB cannot allocate temporary space in tablespace *string*

Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT_AREA_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

ORA-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01684: max # extents (*string*) reached in table *string*.*string* partition *string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01685: max # extents (*string*) reached in index *string*.*string* partition *string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01686: max # files (*string*) reached for the tablespace *string*

Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

ORA-01687: specified logging attribute for tablespace "*string*" is same as the existing

Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

ORA-01688: unable to extend table *string*.*string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01689: syntax error in clause "*string*" of *string*

Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

ORA-01690: sort area size too small

Cause: sort area size too small to fit two records in memory

Action: increase sort_area_size

ORA-01691: unable to extend lob segment *string*.*string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01692: unable to extend lob segment *string*.*string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01693: max # extents (*string*) reached in lob segment *string*.*string*

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-01694: max # extents (*string*) reached in lob segment *string.string* partition *string*

    Cause: A LOB segment tried to extend past maxextents

    Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01695: error converting rollback segment *string* to version 8.0.2

    Cause: Version 8.0.1 database may not have shutdown cleanly

    Action: May have to reload the 8.0.1 database and shutdown cleanly

ORA-01696: control file is not a clone control file

    Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

    Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

ORA-01697: control file is for a clone database

    Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

    Action: Use the clone option or appropriate commands, or mount with the primary control file.

ORA-01698: a clone database may only have SYSTEM rollback segment online

    Cause: Attempting to online a rollback segment in a clone database.

    Action: Do not use this command.

ORA-01699: tablespace "*string*" is being imported for point in time recovery

    Cause: Attempting to online a tablespace or begin another point in time import while a point in time import is already in progress

    Action: Wait until the import complets

ORA-01702: a view is not appropriate here

    Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

    Action: An Editioning View may only be created over a base table.

ORA-01704: string literal too long

    Cause: The string literal is longer than 4000 characters.

    Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

ORA-01715: UNIQUE may not be used with a cluster index

    Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

    Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-01716: NOSORT may not be used with a cluster index

    Cause: An attempt was made to create a cluster index using the NOSORT option.

    Action: Remove NOSORT from the CREATE INDEX statement.

ORA-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT

    Cause: Attempt to specify BY ACCESS | SESSION in a NOAUDIT statement.

Action: Remove BY ACCESS | SESSION.

ORA-01719: outer join operator (+) not allowed in operand of OR or IN

Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+) or B), try (select where (A(+) and not B)) union all (select where (B)).

ORA-01720: grant option does not exist for "*string.string*"

Cause: A grant was being performed on a view and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view.

ORA-01721: USERENV(COMMITSCN) invoked more than once in a transaction

Cause: The USERENV("COMMITSCN") function can only be used once in a transaction.

Action: Re-write the transactioin to use USERENV("COMMITSCN") only once

ORA-01724: floating point precision is out of range (1 to 126)

Cause: Self-evident.

Action: Self-evident.

ORA-01725: USERENV("COMMITSCN") not allowed here

Cause: The function USERNEV("COMMMITSCN") is only allowed as a top-level expression in the VALUES clause of an INSERT statements, and on the right hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function.

ORA-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX

Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

ORA-01742: comment not terminated properly

Cause: The indicated comment or hint begun with the /* token did not have the terminating */.

Action: Properly terminate the comment or hint with a */.

ORA-01743: only pure functions can be indexed

Cause: The indexed function uses SYSDATE or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use SYSDATE, USER, USERENV(), or anything else dependent on the session state. NLS-dependent functions are OK.

ORA-01751: Invalid dump undo option

Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

ORA-01752: cannot delete from view without exactly one key-preserved table

Cause: The deleted table had

- no key-preserved tables,

- more than one key-preserved table, or

- the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

ORA-01754: a table may contain only one column of type LONG

Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

ORA-01755: Must specify an extent number or block number

Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01757: Must specify an object number

Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01761: DML operation does not map to a unique table in the join

Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

ORA-01763: update or delete involves outer joined table

Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer- joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table.

Action: Change the join specification.

ORA-01764: new update value of join is not guaranteed to be unique

Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

ORA-01769: duplicate CLUSTER option specifications

Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

ORA-01771: illegal option for a clustered table

Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

ORA-01772: Must specify a value for LEVEL

Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

ORA-01774: Dump undo option specified more than once

    Cause: The same option for ALTER DUMP UNDO was specified twice.

    Action: Remove the redundant options and reissue the command.

ORA-01776: cannot modify more than one base table through a join view

    Cause: Columns belonging to more than one underlying table were either inserted into or updated.

    Action: Phrase the statement as two or more separate statements.

ORA-01779: cannot modify a column which maps to a non key-preserved table

    Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

    Action: Modify the underlying base tables directly.

ORA-01781: UNRECOVERABLE cannot be specified without AS SELECT

    Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

    Action: Do not specify UNRECOVERABLE.

ORA-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table

    Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

    Action: Do not specify UNRECOVERABLE.

ORA-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified

    Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

    Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

ORA-01784: RECOVERABLE cannot be specified with database media recovery disabled

    Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

    Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

ORA-01792: maximum number of columns in a table or view is 1000

    Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

    Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before

adding new columns; 2) Reduce the number of columns in the command and resubmit.

ORA-01799: a column may not be outer-joined to a subquery

Cause: <expression>(+) <relop> (<subquery>) is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

ORA-01804: failure to initialize timezone information

Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

ORA-01841: (full) year must be between -4713 and +9999, and not be 0

Cause: Illegal year entered

Action: Input year in the specified range

ORA-01854: julian date must be between 1 and 5373484

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

ORA-01858: a non-numeric character was found where a numeric was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01859: a non-alphabetic character was found where an alphabetic was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01861: literal does not match format string

Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

ORA-01862: the numeric value does not match the length of the format item

Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

ORA-01863: the year is not supported for the current calendar

Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

ORA-01864: the date is out of range for the current calendar

    Cause: Your calendar doesn"t extend to the specified date.

    Action: Specify a date which is legal for this calendar.

ORA-01865: not a valid era

    Cause: Era input does not match a known era.

    Action: Provide a valid era on input.

ORA-01866: the datetime class is invalid

    Cause: This is an internal error.

    Action: Please contact Oracle Worldwide Support.

ORA-01867: the interval is invalid

    Cause: The character string you specified is not a valid interval.

    Action: Please specify a valid interval.

ORA-01868: the leading precision of the interval is too small

    Cause: The leading precision of the interval is too small to store the specified interval.

    Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01870: the intervals or datetimes are not mutually comparable

    Cause: The intervals or datetimes are not mutually comparable.

    Action: Specify a pair of intervals or datetimes that are mutually comparable.

ORA-01871: the number of seconds must be less than 60

    Cause: The number of seconds specified was greater than 59.

    Action: Specify a value for seconds that is 59 or smaller.

ORA-01873: the leading precision of the interval is too small

    Cause: The leading precision of the interval is too small to store the specified interval.

    Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01874: time zone hour must be between -12 and 14

    Cause: The time zone hour specified was not in the valid range.

    Action: Specify a time zone hour between -12 and 14.

ORA-01875: time zone minute must be between -59 and 59

    Cause: The time zone minute specified was not in the valid range.

    Action: Specify a time zone minute between -59 and 59.

ORA-01876: year must be at least -4713

    Cause: The specified year was not in range.

    Action: Specify a year that is greater than or equal to -4713.

ORA-01877: string is too long for internal buffer

    Cause: This is an internal error.

    Action: Please contact Oracle Worldwide Support.

ORA-01878: specified field not found in datetime or interval
    Cause: The specified field was not found in the datetime or interval.

    Action: Make sure that the specified field is in the datetime or interval.

ORA-01879: the hh25 field must be between 0 and 24
    Cause: The specified hh25 field was not in the valid range.

    Action: Specify an hh25 field between 0 and 24.

ORA-01880: the fractional seconds must be between 0 and 999999999
    Cause: The specified fractional seconds were not in the valid range.

    Action: Specify a value for fractional seconds between 0 and 999999999.

ORA-01881: timezone region id *number* is invalid
    Cause: The region id referenced an invalid region.

    Action: Please contact Oracle Customer Support.

ORA-01882: timezone region *string* not found
    Cause: The specified region name was not found.

    Action: Please contact Oracle Customer Support.

ORA-01883: overlap was disabled during a region transition
    Cause: The region was changing state and the overlap flag was disabled.

    Action: Please contact Oracle Customer Support.

ORA-01890: NLS error detected
    Cause: An NLS error was detected.

    Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

ORA-01891: Datetime/Interval internal error
    Cause: Internal error.

    Action: Please contact Oracle Worldwide Support.

ORA-01898: too many precision specifiers
    Cause: While trying to truncate or round dates, extra data was found in the date format picture

    Action: Check the syntax of the date format picture and retry.

ORA-01900: LOGFILE keyword expected
    Cause: keyword missing

    Action: supply missing keyword

ORA-01901: ROLLBACK keyword expected
    Cause: keyword missing

    Action: supply missing keyword

ORA-01902: SEGMENT keyword expected
    Cause: keyword missing

    Action: supply missing keyword

ORA-01903: EVENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01904: DATAFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01905: STORAGE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01906: BACKUP keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01907: TABLESPACE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01908: EXISTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01909: REUSE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01910: TABLES keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01911: CONTENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01912: ROW keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01913: EXCLUSIVE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01914: invalid auditing option for sequence numbers

Cause: AUDIT or NOAUDIT on a sequence number specifies an auditing option that is not legal for sequence numbers.

Action: The following options may not be used for sequence numbers and should be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE

ORA-01915: invalid auditing option for views

Cause: AUDIT or NOAUDIT on a view specifies an auditing option that is not legal for views.

Action: The following options may not be used for views and should be removed: ALTER, INDEX, REFERENCES, EXECUTE

ORA-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND or END/DROP expected

Cause: An expected keyword was not used for datafile/tempfile clause

Action: Use correct syntax.

ORA-01917: user or role "*string*" does not exist

Cause: There is not a user or role by that name.

Action: Re-specify the name.

ORA-01918: user "*string*" does not exist

Cause: User does not exist in the system.

Action: Verify the user name is correct.

ORA-01919: role "*string*" does not exist

Cause: Role by that name does not exist.

Action: Verify you are using the correct role name.

ORA-01920: user name "*string*" conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different user name.

ORA-01921: role name "*string*" conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different role name.

ORA-01922: CASCADE must be specified to drop "*string*"

Cause: Cascade is required to remove this user from the system. The user own"s object which will need to be dropped.

Action: Specify cascade.

ORA-01923: CASCADE aborted, objects locked by another user

Cause: Cannot drop the user"s objects; someone has them locked.

Action: Use the lock monitor to determine who has the objects locked.

ORA-01924: role "*string*" not granted or does not exist

Cause: Set role can only be performed with roles granted directly to your account. (e.g. a sub-role cannot be enabled)

Action: Don"t try to set the role.

ORA-01925: maximum of *string* enabled roles exceeded

Cause: The INIT.ORA parameter "max_enabled_roles" has been exceeded.

Action: Increase max_enabled_roles and warm start the database.

ORA-01926: cannot GRANT to a role WITH GRANT OPTION

Cause: Role cannot have a privilege with the grant option.

Action: Perform the grant without the grant option.

ORA-01927: cannot REVOKE privileges you did not grant

Cause: You can only revoke privileges you granted.

Action: Don"t revoke these privileges.

ORA-01928: GRANT option not granted for all privileges

Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

ORA-01929: no privileges to GRANT

Cause: "ALL" was specified but the user doesn"t have any privileges with the grant option.

Action: Don"t grant privileges on that object.

ORA-01930: auditing the object is not supported

Cause: AUDIT or NOAUDIT was specified for an object that cannot be audited.

Action: Don"t attempt to AUDIT the object.

ORA-01931: cannot grant *string* to a role

Cause: UNLIMITED TABLESPACE, REFERENCES, INDEX, SYSDBA or SYSOPER privilege cannot be granted to a role.

Action: Grant privilege directly to the user.

ORA-01932: ADMIN option not granted for role "*string*"

Cause: The operation requires the admin option on the role.

Action: Obtain the grant option and re-try.

ORA-01933: cannot create a stored object using privileges from a role

Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

ORA-01934: circular role grant detected

Cause: Roles cannot be granted circularly. Also, a role cannot be granted to itself.

Action: Do not perform the grant.

ORA-01935: missing user or role name

Cause: A user or role name was expected.

Action: Specify a user or role name.

ORA-01936: cannot specify owner when creating users or roles

Cause: Users and roles do not have owners.

Action: Don"t specify an owner.

ORA-01937: missing or invalid role name

Cause: A valid role name was expected.

Action: Specify a valid role name.

ORA-01938: IDENTIFIED BY must be specified for CREATE USER

Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY".

Action: Specify one of the password clauses.

ORA-01939: only the ADMIN OPTION can be specified

Cause: System privileges and Roles can only be granted with the admin option. The grant option cannot be used with these privileges.

Action: Specify the admin option.

ORA-01940: cannot drop a user that is currently connected

Cause: Attempt was made to drop a user that is currently logged in.

Action: Make sure user is logged off, then repeat command.

ORA-01941: SEQUENCE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified

Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

ORA-01943: IDENTIFIED BY already specified

Cause: The identified clause has been given twice.

Action: Use only one identified by clause.

ORA-01944: IDENTIFIED EXTERNALLY already specified

Cause: The identified externaly clause has been given twice.

Action: Use only one identified clause.

ORA-01945: DEFAULT ROLE[S] already specified

Cause: The default roles clause has been given twice.

Action: Use only on default role clause.

ORA-01946: DEFAULT TABLESPACE already specified

Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

ORA-01947: TEMPORARY TABLESPACE already specified

Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

ORA-01948: identifier''s name length (*string*) exceeds maximum (*string*)

Cause: A name has been specified that is too long. For example, dbms_session.is_role_enabled() specifies a role name that is too long.

Action: Change the application or command to use a correct identifier.

ORA-01949: ROLE keyword expected

Cause: The role keyword is required here.

Action: Specify the role keyword.

ORA-01950: no privileges on tablespace "*string*"

Cause: User does not have privileges to allocate an extent in the specified tablespace.

Action: Grant the user the appropriate system privileges or grant the user space resource on the tablespace.

ORA-01951: ROLE "*string*" not granted to "*string*"

   Cause: The role you tried to revoke was not granted to the user.

   Action: Don"t try to revoke a privilege which is not granted.

ORA-01952: system privileges not granted to "*string*"

   Cause: A system privilege you tried to revoke was not granted to the user.

   Action: Make sure the privileges you are trying to revoke are granted.

ORA-01953: command no longer valid, see ALTER USER

   Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

   Action: Use the alter user command instead.

ORA-01954: DEFAULT ROLE clause not valid for CREATE USER

   Cause: Default roles cannot be specified for create user.

   Action: Grant and alter the user"s default roles after creating the user.

ORA-01955: DEFAULT ROLE "*string*" not granted to user

   Cause: The user being altered does not have the specified role granted directly to the user. Note, sub-roles cannot be used in the default role clause.

   Action: Grant the role to the user.

ORA-01956: invalid command when OS_ROLES are being used

   Cause: This command cannot be used when the INIT.ORA parameter OS_ROLES is TRUE.

   Action: Grant the role to the user in the operating system.

ORA-01967: invalid option for CREATE CONTROLFILE

   Cause: An invalid CREATE CONTROLFILE option is present.

   Action: Specify only valid CREATE CONTROLFILE options.

ORA-01968: Only specify RESETLOGS or NORESETLOGS once

   Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

   Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01969: You must specify RESETLOGS or NORESETLOGS

   Cause: Missing a RESETLOGS or a NORESETLOGS

   Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01970: You must specify a database name for CREATE CONTROLFILE

   Cause: Missing a database name

   Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

ORA-01973: Missing change number

   Cause: Keyword "CHANGE" found but change number not specified.

   Action: Fix command line and resubmit

ORA-01974: Illegal archive option

Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: None

ORA-01977: Missing thread number

Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

ORA-01978: Missing sequence number

Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

ORA-01979: missing or invalid password for role "*string*"

Cause: An attempt was made to enable a role without giving

Action: Use the "identified by" clause in set role to specify the correct password.

ORA-01980: error during OS ROLE initialization

Cause: An OS error occurred while loading a users OS ROLES.

Action: Check the OS error.

ORA-01981: CASCADE CONSTRAINTS must be specified to perform this revoke

Cause: During this revoke some foreign key contraints will be removed. In order to perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

ORA-01982: invalid auditing option for tables

Cause: AUDIT or NOAUDIT on a table specifies an auditing option that is not legal for tables.

Action: The following options may not be used for tables and should be removed: REFERENCES, EXECUTE

ORA-01983: invalid auditing option for DEFAULT

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for DEFAULT.

Action: The following options may not be used for DEFAULT and should be removed: REFERENCES

ORA-01984: invalid auditing option for procedures/packages/functions

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for procedures, packages, or functions.

Action: The following options may not be used for procedures, packages, and functions and should be removed: all but EXECUTE

ORA-01985: cannot create user as LICENSE_MAX_USERS parameter exceeded

Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

ORA-01986: OPTIMIZER_GOAL is obsolete

Cause: An obsolete parameter, OPTIMIZER_GOAL, was referenced.

Action: Use the OPTIMIZER_MODE parameter.

ORA-01987: client os username is too long

Cause: A client"s os username is too long for the os logon to succeed.

Action: Use a shorter os username.

ORA-01988: remote os logon is not allowed

Cause: Remote os login attempted when not allowed.

Action: Use a local client, or use the remote_os_authent system parameter to turn on remote os logon.

ORA-01989: role "*string*" not authorized by operating system

Cause: The os role does not exist, is not granted to you, or you did not provide the correct password.

Action: Re-attempt the SET ROLE with a valid os role and password, if necessary.

ORA-01994: GRANT failed: password file missing or disabled

Cause: The operation failed either because the INIT.ORA parameter REMOTE_ LOGIN_PASSWORDFILE was set to NONE or else because the password file was missing.

Action: Create the password file using the orapwd tool and set the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE.

ORA-01999: password file cannot be updated in SHARED mode

Cause: The operation failed because the INIT.ORA parameter REMOTE_LOGIN_ PASSWORDFILE was set to SHARED.

Action: Set the INIT.ORA parameter to EXCLUSIVE.

ORA-02001: user SYS is not permitted to create indexes with freelist groups

Cause: user tried to create an index while running with sys authorization.

Action: None

ORA-02004: security violation

Cause: This error code is never returned to a user. It is used as a value for column, audit_trail.returncode, to signal that a security violation occurred.

Action: None

ORA-02007: can"t use ALLOCATE or DEALLOCATE options with REBUILD

Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

ORA-02009: the size specified for a file must not be zero

Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

ORA-02020: too many database links in use

Cause: The current session has exceeded the INIT.ORA open_links maximum.

Action: Increase the open_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

ORA-02021: DDL operations are not allowed on a remote database

Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

ORA-02022: remote statement has unoptimized view with remote object

Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

ORA-02024: database link not found

Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

ORA-02025: all tables in the SQL statement must be at the remote database

Cause: The user"s SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: None

ORA-02026: missing LINK keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02027: multi-row UPDATE of LONG column is not supported

Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

ORA-02028: fetching an exact number of rows is not supported by the server

Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

ORA-02029: missing FILE keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02030: can only select from fixed tables/views

Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

ORA-02031: no ROWID for fixed tables or for external-organized tables

Cause: An attempt is being made to access rowid from a fixed table or from a external-organized table.

Action: Do not access ROWID from a fixed table or from a external-organized table.

ORA-02032: clustered tables cannot be used before the cluster index is built

Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

ORA-02033: a cluster index for this cluster already exists

Cause: A cluster index already exists for the cluster.

Action: None

ORA-02034: speed bind not permitted

Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

ORA-02035: illegal bundled operation combination

Cause: User requested that the UPI bundled execution call perform an an illegal combination of operations.

Action: See documentation for legal operation combinations.

ORA-02036: too many variables to describe with automatic cursor open

Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

ORA-02037: uninitialized speed bind storage

Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

ORA-02038: define is not allowed for array type

Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: None

ORA-02039: bind by value is not allowed for array type

Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: None

ORA-02040: remote database *string* does not support two-phase commit

Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

ORA-02041: client database did not begin a transaction

Cause: internal error

Action: contact support

ORA-02042: too many distributed transactions

Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don"t have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

ORA-02043: must end current transaction before executing *string*

Cause: a transaction is in progress and one of the following commands commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

ORA-02044: transaction manager login denied: transaction in progress

Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

ORA-02045: too many local sessions participating in global transaction

Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

ORA-02046: distributed transaction already begun

Cause: internal error or error in external transaction manager. A server session received a begin_tran RPC before finishing with a previous distributed tran.

Action: None

ORA-02047: cannot join the distributed transaction in progress

Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

ORA-02048: attempt to begin distributed transaction without logging on

Cause: client program must issue a distributed transaction login.

Action: contact support.

ORA-02049: timeout: distributed transaction waiting for lock

Cause: exceeded INIT.ORA distributed_lock_timeout seconds waiting for lock.

Action: treat as a deadlock

ORA-02050: transaction *string* **rolled back, some remote DBs may be in-doubt**

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02051: another session in same transaction failed

Cause: a session at the same site with same global transaction ID failed; It can also be caused by application error if an attempt was made to update database while another tightly coupled transaction branch with same global transaction ID has been finalized.

Action: none necessary, transaction automatically recovered. In case of application error, make sure no more updates to database once transaction manager has started two-phase commit for tightly coupled distributed transaction.

ORA-02052: remote transaction failure at *string*

Cause: error in remote transaction at given DBLINK

Action: retry

ORA-02053: transaction *string* committed, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02054: transaction *string* in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending_trans$ for final outcome.

ORA-02055: distributed update operation failed; rollback required

Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

ORA-02056: 2PC: *string*: bad two-phase command number *string* from *string*

Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending_trans$ table to ensure correct resolution. Contact support.

ORA-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string*

Cause: internal error in two-phase recovery protocol

Action: contact support

ORA-02058: no prepared transaction found with ID *string*

Cause: no transaction with local_tran_id or global_tran_id found in the pending_trans$ table in prepared state.

Action: check the pending_trans$ table.

ORA-02059: ORA-2PC-CRASH-TEST-*string* in commit comment

Cause: This is a special comment used to test the two phase commit.

Action: Don"t use this special comment (%s a number 1-10)

ORA-02060: select for update specified a join of distributed tables

Cause: tables in a join with the for update clause must reside at the same DB.

Action: None

ORA-02061: lock table specified list of distributed tables

Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

ORA-02062: distributed recovery received DBID *string*, expected *string*

Cause: a database link at a coordinator no longer points to the expected database. Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

ORA-02063: preceding *stringstring* **from** *stringstring*

Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

ORA-02064: distributed operation not supported

Cause: One of the following unsupported operations was attempted:

1. array execute of a remote update with a subquery that references a dblink, or

2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or

3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

ORA-02065: illegal option for ALTER SYSTEM

Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

ORA-02066: missing or invalid DISPATCHERS text

Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher"s specification after ALTER SYSTEM SET DISPATCHERS

ORA-02067: transaction or savepoint rollback required

Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

ORA-02068: following severe error from *stringstring*

Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

ORA-02069: global_names parameter must be set to TRUE for this operation

Cause: A remote mapping of the statement is required but cannot be achieved because global_names should be set to TRUE for it to be achieved

Action: Issue alter session set global_names = true if possible

ORA-02070: database *stringstring* **does not support** *string* **in this context**

Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

ORA-02071: error initializing capabilities for remote database *string*

Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL*Connect product.

ORA-02072: distributed database network protocol mismatch

Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

ORA-02073: sequence numbers not supported in remote updates

Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: None

ORA-02074: cannot *string* in a distributed transaction

Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

ORA-02075: another instance changed state of transaction *string*

Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query DBA_2PC_PENDING to determine the new state of the transaction.

ORA-02076: sequence not co-located with updated table or long column

Cause: all referenced sequences must be co-located with the table with the long column.

Action: None

ORA-02077: selects of long columns must be from co-located tables

Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: None

ORA-02079: cannot join a committing distributed transaction

Cause: Once a transaction branch is prepared, no more new transaction branches are allowed to start, nor is the prepared transaction branch allowed to be joined.

Action: Check the application code as this is an XA protocol violation.

ORA-02080: database link is in use

Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link <link> command.

Action: commit or rollback, and close all cursors

ORA-02081: database link is not open

Cause: dblink given is not currently open.

Action: None

ORA-02082: a loopback database link must have a connection qualifier

Cause: attempt to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, e.g. MYDB.DEV.US.ORACLE.COM@INST1 - the "@INST1" is the qualifier

ORA-02083: database name has illegal character "*string*"

Cause: supplied database name can contain only A-Z, 0-9, "_", "#", "$" "." and "@" characters.

Action: None

ORA-02084: database name is missing a component

Cause: supplied database name cannot contain a leading ".", trailing "." or "@", or two "." or "@" in a row.

Action: None

ORA-02085: database link *string* connects to *string*

Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set global_names=false.

ORA-02086: database (link) name is too long

Cause: database/database link name can have at most 128 characters.

Action: None

ORA-02087: object locked by another process in same transaction

Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

ORA-02088: distributed database option not installed

Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: None

ORA-02089: COMMIT is not allowed in a subordinate session

Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

ORA-02090: network error: attempted callback+passthru

Cause: internal error.

Action: None

ORA-02091: transaction rolled back

Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

ORA-02092: out of transaction table slots for distributed transaction

Cause: The transaction is assigned to the system rollback segment and is trying to get into the PREPARED state, but the required number of non-PREPARED slots are not available, hence the transaction is rolled back.

Action: Add a rollback segment and retry the transaction.

ORA-02093: TRANSACTIONS_PER_ROLLBACK_SEGMENT(*string*) more than maximum possible(*string*)

Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

ORA-02094: replication option not installed

Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

ORA-02095: specified initialization parameter cannot be modified

Cause: The specified initialization parameter is not modifiable

Action: None

ORA-02096: specified initialization parameter is not modifiable with this option

Cause: Though the initialization parameter is modifiable, it cannot be modified using the specified command.

Action: Check the DBA guide for information about under what scope the parameter may be modified

ORA-02097: parameter cannot be modified because specified value is invalid

Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

ORA-02098: error parsing index-table reference (:I)

Cause: An incorrect index-table (:I) syntax was encountered.

Action: This syntax is for oracle internal use only.

5

ORA-02140 to ORA-04099

ORA-02140: invalid tablespace name

   Cause: An identifier does not follow ALTER TABLESPACE.

   Action: Specify a tablespace name following ALTER TABLESPACE.

ORA-02141: invalid OFFLINE option

   Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

   Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

ORA-02142: missing or invalid ALTER TABLESPACE option

   Cause: A valid option was not present.

   Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

ORA-02143: invalid STORAGE option

   Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

   Action: Specify only valid options.

ORA-02144: no option specified for ALTER CLUSTER

   Cause: No ALTER CLUSTER options are specified.

   Action: Specify one or more of the following options: pctfree, pctused, size, storage.

ORA-02145: missing STORAGE option

   Cause: No STORAGE options were specified following STORAGE (

   Action: Specify one or more STORAGE option between the parentheses.

ORA-02146: SHARED specified multiple times

   Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

   Action: Only specify the SHARED option once.

ORA-02147: conflicting SHARED/EXCLUSIVE options

   Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

   Action: Specify SHARED or EXCLUSIVE, but not both.

ORA-02148: EXCLUSIVE specified multiple times

Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

ORA-02149: Specified partition does not exist

Cause: Partition not found for the object.

Action: Retry with correct partition name.

ORA-02150: invalid new tablespace name

Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

ORA-02151: invalid tablespace name: *string*

Cause: Oracle cannot create a tablespace whose name starts with "_$deleted$".

Action: Try a different tablespace name.

ORA-02152: Invalid ALTER TABLESPACE ... RENAME option

Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

ORA-02153: invalid VALUES password string

Cause: An encoded password string does not follow the VALUES clause.

Action: Place a proper encoded password string after the VALUES clause.

ORA-02154: a tablespace with the name "*string***" is found**

Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

ORA-02155: invalid DEFAULT tablespace identifier

Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

ORA-02156: invalid TEMPORARY tablespace identifier

Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

ORA-02157: no options specified for ALTER USER

Cause: No options were specified.

Action: Specify at least one ALTER USER option.

ORA-02158: invalid CREATE INDEX option

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

ORA-02159: installed DLM does not support releasable locking mode

   Cause: The parameter file specified gc_* parameters that allow locks to be release by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

   Action: Specify configuration parameters that do not require the additional function.

ORA-02160: index-organized table can not contain columns of type LONG

   Cause: A column of type LONG defined for index-organized table.

   Action: Do not use columns of type LONG in index-organized tables.

ORA-02161: invalid value for MAXLOGFILES

   Cause: A number does not follow MAXLOGFILES.

   Action: Specify a number after MAXLOGFILES.

ORA-02162: invalid value for MAXDATAFILES

   Cause: A number does not follow MAXDATAFILES.

   Action: Specify a number after MAXDATAFILES.

ORA-02163: invalid value for FREELIST GROUPS

   Cause: A number does not follow FREELIST GROUPS.

   Action: Specify a number after FREELIST GROUPS.

ORA-02164: DATAFILE clause specified more than once

   Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

   Action: Specify at most one DATAFILE clause.

ORA-02165: invalid option for CREATE DATABASE

   Cause: An invalid CREATE DATABASE option is present.

   Action: Specify only valid CREATE DATABASE options.

ORA-02166: ARCHIVELOG and NOARCHIVELOG specified

   Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

   Action: Specify at most one of these two options.

ORA-02167: LOGFILE clause specified more than once

   Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

   Action: Specify at most one LOGFILE clause.

ORA-02168: invalid value for FREELISTS

   Cause: A number does not follow FREELISTS

   Action: Specify a number after FREELISTS

ORA-02169: FREELISTS storage option not allowed

   Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

   Action: Remove these options and retry the statement.

ORA-02170: FREELIST GROUPS storage option not allowed

Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow_freelist_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow_freelist_groups INIT.ORA parameter.

ORA-02171: invalid value for MAXLOGHISTORY

Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

ORA-02172: The PUBLIC keyword is not appropriate for a disable thread

Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

ORA-02173: invalid option for DROP TABLESPACE

Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

ORA-02174: Missing required thread number

Cause: Must specify thread number after THREAD keyword

Action: None

ORA-02175: invalid rollback segment name

Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

ORA-02176: invalid option for CREATE ROLLBACK SEGMENT

Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

ORA-02177: Missing required group number

Cause: Must specify group number after GROUP keyword

Action: None

ORA-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }

Cause: There is a syntax error in the user"s statement.

Action: Correct the syntax as indicated.

ORA-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user"s statement.

Action: Correct the syntax as indicated.

ORA-02180: invalid option for CREATE TABLESPACE

Cause: An invalid option appeared.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION.

ORA-02181: invalid option to ROLLBACK WORK

    Cause: A token other than TO follows ROLLBACK [WORK].

    Action: Place nothing or TO SAVEPOINT <name> after ROLLBACK [WORK].

ORA-02182: savepoint name expected

    Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

    Action: Place a savepoint name following TO [SAVEPOINT].

ORA-02183: valid options: ISOLATION_LEVEL { SERIALIZABLE | READ COMMITTED }

    Cause: There is a syntax error in the user"s statement.

    Action: Correct the syntax as indicated.

ORA-02184: resource quotas are not allowed in REVOKE

    Cause: In a revoke statement, a resource quota was specified.

    Action: Specify resource privilege without the quota.

ORA-02185: a token other than WORK follows COMMIT

    Cause: A token other than WORK follows COMMIT.

    Action: Place either nothing or WORK after COMMIT.

ORA-02186: tablespace resource privilege may not appear with other privileges

    Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

    Action: Use a separate grant or revoke statement for the resource quota privilege.

ORA-02187: invalid quota specification

    Cause: In a grant or revoke statement, the user attempted to grant a tablespace quota above the upper limit.

    Action: Grant a smaller tablespace quota.

ORA-02188: Cannot enable instance publicly

    Cause: An attempt was made to publicly enable a thread associated with an instance.

    Action: Leave out the PUBLIC keyword.

ORA-02189: ON <tablespace> required

    Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON <tablespace> clause.

    Action: Specify the tablespace on which the quota is to be applied with the ON <tablespace> clause.

ORA-02190: keyword TABLES expected

    Cause: The keyword TABLES is expected following DROP CLUSTER <name> INCLUDING.

    Action: Place TABLES after INCLUDING.

ORA-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT <rbs>

    Cause: There is a syntax error in the user"s statement.

    Action: Correct the syntax as indicated.

ORA-02192: PCTINCREASE not allowed for rollback segment storage clauses

Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

ORA-02194: event specification syntax error *string* (minor error *string*) near "*string*"

Cause: There is a syntax error in an event specification.

Action: Fix the error.

ORA-02195: Attempt to create *string* object in a *string* tablespace

Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

ORA-02196: PERMANENT/TEMPORARY option already specified

Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: None

ORA-02197: file list already specified

Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

ORA-02198: ONLINE/OFFLINE option already specified

Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

ORA-02199: missing DATAFILE/TEMPFILE clause

Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

ORA-02200: WITH GRANT OPTION not allowed for PUBLIC

Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

ORA-02201: sequence not allowed here

Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

ORA-02202: no more tables permitted in this cluster

Cause: An attempt was made to create a table in a cluster which already contains 32 tables.

Action: Up to 32 tables may be stored per cluster.

ORA-02203: INITIAL storage options not allowed

Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

ORA-02204: ALTER, INDEX and EXECUTE not allowed for views

Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

ORA-02205: only SELECT and ALTER privileges are valid for sequences

Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke DELETE, INDEX, INSERT, UPDATE, REFERENCES or EXECUTE privilege on sequences.

ORA-02206: duplicate INITRANS option specification

Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

ORA-02207: invalid INITRANS option value

Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

ORA-02208: duplicate MAXTRANS option specification

Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

ORA-02209: invalid MAXTRANS option value

Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

ORA-02210: no options specified for ALTER TABLE

Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

ORA-02211: invalid value for PCTFREE or PCTUSED

Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

ORA-02212: duplicate PCTFREE option specification

Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

ORA-02213: duplicate PCTUSED option specification

Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

ORA-02214: duplicate BACKUP option specification

Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

ORA-02215: duplicate tablespace name clause

Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

ORA-02216: tablespace name expected

Cause: A tablespace name is not present where required by the syntax for one of the following statements: CREATE/DROP TABLESPACE, CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT.

Action: Specify a tablespace name where required by the syntax.

ORA-02217: duplicate storage option specification

Cause: A storage option (INIITAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

ORA-02218: invalid INITIAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02219: invalid NEXT storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02220: invalid MINEXTENTS storage option value

Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

ORA-02221: invalid MAXEXTENTS storage option value

Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

ORA-02222: invalid PCTINCREASE storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-02223: invalid OPTIMAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02224: EXECUTE privilege not allowed for tables

Cause: An attempt was made to grant or revoke an invalid privilege on a table.

Action: Do not attempt to grant or revoke EXECUTE privilege on tables.

ORA-02225: only EXECUTE and DEBUG privileges are valid for procedures

Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function or package.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions or packages.

ORA-02226: invalid MAXEXTENTS value (max allowed: *string***)**

Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

ORA-02227: invalid cluster name

Cause: A cluster name of the form [<identifier> .] <identifier> is expected but not present.

Action: Enter an appropriate cluster name.

ORA-02228: duplicate SIZE specification

Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

ORA-02229: invalid SIZE option value

Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

ORA-02230: invalid ALTER CLUSTER option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

ORA-02231: missing or invalid option to ALTER DATABASE

Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

ORA-02232: invalid MOUNT mode

Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

ORA-02233: invalid CLOSE mode

Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

ORA-02234: changes to this table are already logged

Cause: the log table to be added is a duplicate of another

Action: Don"t add this change log to the system; check that the replication product"s system tables are consistent

ORA-02235: this table logs changes to another table already

Cause: the table to be altered is already a change log for another table

Action: Don"t log changes to the specified base table to this table; check that the replication product"s system tables are consistent

ORA-02236: invalid file name

Cause: A character string literal was not used in the filename list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

ORA-02237: invalid file size

Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

ORA-02238: filename lists have different numbers of files

Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing filenames does not equal the number of new filenames.

Action: Make sure there is a new filename to correspond to each existing filename.

ORA-02239: there are objects which reference this sequence

Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/object

ORA-02240: invalid value for OBJNO or TABNO

Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

ORA-02241: must of form EXTENTS (FILE <n> BLOCK <n> SIZE <n>, ...)

Cause: bad extent storage clause

Action: respecify

ORA-02242: no options specified for ALTER INDEX

Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

ORA-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option

Cause: An option other than INITRANS, MAXTRANS,or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-02244: invalid ALTER ROLLBACK SEGMENT option

Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

ORA-02245: invalid ROLLBACK SEGMENT name

Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

ORA-02246: missing EVENTS text

Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

ORA-02247: no option specified for ALTER SESSION

Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

ORA-02248: invalid option for ALTER SESSION

Cause: Obvious.

Action: see SQL Language Manual for legal options.

ORA-02249: missing or invalid value for MAXLOGMEMBERS

Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

ORA-02250: missing or invalid constraint name

Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

ORA-02251: subquery not allowed here

Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

ORA-02252: check constraint condition not properly ended

Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

ORA-02253: constraint specification not allowed here

Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

ORA-02254: DEFAULT <expression> not allowed here

Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

ORA-02255: obsolete 7.1.5

Cause: Was that defaults must not conflict with not null constraints

Action: None

ORA-02256: number of referencing columns must match referenced columns

Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

ORA-02257: maximum number of columns exceeded

Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

ORA-02258: duplicate or conflicting NULL and/or NOT NULL specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02259: duplicate UNIQUE/PRIMARY KEY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02260: table can have only one primary key
Cause: Self-evident.

Action: Remove the extra primary key.

ORA-02261: such unique or primary key already exists in the table
Cause: Self-evident.

Action: Remove the extra key.

ORA-02262: ORA-*string* occurs while type-checking column default value expression
Cause: New column datatype causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don"t alter the column datatype.

ORA-02263: need to specify the datatype for this column
Cause: The required datatype for the column is missing.

Action: Specify the required datatype.

ORA-02264: name already used by an existing constraint
Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

ORA-02265: cannot derive the datatype of the referencing column
Cause: The datatype of the referenced column is not defined as yet.

Action: Make sure that the datatype of the referenced column is defined before referencing it.

ORA-02266: unique/primary keys in table referenced by enabled foreign keys
Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";

ORA-02267: column type incompatible with referenced column type
Cause: The datatype of the referencing column is incompatible with the

Action: Select a compatible datatype for the referencing column.

ORA-02268: referenced table does not have a primary key
Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

ORA-02269: key column cannot be of LONG datatype
Cause: Self-evident.

Action: Change the datatype of the column, or remove the column from the key.

ORA-02270: no matching unique or primary key for this column-list

Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL_CONS_COLUMNS catalog view

ORA-02271: table does not have such constraint

Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

ORA-02272: constrained column cannot be of LONG datatype

Cause: Self-evident.

Action: Change the datatype of the column, or remove the constraint on the column.

ORA-02273: this unique/primary key is referenced by some foreign keys

Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

ORA-02274: duplicate referential constraint specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02275: such a referential constraint already exists in the table

Cause: Self-evident.

Action: Remove the extra constraint.

ORA-02276: default value type incompatible with column type

Cause: The type of the evaluated default expression is incompatible with the datatype of the column.

Action: Change the type of the column, or modify the default expression.

ORA-02277: invalid sequence name

Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

ORA-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02280: duplicate or conflicting CYCLE/NOCYCLE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02281: duplicate or conflicting CACHE/NOCACHE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02282: duplicate or conflicting ORDER/NOORDER specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02283: cannot alter starting sequence number

Cause: Self-evident.

Action: Don"t alter it.

ORA-02284: duplicate INCREMENT BY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02285: duplicate START WITH specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02286: no options specified for ALTER SEQUENCE

Cause: Self-evident.

Action: The statement is meaningless without any options.

ORA-02287: sequence number not allowed here

Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

ORA-02288: invalid OPEN mode

Cause: A token other than RESETLOGS appears following ALTER DATABASE <name> OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

ORA-02289: sequence does not exist

Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

ORA-02290: check constraint (*string.string*) violated

Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

ORA-02291: integrity constraint (*string.string*) violated - parent key not found

Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

ORA-02292: integrity constraint (*string.string*) violated - child record found

Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

ORA-02293: cannot validate (*string.string*) - check constraint violated

Cause: an alter table operation tried to validate a check constraint to a populated table that had nocomplying values.

Action: Obvious

ORA-02294: cannot enable (*string.string*) - constraint changed during validation

Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

ORA-02295: found more than one enable/disable clause for constraint

Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

ORA-02296: cannot enable (*string.string*) - null values found

Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

ORA-02297: cannot disable constraint (*string.string*) - dependencies exist

Cause: an alter table disable constraint failed becuase the table has foriegn keys that are dpendent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

ORA-02298: cannot validate (*string.string*) - parent keys not found

Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

ORA-02299: cannot validate (*string.string*) - duplicate keys found

Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

ORA-02300: invalid value for OIDGENERATORS

Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

ORA-02301: maximum number of OIDGENERATORS is 255

Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

ORA-02302: invalid or missing type name

Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

ORA-02303: cannot drop or replace a type with type or table dependents

Cause: An attempt was made to drop or replace a type that has dependents. There could be a substitutable column of a supertype of the type being dropped.

Action: Drop all type(s) and table(s) depending on the type, then retry the operation using the VALIDATE option, or use the FORCE option.

ORA-02304: invalid object identifier literal

Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either:

- not a string of 32 hexadecimal characters

- an object identifier that already identifies an existing object

- an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

ORA-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types

Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

ORA-02306: cannot create a type that already has valid dependent(s)

Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

ORA-02307: cannot alter with REPLACE option a type that is not valid

Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-02308: invalid option *string* for object type column

Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

ORA-02309: atomic NULL violation

Cause: An attempt was made to acess the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

ORA-02310: exceeded maximum number of allowable columns in table

Cause: The attributes in the object type column exceeded the maximum number of columns allowed in a table.

Action: Specify fewer attributes for the object type and retry the operation.

ORA-02311: cannot alter with COMPILE option a valid type with type or table dependents

Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

ORA-02313: object type contains non-queryable type *string* attribute

Cause: The specified object type contains a nested attribute whose type is non-queryable.

Action: Use an object type with queryable attribute types.

ORA-02314: illegal use of type constructor

Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

ORA-02315: incorrect number of arguments for default constructor

Cause: The number of arguments specified for the default constructor doesn''t match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

ORA-02320: failure in creating storage table for nested table column *string*

Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation they describe can be corrected, do so; otherwise contact Oracle Support.

ORA-02322: failure in accessing storage table of the nested table column

Cause: An error occured while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support.

ORA-02324: more than one column in the SELECT list of THE subquery

Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

ORA-02327: cannot create index on expression with datatype *string*

Cause: An attempt was made to create an index on a non-indexable expression.

Action: Change the column datatype or do not create the index on an expression whose datatype is one of VARRAY, nested table, object, LOB, or REF.

ORA-02329: column of datatype *string* **cannot be unique or a primary key**

Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of datatype VARRAY, nested table, object, LOB, FILE or REF.

Action: Change the column datatype or remove the constraint. Then retry the operation.

ORA-02330: datatype specification not allowed

Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

ORA-02331: cannot create constraint on column of datatype *string*

Cause: An attempt was made to create a constraint on a column posessing a non-constrainable datatype -- VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column datatype, or remove the constraint.

ORA-02332: cannot create index on attributes of this column

Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

ORA-02333: cannot create constraints on attributes of this column

Cause: An attempt was made to create a constraint on an attribute of an object type column.

Action: Remove the constraint or change the object type.

ORA-02334: cannot infer type for column

Cause: A datatype was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a datatype for the column.

ORA-02335: invalid datatype for cluster column

Cause: An attempt was made to declare a CLUSTER column of datatype object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the datatype of the column.

ORA-02336: column attribute cannot be accessed

Cause: An attempt was made to extract an attribute of an object type column.

Action: Change the object type for the column and retry the operation.

ORA-02337: not an object type column

Cause: An attempt was made to use dotted notation on a non-ADT column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation.

ORA-02338: missing or invalid column constraint specification

Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

ORA-02339: invalid column specification

Cause: An attempt was made to specify the PACKED or UNPACKED keyword for a non-object type column.

Action: Remove the PACKED or UNPACKED keyword in the column specification and retry the operation.

ORA-02340: invalid column specification

Cause: An attempt was made to specify an UNPACKED column within a packed table.

Action: Remove the UNPACKED keyword in the column specification.

ORA-02342: replacement type has compilation errors

Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

ORA-02344: cannot revoke execute on a type with table dependents

Cause: An attempt was made to revoke execute on a type that has dependents.

Action: Drop all table(s) depending on the type, then retry the operation, or use the FORCE option.

ORA-02345: cannot create a view with column based on CURSOR operator

Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

ORA-02347: cannot grant privileges on columns of an object table

Cause: An attempt was made to grant privileges on the columns of an object table.

Action: None

ORA-02348: cannot create VARRAY column with embedded LOB

Cause: An attempt was made to create a column of a VARRAY type which has an embedded LOB attribute. The LOB could be an attribute of a subtype of the declared type of VARRAY"s element.

Action: Remove offending attribute from type. If it is a subtype attribute then declare the VARRAY column NOT SUBSTITUTABLE.

ORA-02349: invalid user-defined type - type is incomplete

Cause: An attempt was made to use an incomplete type definition as a column or table datatype.

Action: Complete the type definition and retry the operation.

ORA-02351: internal error: *string*

Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

ORA-02352: error setting an OCI attribute: *string*

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02353: error fetching an OCI attribute: *string*

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02354: error in exporting/importing data *string*

Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

ORA-02355: error opening file: *string*

Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02356: The database is out of space. The load cannot continue

    Cause: The load was discontinued due to space exhaustion in the database.

    Action: Add space for the specified table.

ORA-02357: header in file *string* may not contain correct information

    Cause: The header may be corrupted.

    Action: Contact Oracle Support Services.

ORA-02358: error in exporting or importing data

    Cause: An error has occurred in a stream export or import operation.

    Action: Contact Oracle Support Services.

ORA-02359: database version in file *string* is not valid

    Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFILE clause.

    Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02360: fatal error during data export/import initialization

    Cause: An unexpected error occurred during initialization for data export/import.

    Action: Contact Oracle Support Services.

ORA-02361: error while attempting to allocate *number* bytes of memory

    Cause: d by insufficient memory.

    Action: Reconnect to the instance and retry the operation.

ORA-02362: error closing file: *string*

    Cause: An attempt to close the specified file for data export/import failed.

    Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02363: error reading from file: *string*

    Cause: An attempt to read from the specified file for data export/import failed.

    Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02364: error writing to file: *string*

    Cause: An attempt to write to the specified file for data export/import failed.

    Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if

ORA-02365: error seeking in file: *string*

    Cause: An attempt to seek to the specified position in file failed.

    Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if

ORA-02366: The following index(es) on table *string* were processed:

    Cause: The table had some indexes which were loaded if there were no errors.

    Action: None

ORA-02367: read ended but had expected more data from file *string*

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

ORA-02368: the following file is not valid for this load operation

Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation and that the unload was successful.

ORA-02369: internal number in header in file *string* **is not valid**

Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

ORA-02370: internal metadata in file *string* **is not valid**

Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02371: Loader must be at least version *string.string.string.string.string* **for direct path**

Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

ORA-02372: data for row: *string*

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

ORA-02373: Error parsing insert statement for table *string***.**

Cause: self-evident.

Action: Check the error given below this one.

ORA-02374: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02375: conversion error loading table *string.string* **partition** *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02376: invalid or redundant resource

    Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

    Action: define resource first

ORA-02377: invalid resource limit

    Cause: specifying limit of 0

    Action: specify limit > 0

ORA-02379: profile *string* already exists

    Cause: Try to create a profile which already exist

    Action: None

ORA-02380: profile *string* does not exist

    Cause: Try to assign a user to a non-existant profile

    Action: None

ORA-02381: cannot drop PUBLIC_DEFAULT profile

    Cause: Try to drop PUBLIC_DEFAULT profile

    Action: None

ORA-02383: illegal cost factor

    Cause: Negative or UNLIMITED cost for this resourc

    Action: None

ORA-02391: exceeded simultaneous SESSIONS_PER_USER limit

    Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSION_PER_USER clause of the user profile.

    Action: End one or more concurrent sessions or ask the database administrator to increase the SESSION_PER_USER limit of the user profile.

ORA-02396: exceeded maximum idle time, please connect again

    Cause: as stated

    Action: None

ORA-02397: exceeded PRIVATE_SGA limit, you are being logged off

    Cause: Only when using TP monitor

    Action: expand limit

ORA-02398: exceeded procedure space usage

    Cause: Stored procedured used up too much space in SYSTEM Tablespace

    Action: Use less stored procedure

ORA-02399: exceeded maximum connect time, you are being logged off

    Cause: As stated

    Action: None

ORA-02400: explain plan output buffer size limit exceeded

    Cause: Internally this error is raised and caught to handle cases where the plan output exceeds te buffer size. The output is truncated in cases.

    Action: This error should never be seen externally.

ORA-02401: cannot EXPLAIN view owned by another user

Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

ORA-02402: PLAN_TABLE not found

Cause: The table used by EXPLAIN to store row source information does not exist in the current schema.

Action: Create a plan table in the current schema or use the INTO clause of the statement to put the results of the explain command in an existing plan table.

ORA-02403: plan table does not have correct format

Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

ORA-02404: specified plan table not found

Cause: The specified plan table does cannot be found.

Action: Create the specified plan table or use an existing plan table.

ORA-02405: invalid sql plan object provided

Cause: The user provided a NULL, empty, or malformed object of type SQL_PLAN_TABLE_TYPE

Action: Provide a new, properly formed object to the function

ORA-02420: missing schema authorization clause

Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Preceed the schema authorization identifier with the AUTHORIZATION keyword.

ORA-02421: missing or invalid schema authorization identifier

Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

ORA-02422: missing or invalid schema element

Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

ORA-02423: schema name does not match schema authorization identifier

Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

ORA-02424: potential circular view references or unknown referenced tables

Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

ORA-02425: create table failed

Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02426: privilege grant failed

Cause: a grant privilege statement failed inthe create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02427: create view failed

Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02428: could not add foreign key reference

Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have an unique key.

Action: make sure referenced table exists and/or has unique key

ORA-02429: cannot drop index used for enforcement of unique/primary key

Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

ORA-02430: cannot enable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02431: cannot disable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02432: cannot enable primary key - primary key not defined for table

Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

ORA-02433: cannot disable primary key - primary key not defined for table

Cause: Attempted to disable a primary key tht is not defined for the table.

Action: None

ORA-02434: cannot enable unique(*string*) - unique key not defined for table

Cause: attempted to enable a unique key that is not defined for the table.

Action: None

ORA-02435: cannot disable unique(*string*) - unique key not defined for table

Cause: attempted to disable a unique key that is not deined for the table.

Action: None

ORA-02436: date or system variable wrongly specified in CHECK constraint

Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > "10-MAY-96"", which a bug permitted to be created before version 8.

ORA-02437: cannot validate (*string.string*) - primary key violated

Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

ORA-02438: Column check constraint cannot reference other columns

Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constriant.

ORA-02439: Unique index on a deferrable constraint is not allowed

Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

ORA-02440: Create as select with referential constraints not allowed

Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

ORA-02441: Cannot drop nonexistent primary key

Cause: alter table drop primary key - primary key does not exist.

Action: None

ORA-02442: Cannot drop nonexistent unique key

Cause: alter table drop unique (<col list>) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

ORA-02443: Cannot drop constraint - nonexistent constraint

Cause: alter table drop constraint <constraint_name>

Action: make sure you supply correct constraint name.

ORA-02444: Cannot resolve referenced object in referential constraints

Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolve to base table reference

ORA-02445: Exceptions table not found

Cause: the explicity or implicity declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

ORA-02446: CREATE TABLE ... AS SELECT failed - check constraint violated

Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

ORA-02447: cannot defer a constraint that is not deferrable

Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

ORA-02448: constraint does not exist

Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistant constraint

ORA-02449: unique/primary keys in table referenced by foreign keys

Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";

ORA-02450: Invalid hash option - missing keyword IS

Cause: Missing IS keyword.

Action: Specify HASH IS option.

ORA-02451: duplicate HASHKEYS specification

Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

ORA-02452: invalid HASHKEYS option value

Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

ORA-02453: duplicate HASH IS specification

Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

ORA-02454: Number of hash keys per block (*string*) exceeds maximum of *string*

Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

ORA-02455: The number of cluster key column must be 1

Cause: When specifing the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

ORA-02456: The HASH IS column specification must be NUMBER(*,0)

Cause: The column specification must specify an integer.

Action: Specify the column definition as type NUMBER(precision, 0).

ORA-02457: The HASH IS option must specify a valid column

Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name.

ORA-02458: HASHKEYS must be specified for a HASH CLUSTER
Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.
Action: Specify the HASHKEYS option.

ORA-02459: Hashkey value must be a positive integer
Cause: The value of the hash key was not a positive number.
Action: Specify a positive integer.

ORA-02460: Inappropriate index operation on a hash cluster
Cause: An attempt to create a cluster index was issued on a hash cluster.
Action: Do not attempt to create such an index.

ORA-02461: Inappropriate use of the INDEX option
Cause: This option is only valid for non hash clusters.
Action: Do not specify this option.

ORA-02462: Duplicate INDEX option specified
Cause: The INDEX option is specified more than once.
Action: Only specify the INDEX option once.

ORA-02463: Duplicate HASH IS option specified
Cause: The HASH IS option is specified more than once.
Action: Only specify the HASH IS option once.

ORA-02464: Cluster definition can not be both HASH and INDEX
Cause: The cluster can either be a hash or indexed cluster - not both.
Action: Remove either the HASH IS or INDEX options.

ORA-02465: Inappropriate use of the HASH IS option
Cause: This option is only valid for clusters
Action: Do not specify this option

ORA-02466: The SIZE and INITRANS options cannot be altered for HASH CLUSTERS.
Cause: An attempt was made to change the SIZE and INITRANS options after the hash cluster was created.
Action: Do not specify this option.

ORA-02467: Column referenced in expression not found in cluster definition
Cause: A column in the hash is expression was not present in cluster definition.
Action: Recreate the cluster and correct the error in hash expression.

ORA-02468: Constant or system variable wrongly specified in expression
Cause: A constant or system variable was specified in the hash expression.
Action: Recreate the cluster and correct the error in hash expression.

ORA-02469: Hash expression does not return an Oracle Number.
Cause: Result of evaluating hash expression is not an Oracle Number.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02470: TO_DATE, USERENV, or SYSDATE incorrectly used in hash expression.

Cause: TO_DATE, USERENV and SYSDATE are not allowed in hash expressions.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02471: SYSDATE, UID, USER, ROWNUM, or LEVEL incorrectly used in hash expre\ssion.

Cause: SYSDATE, UID, USER, ROWNUM, or LEVEL are not allowed in hash expression\s.

Action: Recreate the cluster and remove the offending keywords.

ORA-02472: PL/SQL functions not allowed in hash expressions

Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

ORA-02473: Error while evaluating the cluster''s hash expression.

Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

ORA-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)

Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

ORA-02475: maximum cluster chain block count of *string* has been exceeded

Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

ORA-02476: can not create index due to parallel direct load on table

Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

ORA-02477: can not perform parallel direct load on object *string*

Cause: A parallel direct load is not possible because an index is is being created on the table.

Action: Retry load after index creation is complete.

ORA-02478: merge into base segment would overflow MAXEXTENTS limit

Cause: Merge of temporary segment into base segment failed because MAXEXTENTS was larger than the total in the temp and base segments

Action: Use a larger value for MAXEXTENTS on the base segment or make the extents in the temporary segments larger

ORA-02479: error while translating file name for parallel load

Cause: An invalid file name was specified to load data into.

Action: Specify a valid database file.

ORA-02481: Too many processes specified for events (max *string*)

    Cause: Too many processes specified than allowed per event.

    Action: Enter fewer processes by using ranges or wildcards if possible.

ORA-02482: Syntax error in event specification (*string*)

    Cause: Illegal event string

    Action: Enter a legal event string

ORA-02483: Syntax error in process specification (*string*)

    Cause: Illegal process string

    Action: Enter a legal process string

ORA-02484: Invalid _trace_buffers parameter specification (*string*)

    Cause: Bad process or size in _trace_buffers INIT.ORA parameter.

    Action: None

ORA-02485: Invalid _trace_options parameter specification (*string*)

    Cause: Bad syntax for _trace_options INIT.ORA parameter.

    Action: None

ORA-02486: Error in writing trace file *string*

    Cause: Error occurred in creating/writing the file.

    Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

ORA-02487: Error in converting trace data

    Cause: Incompatible binary trace data was specified.

    Action: Check the format of the input data.

ORA-02488: Error encountered when accessing file [*string*] for trace conversion

    Cause: An attempt was made to open or access the trace file during a trace conversion.

    Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

ORA-02490: missing required file size in RESIZE clause

    Cause: No value was specified for the RESIZE clause.

    Action: Use correct syntax.

ORA-02491: missing required keyword ON or OFF in AUTOEXTEND clause

    Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

    Action: Use correct syntax.

ORA-02492: missing required file block increment size in NEXT clause

    Cause: No value was specified for the NEXT clause.

    Action: Use correct syntax.

ORA-02493: invalid file increment size in NEXT clause

    Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

    Action: Use correct syntax.

ORA-02494: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

ORA-02495: cannot resize file *string*, tablespace *string* is read only

Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

ORA-02700: osnoraenv: error translating ORACLE_SID

Cause: Two-task driver could not find the value of ORACLE_SID in the environment.

Action: Make sure that the ORACLE_SID environment variable has been properly set and exported.

ORA-02701: osnoraenv: error translating oracle image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02702: osnoraenv: error translating orapop image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02703: osnpopipe: pipe creation failed

Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02704: osndopop: fork failed

Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02705: osnpol: polling of communication channel failed

Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

ORA-02706: osnshs: host name too long

Cause: The length of your host-string specified by the TWO_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02707: osnacx: cannot allocate context area

Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-02708: osnrntab: connect to host failed, unknown ORACLE_SID

Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

ORA-02709: osnpop: pipe creation failed

Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02710: osnpop: fork failed

Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02711: osnpvalid: write to validation channel failed

Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

ORA-02712: osnpop: malloc failed

Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-02713: osnprd: message receive failure

Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

ORA-02714: osnpwr: message send failure

Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

ORA-02715: osnpgetbrkmsg: message from host had incorrect message type

Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02716: osnpgetdatmsg: message from host had incorrect message type

Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02717: osnpfs: incorrect number of bytes written

Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

ORA-02718: osnprs: reset protocol error

Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

ORA-02719: osnfop: fork failed

Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02720: osnfop: shmat failed

Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accomodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

ORA-02721: osnseminit: cannot create semaphore set

Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

ORA-02722: osnpui: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02723: osnpui: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

ORA-02724: osnpbr: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02725: osnpbr: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

ORA-02726: osnpop: access error on oracle executable

Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02727: osnpop: access error on orapop executable

Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE_HOME/bin path.

ORA-02728: osnfop: access error on oracle executable

Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02729: osncon: driver not in osntab

Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

ORA-02730: osnrnf: cannot find user logon directory

Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

ORA-02731: osnrnf: malloc of buffer failed

Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

ORA-02732: osnrnf: cannot find a matching database alias

Cause: Database alias specified was not identified in either $HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

ORA-02733: osnsnf: database string too long

Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02734: osnftt: cannot reset shared memory permission

Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

ORA-02735: osnfpm: cannot create shared memory segment

Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

ORA-02736: osnfpm: illegal default shared memory address

Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

ORA-02737: osnpcl: cannot tell orapop to exit

Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

ORA-02738: osnpwrtbrkmsg: incorrect number of bytes written

Cause: The pipe driver apparently sent an imcomplete break message.

Action: Contact your customer support representative.

ORA-02739: osncon: host alias is too long

    Cause: The alias used for a sqlnet host is longer than 161 characters.

    Action: Use a shorter alias.

ORA-02750: osnfsmmap: cannot open shared memory file ?/dbs/ftt_<pid>.dbf

    Cause: The Fast driver failed to create a shared memory file for two-task communication.

    Action: Check the permissions on the directory ?/dbs

ORA-02751: osnfsmmap: cannot map shared memory file

    Cause: The Fast driver failed to map a shared memory file for two-task communication.

    Action: Contact your customer support representative.

ORA-02752: osnfsmmap: illegal shared memory address

    Cause: The Fast driver failed to attach shared memory at the expected location.

    Action: Contact your customer support representative.

ORA-02753: osnfsmmap: cannot close shared memory file

    Cause: The Fast driver cannot close the shared memory file.

    Action: Contact your customer support representative.

ORA-02754: osnfsmmap: cannot change shared memory inheritence

    Cause: The Fast driver could not alter the inheritence attributes of the shared memory.

    Action: Contact your customer support representative.

ORA-02755: osnfsmcre: cannot create chared memory file ?/dbs/ftt_<pid>.dbf

    Cause: The Fast driver failed to create a file for shared memory.

    Action: Check the permissions on the directory ?/dbs

ORA-02756: osnfsmnam: name translation failure

    Cause: The Fast driver encountered an error translating the shared memory filename ?/dbs/ftt_<pid>.dbf.

    Action: Contact your customer support representative.

ORA-02757: osnfop: fork_and_bind failed

    Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

    Action: Check the desired node number in sercose[0] and cluster ID in sercose[1]. If these seem valid, contact customer support.

ORA-02758: Allocation of internal array failed

    Cause: The package was unable to allocate memory for an array because the system ran out of memory.

    Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

ORA-02759: Not enough request descriptors available

    Cause: All of the package"s request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

ORA-02760: Client close of file failed.

Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

ORA-02761: File number to be canceled is negative.

Cause: The file number contained with the sfiov structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02762: file number to be cancelled is greater than the maximum.

Cause: The file number contained with the sfiov structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02763: Unable to cancel at least one request

Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

ORA-02764: Invalid package mode

Cause: The mode of the package can only be parallel or duplex.

Action: See sfa.h for the correct values.

ORA-02765: Invalid maximum number of servers

Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02766: Invalid maximum of request descriptors

Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02767: Less than one request descriptor was allocated per server

Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

ORA-02768: Maximum number of files is invalid

Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

ORA-02769: Setting of handler for SIGTERM failed

Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

ORA-02770: Total number of blocks is invalid

Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

ORA-02771: Illegal request time out value

Cause: The number was not a positive number.

Action: Use a positive number.

ORA-02772: Invalid maximum server idle time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02773: Invalid maximum client wait time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02774: Invalid request list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02775: Invalid request done signal

Cause: The signal number was not a positive number.

Action: Use a positive number.

ORA-02776: Value for request done signal exceeds maximum

Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: None

ORA-02777: Stat failed on log directory

Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

ORA-02778: Name given for the log directory is invalid

Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

ORA-02779: Stat failed on core dump directory

Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

ORA-02780: Name given for the core dump directory is invalid

Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

ORA-02781: Invalid value given for the timing wanted flag

Cause: The value given was not TRUE or FALSE.

Action: None

ORA-02782: Both read and write functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02783: Both post and wait functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02784: Invalid shared memory ID specified

Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

ORA-02785: Invalid shared memory buffer size

Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

ORA-02786: Size needed for shared region is greater than segment size

Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

ORA-02787: Unable to allocate memory for segment list

Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: None

ORA-02788: Unable to find kernel process pointer in async process array

Cause: Internal error - Contact ORACLE support.

Action: None

ORA-02789: Maximum number of files reached

Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

ORA-02790: File name is too long

Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

ORA-02791: Unable to open file for use with asynchronous I/O

Cause: The package could not open file for some reason.

Action: Check the file name.

ORA-02792: Unable to fstat() a file being used for asynchronous I/O.
Cause: The fstat(2) call on a file being used for asynchronous I/O failed.
Action: Check the file name.

ORA-02793: Close of asynchronous I/O failed.
Cause: The client was unable to close a file being used for asynchronous I/O.
Action: Contact ORACLE support - this should not happen.

ORA-02794: Client unable to get key for shared memory
Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.
Action: Contact ORACLE support - this is an internal error.

ORA-02795: Request list is empty
Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.
Action: Internal error - contact ORACLE support.

ORA-02796: Done request is not in correct state
Cause: A request is not in the right state.
Action: Internal error - contact ORACLE support.

ORA-02797: No requests available
Cause: No free request descriptors are available.
Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

ORA-02798: Invalid number of requests
Cause: The number of operations sent to either sfard() or sfawrite() is less than zero.
Action: This is a user programming error.

ORA-02799: Unable to arm signal handler
Cause: The arming of a signal handler for the "done" signal failed.
Action: Internal error - contact ORACLE support.

ORA-02800: Requests timed out
Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.
Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with sfainit(). If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

ORA-02801: Operations timed out
Cause: Some asynchronous operations timed out in kernel mode.
Action: Internal error - contact ORACLE support.

ORA-02802: No idle servers available in parallel mode
Cause: Internal error.
Action: Contact ORACLE support.

ORA-02803: Retrieval of current time failed

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02804: Allocation of memory failed for log file name

Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

ORA-02805: Unable to set handler for SIGTPA

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02806: Unable to set handler for SIGALRM

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02807: Allocation of memory for I/O vectors failed.

Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

ORA-02808: Allocation of memory of open files array failed.

Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

ORA-02809: Jump buffer not valid

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02813: Unable to make temporary file name in order to get key

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02814: Unable to get shared memory

Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02815: Unable to attach shared memory

Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02816: Unable to kill a process

Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

ORA-02817: Read failed

Cause: A server could not read a requested amount of data.

Action: Check the call to sfard(). An incorrect file descriptor may have been sent to sfard(). The number in the "additional information" field is the starting block number of the data segment being read in.

ORA-02818: Less than the number of blocks requested was read in

Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

ORA-02819: Write failed

Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

ORA-02820: Unable to write the requested number of blocks

Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

ORA-02821: Unable to read the requested number of blocks.

Cause: A server could not read the number of blocks that was requested. The end of the file may have been read.

Action: Check the file on disk.

ORA-02822: Invalid block offset

Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

ORA-02823: Buffer is not aligned.

Cause: The buffer on which an I/O is being done is not on the correct boundary.

Action: Check the calling program.

ORA-02824: Request free list is empty

Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

ORA-02825: Request on free list was not free

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02826: Illegal block size

Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

ORA-02827: Invalid file number

Cause: The file number upon which an operation is to done is either less than zero or greater than the maximum number of files than can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

ORA-02828: Segment free list is empty

Cause: No segments are available to allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

ORA-02829: No segment of the proper size is available

Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

ORA-02830: Segment could not be split - no free segments available

Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

ORA-02831: Segment deallocation failed - empty segment list

Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

ORA-02832: Segment deallocation failed - segment not on list

Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

ORA-02833: Server was unable to close file

Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

ORA-02834: Server unable to open file

Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

ORA-02835: Server unable to send signal to client

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02836: Unable to create temporary key file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02837: Unable to unlink temporary file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02838: Unable to arm signal handler for the alarm signal

Cause: The arming of a signal handler for the alarmsignal failed.

Action: Internal error - contact ORACLE support.

ORA-02839: Sync of blocks to disk failed.

Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

ORA-02840: Open of log file by client failed

Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

ORA-02841: Server died on start up

Cause: A server exited during its initialization process.

Action: Check the servers" logs for more information.

ORA-02842: Client unable to fork a server

Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

ORA-02843: Invalid value for kernel flag

Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

ORA-02844: Invalid value for the leave open flag

Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02845: Invalid value for the timing wanted flag

Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02846: Unkillable server

Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

ORA-02847: Server did not terminate when posted

Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

ORA-02848: Asynchronous I/O package is not running

Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

ORA-02849: Read failed because of an error
   Cause: A server could not read the requested amount of data from disk.
   Action: Check the UNIX error number.

ORA-02850: File is closed
   Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.
   Action: This is a programming error.

ORA-02851: Request list is empty when it should not be
   Cause: This is an internal problem.
   Action: Contact ORACLE support.

ORA-02852: Invalid critical-section time out value
   Cause: The time given was not a positive number.
   Action: Use a positive number.

ORA-02853: Invalid server list latch time out value
   Cause: The time given was not a positive number.
   Action: Use a positive number.

ORA-02854: Invalid number of request buffers
   Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than 0.
   Action: Use a number that is greater than or equal to 0.

ORA-02855: Number of requests is less than the number of slaves
   Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than the number specified for the number of slaves, "db_slaves."
   Action: Specify a number that is greater than that given for "db_slaves" Alternatively, specify 0. The kernel will supply the appropriate number.

ORA-02875: smpini: Unable to get shared memory for PGA
   Cause: Stated in errno.
   Action: Resolve the problem.

ORA-02876: smpini: Unable to attach to shared memory for PGA
   Cause: Stated in errno.
   Action: Resolve the problem.

ORA-02877: smpini: Unable to initialize memory protection
   Cause: The adspcinit program has not been executed.
   Action: Execute the adscpinit program as shown in your Installation and Users" Guide. If the problem persists, try rebooting your computer.

ORA-02878: sou2o: Variable smpdidini overwritten
   Cause: The variable smpdidini was overwritten, probably by client code.
   Action: Verify client code, e.g. Pro*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

ORA-02879: sou2o: Could not gain access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02880: smpini: Could not register PGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02881: sou2o: Could not revoke access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02882: sou2o: Could not register SGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02899: smscre: Cannot create SGA with Extended Shared Memory feature

Cause: The environment variable EXTSHM was set before starting oracle.

Action: Unset the environment variable EXTSHM and startup oracle.

ORA-03001: unimplemented feature

Cause: This feature is not implemented.

Action: None

ORA-03002: operator not implemented

Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03007: obsolete feature

Cause: User attempted to use a feature which is no longer supported.

Action: None

ORA-03009: Incompatible OCI function call

Cause: An incompatible OCI function call was issued for new functionality.

Action: Do not use V7 OCI calls for this functionality.

ORA-03112: a server linked as single-task cannot use SQL*Net

Cause: A statement containing a SQL*Net connect string was issued to the single-task server. For example, a database link was used in a SQL statement.

Action: Do not use SQL*Net connect strings in a single-task environment.

ORA-03113: end-of-file on communication channel

Cause: The connection between Client and Server process was broken.

Action: There was a communication error that requires further investigation. First, check for network problems and review the SQL*Net setup. Also, look in the alert.log file for any errors. Finally, test to see whether the server process is dead and whether a trace file was generated at failure time.

ORA-03119: two-task detected inconsistent datatype specification

Cause: There was both a datatype, and an anonymous datatype declaration found.

Action: Correct the specification.

ORA-03122: attempt to close ORACLE-side window on user side

Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03123: operation would block

Cause: This is a status code that indicates that the operation cannot complete now.

Action: None; this is not an error. The operation should be retried again for completion.

ORA-03124: two-task internal error

Cause: Internal error.

Action: Contact your customer support representative.

ORA-03125: client-server protocol violation

Cause: The application received a bad escape sequence from the server and may indicate a problem with the client application user code.

Action: Contact your customer support representative.

ORA-03126: network driver does not support non-blocking operations

Cause: A non-blocking operation was attempted and the network driver does not support non-blocking operations.

Action: Use default blocking operations or use a driver supporting non-blocking operations.

ORA-03127: no new operations allowed until the active operation ends

Cause: An attempt was made to execute a new operation before the active non-blocking operation completed or a new operation was attempted before all the pieces of a column were inserted or fetched.

Action: Execute the new operation after the non-blocking operation completes. If piecewise binds/defines were done, execute the new operation after all the pieces have been inserted or fetched.

ORA-03128: connection is in blocking mode

Cause: The OCI test for non-blocking mode on a connection indicates that the connection is in blocking mode.

Action: If non-blocking mode is required use appropriate OCI calls to change the mode.

ORA-03129: the next piece to be inserted is required

Cause: The application performed a piecewise bind on a column.

Action: Provide the next piece of this bind variable.

ORA-03130: the buffer for the next piece to be fetched is required

Cause: The application performed a piecewise define on the column.

Action: Provide the next buffer for the next piece to be retrieved.

ORA-03131: an invalid buffer was provided for the next piece

Cause: The application either provided the length of the buffer for the next piece to be zero or provided a null pointer.

Action: Verify if the buffer pointer for the next piece is null or if the length is zero.

ORA-03132: two-task default value overflow

Cause: The default value specified for a record field was too large.

Action: Change the default value to fit the field size.

ORA-03134: Connections to this server version are no longer supported.

Cause: An attempt was made to connect to an Oracle server of older version.

Action: Please refer to documentation for more details.

ORA-03135: connection lost contact

Cause: 1) Server unexpectedly terminated or was forced to terminate. 2) Server timed out the connection.

Action: 1) Check if the server session was terminated. 2) Check if the timeout parameters are set properly in sqlnet.ora.

ORA-03136: inbound connection timed out

Cause: Inbound connection was timed out by the server because user authentication was not completed within the given time specified by SQLNET.INBOUND_CONNECT_TIMEOUT or its default value

Action: 1) Check SQL*NET and RDBMS log for trace of suspicious connections. 2) Configure SQL*NET with a proper inbound connect timeout value if necessary.

ORA-03137: TTC protocol internal error : [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: TTC protocol internal error.

Action: Contact Oracle Support Services.

ORA-03138: Connection terminated due to security policy violation

Cause: Connection was terminated due to a security policy violation.

Action: Contact the Database Administrator

ORA-03139: This OCI call has been disabled by the DBA

Cause: The SEC_DISABLE_OLDER_ORACLE_RPCS initialization parameter was enabled.

Action: Contact the Database Administrator

ORA-03140: I/O operation in progress

Cause: The current I/O operation was not complete. The error is typically returned from vectored and/or asynchronous I/O calls.

Action: Perform the necessary operation to complete or abort the current I/O.

ORA-03141: I/O request queue full

Cause: The I/O request queue was full and no more requests could be queued.

Action: Perform the proper operations to complete part or all of the current in-progress I/O requests.

ORA-03142: Session ID: *number* Serial number: *number*

Cause: Connection was lost for the specified session and serial number. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03143: Process ID: *string* **Thread ID:** *string*

Cause: Connection was lost for the specified process ID and thread ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03144: Process ID: *string*

Cause: Connection was lost for the specified process ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03145: I/O streaming direction error

Cause: Attempted to PUT data when GET streaming was in progress or attempted to GET data when PUT streaming was in progress.

Action: Complete current stream read or write I/O before attempting I/O in reverse direction.

ORA-03146: Invalid buffer length for TTC field

Cause: A corrupt Two-Task Common (TTC) packet was received.

Action: This is a internal protocol error. Contact Oracle Support Services.

ORA-03160: An invalid client operation was requested by the server

Cause: You are using an Oracle client application linked with libraries with lower version than the current server version.

Action: Upgrade client libraries to be same as or higher than the server version.

ORA-03170: deadlocked on readable physical standby

Cause: A new undo segment was added. A query can ocassionally deadlock when issued around the time an undo segment is added and used immediately on the primary.

Action: Retry the query. Avoid creating new undo segments when using standby as a regular part of operation.

ORA-03171: Recovery was terminated during query execution

Cause: Recovery was terminated. A query can ocassionally deadlock when recovery is terminated because it needs a block with changes that are made after the point at which recovery was terminated.

Action: Retry the query. Avoid cancelling recovery on standby.

ORA-03200: the segment type specification is invalid

Cause: segment type is not TABLE, INDEX, or CLUSTER

Action: use a correct segment type

ORA-03201: the group number specification is invalid

Cause: the freelist group number was either negative or larger than the the number of freelist groups in the segment

Action: use a correct group number

ORA-03202: the scan limit specification is invalid

Cause: the scan limit did not have a positive integer value the number of freelist groups in the segment

Action: use a correct scan limit

ORA-03203: concurrent update activity makes space analysis impossible
Cause: high volume of user updates interfere with the space analysis
Action: retry the command or lock the underlying objects

ORA-03204: the segment type specification should indicate partitioning
Cause: partition name is specified for the space analysis, but the object type does not indicate parttitioning
Action: specify PARTITION in the segment type, if the object is partitioned, otherwise, omit the partition name

ORA-03205: partition name is required when partitioned type is specified
Cause: partition name is not specified for the space analysis, but the object type indicates parttitioning
Action: specify partition name, if the object is partitioned, otherwise, specify a non-partitioned type

ORA-03206: maximum file size of (*string*) blocks in AUTOEXTEND clause is out of range
Cause: The maximum file size for an autoextendable file has exceeded the maximum number of blocks allowed.
Action: Reduce the size and retry.

ORA-03207: subpartitioned type must be specified for composite object
Cause: partition type is specified for the space analysis, but the object type indicates composite partitioning
Action: specify subpartition name and subpartition type

ORA-03208: partitioned type must be specified for a non-composite object
Cause: subpartition type is specified for the space analysis, but the object type indicates non-composite partitioning
Action: specify partition name and partition type

ORA-03209: DBMS_ADMIN_PACKAGE invalid file/block specification
Cause: The value of file number or block number is outside of limits or inconsistent
Action: Fix the file number/block number value

ORA-03210: DBMS_ADMIN_PACKAGE invalid option specification
Cause: The value of one of the option parameters is incorrect
Action: Fix the option value

ORA-03211: The segment does not exist or is not in a valid state
Cause: The segment specified in the DBMS_SPACE_ADMIN or DBMS_SPACE operation does not exist or is not in a state appropriate for this operation
Action: Fix the segment specification, or put the segment in the appropriate state.

ORA-03212: Temporary Segment cannot be created in locally-managed tablespace
Cause: Attempt to create a temporary segment for sort/hash/lobs in in permanent tablespace of kind locally-managed

Action: Alter temporary tablespace of user to a temporary tablespace or a dictionary-managed permanent tablespace

ORA-03213: Invalid Lob Segment Name for DBMS_SPACE package
Cause: The Lob Segment specified in the DBMS_SPACE operation does not exist.
Action: Fix the Segment Specification

ORA-03214: File Size specified is smaller than minimum required
Cause: File Size specified for add/resize datafile/tempfile does not allow for the minimum required of one allocation unit.
Action: Increase the specification for file size

ORA-03215: File Size specified for resize is too small
Cause: File Size specified for resize datafile/tempfile causes bitmap control structures to overlap
Action: Increase the specification for file size

ORA-03216: Tablespace/Segment Verification cannot proceed
Cause: Corruptions detected during verification whch cannot be dealt with
Action: Do manual verification

ORA-03217: invalid option for alter of TEMPORARY TABLESPACE
Cause: invalid option for alter of temporary tablespace was specified
Action: Specify one of the valid options: ADD TEMPFILE, TEMPFILE ONLINE, TEMPFILE OFFLINE

ORA-03218: invalid option for CREATE/ALTER TABLESPACE
Cause: invalid option for create/alter tablespace of type locally-managed
Action: Specify one of the valid options.

ORA-03219: Tablespace "*string*" is dictionary-managed, offline or temporary
Cause: Operation which is only applicable to permanent, online, locally-managed tablespaces is specified for a tablespace which is either dictionary-managed, offline or temporary
Action: Reissue operation for a different tablespace, mount the tablespace or do not issue it at all, since it does not apply for the given tablespace

ORA-03220: DBMS_ADMIN_PACKAGE required parameter is NULL or missing
Cause: Some of the procedures was called with missing or NULL parameters
Action: Specify the missing parameter

ORA-03221: Temporary tablespaces and temporary segments must have standard block size
Cause: An attempt was made to do one of the following : (1) create a temporary tablespace with a non-standard block size or, (2) alter an existing permanent tablespace of non-standard block size to a temporary tablespace or, (3) issue a DDL statement that would result in the creation of a temporary segment in a tablespace of non-standard block size.
Action: (1) If creating a temporary tablespace, do not specify a block size different from the standard block size. (2) If altering an existing permanent tablespace to a temporary tablespace, ensure that it is of standard block size. (3) Ensure that the user"s temporary tablespace is a tablespace having the standard block size.

ORA-03222: average row size and row count must be greater than zero

Cause: Either a bad value passed to dbms_space.create_table_cost() or explain plan did not pass through size information.

Action: Check the row size parameter in dbms_space.create_table_cost(). For explain plan, make sure statistics have been computed for all source tables in the CREATE TABLE AS SELECT statement.

ORA-03230: segment only contains *string* blocks of unused space above high water mark

Cause: Attempt to preserve too many blocks.

Action: reduce the KEEP amount.

ORA-03231: the INITIAL extent may not be deallocated

Cause: Attempt to deallocate space from the segment which was truncated prior to the 7.3 release.

Action: increase the KEEP amount, or truncate the segment, and reissue the command.

ORA-03233: unable to extend table *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for table subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03234: unable to extend index *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for index subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03235: max # extents (*string*) reached in table *string.string* subpartition *string*

Cause: A table subpartition tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-03236: max # extents (*string*) reached in index *string.string* subpartition *string*

Cause: An index subpartition tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-03237: Initial Extent of specified size cannot be allocated in tablespace (*string*)

Cause: Too large a size for an initial extent due to freelist group specification

Action: Reduce number of freelist groups specified for segment

ORA-03238: unable to extend LOB segment *string.string* subpartition *string* by *string* in tablespace *string*

Cause: An attempt was made to allocate an extent for LOB subpartition segment in tablespace, but the extent could not be allocated because there is not enough space in the tablespace indicated.

Action: Use the ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03239: maxextents (*string*) reached in LOB segment *string.string* subpartition *string*

Cause: A LOB subpartition segment tried to extend past maxextents.

Action: If maxextents is less than the system maximum, raise it. Otherwise, recreate the subpartition with larger INITIAL, NEXT, or PCTINCREASE parameters.

ORA-03240: User"s temporary tablespace same as tablespace being migrated

Cause: Users default temporary tablespace must be different from the tablespace being migrated.

Action: alter users default temporary tablespace to be different.

ORA-03241: Invalid unit size

Cause: User specified an invalid unit size for the tablespace

Action: Specify the correct unit size. To estimate unit size please refer to Oracle Server Administrator"s Guide.

ORA-03242: Tablespace migration retried 500 times

Cause: For migration to complete, temporary segments should not be present in the tablespace at the time of migration.

Action: Avoid migrating the tablespace when there is heavy temporary segment creation going on as with object drops.

ORA-03243: destination dba overlaps with existing control information

Cause: Cannot overlap control information during relocation

Action: Please chose another destination address

ORA-03244: No free space found to place the control information

Cause: During migration of tablespace found no place to put the control information. If during bitmaps relocation, found no space at the specified destination.

Action: If during migration, add more space to the tablespace and retry migration. If during bitmaps relocation, specify a destination address where there is enough free space.

ORA-03245: Tablespace has to be dictionary managed, online and permanent to be able to migrate

Cause: Tablespace was not dictionary managed or online or permanent.

Action: Make sure the tablespace is online, permanent and dictionary managed

ORA-03246: Invalid block number specified

Cause: Control information cannot be placed at the specified dba either because the block number specified is beyond the file end or the file is not large enough to accomodate the control information at that location

Action: specify a correct block number

ORA-03247: Invalid block number specified

Cause: Relocation of bitmaps to the said destination will make the tablespace self descriptive

Action: Choose another destination dba.

ORA-03248: Too much of segment creation activity during migration

Cause: Temporary segments were attempted to be created during migration

Action: The error is signalled after retrying migration for 500 times. Run migration when there is less of segment creation activity is going on.

ORA-03249: Uniform size for auto segment space managed tablespace should have atleast *string* blocks

Cause: For the given blocksize, uniform size specified is insufficient

Action: Specify larger extent size and retry

ORA-03250: Cannot mark this segment corrupt

Cause: This segment cannot be marked corrupt because it contains data dictionary objects

Action: Check the segment information and reissue the command.

ORA-03251: Cannot issue this command on SYSTEM tablespace

Cause: It is not permitted to migrate SYSTEM tablespace from locally managed format to dictionary managed format or relocate bitmaps.

Action: Check the tablespace name and procedure name

ORA-03252: initial extent size not enough for LOB segment

Cause: Fatblock size of LOB segment is too big to fit into the initial extent.

Action: Specify a smaller fatblock size or create the LOB segment in other tablespaces with bigger initial extent size.

ORA-03254: unable to execute the sql in read only database

Cause: Unable to create a consistent snapshot of the object in a read only database. Transaction recovery must be performed before opening the database read only.

Action: Open the database read write, allow dead transaction recovery to complete and then open the database read only.

ORA-03261: the tablespace *string* has only one file

Cause: Dropping file from ts which has a single file extent.

Action: Cannot make a tablespace fileless

ORA-03262: the file is non-empty

Cause: Trying to drop a non-empty datafile

Action: Cannot drop a non empty datafile

ORA-03263: cannot drop the first file of tablespace *string*

Cause: Trying to drop the first datafile with which ts is created

Action: Cannot drop the first datafile with which ts is created

ORA-03264: cannot drop offline datafile of locally managed tablespace

Cause: Trying to drop offline datafile in lmts

Action: Try to drop file afetr making it online

ORA-03274: both ALLOCATE EXTENT and DEALLOCATE UNUSED options are specified

Cause: The DEALLOCATE option and the ALLOCATE option are specified in the same command.

Action: Choose one of the options or issue two separate commands.

ORA-03275: duplicate DEALLOCATE option specification

    Cause: The DEALLOCATE UNUSED option to ALTER TABLE or ALTER INDEX is specified more than once.

    Action: Specify the option at most once.

ORA-03276: duplicate ALLOCATE EXTENT option specification

    Cause: The ALLOCATE EXTENT option to ALTER TABLE or ALTER INDEX is specified more than once.

    Action: Specify the option at most once.

ORA-03277: invalid SIZE specified

    Cause: The specified value must be an integer.

    Action: Choose an appropriate integer value.

ORA-03278: duplicate ALLOCATE EXTENT option specification

    Cause: An option (DATAFILE, SIZE or INSTANCE) was specified more than once.

    Action: Specify each option at most once.

ORA-03279: invalid INSTANCE specified

    Cause: The specified value is not recognized as a valid instance name.

    Action: Use a valid name.

ORA-03280: invalid DATAFILE filename specified

    Cause: A character string literal is expected, but not found.

    Action: Specify filenames using character string literals.

ORA-03281: invalid ALLOCATE EXTENT option

    Cause: An option other than DATAFILE, SIZE or INSTANCE was specified.

    Action: Remove invalid option and retry the command.

ORA-03282: missing ALLOCATE EXTENT option

    Cause: No ALLOCATE EXTENT options were specified.

    Action: Specified one or more of the following options: DATAFILE, SIZE or INSTANCE.

ORA-03283: specified datafile *string* does not exist

    Cause: The datafile does not exist

    Action: Retry the option with the correct datafile

ORA-03284: datafile or tempfile *string* is not a member of tablespace *string*

    Cause: The specified datafile or tempfile did not belong to the tablespace that the object resides in.

    Action: Retry the option with the correct datafile or tempfile.

ORA-03286: ALLOCATE EXTENT not valid for HASH CLUSTERS

    Cause: The cluster is a hash cluster, and can not use the allcoate extent option.

    Action: None

ORA-03287: invalid FREELIST GROUP specified

    Cause: The specified FREELIST GROUP number is invalid

Action: Choose a number between 1 and # freelist groups for this object

ORA-03288: both FREELIST GROUP and INSTANCE parameters may not be specified

Cause: Both FREELIST GROUP and INSTANCE were specified in clause

Action: Remove one of the two parameters

ORA-03289: partition name and segment type do not match

Cause: Partition name and segment type specified for space analysis do not match

Action: Specify type PARTITION if the object is partitioned, specify SUBPARTITION if the object is composite

ORA-03290: Invalid truncate command - missing CLUSTER or TABLE keyword

Cause: Invalid object specification given.

Action: Either specify TRUNCATE CLUSTER or TRUNCATE TABLE

ORA-03291: Invalid truncate option - missing STORAGE keyword

Cause: Expected STORAGE keyword

Action: Either specify DROP STORAGE or REUSE STORAGE

ORA-03292: Table to be truncated is part of a cluster

Cause: The table being truncated is a member of a cluster.

Action: Either use TRUNCATE CLUSTER or DROP TABLE

ORA-03293: Cluster to be truncated is a HASH CLUSTER

Cause: Only INDEX CLUSTERS can be truncated.

Action: Drop and recreate the HASH CLUSTER instead of using truncate.

ORA-03296: cannot resize datafile - file *string* not found

Cause: The specified datafile is not available for resizing.

Action: Ensure that the datafile name is valid, and if so, ensure the file is accessible.

ORA-03297: file contains used data beyond requested RESIZE value

Cause: Some portion of the file in the region to be trimmed is currently in use by a database object

Action: Drop or move segments containing extents in this region prior to resizing the file, or choose a resize value such that only free space is in the trimmed.

ORA-03298: cannot shrink datafile - file *string* is under hot backup

Cause: Attempt to shrink a datafile while it is under hot backup. This is not allowed.

Action: Retry shrinking the file after the hot backup completes.

ORA-03299: cannot create dictionary table *string*

Cause: A dictionary table is created upon the first execution of the command "alter database datafile autoextend on" for a database. This operation did not succeed. The most probable cause for this is insufficient space in the system tablespace.

Action: See action for next error message in error stack.

ORA-04000: the sum of PCTUSED and PCTFREE cannot exceed 100

Cause: the sum of PCTUSED and PCTFREE for a cluster or table exceeds 100

Action: create the table/cluster specifying values whose sum is <= 100

ORA-04001: sequence parameter *string* must be an integer

Cause: %s (a sequence parameter) specified was not an integer

Action: create the sequence, giving the specified parameter an integer value

ORA-04002: INCREMENT must be a non-zero integer

Cause: a sequence increment was specified to be zero

Action: specify the increment to be a non-zero value

ORA-04003: sequence parameter *string* exceeds maximum size allowed (*string* digits)

Cause: %s (a sequencer parameter) had too many digits

Action: specify the parameter with the allowed number of digits

ORA-04004: MINVALUE must be less than MAXVALUE

Cause: MINVALUE was specified to be greater than or equal to MAXVALUE

Action: specify a MINVALUE that is less than MAXVALUE

ORA-04005: INCREMENT must be less than MAXVALUE minus MINVALUE

Cause: the INCREMENT specified is >= MAXVALUE-MINVALUE

Action: specify an INCREMENT that is < MAXVALUE-MINVALUE

ORA-04006: START WITH cannot be less than MINVALUE

Cause: the given starting value is less than MINVALUE

Action: make sure that the starting value is >= MINVALUE

ORA-04007: MINVALUE cannot be made to exceed the current value

Cause: the given MINVALUE would be greater than the current value

Action: always make sure that MINVALUE is <= the current value

ORA-04008: START WITH cannot be more than MAXVALUE

Cause: the starting value would be larger than MAXVALUE

Action: make sure that the starting value is less than MAXVALUE

ORA-04009: MAXVALUE cannot be made to be less than the current value

Cause: the current value exceeds the given MAXVALUE

Action: make sure that the new MAXVALUE is larger than the current value

ORA-04010: the number of values to CACHE must be greater than 1

Cause: the value in the CACHE clause was one

Action: specify NOCACHE, or a value larger than one

ORA-04011: sequence *string* must range between *string* and *string*

Cause: the value specified for one of the sequence parameters exceeds limits

Action: specify parameter within these limits

ORA-04012: object is not a sequence

Cause: the object specified cannot have sequence ddl"s performed on it

Action: re-enter the statement being careful with the spelling of the name

ORA-04013: number to CACHE must be less than one cycle
Cause: number to CACHE given is larger than values in a cycle
Action: enlarge the cycle, or cache fewer values

ORA-04014: descending sequences that CYCLE must specify MINVALUE
Cause: sequences that cycle must have their wrap-wrap specified
Action: re-create the sequence, specifying its wrap-value

ORA-04015: ascending sequences that CYCLE must specify MAXVALUE
Cause: sequences that cycle must have their wrap-wrap specified
Action: re-create the sequence, specifying its wrap-value

ORA-04016: sequence *string* no longer exists
Cause: sequence was dropped while processing its next value.
Action: re-create the sequence

ORA-04017: invalid value *string* (length = *string*) for parameter max_dump_file_size
Cause: neither did the string supplied for max_dump_file_size parameter match the "UNLIMITED" string value nor did it represent a base 10 integer.
Action: reassign a proper value to this parameter.

ORA-04020: deadlock detected while trying to lock object *stringstringstringstringstring*
Cause: While trying to lock a library object, a deadlock is detected.
Action: Retry the operation later.

ORA-04021: timeout occurred while waiting to lock object *stringstringstringstringstring*
Cause: While waiting to lock a library object, a timeout is occurred.
Action: Retry the operation later.

ORA-04022: nowait requested, but had to wait to lock dictionary object
Cause: Had to wait to lock a library object during a nowait request.
Action: Retry the operation later.

ORA-04023: Object *stringstringstringstringstring* could not be validated or authorized
Cause: A number of attempts were made to validate or authorize an object but failed.
Action: Please report this error to Oracle Support Services.

ORA-04024: self-deadlock detected while trying to mutex pin cursor *string*
Cause: While trying to mutex pin a cursor, a self-deadlock is detected.
Action: Retry the operation later.

ORA-04027: self-deadlock during automatic validation for object *string.string*
Cause: An attempt was made to validate an invalidated object but it failed because of a self-deadlock.
Action: , e.g. compile the invalidated object separately.

ORA-04028: cannot generate diana for object *stringstringstringstringstring*

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

ORA-04029: error ORA-*string* occurred when querying *stringstringstring*

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

ORA-04030: out of process memory when trying to allocate *string* bytes (*string,string*)

Cause: Operating system process private memory was exhausted.

Action: None

ORA-04031: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*","*string*")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: If the shared pool is out of memory, either use the DBMS_SHARED_POOL package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the initialization parameters SHARED_POOL_RESERVED_SIZE and SHARED_POOL_SIZE. If the large pool is out of memory, increase the initialization parameter LARGE_POOL_SIZE.

ORA-04032: pga_aggregate_target must be set before switching to auto mode

Cause: attempt to set workarea_size_policy to AUTO while pga_aggregate_target is not specified

Action: before setting workarea_size_policy, set pga_aggregate_target to a value representing the total private memory available to the instance. This total is generally the total physical memory available in the system minus what is needed for the SGA minus what is needed for the operating system (e.g. 500MB)

ORA-04033: Insufficient memory to grow pool

Cause: The system had insufficient memory to grow the pool to the specified size.

Action: Specify a smaller value to grow the pool.

ORA-04034: unable to shrink pool to specified size

Cause: The pool could not shrink to the specified size as it could not free memory.

Action: Specify a larger value to which to shrink the pool to.

ORA-04035: unable to allocate *string* bytes of shared memory in shared object cache "*string*" of size "*string*"

Cause: More shared memory is needed than was allocated in the shared object cache.

Action: None

ORA-04041: package specification must be created first before creating package body

Cause: Attempt to create a package body before creating its package specification.

Action: Create the package specification first before creating the package body.

ORA-04042: procedure, function, package, or package body does not exist

Cause: Attempt to access a procedure, function, package, or package body that does not exist.

Action: Make sure the name is correct.

ORA-04043: object *string* **does not exist**

Cause: An object name was specified that was not recognized by the system. There are several possible causes:

- An invalid name for a table, view, sequence, procedure, function, package, or package body was entered. Since the system could not recognize the invalid name, it responded with the message that the named object does not exist.

- An attempt was made to rename an index or a cluster, or some other object that cannot be renamed.

Action: Check the spelling of the named object and rerun the code. (Valid names of tables, views, functions, etc. can be listed by querying the data dictionary.)

ORA-04044: procedure, function, package, or type is not allowed here

Cause: A procedure, function, or package was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-04045: errors during recompilation/revalidation of *string.string*

Cause: This message indicates the object to which the following errors apply. The errors occurred during implicit recompilation/revalidation of the object.

Action: Check the following errors for more information, and make the necessary corrections to the object.

ORA-04046: results of compilation are too large to support

Cause: Attempt to compile and store a large stored procedure that results in compilation data that is too large for the system to support or store.

Action: Reduce the size of the store procedure by splitting it into smaller stored procedures.

ORA-04047: object specified is incompatible with the flag specified

Cause: The object type implied by the flag does not match the type of object specified.

Action: Specify the correct object, or use the appropriate flag

ORA-04050: invalid or missing procedure, function, or package name

Cause: The required procedure, function, or package name is invalid or missing.

Action: Specify a valid name.

ORA-04051: user *string* **cannot use database link** *string.string*

Cause: During forwarding of a remote object access, an attempt was made to use a non-existent database link or one owned by a user other than the logon user or PUBLIC.

Action: Change your database link structure so that all indirect remote accesses are done from the same userid that originates the request.

ORA-04052: error occurred when looking up remote object *stringstringstringstringstring*

Cause: An error has occurred when trying to look up a remote object.

Action: Fix the error. Make sure the remote database system has run KGLR.SQL to create necessary views used for querying/looking up objects stored in the database.

ORA-04053: error occurred when validating remote object *stringstringstringstringstring*

Cause: An error has occurred when trying to validate a remote object.

Action: Fix the error. Make sure the remote database system has run KGLR.SQL to create necessary views used for querying/looking up objects stored in the database.

ORA-04054: database link *string* **does not exist**

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

ORA-04055: Aborted: "*string***" formed a non-REF mutually-dependent cycle with "***string***".**

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

ORA-04060: insufficient privileges to execute *string*

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

ORA-04061: existing state of *string* **has been invalidated**

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

ORA-04062: *string* **of** *string* **has been changed**

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp or signature that is different from the current timestamp/signature of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

ORA-04063: *string* **has errors**

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view"s defining query to a non-existent table. Can also be a table which has references to non-existent or inaccessible types.

Action: Fix the errors and/or create referenced objects as necessary.

ORA-04064: not executed, invalidated *string*

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

ORA-04065: not executed, altered or dropped *string*

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

ORA-04066: non-executable object, *string*

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

ORA-04067: not executed, *string* **does not exist**

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

ORA-04068: existing state of packages*stringstringstring* **has been discarded**

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application"s state.

ORA-04069: cannot drop or replace a library with table dependents

Cause: An attempt was made to drop or replace a library that has dependents. There could be a table which depends on type which depends on the library being dropped.

Action: Drop all table(s) depending on the type, then retry.

ORA-04070: invalid trigger name

Cause: An invalid trigger name was specified.

Action: Verify that trigger name is not a reserved keyword.

ORA-04071: missing BEFORE, AFTER or INSTEAD OF keyword

Cause: The trigger statement is missing the BEFORE/AFTER/INSTEAD OF clause.

Action: Specify either BEFORE, AFTER or INSTEAD OF.

ORA-04072: invalid trigger type

Cause: An invalid trigger type was given.

Action: Specify either INSERT, UPDATE or DELETE.

ORA-04073: column list not valid for this trigger type

Cause: A column list was specified for a non-update trigger type.

Action: Remove the column list.

ORA-04074: invalid REFERENCING name

Cause: An invalid name was given in the referencing clause.

Action: Verify the referencing name is not a reserved word.

ORA-04075: invalid trigger action

Cause: An statement was given for the trigger action.

Action: Re-specify the trigger action.

ORA-04076: invalid NEW or OLD specification

Cause: An invalid NEW or OLD specification was given for a column.

Action: Re-specify the column using the correct NEW or OLD specification.

ORA-04077: WHEN clause cannot be used with table level triggers

    Cause: The when clause can only be specified for row level triggers.

    Action: Remove the when clause or specify for each row.

ORA-04078: OLD and NEW values cannot be identical

    Cause: The referencing clause specifies identical values for NEW and OLD.

    Action: Re-specify either the OLD or NEW referencing value.

ORA-04079: invalid trigger specification

    Cause: The create TRIGGER statement is invalid.

    Action: Check the statement for correct syntax.

ORA-04080: trigger "*string*" does not exist

    Cause: The TRIGGER name is invalid.

    Action: Check the trigger name.

ORA-04081: trigger "*string*" already exists

    Cause: The TRIGGER name or type already exists.

    Action: Use a different trigger name or drop the trigger which is of the same name.

ORA-04082: NEW or OLD references not allowed in table level triggers

    Cause: The trigger is accessing "new" or "old" values in a table trigger.

    Action: Remove any new or old references.

ORA-04083: invalid trigger variable "*string*"

    Cause: The variable referenced in the trigger body is invalid.

    Action: See the manual for valid trigger variable types.

ORA-04084: cannot change NEW values for this trigger type

    Cause: New trigger variables can only be changed in before row insert or update triggers.

    Action: Change the trigger type or remove the variable reference.

ORA-04085: cannot change the value of an OLD reference variable

    Cause: Old values can only be read and not changed.

    Action: Do not attempt to change an old variable.

ORA-04086: trigger description too long, move comments into triggering code

    Cause: The trigger description is limited to 2000 characters (for dictionary storage reasons). The description does not include the text of the "when" clause or the text of the pl/sql code executed for the trigger.

    Action: If the trigger description contains a large comment, move that

ORA-04087: cannot change the value of ROWID reference variable

    Cause: Rowid"s can only be read and not changed.

    Action: Do not attempt to change an rowid value.

ORA-04088: error during execution of trigger "*string.string*"

    Cause: A runtime error occurred during execution of a trigger.

    Action: Check the triggers which were involved in the operation.

ORA-04089: cannot create triggers on objects owned by SYS
Cause: An attempt was made to create a trigger on an object owned by SYS.

Action: Do not create triggers on objects owned by SYS.

ORA-04090: "*string*" specifies same table, event and trigger time as "*string*"
Cause: Trigger is of duplicate event and trigger time.

Action: Combine the triggering information into one trigger which is fired at the given time.

ORA-04091: table *string.string* is mutating, trigger/function may not see it
Cause: A trigger (or a user defined plsql function that is referenced in this statement) attempted to look at (or modify) a table that was in the middle of being modified by the statement which fired it.

Action: Rewrite the trigger (or function) so it does not read that table.

ORA-04092: cannot *string* in a trigger
Cause: A trigger attempted to commit or rollback.

Action: Rewrite the trigger so it does not commit or rollback.

ORA-04093: references to columns of type LONG are not allowed in triggers
Cause: A trigger attempted to reference a long column in the triggering table.

Action: Do not reference the long column.

ORA-04094: table *string.string* is constraining, trigger may not modify it
Cause: A trigger attempted to modify a table that was constraining for some referential constraint of a parent SQL statement.

Action: None

ORA-04095: trigger "*string*" already exists on another table, cannot replace it
Cause: Cannot replace a trigger which already exists on a different table than the one being replaced.

Action: Drop the trigger with the same name and re-create it.

ORA-04096: trigger "*string*" has a WHEN clause which is too large, limit 2K
Cause: A trigger"s "when" clause is limited to 2K for dictionary storage reasons. The trigger being created exceeded that size.

Action: Use a smaller "when" clause. Note, the trigger body could be used to perform the same limiting action as the "when" clause.

ORA-04097: DDL conflict while trying to drop or alter a trigger
Cause: An attempt was made to concurrently perform two DDL operations on a trigger or trigger table.

Action: Investigate the new state of the trigger and retry the DDL operation, if still appropriate.

ORA-04098: trigger "*string.string*" is invalid and failed re-validation
Cause: A trigger was attempted to be retrieved for execution and was found to be invalid. This also means that compilation/authorization failed for the trigger.

Action: Options are to resolve the compilation/authorization errors, disable the trigger, or drop the trigger.

ORA-04099: trigger "*string*" is valid but not stored in compiled form

Cause: A trigger was attempted to be retrieved for execution and was found to be valid, but not stored. This may mean the an upgrade was done improperly from a non-stored trigger release.

Action: Alter compile the trigger to create the trigger in stored form. Also, you may want to review that a proper upgrade was done.

6

ORA-04930 to ORA-07499

ORA-04930: open sequence number failed or initial state is valid

Cause: Either Shared Sequence Number OS component was not installed properly, or an MC hardware failure may have occurred or a previous instance was not shut down properly.

Action: Verify that there are no background or foreground Oracle processes from a previous instance on this node using the OS command ps -ef|grep <instance_name>. Verify that there are no shared memory segments belonging to the user which owns the Oracle installation by isuing the ipcs -b OS command. If there are shared memory segments or processes still on the system, use svrmgrl to shutdown the instance with the abort option. If the instance is not up, verify that the cluster software and/or the hardware is installed and working. Log in as superuser and issue the cnxshow command. Are all of the nodes in the cluster listed? Are they members of the cluster? Is the communications between nodes okay? If the answer to any of these questions is false, contact Digital"s customer support organization.

ORA-04931: unable to set initial sequence number value

Cause: A call to the SSN failed to set the sequence number to its initial value, possibly caused by an MC hardware problem.

Action: Verify that the MC hardware is functioning properly. If it is not, contact Digital"s customer support organization. If it is, contact Oracle support.

ORA-04932: increment or adjust of sequence number failed

Cause: A call to the SSN failed to increment the sequence number.

Action: Verify that the MC hardware is functioning properly. If it is not, contact Digital"s customer support organization. If it is, contact Oracle support.

ORA-04933: initial service identifier is non-zero

Cause: A valid service identifier existed before the sequence number service was opened.

Action: Verify that the instance is completely shut down.

ORA-04934: unable to obtain the current sequence number

Cause: A call to the SSN failed to return its current value. Either there are many errors occurring on the MC hardware, or the sequence number has become invalid and cannot be validated.

Action: Verify that the MC hardware is functioning properly. If it is, contact Oracle Support.

ORA-04935: unable to get/convert SCN recovery lock

Cause: A process has timed out trying to get or convert the SCN recovery lock. Another process probably has the lock in EX or SHR mode, but is not releasing it.

Action: Contact Oracle Support.

ORA-04940: unsupported optimization of Oracle binary, check alert log for more info

Cause: ORACLE binary has been optimized with unsupported options or a required option has not been used.

Action: Check the documentation for a list of supported and required flags for the optimizing utility that you used to optimize ORACLE. Shutdown the instance, optimize ORACLE again with supported combination of options and restart the instance.

ORA-04941: required operating system patch needs to be applied

Cause: The operating system could not return the start time of a process.

Action: Check that the operating system kernel has been patched to return process start time. Apply the required operating system patch and restart the instance.

ORA-06000: NETASY: port open failure

Cause: Autologin unable to open port

Action: Check log file for OS-specific error code

ORA-06001: NETASY: port set-up failure

Cause: Autologin unable to change port attributes

Action: Check log file for OS-specific error code

ORA-06002: NETASY: port read failure

Cause: Autologin unable to read from port

Action: Check log file for OS-specific error code

ORA-06003: NETASY: port write failure

Cause: Autologin unable to write to port

Action: Check log file for OS-specific error code

ORA-06004: NETASY: dialogue file open failure

Cause: Autologin unable to open dialogue file

Action: Check connect string for accuracy/typos

ORA-06005: NETASY: dialogue file read failure

Cause: Autologin unable to read dialogue file

Action: Check log file for OS-specific error code

ORA-06006: NETASY: dialogue execute failure

Cause: Expected response never received

Action: None

ORA-06007: NETASY: bad dialogue format

Cause: Dialogue file contains syntax error

Action: Correct the dialogue file

ORA-06009: NETASY: dialogue filename too long

Cause: Full file spec for dialogue file exceeds 64 bytes

Action: Amend connect string accordingly

ORA-06010: NETASY: dialogue file too long

Cause: Dialogue file exceeds 768 bytes in length

Action: Simplify dialogue (e.g. remove comments, redundant white space), or split into two and link with "more" command

ORA-06011: NETASY: dialogue too long

Cause: One of two:

1. Dialogue contains more than 24 exchange blocks

2. Dialogue send string exceeds 84 bytes in length

Action: Simplify dialogue or split into two and link with "more" command

ORA-06017: NETASY: message receive failure

Cause: Async driver gets I/O error while doing network read operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06018: NETASY: message send failure

Cause: Async driver gets I/O error while doing network write operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06019: NETASY: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06020: NETASY: initialisation failure

Cause: Async driver unable to complete initialisation

Action: Check log file for OS-specific error code

ORA-06021: NETASY: connect failed

Cause: Async driver unable to establish connection with partner

Action: Check log file for OS-specific error code

ORA-06022: NETASY: channel open failure

Cause: no free channel [should never happen]

Action: Contact your customer support representative.

ORA-06023: NETASY: port open failure

Cause: Async driver unable to open port

Action: Check log file for OS-specific error code

ORA-06024: NETASY: VTM error

Cause: Virtual Terminal Manager unable to read/write to port

Action: Check log file for OS-specific error code

ORA-06025: NETASY: Configuration error

Cause: Async driver genned for server-only, but client service requested

Action: Contact your customer support representative.

ORA-06026: NETASY: port close failure
    Cause: Async driver unable to close port
    Action: Check log file for OS-specific error code

ORA-06027: NETASY: channel close failure
    Cause: Async driver unable to close channel
    Action: Check log file for OS-specific error code

ORA-06028: NETASY: unable to intialise for logging
    Cause: Async driver unable to initialise for logging I/O
    Action: Contact your customer support representative.

ORA-06029: NETASY: port assignment failure
    Cause: Async driver unable to assign port to channel [should never happen]
    Action: Contact your customer support representative.

ORA-06030: NETDNT: connect failed, unrecognized node name
    Cause: Node name specified in host string is unknown (probably misspelled)
    Action: Retry with correct node name

ORA-06031: NETDNT: connect failed, unrecognized object name
    Cause: Host string contains reference to object (which doesn"t exist):
    @d:<node>-<obj> => object is ORDN<obj>; when <node> is VMS, the object is
    ORDN<obj>.COM when <node> is UNIX, the object is ORDN<obj>
    @d:<node>::"task=<obj>" => object is <obj>; when <node> is VMS, the object is
    <obj>.COM when <node> is UNIX, the object is <obj>
    Action: Retry with correct object name or create the required object on host node

ORA-06032: NETDNT: connect failed, access control data rejected
    Cause: Host string contains invalid username/password
    Action: Retry with correct username/password

ORA-06033: NETDNT: connect failed, partner rejected connection
    Cause: Connection with partner was made but was rejected.
    Action: Contact your network administrator.

ORA-06034: NETDNT: connect failed, partner exited unexpectedly
    Cause: Connection with host node was made but partner aborted
    Action: Make sure object (see 06031, above) is working (for VMS run the
    command file and make sure that the ORACLE server process starts up);
    sometimes happens when the network/node is under stress - in this case a retry
    often works.

ORA-06035: NETDNT: connect failed, insufficient resources
    Cause: Insufficient system resources are available to complete the connection; for
    example, all DECnet channels are in use.
    Action: Contact your network administrator.

ORA-06037: NETDNT: connect failed, node unreachable
    Cause: Host node is down.

Action: Contact your network administrator.

ORA-06039: NETDNT: connect failed

Cause: Connect failed for unexpected reason (see OSD error).

Action: Contact your customer support representative.

ORA-06040: NETDNT: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06041: NETDNT: disconnect failed

Cause: Driver gets error while doing network close operation

Action: Contact your customer support representative.

ORA-06042: NETDNT: message receive failure

Cause: Driver gets I/O error while doing network read operation

Action: Contact your customer support representative.

ORA-06043: NETDNT: message send failure

Cause: Driver gets I/O error while doing network write operation

Action: Contact your customer support representative.

ORA-06044: NETDNT: connect failed, byte count quota exceeded

Cause: Connect failed because of insufficient byte count quota.

Action: Increase byte count quota.

ORA-06102: NETTCP: cannot allocate context area

Cause: Insufficient dynamic memory available for connection context area.

Action: Contact your customer support representative.

ORA-06105: NETTCP: remote host is unknown

Cause: Host name specified in the login (connect) string is unknown.

Action: Check spelling; make sure name is in the TCP/IP HOST file.

ORA-06106: NETTCP: socket creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06107: NETTCP: ORACLE network server not found

Cause: No entry in SERVICES file for ORACLE server.

Action: Add ("orasrv") entry to the TCP/IP SERVICES file.

ORA-06108: NETTCP: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net TCP/IP server on the remote host is not up, or the host itself is not up (check the latter by targeting it with Telnet).

Action: Start the SQL*Net TCP/IP server process on the remote host.

ORA-06109: NETTCP: message receive failure

Cause: I/O error occurred while attempting network read operation.

Action: Contact your customer support representative.

ORA-06110: NETTCP: message send failure

    Cause: I/O error occurred while attempting network write operation.

    Action: Contact your customer support representative.

ORA-06111: NETTCP: disconnect failure

    Cause: Error occurred while closing a socket.

    Action: Contact your customer support representative.

ORA-06112: NETTCP: invalid buffer size

    Cause: The buffer size specified in the login string exceeds the allowed maximum (of 4096).

    Action: Re-submit with valid buffer size.

ORA-06113: NETTCP: Too many connections

    Cause: The maximum no. of concurrently open connections has been reached.

    Action: Exit an application with an open connection which is no longer required.

ORA-06114: NETTCP: SID lookup failure

    Cause: From the remote host"s SQL*Net TCP/IP server: the database SID, specified in the login (connect) string, was not recognized.

    Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net TCP/IP server).

ORA-06115: NETTCP: unable to create ORACLE logicals

    Cause: The host"s SQL*Net TCP/IP server was unable to create the necessary logicals required by the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

    Action: Contact your system administrator.

ORA-06116: NETTCP: unable to create ORASRV process

    Cause: The host"s SQL*Net TCP/IP server was unable to create the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

    Action: Contact your system administrator.

ORA-06117: NETTCP: unable to create ORASRV: quota exceeded

    Cause: The host"s SQL*Net TCP/IP server was unable to create the ORACLE server process because of quota depletion.

    Action: Increase quota allocations to the SQL*Net TCP/IP server process.

ORA-06118: NETTCP: unable to complete handshake with ORASRV

    Cause: The ORACLE server process was started but failed to complete its initialization.

    Action: Contact your customer support representative.

ORA-06119: NETTCP: spurious client request

    Cause: The host"s SQL*Net TCP/IP server was unable to recognize this connection request. See the SQL*Net TCP/IP server log file for more details.

    Action: Contact your customer support representative.

ORA-06120: NETTCP: network driver not loaded

    Cause: The TCP/IP network driver is not loaded.

Action: Check that the TCP/IP driver is loaded correctly.

ORA-06121: NETTCP: access failure

Cause: The host''s SQL*Net TCP/IP server was unable to test the accessibility of the SID mapping file (specified in CONFIG.ORA) associated with this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06122: NETTCP: setup failure

Cause: The host''s SQL*Net TCP/IP server was unable to set up the appropriate environment to service this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06123: NETTCP: cannot set KEEPALIVE

Cause: The host''s SQL*Net TCP/IP server was unable to set the socket KEEPLIVE option. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06124: NETTCP: timeout waiting for ORASRV

Cause: The ORACLE server process was started but failed to respond after N secs.

Action: For heavily loaded systems this is not an uncommon occurrence. Increase the value of N (the default is 30) by placing the following entry in the CONFIG.ORA file: SQLNET ORASRV_WAIT = <no. of secs> which will come into effect the next time the SQL*Net TCP/IP server is started.

ORA-06125: NETTCP: ORASRV exited unexpectedly

Cause: The ORACLE server process was started but exited unexpectedly. Possible causes:

1. Insufficient quotas to run ORASRV

2. ORACLE is not installed See the ORASRV output file for more details; the file will be in the ORA_SQLNET directory and will have a name of the form: ORA_ SRVTnn_<SID>.OUT

Action: If appropriate action is not obvious from the ORASRV output file then contact your customer support representative.

ORA-06126: NETTCP: ORASRV unable to open network connection

Cause: The ORACLE server process was started but was unable to open the socket passed to it by TCPSRV.

Action: Contact your customer support representative.

ORA-06127: NETTCP: unable to change username

Cause: The host''s SQL*Net TCP/IP server could not establish a PROXY LOGIN connection because the client username is unknown (to the host OS).

Action: Create new user account on host.

ORA-06128: NETTCP: unable to create mailbox

Cause: The host''s SQL*Net TCP/IP server was unable to create a mailbox (needed for IPC communication with the ORACLE server process). See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06129: NETTCP: unable to transfer socket ownership to ORASRV

Cause: The host"s SQL*Net TCP/IP server was unable to transfer the network communication handle to the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06130: NETTCP: host access denied

Cause: The host"s SQL*Net TCP/IP server rejected this connection request because the client node does not have access privilege - as determined by the contents of the Valid Node Table (VNT), a component of the host"s CONFIG.ORA.

Action: To grant access, add appropriate entry to the host"s VNT.

ORA-06131: NETTCP: user access denied

Cause: The host"s SQL*Net TCP/IP server rejected this connection request because the client user(name) does not have access privilege - as determined by the contents of the Username Mapping Table (UMT), a component of the host"s CONFIG.ORA.

Action: To grant access, add appropriate entry to the host"s UMT.

ORA-06132: NETTCP: access denied, wrong password

Cause: The host SQL*Net TCP/IP server rejected this connection request because the client password did not match the host password.

Action: To grant access, get passwords in sync.

ORA-06133: NETTCP: file not found

Cause: The host"s SQL*Net TCP/IP server could not find the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Check CONFIG.ORA for spelling; make correct entry.

ORA-06134: NETTCP: file access privilege violation

Cause: The host"s SQL*Net TCP/IP server did not have READ/ EXECUTE permission for the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Change protection on SID mapping file.

ORA-06135: NETTCP: connection rejected; server is stopping

Cause: The host"s SQL*Net TCP/IP server rejected this connection request because it is in the process of stopping.

Action: Re-start SQL*Net TCP/IP server.

ORA-06136: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host"s SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06137: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host"s SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06138: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host"s SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06140: NETTCP: no such user

Cause: A proxy login connect attempt failed because the client username has no counterpart on the host.

Action: None

ORA-06141: NETTCP: no privilege for user

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server had insufficient privileges to access the proxy account.

Action: Change account protection; change server privilges.

ORA-06142: NETTCP: error getting user information

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server was unable to access the proxy account. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06143: NETTCP: maximum connections exceeded

Cause: The connect failed because the maximum conncurrent connections supported by the host"s SQL*Net TCP/IP server has already been reached.

Action: Wait for a short period and re-try.

ORA-06144: NETTCP: SID (database) is unavailable

Cause: The database administrator on the host has varied the SID offline.

Action: Wait for it to be varied back on-line.

ORA-06145: NETTCP: unable to start ORASRV: images not installed

Cause: The host"s SQL*Net TCP/IP server was unable to start the ORACLE server process because the ORACLE protected images were not installed.

Action: Install the images.

ORA-06250: NETNTT: cannot allocate send and receive buffers

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06251: NETNTT: cannot translate address file name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-06252: NETNTT: cannot open address file

Cause: The NTT two-task driver could not open a file containing address information.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06253: NETNTT: cannot read arguments from address file

Cause: The NTT two-task driver could not read addressing information from its addressing file.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06254: NETNTT: cannot share connection to cube

Cause: The NTT two-task driver could not share a connection to the cube.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06255: NETNTT: cannot read pid of remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06256: NETNTT: remote fork failed

Cause: The Oracle listener process on the cube could not fork off a shadow process.

Action: The instance you are trying to connect to probably doesn"t have enough memory to run another shadow process. Ask someone else to log off, or connect to a different instance.

ORA-06257: NETNTT: cannot send command line to shadow process

Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

ORA-06258: NETNTT: cannot allocate context area

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06259: NETNTT: cannot read from remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06260: NETNTT: cannot write to remote process

Cause: An error occurred while writing the NTT communications linke.

Action: Contact your customer support representative.

ORA-06261: NETNTT: nrange() failed

Cause: The call to "nrange()" failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06262: NETNTT: nfconn() failed

Cause: The call to "nfconn()" failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06263: NETNTT: out of memory in pi_connect

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06264: NETNTT: data protocol error

    Cause: The NTT two-task driver received an unexpected message type."

    Action: Contact your customer support representative.

ORA-06265: NETNTT: break protocol error

    Cause: The NTT two-task driver received an unexpected message type."

    Action: Contact your customer support representative.

ORA-06266: NETNTT: bad write length

    Cause: The NTT two-task driver failed on an internal consistency check.

    Action: Contact your customer support representative.

ORA-06267: NETNTT: bad state

    Cause: The NTT two-task driver failed on an internal consistency check.

    Action: Contact your customer support representative.

ORA-06268: NETNTT: cannot read /etc/oratab

    Cause: The NTT two-task driver could not read configuration information from /etc/oratab.

    Action: Make sure /etc/oratab exists and is readable. This error may occur if the file is incorrectly formatted. It also may occur if the driver has run out of memory.

ORA-06300: IPA: Disconnect failure

    Cause: A fatal error occurred during the disconnect from the server. This was probably caused by inaccessible message queues.

    Action: If there is no message queue, restart the SQL*Net IPA servers using ipactl. Otherwise contact your customer support representative.

ORA-06301: IPA: Cannot allocate driver context

    Cause: The memory pool is exhausted.

    Action: Check the circumstances and try to allocate less memory in your program or adjust the init parameters in your INIT.ORA file and retry.

ORA-06302: IPA: Cannot connect to remote host

    Cause: found.

    Action: Check sequentially for the above causes and eliminate the actual

ORA-06303: IPA: Message send error

    Cause: The SQL*Net IPA driver could not write the message into the message queue.

    Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06304: IPA: Message receive error

    Cause: The SQL*Net IPA driver could not read a message from the message queue.

    Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06305: IPA: Illegal message type

    Cause: The communication between user and ORACLE is out of synchronization. This message should not normally be issued.

Action: Contact your customer support representative.

ORA-06306: IPA: Message write length error

Cause: The IPA driver tried to write a message in the queue that was too big for the queue.

Action: Contact your customer support representative.

ORA-06307: IPA: Cannot reset connection

Cause: A fatal error occurred during the resetting of the connection.

Action: Contact your customer support representative.

ORA-06308: IPA: No more connections available

Cause: You have exhausted all your connections.

Action: Try again when some of the current users have logged off.

ORA-06309: IPA: No message queue available

Cause: The SQL*Net IPA servers have not been started.

Action: Run ipactl.

ORA-06310: IPA: Environment variable(s) not set

Cause: Environment variable(s) not set correctly.

Action: Check and correct.

ORA-06311: IPA: Maximum number of servers reached

Cause: Maximum number of servers reached.

Action: Shutdown and restart with an increased maximum number of servers. Note that database links consume one server per link. Be sure to start up enough servers to support database links.

ORA-06312: IPA: Incorrect outgoing service name supplied

Cause: Incorrect outgoing service name supplied.

Action: Check and correct the service name.

ORA-06313: IPA: Shared memory failed to initialise

Cause: The shared memory has not been set up correctly.

Action: Contact your system manager.

ORA-06314: IPA: Event set up failure

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06315: IPA: Invalid connect string

Cause: The connect string is malformed.

Action: Check and correct.

ORA-06316: IPA: Invalid database SID

Cause: The SID is unknown at the remote side.

Action: Either the database does not exist, is not running, or there are no reserved servers for that SID.

ORA-06317: IPA: Local maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06318: IPA: Local maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle to different hosts has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06319: IPA: Remote maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06320: IPA: Remote maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle from different hosts has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06321: IPA: Cannot reach the remote side

Cause: There has been a timeout on an attempt to connect to a remote server the reason for which is most likely to be the remote SQL*Net IPA software is not running. An alternative reason could be that the remote initiator service name is incorrect.

Action: Check and start the remote SQL*Net software. Check that it is started with the correct service names supplied.

ORA-06322: IPA: Fatal shared memory error

Cause: An internal error has occurred in the shared memory handling.

Action: Contact customer support.

ORA-06323: IPA: Cause event error

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06400: NETCMN: No default host string specified

Cause: There was no default host string specified in the configuration and the user didn"t specify any explicit connect string.

Action: Either reconfigure the system specifying a default connect string or use an explicit connect string.

ORA-06401: NETCMN: invalid driver designator

Cause: The login (connect) string contains an invalid driver designator.

Action: Correct the string and re-submit.

ORA-06402: NETCMN: error receiving break message

Cause: Error occurred while attempting to read a break message.

Action: Contact your customer support representative.

ORA-06403: Unable to allocate memory.

Cause: System unable to allocate needed virtual memory.

Action: Configure more memory, reduce load, or simply try again.

ORA-06404: NETCMN: invalid login (connect) string

Cause: Syntax error in login string.

Action: Correct string and re-submit.

ORA-06405: NETCMN: reset protocol error

Cause: Unable to reset out of break state.

Action: Contact your customer support representative.

ORA-06406: NETCMN: error sending break message

Cause: Error occurred while attempting to send a break message.

Action: Contact your customer support representative.

ORA-06407: NETCMN: unable to set up break handling environment

Cause: Error occurred while attempting to set up asynchronous handlers for in-coming, out-of-band break messages.

Action: Contact your customer support representative.

ORA-06408: NETCMN: incorrect message format

Cause: Message from partner contains bad header.

Action: Contact your customer support representative.

ORA-06413: Connection not open.

Cause: Unable to establish connection.

Action: Use diagnostic procedures to ascertain exact problem.

ORA-06416: NETCMN: error on test

Cause: Error occurred while testing I/O status of the network connection.

Action: Contact your customer support representative.

ORA-06419: NETCMN: server can not start oracle

Cause: The remote server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-06420: NETCMN: SID lookup failure

Cause: From the remote host"s server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA or oratab file on the remote host (restarting the remote server may be needed).

ORA-06421: NETCMN: Error detected in the read-in data

Cause: Error found during recomputation of checksum or CRC.

Action: Possible hardware failures of communication nodes. Contact system administrator immediately.

ORA-06422: NETCMN: Error in sending data

Cause: Unable to transmit data to remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06423: NETCMN: Error in receiving data

Cause: Unable to receive data from remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06430: ssaio: Seals do not match

Cause: A function was called with an invalid argument.

Action: Contact your Oracle Customer Support Representative.

ORA-06431: ssaio: Invalid Block number

Cause: The file block number is out of range of the file. The additional information returns the block number.

Action: Verify that the block number is correct. Run dbfsize and check if the block number is in that range. Contact your Oracle Customer Support Representative.

ORA-06432: ssaio: Buffer Not Aligned

Cause: The I/O buffer was not aligned on a 2K boundary.

Action: Contact your Oracle Customer Support Representative.

ORA-06433: ssaio: LSEEK error, unable to seek to requested block.

Cause: The additional information returns the block number

Action: Look up the additional information returned in your operating system reference manual. Verify that the block number is correct.

ORA-06434: ssaio: read error, unable to read requested block from database file.

Cause: The read system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06435: ssaio: write error, unable to write requested block to database file.

Cause: The write system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06436: ssaio: asynchronous I/O failed due to incorrect parameters.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06437: ssaio: the asynchronous write was unable to write to the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06438: ssaio: the asynchronous read was unable to read from the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06439: ssaio: the asynchronous write returned incorrect number of bytes

Cause: This write call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes written are correct.

ORA-06440: ssaio: the asynchronous read returned incorrect number of bytes

Cause: This read call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes read are correct.

ORA-06441: ssvwatev: Incorrect parameter passed to function call

Cause: Either the ORACLE process id, or wait time or event ID is invalid.

Action: The additional information indicates the process id, time and event id.

ORA-06442: ssvwatev: Failed with unexpected error number.

Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06443: ssvpstev: Incorrect parameter passed to function call

Cause: An invalid event ID is passed in to this routine.

Action: The additional information indicates the event id.

ORA-06444: ssvpstev: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06445: ssvpstevrg: Incorrect parameters passed to function call

Cause: An invalid event id, or the low and high event ID do not exist.

Action: The additional information indicates the error number. It also contains the event id, low boundary and high boundary.

ORA-06446: ssvpstevrg: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06447: ssvpstp: Incorrect parameter passed to function call

Cause: Invalid oracle process ID is passed in to this routine.

Action: The additional information indicates the process id.

ORA-06448: ssvpstp: Failed with unexpected error number.

Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06449: The list IO or the sysvendor is not installed.

Cause: ORACLE tries to use the sysvendor interface (INIT.ORA parameter use_sysvendor=true) but the UNIX kernel does not have the ORACLE sysvendor interface linked in.

Action: Set use_sysvendor=false in INIT.ORA, if you don"t want to use this interface or link the UNIX kernel with this interface so that ORACLE can use it.

ORA-06500: PL/SQL: storage error

Cause: PL/SQL was unable to allocate additional storage. This message normally appears with an ORA-4030 or ORA-4031 error which gives additional information. Sometimes this error can be caused by runaway programs.

Action: 1) Ensure there are no issues or bugs in your PL/SQL program which are causing excessive amounts of memory to be used. 2) Programmatically cause unused objects to be freed (e.g. by setting them to NULL). 3) Increase the amount of shared or process memory (as appropriate) available to you.

ORA-06501: PL/SQL: program error

Cause: This is an internal error message. An error has been detected in a PL/SQL program.

Action: Contact Oracle Support Services.

ORA-06502: PL/SQL: numeric or value error*string*

Cause: An arithmetic, numeric, string, conversion, or constraint error occurred. For example, this error occurs if an attempt is made to assign the value NULL to a variable declared NOT NULL, or if an attempt is made to assign an integer larger than 99 to a variable declared NUMBER(2).

Action: Change the data, how it is manipulated, or how it is declared so that values do not violate constraints.

ORA-06503: PL/SQL: Function returned without value

Cause: A call to PL/SQL function completed, but no RETURN statement was executed.

Action: Rewrite PL/SQL function, making sure that it always returns a value of a proper type.

ORA-06504: PL/SQL: Return types of Result Set variables or query do not match

Cause: Number and/or types of columns in a query does not match declared return type of a result set variable, or declared types of two Result Set variables do not match.

Action: Change the program statement or declaration. Verify what query the variable actually refers to during execution.

ORA-06505: PL/SQL: variable requires more than 32767 bytes of contiguous memory

Cause: A PL/SQL variable was declared with a constraint which required more than 32767 bytes of memory. PL/SQL does not currently support allocations of contiguous memory greater than 32767 bytes.

Action: Consider reducing the constraint in the variable declaration. If that is not possible, try changing the database or national character set to such, that requires less memory for the same constraint. Note: changing the character set will impact execution of all PL/SQL code.

ORA-06510: PL/SQL: unhandled user-defined exception

Cause: A user-defined exception was raised by PL/SQL code, but not handled.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06511: PL/SQL: cursor already open

Cause: An attempt was made to open a cursor that was already open.

Action: Close cursor first before reopening.

ORA-06512: at *string***line** *string*

    Cause: Backtrace message as the stack is unwound by unhandled exceptions.

    Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06513: PL/SQL: index for PL/SQL table out of range for host language array

    Cause: An attempt is being made to copy a PL/SQL table to a host language array. But an index in the table is either less than one or greater than the maximum size of the host language array. When copying PL/SQL tables to host language arrays, the table entry at index 1 is placed in the first element of the array, the entry at index 2 is placed in the second element of the array, etc. If an table entry has not been assigned then the corresponding element in the host language array is set to null.

    Action: Increase size of host language array, or decrease size of PL/SQL table. Also make sure that you don"t use index values less than 1.

ORA-06514: PL/SQL: The remote call cannot be handled by the server

    Cause: The remote call has parameters that are cursor variables or lob variables. This cannot be handled by stored procedures on your server.

    Action: Avoid using cursor variables or lob variables as parameters for stored procedures on this server or upgrade your server to a version that supports this.

ORA-06515: PL/SQL: unhandled exception *string*

    Cause: An exception was raised by PL/SQL code, but not handled. The exception number is outside the legal range of Oracle errors.

    Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06516: PL/SQL: the Probe packages do not exist or are invalid

    Cause: A Probe operation, probably an attempt to initialize the ORACLE server to debug PL/SQL, could not be completed because the Probe packages were not loaded or have become invalid.

    Action: DBA should load the Probe packages. This can be done by running the pbload.sql script supplied with the RDBMS.

ORA-06517: PL/SQL: Probe error - *string*

    Cause: An error occurred while passing a Probe operation to the server for execution.

    Action: Refer to the entry for the embedded error message.

ORA-06518: PL/SQL: Probe version *string* **incompatible with version** *string*

    Cause: The current version of Probe is incompatible with the version on the ORACLE server.

    Action: Refer to the documentation to ensure that this degree of compatibility is supported.

ORA-06519: active autonomous transaction detected and rolled back

    Cause: Before returning from an autonomous PL/SQL block, all autonomous transactions started within the block must be completed (either committed or rolled back). If not, the active autonomous transaction is implicitly rolled back and this error is raised.

Action: Ensure that before returning from an autonomous PL/SQL block, any active autonomous transactions are explicitly committed or rolled back.
-- 06520 through 06529 reserved for Foreign function errors

ORA-06520: PL/SQL: Error loading external library

Cause: An error was detected by PL/SQL trying to load the external library dynamically.

Action: Check the stacked error (if any) for more details.

ORA-06521: PL/SQL: Error mapping function

Cause: An error was detected by PL/SQL trying to map the mentioned function dynamically.

Action: Check the stacked error (if any) for more details.

ORA-06522: *string*

Cause: ORA-06520 or ORA-065211 could stack this error with a system specific error string.

Action: This error string should give the cause for errors ORA-06520 or ORA-065211

ORA-06523: Maximum number of arguments exceeded

Cause: There is an upper limit on the number of arguments that one can pass to the external function.

Action: Check the port specific documentation on how to calculate the upper limit.

ORA-06524: Unsupported option : *string*

Cause: The option specified is an unsupported feature for external procedures.

Action: Correct the syntax in the external specification

ORA-06525: Length Mismatch for CHAR or RAW data

Cause: The length specified in the length variable has an illegal value. This can happen if you have requested requested a PL/SQL INOUT, OUT or RETURN raw variable to be passed as a RAW with no corresponding length variable. This error can also happen if there is a mismatch in the length value set in the length variable and the length in the orlvstr or orlraw.

Action: Correct the external procedure code and set the length variable correctly.

ORA-06526: Unable to load PL/SQL library

Cause: PL/SQL was unable to instantiate the library referenced by this referenced in the EXTERNAL syntax. This is a serious error and should normally not happen.

Action: Report this problem to customer support.

ORA-06527: External procedure SQLLIB error: *string*

Cause: An error occurred in sqllib during execution of a Pro* external procedure.

Action: The message text indicates the actual SQLLIB error that occurred. Consult the Oracle Error Messages and Codes manual for a complete description of the error message and follow the appropriate action.

ORA-06528: Error executing PL/SQL profiler

Cause: An error occurred in during execution of a PL/SQL profiler procedure.

Action: Check the stacked errors for more details.

ORA-06529: Version mismatch - PL/SQL profiler

Cause: The PL/SQL profiler package (dbmspb.sql, prvtpbp.plb) does not match the version of the code in the server implementing the profiler.

Action: Run the package profload.sql in $ORACLE_HOME/rdbms/admin to load the correct version of the PL/SQL profiler packages

ORA-06530: Reference to uninitialized composite

Cause: An object, LOB, or other composite was referenced as a left hand side without having been initialized.

Action: Initialize the composite with an appropriate constructor or whole-object assignment.

ORA-06531: Reference to uninitialized collection

Cause: An element or member function of a nested table or varray was referenced (where an initialized collection is needed) without the collection having been initialized.

Action: Initialize the collection with an appropriate constructor or whole-object assignment.

ORA-06532: Subscript outside of limit

Cause: A subscript was greater than the limit of a varray or non-positive for a varray or nested table.

Action: Check the program logic and increase the varray limit if necessary.

ORA-06533: Subscript beyond count

Cause: An in-limit subscript was greater than the count of a varray or too large for a nested table.

Action: Check the program logic and explicitly extend if necessary.

ORA-06534: Cannot access Serially Reusable package *string*

Cause: The program attempted to access a Serially Reusable package in PL/SQL called from SQL context (trigger or otherwise). Such an access is currently unsupported.

Action: Check the program logic and remove any references to Serially Reusable packages (procedure, function or variable references) which might happen in PL/SQL called from sql context (trigger or otherwise).

ORA-06535: statement string in *string* is NULL or 0 length

Cause: The program attempted to use a dynamic statement string that was either NULL or 0 length.

Action: Check the program logic and ensure that the dynamic statement string is properly initialized.

ORA-06536: IN bind variable bound to an OUT position

Cause: The program attempted to bind an IN bind variable to a statement that was expecting an OUT bind variable at that position.

Action: Make sure that an OUT or IN OUT bind mode is specified for the bind argument.

ORA-06537: OUT bind variable bound to an IN position

Cause: The program attempted to bind an OUT bind variable to a statement that was expecting an IN bind variable at that position.

Action: Make sure that an IN or IN OUT bind mode is specified for the bind argument.

ORA-06538: statement violates *string* RESTRICT_REFERENCES pragma

Cause: The program attempted to execute a dynamic statement which does not meet the purity level specified (in the pragma RESTRICT_REFERENCES directive) for the module executing the statement.

Action: Ensure that the dynamic statement meets the purity level specified for the module executing the statement.

ORA-06539: target of OPEN must be a query

Cause: The program attempted to perform an OPEN cursor operation on a dynamic statement that was not a query.

Action: Ensure that the OPEN cursor operation is done on a dynamic query statement. -- 06540 through 06549 reserved for pl/sql error handling

ORA-06540: PL/SQL: compilation error

Cause: A pl/sql compilation error occurred. However, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06541: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted; but the compilation unit was written out to the backing store. However, unlike ora-06545, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06544: PL/SQL: internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: A pl/sql internal error occurred.

Action: Report as a bug; the first argument is the internal error nuber.

ORA-06545: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted completely without the compilation unit being written out to the backing store. Unlike ora-06541, the user will always see this error along with the accompaning PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06546: DDL statement is executed in an illegal context

Cause: DDL statement is executed dynamically in illegal PL/SQL context.

- Dynamic OPEN cursor for a DDL in PL/SQL

- Bind variable"s used in USING clause to EXECUTE IMMEDIATE a DDL

- Define variable"s used in INTO clause to EXECUTE IMMEDIATE a DDL

Action: Use EXECUTE IMMEDIATE without USING and INTO clauses to execute the DDL statement.

ORA-06547: RETURNING clause must be used with INSERT, UPDATE, or DELETE statements

Cause: EXECUTE IMMEDIATE with a RETURNING clause is used to execute dynamic UPDATE, INSERT, or DELETE statements only.

Action: use RETURNING clause in EXECUTE IMMEDIATE for INSERT, UPDATE, or DELETE statements only. For other statements, use USING clause instead.

ORA-06548: no more rows needed

Cause: The caller of a pipelined function does not need more rows to be produced by the pipelined function.

Action: Catch the NO_DATA_NEEDED exception is an exception handling block.

ORA-06549: PL/SQL: failed to dynamically open shared object (DLL): *string:string*

Cause: One possible cause might be there are too many DLLs open at the same time.

Action: ---

ORA-06550: line *string*, **column** *string*: *string*

Cause: Usually a PL/SQL compilation error.

Action: None

ORA-06554: package DBMS_STANDARD must be created before using PL/SQL

Cause: The DBMS specific extensions to PL/SQL's package "STANDARD" are in package "DBMS_STANDARD". This package must be created before using PL/SQL.

Action: Create package "DBMS_STANDARD". The source for this PL/SQL stored package is provided with the distribution.

ORA-06555: this name is currently reserved for use by user SYS

Cause: You tried to create a package named "STANDARD", "DBMS_STANDARD" or "DEBUG_IO". These are currently reserved for use by user SYS.

Action: Choose another name for your package.

ORA-06556: the pipe is empty, cannot fulfill the unpack_message request

Cause: There are no more items in the pipe.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06557: null values are not allowed for any parameters to pipe icd"s

Cause: Internal error from the dbms_pipe package.

Action: None

ORA-06558: buffer in dbms_pipe package is full. No more items allowed

Cause: The pipe buffer size has been exceeded.

Action: None

ORA-06559: wrong datatype requested, *string*, **actual datatype is** *string*

Cause: The sender put different datatype on the pipe than that being requested (package "dbms_pipe"). The numbers are: 6 - number, 9 - char, 12 - date.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06560: pos, *string*, is negative or larger than the buffer size, *string*

Cause: Internal error from the dbms_pipe package.

Action: None

ORA-06561: given statement is not supported by package DBMS_SQL

Cause: Attempting to parse an unsupported statement using procedure PARSE provided by package DBMS_SQL.

Action: Only statements which begin with SELECT, DELETE, INSERT, UPDATE, LOCK, BEGIN, DECLARE or << (PL/SQL label delimiter) are supported.

ORA-06562: type of out argument must match type of column or bind variable

Cause: Attempting to get the value of a column or a bind variable by calling procedure COLUMN_VALUE or VARIABLE_VALUE of package DBMS_SQL but the type of the given out argument where to place the value is different from the type of the column or bind variable that was previously defined by calling procedure DEFINE_COLUMN (for defining a column) or BIND_VARIABLE (for binding a bind variable) of package DBMS_SQL.

Action: Pass in an out argument of the correct type when calling procedure COLUMN_VALUE or VARIABLE_VALUE. The right type is the type that was provided when defining the column or binding the bind variable.

ORA-06563: top level procedure/function specified, cannot have subparts

Cause: The name to be resolved was specified with three parts (a.b.c) but the a.b part resolves to a top level procedure or function (which don"t have nested procedures). This can also happen with a two-part name, a.b, where a is a synonym for a top level package or procedure.

Action: Specify a procedure/function within a package, or a top level procedure/function.

ORA-06564: object *string* does not exist

Cause: The named object could not be found. Either it does not exist or you do not have permission to access it.

Action: Create the object or get permission to access it.

ORA-06565: cannot execute *string* from within stored procedure

Cause: The named procedure cannot be executed from within a stored procedure, function or package. This function can only be used from pl/sql anonymous blocks.

Action: Remove the procedure from the calling stored procedure.

ORA-06566: invalid number of rows specified

Cause: An invalid number of rows was specified in a call to the procedure DEFINE_COLUMN in the package DBMS_SQL. For a given parsed statement in a given cursor, all columns must be defined to have the same number of rows, so all the calls to DEFINE_COLUMN must specify the same number of rows.

Action: Specify a number that matches that for previously defined columns.

ORA-06567: invalid number of values specified

Cause: An invalid number of values to be bound was specified in a call to the procedure BIND_VARIABLE in the package DBMS_SQL. In order to execute a given parsed statement in a given cursor, the same number of values must have been bound for all bind variables, so when EXECUTE is called, the latest calls to

BIND_VARIABLE must must have specified the same number of values to be bound for all bind variables.

Action: Make sure that the same number of values have been bound for all of the bind variables.

ORA-06568: obsolete ICD procedure called

Cause: An obsolete ICD procedure was called by a PL/SQL program. The PL/SQL program was probably written for an eralier release of RDBMS.

Action: Make sure that all PL/SQL programs have been upgraded to the latest release of the RDBMS. This can be accomplished by following upgrade instructions in the README file, or by running the catproc.sql script supplied with the RDBMS.

ORA-06569: Collection bound by bind_array contains no elements

Cause: A collection with zero elements was bound to a bind variable in a call to procedure BIND_ARRAY in the package DBMS_SQL. In order to execute a bind of a collection, the collection must contain at least one element. If no elements are present then at execute time there will be no value for this bind and the statement is meaningless.

Action: Fill the collection with the elements you want to bind and try the bind call again.

ORA-06570: shared pool object does not exist, cannot be pinned/purged

Cause: The specified shared pool shared cursor could not be found, therefore it cannot be pinned/purged.

Action: Remove the procedure from the calling stored procedure.

ORA-06571: Function *string* does not guarantee not to update database

Cause: There are two possible causes for this message:

* A SQL statement references a packaged, PL/SQL function that does not contain a pragma that prevents the database from being updated.

* A SQL statement references a stand-alone, PL/SQL function that contains an instruction to update the database.

Action: If the referenced function is a packaged, PL/SQL function: Recreate the PL/SQL function with the required pragma; be certain to include the "Write No Database State" (WNDS) argument in the argument list of the pragma. If the referenced function is a stand-alone, PL/SQL function: Do not use the function.

ORA-06572: Function *string* has out arguments

Cause: A SQL statement references either a packaged, or a stand-alone, PL/SQL function that contains an OUT parameter in its argument list. PL/SQL functions referenced by SQL statements must not contain the OUT parameter.

Action: Recreate the PL/SQL function without the OUT parameter in the argument list.

ORA-06573: Function *string* modifies package state, cannot be used here

Cause: There are two possible causes for this message:

* A SQL statement references a packaged, PL/SQL function that does not contain a pragma containing the "Write no Package State" (WNPS).

* A SQL statement references a stand-alone, PL/SQL function that modifies a package state. A stand-alone, PL/SQL function referenced by a SQL statement cannot modify a package state.

Action: If the function is a packaged, PL/SQL function: Recreate the function and include a pragma containing the "Write no Package State" (WNPS). If the function is a stand-alone, PL/SQL function: Delete the function from the SQL statement.

ORA-06574: Function *string* references package state, cannot execute remotely

Cause: There are two possible causes for this message:

* A remote, packaged function or a remote-mapped, local, packaged function that does not contain a pragma with the "Write no Package State" (WNPS) and "Read no Package State" (RNPS) arguments references a package state.

* A remote, stand-alone function or a remote-mapped, local, stand-alone function contains a reference to a package state (reads or writes a package variable). Only local functions that are referenced in a SELECT list, VALUES clause of an INSERT statement, or SET clause of an UPDATE statement can modify a package state.

Action: If the function is a packaged function: Recreate the function and include a pragma containing the "Write no Package State" (WNPS) and "Read no Package State" (RNPS) arguments. If the function is a stand-alone function: Do not call the function.

ORA-06575: Package or function *string* is in an invalid state

Cause: A SQL statement references a PL/SQL function that is in an invalid state. Oracle attempted to compile the function, but detected errors.

Action: Check the SQL statement and the PL/SQL function for syntax errors or incorrectly assigned, or missing, privileges for a referenced object.

ORA-06576: not a valid function or procedure name

Cause: Could not find a function (if an INTO clause was present) or a procedure (if the statement did not have an INTO clause) to call.

Action: Change the statement to invoke a function or procedure

ORA-06577: output parameter not a bind variable

Cause: The argument corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement must be a bind variable.

Action: Change the argument to a bind variable

ORA-06578: output parameter cannot be a duplicate bind

Cause: The bind variable corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement cannot be a duplicate bind variable.

Action: Change the bind variable to be unique

ORA-06579: Bind variable not big enough to hold the output value

Cause: The bind variable specified by the user is not large enough to hold the output returned by the function or a procedure.

Action: Specify a bind variable of larger size.

ORA-06580: Hash Join ran out of memory while keeping large rows in memory

Cause: Hash Join reserves 3 slots (each slot size = DB_BLOCK_SIZE * HASH_JOIN_MULTIBLOCK_IO_COUNT) for a row. If a row is larger than that, this error will be raised.

Action: Increase HASH_JOIN_MULTIBLOCK_IO_COUNT so that each joined row fits in a slot. HASH_AREA_SIZE may also need to be increaed.

ORA-06592: CASE not found while executing CASE statement

Cause: A CASE statement must either list all possible cases or have an else clause.

Action: Add all missing cases or an else clause.

ORA-06593: *string* **is not supported with natively compiled PL/SQL modules**

Cause: Specified feature is not yet supported for natively compiled PL/SQL modules yet.

Action: Recompile the relevant PL/SQL modules in non-native mode by setting the parameter plsql_compiler_flags to INTERPRETED.

ORA-06595: REF CURSOR parameters are not supported in forwarded RPC calls

Cause: An attempt was made to make a forwarded RPC call with a REF CURSOR parameter.

Action: Either call the remote function directly (i.e., not by way of forwarding), or move the remote function to a database where it can be called directly.

ORA-06596: object cannot be purged, object is permanently kept in shared pool

Cause: The specified object was permanently kept, therefore, cannot be purged.

Action: Use DBMS_SHARED_POOL.UNKEEP procedure to unkeep the object and then purge it.

ORA-06600: LU6.2 Driver: SNA software is not loaded

Cause: The SNA software is not running.

Action: Start the SNA software and try again.

ORA-06601: LU6.2 Driver: Invalid database ID string

Cause: The database string in the connect was invalid.

Action: Provide a valid database string, as defined in documentation.

ORA-06602: LU6.2 Driver: Error allocating context area

Cause: Context area failure.

Action: Contact your local service representative.

ORA-06603: LU6.2 Driver: Error allocating memory

Cause: Operating system refused request for memory.

Action: Contact you local service representative.

ORA-06604: LU6.2 Driver: Unable to allocate session with remote LU

Cause: Allocate system call failed.

Action: Ensure that the SNA software is running and that sessions are free. If this is the case, then check your SNA configuration data for errors. You may have entered an incorrect parameter.

ORA-06605: LU6.2 Driver: Unexpected line turnaround

Cause: SNA software switched from send to receive unexpectedly.

Action: Check the SNA configuration data, particularly parameters associated with a session.

ORA-06606: LU6.2 Driver: Unexpected response from SNA

Cause: A parameter in an SNA call returned an unexpected value.

Action: Attempt to reproduce problem, debug and record the value of the "what" data parameter at the time of error. Then contact your service representative.

ORA-06607: LU6.2 Driver: Reset occurred in send state

Cause: A reset was issued whilst in send state.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06608: LU6.2 Driver: Reset occurred in receive state

Cause: A reset was received from the partner whilst in receive state. This may be because the partner deallocated.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06610: LU6.2 Driver: Failed during deallocation

Cause: LU6.2 driver was unable to deallocate gracefully.

Action: Check the reason for deallocation. Consult the SNA LOG data.

ORA-06616: LU6.2 Driver: Attach to LU failed

Cause: The SQL*Net LU6.2 driver was unable to attach to the LU specified in the connect string, or was unable to attach to the default LU.

Action: Check that the LU name specified in the connect string, or the default LU name if no LU was specified, is correctly configured and operational.

ORA-06622: LU6.2 Driver: Unable to attach to SNA

Cause: The SQL*Net LU6.2 driver could not attach to the SNA software on your machine. The most likely cause is that the SNA software is not operational.

Action: Check the status of the SNA software, ensure that it is operational and then try again.

ORA-06700: TLI Driver: incorrect message type from host

Cause: TLI received a message with an unrecognizable message type.

Action: Contact your customer support representative.

ORA-06701: TLI Driver: incorrect number of bytes written

Cause: TLI sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes supplied to the driver.

Action: Contact your customer support representative.

ORA-06702: TLI Driver: cannot allocate context area

Cause: TLI could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-06703: TLI Driver: send break message failed

Cause: TLI failed to send a break message across the connection.

Action: Contact your customer support representative.

ORA-06704: TLI Driver: receive break message failed

Cause: TLI failed to receive an expected break message.

Action: Contact your customer support representative.

ORA-06705: TLI Driver: remote node is unknown

Cause: TLI could not find your remote host information.

Action: Make sure you specified the hostname correctly on the command line. (Also, check your capitalization and spelling.)

ORA-06706: TLI Driver: service not found

Cause: TLI could not find service information for the specified service name.

Action: If you specified the service name on the command line or with the environment variable TLI_SERVER, make sure you specified it correctly. If the service name is not in the SERVICES file for your protocol, ask your system adminstrator to add it.

ORA-06707: TLI Driver: connection failed

Cause: TLI failed to establish the connection to a SQL*Net TCP/IP server due to an error encountered by the remote server, which has supplied a string describing the remote error.

Action: See the SQL*Net TCP/IP User"s Guide section "orasrv Messages" for the specific cause and action.

ORA-06708: TLI Driver: message receive failure

Cause: TLI encountered an error receiving a message from the communication channel.

Action: Contact your customer support representative.

ORA-06709: TLI Driver: message send failure

Cause: TLI encountered an error sending a message across the communication channel.

Action: Contact your customer support representative.

ORA-06710: TLI Driver: send interrupt break message failed

Cause: TLI failed to send a break message while handling an interrupt signal from the user.

Action: Contact your customer support representative.

ORA-06711: TLI Driver: error on bind

Cause: TLI failed to assign a network address to the communication channel.

Action: Contact your customer support representative.

ORA-06712: TLI Driver: error on accept

Cause: TLI failed to accept a connection request from the client.

Action: Contact your customer support representative.

ORA-06713: TLI Driver: error on connect

Cause: TLI failed to connect the client to the remote server. The network line to the remote host may be down.

Action: Use other network login programs to make sure that the remote host is accessible.

ORA-06720: TLI Driver: SID lookup failure

Cause: The database SID supplied in the database login string was not recognized by the remote host.

Action: Ask your system administrator to add the appropriate SID entry to oratab on the remote host.

ORA-06721: TLI Driver: spurious client req

Cause: The remote TLI server received an undefined request.

Action: Contact your customer support representative.

ORA-06722: TLI Driver: connection setup failure

Cause: The remote TLI server rejected the connection request, and the client was unable to retrieve an error code or message.

Action: Contact your customer support representative.

ORA-06730: TLI Driver: unable to open clone device

Cause: TLI failed to open the Streams clone device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06731: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the client"s connection information.

Action: Contact your customer support representative.

ORA-06732: TLI Driver: cannot alloc t_discon

Cause: TLI cannot allocate space for the client"s disconnection information.

Action: Contact your customer support representative.

ORA-06733: TLI Driver: failed to receive disconnect

Cause: TLI failed to receive an expected disconnection message during connection release.

Action: Contact your customer support representative.

ORA-06734: TLI Driver: cannot connect

Cause: TLI failed to connect the client to the remote server.

Action: Check that the remote TLI server is running.

ORA-06735: TLI Driver: client failed to close error conn

Cause: TLI failed to properly close a connection after an error was received.

Action: Contact your customer support representative.

ORA-06736: TLI Driver: server not running

Cause: TLI timed out while attempting to connect to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using. If it is not, ask your system adminstrator to start it.

ORA-06737: TLI Driver: connection failed

Cause: TLI could not establish a connection to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using.

ORA-06741: TLI Driver: unable to open protocol device

Cause: The TLI server failed to open the Streams device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06742: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its requested network address.

Action: Contact your customer support representative.

ORA-06743: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its actual network address.

Action: Contact your customer support representative.

ORA-06744: TLI Driver: listener cannot bind

Cause: The TLI server failed to assign the correct network address on which to listen for connections.

Action: Contact your customer support representative.

ORA-06745: TLI Driver: listener already running

Cause: The network address on which the TLI server awaits connection requests is in use, possibly because the server is already running.

Action: Ensure that the TLI server is not already running. If it is not running and this error message recurs, contact your customer support representative.

ORA-06746: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the TLI server''s connection information.

Action: Contact your customer support representative.

ORA-06747: TLI Driver: error in listen

Cause: The TLI server encountered an error while listening for connection requests.

Action: Contact your customer support representative.

ORA-06748: TLI Driver: cannot allocate t_discon

Cause: TLI cannot allocate space for the TLI server''s disconnection information.

Action: Contact your customer support representative.

ORA-06749: TLI Driver: option not allowed across network

Cause: The requested TLI server command must be issued from the same host on which the server is running.

Action: Log in to the remote host and try again.

ORA-06750: TLI Driver: sync failed

Cause: The ORACLE process started by the TLI server was unable to synchronize its inherited connection.

Action: Contact your customer support representative.

ORA-06751: TLI Driver: bound addresses unequal

Cause: The osn check server address failed. The bound server address was not the same as the requested binding address.

Action: Contact your customer support representative.

ORA-06752: TLI: error in signal setup

Cause: A call to sigaction() returned with a system error.

Action: Contact your customer support representative.

ORA-06753: TLI Driver: name-to-address mapping failed

Cause: For SVR4, the netdir_getbyname() call failed for some unknown reason.

Action: Contact your custumer service representative.

ORA-06754: TLI Driver: unable to get local host address

Cause: The name of the remote host to connect to was not specified, and the name of the local host cannot be retrieved from the HOSTS file.

Action: Contact your system administrator.

ORA-06755: TLI Driver: cannot close transport endpoint

Cause: The TLI server was unable to close a connection after passing it to an ORACLE process.

Action: Contact your customer support representative.

ORA-06756: TLI Driver: cannot open oratab

Cause: The TLI server could not open the file used to define the locations of remotely accessible databases.

Action: Ask your system administrator to check that the file exists and has the correct permissions.

ORA-06757: TLI Driver: server got bad command

Cause: The TLI server received an invalid command.

Action: Contact your customer support representative.

ORA-06760: TLI Driver: timeout reading orderly release

Cause: TLI was not able to retreive an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06761: TLI Driver: error sending orderly release

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06762: TLI Driver: error reading orderly release

Cause: TLI encountered an error receiving an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06763: TLI Driver: error sending disconnect

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06764: TLI Driver: error reading disconnect

Cause: TLI was not able to retreive an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06765: TLI Driver: error awaiting orderly release

    Cause: TLI encountered an error awaiting a disconnect message while closing the communication channel.

    Action: Contact your customer support representative.

ORA-06766: TLI Driver: close failed during release

    Cause: TLI failed to close the communication channel after receiving a disconnect message.

    Action: Contact your customer support representative.

ORA-06767: TLI Driver: alloc failed during release

    Cause: TLI cannot allocate space for disconnection information while closing the communication channel.

    Action: Contact your customer support representative.

ORA-06770: TLI Driver: error sending version

    Cause: TLI encountered an error while sending its version information during connection establishment.

    Action: Contact your customer support representative.

ORA-06771: TLI Driver: error reading version

    Cause: TLI encountered an error while awaiting the expected version information during connection establishment.

    Action: Contact your customer support representative.

ORA-06772: TLI Driver: error sending command

    Cause: TLI encountered an error while sending a command message during connection establishment.

    Action: Contact your customer support representative.

ORA-06773: TLI Driver: error reading command

    Cause: TLI encountered an error while awaiting the expected command message during connection establishment.

    Action: Contact your customer support representative.

ORA-06774: TLI Driver: error sending break mode

    Cause: TLI encountered an error while sending break-mode message during connection establishment.

    Action: Contact your customer support representative.

ORA-06775: TLI Driver: error reading break mode

    Cause: TLI encountered an error while awaiting the expected break-mode message during connection establishment.

    Action: Contact your customer support representative.

ORA-06776: TLI Driver: error sending parms

    Cause: TLI encountered an error while sending the connection parameters during connection establishment.

    Action: Contact your customer support representative.

ORA-06777: TLI Driver: error reading parms

Cause: TLI encountered an error while awaiting the expected connection parameter message during connection establishment.

Action: Contact your customer support representative.

ORA-06778: TLI Driver: error sending ccode

Cause: TLI encountered an error while sending the completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06779: TLI Driver: error reading ccode

Cause: TLI encountered an error while awaiting the expected completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06780: TLI Driver: recv error code failed

Cause: TLI encountered an error while awaiting an expected error message during connection establishment.

Action: Contact your customer support representative.

ORA-06781: TLI Driver: error reading negotation string

Cause: TLI encountered an error while awaiting the expected negotiation message during connection establishment.

Action: Contact your customer support representative.

ORA-06790: TLI Driver: poll failed

Cause: TLI was unable to poll the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06791: TLI Driver: poll returned error event

Cause: TLI received an unexpected event while polling the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06792: TLI Driver: server cannot exec oracle

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system adminstrator. The permissions on the remote ORACLE program may be set incorrectly.

ORA-06793: TLI Driver: server cannot create new process

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system adminstrator. The remote host may be unable to create any new processes due to a full process table.

ORA-06794: TLI Driver: shadow process could not retrieve protocol info

Cause: The ORACLE process either failed to allocate memory to store the protocol information record, or the protocol rejected the request for some unknown reason.

Action: Contact your customer support representative.

ORA-06800: TLI Driver: SQL*Net SPX client went away during reconnect
    Cause: The client process was aborted by the system or the user, and was unable to complete the connection establishment with the server listener process.

    Action: Determine cause of client exit, and reattempt connection.

ORA-06801: TLI Driver: listen for SPX server reconnect failed
    Cause: An unknown event occurred on the client"s listening socket.

    Action: Contact your customer support representative.

ORA-06802: TLI Driver: could not open the /etc/netware/yellowpages file
    Cause: The /etc/netware/yellowpages file does not exist, or is not readable by the TLI listener process.

    Action: Insure the file exists and is readable. Make sure that the server machine"s node name, network number, ethernet address, and listening socket number are encoded in the file.

ORA-06803: TLI Driver: the IPX device file could not be opened
    Cause: The /dev/ipx file does not exist, or the driver has not been installed in the kernel correctly.

    Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06804: TLI Driver: could not bind an IPX address at initialization
    Cause: The IPX driver has not been correctly installed.

    Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06805: TLI Driver: could not send datagram SAP packet for SPX
    Cause: The socket endpoint for sending SAP packet was corrupted for some unknown reason.

    Action: Contact your customer support representative.

ORA-06806: TLI Driver: could not complete protocol initialization for SPX
    Cause: A step in the SPX/IPX protocol initialization failed.

    Action: Check the previous error reported, and follow corrective action.

ORA-06807: TLI Driver: could not open ethernet device driver file
    Cause: The file /dev/eth does not exist, or the driver it references could not be opened.

    Action: The system"s real ethernet device file, for example /dev/wd, for the Western Digital ethernet driver, should be linked to the file /dev/eth. If this has been done, insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06808: TLI Driver: could not link IPX and ethernet streams
    Cause: Either the ethernet driver has not been installed in the system correctly, or the ethernet driver is not supported.

    Action: Insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem

continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06809: TLI Driver: could not clear the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06810: TLI Driver: could not set the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06811: TLI Driver: could not set the IPX network number at init

Cause: The IPX driver has not been correctly installed, or the network number encoded in the /etc/netware/yellowpages file is invalid.

Action: The network number in the yellowpages file should match the four-byte network number of your Novell file server. If this is configured correctly, reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06812: TLI Driver: could not read the ethernet driver''s node address

Cause: The ethernet driver is not installed correctly, or does not support this operation.

Action: Contact your customer support representative for a list of supported ethernet drivers.

ORA-06813: TLI Driver: the configured ethernet address is incorrect

Cause: The node address read from the ethernet driver does not match the value encoded in the /etc/netware/yellowpages file for this server.

Action: Confirm the correct ethernet node address for your LAN card, and enter this value in the yellowpages file.

ORA-06814: TLI Driver: the SPX device file could not be opened

Cause: The /dev/nspxd file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06815: TLI Driver: could not link SPX and IPX streams

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06816: TLI Driver: could not set the SPX SAP address

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06817: TLI Driver: could not read the Novell network address

Cause: The file $ORACLE_HOME/spx/address could not be opened for reading and writing.

Action: Make sure ORACLE_HOME is set, and the permissions on the ORACLE_HOME are read, write. If this file has been unintentially deleted, run spxctl (net option) to reset the configured Novell network number for SQL*Net SPX.

ORA-06900: CMX: cannot read tns directory

Cause: CMX is not started on your system.

Action: Install and/or start CMX on your system.

ORA-06901: CMX: no local name assigned to local application

Cause: Local application oracmx has no local name assigned

Action: Enter unique local name for oracmx in the tns directory

ORA-06902: CMX: cannot attach to cmx subsystem

Cause: ccp-xxxx is not started

Action: start your ccp software on the communication controller

ORA-06903: CMX: cannot read transport address of remote application

Cause: remote application not entered in tns directory

Action: enter remote application in tns directory

ORA-06904: CMX: no transport address available for remote application

Cause: no local name assigned to remote application

Action: assign local name to remote application

ORA-06905: CMX: connect error

Cause: remote partner not listening

Action: make sure remote node has CMX installed and running make sure oracmx is running on remote host

ORA-06906: CMX: cannot get maximum packet size from CMX

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06907: CMX: error during connect confirmation

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06908: CMX: error during transfer of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06909: CMX: error during acknowledge of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06910: CMX: Cannot start oracle process on remote machine

Cause: oracle process not found or wrong mode (should be 4751)

Action: change /etc/oratab or set mode to 4751

ORA-06911: CMX: t_event returns ERROR

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06912: CMX: write error in datarq
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06913: CMX: error during redirection of connection
    Cause: oracmx has been stopped, or user process has been aborted
    Action: contact your customer support representative

ORA-06914: CMX: unexepected event during start of oracle
    Cause: connect sequence out of sync
    Action: contact your customer support representative

ORA-06915: CMX: unknown t_event in datarq
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06916: CMX: error in data read (t_datain)
    Cause: remote partner aborted
    Action: contact your customer support representative

ORA-06917: CMX: error in data read (too many bytes read)
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06918: CMX: T_NOEVENT during wait for read event
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06919: CMX: error during write request (unknown event)
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06920: CMX: getbrkmsg illegal datatype
    Cause: received packets are corrupted
    Action: contact your customer support representative

ORA-06921: CMX: getdatmsg illegal datatype
    Cause: received packets are corrupted
    Action: contact your customer support representative

ORA-06922: CMX: bad write length
    Cause: internal error in CMX
    Action: contact your customer support representative

ORA-06923: CMX: illegal break condition
    Cause: break handling out of sync
    Action: contact your customer support representative

ORA-06924: CMX: wrong break message length

Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06925: CMX: disconnect during connect request

Cause: partner is not responding

Action: make sure partner is up and running and reachable

ORA-06926: CMX: T_ERROR during read data

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06927: CMX: T_DATAIN received before all data written

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06928: CMX: wrong ORACLE_SID

Cause: ORACLE_SID is not entered in remote oratab

Action: add ORACLE_SID to remote oratab

ORA-06929: CMX: error when sending ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06930: CMX: error when checking ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06931: CMX: error during read_properties for server

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06932: CMX: error in local name

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06933: CMX: error during attach

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06950: No error

Cause: SQL*Net AppleTalk error codes base. This is not an error.

Action: None

ORA-06951: Operating system call error

Cause: AppleTalk API received error in VMS system service.

Action: Contact Oracle Customer Support representative.

ORA-06952: Remote end of the communication issued a forward-reset packet.

Cause: Peer program may have aborted

Action: Investigate network problems and try again.

ORA-06953: Not enough virtual memory

Cause: Not enough memory available.

Action: Check VMS process quotas and/or sysgen parameters

ORA-06954: Illegal file name

Cause: Erroneous file name

Action: Check path name for server output file, or SQL*Net Appletalk Logical names and symbols.

ORA-06955: Number of database servers exceed limit

Cause: Too many database connections.

Action: Check ATKSRV_MAXCONparameter in configuration file.

ORA-06956: Failed to get local host name

Cause: Unable to get Appletalk host name.

Action: Check Appletalk configuration.

ORA-06957: No SID is currently available

Cause: Incoming SQL*Net connection specified invalid SID name.

Action: Specify correct SID in connect string and retry.

ORA-06958: Failed to access configuration file

Cause: Unable to access CONFIG.ATK

Action: Check file protections.

ORA-06959: Buffer I/O quota is too small

Cause: Buffered I/O quota exceeded.

Action: Increase BIOlm using AUTHORIZE utility and retry.

ORA-06960: Failed to access log file

Cause: SQL*Net Appletalk listener could not create log file.

Action: Check directory path and protections.

ORA-06970: X.25 Driver: remote host is unknown

Cause: Host name specified in the login (connect string) is unknown.

Action: Check spelling; make sure name is in the X.25 HOST file.

ORA-06973: X.25 Driver: invalid buffer size

Cause: The buffer size specified in the login string must be between 5 and 4096.

Action: Re-submit with valid buffer size.

ORA-06974: X.25 Driver: SID lookup failure

Cause: From the remote host"s SQL*Net X.25 server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net X.25 server).

ORA-06975: X.25 Driver: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net X.25 server on the remote host is not up, or the host itself is not up.

Action: Start the SQL*Net X.25 server process on the remote host.

ORA-06976: X.25 Driver: endpoint creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06977: X.25 Driver: X.25 Level 2 failure

Cause: X.25 level 2 is down. X.25 link is not working.

Action: Run system checks to verify functioning of X.25 software. Contact your hardware vendor.

ORA-06978: X.25 Driver: Too many callback tries

Cause: Call back address probably same as called address.

Action: Verify that callback address and called address are different.

ORA-06979: X.25 Driver: server cannot start oracle

Cause: The remote X.25 server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-07200: slsid: oracle_sid not set.

Cause: The environment variable $(ORACLE_SID) is not set.

Action: Set ORACLE_SID environment variable.

ORA-07201: slhom: oracle_home variable not set in environment.

Cause: $(ORACLE_HOME) environment variable not set.

Action: Set ORACLE_HOME.

ORA-07202: sltln: invalid parameter to sltln.

Cause: The sltln name translation routine was called with invalid arguments. The input, or output stings were either NULL or 0 length.

Action: Probable internal oracle error. Contact customer support.

ORA-07203: sltln: attempt to translate a long environment variable.

Cause: A string was passed to sltln containing a long environment variable. sltln accepts environment names of 30 or less characters.

Action: Shorten environment variable name to less than 30 characters.

ORA-07204: sltln: name translation failed due to lack of output buffer space.

Cause: The sltln routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0]. Pathnames are limited to 255 characters.

ORA-07205: slgtd: time error, unable to obtain time.

Cause: Time() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07206: slgtd: gettimeofday error, unable to obtain time.

Cause: Gettimeofday() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07207: sigpidu: process ID string overflows internal buffer.

Cause: The sigpidu routine is given a maximum length buffer to hold process ID string. An overflow of this buffer occurred.

Action: Internal error. Contact customer support.

ORA-07208: sfwfb: failed to flush dirty buffers to disk.

Cause: The fsync system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07209: sfofi: file size limit was exceeded.

Cause: The size of the file to be opened exceeded the OS limit imposed on this process.

Action: Run osh to increase the file size limit.

ORA-07210: slcpu: getrusage error, unable to get cpu time.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07211: slgcs: gettimeofday error, unable to get wall clock.

Cause: Gettimeofday system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07212: slcpu: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07213: slgcs: times error, unable to get wall clock.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07214: slgunm: uname error, unable to get system information.

Cause: uname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07215: slsget: getrusage error.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-07216: slghst: gethostname error, unable to get name of current host.

Cause: gethostname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07217: sltln: environment variable cannot be evaluated.

Cause: getenv call returned a null pointer.

Action: Set the environment variable and try again.

ORA-07218: slkhst: could not perform host operation

Cause: Unix system() call failed

Action: Examine system error message

ORA-07219: slspool: unable to allocate spooler argument buffer.

Cause: Malloc failed to allocate space to hold spooler arguments.

Action: Check additional information returned in OS reference manual. The process may have run out of heap space. Contact customer support.

ORA-07220: slspool: wait error.

Cause: Wait returned an error, when waiting for spool job to complete. Possible spooler program error.

Action: Check additional information returned. Refer to OS reference manual. Contact customer support.

ORA-07221: slspool: exec error, unable to start spooler program.

Cause: Exec failed when starting line printer spooler command. Likely that either the default line printer command, or ORACLE_LPPROG, is incorrectly set.

Action: Verify default line printer command and ORACLE_LPPROG are set correctly. Set ORACLE_LPPROG to working line printer spooler.

ORA-07222: slspool: line printer spooler command exited with an error.

Cause: The line printer spooler exited with a non-zero return value. This probably indicates an error in spooling file.

Action: Verify that line printer spooler is up. Verify that ORACLE_LPPROG, and ORACLE_LPARG are set properly. Check exit value returned as additional informatin.

ORA-07223: slspool: fork error, unable to spawn spool process.

Cause: Fork system call failed to create additional process. Probable resource limit reached.

Action: Check additional information returned. Retry operation. Contact system administrator.

ORA-07224: sfnfy: failed to obtain file size limit; errno = *string*.

Cause: The ulimit system call returned an error.

Action: Check errno and contact customer support.

ORA-07225: sldext: translation error, unable to expand file name.

Cause: Additional information returned is error returned from sltln.

Action: Check additional information.

ORA-07226: rtneco: unable to get terminal mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07227: rtneco: unable to set noecho mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07228: rtecho: unable to restore terminal to echo mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07229: slcpuc: error in getting number of CPUs.

Cause: error in mpcntl system call

Action: check errno and contact system administrator

ORA-07230: slemcr: fopen error, unable to open error file.

Cause: Fopen failed to open file.

Action: Try to determine which file was not opened. Check that file exists and is accessible.

ORA-07231: slemcc: invalid file handle, seals do not match.

Cause: Function was called with an invalid argument. The file handle used was not obtained be slemcr.

Action: Internal error. Contact customer support.

ORA-07232: slemcc: fclose error.

Cause: An error was encountered when closing the file. Possible OS error.

Action: Contact system administator.

ORA-07233: slemcw: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. File handle was not obtained by slemcr.

Action: Internal error. Contact customer support.

ORA-07234: slemcw: fseek error.

Cause: Unable to seek to desired position in file. Possible OS error. Possible internal error.

Action: Verify that error message file is intact. Try to regenerate error message file. Contact customer support.

ORA-07235: slemcw: fwrite error.

Cause: Unable to write item to file. Possible OS error. Possible permissions problem.

Action: Retry operation.

ORA-07236: slemop: open error.

Cause: Unable to open error file. Possible permissions problem.

Action: Verify permission on error message file. Check additional information for errno.

ORA-07237: slemcl: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. Handle was not obtained by previous call to slemop.

Action: Internal error.

ORA-07238: slemcl: close error.

Cause: Unable to close file. Possible OS error.

Action: Contact system administator. Check additional information for errno.

ORA-07239: slemrd: invalid file handle, seals do not match.

Cause: Function was called with invalid file handle. Handle was not obtained by call to slemop.

Action: Internal error. Contact customer support.

ORA-07240: slemrd: seek error.

Cause: Unable to seek to desired position in file. Possible OS error.

Action: Check that error file is still intact. Verify space on device. Contact system administrator. Check additional information for errno.

ORA-07241: slemrd: read error.

Cause: Unable to read file. Possible OS error.

Action: Verify that error file is intact. Regenerate error message file. Contact customer support. Check additional information for errno.

ORA-07242: slembfn: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-07243: supplied buffer not big enough to hold entire line

Cause: supplied buffer was not big enough

Action: Internal error. Contact customer support. Additional information indicates how big the supplied buffer was.

ORA-07244: ssfccf: create file failed, file size limit reached.

Cause: An attempt was made to create a file that exceeds the process"s file size limit.

Action: Run osh to raise the file size limit.

ORA-07245: sfccf: unable to lseek and write the last block.

Cause: An attempt was made to move and write to a bad device address.

Action: Check errno. Possible lack of space on device.

ORA-07246: sfofi: open error, unable to open database file.

Cause: sfofi returns an error.

Action: This is an oracle internal error.

ORA-07247: skgfrfms, skgfrnms: read error, unable to read block from database file

Cause: The ioctl() system call returned an error doing VOL_READ_MIRRORS.

Action: Check errno.

ORA-07248: sfwfb: write error, unable to write database block.

Cause: sfwfb returns an error.

Action: This is an oracle internal error.

ORA-07249: slsget: open error, unable to open /proc/pid.

Cause: The open() system call returned an error.

Action: Check that /proc has the right permissions.

ORA-07250: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07251: spcre: semget error, could not allocate any semaphores.

Cause: Semget failed to even allocate a single semaphore. Either they are all in use or the system is not configured to have any semaphores.

Action: Check to see if all semaphores are in use. Check to see if system is configured to have semaphores. Check errno.

ORA-07252: spcre: semget error, could not allocate semaphores.

Cause: Semget system call returned an error. Possible resource limit problem.

Action: Check errno. Verify that enough semaphores are available in system. If additional errors occur in destroying the semaphore sets then sercose[0] will be non-zero. If this occurs, remove the semaphore sets using ipcrm.

ORA-07253: spdes: semctl error, unable to destroy semaphore set.

Cause: Semctl system call returned an error.

Action: Check semaphore sets. May require manual cleanup. Check additional information returned. Consult OS reference manual.

ORA-07254: spdcr: translation error while expanding ?/bin/oracle.

Cause: An error occurred while translating the name of the oracle executable.

Action: Check sercose[0] for error returned from sltln. Perhaps $(ORACLE_HOME) is not set correctly.

ORA-07255: spini: cannot set up signal handler.

Cause: System failed to set up signal handler.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07256: sptrap: cannot set up signal handler to catch exceptions.

Cause: System failed to set up signal handler to catch exceptions.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07257: spdcr: translation error expanding program name.

Cause: Error ocurred when expanding program name ora_PNAME_@. The result of this translation is put in argv[0] of oracle process.

Action: Check error returned by sltln returned in sercose[0].

ORA-07258: spdcr: fork error, unable to create process.

Cause: An error occurred when creating a new process.

Action: Check errno. Perhaps a system limit on the number of processes has been exceeded.

ORA-07259: spdcr: exec error, detached process failed in startup.

Cause: An oracle detached process died shortly after startup. Wait() indicated that a child process terminated.

Action: Check ?/dbs directory for trace or core files. Check errno.

ORA-07260: spdcr: wait error.

Cause: Wait system call returned an error.

Action: Check errno.

ORA-07261: spdde: kill error, unable to send signal to process.

Cause: Kill system call returned an error. Possibly an attempt to destroy an already gone process.

Action: Check errno.

ORA-07262: sptpa: sptpa called with invalid process id.
    Cause: This is an internal error.

    Action: This is an oracle internal error.

ORA-07263: sptpa: kill error.
    Cause: Kill system call returned an error. Possible OS error.

    Action: Check errno. Additional information indicates the process ID tested.

ORA-07264: spwat: semop error, unable to decrement semaphore.
    Cause: Semop system call returned an error. Semaphore set may not exist.

    Action: Check errno. Semaphore ID is returned in sercose[0]. Verify semaphore set exists. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07265: sppst: semop error, unable to increment semaphore.
    Cause: Semop system call returned an error. Semaphore set may not exist.

    Action: Check errno. Semaphore ID is returned in sercose[0]. Check semaphore set existence. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07266: sppst: invalid process number passed to sppst.
    Cause: Function was passed an invalid oracle process id.

    Action: Internal error.

ORA-07267: spwat: invalid process number.
    Cause: Function was passed an invalid oracle process id.

    Action: Internal error. Additional information indicates the invalid process id.

ORA-07268: szguns: getpwuid error.
    Cause: Getpwuid() could not find an entry in the passwd file for a user.

    Action: Add an entry for the user in the passwd file.

ORA-07269: spdcr: detached process died after exec.
    Cause: Detached process succesfully execed, but died shortly thereafter. Additional information indicates exit code, and termination status.

    Action: Check termination code for information as to why process exited. Check for core dump or trace file.

ORA-07270: spalck: setitimer error, unable to set interval timer.
    Cause: An error occurred while trying to set an interval timer. Probable porting problem.

    Action: Check errno.

ORA-07271: spwat: invalid oracle process number.
    Cause: Function was called with an invalid oracle process number (0).

    Action: Internal oracle error.

ORA-07272: spwat: invalid semaphore set id.

Cause: Semaphore ID fetched from SGA was not initialized to valid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07273: sppst: invalid semaphore id.

Cause: Semaphore ID fetched from SGA contained an invalid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07274: spdcr: access error, access to oracle denied.

Cause: Unable to access "oracle" program. Verify ?/bin/oracle or $ORABCKPRG exist, and are executable.

Action: Check errno returned.

ORA-07275: unable to send signal to process

Cause: The kill system call returned an error. Possibly an attempt to signal a process which does not exist.

Action: Check errno.

ORA-07276: no dba group in /etc/group.

Cause: A group has not been set up for dba users.

Action: Contact system administrator. Set up dba group in /etc/group.

ORA-07277: spdde: illegal pid passed as argument.

Cause: A 0 pid was passed to spdde.

Action: Internal error. .

ORA-07278: splon: ops$username exceeds buffer length.

Cause: Splon constructed an ops$username logon which exceeded the alloted buffer space.

Action: Use a shorter Unix username, or use an oracle username. Contact customer support.

ORA-07279: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07280: slsget: unable to get process information.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07281: slsget: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07282: sksaprd: string overflow.

Cause: The internal buffer is not big enough to hold the archive control string.

Action: Internal restriction. Try a shorter archive control string.

ORA-07283: sksaprd: invalid volume size for archive destination.
Cause: An invalid volume size was specified.
Action: Specify a valid volume size in archive control string.

ORA-07284: sksaprd: volume size specification not terminated properly.
Cause: Some non-numeric text follows the volume size specification.
Action: Enter a correct archive control string.

ORA-07285: sksaprd: volume size should not be specified for a disk file.
Cause: Volume size was specified for a disk file.
Action: If you are archiving to a disk file, do not specify its volume size.

ORA-07286: sksagdi: cannot obtain device information.
Cause: Stat on the log archiving device failed.
Action: Check the returned OSD error for the reason of failure.

ORA-07287: sksagdi: unsupported device for log archiving.
Cause: Log archiving to this device is unsupported.
Action: Try log archiving to a supported device.

ORA-07290: sksagdi: specified directory for archiving does not exist.
Cause: The specified pathname is not a directory.
Action: Verify that the archive destination directory exists.

ORA-07303: ksmcsg: illegal database buffer size.
Cause: The database buffer size must be a multiple of the database block size, and less than the maximum block size.
Action: Verify that the db_block_size parameter is correct in INIT.ORA.

ORA-07304: ksmcsg: illegal redo buffer size.
Cause: The redo buffer size must be a multiple of machine block size.
Action: Verify that the log_buffer INIT.ORA parameter is correctly set.

ORA-07305: ksmcsg: illegal database buffer size.
Cause: The database buffer size must be a multiple of the extended cache mapping size for indirect data buffers to be used.
Action: Verify that the db_block_size parameter is correct in INIT.ORA, or disable the use_indirect_data_buffers parameter.

ORA-07324: smpall: malloc error while allocating pga.
Cause: Malloc library routine returned an error.
Action: Check errno. Possibly out of swap space.

ORA-07327: smpdal: attempt to destroy pga when it was not mapped.
Cause: Smpdal was called when the PGA had not been previously created.
Action: Internal error.

ORA-07339: spcre: maximum number of semaphore sets exceeded.
Cause: The internal buffer is not big enough to hold the number of semaphore set identifiers requested.

Action: Reconfigure OS to have more semaphores per set.

ORA-07345: The datafile name must not contain the string "..".

Cause: The specified datafile name contains "..".

Action: Correct the datafile name and retry the operation.

ORA-07346: slnrm: normalized file name is too long

Cause: After normalizing the specified file name, the resulting file name was too long.

Action: Specify the shorter file name and retry the operation.

ORA-07390: sftopn: translate error, unable to translate file name.

Cause: An error occurred while expanding the file name to open. Additional information returns error generated in translation routine.

Action: Lookup additional error code for further information.

ORA-07391: sftopn: fopen error, unable to open text file.

Cause: Fopen library routine returned an error.

Action: Verify existence and permissions.

ORA-07392: sftcls: fclose error, unable to close text file.

Cause: Fclose library routine returned an error.

Action: Possible internal oracle error.

ORA-07393: unable to delete text file

Cause: An error occurred while deleting a text file.

Action: Verify that the file exists and check additional errors.

ORA-07394: unable to append string to text file

Cause: An error occurred while performing a string put operation.

Action: This is an internal error. Check additional information.

ORA-07400: slemtr: translated name for the message file is too long.

Cause: The name for the message file overflows internal buffer.

Action: Try making the complete path-name of the message file shorter by reorganizing the directory hierarchy.

ORA-07401: sptrap: cannot restore user exception handlers.

Cause: The system failed to restore user exception handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07402: sprst: cannot restore user signal handler.

Cause: The system failed to restore user signal handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07403: sfanfy: db_writers parameter not valid.

Cause: The db_writers parameter in INIT.ORA exceeds the system-dependent maximum or is less than 0.

Action: Change the db_writers parameter in INIT.ORA.

ORA-07404: sfareq: Timeout occurred waiting for request to complete.

Cause: The master database writer timed out waiting for a write or close to complete. One of the database writers may have stopped running.

Action: Check all database writer trace files. Shut down the database and try to warm start.

ORA-07405: sptrap: cannot setup alternate signal stack.

Cause: The system failed to setup an alternate signal stack.

Action: Check errno and sercose[0] for the location where it failed.

ORA-07406: slbtpd: invalid number.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07407: slbtpd: invalid exponent.

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed.

ORA-07408: slbtpd: overflow while converting to packed decimal.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07409: slpdtb: invalid packed decimal nibble.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07410: slpdtb: number too large for supplied buffer.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07411: slgfn: full path name too big for supplied buffer.

Cause: The supplied buffer is not big enough to hold the full path name.

Action: The construction of the full path name cannot be performed.

ORA-07412: sfaslv: Error getting entry in asynchronous write array.

Cause: One of the database writer processes could not locate its entry in the SGA.

Action: Contact customer support.

ORA-07415: slpath: allocation of memory buffer failed.

Cause: Malloc() failed to allocate buffer for storing ORACLE_PATH.

Action: System has run out of heap space. Additional information indicates errno.

ORA-07416: slpath: pathname construction failed; lack of output buffer space.

Cause: The slpath routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0] and constructed pathname length in sercose[1].

ORA-07417: sfareq: One or more database writers not active.

Cause: One or more of the database writer processes is no longer running.

Action: Check the trace files for the database writers. Shut down the database and try to warm start.

ORA-07418: sfareq: Database writer got error in timing function.

> **Cause:** An error occurred when the database writer called the system timing function.

> **Action:** Check the database writer trace file. Shut down database and try to warm start.

ORA-07419: sfareq: Database writer got error in timing function.

> **Cause:** An error occurred when the database writer called the system timing function.

> **Action:** Check the database writer trace file. Shut down database and try to warm start.

ORA-07425: sdpri: error *string* in translating dump file location.

> **Cause:** An oracle error occurred when translating the location of the dump file.

> **Action:** Check the oracle error code.

ORA-07426: spstp: cannot obtain the location of dbs directory.

> **Cause:** An oracle error occurred when translating the location of the dbs directory.

> **Action:** Check additional information for the error returned from sltln.

ORA-07427: spstp: cannot change directory to dbs.

> **Cause:** Chdir system call returned an error. Possible permission problems.

> **Action:** Check additional information for the OS error code.

ORA-07431: fork failed

> **Cause:** The server process was unable to fork a child process.

> **Action:** Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-07432: unable to perform nested sleep

> **Cause:** An attempt was made to make a process sleep when it was already sleeping. This platform does not support this capability.

> **Action:** Try the SLEEP command when the process is not sleeping.

ORA-07440: WMON process terminated with error

> **Cause:** The wakeup monitor process died.

> **Action:** Warm start instance.

ORA-07441: function address must be aligned on *string* byte boundary

> **Cause:** An improperly aligned function address was specified.

> **Action:** Use a properly aligned function address.

ORA-07442: function address must be in the range *string* to *string*

> **Cause:** An invalid function address was specified.

> **Action:** Use a valid function address.

ORA-07443: function *string* not found

> **Cause:** An invalid function name was specified.

> **Action:** Use a valid function name.

ORA-07444: function address *string* is not readable

Cause: An invalid function name/address was specified.

Action: Use a valid function name/address.

ORA-07445: exception encountered: core dump [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An OS exception occurred which should result in the creation of a core file. This is an internal error.

Action: Contact your customer support representative.

ORA-07446: sdnfy: bad value "*string*" for parameter *string*.

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-07447: ssarena: usinit failed.

Cause: Oracle failed to create a shared arena file.

Action: Use sercerrno field to determine cause of failure.

ORA-07448: ssarena: maximum number of shared arenas exceeded.

Cause: Oracle attempted to create more shared arena files than permitted.

Action: Raise the value for max_arena in INIT.ORA.

ORA-07449: sc: usnewlock failed.

Cause: Oracle failed to acquire a shared arena lock.

Action: Check result code in sercerrno to determine the cause of failure.

ORA-07451: slskstat: unable to obtain load information.

Cause: kstat library returned an error. Possible OS failure

Action: Check result code in sercose[0] for more information.

ORA-07452: specified resource manager plan does not exist in the data dictionary

Cause: User tried to load a resource manager plan that does not exist.

Action: Use a resource manager plan that exists in the data dictionary.

ORA-07453: requested resource manager plan schema does not contain OTHER_ GROUPS

Cause: User tried to load a resource manager plan schema that does not contain the OTHER_GROUPS group.

Action: Use a resource manager plan schema that contains the OTHER_GROUPS group.

ORA-07454: queue timeout, *string* second(s), exceeded

Cause: User session queued for longer than maximum specified queue queue duration time for consumer group.

Action: Re-submit job at a later time or increase queue timeout.

ORA-07455: estimated execution time (*string* secs), exceeds limit (*string* secs)

Cause: User attempted to execute an operation whose estimated execution time exceeds the limit specified for the consumer group.

Action: Execute job on behalf of another group, or increase limit.

ORA-07456: cannot set RESOURCE_MANAGER_PLAN when database is closed

Cause: An attempt was made to turn on the Resource Manager when the database was closed.

Action: Open the database and try again.

ORA-07457: cannot set _INTERNAL_RESOURCE_MANAGER_PLAN because of FORCE

Cause: An attempt was made to set the _INTERNAL_RESOURCE_MANAGER_ PLAN parameter, however this failed because the current RESOURCE_ MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07458: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the database was quiesced.

Action: Unquiesce the database.

ORA-07459: cannot restore the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally restore the RESOURCE_MANAGER_ PLAN parameter to the value before it was internally set. This failed because the current plan was set by the user and therefore did not need to be restored.

Action: No action needed.

ORA-07460: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally set the RESOURCE_MANAGER_ PLAN parameter, however, this failed because the current RESOURCE_ MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07468: spwat: mset error, unable to set semaphore.

Cause: The mset routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07469: sppst: mclear error, unable to clear semaphore.

Cause: The mclear routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07470: snclget: cannot get cluster number.

Cause: The cluster_status system call failed to get status information for the current cluster.

Action: Check result code in sercose[0]. Possible operating system failure.

ORA-07471: snclrd: name translation error of sgadef.dbf file name.

Cause: Unable to expand out ?/dbs/sgadef@.dbf file name.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are properly set. Check error number returned from sltln in sercose[0].

ORA-07472: snclrd: open error when opening sgadef.dbf file.

Cause: open failed when opening the file ?/dbs/sgadef@.dbf

Action: Check errno. Possible permission problem. Verify that the file ?/dbs/sgadef@.dbf exists.

ORA-07473: snclrd: read error when trying to read sgadef.dbf file.
> **Cause:** Read had an error when reading sgadef.dbf file.
>
> **Action:** Check errno. Verify file exists, and is correct size.

ORA-07474: snclrd: close error, unable to close sgadef.dbf file.
> **Cause:** An error occurred in close, while closing the file "?/dbs/sgadef@.dbf"
>
> **Action:** Check errno. Possible operating system error.

ORA-07475: slsget: cannot get vm statistics.
> **Cause:** The vm_statistics system call failed to get virtual memory statistics.
>
> **Action:** Check result code in sercerrno. Possible operating system failure.

ORA-07476: slsget: cannot get mapped memory statistics.
> **Cause:** The vm_mapmem system call failed to get mapped memory statistics.
>
> **Action:** Check result code in sercerrno. Possible operating system failure.

ORA-07477: scgcmn: lock manager not initialized.
> **Cause:** Lock manager must be initialized before converting locks.
>
> **Action:** Check result code in sercerrno. Possible lock manager failure.

ORA-07478: scgcmn: cannot get lock status.
> **Cause:** lm_stat_lock failed.
>
> **Action:** Check result code in sercerrno. Possible lock manager failure.

ORA-07479: scgcmn: cannot open or convert lock.
> **Cause:** lm_open or lm_open_convert failed.
>
> **Action:** Check result code in sercerrno. Possible lock manager failure.

ORA-07480: snchmod: cannot change permissions on ?/dbs/sgalm.dbf.
> **Cause:** When creating an instance, snlmini could not change the permissions on ?/dbs/sgalm.dbf
>
> **Action:** Contact your customer support representative.

ORA-07481: snlmatt: cannot attach to lock manager instance.
> **Cause:** lm_attach failed to attach to lock manager instance.
>
> **Action:** Check result code in sercerrno. Possible lock manager failure.

ORA-07482: snlmini: cannot create lock manager instance.
> **Cause:** lm_create failed to create lock manager instance.
>
> **Action:** Check permissions on ?/dbs, and remove ?/dbs/sgalm.dbf if it exists, then retry.

ORA-07483: snlkget: cannot convert(get) lock.
> **Cause:** lm_convert failed to convert(get) lock.
>
> **Action:** Check result code in sercerrno. Possible lock manager failure.

ORA-07484: snlkput: cannot convert(put) lock.
> **Cause:** lm_convert failed to put lock value.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07485: scg_get_inst: cannot open instance number lock.
    Cause: lm_open failed.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07486: scg_get_inst: cannot convert(get) instance number lock.
    Cause: lm_convert failed to get lock value.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07487: scg_init_lm: cannot create lock manager instance.
    Cause: lm_create failed.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07488: scgrcl: lock manager not initialized.
    Cause: Lock manager must be initialized before releasing locks.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07489: scgrcl: cannot get lock status.
    Cause: lm_stat_lock failed during lock release/cancel.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07490: scgrcl: cannot convert lock.
    Cause: lm_convert failed during lock release/cancel.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07491: scgrcl: cannot cancel lock request.
    Cause: lm_cancel failed during lock release/cancel.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07492: scgrcl: cannot close lock.
    Cause: lm_close failed during lock release/cancel.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07493: scgrcl: lock manager error.
    Cause: An error was encountered releasing the lock.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07494: scgcm: unexpected error.
    Cause: Unknown or unexpected error code.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07495: spwat: lm_wait failed.
    Cause: lm_wait failed.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07496: sppst: lm_post failed.
    Cause: lm_post failed.
    Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07497: sdpri: cannot create trace file "*string*"; errno = *string*.

Cause: 1. The trace file could not be created for writing.

2. The trace file is a symbolic link.

Action: 1. Check if the dump directory exists and whether it is writable.

2. Remove the symbolic link.

ORA-07498: spstp: Unable to open /dev/resched.

Cause: The rescheduling driver /dev/resched is not found or is not working properly.

Action: Check installation of the ORACLE rescheduling driver in the AIX kernel.

ORA-07499: spglk: Cannot reschedule.

Cause: The rescheduling driver /dev/resched is not open. This is an internal error and should not occur.

Action: Contact your customer support representative.

7

ORA-07500 to ORA-09859

ORA-07500: scglaa: $cantim unexpected return

    Cause: VMS system service $CANTIM returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07501: scgtoa: $deq unexpected return

    Cause: VMS system service $DEQ returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07502: scgcmn: $enq unexpected return

    Cause: VMS system service $ENQ returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07503: scgcmn: $setimr unexpected return

    Cause: VMS system service $SETIMR returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07504: scgcmn: $hiber unexpected return

    Cause: VMS system service $HIBER returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07505: scggt: $enq parent lock unexpected return

    Cause: VMS system service $ENQ returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07506: scgrl: $deq unexpected return on lockid *string*

    Cause: VMS system service $DEQ returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07507: scgcm: unexpected lock status condition

    Cause: A global locking system service returned an unexpected value.

    Action: Check for system error message (if any) and refer to VMS documentation, or contact your customer support representative.

ORA-07508: scgfal: $deq all unexpected return

    Cause: VMS system service $DEQ returned an unexpected value

    Action: Check for system error message and refer to VMS documentation

ORA-07509: scgfal: $deq parent lock unexpected return

Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07510: scgbrm: $getlki unexpected return on lockid *string*

Cause: VMS system service $GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07511: sscggtl: $enq unexpected return for master termination lock

Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07512: sscggtl: $enq unexpected return for client termination lock

Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07513: sscgctl: $deq unexpected return on cancel of term. lock

Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07514: scgcan: $deq unexpected return while canceling lock

Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07534: scginq: $getlki unexpected return on lockid *string*

Cause: VMS system service $GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07548: sftopn: Maximum number of files already open

Cause: Too many test files open

Action: This is an internal error, please report to Oracle

ORA-07549: sftopn: $OPEN failure

Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07550: sftopn: $CONNECT failure

Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07551: sftcls: $CLOSE failure

Cause: VMS system service $CLOSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07552: sftget: $GET failure

Cause: VMS system service $GET failed

Action: Examine system error message and refer to VMS documentation

ORA-07561: szprv: $IDTOASC failure

Cause: VMS system service $IDTOASC failed

Action: Examine system error message and refer to VMS documentation

ORA-07562: sldext: extension must be 3 characters
 Cause: An extension was found but it is of improper length
 Action: This is an internal error, please report to Oracle

ORA-07563: sldext: $PARSE failure
 Cause: VMS system service $PARSE failed
 Action: Examine system error message and refer to VMS documentation

ORA-07564: sldext: wildcard in filename or extension
 Cause: A wildcard was used in the file name
 Action: Reenter the file name completely

ORA-07565: sldext: $SEARCH failure
 Cause: VMS system service $SEARCH failed
 Action: Examine system error message and refer to VMS documentation

ORA-07568: slspool: $OPEN failure
 Cause: VMS system service $OPEN failed
 Action: Examine system error message and refer to VMS documentation

ORA-07569: slspool: $CLOSE failure
 Cause: VMS system service $CLOSE failed
 Action: Examine system error message and refer to VMS documentation

ORA-07570: szrfc: $IDTOASC failure
 Cause: VMS system service $IDTOASC failed
 Action: Examine system error message and refer to VMS documentation

ORA-07571: szrfc: $FIND_HELD failure
 Cause: VMS system service $FIND_HELD failed
 Action: Examine system error message and refer to VMS documentation

ORA-07572: szrfc: insufficient rolename buffer space
 Cause: An OS role name was too long.
 Action: Re-define the role name to be of correct length.

ORA-07573: slkhst: could not perform host operation
 Cause: VMS system service LIB$SPAWN failed
 Action: Examine system error message and refer to VMS documentation

ORA-07574: szrfc: $GETUAI failure
 Cause: VMS system service $GETUAI failed
 Action: Examine system error message and refer to VMS documentation

ORA-07576: sspexst: $GETJPIW failure on process ID *string*
 Cause: VMS system service $GETJPIW failed
 Action: Examine system error message and refer to VMS documentation

ORA-07577: no such user in authorization file

Cause: An attempt was made to set an INTERNAL password (for either DBA or OPER privilege), but the corresponding VMS account (either ORA_<sid>_DBA or ORA_<sid>_OPER) hasn"t been created yet.

Action: Add a VMS account for ORA_<sid>_DBA and/or ORA_<sid>_OPER before trying to set a password for them.

ORA-07578: szprv: $FIND_HELD failure

Cause: VMS system service $FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

ORA-07579: spini: $DCLEXH failure

Cause: VMS system service $PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07580: spstp: $GETJPIW failure

Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07581: spstp: cannot derive SID from unexpected process name

Cause: A background process did not have name of correct form

Action: If the job name was changed, restore it, otherwise this is an internal error, please report to Oracle.

ORA-07582: spstp: ORA_SID has illegal value

Cause: The ORA_SID must exist and be less than 6 characters

Action: Consult the VMS Installation guide for information on setting the SID.

ORA-07584: spdcr: invalid value for ORA_sid_(proc_)PQL$_item

Cause: A logical name used to set a detached process quota value has an invalid value (probably non-numeric).

Action: Examine the values of these logical names, correct the one in error, and retry.

ORA-07585: spdcr: $PARSE failure

Cause: VMS system service $PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07586: spdcr: $SEARCH failure

Cause: VMS system service $SEARCH failed

Action: Examine system error message and refer to VMS documentation

ORA-07587: spdcr: $CREPRC failure

Cause: VMS system service $CREPRC failed

Action: Examine system error message and refer to VMS documentation

ORA-07588: spdcr: $GETJPIW get image name failure

Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07589: spdde: system ID not set

Cause: The logical name ORA_SID doesn"t translate to a valid value.

Action: Check the value of ORA_SID in the process that gets the error, and correct the installation or command procedures that caused ORA_SID to be set incorrectly.

ORA-07590: spdde: $DELPRC failure
Cause: VMS system service $DELPRC failed
Action: Examine system error message and refer to VMS documentation

ORA-07591: spdde: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07592: sspgprv: Error obtaining required privileges
Cause: While obtaining needed privileges, an error was returned from SYS$SETPRV.
Action: This is an internal error. Please report to Oracle

ORA-07593: ssprprv: Error release privileges
Cause: While releasing privileges, an error was returned from SYS$SETPRV.
Action: This is an internal error. Please report to Oracle

ORA-07594: spiip: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07595: sppid: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07596: sptpa: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07597: spguns: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07598: spwat: $SETIMR failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07599: spwat: $SCHDWK failure
Cause: VMS system service $SCHDWK failed
Action: Examine system error message and refer to VMS documentation

ORA-07600: slkmnm: $GETSYIW failure
Cause: VMS system service $GETSYIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07601: spguno: $GETJPIW failure
Cause: VMS system service $GETJPIW failed
Action: Examine system error message and refer to VMS documentation

ORA-07602: spgto: $GETJPIW failure
    Cause: VMS system service $GETJPIW failed

    Action: Examine system error message and refer to VMS documentation

ORA-07605: szprv: $ASCTOID failure
    Cause: VMS system service $ASCTOID failed

    Action: Examine system error message and refer to VMS documentation

ORA-07606: szprv: $CHKPRO failure
    Cause: VMS system service $CHKPRO failed

    Action: Examine system error message and refer to VMS documentation

ORA-07607: szaud: $SNDOPR failure
    Cause: VMS system service $SNDOPR failed

    Action: Examine system error message and refer to VMS documentation

ORA-07608: szprv: $GETUAI failure
    Cause: VMS system service $GETUAI failed

    Action: Examine system error message and refer to VMS documentation

ORA-07609: szprv: $HASH_PASSWORD failure
    Cause: VMS system service $HASH_PASSWORD failed

    Action: Examine system error message and refer to VMS documentation

ORA-07610: $GETJPIW failed in retrieving the user''s MAC priviledges
    Cause: VMS system service $GETJPIW failed

    Action: Examine system error message and refer to VMS documentation

ORA-07612: $GETUAI failed in retrieving the user''s clearance level
    Cause: VMS system service $GETUAI failed

    Action: Examine system error message and refer to VMS documentation

ORA-07613: $GETJPIW failed in retrieving the user''s process label
    Cause: VMS system service $GETJPIW failed

    Action: Examine system error message and refer to VMS documentation

ORA-07614: $CHANGE_CLASS failed in retrieving the user''s process label
    Cause: VMS system service $CHANGE_CLASS failed

    Action: Examine system error message and refer to SEVMS documentation

ORA-07615: $CHANGE_CLASS failed in retrieving the specified file label
    Cause: VMS system service $CHANGE_CLASSS failed

    Action: Examine system error message and refer to SEVMS documentation

ORA-07616: $CHANGE_CLASS failed in retrieving the specified device label
    Cause: VMS system service $CHANGE_CLASS failed

    Action: Examine system error message and refer to SEVMS documentation

ORA-07617: $FORMAT_CLASS failed translating the binary label to a string
    Cause: VMS system service $FORMAT_CLASS failed because the given binary classification was not valid.

Action: Examine system error message and refer to SEVMS documentation

ORA-07618: $IDTOASC failed translating a secrecy level

Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of a secrecy level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07619: $IDTOASC failed translating an integrity level

Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of an integrity level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07620: smscre: illegal database block size

Cause: An illegal database block size was specified in the parameter file. It must be positive, a multiple of 512, and less than the maximum physical i/o data size.

Action: Change db_block_size in the parameter file to conform to these limits.

ORA-07621: smscre: illegal redo block size

Cause: An illegal redo log buffer size was specified in the parameter file. It must be positive and a multiple of 512.

Action: Change log_buffer in the parameter file to conform to these limits.

ORA-07622: smscre: $CREATE failure

Cause: While creating the system global area (SGA) backing file, VMS system service $CREATE failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07623: smscre: $CRMPSC failure

Cause: While creating the system global area (SGA), VMS system service $CRMPSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07624: smsdes: $DGBLSC failure

Cause: While deleting the system global area (SGA), VMS system service $DGBLSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07625: smsget: $MGBLSC failure

Cause: While mapping the system global area (SGA) during logon, VMS system service $MGBLSC failed. The usual reason is that Oracle has not been started up.

Action: Examine the system error message and refer to VMS documentation. Start up Oracle if it is not already started.

ORA-07626: smsget: sga already mapped

Cause: An attempt to map the SGA during logon failed because it was already mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07627: smsfre: $CRETVA failure

Cause: While unmapping the system global area (SGA) during logoff, VMS system service $CRETVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07628: smsfre: sga not mapped

Cause: An attempt to unmap the SGA during logoff failed because it was not mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07629: smpall: $EXPREG failure

Cause: While extending the program global area (PGA), VMS system service $EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07630: smpdal: $DELTVA failure

Cause: While deleting the program global area (PGA) during logoff, VMS system service $DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07631: smcacx: $EXPREG failure

Cause: While creating or extending a context area, VMS system service $EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07632: smsrcx: $DELTVA failure

Cause: While deleting a context area, VMS system service $DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07633: smsdbp: illegal protection value

Cause: The buffer debug function was called with an illegal value. This is an internal error.

Action: Contact your customer support representative.

ORA-07634: smsdbp: $CRETVA failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $CRETVA failed.

Action: Contact your customer support representative.

ORA-07635: smsdbp: $SETPRT failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $SETPRT failed.

Action: Contact your customer support representative.

ORA-07636: smsdbp: $MGBLSC failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $MGBLSC failed.

Action: Contact your customer support representative.

ORA-07637: smsdbp: buffer protect option not specified when sga created

Cause: Trying to change the buffer protect mode when the SGA was not created with buffer protect debug option. This is an internal error.

Action: Contact your customer support representative.

ORA-07638: smsget: SGA pad area not large enough for created SGA

Cause: An attempt was made to map an SGA with software in which the SGA pad area isn"t large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07639: smscre: SGA pad area not large enough (*string* bytes required)

Cause: An attempt was made to create an SGA with software in which the SGA pad area isn"t large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07640: smsget: SGA not yet valid. Initialization in progress

Cause: An attempt was made to map to the SGA while it was being initialized.

Action: Wait until initialization is complete, and try again.

ORA-07641: smscre: Unable to use the system pagefile for the SGA

Cause: The system global area (SGA) backing file could not be allocated using the system pagefile because the system-wide limit on global pages has been exceeded.

Action: Either increase the VMS system parameter GBLPAGFIL or use a disk file as the SGA backing file.

ORA-07642: smprtset: $CMKRNL failure

Cause: While attempting to set the protection of a region of memory, an error was returned from the $CMKRNL system service.

Action: Examine the system error message and refer to VMS documentation.

ORA-07643: smsalo: SMSVAR is invalid

Cause: an internal error

Action: Report this error to Oracle Support Services, provide your INIT.ORA file.

ORA-07645: sszfsl: $CHANGE_CLASS failure

Cause: While attempting to set the label on a file, SEVMS service $CHANGE_CLASS failed.

Action: Examine the system message and refer to SEVMS system documentation.

ORA-07646: sszfck: $CREATE failure

Cause: While attempting to create a file, VMS system service $CREATE failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07647: sszfck: $OPEN failure

Cause: While attempting to reopen a file, VMS system service $OPEN failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07650: sigunc: $GETJPIW failure

Cause: While attempting to get the user"s terminal device name, user name, user program name, or process name during logon, VMS system service $GETJPIW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07655: slsprom:$TRNLOG failure

Cause: While attempting to translate SYS$INPUT during a prompt for a password, VMS system service $TRNLOG failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07656: slsprom:$GETDVI failure

Cause: While attempting to get device characteristics during a prompt for a password, VMS system service $GETDVI failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07657: slsprom:$ASSIGN failure

Cause: While prompting for a password, VMS system service $ASSIGN failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07658: slsprom:$QIOW read failure

Cause: While prompting for a password, VMS system service $QIOW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07665: ssrexhd: recursive exception encountered *string string string string string string*

Cause: A VMS exception occurred while executing in the Oracle exception handler. The message includes the signal number, first and second signal arguments, and exception PC, PSL and R0. This is an internal error.

Action: Contact your customer support representative.

ORA-07670: $IDTOASC failed translating a secrecy category

Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of a secrecy category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07671: $IDTOASC failed translating an integrity category

Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of an integrity category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07672: $PARSE_CLASS failed translating the string into a binary label

Cause: SEVMS system service $PARSE_CLASS failed because the given string did not represent a valid classification.

Action: Examine system error message and refer to SEVMS documentation.

ORA-07680: sou2os: another call to Oracle currently executing

Cause: A call to the Oracle shared image entry point occurred from within the shared image. This is an internal error.

Action: Contact your customer support representative.

ORA-07681: sou2os: An error occurred while initializing Oracle

Cause: While attempting to set up the dispatch vectors for the shared image, an error occurred. This is an internal error.

Action: Contact your customer support representative.

ORA-07682: sou2os: set kernel dispatch fail err

Cause: During Oracle shared image entry, a dispatch to kernel mode failed.

Action: Make sure that your shared image is installed with the CMKRNL privilege, then contact your customer support representative.

ORA-07683: sou2os: $SETPRV reset error

Cause: During an attempt to restore user privileges at Oracle shared image exit, VMS system service $SETPRV failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07684: sou2os: supervisor stack reset error

Cause: During an attempt to restore the supervisor-mode stack at Oracle shared image exit, VMS system service $SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07685: sou2os: supervisor stack set error

Cause: During an attempt to set the Oracle supervisor-mode stack at Oracle shared image entry, VMS system service $SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07700: sksarch: interrupt received

Cause: An interrupt was received while archiving the logs

Action: Retry operation

ORA-07701: sksatln: internal exception: output buffer too small

Cause: Overflow of buffer for parsing archive control text string

Action: This is an internal error, please report to Oracle

ORA-07702: unrecognized device type in archive text

Cause: Unrecognized device type in archive text

Action: This is an internal error, please report to Oracle

ORA-07703: error in archive text: need "/" after device type

Cause: The archive control text in the ARCHIVE command is invalid; the device type (to indicate a file or tape) must be followed by a "/".

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07704: error in archive text: need ":" after device name

Cause: The archive control text in the ARCHIVE command is invalid; the device name must be followed by a ":".

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07705: sksaprs: device name buffer too small

Cause: The buffer supplied for the device name is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07706: error in archive text: need disk file name

Cause: The archive control text in the ARCHIVE command is invalid; the disk file name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07707: error in archive text: need tape label name
    Cause: The archive control text in the ARCHIVE command is invalid; the tape label name is missing.

    Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07708: sksaprs: tape label name buffer too small
    Cause: The buffer supplied for the tape label is too small. This is an internal error.

    Action: Contact your customer support representative.

ORA-07709: sksaprs: archiving to a remote host is not allowed
    Cause: The user specified a remote disk for archiving via DECnet.

    Action: Archive to a disk on the local host.

ORA-07710: sksaprs: file name buffer too small
    Cause: The buffer supplied for the file name is too small. This is an internal error.

    Action: Contact your customer support representative.

ORA-07713: sksamtd: could not mount archival device (SYS$MOUNT failure)
    Cause: VMS system service SYS$MOUNT failed

    Action: Examine system error message and refer to VMS documentation

ORA-07715: sksadtd: could not dismount archival device (SYS$DISMNT failure)
    Cause: VMS system service SYS$DISMNT failed

    Action: Examine system error message and refer to VMS documentation

ORA-07716: sksachk: invalid device specification for ARCHIVE
    Cause: VMS system service SYS$GETDVI failed"

    Action: Specify a valid device in ARCHIVE control string

ORA-07717: sksaalo: error allocating memory
    Cause: VMS system service LIB$GET_VM failed"

    Action: Examine system error message and refer to VMS documentation

ORA-07718: sksafre: error freeing memory
    Cause: VMS system service LIB$FREE_VM failed

    Action: Examine system error message and refer to VMS documentation

ORA-07721: scgcm: not enough OS resource to obtain system enqueue
    Cause: d by the messages SS$_EXENQLM or SS$_INSFMEM.

    Action: Free up some of the required resource to allow the creation of the required lock.

ORA-07740: slemop: incorrect handle size (programming error)
    Cause: structures used for reading error message files do not match

    Action: this is an internal error, please report to Oracle

ORA-07741: slemop: $OPEN failure
    Cause: VMS system service $OPEN failed

    Action: Examine system error message and refer to VMS documentation

ORA-07742: slemop: $CONNECT failure

Cause: VMS system service $CONNECT failed

Action: Examine system error message and refer to VMS documentation

ORA-07743: slemop: incorrect error file attributes

Cause: An error message file is of incorrect format

Action: Unless an error file has been changed, report this to Oracle

ORA-07744: slemcl: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07745: slemcl: $CLOSE failure

Cause: VMS system service $CLOSE failed

Action: Check system error and refer to VMS documentation

ORA-07746: slemrd: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07747: slemrd: $READ failure

Cause: VMS system service $READ failed

Action: Check system error and refer to VMS documentation

ORA-07750: slemcr: fopen failure

Cause: An attempt to create a message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07751: slemcr: malloc failure

Cause: An attempt to allocate a cache for a newly-created message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07753: slemcf: fseek before write failure

Cause: An attempt to seek before writing a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07754: slemcf: fwrite failure

Cause: An attempt to write a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07755: slemcf: fseek before read failure

Cause: An attempt to seek before reading a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07756: slemcf: fread failure

Cause: An attempt to read a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07757: slemcc: invalid handle
    Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

    Action: Contact your customer support representative.

ORA-07758: slemcw: invalid handle
    Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

    Action: Contact your customer support representative.

ORA-07759: slemtr: invalid destination
    Cause: The destination string provided to the function is too short This is an internal error.

    Action: Contact your customer support representative.

ORA-07760: slemtr: $open failure
    Cause: the $open service failed. This is an internal error

    Action: Contact your customer support representative.

ORA-07800: slbtpd: invalid number
    Cause: An impossible request for binary to decimal conversion was made

    Action: This conversion cannot be performed

ORA-07801: slbtpd: invalid exponent
    Cause: An impossible request for binary to decimal conversion was made

    Action: This conversion cannot be performed

ORA-07802: slbtpd: overflow while converting to packed decimal
    Cause: An impossible request for binary to decimal conversion was made

    Action: This conversion cannot be performed

ORA-07803: slpdtb: invalid packed decimal nibble
    Cause: An impossible request for decimal to binary conversion was made

    Action: This conversion cannot be performed

ORA-07804: slpdtb: number too large for supplied buffer
    Cause: An impossible request for decimal to binary conversion was made

    Action: This conversion cannot be performed

ORA-07820: sspscn: SYS$CRELNM failure
    Cause: An error was returned from the SYS$CRELNM function

    Action: Check system error and refer to VMS documentation

ORA-07821: sspsdn: SYS$DELLNM failure
    Cause: An error was returned from the SYS$DELLNM function

    Action: Check system error and refer to VMS documentation

ORA-07822: sspscm: SYS$CREMBX failure
    Cause: An error was returned from the SYS$CREMBX function while trying to create the process dump mailbox.

    Action: Check system error and refer to VMS documentation

ORA-07823: sspsqr: $QIO failure

    Cause: An error was returned from $QIO while trying to queue a read to the process dump mailbox.

    Action: Check system error and refer to VMS documentation

ORA-07824: sspain: $SETIMR failure

    Cause: An error was returned from SYS$SETIMR while trying to queue a process spin-watch timer.

    Action: Check system error and refer to VMS documentation

ORA-07825: sspsck: $QIO failure at AST level

    Cause: An error was returned from SYS$QIO while trying to read the process dump mailbox.

    Action: Check system error and refer to VMS documentation

ORA-07826: sspscm: SYS$GETDVIW failure

    Cause: An error was returned from SYS$GETDVIW while trying to get information about the process dump mailbox.

    Action: Check system error and refer to VMS documentation

ORA-07840: sllfop: LIB$GET_VM failure

    Cause: An error was returned from LIB$GET_VM while attempting to allocate memory for an i/o vector.

    Action: Check system error and refer to VMS documentation

ORA-07841: sllfop: SYS$OPEN failure

    Cause: An error was returned from SYS$OPEN while attempting to open the data file for reading

    Action: Check system error and refer to VMS documentation

ORA-07842: sllfcl: SYS$CLOSE failure

    Cause: An error was returned from SYS$CLOSE while attempting to close the input data file

    Action: Check system error and refer to VMS documentation

ORA-07843: sllfcl: LIB$FREE_VM failure

    Cause: An error was returned from LIB$FREE_VM while attempting to free the memory for the i/o vector

    Action: Check system error and refer to VMS documentation

ORA-07844: sllfop: LIB$GET_VM failure

    Cause: An error was returned from LIB$GET_VM while attempting to allocate memory for data and index buffers

    Action: Check system error and refer to VMS documentation

ORA-07845: sllfcl: LIB$FREE_VM failue

    Cause: An error was returned from LIB$FREE_VM while attempting to free memory used by data and index buffers

    Action: Check system error and refer to VMS documentation

ORA-07846: sllfop: *string* byte record too big for *string* byte user buffer

Cause: The longest record in the file will not fit into the largest data buffer that can be allocated

Action: Modify the RMS file to have smaller records

ORA-07847: sllfop: $CONNECT failure

Cause: An error was returned by SYS$CONNECT while attempting to open the data file

Action: Check system error and refer to VMS documentation

ORA-07848: sllfrb: $GET failure

Cause: An error was returned by SYS$GET while attempting to read the data file

Action: Check system error and refer to VMS documentation

ORA-07849: sllfsk: $GET failure

Cause: An error was returned by SYS$GET while attempting to skip records in the input file

Action: Check system error and refer to VMS documentation

ORA-07850: sllfop: bad option

Cause: You are using a bad option to loader Fixed= is one legal option. Check documentation for others.

Action: Check documentation

ORA-07860: osnsoi: error setting up interrupt handler

Cause: An error occurred while setting up the control interrupt handler

Action: This is an internal error. Contact your Oracle representative.

ORA-07880: sdopnf: internal error

Cause: A list of all files open by this process could not be obtained.

Action: This is an internal error. Contact your customer support representative.

ORA-08000: maximum number of session sequence lists exceeded

Cause: the sequence parent state objects for this session are all used

Action: an internal error; quit the session and begin a new one

ORA-08001: maximum number of sequences per session exceeded

Cause: the limit on the number of sequences usable by session has been hit

Action: increase INIT.ORA parameter user_sequences to get more

ORA-08002: sequence *string*.CURRVAL is not yet defined in this session

Cause: sequence CURRVAL has been selected before sequence NEXTVAL

Action: select NEXTVAL from the sequence before selecting CURRVAL

ORA-08003: sequence *string*.NEXTVAL exceeds internal limits

Cause: The sequence was created with unsafe values for some of the parameters. The calculation of NEXTVAL cannot be made because it exceeds the legal represention size.

Action: Alter or recreate the sequence number with legal limits.

ORA-08004: sequence *string*.NEXTVAL *string string*VALUE and cannot be instantiated

Cause: instantiating NEXTVAL would violate one of MAX/MINVALUE

Action: alter the sequence so that a new value can be requested

ORA-08005: specified row does not exist
Cause: A row with the given rowid does not exist in any of the tables given
Action: check the query for misspellings of table names and the rowid

ORA-08006: specified row no longer exists
Cause: the row has been deleted by another user since the operation began
Action: re-try the operation

ORA-08007: Further changes to this block by this transaction not allowed
Cause: Max locks have been reached for this transaction in this block
Action: Commit changes

ORA-08008: another instance is mounted with USE_ROW_ENQUEUES = *string*
Cause: the shared instance being started does not have the same value for use_row_enqueues as already running instances
Action: ensure that all instances" INIT.ORA files specify the same value for the parameter "use_row_enqueues"

ORA-08100: index is not valid - see trace file for diagnostics
Cause: Validate Index detected an inconsistency in its argument index
Action: Send trace file to your customer support representative

ORA-08101: index key does not exist file *string*: (root *string*, node *string*) blocks (*string*)
Cause: Internal error: possible inconsistency in index
Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08102: index key not found, obj# *string*, file *string*, block *string* (*string*)
Cause: Internal error: possible inconsistency in index
Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08103: object no longer exists
Cause: The object has been deleted by another user since the operation began, or a prior incomplete recovery restored the database to a point in time during the deletion of the object.
Action: Delete the object if this is the result of an incomplete recovery.

ORA-08104: this index object *string* is being online built or rebuilt
Cause: the index is being created or rebuild or waited for recovering from the online (re)build
Action: wait the online index build or recovery to complete

ORA-08105: Oracle event to turn off smon cleanup for online index build
Cause: set this event only under the supervision of Oracle development
Action: debugging only

ORA-08106: cannot create journal table *string.string*
Cause: The online index builder could not create its journal table

Action: rename your table in conflict or rerun the SQL statement

* there may be a concurrent online index rebuild on the same object.

ORA-08108: may not build or rebuild this type of index online
    Cause: only support normal index or IOT top-level index
    Action: change your index type

ORA-08109: nosort is not a supported option for online index build
    Cause: may not specify nosort for online index build
    Action: get rid of nosort in the index creation command

ORA-08110: Oracle event to test SMON cleanup for online index build
    Cause: Oracle Kernel test only
    Action: Donot set this event(for test only)

ORA-08111: a partitioned index may not be coalesced as a whole
    Cause: User attempted to coalesce a partitioned index using ALTER INDEX COALESCE statement, which is illegal
    Action: Coalesce the index a (sub)partition at a time (using ALTER INDEX MODIFY (sub)PARTITION COALESCE)

ORA-08112: a composite partition may not be coalesced as a whole
    Cause: User attempted to coalesce a composite partition
    Action: Coalesce the index a subpartition at a time (using ALTER INDEX MODIFY SUBPARTITION COALESCE)

ORA-08113: composite partition index may not be compressed
    Cause: User attempted to compress a composite partition index
    Action: create uncompressed composite partition index

ORA-08114: can not alter a fake index
    Cause: User attempted to alter a fake index
    Action: drop fake index

ORA-08115: can not online create/rebuild this index type
    Cause: User attempted to create index type that online doesnot support
    Action: use offline index create/rebuild command

ORA-08116: can not acquire dml enough lock(S mode) for online index build
    Cause: User attempted to create index online without allowing DML Share lock
    Action: allow DML share lock on the base table

ORA-08117: Index Organized Table operation released its block pin
    Cause: Block maintenance forced the release of a block pin
    Action: Contact your customer support representative

ORA-08118: Deferred FK constraints cannot be enforced, index too big (*string*)
    Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB_BLOCK_SIZE.
    Action: First try to drop the Foreign Key and then the primary key.

ORA-08119: The new initrans will make the index too big

Cause: Specifying the initrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller initrans value

ORA-08120: Need to create SYS.IND_ONLINE$ table in order to (re)build index

Cause: Alter index Build/Rebuild online require existing of SYS.IND_ONLINE$ table.

Action: User/DBA needs to create sys.ind_online$ before alter the index /rdbms/admin/catcio.sql contains script to create ind_online$.

ORA-08121: Number of indexes need to be maintained offline exceeds limit for DML

Cause: Too many indexes needed to be maintained. The limit is 2^16 indexes for each DML statement

Action: Make sure the index maintainance is online. If indexes need to be maintained offline, drop some indexes.

ORA-08122: Online (re)build of index rolled back due to DML conflict

Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

ORA-08175: discrete transaction restriction violated (*string*)

Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

ORA-08176: consistent read failure; rollback data not available

Cause: Encountered data changed by an operation that does not generate rollback data : create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Read only transactions must be restarted.

ORA-08177: can't serialize access for this transaction

Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

ORA-08178: illegal SERIALIZABLE clause specified for user INTERNAL

Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

ORA-08179: concurrency check failed

Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

ORA-08180: no snapshot found based on specified time

Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

ORA-08181: specified number is not a valid system change number
    Cause: supplied scn was beyond the bounds of a valid scn.
    Action: use a valid scn.

ORA-08182: operation not supported while in Flashback mode
    Cause: user tried to do dml or ddl while in Flashback mode
    Action: disable Flashback and re-attempt the operation

ORA-08183: Flashback cannot be enabled in the middle of a transaction
    Cause: user tried to do Flashback in the middle of a transaction
    Action: do a commit

ORA-08184: attempting to re-enable Flashback while in Flashback mode
    Cause: as stated above
    Action: disable first before re-enabling

ORA-08185: Flashback not supported for user SYS
    Cause: user logged on as SYS
    Action: logon as a different (non SYS) user.

ORA-08186: invalid timestamp specified
    Cause: as stated above
    Action: enter a valid timestamp

ORA-08187: snapshot expression not allowed here
    Cause: A snapshot expression using AS OF was specified when not allowed.
    Action: Do not use the AS OF clause

ORA-08189: cannot flashback the table because row movement is not enabled
    Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.
    Action: Enable row movement on the table

ORA-08190: restore point *string* is from a different incarnation of the database
    Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database
    Action: Provide a restore point from the current database incarnation

ORA-08191: Flashback Table operation is not supported on remote tables
    Cause: An attempt was made to perform Flashback Table operation on a remote table. This is not permitted.
    Action: Do not perform a Flashback Table operation on remote tables.

ORA-08192: Flashback Table operation is not allowed on fixed tables
    Cause: An attempt was made to perform Flashback Table operation on a fixed table. This is not permitted.
    Action: Do not perform a Flashback Table operation on fixed tables.

ORA-08193: Flashback Table operation is not allowed on temporary tables

Cause: An attempt was made to perform Flashback Table operation on a temporary table. This is not permitted.

Action: Do not perform a Flashback Table operation on temporary tables.

ORA-08194: Flashback Table operation is not allowed on materialized views

Cause: An attempt was made to perform Flashback Table operation on a materialized view. This is not permitted.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

ORA-08195: Flashback Table operation is not supported on partitions

Cause: An attempt was made to perform Flashback Table operation on a partition. This is not permitted.

Action: Do not perform a Flashback Table operation on partitions.

ORA-08196: Flashback Table operation is not allowed on AQ tables

Cause: An attempt was made to perform Flashback Table operation on AQ tables. This is not permitted.

Action: Do not perform a Flashback Table operation on AQ tables.

ORA-08197: Flashback Table operation is not supported on clustered tables

Cause: An attempt was made to perform Flashback Table operation on a clustered table. This is not permitted.

Action: Do not perform a Flashback Table operation on clustered tables.

ORA-08198: Flashback Table is not supported on object tables, nested tables

Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This is not permitted.

Action: Do not perform a Flashback Table operation on such tables.

ORA-08199: Flashback Table operation is not supported on this object

Cause: An attempt was made to perform Flashback Table operation on an object on which the operation is not supported.

Action: Do not perform a Flashback Table operation on such objects.

ORA-08205: ora_addr: $ORACLE_SID not set in environment

Cause: The environment variable ORACLE_SID is not set.

Action: Set the ORACLE_SID environment variable.

ORA-08206: ora_addr: cannot translate address file name

Cause: Cannot translate $ORACLE_HOME/dbs/sgadef$ORACLE_SID.dbf.

Action: Ensure that ORACLE_HOME and ORACLE_SID are properly set.

ORA-08207: ora_addr: cannot open address file

Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file $(ORACLE_HOME)/dbs/sgadef$(ORACLE_SID).dbf exists and has correct permissions.

ORA-08208: ora_addr: cannot read from address file

Cause: The address file could not be read.

Action: Check that the file $(ORACLE_HOME)/dbs/sgadef$(ORACLE_SID).dbf exists and contains a single line of text.

ORA-08209: scngrs: SCN not yet initialized

Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

ORA-08210: Requested I/O error

Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

ORA-08230: smscre: failed to allocate SGA

Cause: The n_core system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check INIT.ORA parameters.

ORA-08231: smscre: unable to attach to SGA

Cause: The process cannot attach to the SGA. This can happen if either the listener can"t attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

ORA-08232: smsdes: cannot detach from SGA

Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

ORA-08233: smsdes: cannot unmap SGA

Cause: The n_core system call failed while detaching from the SGA.

Action: Note nCX error returned; contact your customer support representative.

ORA-08234: smsget: cannot get instance listener address

Cause: The instance listener address cannot be read from the sgadef file.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are set correctly. Additional information gives error return from ora_addr.

ORA-08235: smsget: listener not on this node

Cause: A process wishing to attach to the SGA is on a different node from its instance"s listener.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are set correctly. Contact your customer support representative.

ORA-08236: smsget: cannot share subcube with listener

Cause: The n_share call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

ORA-08237: smsget: SGA region not yet created

Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

ORA-08238: smsfre: cannot detach from SGA

Cause: The n_core system call failed while detaching from the SGA.

Action: Check nCX error, and contact your customer support representative.

ORA-08260: ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver"s returned status.

ORA-08261: ora_addr: cannot find name in nameserver

Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver"s returned status.

ORA-08263: ora_addr: cannot free listener address

Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver"s returned status. Contact your customer support representative.

ORA-08264: ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver"s returned status. Contact your customer support representative.

ORA-08265: create_ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver"s returned status.

ORA-08266: create_ora_addr: cannot register name in nameserver

Cause: The listener"s addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver"s returned status.

ORA-08267: destroy_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver"s returned status. Contact your customer support representative.

ORA-08268: create_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver"s returned status. Contact your customer support representative.

ORA-08269: destroy_ora_addr: cannot destroy name

Cause: The listener"s addressing information could not be removed.

Action: Additional information gives nameserver"s returned status. Contact your customer support representative.

ORA-08270: sksachk: Illegal archival control string

Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

ORA-08271: sksabln: Buffer size not large enough for archive control string

Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

ORA-08274: Out of memory for environment variable

    Cause: There is insufficient memory to return the requested value

    Action: Reduce memory usage and retry.

ORA-08275: Environment variable unset

    Cause: The requested environment variable is not set

    Action: Ensure that the variable name requested is correct.

ORA-08276: No room in nameserver for pid

    Cause: There is no room to record the pid for a background process

    Action: Shutdown abort and restart the database.

ORA-08277: Cannot set environment variable

    Cause: There is insufficient memory to expand the environment.

    Action: Reduce memory usage and retry.

ORA-08278: Cannot get CPU statistics

    Cause: Could not retrieve CPU times because n_stat failed.

    Action: Contact customer support.

ORA-08308: sllfop: Cannot open file

    Cause: Oracle could not open a file.

    Action: Check the Unix errno returned as additional information.

ORA-08309: sllfop: Cannot fstat file

    Cause: Oracle could not obtain information about an open file.

    Action: Check the Unix errno returned as additional information.

ORA-08310: sllfop: Bad value for recsize

    Cause: An illegal value for the record size was specified.

    Action: Specify a value for the recsize option that is greater than 0.

ORA-08311: sllfop: bad value for maxrecsize

    Cause: An illegal value for the maximum record size was specified.

    Action: Specify a value for the maxrecsize option that is greater than 0.

ORA-08312: sllfop: unrecognized processing option

    Cause: An unrecognized processing option was specified.

    Action: Check the Oracle for nCUBE 2 User"s Guide for valid options.

ORA-08313: sllfop: could not allocate buffers

    Cause: Memory for the load buffers could not be allocated.

    Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL*Loader again.

ORA-08314: sllfcf: Error closing file

    Cause: An error occurred trying to close a file.

    Action: Check the Unix errno returned as additional information.

ORA-08315: sllfrb: Error reading file

    Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08316: sllfsk: Error seeking in file.
    Cause: The lseek system call returned an error.
    Action: Check the Unix errno returned as additional information.

ORA-08317: sllfsk: Error seeking in file.
    Cause: The lseek system call returned an error.
    Action: Check the Unix errno returned as additional information.

ORA-08318: sllfsk: Error reading file
    Cause: An error occurred trying to read from a file.
    Action: Check the Unix errno returned as additional information.

ORA-08319: sllfsk: Error reading file
    Cause: An error occurred trying to read from a file.
    Action: Check the Unix errno returned as additional information.

ORA-08320: scnget: Call to scnget before scnset or scnfnd.
    Cause: An internal error
    Action: Contact your customer support representative.

ORA-08321: scnmin: NOT IMPLEMENTED YET
    Cause: An internal error
    Action: Contact your customer support representative.

ORA-08322: scnmin: open/convert of bias lock failed
    Cause: A call to the lkmgr failed to open and convert the bias lock
    Action: Check to make sure the lkmgr is up.

ORA-08323: scnmin: close of bias lock failed
    Cause: A call to the lkmgr failed to close the bias lock
    Action: Check to make sure the lkmgr is up.

ORA-08330: Printing not supported
    Cause: An attempt was made to automatically spool a file to the printer
    Action: None

ORA-08331: Wait operation timed out
    Cause: Oracle timed out waiting for an event
    Action: Contact your Oracle support representative

ORA-08332: rollback segment #*string* specified not available
    Cause: (same as 1545)
    Action: (same as 1545). Also, make sure you have created enough rollback
segments for the number of instances you are trying to start.

ORA-08340: This command not allowed on nCUBE, only one thread is ever used.
    Cause: An illegal command was executed for the nCUBE platform.
    Action: There is no need to issue this command.

ORA-08341: On nCUBE, this command can only be executed from instance 1.

Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

ORA-08342: sropen: failed to open a redo server connection

Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08343: srclose: failed to close a redo server connection

Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

ORA-08344: srapp: failed to send redo data to the redo server

Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08401: invalid compiler name: *string*

Cause: An invalid compiler name <compname> was passed to a UTL_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

ORA-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message

Cause: The WMSGBSIZ is the maximun size for warning message block, it is recommanded to be 1024 bytes to 8 kbytes.

Action: Defined WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

ORA-08413: invalid compiler type in FORMAT parameter at *string*

Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08414: error encountered in *string*

Cause: The function <routine> returned an error. Where <routine> may be: RAW_TO_NUMER NUMBER_TO_RAW RAW_TO_NUMBER_FORMAT NUMBER_TO_RAW_FORMAT MAKE_NUMBER_TO_RAW_FORMAT MAKE_RAW_TO_NUMBER_FORMAT

Action: to take.

ORA-08429: raw data has invalid digit in display type data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08430: raw data missing leading sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08431: raw data missing zero as defined in picture

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08432: raw data has invalid floating point data

Cause: The input raw data passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

ORA-08433: invalid picture type in convert raw to number

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08434: raw data has invalid trailing sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified

Cause: The input MASK passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08436: raw data has invalid sign digit

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

ORA-08437: invalid picture type in picture mask

Cause: The picture mask parameter passed to a UTL_PG NUMBER_TO_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08440: raw buffer is too short to hold converted data

Cause: The output raw buffer passed to a UTL_PG NUMBER_TO_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

ORA-08441: closed parenthesis missing in picture mask

Cause: A closed parenthesis was missing from the picture mask passed to a UTL_PG conversion routine.

Action: Correct the picture mask.

ORA-08443: syntax error in BLANK WHEN ZERO clause in mask options

Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

ORA-08444: syntax error in JUSTIFIED clause in mask options

Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

ORA-08445: syntax error in SIGN clause in mask options

Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08446: syntax error in SYNCHRONIZED clause in mask options

Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

ORA-08447: syntax error in USAGE clause in mask options

Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

ORA-08448: syntax error in DECIMAL-POINT environment clause

Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

ORA-08449: invalid numeric symbol found in picture mask

Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL_PG conversion routine.

Action: Correct the picture mask parameter.

ORA-08450: invalid specification of CR in picture mask

Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08451: invalid specification of DB in picture mask

Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08452: specification of E in picture mask is unsupported

Cause: The floating point exponent symbol "E" was specified in the picture mask parameter passed to a UTL_PG conversion routine. The floating point data type is currently not supported by the UTL_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

ORA-08453: more than one V symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one decimal point indicator ("V"). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08454: more than one S symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one operational sign indicator ("S"). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08455: syntax error in CURRENCY SIGN environment clause

Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

ORA-08456: no sign in picture mask but SIGN clause in mask options

Cause: The picture mask parameter passed to a UTL_PG conversion routine contained no sign symbol ("S", "+", or "-"), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

ORA-08457: syntax error in SEPARATE CHARACTER option of SIGN clause

Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08458: invalid format parameter

Cause: The format parameter passed to a UTL_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08459: invalid format parameter length

Cause: The format parameter passed to a UTL_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08460: invalid environment clause in environment parameter

Cause: The environment parameter passed to a UTL_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

ORA-08462: raw buffer contains invalid decimal data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

ORA-08463: overflow converting decimal number to Oracle number

Cause: The output variable passed to a UTL_PG RAW_TO_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and besure that the output variable is large enough to hold the Oracle number value.

ORA-08464: input raw decimal data contains more than 42 digits

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

ORA-08465: input mask contains more than 32 characters

Cause: The input mask passed to UTL_PG numeric conversion routine contained more the 32 characters.

Action: Correct the mask input buffer.

ORA-08466: raw buffer length *string* is too short for *string*

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08467: error converting Oracle number to *string*

Cause: An error occurred when converting an Oracle number to a COBOL <type> of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

ORA-08468: mask option *string* **is not supported**

Cause: The mask option <clause> was passed to a UTL_PG conversion routine, but is not supported by UTL_PG. The <clause> can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the <clause> from the mask options parameter in the PL/SQL call to UTL_PG.

ORA-08469: must use the SIGN IS SEPARATE clause in mask options

Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don"t specify an S in the PICTURE character-string.

ORA-08498: Warning: picture mask "*string***" overrides picture mask option "USAGE IS** *string***" to "USAGE IS DISPLAY"**

Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

ORA-08499: Warning: picture mask options "*string***" ignored by UTL_PG**

Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL_PG routine.

ORA-09200: sfccf: error creating file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09201: sfcopy: error copying file

Cause: Block sizes may not match

Action: See OSD error accompanying this message

ORA-09202: sfifi: error identifying file

Cause: db_block_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

ORA-09203: sfofi: error opening file

Cause: File attributes may have changed

Action: See OSD error accompanying this message

ORA-09204: sfotf: error opening temporary file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09205: sfqio: error reading or writing to disk

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09206: sfrfb: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09207: sfsrd: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09208: sftcls: error closing file

Cause: File may have been corrupted

Action: See OSD error accompanying this message

ORA-09209: sftget: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09210: sftopn: error opening file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09211: sfwfb: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09212: sfwfbmt: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09213: slgfn: error fabricating file name

Cause: Filename may be too long

Action: See OSD error accompanying this message

ORA-09214: sfdone: I/O error detected

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09215: sfqio: error detected in IOCompletionRoutine

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09216: sdnfy: bad value "*string*" for parameter *string*

Cause: The directory specified as the value for the stated parameter could not be
used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-09217: sfsfs: failed to resize file
>   **Cause:** Could be out of disk space
>
>   **Action:** See OSD error accompanying this message

ORA-09218: sfrfs: failed to refresh file size
>   **Cause:** File may be corrupted or truncated
>
>   **Action:** See OSD error accompanying this message

ORA-09240: smpalo: error allocating PGA memory
>   **Cause:** Could be out of memory
>
>   **Action:** See OSD error accompanying this message

ORA-09241: smsalo: error allocating SGA memory
>   **Cause:** Could be out of memory
>
>   **Action:** See OSD error accompanying this message

ORA-09243: smsget: error attaching to SGA
>   **Cause:** SGA may not have been created (database not started)
>
>   **Action:** See OSD error accompanying this message

ORA-09260: sigpidu: error obtaining process id
>   **Cause:** May be out of resources
>
>   **Action:** See OSD error accompanying this message

ORA-09261: spdcr: error creating detached (background) process
>   **Cause:** Could be out of resources
>

ORA-09266: spawn: error starting an Oracle process
>   **Cause:** Could be out memory
>
>   **Action:** See OSD error accompanying this message

ORA-09270: szalloc: error allocating memory for security
Cause: Could be out of memory
Action: See OSD error accompanying this message

ORA-09271: szlon: error verifying user name
Cause: Username may be too long
Action: See OSD error accompanying this message

ORA-09272: remote os logon is not allowed
Cause: Remote os login attempted when not allowed.
Action: See OSD error accompanying this message

ORA-09273: szrfc: error verifying role name
Cause: An OS error was returned when verifying the role name.
Action: See OSD error accompanying this message

ORA-09274: szrfc: insufficient role name buffer space
Cause: An OS role name was too long.
Action: See OSD error accompanying this message

ORA-09275: CONNECT INTERNAL is not a valid DBA connection
Cause: CONNECT INTERNAL is no longer supported for DBA connections.
Action: Please try to connect AS SYSDBA or AS SYSOPER.

ORA-09276: All bequeath database links must be loopback database links
Cause: A non-loopback bequeath connect string was supplied for a database link.
Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance"s ORACLE_HOME>/bin/oracle)" and, optionally, "(ENVS=""ORACLE_SID=<this instance"s ORACLE_SID>"")".

ORA-09280: sllfcf: error closing file
Cause: File may be corrupted
Action: See OSD error accompanying this message

ORA-09281: sllfop: error opening file
Cause: Possibly incorrect path specified to the file
Action: See OSD error accompanying this message

ORA-09282: sllfrb: error reading records
Cause: File could be corrupted
Action: See OSD error accompanying this message

ORA-09283: sllfsk: error skipping records
Cause: File could be corrupted
Action: See OSD error accompanying this message

ORA-09284: sllfop: cannot allocate read buffer
Cause: malloc() system call returned an error. The system might have run out of heap space
Action: Check additional information for the OS error.

ORA-09285: sllfop: unrecognizable processing option, incorrect format
    Cause: Processing option passed is of incorrect format

    Action: Consult your IUG for permissible formats

ORA-09290: sksaalo: error allocating memory for archival
    Cause: Could be out of memory

    Action: See OSD error accompanying this message

ORA-09291: sksachk: invalid device specified for archive destination
    Cause: Unable to access directory

    Action: Specify a valid device in ARCHIVE control string

ORA-09292: sksabln: unable to build archive file name
    Cause: Bad directory or format specified

    Action: Specify a valid directory in "log_archive_format" and a valid format string in "log_archive_format" in init.ora

ORA-09293: sksasmo: unable to send message to console
    Cause: An error was returned while attempting to send a message to the console operator

    Action: See OSD error accompanying this message

ORA-09300: osncon: unable to connect, DPMI not available
    Cause: Unable to detect the presence of DPMI

    Action: Restart Windows and retry

ORA-09301: osncon: local kernel only supported in standard mode
    Cause: An attempt was made to connect to S: while in enhanced mode

    Action: Restart Windows in standard mode

ORA-09310: sclgt: error freeing latch
    Cause: Internal error

    Action: See OSD error accompanying this message

ORA-09311: slsleep: error temporarily suspending process
    Cause: May be out of resources

    Action: See OSD error accompanying this message

ORA-09312: slspool: error spooling file to printer
    Cause: Could be out of resources

    Action: See OSD error accompanying this message

ORA-09313: slsprom: error prompting user
    Cause: May be out of resources

    Action: See OSD error accompanying this message

ORA-09314: sltln: error translating logical name
    Cause: Internal buffer may have overflowed

    Action: See OSD error accompanying this message

ORA-09315: sql2tt: two-task error translating ORACLE_EXECUTABLE

Cause: Internal error

Action: See OSD error accompanying this message

ORA-09316: szrpc: unable to verify password for role
Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

ORA-09317: szprv: insufficient privileges
Cause: The password specified is invalid

Action: See OSD error accompanying this message

ORA-09318: slkhst: unable to host out to operating system
Cause: There might not be enough memory for the command or hosting out may
not be supported on this platform

Action: See OSD error accompanying this message

ORA-09319: slgtd: unable to obtain the current date and time
Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

ORA-09320: szrfc: unable to obtain the list of valid OS roles
Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09321: slzdtb: unable to convert zoned decimal to binary
Cause: internal error

Action: See OSD error accompanying this message

ORA-09322: slpdtb: unable to convert packed decimal to binary
Cause: internal error

Action: See OSD error accompanying this message

ORA-09330: Session terminated internally by Oracle or by an Oracle DBA
Cause: Oracle to terminate that session after about a minute. This message also
appears in the trace file if a shutdown abort is performed.

Action: None

ORA-09340: Specified ORACLE_SID is either invalid or too long
Cause: ORACLE_SID must be at the most 4 alphanumeric characters.

Action: None

ORA-09341: scumnt: unable to mount database
Cause: Another instance is currently mounting the database

Action: None

ORA-09342: Detached process terminated by Oracle during shutdown abort
Cause: The user performed a shutdown abort.

Action: None

ORA-09344: spsig: error signalling thread
Cause: This function may not be implemented.

Action: None

ORA-09350: Windows 32-bit Two-Task driver unable to allocate context area
    Cause: See OSD error accompanying this message
    Action: None

ORA-09351: Windows 32-bit Two-Task driver unable to allocate shared memory
    Cause: See OSD error accompanying this message
    Action: None

ORA-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task
    Cause: See OSD error accompanying this message
    Action: None

ORA-09353: Windows 32-bit Two-Task driver unable to open event semaphore
    Cause: See OSD error accompanying this message
    Action: None

ORA-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died
    Cause: See OSD error accompanying this message
    Action: None

ORA-09360: Windows 3.1 Two-Task driver unable to allocate context area
    Cause: See OSD error accompanying this message
    Action: None

ORA-09361: Windows 3.1 Two-Task driver unable to lock context area
    Cause: See OSD error accompanying this message
    Action: None

ORA-09362: Windows 3.1 Two-Task driver unable to deallocate context area
    Cause: See OSD error accompanying this message
    Action: None

ORA-09363: Windows 3.1 Two-Task driver invalid context area
    Cause: See OSD error accompanying this message
    Action: None

ORA-09364: Windows 3.1 Two-Task driver unable to create hidden window
    Cause: See OSD error accompanying this message
    Action: None

ORA-09365: Windows 3.1 Two-Task driver unable to destroy hidden window
    Cause: See OSD error accompanying this message
    Action: None

ORA-09366: Windows 3.1 Two-Task driver unable to allocate shared memory
    Cause: See OSD error accompanying this message
    Action: None

ORA-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory

Cause: See OSD error accompanying this message

Action: None

ORA-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE

Cause: See OSD error accompanying this message

Action: None

ORA-09369: Windows 3.1 Two-Task driver bad instance handle

Cause: See OSD error accompanying this message

Action: None

ORA-09370: Windows 3.1 Two-Task driver ORACLE task timed out

Cause: See OSD error accompanying this message

Action: None

ORA-09700: sclin: maximum number of latches exceeded

Cause: ORACLE wants to use more latches then available.

Action: increase INIT.ORA parameter latch_pages or decrease the amount of shared memory you are using.

ORA-09701: scnfy: maximum number of processes exceeded

Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

ORA-09702: sem_acquire: cannot acquire latch semaphore

Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09703: sem_release: cannot release latch semaphore

Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09704: sstascre: ftok error in creating test and set pages.

Cause: the ftok() library call failed in sstastcre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

ORA-09705: spcre: cannot initialize latch semaphore

Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09706: slsget: get_process_stats error.

Cause: get_process_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-09708: soacon: failed to bind socket to port.

Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09709: soacon: failed to accept a connection.
Cause: The accept system call failed on the socket.
Action: Check additional information for OS error. Try connecting again.

ORA-09710: soarcv: buffer overflow.
Cause: The internal buffer is not big enough to hold the message read.
Action: Internal error. Contact customer support representative.

ORA-09711: orasrv: archmon already connected.
Cause: An existing connection has already been made from archmon to orasrv.
Action: Stop trying to connect.

ORA-09712: orasrv: log archiver already connected.
Cause: An existing connection has already been made from log archiver to orasrv.
Action: Stop trying to connect.

ORA-09714: Two Task interface: cannot obtain puname
Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)
Action: Check if the PUs are named (consistend).

ORA-09715: orasrv: cannot obtain puname
Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)
Action: Check if the PUs are named (consistend).

ORA-09716: kslcll: Unable to fix in-flux lamport latch.
Cause: One Oracle process died while still holding a lamport latch.
Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

ORA-09717: osnsui: maximum number of user interrupt handlers exceeded.
Cause: The internal limit on the number of user interrupt handlers has been exceeded.
Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

ORA-09718: osnsui: cannot set up user interrupt handler.
Cause: Malloc() failed to allocate space to hold user interrupt handler.
Action: Possible memory resource shortage.

ORA-09719: osncui: invalid handle.
Cause: The handle passed to osncui is out of the valid range.
Action: Use a valid handle.

ORA-09740: slsget: cannot get virtual memory region statistics.
Cause: The vm_region system call failed to get virual memory region statistics.
Action: Check return code in sercerrno. Possible operating system failure.

ORA-09741: spwat: error waiting for a post.
Cause: Msg_receive system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09742: sppst: error during a post.

Cause: Msg_send system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09743: smscre: could not attach shared memory.

Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09744: smsget: mmap returned an error.

Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09745: smscre: vm_allocate error, unable to create shared memory.

Cause: Error in system call vm_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerrno. Verify that the SGA attach address is valid.

ORA-09746: smscre: shared memory attach address incorrect.

Cause: The vm_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

ORA-09747: pw_detachPorts: server call pws_detach failed.

Cause: The call pws_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09748: pws_look_up: fork failed

Cause: The pws_look_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09749: pws_look_up: port lookup failure

Cause: The pws_look_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by pws_look_up, and that the network name server is still running.

ORA-09750: pw_attachPorts: port_rename failed.

Cause: The port_rename system call failed; possible internal error.

Action: Check return code in sercerrno, report to Oracle customer support.

ORA-09751: pw_attachPorts: server call pws_attach failed.

Cause: The call pws_attach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09752: pw_attachPorts: port_allocate failed.

Cause: The port_allocate system call failed; possible resource exhaustion.

Action: Check return code in sercerrno, report to Oracle customer support.

ORA-09753: spwat: invalid process number.

    Cause: Function was passed an invalid oracle process id.

    Action: Internal error. Additional information indicates the invalid process id.

ORA-09754: sppst: invalid process number passed to sppst.

    Cause: Function was passed an invalid oracle process id.

    Action: Internal error. Contact Oracle support.

ORA-09755: osngpn: port allocation failure.

    Cause: The port_allocate system call failed.

    Action: Possible system resource shortage; check the error code in sercerrno.

ORA-09756: osnpns: no port in the name server.

    Cause: osnpns could not find the given named port in the name server.

    Action: Check the error code in sercerrno. Make sure the shadow process and network name server are still running.

ORA-09757: osnipn: port allocation failure.

    Cause: The port_allocate system call failed.

    Action: Possible system resource shortage; check the error code in sercerrno.

ORA-09758: osnipn: could not check port in name server.

    Cause: The netname_check_in call failed.

    Action: Check the error code in sercerrno. Make sure the network name server is running.

ORA-09759: osnsbt: bad message received.

    Cause: The msg_receive system call failed, or received a bad message.

    Action: Internal error. Report the error code returned in sercerrno.

ORA-09760: osnpui: cannot send break message

    Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

    Action: Contact your customer support representative.

ORA-09761: pw_destroyPorts: server call pws_stop_instance failed.

    Cause: The call pws_stop_instance to (Oracle helper) failed.

    Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09762: sNeXT_instanceName: translation error.

    Cause: A failure was detected while translating the value of ORACLE_SID.

    Action: Make sure ORACLE_SID is defined, and that it is of legal length.

ORA-09763: osnmpx: send/receive error exchanging Mach ports.

    Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg_send (sercose[0] == 1) or msg_receive (sercose[0] == 2) failed.

    Action: Check return code in sercerrno. Make sure both sides of the connection are still running.

ORA-09764: osnmop: access error on oracle executable

Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09765: osnmop: fork failed

Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09766: osnmop: buffer allocation failure.

Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer_size parameter in the Two-Task driver hoststring.

ORA-09767: osnmfs: bad return code from msg_send.

Cause: The msg_send system call failed while flushing the Mach driver"s send buffer.

Action: Internal error. Contact your customer support representative.

ORA-09768: osnmgetmsg: could not read a message

Cause: The msg_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

ORA-09769: osnmbr: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09770: pws_look_up: translation failure.

Cause: The pws_look_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE_SID and ORACLE_HOME are set and correct. Additional information gives the translation error code.

ORA-09771: osnmwrtbrkmsg: bad return code from msg_send.

Cause: The msg_send sytem call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

ORA-09772: osnpmetbrkmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09773: osnmgetdatmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09774: osnmui: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09775: osnmrs: reset protocol error

Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

ORA-09776: pws_look_up: access error on (Oracle helper) executable

Cause: The pws_look_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE_HOME/bin path.

ORA-09777: osnpbr: cannot send break message

Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09778: snynfyport: failure allocating the notify port.

Cause: The routine failed to allocate or set the task"s notify port.

Action: Possible operating system error. Contact Oracle support.

ORA-09779: snyGetPort: failure to allocate a port.

Cause: The port_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

ORA-09786: sllfop: open error, unable to open file.

Cause: Open system call returned an error.

Action: Check errno.

ORA-09787: sllfop: unrecognizable processing option, incorrect format.

Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

ORA-09788: sllfrb: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09789: sllfsk: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09790: sllfcf: unable to close file.

Cause: Close system call returned an error.

Action: Check errno.

ORA-09791: slembdf: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-09792: sllfop: cannot allocate read buffer.

Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

ORA-09793: szguns: length of user name is greater than buffer.

Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09794: szrbuild: length of role name is greater than buffer.

Cause: The length of the name of the role being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09795: szrbuild: malloc of role structure failed.

Cause: The allocation of memory for an internal structure used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09796: szrbuild: malloc of role name failed.

Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09797: Failed to get O/S MAC privileges.

Cause: The operating system would not allow the retrieval of this process" privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09798: Label comparison failed.

Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09799: File label retrieval failed.

Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09800: Process sensitivity label retrieval failed.

Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09801: Unable to get user ID from connection

Cause: ORACLE was unable to retrieve the user"s ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09802: Conversion of binary label to string failed.

Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09803: Allocation of string buffer failed.

Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09804: Class conversion from binary to ORACLE failed.

Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09805: conversion of category number to string failed.

Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

ORA-09806: Allocation of label string buffer failed.

Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09807: Conversion of label from string to binary failed.

Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

ORA-09808: Could not obtain user clearance.

Cause: ORACLE was unable to get a user"s clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09809: Unable to get user"s group ID from connection

Cause: ORACLE was unable to retrieve the user"s group ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09810: Unable to get process ID from connection

Cause: ORACLE was unable to retrieve the user"s process ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09811: Unable to initialize package.

Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09812: Unable to get user clearance from connection

Cause: ORACLE was unable to retrieve the user"s operating system session clearance from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09813: Unable to get directory status

Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09814: Unable to expand file name

Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09815: File name buffer overflow

Cause: The buffer that ORACLE uses to hold the expanded name of a too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09817: Write to audit file failed.

Cause: ORACLE was unable to write an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09818: Number is too large

Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

ORA-09819: Number exceeds maximum legal value

Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

ORA-09820: Conversion of class string to numeric representation failed.

Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

ORA-09821: Numeric label is not valid

Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system"s encodings for valid numeric component values.

ORA-09822: Translation of audit file name failed.

Cause: Oracle was unable to translate the value of the AUDIT_FILE_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09823: device name is too long

Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09824: Unable to enable allowmacaccess privilege.

Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of $ORACLE_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

ORA-09825: Unable to disable allowmacaccess privilege.

Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09826: SCLIN: cannot initialize atomic latch.

Cause: System call atomic_op() return error.

Action: Check additional information in the trace file.

ORA-09827: SCLGT: atomic latch return unknown error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09828: SCLFR: atomic latch return error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09829: pw_createPorts: server call pws_start_instance failed.

Cause: The call pws_start_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09830: snyAddPort: failed to perform a remote procedure call.

Cause: The msg_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09831: snyStartThread: failed to build the server port set.
    Cause: The routine failed to build a port set on which to listen for requests.
    Action: Possible operating system failure. Contact Oracle support.

ORA-09832: infoCallback: bad message format.
    Cause: The routine received an incorrectly formatted request.
    Action: Internal error. Contact Oracle support.

ORA-09833: addCallback: bad message format.
    Cause: The routine received an incorrectly formatted request.
    Action: Internal error. Contact Oracle support.

ORA-09834: snyGetPortSet: failed to collect info on a port.
    Cause: The port_status system called failed.
    Action: Possible operating system error. Contact Oracle support.

ORA-09835: addCallback: callback port is already in a set.
    Cause: The port to be added to the callback list is already in a port set.
    Action: Internal error. Contact Oracle support.

ORA-09836: addCallback: could not add a port to the callback set.
    Cause: The port_set_add system called failed.
    Action: Possible operating system error. Contact Oracle support.

ORA-09837: addCallback: could not add allocate a callback link.
    Cause: The malloc library call failed to allocate space for a callback link.
    Action: Possible operating system error. Contact Oracle support.

ORA-09838: removeCallback: failure removing the callback port.
    Cause: The port port_set_remove system call failed.
    Action: Possible operating system error. Contact Oracle support.

ORA-09839: removeCallback: callback port is not in the callback set.
    Cause: The port to be removed to the callback list is not in the callback port set.
    Action: Internal error. Contact Oracle support.

ORA-09840: soacon: Name translation failure.
    Cause: sltln() could not translate the named pipe ?/dbs/mon2arch_@.
    Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09841: soacon: Name translation failure.
    Cause: sltln() could not translate the named pipe ?/dbs/arch2mon_@.
    Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09842: soacon: Archmon unable to create named pipe.
    Cause: mknod() failed to create named pipe ?/dbs/mon2arch_@.

Action: Your current OS login may lack write permission for the ORACLE_ HOME/dbs directory. Only userids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09843: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/arch2mon_@.

Action: Your current OS login may lack write permission for the ORACLE_ HOME/dbs directory. Only userids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09844: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09845: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09846: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09847: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09850: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09851: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09853: snyRemovePort: bad return code from request.

Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09854: snyPortInfo: bad return code from request.

Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09855: removeCallback: bad message format.
    Cause: The routine received an incorrectly formatted request.
    Action: Internal error. Contact Oracle support.

ORA-09856: smpalo: vm_allocate error while allocating pga.
    Cause: The vm_allocate system call returned an error.
    Action: Check returned error. Possibly out of system resources.

ORA-09857: smprset: vm_protect error while protecting pga.
    Cause: The vm_protect system call returned an error.
    Action: Internal error. Contact Oracle support.

ORA-09858: sfngat: the input file name is not in the OMF format
    Cause: The function sfngat() received a filename which is not an OMF file name.
    Action: Further diagnostic information should be in the error stack.

ORA-09859: sfngat: the input file name is not in the autobackup OMF format
    Cause: The function sfngat() received a filename which is not an autobackup OMF file name.
    Action: Further diagnostic information should be in the error stack.

8

ORA-09870 to ORA-12100

ORA-09870: spini: failure initializing maximum number of open files.
    Cause: ulimit system call returned an error.
    Action: Check errno.

ORA-09871: TASDEF_NAME: translation error while expanding ?/dbs/tasdef@.dbf.
    Cause: Failure of sltln(?/tasdef@.dbf) while creating test and set pages.
    Action: Check additional return error for more information.

ORA-09872: TASDEF_CREATE: create failure in creating ?/dbs/tasdef@.dbf.
    Cause: Create() failed when trying to create the tasdef file.
    Action: Verify permissions on $(ORACLE_HOME)/dbs directory.

ORA-09873: TASDEF_OPEN: open error when opening tasdef@.dbf file.
    Cause: Unable to open tasdef@.dbf file.
    Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

ORA-09874: TASDEF_READ: read error, unable to read tasdef@.dbf file.
    Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.
    Action: Check errno returned. Sgadef file may be corrupted or incompatible with oracle version.

ORA-09875: TASDEF_WRITE: write error when writing ?/dbs/tasdef@.dbf file.
    Cause: Write call failed.
    Action: Check errno returned. Possibly out of space on device.

ORA-09876: TASDEF_CLOSE: unable to close ?/dbs/tasdef@.dbf file.
    Cause: Close system call returned an error.
    Action: Check errno returned. Possible operating system failure.

ORA-09877: sstascre: shmget error, unable to get a shared memory segment.
    Cause: Error in shmget.
    Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09878: sstascre/sstasat: shmat error, unable to attach tas write page
    Cause: Error in shmat.

Action: Check errno returned.Verify that enough shared memory is available on the system.

ORA-09879: sstascre/sstasat: shmat error, unable to attach tas read page

Cause: Error in shmat.

Action: Check errno returned.Verify that enough shared memory is available on the system.

ORA-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page

Cause: Error in shmctl.

Action: Check errno returned.

ORA-09883: Two Task interface: oratab file does not exist

Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

ORA-09884: Two Task interface: SID doens"t match current PU

Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

ORA-09885: osnTXtt: cannot create TXIPC channel

Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-09886: osnTXtt: translation error while expanding txipc@.trc.

Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

ORA-09888: osnTXtt: txipc channel creation failed

Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

ORA-09889: osnTXtt: access error on oracle executable

Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09890: osnTXtt: malloc failed

    Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

    Action: Contact your customer support representative.

ORA-09908: slkmnm: gethostname returned error code.

    Cause: The system call gethostname returned an error.

    Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

ORA-09909: Malloc of scratch buffer failed.

    Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

    Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09910: Unable to find ORACLE password file entry for user.

    Cause: No entry exists for the user in the ORACLE password file.

    Action: Have the database administrator install a password entry by running orapasswd.

ORA-09911: Incorrect user password.

    Cause: The password entered by the user was incorrect.

    Action: Enter the correct password.

ORA-09912: Malloc of name buffer(s) failed.

    Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

    Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09913: Malloc of dummy name failed.

    Cause: ORACLE was unable to allocate memory for the user name that is to to be used in the encryption of the user"s password.

    Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09914: Unable to open the ORACLE password file.

    Cause: ORACLE could not open the password file for reading.

    Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running orapasswd. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

ORA-09915: Password encryption failed.

    Cause: ORACLE was unable to encrypt a password.

    Action: This is an internal error - contact ORACLE customer support.

ORA-09916: Required password was not specified.

    Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

ORA-09918: Unable to get user privileges from SQL*Net

Cause: ORACLE was unable to retrieve the user"s privilege set from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09919: Unable to set label of dedicated server

Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

ORA-09920: Unable to get sensitivity label from connection

Cause: ORACLE was unable to retrieve the user"s sensitivity label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09921: Unable to get information label from connection

Cause: ORACLE was unable to retrieve the user"s information label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09922: Can"t spawn process - background log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background_dump_dest". Make sure that all of the following is true:

1. The directory exists.

2. The name indeed points to a directory, and is not a file.

3. The directory is accessible and writable to the ORACLE user.

ORA-09923: Can"t spawn process - user log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user_dump_dest". Make sure that all of the following is true:

1. The directory exists.

2. The name indeed points to a directory, and is not a file.

3. The directory is accessible and writable to the ORACLE user.

ORA-09924: Can"t spawn process - core dump directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core_dump_dest". Make sure that all of the following is true:

1. The directory exists.

2. The name indeed points to a directory, and is not a file.

3. The directory is accessible and writable to the ORACLE user.

ORA-09925: Unable to create audit trail file

Cause: ORACLE was not able to create the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09926: Unable to set effective privilege set of the server

Cause: A dedicated server was unable to set it"s own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacacess" privilege.

ORA-09927: Unable to set label of server

Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on $ORACLE_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

ORA-09928: Unable to restore the label of server

Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

ORA-09929: GLB of two labels is invalid

Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09930: LUB of two labels is invalid

Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09931: Unable to open ORACLE password file for reading

Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

ORA-09932: Close of ORACLE password file failed.

Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09933: Deletion of old password file failed.

Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09934: Link of current password file to old failed.

Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

ORA-09935: Unlink of current password file failed.

Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

ORA-09936: Open of ORACLE password file for write failed.

Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

ORA-09937: Chmod of ORACLE password file failed.

Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

ORA-09938: Save of signal handlers failed.

Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09939: Restoration of signal handlers failed.

Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09940: ORACLE password file header is corrupt

Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N.N EXECUTABLE VERSION: N.N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

ORA-09941: Version of orapasswd or installer is older than file.

Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

ORA-09942: Write of ORACLE password file header failed.

Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

ORA-09943: Allocation of memory for password list component failed.

Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

ORA-09944: Password entry is corrupt.

Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

ORA-09945: Unable to initialize the audit trail file

Cause: ORACLE unable to write header information to the file being used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09946: File name too long for buffer

Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

ORA-09947: Unable to allocate connection attributes structure

Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

ORA-09948: Process information label retrieval failed.

Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09949: Unable to get client operating system privileges

Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09950: Unable to get server operating system privileges

Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

ORA-09951: Unable to create file

Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09952: scgcmn: lk_open_convert unexpected return: open failed

Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09953: scggc: unexpected return of a lock convert

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09954: scgcc: unexpected return status to callback of lock close

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09955: scgcan: unexpected return status when canceling a lock

Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09956: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09957: Unable to send termination request to IMON

Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

ORA-09958: IMON: two processes with the same ORACLE pid are active

Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

ORA-09959: IMON: deletion of a process failed.

Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

ORA-09960: Unable to establish signal handler for termination signal

Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

ORA-09961: Unable to restore termination signal handler

Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

ORA-09966: falure in translation while expanding ?/dbs/lk for lock file

   Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

   Action: Check additional return errors for more information.

ORA-09967: unable to create or open lock file

   Cause: Oracle failed, when making an open system call, inorder to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

   Action: Check errno for more information.

ORA-09968: unable to lock file

   Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

   Action: Check errno for more information.

ORA-09969: unable to close or remove lock file

   Cause: The close system call or unlink system call returned an error.

   Action: Check errno for more information.

ORA-09974: skxfidini: Error Initializing SDI Channel

   Cause: The process was unable to initialize the SDI channel properly.

   Action: Correct the operating system error and retry the operation.

ORA-09975: kxfspini: Error Initializing SDI Process

   Cause: The process was unable to attach to the SDI channel.

   Action: Verify that the SDI process specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09976: skxfqdini: Error Creating Port

   Cause: The process was unable to create a communications endpoint.

   Action: Verify that the SDI port specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09977: skxfqhini: Error Connecting

   Cause: The process was unable to connect to another endpoint.

   Action: Verify that the SDI port specific limits correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

ORA-09978: skxfqhdel: Error Disconnecting from another endpoint.

   Cause: The process was unable to disconnect cleanly from another endpoint.

   Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09979: skxfqhsnd: Error Sending a message to another endpoint

   Cause: The process was unable to send a message to an existing endpoint.

   Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09980: skxfqdrcv: Error Receiving a message from another endpoint

Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09981: skxfqdreg: Error Adding a page to the SDI buffer pool

Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09982: skxfqddrg: Error Removing a page from the SDI buffer pool

Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09983: skxfidsht: Error shutting down SDI channel

Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

ORA-09984: SGA file $ORACLE_HOME/dbs/sgadef$ORACLE_SID.dbf does not exist

Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

ORA-09985: SGA definition file could not be read

Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

ORA-09986: wrong number of bytes read from SGA definition file

Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

ORA-09987: unable to attach to SGA in READ-ONLY mode

Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

ORA-09988: error while detaching SGA

Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

ORA-09989: attempt to use invalid skgmsdef struct pointer

Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

ORA-10243: simulated error for test *string* of K2GTAB latch cleanup

Cause: levels 1..6 for insert, 7..11 for delete

Action: None

ORA-10244: make tranids in error msgs print as 0.0.0 (for testing)

Cause: also makes "alter system enable distributed recovery" synchronous

Action: None

ORA-10259: get error message text from remote using explicit call

Cause: for npigem coverage testing (normally called only for V5 remote)

Action: None

ORA-10261: Limit the size of the PGA heap

Cause: the limit is one kilobyte times the level of the event. If the pga grows bigger than this signal an internal error.

Action: None

ORA-10262: Don"t check for memory leaks

Cause: Setting this event to level one causes memory leak checking to be disabled. Setting this event to any other non-zero number allows that number to be used as a threshold value when checking for memory leaks in the PGA, SGA, and UGA heaps.

Action: None

ORA-10263: Don"t free empty PGA heap extents

Cause: This is useful for debugging since watchpoints are lost on free

Action: None

ORA-10265: Keep random system generated output out of error messages

Cause: so test system files don"t diff

Action: None

ORA-10266: Trace OSD stack usage

Cause: Porters should implement this to help them debug their stack implementations. It should be used in at least smcstk().

Action: None

ORA-10267: Inhibit KSEDMP for testing

Cause: Some tests may generate internal or fatal errors on purpose.

Action: LEVEL used by KSEDMP is one less than level of this event.

ORA-10268: Don"t do forward coalesce when deleting extents

Cause: setting this event keeps kts from coalescing forward at each extent when dropping a temp segment.

Action: None

ORA-10269: Don"t do coalesces of free space in SMON

Cause: setting this event prevents SMON from doing free space coalesces

Action: None

ORA-10270: Debug shared cursors

Cause: Enables debugging code in shared cursor management modules

Action: None

ORA-10281: maximum time to wait for process creation

Cause: used to override the default SPMXWAIT, level = timeout in sec.

Action: None

ORA-10282: Inhibit signalling of other backgrounds when one dies

Cause: Used in KSB

Action: None

ORA-10284: simulate zero/infinite asynch I/O buffering

Cause: Used in KCF, level=1 out of space (red), level=2 infinite (green)

Action: None

ORA-10469: error creating control file backup, no checkpoint

Cause: The control file being backed up did not contain a valid control file checkpoint. Therefore the control file could not be backed up, as such a backup would not be usable later for recovery. A common cause for this situation is that you executed CREATE CONTROLFILE, which mounts the database, but not ALTER DATABASE OPEN, to open the database. The latter operation generates a valid control file checkpoint.

Action: Open the database with ALTER DATABASE OPEN ..., which results in a valid control file checkpoint. Run the backup operation again.

ORA-10560: block type "*string*"

Cause: Report block type for details of another error.

Action: See associated error message.

ORA-10561: block type "*string*", data object# *string*

Cause: Report block type and data object number for details of another error.

Action: See associated error message.

ORA-10562: Error occurred while applying redo to data block (file# *string*, block# *string*)

Cause: See other errors on error stack.

Action: Investigate why the error occurred and how important is the data block. Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

ORA-10563: Test recovery had to corrupt data block (file# *string*, block# *string*) in order to proceed

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

ORA-10564: tablespace *string*

Cause: Report tablespace name for details of another error.

Action: See associated error message.

ORA-10565: Another test recovery session is active

Cause: There can only be one test recovery session at any time. Another test recovery session is active.

Action: Wait till the other test recovery session completes.

ORA-10566: Test recovery has used all the memory it can use

Cause: Test recovery tests redo in memory. It can no longer proceed because it has consumed all the memory it can use.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

ORA-10567: Redo is inconsistent with data block (file# *string***, block#** *string***)**

Cause: There are two possible causes of this error: (1) A write issued by Oracle was lost by the underlying OS or storage system. (2) an Oracle internal error.

Action: Investigate why the error occurred and how important is the data block. Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

ORA-10568: Failed to allocate recovery state object: out of SGA memory

Cause: out of SGA memory

Action: Restart the instance. If problem persists, call Oracle support.

ORA-10570: Test recovery complete

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

ORA-10571: Test recovery canceled

Cause: User canceled test recovery.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

ORA-10572: Test recovery canceled due to errors

Cause: See other errors on the error stack.

Action: is needed. See other messages on error stack for a summary of the result of the test recovery so far.

ORA-10573: Test recovery tested redo from change *string* **to** *string*

Cause: This message show the range of test recovery have tested.

Action: No action is needed. See other messages on error stack.

ORA-10574: Test recovery did not corrupt any data block

Cause: This message summarizes test recovery result.

Action: No action is needed. See other messages on error stack.

ORA-10575: Give up restoring recovered datafiles to consistent state: out of memory

Cause: There were not enough memory to restore recovered datafiles to consistent state

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

ORA-10576: Give up restoring recovered datafiles to consistent state: some error occurred

Cause: See alert file or other errors on the stack for a cause of the problem.

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

ORA-10577: Can not invoke test recovery for managed standby database recovery

Cause: Test recovery option is used for managed standby database recovery.

Action: Either remove the test recovery option or invoke manual test standby database recovery.

ORA-10578: Can not allow corruption for managed standby database recovery

Cause: You used the allow corruption option for managed standby database recovery.

Action: Either remove the allow corruption option or invoke manual standby database recovery.

ORA-10579: Can not modify control file during test recovery

Cause: To proceed with recovery, test recovery needs to modify the control file. But test recovery is not allowed to modify control file.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10580: Can not modify datafile header during test recovery

Cause: To proceed with recovery, test recovery needs to modify a datafile header. But test recovery is not allowed to modify datafile headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10581: Can not modify redo log header during test recovery

Cause: To proceed with recovery, test recovery needs to modify a redo log header. But test recovery is not allowed to modify redo log headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10582: The control file is not a backup control file

Cause: User requested backup control file test recovery, but the control file is not a backup control file.

Action: Use a backup control file, or do not use USING BACKUP CONTROLFILE option.

ORA-10583: Can not recovery file *string* renamed as missing during test recovery

Cause: One of the files to be recovered is renamed as missing.

Action: Rename the file to the correct file or offline it.

ORA-10584: Can not invoke parallel recovery for test recovery

Cause: Both test recovery and parallel recovery are requested.

Action: Drop either one of the two recovery options.

ORA-10585: Test recovery can not apply redo that may modify control file

Cause: Test recovery has encountered a special redo that may modify control file.

Action: No action is needed. Test recovery has proceeded successfully as far as it could from its starting point.

ORA-10586: Test recovery had to corrupt 1 data block in order to proceed

Cause: This message summarizes test recovery result: Oracle may have to corrupt one block in order to apply the range of redo tested.

Action: See alert log for details of the problem.

ORA-10587: Invalid count for ALLOW n CORRUPTION option

Cause: The number specified in the ALLOW n CORRUPTION option is too big.

Action: Use a smaller number.

ORA-10588: Can only allow 1 corruption for normal media/standby recovery

Cause: The number specified in the ALLOW n CORRUPTION option is too big.

Action: change to allow zero or one corruption.

ORA-10589: Test recovery had to corrupt *string* data blocks in order to proceed

Cause: This message summarizes test recovery result: Oracle may have to corrupt a number of data blocks as specified in the message in order to apply the range of redo tested.

Action: See alert log for details of the problems.

ORA-10614: Operation not allowed on this segment

Cause: This procedure can be used only on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

ORA-10615: Invalid tablespace type for temporary tablespace

Cause: Tablespace with AUTO SEGMENT SPACE MANAGENEMT specified cannot be used as a temporary tablespace

Action: Recheck the tablespace name and re-issue the statement

ORA-10616: Operation not allowed on this tablespace

Cause: Cannot perform the operation on tablespace with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the tablespace name and re-issue the statement

ORA-10617: Cannot create rollback segment in dictionary managed tablespace

Cause: Rollback segments cannot be created in dictionary managed tablespaces when SYSTEM tablespace is locally managed

Action: Recheck the tablespace name and re-issue the statement

ORA-10618: Operation not allowed on this segment

Cause: This DBMS_SPACE operation is not permitted on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

ORA-10619: Avoid assertions when possible

Cause: A bug (or upgrade) hits unicode assertions (csid, csform, bfc)

Action: Event makes RDBMS skip assertions and patch up datastructures

ORA-10620: Operation not allowed on this segment

Cause: Cannot alter freelist storage parameter for segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and re-issue the statement

ORA-10627: Dump the content of the index leaf block

Cause: Generate a complete index tree dump, not just an overview during alter session set events immediate trace name treedump

Action: This event is recommended only for small table/index since it

ORA-10628: Turn on sanity check for kdiss index skip scan state
    Cause: Will do sanity checking on the kdiss state.
    Action: set this event only under the supervision of Oracle development

ORA-10630: Illegal syntax specified with SHRINK clause
    Cause: An illegal option was specified with the SHRINK clause
    Action: Verify the SQL Reference Manual and reissue the command

ORA-10631: SHRINK clause should not be specified for this object
    Cause: It is incorrect to issue shrink on the object
    Action: Verify the object name and type and reissue the command

ORA-10632: Invalid rowid
    Cause: Segment Highwatermark was overwritten due to shrink and space reused
    Action: Reissue this command.

ORA-10633: No space found in the segment
    Cause: Raised while trying to find space during segment shrink
    Action: This error should be trapped internally and treated. The user should not be able to see the error.

ORA-10634: Segment is already being shrunk
    Cause: Only one invocation of shrink can be in progress on a segment at any time
    Action: Reissue the command after the first shrink is over

ORA-10635: Invalid segment or tablespace type
    Cause: Cannot shrink the segment because it is not in auto segment space managed tablespace or it is not a data, index or lob segment.
    Action: Check the tablespace and segment type and reissue the statement

ORA-10636: ROW MOVEMENT is not enabled
    Cause: To shrink a data segment, row movement must be enabled.
    Action: Enable row movement and reissue this command.

ORA-10637: The segment does not exist
    Cause: Segment to be shrunk has been dropped
    Action: None

ORA-10638: Index status is invalid
    Cause: Cannot shrink an index which is being rebuilt or disabled is an unusable state.
    Action: None

ORA-10639: Dump library cache during kksfbc-reparse-infinite-loop error
    Cause: During this error a library cache dump is necessary , so enable librarycache dump if event is set.
    Action: Dump a library cache if this event is set when reparse error.

ORA-10640: Operation not permitted during SYSTEM tablespace migration
    Cause: SYSTEM tablespace is being migrated to locally managed format.

Action: Reissue this command once SYSTEM tablespace migration is over.

ORA-10641: Cannot find a rollback segment to bind to

Cause: SYSTEM tablespace migration requires rollback segment in locally managed tablespace.

Action: Drop rollback segments in dictionary managed tablespaces other than SYSTEM and create rollback segments in locally managed tablespace and retry migration.

ORA-10642: Found rollback segments in dictionary managed tablespaces

Cause: When SYSTEM tablespace is migrated found rollback segments in dictionary managed tablespaces.

Action: Drop the rollback segments in dictionary managed tablespaces and reissue the command

ORA-10643: Database should be mounted in restricted mode and Exclusive mode

Cause: When SYSTEM tablespace is being migrated database should be mounted in Exclusive mode and in Restricted mode.

Action: Reissue this command after mounting the database in right mode.

ORA-10644: SYSTEM tablespace cannot be default temporary tablespace

Cause: When SYSTEM tablespace is being migrated no user should have SYSTEM as the default temporary tablespace.

Action: Reissue this command after altering the default temporary tablespace setting for all users.

ORA-10645: Recursive Extension in SYSTEM tablespace during migration

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively. Must be caught and processed internally. Should not be thrown to the user.

Action: Report the error as a bug.

ORA-10646: Too many recursive extensions during SYSTEM tablespace migration

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively more than 1000 times.

Action: If SYSTEM tablespace is very large, then simply reissue the tablespace migration command.

ORA-10647: Tablespace other than SYSTEM, *string*, *string* not found in read only mode

Cause: When SYSTEM tablespace is being migrated, tablespaces other than the three should be ALTERed to read only.

Action: Alter the tablespace status to read only and retry migration.

ORA-10648: Tablespace SYSAUX is not offline

Cause: The SYSAUX tablespace was online while SYSTEM tablespace was being migrated.

Action: Alter the SYSAUX tablespace status to offline and retry migration.

ORA-10649: Turn off/trace lob index freelist coalesce

Cause: Will turn off or trace lob index freelist coalescing

Action: set this event only under the supervision of Oracle development

ORA-10651: incorrect file number block number specified

    Cause: The dba specified is not valid

    Action: Check if the dba specified belongs to the segment and is under the segment HWM and reissue the statement

ORA-10652: Object has on-commit materialized views

    Cause: It is illegal to issue shrink on an object with on-commit materialized views

    Action: None

ORA-10653: Table is in a cluster

    Cause: It is illegal to shrink a table belonging to a cluster

    Action: None

ORA-10654: Table is of type temporary or external

    Cause: It is illegal to shrink a temporary table or an external table

    Action: None

ORA-10655: Segment can be shrunk

    Cause: Error message returned when called in probe mode by OEM

    Action: None

ORA-10656: Table is in unusable state due to incomplete operation

    Cause: ALTER TABLE SHRINK operation was tried on the table which is in unusable state because of previously failed/incomplete operation.

    Action: If the previous operation was

    - DROP COLUMN, resubmit DROP COLUMN CONTINUE

    - DROP TABLE, resubmit DROP TABLE <table> PURGE

ORA-10657: Lob column to be shrunk does not exist

    Cause: Shrink was issued on a lob segment that did not exist

    Action: None

ORA-10658: Lob column to be shrunk is marked unused

    Cause: Shrink was issued on a lob segment that is marked as unused

    Action: None

ORA-10659: Segment being shrunk is not a lob

    Cause: Shrink was issued on a segment that should be a first class lob or other data type stored in lob

    Action: None

ORA-10660: Segment is a shared lob segment

    Cause: Shrink was issued on a segment that was being shared by multiple lob columns

    Action: None

ORA-10661: Invalid option specified

    Cause: Check option can be specified for one segment only

    Action: None

ORA-10662: Segment has long columns

Cause: Shrink was issued on a segment with long columns. This is not supported.

Action: None

ORA-10663: Object has rowid based materialized views

Cause: Shrink was issued on an object with rowid based materialized views.

Action: Drop the rowid based materialized views and issue shrink on the object

ORA-10664: Table has bitmap join indexes

Cause: SHRINK was issued on a table with bitmap join indexes.

Action: Drop bitmap join indexes and reissue SHRINK on the object.

ORA-10665: Inject Evil Literals

Cause: Event 10665 is set to some number > 0, causing 1/(value-1) of all literals to be replaced by 2000 letter "A"s. A value of 1 does not corrupt anything.

Action: never set this event

ORA-10668: Inject Evil Identifiers

Cause: event 10668 is set to some number > 0, causing 1/(value-1) of all identifiers to be replaced by a maximum amount of x"s. It is common for an identifier to be parsed once with a max of 30 bytes, then reparsed later with a max of 4000, so it may not be possible to inject such an identifier without the aid of this event. A value of 1 causes no identifiers to be corrupted.

Action: never set this event

ORA-10690: Set shadow process core file dump type (Unix only)

Cause: Control core file size for shadow processes

Action: Level 1: Detach SGA before dumping core Level 2: Do not produce any core

ORA-10691: Set background process core file type (Unix only)

Cause: Control core file size file for background processes

Action: Level 1: Detach SGA before dumping core

ORA-10700: Alter access violation exception handler

Cause: Use this event to control what the VMS exception handler does when it encounters an access violation.

Action: Level: >=10 Suspend current process on access violation *** SET THIS EVENT ONLY UNDER THE SUPERVISION OF ORACLE DEVELOPMENT ***

ORA-10701: Dump direct loader index keys

Cause: Dumps index keys at various points in a direct load based on the value of this event.

Action: None

ORA-10704: Print out information about what enqueues are being obtained

Cause: When enabled, prints out arguments to calls to ksqcmi and ksqlrl and the return values.

Action: Level indicates details: Level: 1-4: print out basic info for ksqlrl, ksqcmi 5-9: also print out stuff in callbacks: ksqlac, ksqlop 10+: also print out time for each line

ORA-10706: Print out information about global enqueue manipulation

Cause: When enabled, prints out activity in ksi routines.

Action: Level indicates details: 0-4: show args for each main call 5-9: also indicate callbacks 10+: also printout time for each line

ORA-10707: Simulate process death for instance registration

Cause: When enabled, process commits suicide to test instance registration recovery code.

Action: Level indicates where the process will die

ORA-10828: memory allocator error

Cause: Error in the memory allocator

Action: Check the trace files and other relevant output

ORA-10841: Default un-inintialized charact set form to SQLCS_IMPLICIT

Cause: client side, such as JDBC-THIN 8i client sends 0 as charset form

Action: This event sets charset form as SQLCS_IMPLICIT when it is 0

ORA-10842: Event for OCI Tracing and Statistics Info

Cause: This event is meant for tracing OCI Calls and getting statistics

Action: This event sets tracing OCI Calls and gets statistics info

ORA-10848: OCI Non Blocking not supported with *string*

Cause: Attempt made to set connection as non-blocking with another feature that does not support non-blocking.

Action: Use blocking connection.

ORA-10852: Enable tracing for Enqueue Dequeue Operations

Cause: NA

Action: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED. IT IS USED ONLY FOR INTERNAL TESTING.

ORA-10854: Sets poll count used for AQ listen code under RAC

Cause: NA

Action: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED. IT IS USED ONLY FOR INTERNAL TESTING.

ORA-10862: resolve default queue owner to current user in enqueue/dequeue

Cause: resolve default queue owner to current user in enqueue/dequeue.

Action: turn on if client wish to resolve the default queue owner to the current user. If not turned on, the default queue owner will be resolved to the login user.

ORA-10863: Control behavior of buffered background operations

Cause: NA

Action: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED. IT IS USED ONLY FOR INTERNAL TESTING.

ORA-10865: Control tracing of notification operations

Cause: NA

Action: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED. IT IS USED ONLY FOR INTERNAL TESTING.

ORA-10873: file *string* needs end backup before opening a database

Cause: An attempt was made to open a database after a crash in an online backup. The indicated file is in need of end backup, not media recovery, if not restored.

Action: First end backup to the file and then open the database.

ORA-10877: error signaled in parallel recovery slave *string*

Cause: A parallel recovery slave reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-10878: parallel recovery slave died unexpectedly

Cause: A parallel recovery slave died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-10900: extent manager fault insertion event #*string*

Cause: causes faults to be generated in instrumented extent code

Action: this should only be enabled for internal testing

ORA-10902: disable seghdr conversion for ro operation

Cause: causes seghdr conversion to be turned off for ro ops(#555856)

Action: this should be enabled only if determined that bug 555856 has occured. Table needs to be exported subsequently

ORA-10906: Unable to extend segment after insert direct load

Cause: This is a restriction with insert direct load transactions.

Action: When a segment has been insert direct loaded, avoid DMLs that could cause more space to be consumed.

ORA-10914: invalid TABLESPACE GROUP clause

Cause: An invalid option appears for TABLESPACE GROUP clause.

Action: Specify a valid tablespace group name.

ORA-10915: TABLESPACE GROUP cannot be specified for this type of tablespace

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP clause was used while creating/altering a tablespace that is not TEMPORARY.

Action: Remove the TABLESPACE GROUP clause.

ORA-10916: TABLESPACE GROUP already specified

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP option was specified more than once.

Action: Remove all but one of the TABLESPACE GROUP specifications.

ORA-10917: TABLESPACE GROUP cannot be specified

Cause: The tablespace name specified in the command is actually the name of a tablespace group.

Action: Please specify an appropriate tablespace name.

ORA-10918: TABLESPACE GROUP name cannot be the same as tablespace name

Cause: The tablespace group name specified in the command is the same as the tablespace being CREATEd/ALTERed.

Action: Please specify an appropriate tablespace group name.

ORA-10919: Default temporary tablespace group must have at least one tablespace

Cause: An attempt was made to move the only tablespace in the default database temporary tablespace group to another tablespace group.

Action: Either change the database default temporary tablespace or add another tablespace to the group that this tablespace belongs to.

ORA-10920: Cannot offline tablespace belonging to default temporary tablespace group

Cause: An attempt was made to offline a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

ORA-10921: Cannot drop tablespace belonging to default temporary tablespace group

Cause: An attempt was made to drop a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

ORA-10922: Temporary tablespace group is empty

Cause: An attempt was made to allocate a temporary segment in a group, which now no longer has any members.

Action: Either add some temporary tablespaces or change the temporary tablespace for this user.

ORA-10924: import storage parse error ignore event

Cause: causes server to ignore specific error associated with freelists and freelist groups when parsing

Action: this should be enabled by import code only

ORA-10925: trace name context forever

Cause: When enabled, turns off bugfix 237911

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10926: trace name context forever

Cause: When enabled, turns off bugfix 190119

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10927: trace name context forever

Cause: When enabled, turns off bugfix 235190

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10929: trace name context forever

Cause: When enabled, turns off bugfix 343966

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10930: trace name context forever

Cause: When enabled, provides V7 behavior for fixed char binds

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10931: trace name context forever

Cause: When enabled, allows normal packages to be compiled with standard extensions like "<ADT_1>"

Action: Set this event only for a short amount of time. Once the packages are compiled, this event should be turned off. Level 1 - Turn the event on Level > 1 - Turn the event off

ORA-10932: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10933: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10936: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available in versions 7.x and 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10940: trace name context forever

Cause: Size of the PL/SQL tracing circular buffer, in kilobytes.

Action: Set this event in concert with the 10938 event and the _PLSQL_DUMP_ BUFFER_EVENTS init.ora parameter, under supervision of Oracle Support.

ORA-10941: trace name context forever

Cause: When enabled, turns on PL/SQL profiler

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10943: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10944: trace name context forever

Cause: When enabled, allows or controls PL/SQL OPT code gen project. available only in version 8.2+.

Action: set this event ONLY for development of the OPT project. This is not for general use or deployment.

ORA-10945: trace name context forever

Cause: When enabled, disables the behaviour change introduced by the fix for bug 822764, which traps and handles invalidations of packages whereas the previous behaviour was to use stale invalidated instantiations of the stateful package body.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10946: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10947: trace name context forever

Cause: When enabled, causes various PL/SQL warnings related debugging info to be written in a trace file. Useful for debugging varous Oracle processes. available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10970: backout event for bug 2133357

Cause: 2133357 dynamically sets the varying width flag and character width. Lob data which is not migrated during migration from single byte to multibyte charater set will be displayed as special characters.

Action: To help migrate lob data which was not migrated during migration by backing out 2133357, so lob data can be selected and moved to multibyte character set.

ORA-10973: backout evet for 2619509

Cause: 2619509 catches offsets when not reading/writing on full character boundary. To facilitate backward compatiblity event is being introduced.

Action: To help upgrade/migrate issues which already have corrupt data

ORA-10979: trace flags for join index implementation

Cause: This is an informational message.

Action: Values are as follows: LEVEL ACTION
--- > 1 Dump refresh expressions (SQL) to trace file. > 999 If a complete refresh is invoked, it will not be performed but the system will assume that a complete refresh was done, causing the view to be VALID and updating timestamps. This should be used only under Oracle Support supervision.

ORA-10997: another startup/shutdown operation of this instance inprogress

Cause: An Oracle Instance startup or shutdown operation failed to procure the serialization primitive. Another foreground process may have attempted startup or shutdown operation in parallel.

Action: Check additional error messages in the alert log and the process trace file.

ORA-12001: cannot create log: table "*string*" already has a trigger

   Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

   Action: To create a materialized view log, drop the current trigger on the master.

ORA-12002: there is no materialized view log on table "*string*"."*string*"

   Cause: There was no materialized view log on the master table.

   Action: Create a materialized view log on the master table.

ORA-12003: materialized view "*string*"."*string*" does not exist

   Cause: The materialized view with the given owner and name does not exist.

   Action: Verify inputs and create a materialized view.

ORA-12004: REFRESH FAST cannot be used for materialized view "*string*"."*string*"

   Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

   Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12005: may not schedule automatic refresh for times in the past

   Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

   Action: Choose a time in the future instead.

ORA-12007: materialized view reuse parameters are inconsistent

   Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

   Action: Examine the other messages on the stack to find the problem.

ORA-12008: error in materialized view refresh path

   Cause: Table SNAP$_<mview_name> reads rows from the view MVIEW$_<mview_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master_owner>.MLOG$_<master> is also referenced.

   Action: Examine the other messages on the stack to find the problem. See if the objects SNAP$_<mview_name>, MVIEW$_<mview_name>, <mowner>.<master>@<dblink>, <mowner>.MLOG$_<master>@<dblink> still exist.

ORA-12010: cannot create materialized view log on table owned by SYS

   Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

   Action: Do not create a materialized view log on SYS tables.

ORA-12011: execution of *string* jobs failed

   Cause: An error was caught in dbms_ijob.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

ORA-12012: error on auto execute of job *string*

Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

ORA-12013: updatable materialized views must be simple enough to do fast refresh

Cause: The updatable materialized view query contained a join, subquery, union, connect by, order by, or group by caluse.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them.

ORA-12014: table "*string***" does not contain a primary key constraint**

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

ORA-12015: cannot create a fast refresh materialized view from a complex query

Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

ORA-12016: materialized view does not include all primary key columns

Cause: The query that instantiates the materialized view did not include all of the columns in the master"s primary key constraint.

Action: Include all of the master"s primary key columns in the materialized view query or create a ROWID materialized view.

ORA-12017: cannot alter primary key mview "*string***" to a rowid mview**

Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

ORA-12018: following error encountered during code generation for "*string***"."***string***"**

Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

ORA-12019: master table is a synonym to a remote object

Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

ORA-12020: materialized view *string* **is not registered**

Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

ORA-12021: materialized view "*string*"."*string*" is corrupt

Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

ORA-12022: materialized view log on "*string*"."*string*" already has rowid

Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

ORA-12023: missing index on materialized view "*string*"."*string*"

Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

ORA-12024: materialized view log on "*string*"."*string*" does not have primary key columns

Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

ORA-12025: materialized view log on "*string*"."*string*" already has primary keys

Cause: Materialized view log on the indicated table already has primary key columns.

Action: No action required.

ORA-12026: invalid filter column detected

Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.

Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

ORA-12027: duplicate filter column

Cause: One or more of the specified filter columns were already being recorded in the materialized view log.

Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

ORA-12028: materialized view type is not supported by master site *string*

Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.

Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

ORA-12029: LOB columns may not be used as filter columns

Cause: An attempt was made to use LOB columns as filter columns.

Action: Remove LOB columns from the filter columns list and retry command.

ORA-12030: cannot create a fast refresh materialized view

Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.

Action: Ensure that the materialized view log exists and logs the necessary information.

- For ROWID materialized views, the master table"s ROWID must be logged.

- For primary key materialized views, the master table"s primary key columns must be logged.

- For subquery materialized views, the filter columns, primary key, and ROWID values must be logged.

- For object materialized views, object id must be logged.

ORA-12031: cannot use primary key columns from materialized view log on "*string*"."*string*"

Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

ORA-12032: cannot use rowid column from materialized view log on "*string*"."*string*"

Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

ORA-12033: cannot use filter columns from materialized view log on "*string*"."*string*"

Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

ORA-12034: materialized view log on "*string*"."*string*" younger than last refresh

Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

ORA-12035: could not use materialized view log on "*string*"."*string*"

Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12036: updatable materialized view log is not empty, refresh materialized view

Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

ORA-12037: unknown export format

Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

ORA-12039: unable to use local rollback segment "*string*"

Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can"t be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

ORA-12040: master rollback segment option not support by master site *string*

Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

ORA-12041: cannot record ROWIDs for index-organized table "*string*"."*string*"

Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

ORA-12042: cannot alter job_queue_processes in single process mode

Cause: An attempt was made to alter job_queue_processes in single process mode.

Action: Do not attempt to set job_queue_processes in single process mode.

ORA-12043: invalid CREATE MATERIALIZED VIEW option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12044: invalid CREATE MATERIALIZED VIEW LOG option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12045: invalid ALTER MATERIALIZED VIEW LOG option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12046: cannot use trusted constraints for refreshing remote MV

Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

ORA-12047: PCT FAST REFRESH cannot be used for materialized view "*string*"."*string*"

Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinstantiate the entire table and try to pick the best refresh method on the materialized view Do explain_mview to look at the cause why PCT refresh is not possible on this materialized view

ORA-12048: error encountered while refreshing materialized view "*string*"."*string*"

Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

ORA-12051: ON COMMIT attribute is incompatible with other options

Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

ORA-12052: cannot fast refresh materialized view *string.string*

Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

ORA-12053: this is not a valid nested materialized view

Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

ORA-12054: cannot set the ON COMMIT refresh attribute for the materialized view

Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

ORA-12055: materialized view definition contains cyclic dependencies with existing materialized views

Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

ORA-12056: invalid REFRESH method

Cause: The NEVER REFRESH option may not be used under the following conditions:

* The materialized view is updatable

* The materialized view refreshes ON COMMIT

* Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

ORA-12057: materialized view "*string*"."*string*" is INVALID and must complete refresh

Cause: The status of the materialized view was INVALID and an attempt was made to fast refresh the materialized view.

Action: Perform a complete refresh of the materialized view. Check the value of the STATUS column in dba_mviews, all_mviews, or user_mviews to verify that the materialized view is VALID after the complete refresh.

ORA-12058: materialized view cannot use prebuilt table

Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

ORA-12059: prebuilt table "*string*"."*string*" does not exist

Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

ORA-12060: shape of prebuilt table does not match definition query

Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

ORA-12061: invalid ALTER MATERIALIZED VIEW option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12062: transaction *string* received out of sequence from site *string*

Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

ORA-12063: unable to apply transaction from site *string*

Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12064: invalid refresh sequence number: *string*
>   **Cause:** The client site was attempting to perform a refresh with an invalid refresh sequence.
>
>   **Action:** Perform a complete refresh to synchronize the refresh sequence number.

ORA-12065: unknown refresh group identifier *string*
>   **Cause:** The specified refresh group did not exist at the master site.
>
>   **Action:** Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12066: invalid CREATE MATERIALIZED VIEW command
>   **Cause:** The Replication API does not support the following options and types of materialized view:
>
>   o ROWID materialized views
>
>   o REFRESH ON COMMIT
>
>   o ON PREBUILT TABLE
>
>   o BUILD DEFERRED
>
>   o NEVER REFRESH
>
>   o ENABLE QUERY REWRITE
>
>   **Action:** Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

ORA-12067: empty refresh groups are not allowed
>   **Cause:** The refresh group being instantiated did not contain any materialized views.
>
>   **Action:** Modify the template to include at least one materialized view.

ORA-12068: updatable mview log for mview "*string*"."*string*" does not exist
>   **Cause:** The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.
>
>   **Action:** Create the updatable materialized view log.

ORA-12069: invalid object for offline instantiation
>   **Cause:** Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.
>
>   **Action:** Remove the object from the template or replace the object with a valid materialized view.

ORA-12070: cannot offline instantiate materialized view "*string*"."*string*"
>   **Cause:** Offline instantiation does not support materialized views using the following options:
>
>   o ON PREBUILT TABLE
>
>   o BUILD DEFERRED
>
>   **Action:** Remove the invalid options.

ORA-12071: definition query of "*string*"."*string*" is invalid for offline instantiation
>   **Cause:** Offline instantiation requires materialized view definition queries to observe the following constraints:

o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query.

o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

ORA-12072: updatable materialized view log data for "*string*"."*string*" cannot be created
Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.
Action: Create an updatable materialized view log.

ORA-12073: request cannot be processed
Cause: An out-of-sequence request was made and it cannot be processed.
Action: Try again with a valid request.

ORA-12074: invalid memory address
Cause: An attempt was made to access an invalid memory region.
Action: Reconnect and try the command again.

ORA-12075: invalid object or field
Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.
Action: Retry the request.

ORA-12076: invalid threshold value
Cause: The result set threshold or LOB threshold value is not supported.
Action: Specify a threshold value below 64K.

ORA-12077: temporary updatable materialized view log does not exist
Cause: Temporary updatable materialized view log was not created or was dropped.
Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

ORA-12078: fast refresh of refresh group ID *string* failed
Cause: Refresh result set sent through client method REFRESH_REQ_RESULT returned an unknown value.
Action: Re-issue the refresh request.

ORA-12081: update operation not allowed on table "*string*"."*string*"
Cause: An attempt was made to update a read-only materialized view.
Action: No action required. Only Oracle is allowed to update a read-only materialized view.

ORA-12082: "*string*"."*string*" cannot be index organized
Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.
Action: Try to create the materialized view without the index organization clause.

ORA-12083: must use DROP MATERIALIZED VIEW to drop "*string*"."*string*"

Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

ORA-12084: must use ALTER MATERIALIZED VIEW to alter "*string*"."*string*"

Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

ORA-12085: materialized view log on "*string*"."*string*" already has object id

Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

ORA-12086: table "*string*"."*string*" is not an object table

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

ORA-12087: online redefinition not allowed on tables owned by "*string*"

Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

ORA-12088: cannot online redefine table "*string*"."*string*" with unsupported datatype

Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

ORA-12089: cannot online redefine table "*string*"."*string*" with no primary key

Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

ORA-12090: cannot online redefine table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

ORA-12091: cannot online redefine table "*string*"."*string*" with materialized views

Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

ORA-12092: cannot online redefine replicated table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

ORA-12093: invalid interim table "*string*"."*string*"

Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

ORA-12094: error during online redefinition

Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

ORA-12096: error in materialized view log on "*string*"."*string*"

Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

ORA-12097: changes in the master tables during refresh, try refresh again

Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

ORA-12098: cannot comment on the materialized view

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

ORA-12100: materialized view log on "*string*"."*string*" already has sequence

Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.
```
//////////////////////////////////////////////////////
/////////////
//////////////////////////////////////////////////////
/////////////
```

9

ORA-12150 to ORA-12236

ORA-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

ORA-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action:

- If you are using local naming (TNSNAMES.ORA file):

- Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA)

- Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible.

- Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file.

- Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable.

- If you are using directory naming:

- Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_ PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Verify that the LDAP directory server is up and that it is accessible.

- Verify that the net service name or database name used as the connect identifier is configured in the directory.

- Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier

- If you are using easy connect naming:

- Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Make sure the host, port and service name specified are correct.

- Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

ORA-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

ORA-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming.

ORA-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name"s connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

ORA-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn"t exist in $ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in $ORACLE_HOME/network/admin or turn off tracing in your ORA file.

ORA-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn"t allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

ORA-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

ORA-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

ORA-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

ORA-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval.

This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

ORA-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action:

- If you are using local naming (TNSNAMES.ORA file):

- Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA)

- Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible.

- Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file.

- Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable.

- If you are using directory naming:

- Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_ PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Verify that the LDAP directory server is up and that it is accessible.

- Verify that the net service name or database name used as the connect identifier is configured in the directory.

- Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier

- If you are using easy connect naming:

- Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Make sure the host, port and service name specified are correct.

- Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

ORA-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

ORA-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

ORA-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

ORA-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

ORA-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

ORA-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

ORA-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

ORA-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application`s machine, and verify that it lists the correct communities.

ORA-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

ORA-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

ORA-12211: TNS:needs PREFERRED_CMANAGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANAGERS defined.

Action: Add a PREFERRED_CMANAGERS entry to the TNSNAV.ORA file.

ORA-12212: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANAGERS binding in the client''s TNSNAV.ORA file does not have a CMANAGER_NAME specified.

Action: Define the CMANAGER_NAME as part of the PREFERRED_CMANAGERS binding. Use of the Oracle Network Manager should eliminate this error.

ORA-12213: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANAGERS binding in the client''s TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

ORA-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

ORA-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

ORA-12216: TNS:poorly formed PREFERRED_CMANAGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANAGERS entry in the client"s TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

ORA-12217: TNS:could not contact PREFERRED_CMANAGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANAGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANAGERS entries in the client"s TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

ORA-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_ CMANAGERS entry may have an incorrect CMANAGER_NAME in the client"s TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_ INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

ORA-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSes in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSes have a COMMUNITY component or all do not.

ORA-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator"s Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

ORA-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net

service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

ORA-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

ORA-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

ORA-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

ORA-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

ORA-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

10

ORA-12315 to ORA-12354

ORA-12315: database link type is invalid for the ALTER DATABASE statement

Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

ORA-12316: syntax error in database link"s connect string

Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

ORA-12317: logon to database (link name *string*) denied

Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

ORA-12318: database (link name *string*) is already mounted

Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: to mount it. To establish access, use the ALTER DATABASE <linkname> OPEN command to open the database.

ORA-12319: database (link name *string*) is already open

Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

ORA-12321: database (link name *string*) is not open and AUTO_ MOUNTING=FALSE

Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE <linkname> with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO_MOUNTING parameter in the parameter file to TRUE.

ORA-12322: unable to mount database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12323: unable to open database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12324: cannot use the ROM: link type on a private database link

Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

ORA-12326: database *string* is closing immediately; no operations are permitted

Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database adminstrator.

ORA-12329: database *string* is closed; no operations are permitted

Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

ORA-12333: database (link name *string*) is not mounted

Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE <linkname> MOUNT command, then re-attempt to open the database.

ORA-12334: database (link name *string*) is still open

Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE <linkname> CLOSE command, then re-attempt to dismount the database.

ORA-12335: database (link name *string*) is not open

Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

ORA-12336: cannot login to database (link name *string*)

Cause: You are tyring to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

ORA-12341: maximum number of open mounts exceeded

Cause: The number specified on the OPEN_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

ORA-12342: open mounts exceeds limit set on the OPEN_MOUNTS parameter

Cause: The number of currently open mounts exceeds the value you specified on the OPEN_MOUNTS parameter.

Action: Increase the value of the OPEN_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

ORA-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)

Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

ORA-12350: database link being dropped is still mounted

Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

ORA-12351: cannot create view using a remote object which has a remote object reference

Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

ORA-12352: object *string.string@string* **is invalid**

Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

ORA-12353: secondary stored object cannot reference remote object

Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

ORA-12354: secondary object being dropped

Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

11

ORA-12400 to ORA-12497

ORA-12400: invalid argument to facility error handling

Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product/facility.

Action: Specify a valid facility error handling parameter value.

ORA-12401: invalid label string: *string*

Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the syntax of the label string.

ORA-12402: invalid format string: *string*

Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

ORA-12403: invalid internal label

Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

ORA-12404: invalid privilege string: *string*

Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

ORA-12405: invalid label list

Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

ORA-12406: unauthorized SQL statement for policy *string*

Cause: The policy did not authorize the database session to perform the requested SQL statement.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12407: unauthorized operation for policy *string*

Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12408: unsupported operation: *string*

Cause: The specified policy does not support the requested operation.

Action: Consult the policy documentation to determine the supported access mediation operations.

ORA-12409: policy startup failure for *string* **policy**

Cause: The policy encountered an error during startup processing; access to the data protected by the policy is prohibited.

Action: Check the alert log for additional information, correct the policy error, and restart the instance.

ORA-12410: internal policy error for policy: *string* **Error:** *string*

Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

ORA-12411: invalid label value

Cause: The specified label value does not exist.

Action: Check the data dictionary views for the policy to identify valid labels.

ORA-12412: policy package *string* **is not installed**

Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

ORA-12413: labels do not belong to the same policy

Cause: The labels being compared belong to different policies.

Action: Only compare labels that belong to the same policy.

ORA-12414: internal LBAC error: *string* **Error:** *string*

Cause: An internal label policy framework error occurred.

Action: Contact Oracle Customer Support.

ORA-12415: A column of another datatype exists on the specified table

Cause: The datatype of the column present in the table is different from the datatype set for the policy column.

Action: Drop the column on the table or change the datatype for policy column.

ORA-12416: policy *string* **not found**

Cause: The specified policy does not exist in the database.

Action: Enter the correct policy name or create the policy.

ORA-12417: database object "*string***" not found**

Cause: The specified object was not in the database.

Action: Enter the correct name for the database object.

ORA-12418: user *string* **not found**

Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

ORA-12419: null binary label value

Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

ORA-12420: required procedures and functions not in policy package "*string*"

    Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

    Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

ORA-12421: different size binary labels

    Cause: The label sizes for the binary label operation were not equal.

    Action: Provide binary labels with the same lengths for the operation.

ORA-12422: max policies exceeded

    Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

    Action: Increase the size of the MAX_LABEL_POLICIES initialization parameter and restart the server.

ORA-12423: invalid position specified

    Cause: The position specified for a binary label operation was invalid.

    Action: Provide a position that is within the label size limits.

ORA-12424: length exceeds binary label size

    Cause: The length specified for a binary label operation exceeded the the size of the binary label.

    Action: Provide a bit or byte length that is within the label size limits.

ORA-12425: cannot apply policies or set authorizations for system schemas

    Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

    Action: Apply policies and set authorizations only for non-system users.

ORA-12426: invalid audit option

    Cause: The option specified was not a valid audit option for the specified policy.

    Action: Enter a correct audit option.

ORA-12427: invalid input value for *string* parameter

    Cause: An input parameter was specified incorrectly.

    Action: Correct the parameter value.

ORA-12429: label list range exceeded

    Cause: The specified index value was not between 1 and 6.

    Action: Correct the index value for the label list operation.

ORA-12430: invalid privilege number

    Cause: The specified privilege number was not between 1 and 32.

    Action: Correct the privilege number.

ORA-12431: invalid audit action

    Cause: The specified audit action was not a valid audit action.

    Action: Correct the audit action number.

ORA-12432: LBAC error: *string*

Cause: LBAC enforcement resulted in an error.

Action: Correct the problem identified in the error message.

ORA-12433: create trigger failed, policy not applied

Cause: The policy could not be applied due to errors during the creation of a DML trigger.

Action: Correct the SQL syntax of the label function specification.

ORA-12434: invalid audit type: *string*

Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

ORA-12435: invalid audit success: *string*

Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

ORA-12436: no policy options specified

Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

ORA-12437: invalid policy option: *string*

Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

ORA-12438: repeated policy option: *string*

Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

ORA-12439: invalid combination of policy options

Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

ORA-12440: insufficient authorization for the SYSDBA package

Cause: The use of the SYSDBA package requires the LBAC_DBA role.

Action: Grant the LBAC_DBA role to the database user.

ORA-12441: policy *string* **already exists**

Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

ORA-12442: policy column "*string***" already used by an existing policy**

Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

ORA-12443: policy not applied to some tables in schema

Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

ORA-12444: policy already applied to table

    Cause: You tried to apply a policy to a table that was already protected by the policy.

    Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

ORA-12445: cannot change HIDDEN property of column

    Cause: You tried to specify a different HIDE option for a table with an existing policy column.

    Action: Drop the column from the table and reapply the policy with the new HIDE option.

ORA-12446: Insufficient authorization for administration of policy *string*

    Cause: You tried to perform an administrative function for a policy, but you have not been granted the <policy>_DBA role.

    Action: Grant the user the <policy>_DBA role for the specified policy.

ORA-12447: policy role already exists for policy *string*

    Cause: The role named <policy>_DBA already exists.

    Action: Correct the policy name or delete the existing policy.

ORA-12448: policy *string* **not applied to schema** *string*

    Cause: You tried to alter a schema policy that was not applied.

    Action: Correct the policy name or schema name.

ORA-12449: Labels specified for user must be of type USER

    Cause: You tried to set labels for a user, but the labels in the list were not all designated as USER labels.

    Action: Alter the labels to be USER labels.

ORA-12450: LOB datatype disabled in LBAC initialization file

    Cause: You tried to specify a LOB datatype for a column or attribute, but the use of the LOB datatype has been disabled.

    Action: Change the LBAC initialization file to allow the creation of LOB columns and attributes.

ORA-12451: label not designated as USER or DATA

    Cause: A label is either a DATA label, a USER label, or both DATA and USER.

    Action: Enter TRUE for at least DATA or USER.

ORA-12452: label tag *string* **already exists**

    Cause: The label tag value you entered is already in use for another label.

    Action: Enter a different value for the label tag.

ORA-12453: label *string* **already exists**

    Cause: The label value you entered already exists.

    Action: No action necessary; alter the label to change its tag or type.

ORA-12454: label *string* **does not exist for policy** *string*

    Cause: The label tag or value you entered did not identify a label for the policy.

Action: Enter a label value or tag that is in use by the policy.

ORA-12455: internal error in Label Security MMON cleanup task
Cause: An internal error occurred in the Label Security MMON cleanup task.
Action: Contact Oracle Customer Support.

ORA-12456: label security startup in progress
Cause: You attempted to connect to the database before the Oracle Label Security component was fully initialized.
Action: Wait until the database is fully open before attempting to connect.

ORA-12457: security label exceeded maximum allowable length
Cause: An operation attempted to materialize a security label greater than 4000 bytes in length.
Action: Consult the Oracle Label Security documentation for information on how the length of a security label is calculated. Re-submit the operation once the problem has been corrected.

ORA-12461: undefined level *string* for policy *string*
Cause: The specified level is not defined for the policy.
Action: Correct the level identifier value.

ORA-12462: undefined compartment *string* for policy *string*
Cause: The specified compartment is not defined for the policy.
Action: Correct the compartment identifier value.

ORA-12463: undefined group *string* for policy *string*
Cause: The specified group is not defined for the policy.
Action: Correct the group identifier value.

ORA-12464: invalid characters in label component *string*
Cause: Label components can contain only alphanumeric characters, blanks, and underscores.
Action: Correct syntax of the label component.

ORA-12465: Not authorized for read or write on specified groups or compartments
Cause: You included groups or compartments that are not in the user"s list of groups and compartments authorized for read or write access.
Action: Include read access when authorizing groups or compartments for write access.

ORA-12466: default level is greater than the user"s maximum
Cause: The default level cannot be greater than the user"s maximum.
Action: Enter an authorized level.

ORA-12467: minimum label can contain a level only
Cause: You included compartments or groups in the minimum label.
Action: Enter only an authorized minimum level as the label.

ORA-12468: max write level does not equal max read level
Cause: The level in the max write label must equal the level in the max read label.
Action: Enter max read and max write labels with the same level component.

ORA-12469: no user levels found for user *string* **and policy** *string*

Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

ORA-12470: NULL or invalid user label: *string*

Cause: The label entered is NULL or not within the user''s authorizations.

Action: Enter the authorized labels for the user.

ORA-12471: Specified compartment or group is not authorized for user

Cause: The specified compartment or group is not in user''s authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

ORA-12472: policy *string* **is being used**

Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

ORA-12473: The procedure is disabled when Label Security is used with OID.

Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

ORA-12476: least upper bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12477: greatest lower bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12479: file label *string* **must equal DBHIGH** *string*

Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

ORA-12480: specified clearance labels not within the effective clearance

Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

ORA-12481: effective label not within program unit clearance range

Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

ORA-12482: internal MLS error: *string* **Error:** *string*

> **Cause:** An internal MLS policy error occurred.

> **Action:** Contact Oracle Customer Support.

ORA-12483: label not in OS system accreditation range

> **Cause:** The specified label is above the OS maximum label or below the OS minimum label.

> **Action:** Use a label that is within the accreditation range for the host OS.

ORA-12484: invalid OS label

> **Cause:** The specified label does not exist in the OS host"s label definition file.

> **Action:** Use the OS label management tools to define the label.

ORA-12485: new effective label not within effective clearance

> **Cause:** You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

> **Action:** Enter a value between the min and the max labels.

ORA-12486: effective max labels and min labels cannot be changed

> **Cause:** You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

> **Action:** Enter NULL values for the effective minimum and maximum labels.

ORA-12487: clearance labels not between DBHIGH and DBLOW

> **Cause:** You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

> **Action:** Enter clearance label values between DBHIGH and DBLOW.

ORA-12488: maximum label does not dominate minimum label

> **Cause:** You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

> **Action:** Enter label values that preserves the dominance relationship between the minimum and maximum.

ORA-12489: default label not within clearance range

> **Cause:** You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

> **Action:** Enter a default label value within the clearance range.

ORA-12490: DBHIGH cannot be lowered

> **Cause:** You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

> **Action:** Enter a value for DBHIGH that dominates the old value.

ORA-12491: DBHIGH value does not dominate DBLOW

> **Cause:** You attempted to enter a value for DBHIGH that did not dominate DBLOW.

> **Action:** Enter a value for DBHIGH that dominates DBLOW.

ORA-12492: DBLOW cannot be changed

> **Cause:** You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

ORA-12493: invalid MLS binary label

Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA_MLS_LABELS view for the valid MLS labels.

ORA-12494: cannot insert or delete a level, category, or release category

Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12495: cannot disable an enabled level, category, or release category

Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may be exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12496: cannot change existing level, category, or release numbers

Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

ORA-12497: maximum combined categories exceeds *string*

Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

12

ORA-12500 to ORA-12699

ORA-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

ORA-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

ORA-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are:

- Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator.

- If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

ORA-12505: TNS:listener does not currently know of SID given in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which instances are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the SID parameter in the connect descriptor specifies an instance known by the listener.

- Check for an event in the listener.log file.

ORA-12508: TNS:listener could not resolve the COMMAND given

Cause: d by incompatible Oracle Net or Net8 versions. Do not include in error manual.

Action: This is not seen in normal use of Oracle Net.

ORA-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

ORA-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers" limit on number of connections/sessions that they can accept.

ORA-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

ORA-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

ORA-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which services are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the SERVICE_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener.

- If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener.

- Check for an event in the listener.log file.

ORA-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener"s known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

ORA-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given SERVICE_NAME support the client"s protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

ORA-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

ORA-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

ORA-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

ORA-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which instances are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener.

- Check for an event in the listener.log file.

ORA-12522: TNS:listener could not find available instance with given INSTANCE_ ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

ORA-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

ORA-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener"s tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

ORA-12525: TNS:listener has not received client"s request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

ORA-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

ORA-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

ORA-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

ORA-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

ORA-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

ORA-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

ORA-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

ORA-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

ORA-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

ORA-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

ORA-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

ORA-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

ORA-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

ORA-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

ORA-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

ORA-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

ORA-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

ORA-12562: TNS:bad global handle

Cause: Internal error - bad "gbh" argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

ORA-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

ORA-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12574: TNS:redirection denied

Cause: The connect request failed because it would have required redirection and the caller has requested no redirections.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

ORA-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user"s request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

ORA-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

ORA-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

ORA-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

ORA-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

ORA-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

ORA-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

ORA-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

ORA-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user"s roles.

Action: Enable tracing to determine which routine is failing.

ORA-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

ORA-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

ORA-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

ORA-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are:

1. The other process was terminated.

2. The machine on which the other process is running went down.

3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are:

1. The other process was terminated.

2. The machine on which the other process is running went down.

3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

ORA-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions:

1. Change the entry in sqlnet.ora that determines which services are to be used.

2. Relink the client with at least one of the authentication service adapters that the server supports.

3. Relink the server with at least one of the authentication service adapters that the client supports.

4. Disable authentication on both the client and server.

ORA-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

ORA-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

ORA-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

ORA-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

ORA-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

ORA-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

ORA-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

ORA-12648: Encryption or data integrity algorithm list empty

Cause: An Oracle Advanced Security list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

ORA-12649: Unknown encryption or data integrity algorithm

Cause: An Oracle Advanced Security list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

ORA-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client"s algorithm choices to the server"s list or vice versa.

ORA-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

ORA-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

ORA-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

ORA-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

ORA-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

ORA-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn"t match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

ORA-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

ORA-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

ORA-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

ORA-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

ORA-12661: Protocol authentication to be used

Cause: The Oracle Advanced Security authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user"s identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

ORA-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

ORA-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

ORA-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

ORA-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

ORA-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

ORA-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

ORA-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

ORA-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

ORA-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

ORA-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

ORA-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

ORA-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

ORA-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

ORA-12678: Authentication disabled but required

Cause: The configuration parameters that control whether Oracle Advanced Security authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

ORA-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

ORA-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

ORA-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

ORA-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

ORA-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file for Oracle Advanced Security.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

ORA-12684: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Advanced Security is too small.

Action: Add more randomly-chosen text to it, perhaps using Network Manager.

ORA-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

ORA-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

ORA-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode:

- The user might not have permission to make up his own pincode.

- The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters.

- The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

ORA-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

ORA-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server"s credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

ORA-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to Oracle Advanced Security Administrator"s Guide on how to do this.

ORA-12699: Native service internal error

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

13

ORA-12700 to ORA-19400

ORA-12700: invalid NLS parameter value (*string*)

    Cause: An invalid or unknown NLS configuration parameter was specified.

    Action: None

ORA-12701: CREATE DATABASE character set is not known

    Cause: The character set specified when creating the database is unknown.

    Action: None

ORA-12702: invalid NLS parameter string used in SQL function

    Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

    Action: None

ORA-12703: this character set conversion is not supported

    Cause: The requested conversion between two character sets in the CONVERT function is not implemented

    Action: None

ORA-12704: character set mismatch

    Cause: One of the following:

    - The string operands(other than an nlsparams argument) to an operator or built-in function do not have the same character set.

    - An nlsparams operand is not in the database character set.

    - String data with character set other than the database character set is passed to a built-in function not expecting it.

    - The second argument to CHR() or CSCONVERT() is not CHAR_CS or NCHAR_CS.

    - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted.

    - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column.

    - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

    Action: None

ORA-12705: Cannot access NLS data files or invalid environment specified

Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS_LANG, ORA_NLSxx, or ORACLE_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

ORA-12706: this CREATE DATABASE character set is not allowed

Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: None

ORA-12707: error while getting create database NLS parameter *string*

Cause: Internal error

Action: None

ORA-12708: error while loading create database NLS parameter *string*

Cause: Internal error

Action: None

ORA-12709: error while loading create database character set

Cause: Internal error

Action: None

ORA-12710: CREATE CONTROLFILE character set is not known

Cause: The character set specified when creating the control file is unknown.

Action: None

ORA-12711: this CREATE CONTROLFILE character set is not allowed

Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: None

ORA-12712: new character set must be a superset of old character set

Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

ORA-12713: Character data loss in NCHAR/CHAR conversion

Cause: When character set conversion happens between CHAR and NCHAR either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE.

ORA-12714: invalid national character set specified

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

ORA-12715: invalid character set specified

　　Cause: The character set specified is not allowed for this operation or is invalid

　　Action: Ensure that the specified character set is valid

ORA-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists

　　Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

　　Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

ORA-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists

　　Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

　　Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

ORA-12718: operation requires connection as SYS

　　Cause: This command can only be run when connecting as SYS

　　Action: Connect as SYS to run this command

ORA-12719: operation requires database is in RESTRICTED mode

　　Cause: This command can only be run when the database is in RESTRICTED mode

　　Action: Ensure that the system is in RESTRICTED mode

ORA-12720: operation requires database is in EXCLUSIVE mode

　　Cause: This command can only be run when the database is in EXCLUSIVE mode

　　Action: Ensure that the system is in EXCLUSIVE mode

ORA-12721: operation cannot execute when other sessions are active

　　Cause: This command can only be run when there are no other sessions active

　　Action: Ensure there are no other connections to the database

ORA-12722: regular expression internal error

　　Cause: A regular expression internal error occurred.

　　Action: This is an internal error. Contact Oracle Support Services.

ORA-12723: regular expression too complex

　　Cause: The regular expression was too complex and could not be parsed.

　　Action: This is an internal error. Contact Oracle Support Services.

ORA-12724: regular expression corrupt

　　Cause: The regular expression contained an incorrect sequence of metacharacters.

　　Action: Ensure the metacharacters are correctly positioned.

ORA-12725: unmatched parentheses in regular expression

　　Cause: The regular expression did not have balanced parentheses.

　　Action: Ensure the parentheses are correctly balanced.

ORA-12726: unmatched bracket in regular expression

Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

ORA-12727: invalid back reference in regular expression

Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

ORA-12728: invalid range in regular expression

Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

ORA-12729: invalid character class in regular expression

Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

ORA-12730: invalid equivalence class in regular expression

Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

ORA-12731: invalid collation class in regular expression

Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

ORA-12732: invalid interval value in regular expression

Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

ORA-12733: regular expression too long

Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

ORA-12734: Instant Client Light: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12735: Instant Client Light: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12736: Instant Client Light: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12737: Instant Client Light: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12738: Express Instant Client: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12739: Express Instant Client: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12740: Express Instant Client: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12741: Express Instant Client: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

ORA-12800: system appears too busy for parallel query execution

Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

ORA-12801: error signaled in parallel query server *string*

Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-12802: parallel query server lost contact with coordinator

Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12803: parallel query server lost contact with another server

Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12804: parallel query server appears to have died

Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12805: parallel query server died unexpectedly

Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-12806: could not get background process to hold enqueue

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12807: process queue could not receive parallel query message

    Cause: Internal error.

    Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12808: cannot set *string*_INSTANCES greater than number of instances *string*

    Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

    Action: See the accompanying message for the current allowable maximum value, or set SCAN_INSTANCES / CACHE_INSTANCES to ALL.

ORA-12809: cannot set *string*_INSTANCES when mounted in exclusive mode

    Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

    Action: SCAN_INSTANCES / CACHE_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER_DATABASE mode.

ORA-12810: PARALLEL_MAX_SERVERS must be less than or equal to *string*

    Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value higher than the maximum allowed by the system.

    Action: Set PARALLEL_MAX_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

ORA-12811: PARALLEL_MIN_SERVERS must be less than or equal to PARALLEL_MAX_SERVERS, *string*

    Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PARALLEL_MAX_SERVERS.

    Action: Set PARALLEL_MIN_SERVERS to a value less than or equal to PARALLEL_MAX_SERVERS (indicated in the accompanying message) and retry.

ORA-12812: only one PARALLEL or NOPARALLEL clause may be specified

    Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

    Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

ORA-12813: value for PARALLEL or DEGREE must be greater than 0

    Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

    Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

ORA-12814: only one CACHE or NOCACHE clause may be specified

Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

ORA-12815: value for INSTANCES must be greater than 0

Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

ORA-12817: parallel query option must be enabled

Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

ORA-12818: invalid option in PARALLEL clause

Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { <n> | DEFAULT } and INSTANCES { <n> | DEFAULT } within the PARALLEL clause.

ORA-12819: missing options in PARALLEL clause

Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { <n> | DEFAULT } and INSTANCES { <n> | DEFAULT } within the PARALLEL clause.

ORA-12820: invalid value for DEGREE

Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

ORA-12821: invalid value for INSTANCES

Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

ORA-12822: duplicate option in PARALLEL clause

Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

ORA-12823: default degree of parallelism may not be specified here

Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12824: INSTANCES DEFAULT may not be specified here

Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

ORA-12825: explicit degree of parallelism must be specified here
   Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

   Action: respecify with an explicit degree of parallelism.

ORA-12826: hung parallel query server was killed
   Cause: parallel query server was hung and subsequently killed.

   Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12827: insufficient parallel query slaves available
   Cause: PARALLEL_MIN_PERCENT parameter was specified and fewer than minimum slaves were acquired

   Action: either re-execute query with lower PARALLEL_MIN_PERCENT or wait until some running queries are completed, thus freeing up slaves

ORA-12828: Can''t start parallel transaction at a remote site
   Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

   Action: Do not use PDML at remote sites.

ORA-12829: Deadlock - itls occupied by siblings at block *string* of file *string*
   Cause: parallel statement failed because all itls in the current block are occupied by siblings of the same transaction.

   Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE
   Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

   Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint
   Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

   Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12832: Could not allocate slaves on all specified instances
   Cause: After executing a query on a global v$ fixed view, one or more instances failed to allocate a slave to process query

   Action: To allow results to be returned by sucessfully allocated slaves, execute ALTER SESSION SET ALLOW_PARTIAL_SN_RESULTS=TRUE statement, or check parameters of instances

ORA-12833: Coordinator''s instance not a member of parallel_instance_group
   Cause: The coordinator''s instance must be a member of the parallel_instance_ group in which this operation will be run.

   Action: Either add the coordinator''s instance to the current parallel_instance_ group or change parallel_instance_group.

ORA-12834: Instance group name, "*string*", too long, must be less than *string* characters

Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

ORA-12835: No instances are active in the GLOBAL_VIEW_ADMIN_GROUP

Cause: There must be at least one instance in the GLOBAL_VIEW_ADMIN_ GROUP in order to execute a query on global views

Action: Change the value of GLOBAL_VIEW_ADMIN_GROUP

ORA-12838: cannot read/modify an object after modifying it in parallel

Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

ORA-12839: cannot modify an object in parallel after modifying it

Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions: one containing the parallel modification and the second containing the initial modification operation.

ORA-12840: cannot access a remote table after parallel/insert direct load txn

Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

ORA-12841: Cannot alter the session parallel DML state within a transaction

Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

ORA-12842: Cursor invalidated during parallel execution

Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

ORA-12843: pdml lock not held properly on the table

Cause: The coodinator crashed or released the lock on the partition which the slave is trying to aquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

ORA-12844: cluster reconfiguration in progress

Cause: Internal error

Action: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED. IT IS USED ONLY FOR INTERNAL ERROR.

ORA-12845: failed to receive interinstance parallel execution message

Cause: OS or interconnect problem receiving interinstance message

Action: Check OS specific diagnostics

ORA-12850: Could not allocate slaves on all specified instances: *string* **needed,** *string* **allocated**

Cause: When executing a query on a gv$ fixed view, one or more instances failed to allocate a slave to process query.

Action: Check trace output for instances on which slaves failed to start. GV$ query can only proceed if slaves can be allocated on all instances.

ORA-12851: PARALLEL_MAX_SERVERS must be greater than or equal to PARALLEL_MIN_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value less than PARALLEL_MIN_SERVERS.

Action: Set PARALLEL_MAX_SERVERS to a value greater than or equal to PARALLEL_MIN_SERVERS value specified in the accompanying message and retry.

ORA-12852: PARALLEL_MIN_SERVERS must be less than PROCESSES, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PROCESSES.

Action: Set PARALLEL_MIN_SERVERS to a value less than PROCESSES value specified in the accompanying message and retry.

ORA-12853: insufficient memory for PX buffers: current *string***K, max needed** *string***K**

Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

ORA-12854: Parallel query is not supported on temporary LOBs

Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

ORA-12855: cannot run parallel or insert direct load in a loopback

Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

ORA-12856: cannot run parallel query on a loopback connection

Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

ORA-12872: First slave parse gave different plan

Cause: First hard parse on slave given QC-supplied environment and parameters gave different plan from QC. Try again with outline.

Action: No external action. Internally used for outline-based reparse.

ORA-12899: value too large for column *string* **(actual:** *string*, **maximum:** *string*)

Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

ORA-12900: must specify a default temporary tablespace for a locally managed database

Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

ORA-12901: default temporary tablespace must be of TEMPORARY type

Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: None

ORA-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type

Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: None

ORA-12910: cannot specify temporary tablespace as default tablespace

Cause: attempt to assign a temporary tablespace to be a user"s default tablespace

Action: assign a permanent tablespace to be the default tablespace

ORA-12911: permanent tablespace cannot be temporary tablespace

Cause: attempt to assign a permanent tablespace to be a user"s temporary tablespace

Action: assign a temporary tablespace to be user"s temporary tablespace

ORA-12912: Dictionary managed tablespace specified as temporary tablespace

Cause: attempt to assign a dictionary managed tablespace to be a user"s temporary tablespace

Action: Assign a locally managed temporary tablespace to be user"s temporary tablespace

ORA-12913: Cannot create dictionary managed tablespace

Cause: Attemp to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

ORA-12914: Cannot migrate tablespace to dictionary managed type

Cause: Attemp to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

ORA-12915: Cannot alter dictionary managed tablespace to read write

Cause: Attemp to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

ORA-12916: cannot shrink permanent or dictionary managed tablespace

Cause: An attempt was made to shrink a permanent tablespace or a dictionary managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

ORA-12918: Invalid tablespace type for default permanent tablespace

Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

ORA-12919: Can not drop the default permanent tablespace

Cause: An attemp was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

ORA-12920: database is already in force logging mode

Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: None

ORA-12921: database is not in force logging mode

Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: None

ORA-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running

Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-12923: tablespace *string* is in force logging mode

Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

ORA-12924: tablespace *string* is already in force logging mode

Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: None

ORA-12925: tablespace *string* is not in force logging mode

Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: None

ORA-12926: FORCE LOGGING option already specified

Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

ORA-12927: RETENTION option already specified

Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

ORA-12928: ENCRYPTION option already specified

Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

ORA-12940: Not enough space in DBVerify text buffer

Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

ORA-12941: DBVerify exception

Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

ORA-12950: SYSTEM tablespace specified as default permanent tablespace

Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified,then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

ORA-12951: Attempt to change default permanent tablespace to temporary

Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: None

ORA-12980: checkpoint option not allowed with SET UNUSED

Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

ORA-12981: cannot drop column from an object type table

Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

ORA-12982: cannot drop column from a nested table

Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

ORA-12983: cannot drop all columns in a table

Cause: An attempt was made to drop all columns in a table.

Action: Make sure at least one column remains in the table after the drop column operation.

ORA-12984: cannot drop partitioning column

Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

ORA-12985: tablespace "*string*" is read only, cannot drop column

Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

ORA-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE

Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

ORA-12987: cannot combine drop column with other operations

Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

ORA-12988: cannot drop column from table owned by SYS

Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

ORA-12989: invalid value for checkpoint interval

Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and $(2^{31}-1)$.

Action: Correct checkpoint interval and resubmit statement

ORA-12990: duplicate option specified

Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

ORA-12991: column is referenced in a multi-column constraint

Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

ORA-12992: cannot drop parent key column

Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

ORA-12993: tablespace "*string*" is offline, cannot drop column

Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

ORA-12994: drop column option only allowed once in statement

Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

ORA-12995: no columns in partially dropped state

Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

ORA-12996: cannot drop system-generated virtual column

Cause: An attempt was made to drop a virtual column generated by the system.

Action: None

ORA-12997: cannot drop primary key column from an index-organized table

Cause: An attempt was made to drop a primary key column from an index-organized table.

Action: This action is not allowed.

ORA-13000: dimension number is out of range

Cause: The specified dimension is either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Make sure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

ORA-13001: dimensions mismatch error

Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation do not match.

Action: Make sure that the number of dimensions in the HHCODEs match.

ORA-13002: specified level is out of range

Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

ORA-13003: the specified range for a dimension is invalid

Cause: The specified range for a dimension is invalid.

Action: Make sure that the lower bound (lb) is less than the upper bound (ub).

ORA-13004: the specified buffer size is invalid

Cause: The buffer size for a function is not valid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13005: recursive HHCODE function error

Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13006: the specified cell number is invalid

Cause: The cell identifier is either less than 0 or greater than (2^ndim - 1).

Action: Make sure that the cell identifier is between 0 and (2^ndim - 1).

ORA-13007: an invalid HEX character was detected

Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

ORA-13008: the specified date format has an invalid component

Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

ORA-13009: the specified date string is invalid

Cause: The specified date string has a bad component or does not match the specified format string.

Action: Make sure that the components of the date string are valid and that the date and format strings match.

ORA-13010: an invalid number of arguments has been specified

Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

ORA-13011: value is out of range

Cause: A specified dimension value is outside the range defined for that dimension.

Action: Make sure that all values to be encoded are within the defined dimension range.

ORA-13012: an invalid window type was specified

Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

ORA-13013: the specified topology was not INTERIOR or BOUNDARY

Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Make sure that INTERIOR or BOUNDARY is used to describe an HHCODE"s topology.

ORA-13014: a topology identifier outside the range of 1 to 8 was specified

Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

ORA-13015: the window definition is not valid

Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

ORA-13016: specified topology [*string*] is invalid

Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO_TOPO.validate_topology function.

ORA-13017: unrecognized line partition shape

Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13018: bad distance type

Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

ORA-13019: coordinates out of bounds

Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

ORA-13020: coordinate is NULL

Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

ORA-13021: element not continuous

Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

ORA-13022: polygon crosses itself

Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

ORA-13023: interior element interacts with exterior element

Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

ORA-13024: polygon has less than three segments

Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

ORA-13025: polygon does not close

Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

ORA-13026: unknown element type for element *string.string.string*

Cause: The SDO_ETYPE column in the <layer>_SDOGEOM table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the <layer>_SDOGEOM table for the specified geometric element using one of the supported SDO_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO_ETYPE and its possible values.

ORA-13027: unable to read dimension definition from *string*

Cause: There was a problem reading the dimension definition from the <layer>_ SDODIM table.

Action: Verify that the <layer>_SDODIM table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

ORA-13028: Invalid Gtype in the SDO_GEOMETRY object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

ORA-13029: Invalid SRID in the SDO_GEOMETRY object

Cause: There is an invalid SDO_SRID in the SDO_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

ORA-13030: Invalid dimension for the SDO_GEOMETRY object

Cause: There is a mismatch between the dimension in the SDO_GTYPE and dimension in the SDO_GEOM_METADATA for the SDO_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

ORA-13031: Invalid Gtype in the SDO_GEOMETRY object for point object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object where the VARRAYs are NULL but the SDO_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

ORA-13032: Invalid NULL SDO_GEOMETRY object

Cause: There are invalid SDO_POINT_TYPE or SDO_ELEM_INFO_ARRAY or SDO_ORDINATE_ARRAY fields in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO_GEOMETRY as NULL instead of setting each field to NULL.

ORA-13033: Invalid data in the SDO_ELEM_INFO_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

ORA-13034: Invalid data in the SDO_ORDINATE_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ORDINATE_ARRAY field of the SDO_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

ORA-13035: Invalid data (arcs in geodetic data) in the SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

ORA-13036: Operation [*string*] not supported for Point Data

Cause: The specified geometry function is not supported for point data.

Action: Make sure that the specified geometry function is not called on point data.

ORA-13037: SRIDs do not match for the two geometries

Cause: A Spatial operation is invoked with two geometries where one geometry has an SRID and the other geometry does not have an SRID.

Action: Make sure that the spatial operations are invoked between two geometries with compatible SRIDs.

ORA-13039: failed to update spatial index for element *string.string.string*

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13040: failed to subdivide tile

Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

ORA-13041: failed to compare tile with element *string.string.string*

Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE_ GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13041 and contact Oracle Support Services.

ORA-13042: invalid SDO_LEVEL and SDO_NUMTILES combination

Cause: An invalid combination of SDO_LEVEL and SDO_NUMTILES values was read from the <layer>_SDOLAYER table. The most likely cause is that the columns are NULL.

Action: Verify the that SDO_LEVEL and SDO_NUMTILES columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

ORA-13043: failed to read metadata from the <layer>_SDOLAYER table

Cause: An error was encountered reading the layer metadata from the <layer>_ SDOLAYER table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

ORA-13044: the specified tile size is smaller than the tolerance

Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

ORA-13045: invalid compatibility flag

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13046: invalid number of arguments

Cause: An invalid number of arguments were specified for an SDO_GEOM function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant SDO_GEOM function.

ORA-13047: unable to determine ordinate count from table <layer>_SDOLAYER

Cause: An SDO_GEOM function was unable to determine the number of ordinates for the SDO layer <layer>.

Action: Verify that the <layer>_SDOLAYER table has a valid value for the column SDO_ORDCNT. Then retry the operation.

ORA-13048: recursive SQL fetch error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13049: unable to determine tolerance value from table <layer>_SDODIM

Cause: An SDO_GEOM function was unable to determine the tolerance value for the SDO layer <layer>.

Action: Verify that the <layer>_SDODIM table has a valid value for the column SDO_TOLERANCE.

ORA-13050: unable to construct spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13051: failed to initialize spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13052: unsupported geometric type for geometry *string.string*

Cause: The geometry type for a specific instance in a <layer>_SDOGEOM table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

ORA-13053: maximum number of geometric elements in argument list exceeded

Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO_GEOM function.

ORA-13054: recursive SQL parse error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13055: Oracle object *string* does not exist in specified table

Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

ORA-13060: topology with the name *string* already exists

Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

ORA-13061: topology with the name *string* does not exist

Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

ORA-13062: topology IDs do not match in the feature table and the topology

Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

ORA-13063: relationship information table is missing data for feature table [*string*]

Cause: The topology relationship information table (xxx_RELATION$) did not have the matching partition corresponding to the feature table.

Action: Make sure the correct topology IDs and names are specified in the call to register the feature table with the topology.

ORA-13064: relationship information table has inconsistent data for feature table [*string*]

Cause: The topology_id, tg_layer_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx_RELATION$).

Action: Make sure that the correct feature tables are specified in the call to register the feature table with the topology.

ORA-13065: cannot delete a child layer with a parent layer

Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Make sure that all dependent feature layers are deleted before deleting the current feature layer.

ORA-13066: wrong feature geometry or element type

Cause: The SDO_TOPO_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO_TOPO_GEOMETRY object.

ORA-13067: operator requires both parameters from the same topology

Cause: Both SDO_TOPO_GEOMETRY parameters did not come from the same topology.

Action: Make sure both the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO_TOPO_GEOMETRY parameters.

ORA-13068: wrong table or column name in SDO_TOPO_GEOMETRY constructor

Cause: An SDO_TOPO_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

ORA-13108: spatial table *string* not found

Cause: The specified spatial table does not exist.

Action: Check the Spatial data dictionary to make sure that the table is registered.

ORA-13109: spatial table *string* exists

Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

ORA-13110: cannot drop topology with associated topo_geometry tables

Cause: The drop_topology procedure was invoked for a topology that has associated topo_geometry layers with it.

Action: Delete the topo_geometry layers from the topology before dropping the topology. Use SDO_TOPO.delete_topo_geometry_layer to delete topo_geometry layers from the topology.

ORA-13111: cannot add topo_geometry layer [*string*] to topology

Cause: It was not possible to add the specified topo_geometry layer to the topology.

Action: Make sure the topo_geometry layer table exists in the database.

ORA-13112: cannot delete topo_geometry layer [*string*] from topology

Cause: It was not possible to delete the specified topo_geometry layer from the topology.

Action: Check USER_SDO_TOPO_METADATA to see if the specified topo_geometry layer is part of the topology. Only those topo_geometry layers which are part of the topology can be deleted from it.

ORA-13113: invalid tg_layer_id in sdo_topo_geometry constructor

Cause: An invalid layer_id was passed to the SDO_TOPO_GEOMETRY constructor.

Action: Valid layer_ids are obtained by adding a topo_geometry layer to the topology. Check USER_SDO_TOPO_METADATA to find out the layer_id for an existing topo_geometry layer.

ORA-13114: [*string*]_NODE$ table does not exist

Cause: The NODE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13115: [*string*]_EDGE$ table does not exist

Cause: The EDGE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13116: [*string*]_FACE$ table does not exist

Cause: The FACE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13117: [*string*]_RELATION$ table does not exist

Cause: The RELATION$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13118: invalid node_id [*string*]

Cause: A topology node operation was invoked with an invalid node_id.

Action: Check the topology node$ table to see if the specified node_id exists in the topology.

ORA-13119: invalid edge_id [*string*]

Cause: A topology edge operation was invoked with an invalid edge_id.

Action: Check the topology edge$ table to see if the specified edge_id exists in the topology.

ORA-13120: invalid face_id [*string*]

Cause: A topology face operation was invoked with an invalid face_id.

Action: Check the topology face$ table to see if the specified face_id exists in the topology.

ORA-13121: layer type type mismatch with topo_geometry layer type

Cause: The tg_type in SDO_TOPO_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER_SDO_TOPO_METADATA view to see the layer type for the layer and use it in the constructor.

ORA-13122: invalid topo_geometry specified

Cause: The SDO_TOPO_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO_TOPO_GEOMETRY object and verify that it is a valid topo_geometry object.

ORA-13123: invalid <TOPOLOGY> name specified

Cause: The create_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER_SDO_TOPO_METADATA (or the MDSYS.SDO_TOPO_METADATA_TABLE) with this topology name.

ORA-13124: unable to determine column id for column *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13125: partition key is already set

Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

ORA-13126: unable to determine class for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13127: failed to generate target partition

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13128: current tiling level exceeds user specified tiling level

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13129: HHCODE column *string* not found

Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

ORA-13135: failed to alter spatial table

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13136: null common code generated

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13137: failed to generate tablespace sequence number

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13138: could not determine name of object *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13139: could not obtain column definition for *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13140: invalid target type

Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

ORA-13141: invalid RANGE window definition

Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.: lower_bound1,upper_bound1,lower_bound2,upper_bound2,...). There should be an even number of values.

ORA-13142: invalid PROXIMITY window definition

Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

ORA-13143: invalid POLYGON window definition

Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

ORA-13144: target table *string* not found

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13145: failed to generate range list

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13146: could not find table substitution variable *string*

Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

ORA-13147: failed to generate MBR

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13148: failed to generate SQL filter

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13149: failed to generate next sequence number for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13150: failed to insert exception record

Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

ORA-13151: failed to remove exception record

Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

ORA-13152: invalid HHCODE type

Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

ORA-13153: invalid high water mark specified

Cause: The high water mark must be greater than or equal to zero.

Action: Make sure that the high water mark is an integer greater than or equal to zero.

ORA-13154: invalid precision specified

Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

ORA-13155: invalid number of dimensions specified
   Cause: The number of dimensions specified is out of range.

   Action: The number of dimension must be between 1 and 32.

ORA-13156: table to be registered *string.string* is not empty
   Cause: The specified table has rows in it.

   Action: Make sure that the table to be registered is empty.

ORA-13157: Oracle error ORA*string* encountered while *string*
   Cause: The specified Oracle error was encountered.

   Action: Correct the Oracle error.

ORA-13158: Oracle object *string* does not exist
   Cause: The specified object does not exist.

   Action: Verify that the specified object exists.

ORA-13159: Oracle table *string* already exists
   Cause: The specified table already exists.

   Action: Drop the specified table.

ORA-13181: unable to determine length of column *string*_SDOINDEX.SDO_CODE
   Cause: The length of the SDO_CODE column in the <layer>_SDOINDEX table could not be determined.

   Action: Make sure that the <layer>_SDOINDEX table exists with the SDO_CODE column. Verify that the appropriate privileges exist on the table. Then retry the operation.

ORA-13182: failed to read element *string.string.string*
   Cause: The specified element could not be read from the <layer>_SDOGEOM table.

   Action: Verify that the specified element exists in the table. Then retry the operation.

ORA-13183: unsupported geometric type for geometry *string.string*
   Cause: The geometry type in the <layer>_SDOGEOM table is unsupported.

   Action: Modify the geometry type to be one of the supported types.

ORA-13184: failed to initialize tessellation package
   Cause: Initialization of the tessellation package failed.

   Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13185: failed to generate initial HHCODE
   Cause: This is an internal error.

   Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13186: fixed tile size tessellation failed
   Cause: This is an internal error.

   Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13187: subdivision failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13188: cell decode failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13189: recursive SQL parse failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13190: recursive SQL fetch failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13191: failed to read SDO_ORDCNT value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13192: failed to read number of element rows

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13193: failed to allocate space for geometry

Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

ORA-13194: failed to decode supercell

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13195: failed to generate maximum tile value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13196: failed to compute supercell for element *string.string.string*

Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13197: element *string.string.string* is out of range

Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the <layer>_SDODIM table.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13198: Spatial error: *string*

Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

ORA-13199: *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13200: internal error [string**] in spatial indexing.**

Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

ORA-13201: invalid parameters supplied in CREATE INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

ORA-13202: failed to create or insert into the SDO_INDEX_METADATA table

Cause: An error was encountered while trying to create the SDO_INDEX_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

ORA-13203: failed to read USER_SDO_GEOM_METADATA view

Cause: An error encountered while trying to read the USER_SDO_GEOM_METADATA view.

Action: Check that USER_SDO_GEOM_METADATA has an entry for the current geometry table.

ORA-13204: failed to create spatial index table

Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

ORA-13205: internal error while parsing spatial parameters

Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

ORA-13206: internal error [string**] while creating the spatial index**

Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

ORA-13207: incorrect use of the [string**] operator**

Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

ORA-13208: internal error while evaluating [*string*] operator

Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

ORA-13209: internal error while reading SDO_INDEX_METADATA table

Cause: An internal error was encountered while trying to read the SDO_INDEX_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

ORA-13210: error inserting data into the index table

Cause: An error was encountered while trying to insert data into the index table. Likely causes are:

- Insufficient quota in the current tablespace

- User does not appropriate privileges

Action: Check the accompanying error messages.

ORA-13211: failed to tessellate the window object

Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure.

ORA-13212: failed to compare tile with the window object

Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

ORA-13213: failed to generate spatial index for window object

Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13214: failed to compute supercell for window object

Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13215: window object is out of range

Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the USER_SDO_GEOM_METADATA view.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13216: failed to update spatial index

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13217: invalid parameters supplied in ALTER INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial ALTER INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial ALTER INDEX statement.

ORA-13218: max number of supported index tables reached for [*string*] index

Cause: An add_index parameter was passed to ALTER INDEX when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

ORA-13219: failed to create spatial index table [*string*]

Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index"s schema with the specified name. The CREATE INDEX statement will try to create an index table with this name. Either rename this table or change the name of the index.

ORA-13220: failed to compare tile with the geometry

Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the VALIDATE_ GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

ORA-13221: unknown geometry type in the geometry object

Cause: The SDO_GTYPE attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported SDO_GTYPE values. See the Oracle Spatial documentation for an explanation of SDO_GTYPE and its possible values.

ORA-13222: failed to compute supercell for geometry in *string*

Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13223: duplicate entry for *string* in SDO_GEOM_METADATA

Cause: There are duplicate entries for the given table and column value pair in the USER_SDO_GEOM_METADATA view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the USER_ SDO_GEOM_METADATA view.

ORA-13224: zero tolerance specified for layer in USER_SDO_GEOM_METADATA

Cause: A tolerance of zero or NULL is supplied for a layer in USER_SDO_ GEOM_METADATA view.

Action: Check the tolerance specified to make sure it is a positive value.

ORA-13225: specified index table name is too long for a spatial index

    Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

    Action: Check the supported size of the index table name and reduce the size of the index name.

ORA-13226: interface not supported without a spatial index

    Cause: The geometry table does not have a spatial index.

    Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

ORA-13227: SDO_LEVEL values for the two index tables do not match

    Cause: The SDO_LEVEL values for the two index tables used in the spatial join operator do not match.

    Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same SDO_LEVEL and SDO_NUMTILES values

ORA-13228: spatial index create failed due to invalid type

    Cause: An Attempt was made to create a spatial index on a column of type other than SDO_GEOMETRY.

    Action: Make sure that the index is created on a column of type SDO_GEOMETRY.

ORA-13230: failed to create temporary table [*string*] during R-tree creation

    Cause: The specified temporary table either already exists or there is not enough tablespace.

    Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

ORA-13231: failed to create index table [*string*] during R-tree creation

    Cause: The specified index table either already exists or there is not enough tablespace.

    Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

ORA-13232: failed to allocate memory during R-tree creation

    Cause: This feature assumes a minimum of 64K memory for bulk creation.

    Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

ORA-13233: failed to create sequence number [*string*] for R-tree

    Cause: The specified sequence number exists.

    Action: Delete the sequence object, or contact Oracle Support Services.

ORA-13234: failed to access R-tree-index table [*string*]

    Cause: The index table is either deleted or corrupted.

    Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

ORA-13236: internal error in R-tree processing: [*string*]

Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

ORA-13237: internal error during R-tree concurrent updates: [*string*]

Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

ORA-13239: sdo_dimensionality not specified during n-d R-tree creation

Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

ORA-13240: specified dimensionality greater than that of the query mbr

Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

ORA-13241: specified dimensionality does not match that of the data

Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

ORA-13243: specified operator is not supported for 3- or higher-dimensional R-tree

Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO_FILTER operator.

Action: Use the SDO_FILTER operator, and check the documentation for the querytype parameter for SDO_FILTER; or contact Oracle Support Services.

ORA-13249: *string*

Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

ORA-13250: insufficient privileges to modify metadata table entries

Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

ORA-13251: duplicate entry *string* in metadata table

Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

ORA-13260: layer table *string* does not exist

Cause: Data migration source table <layer>_SDOGEOM does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

ORA-13261: geometry table *string* does not exist

Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO_GEOMETRY and a column of type NUMBER for the GID values.

ORA-13262: geometry column *string* does not exist in table *string*

Cause: The specified table does not have a column of type SDO_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO_GEOMETRY and a column of type NUMBER.

ORA-13263: column *string* in table *string* is not of type SDO_GEOMETRY

Cause: The column intended for storing the geometry is not of type SDO_GEOMETRY.

Action: Alter the column definition to be of type SDO_GEOMETRY.

ORA-13264: geometry identifier column *string* does not exist in table *string*

Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

ORA-13265: geometry identifier column *string* in table *string* is not of type NUMBER

Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

ORA-13266: error inserting data into table *string*

Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

ORA-13267: error reading data from layer table *string*

Cause: There was an error reading the geometry data from the <layer>_SDOGEOM table.

Action: Verify that <layer>_SDOGEOM and <layer>_SDODIM exist. If they do exist, run VALIDATE_LAYER_WITH_CONTEXT on the specified layer.

ORA-13268: error obtaining dimension from USER_SDO_GEOM_METADATA

Cause: There is no entry in the USER_SDO_GEOM_METADATA view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

ORA-13269: internal error [*string*] encountered when processing geometry table

Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13270: OCI error *string*

Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

ORA-13271: error allocating memory for geometry object
Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

ORA-13272: geometric object *string* in table *string* is invalid
Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by VALIDATE_GEOMETRY_WITH_CONTEXT and correct the geometry definition if required.

ORA-13273: dimension metadata table *string* does not exist
Cause: The <layer>_SDODIM table does not exist.

Action: Verify that the specified layer name is correct and that the <layer>_SDODIM table exists in the current schema.

ORA-13274: operator invoked with non-compatible SRIDs
Cause: A Spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Make sure that the layer and window both have an SRID or that they both do not have an SRID.

ORA-13275: spatial index creation failure on unsupported type
Cause: An attempt was made to create a spatial index create on a column that is not of type SDO_GEOMETRY.

Action: A spatial index can only be created on a column of type SDO_GEOMETRY. Make sure the indexed column is of type SDO_GEOMETRY.

ORA-13276: internal error [*string*] in coordinate transformation
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13278: failure to convert SRID to native format
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13281: failure in execution of SQL statement to retrieve WKT
Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

ORA-13282: failure on initialization of coordinate transformation
Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

ORA-13283: failure to get new geometry object for conversion in place
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13284: failure to copy geometry object for conversion in place
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13285: Geometry coordinate transformation error

Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

ORA-13287: can''t transform unknown gtype

Cause: A geometry with a gtype of <= 0 was specified for transformation. Only a gtype >= 1 is allowed.

Action: Check the Oracle Spatial documentation for SDO_GTYPE values, and specify a value whose last digit is 1 or higher.

ORA-13288: point coordinate transformation error

Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

ORA-13290: the specified unit is not supported

Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

ORA-13291: conversion error between the specified unit and standard unit

Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

ORA-13292: incorrect ARC_TOLERANCE specification

Cause: When a SDO_BUFFER or SDO_AGGR_BUFFER function is called on a geodetic geometry, or SDO_ARC_DENSIFY is called, ARC_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check ARC_TOLERANCE specification and make sure it is correct.

ORA-13293: cannot specify unit for geometry without a georeferenced SRID

Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Make sure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

ORA-13294: cannot transform geometry containing circular arcs

Cause: It is impossible to transform a 3-point representation of a circular arc without distortion.

Action: Make sure a geometry does not contain circular arcs.

ORA-13295: geometry objects are in different coordinate systems

Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

ORA-13296: incorrect coordinate system specification

Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS_SRS table for Earth radius and inverse flattening.

ORA-13300: single point transform error

Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

ORA-13303: failure to retrieve a geometry object from a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13304: failure to insert a transformed geometry object in a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13330: invalid MASK

Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

ORA-13331: invalid LRS segment

Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

ORA-13332: invalid LRS point

Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

ORA-13333: invalid LRS measure

Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

ORA-13334: LRS segments not connected

Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

ORA-13335: LRS measure information not defined

Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

ORA-13336: failure in converting standard diminfo/geometry to LRS dim/geom

Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

ORA-13337: failure in concatenating LRS polygons

Cause: LRS concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to make sure the concatenate operation is not called with a polygon type.

ORA-13338: failure in reversing LRS polygon/collection geometry

Cause: Reversing an LRS polygon/collection geometry produces an invalid geometry.

Action: Check the geometry type to make sure this operation is called on non-polygon geometries.

ORA-13339: LRS polygon clipping across multiple rings

Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

ORA-13340: a point geometry has more than one coordinate

Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO_GTYPE or SDO_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

ORA-13341: a line geometry has fewer than two coordinates

Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13342: an arc geometry has fewer than three coordinates

Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13343: a polygon geometry has fewer than four coordinates

Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13344: an arcpolygon geometry has fewer than five coordinates

Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13345: a compound polygon geometry has fewer than five coordinates

Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13346: the coordinates defining an arc are collinear

Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO_ETYPE or SDO_GTYPE to the line type.

ORA-13347: the coordinates defining an arc are not distinct

Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

ORA-13348: polygon boundary is not closed

Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO_GTYPE or SDO_ETYPE attribute of the geometry.

ORA-13349: polygon boundary crosses itself

Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

ORA-13350: two or more rings of a complex polygon touch

Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13351: two or more rings of a complex polygon overlap

Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13352: the coordinates do not describe a circle

Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

ORA-13353: ELEM_INFO_ARRAY not grouped in threes

Cause: The ELEM_INFO_ARRAY in an SDO_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM_INFO_ARRAY is divisible by 3.

ORA-13354: incorrect offset in ELEM_INFO_ARRAY

Cause: The offset field in ELEM_INFO_ARRAY of an SDO_GEOMETRY definition references an invalid array subscript in SDO_ORDINATE_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO_ORDINATE_ARRAY.

ORA-13355: SDO_ORDINATE_ARRAY not grouped by number of dimensions specified

Cause: The number of elements in SDO_ORDINATE_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO_ORDINATE_ARRAY.

ORA-13356: adjacent points in a geometry are redundant

Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

ORA-13357: extent type does not contain 2 points

Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

ORA-13358: circle type does not contain 3 points

Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

ORA-13359: extent does not have an area

Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

ORA-13360: invalid subtype in a compound type

Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

ORA-13361: not enough sub-elements within a compound ETYPE

Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

ORA-13362: disjoint sub-element in a compound polygon

Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

ORA-13363: no valid ETYPE in the geometry

Cause: None of the ETYPEs within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

ORA-13364: layer dimensionality does not match geometry dimensions

Cause: The spatial layer has a geometry with a different dimensions than the dimensions specified for the layer.

Action: Make sure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO_DIM_ARRAY object for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13365: layer SRID does not match geometry SRID

Cause: The spatial layer has a geometry with a different SRID than the SRID specified for the layer.

Action: Make sure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13366: invalid combination of interior exterior rings

Cause: In an Oracle Spatial geometry, interior and exterior rings are not used consistently.

Action: Make sure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

ORA-13367: wrong orientation for interior/exterior rings

Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

ORA-13368: simple polygon type has more than one exterior ring

Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

ORA-13369: invalid value for etype in the 4-digit format

Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

ORA-13370: failure in applying 3D LRS functions

Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

ORA-13371: invalid position of measure dimension

Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim_info_array.

Action: Check the geometry"s gtype and its position in the dim_info_array.

ORA-13372: failure in modifying metadata for a table with spatial index

Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry"s gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO_GEOMETRY column.

ORA-13373: invalid line segment in geodetic data

Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

ORA-13374: SDO_MBR not supported for geodetic data

Cause: The SDO_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

ORA-13375: the layer is of type [*string*] while geometry inserted has type [*string*]

Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

ORA-13376: invalid type name specified for layer_gtype parameter

Cause: An invalid type name is specified for the layer_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer_gtype constraint.

ORA-13377: invalid combination of elements with orientation

Cause: An element of the geometry has orientation specified while some other element has no orientation specified (4-digit etype).

Action: Make sure all the polygon elements have orientation specified using the 4-digit etype notation.

ORA-13378: invalid index for element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Make sure the parameters to the extract function are in the valid range for the geometry.

ORA-13379: invalid index for sub-element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Make sure the parameters to the extract function are in the valid range for the geometry.

ORA-13380: network not found

Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER_SDO_NETWORK_ METADATA view.

ORA-13381: table:*string* not found in network:*string*

Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER_SDO_NETWORK_METADATA view.

ORA-13382: geometry metadata (table:*string* column:*string*) not found in spatial network:*string*

Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER_SDO_NETWORK_ METADATA view.

ORA-13383: inconsistent network metadata: *string*

    Cause: There was an inconsistency between the network metadata and the node/link information.

    Action: Check the network metadata and the node/link information.

ORA-13384: error in network schema: *string*

    Cause: The network table(s) did not have required column(s)

    Action: Check the network schema.

ORA-13385: error in network manager: [*string***]**

    Cause: There was an internal error in network manager.

    Action: Contact Oracle Customer Support for more help.

ORA-13386: commit/rollback operation error: [*string***]**

    Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

    Action: Correct the specified error and use the following statement: ALTER INDEX <index-name> PARAMETERS ("index_status=synchronize");

ORA-13387: sdo_batch_size for array inserts should be in the range [*number,number***]**

    Cause: The specified value for sdo_batch_size was too high or too low.

    Action: Change the value to be in the specified range.

ORA-13388: invalid value for dst_spec parameter

    Cause: The dst_spec parameter was specified in the wrong format.

    Action: Check the documentation for this parameter.

ORA-13389: unable to compute buffers or intersections in analysis function

    Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

    Action: Modify the tolerance value in the USER_SDO_GEOM_METADATA view before invoking the spatial analysis function.

ORA-13390: error in spatial analysis and mining function: [*string***]**

    Cause: There was an internal error in the specified analysis function.

    Action: Contact Oracle Customer Support for more help.

ORA-13391: *string*

    Cause: An attempt was made to violate GeoRaster management restrictions.

    Action: Check the documentation for more detailed information.

ORA-13400: duplicate entry for *string* **in USER_SDO_GEOR_SYSDATA view**

    Cause: The current operation caused a duplicate RASTER_DATA_TABLE and RASTER_ID combination to be inserted into the USER_SDO_GEOR_SYSDATA view.

    Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID combination to be inserted into the USER_SDO_GEOR_SYSDATA view is unique.

ORA-13401: duplicate entry for *string* **in USER_SDO_GEOR_SYSDATA view**

    Cause: The RASTER_DATA_TABLE and RASTER_ID columns contained the same information in two or more rows in the USER_SDO_GEOR_SYSDATA view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID columns in the USER_SDO_GEOR_SYSDATA view contain the correct information, and that the value pair is unique for each row.

ORA-13402: the rasterType is null or not supported

Cause: The specified rasterType was null or not supported.

Action: Check the documentation for the rasterType number and/or formats supported by GeoRaster.

ORA-13403: invalid rasterDataTable specification: *string*

Cause: Each GeoRaster object must have an associated raster data table whose name is unique among raster data table names in the database. If the GeoRaster object is not empty and not blank, the raster data table must exist, be visible in the current schema, be defined in the same schema as the GeoRaster data table, and be an object table of SDO_RASTER type. However, one or more of these requirements were not met.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

ORA-13404: invalid ultCoordinate parameter

Cause: The ultCoordinate array parameter had the wrong length or contained an invalid value.

Action: Check the documentation, and make sure the ultCoordinate parameter is correct.

ORA-13405: null or invalid dimensionSize parameter

Cause: The dimensionSize array parameter was null, had the wrong length, or contained an invalid value.

Action: Check the documentation, and make sure the dimensionSize parameter is correct.

ORA-13406: null or invalid GeoRaster object for output

Cause: The GeoRaster object for output was null or invalid.

Action: Make sure the GeoRaster object for output has been initialized properly.

ORA-13407: invalid storage parameter *string*

Cause: The storage parameter contained an invalid specification.

Action: Check the documentation, and make sure the storage parameter is correct.

ORA-13408: invalid blockSize storage parameter

Cause: The blockSize storage parameter had the wrong length or contained invalid value.

Action: Check the documentation, and make sure the blockSize storage parameter is correct.

ORA-13409: null or invalid pyramidLevel parameter

Cause: The specified pyramidLevel parameter was null or invalid.

Action: Make sure the pyramidLevel parameter specifies a valid pyramid level value for the GeoRaster object.

ORA-13410: invalid layerNumbers or bandNumbers parameter

Cause: The layerNumbers or bandNumbers parameter was invalid.

Action: Check the documentation and make sure the layerNumbers or bandNumbers parameter is valid.

ORA-13411: subset results in null data set

   Cause: The intersection of cropArea and source GeoRaster object was null.

   Action: Check the documentation, and make sure the cropArea parameter is correct.

ORA-13412: invalid scale parameter*string*

   Cause: The scale parameter contained an invalid specification.

   Action: Check the documentation, and make sure the scale parameter is correct.

ORA-13413: null or invalid resampling parameter

   Cause: The resampling parameter was null or invalid.

   Action: Check the documentation, and make sure the resampling parameter is correct.

ORA-13414: invalid pyramid parameter

   Cause: The pyramid parameter was invalid.

   Action: Check the documentation, and make sure the pyramid parameter is correct.

ORA-13415: invalid or out of scope point specification

   Cause: The point position specified by the <ptGeom, layerNumber> or <rowNumber, colNumber, bandNumber> parameter combination was invalid or out of scope.

   Action: Make sure the parameter(s) specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13416: invalid geometry parameter

   Cause: The geometry parameter did not specify a valid single-point geometry.

   Action: Specify a valid single-point geometry.

ORA-13417: null or invalid layerNumber parameter

   Cause: The layerNumber parameter was null or out of scope.

   Action: Specify a valid layerNumber parameter.

ORA-13418: null or invalid parameter(s) for set functions

   Cause: A parameter for set metadata operations was null or invalid.

   Action: Check the documentation for information about the parameters.

ORA-13419: cannot perform mosaick operation on the specified table column

   Cause: An attempt to perform a mosaick operation failed because the GeoRaster objects in the specified table column did not meet necessary conditions.

   Action: Check the documentation for SDO_GEOR.Mosaick for details.

ORA-13420: the SRID of the geometry parameter was not null

   Cause: The input geometry must be in the GeoRaster cell space, which has a null SRID value.

   Action: Make sure the geometry parameter has a null SRID.

ORA-13421: NULL or invalid cell value

Cause: The cell value was NULL or out-of-scope.

Action: Make sure the cell value is not NULL and is in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13422: invalid model coordinate parameter

Cause: The model coordinate array parameter had the wrong length or had null ordinate element(s).

Action: Make sure the model coordinate parameter is valid.

ORA-13423: invalid cell coordinate parameter

Cause: The cell coordinate array parameter had the wrong length or had null ordinate element(s).

Action: Make sure the cell coordinate parameter is valid.

ORA-13424: the GeoRaster object is not spatially referenced

Cause: The GeoRaster object was not spatially referenced.

Action: Make sure the GeoRaster object is spatially referenced.

ORA-13425: invalid background filling value parameter

Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Make sure the parameter that specifies the background filling value is valid. The size of the array must equal to either 1 (the value is for all bands) or the exact band dimension size. The element values must be valid cell values as determined by the cell depth.

ORA-13426: invalid window parameter

Cause: The specified window parameter was invalid.

Action: Specify a valid window parameter. Check the documentation for details.

ORA-13427: invalid bitmap mask

Cause: The bitmap mask was not a valid 1BIT GeoRaster object, or it had the wrong dimension sizes.

Action: Make sure the bitmap mask is a valid 1BIT GeoRaster object with only one band, and the row and column dimension sizes of the bitmap mask are the same as those of the target GeoRaster object.

ORA-13428: invalid modelCoordinateLocation

Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

ORA-13429: invalid xCoefficients or yCoefficients parameter(s)

Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

ORA-13430: the GeoRaster object has null attribute(s)

Cause: The metadata or rasterType of the GeoRaster object was null.

Action: This object may only be used as an output parameter of procedures or functions. It is not valid for other purposes.

ORA-13431: GeoRaster metadata rasterType error

Cause: The rasterType in the metadata of the GeoRaster object was inconsistent with the GeoRaster rasterType attribute.

Action: Make sure the rasterType in the metadata of the GeoRaster object and the GeoRaster rasterType attribute have the same value.

ORA-13432: NULL or invalid blankCellValue

Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid.

Action: Call SDO_GEOR.setBlankCellValue to add blankCellValue to the metadata whenever the isBlank element value is TRUE, and make sure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

ORA-13433: GeoRaster metadata default RGB error

Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

ORA-13434: GeoRaster metadata cellRepresentation error

Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

ORA-13435: GeoRaster metadata dimension inconsistent

Cause: The specification of dimensions or totalDimensions was inconsistent with rasterType, or vice versa.

Action: Make sure dimension specifications are consistent.

ORA-13436: GeoRaster metadata dimensionSize error

Cause: Either the dimensionSize for each dimension was not specified, or an extraneous dimensionSize was specified.

Action: Add a dimsenionSize for each dimension of the GeoRaster object and delete extra dimensionSize elements.

ORA-13437: GeoRaster metadata blocking error

Cause: Either the wrong block number(s) or block size(s) along dimensions were specified, or the block numbers and sizes when taken together were not consistent.

Action: Check the documentation for details.

ORA-13438: GeoRaster metadata pyramid type error

Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

ORA-13439: GeoRaster metadata pyramid maxLevel error

Cause: The specified maxLevel exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

ORA-13440: GeoRaster metadata compression type error

Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

ORA-13441: GeoRaster metadata SRS error: *string*

Cause: The specified error relates to the polynomialModel element in the Spatial Reference System (SRS) metadata.

Action: Check the documentation and make sure that a valid polynomial model is specified.

ORA-13442: GeoRaster object not registered: *string*

Cause: There was no sysdata entry for the specified GeoRaster object.

Action: Make sure that a sysdata entry has been inserted for the specified GeoRaster object.

ORA-13443: null or invalid values in *string*

Cause: There were null or invalid component values in the specified metadata.

Action: Check the documentation and make sure that all the component values are valid.

ORA-13444: cannot perform mergeLayers operation

Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Make sure the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCoordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

ORA-13445: NULL or invalid NODATA value or value range

Cause: There was invalid NODATA value or value range in the metadata, or the specified NODATA value or value range was invalid.

Action: Make sure the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13446: GeoRaster metadata TRS error

Cause: The GeoRaster Temporal Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13447: GeoRaster metadata BRS error

Cause: The GeoRaster Band Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13448: GeoRaster metadata BRS error

Cause: The GeoRaster spectral extent specification was incorrect.

Action: The MIN value must be less than the MAX value in the spectralExtent element.

ORA-13449: GeoRaster metadata ULTCoordinate error

Cause: The GeoRaster rasterInfo ULTCoordinate was not correct.

Action: Check the documentation for restrictions.

ORA-13450: GeoRaster metadata layerInfo error

Cause: The GeoRaster had more than one layerInfo element, or the layerDimension value was not supported.

Action: The current release only supports one layerInfo element; layer can only be defined along one dimension, and this dimension must be BAND.

ORA-13451: GeoRaster metadata scaling function error

Cause: The scaling function had a zero denominator.

Action: Make sure the scaling function denominator is not zero.

ORA-13452: GeoRaster metadata BIN function error

Cause: The bin function data did not match its type.

Action: For EXPLICIT type, provide a binTableName element; otherwise, provide a binFunctionData element.

ORA-13453: GeoRaster metadata layer error

Cause: Too many subLayers were defined for the GeoRaster object, or layerNumber or layerDimensionOrdinate was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

ORA-13454: GeoRaster metadata is invalid

Cause: The GeoRaster metadata was invalid against its XML Schema.

Action: Run the schemaValidate routine to find the errors.

ORA-13455: GeoRaster metadata TRS error

Cause: The beginDateTime value was later than the endDateTime value.

Action: Make sure that the beginDateTime value is not later than the endDateTime value.

ORA-13456: GeoRaster cell data error: *string*

Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

ORA-13457: bitmap mask cell data error: *string*

Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

ORA-13458: GeoRaster metadata SRS error

Cause: The polynomial model did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set isRectified to be false.

ORA-13459: GeoRaster metadata SRS error

Cause: The polynomial model was not an six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and make sure the polynomial model is a valid six-parameter affine transformation.

ORA-13460: GeoRaster metadata SRS error

Cause: The referenced GeoRaster object had a zero model space SRID or the specified model space SRID was zero.

Action: Set or specify the model space SRID to be a nonzero number.

ORA-13461: the interleaving type is not supported

Cause: The interleaving type of the GeoRaster object was not supported.

Action: Check the documentation for the interleaving types supported by GeoRaster. Use SDO_GEOR.changeFormatCopy to transform the image to a supported interleaving type.

ORA-13462: invalid blocking specification

Cause: The specified blocking configuration was invalid.

Action: Check the documentation for the blocking specification supported by GeoRaster.

ORA-13463: error retrieving GeoRaster data: *string*

Cause: An internal error occurred while retrieving GeoRaster data from the database.

Action: Check the error message for details.

ORA-13464: error loading GeoRaster data: *string*

Cause: An internal error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

ORA-13465: null or invalid table or column specification

Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Make sure the specified table exists and the specified column is a GeoRaster column.

ORA-13466: format not appropriate for specified compression method: *string*

Cause: The operation failed because the GeoRaster object had an inappropriate type or format for the specified compression method. The GeoRaster type or format is not supported for the specified compression.

Action: Check the error message for details. Check the documentation for the appropriate GeoRaster types and formats for each compression method. Use SDO_GEOR.changeFormatCopy to transform the GeoRaster object to an appropriate format, or apply another compression method.

ORA-13467: unsupported GeoRaster metadata specification: *string*

Cause: The GeoRaster metadata specification is not supported.

Action: Check the documentation for the supported GeoRaster metadata specifications.

ORA-13468: invalid blockMBR

Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Make sure the blockMBR geometries stored in the raster data table are valid, or call SDO_GEOR.generateBlockMBR() to regenerate the blockMBR geometries.

ORA-13469: cannot perform updateRaster operation

Cause: The data of the source GeoRaster object could not be used to update that of the target GeoRaster object.

Action: Make sure the source and the target GeoRaster objects have the same cell depth, and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

ORA-13470: target and source layers or bands mismatched

Cause: The number of specified target layers or bands and source layers or bands did not match.

Action: When updating layers or bands of a target GeoRaster object to reflect the associated layers or bands of the source GeoRaster object, specify the same number of layers or bands for both the source and the target objects. Check the documentation for details.

ORA-13471: unable to determine the owner of *string*

Cause: The owner of the specified raster data table could not be determined.

Action: Make sure the GeoRaster object that refers to the raster data table has been registered by inserting the object into a GeoRaster table.

ORA-13472: invalid geometry parameter

Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model SRID is null or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

ORA-13473: invalid rasterSpec parameter

Cause: The rasterSpec parameter contained an invalid specification.

Action: Check the documentation and make sure the rasterSpec parameter contains only valid keywords and values.

ORA-13474: invalid rasterDataTable name: *string*

Cause: The rasterDataTable name was not a valid nonquoted identifier, it contained a period separator, or not all of the alphanumeric characters were uppercase.

Action: Ensure that the table name is a valid nonquoted identifier without any period separators, and that all the alphanumeric characters are uppercase.

ORA-13475: invalid GeoRaster object for output

Cause: The output GeoRaster object had the same RASTER_DATA_TABLE and RASTER_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

ORA-13476: invalid or out of scope point specification

Cause: The point position specified by the point geometry parameter or the rowNumber/colNumber parameter combination was null or out of scope.

Action: Ensure that the parameters specify a valid point that translates or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13480: the Source Type is not supported

Cause: The specified source type was not supported.

Action: Check the documentation for the source types (such as FILE and HTTP) supported by GeoRaster.

ORA-13481: the destination type is not supported

Cause: The specified destination type was not supported.

Action: Check the documentation for the destination types (such as FILE) supported by GeoRaster.

ORA-13482: GeoRaster object is not initialized for the image

Cause: No GeoRaster object has been initialized for the specified image.

Action: Initialize a GeoRaster object to hold this image before loading it into the database. Check the documentation for details.

ORA-13483: insufficient memory for the specified GeoRaster data

Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

ORA-13484: the file format or compression type is not supported: *string*

Cause: The file format or compression type was not supported.

Action: Check the documentation for formats that are currently supported by GeoRaster.

ORA-13485: error occurred during compression or decompression: *string*

Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: Check that the GeoRaster object is valid, that its metadata is valid for the specified compression format, and that valid parameters are passed into the compression or decompression operation.

ORA-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string*

Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

ORA-13487: SRID not found for source coordinate system metadata

Cause: No SRID was found in the Oracle Spatial CS_SRS table to match the source coordinate system metadata.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

ORA-13497: *string*

Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to make sure the GeoRaster object is valid before you do so.

ORA-13498: *string*

Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

ORA-13499: *string*

Cause: This is an internal Spatial error.

Action: Contact Oracle Support Services.

ORA-13500: SYSAUX DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

ORA-13501: Cannot drop SYSAUX tablespace

Cause: Tried to drop SYSAUX tablespace

Action: None

ORA-13502: Cannot rename SYSAUX tablespace

Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

ORA-13503: Creating SYSAUX tablespace with invalid attributes

Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

ORA-13504: No SYSAUX datafile clause specified

Cause: If Create Database has the datafile clause, then SYSAUX datafile clause has to be specified, unless using OMF.

Action: Specify the SYSAUX datafile clause.

ORA-13505: SYSAUX tablespace can not be made read only

Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

ORA-13506: operation failed due to invalid snapshot range (*string*, *string*)

Cause: An attempt was made to perform operation with an invalid Start/End Snapshot Pair.

Action: Choose a valid Start/End Snapshot Pair.

ORA-13509: error encountered during updates to a AWR table

Cause: An update error occurred during OCI operation due to an underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13510: invalid RETENTION *string*, must be in the range (*string*, *string*)

Cause: The user has specified a RETENTION setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid RETENTION setting and retry the operation.

ORA-13511: invalid INTERVAL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a INTERVAL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid INTERVAL setting and retry the operation.

ORA-13514: Metric Capture too close to last capture, group *string*

Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

ORA-13515: Error encountered during Database Usage Statistics capture

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13516: AWR Operation failed: *string*

Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

ORA-13517: Baseline (id = *string*) does not exist

Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

ORA-13518: Invalid database id (*string*)

Cause: The operation failed because the specified database ID does not exist in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13519: Database id (*string*) exists in the workload repository

Cause: The operation failed because the specified database ID already exists in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13520: Database id (*string*) not registered, Status = *string*

Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

ORA-13521: Unregister operation on local Database id (*string*) not allowed

Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

ORA-13523: unable to allocate required space for return type

Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

ORA-13524: error encountered while retrieving baseline information

Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

ORA-13525: error with computing space usage for sysaux occupant

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13526: baseline (*string*) does not exist

Cause: The operation failed because the specified baseline name does not exist in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13527: invalid baseline name

Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

ORA-13528: name (*string*) is already used by an existing baseline

Cause: The operation failed because the specified baseline name already exists in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13529: Error occurred when flushing AWR table group

Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

ORA-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

ORA-13531: SQL Text was purged from AWR before the operation completed

Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

ORA-13532: SQL ID [*string*] already exists

Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

ORA-13533: invalid SQL ID

Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

ORA-13534: Current SQL count(*string*) reached maximum allowed (*string*)

Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

ORA-13535: name (*string*) is already used by an existing baseline template

Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13536: baseline template (*string*) does not exist

Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13537: invalid input for create baseline template (*string*, *string*)

Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

ORA-13538: invalid value for baseline expiration (*string*)

Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

ORA-13539: invalid input for modify baseline window size (*string*, *string*)

Cause: Invalid input was specified for the modify baseline window size routine.

Action: Check the argument displayed in the error message text.

ORA-13540: operation not allowed on system moving window baseline (*string*)

Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

ORA-13541: system moving window baseline size (*string*) greater than retention (*string*)

Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

ORA-13542: baseline ID (*string*) does not exist

Cause: The operation failed because the specified baseline ID did not exist in the Workload Repository.

Action: Check the baseline ID and retry the operation.

ORA-13543: error encountered while retrieving baseline template information

Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

ORA-13544: error encountered while automatically generating a baseline

Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

ORA-13545: invalid baseline template name

Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

ORA-13546: Error encountered during maintenance of Adaptive Thresholds

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13547: Unable to drop baseline since it is in use by *string*

Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

ORA-13548: Unable to find valid snapshot IDs for the inputted baseline time range

Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The dba_hist_snapshot displays the snapshot id and time information.

ORA-13549: invalid input for create baseline with time range (*string*)

Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

ORA-13600: error encountered in Advisor *string*

Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

ORA-13601: The specified Advisor *string* does not exist.

Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

ORA-13602: The specified parameter *string* is not valid for task or object *string*.

Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

ORA-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.

Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13604: The specified parameter *string* cannot be fetched as a SQL table.

Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13605: The specified task or object *string* **does not exist for the current user.**

Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

ORA-13606: the specified task parameter element *string* **is out of range for parameter** *string*.

Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

ORA-13607: The specified task or object *string* **already exists**

Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

ORA-13608: The specified name *string* **is invalid.**

Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

ORA-13609: The specified task *string* **must be executing to be cancelled or interrupted.**

Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

ORA-13610: The directive *string* **does not exist for task** *string*.

Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

ORA-13611: The command *string* **is not a valid advisor command.**

Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

ORA-13612: The recommendation action *string,string* **is not valid for task** *string*.

Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

ORA-13613: The requested operation is not supported for this advisor object.

Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

ORA-13614: The template *string* **is not compatible with the current advisor.**

Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

ORA-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.

Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

ORA-13616: The current user *string* has not been granted the ADVISOR privilege.

Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user"s privileges and retry the operation.

ORA-13617: The specified task *string* already executing

Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

ORA-13618: The specified value is not a valid value for procedure argument *string*.

Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

ORA-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.

Cause: The user attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

ORA-13620: The task or object *string* is read-only and cannot be deleted or modified.

Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ_ONLY property for the object and retry the operation.

ORA-13621: The task_or object *string* is marked as a template and cannot perform the requested operation.

Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

ORA-13622: invalid recommendation annotation

Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

ORA-13623: The recommendation *string* is not valid for task *string*.

Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

ORA-13624: The task *string* is executing and cannot be deleted or modified.

Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

ORA-13625: *string* is an invalid advisor object type.

Cause: The user has specified an invlaid object type.

Action: Refre to dba_advisor_object_types for all valid object types

ORA-13626: The specified object *string* **is not valid for task** *string*.
Cause: The user specified an non-existent object for the task
Action: Choose a different object and retry the operation.

ORA-13627: Setting of parameter *string* **is disallowed until the task is reset.**
Cause: The user attempted to set the value of a parameter before the task was reset. This parameter cannot be changed until the task is reset.
Action: Reset the task and retry the operation.

ORA-13628: Insufficient privileges to access the task belonging to the specified user
Cause: The user could not access dba_* views.
Action: Retry operation as owner of the task or after granting new privileges.

ORA-13629: The task or object *string* **is being used by another operation.**
Cause: The user attempted to access a task or object that is locked by another session.
Action: Wait for the task or object activity to complete and retry the operation.

ORA-13630: The task *string* **contains execution results and cannot be executed.**
Cause: The user attempted to execute a task that already contains execution results.
Action: Reset the task to its initial state and retry the operation.

ORA-13631: The most recent execution of task *string* **contains no results.**
Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.
Action: Execute the task and then retry the operation

ORA-13632: The user cancelled the current operation.
Cause: The user signaled a cancel during a task or object operation.
Action: None

ORA-13633: The task *string* **was interrupted and needs to be resumed.**
Cause: The user attempted to execute a task that was interrupted.
Action: Resume the execution of the task via the RESUME_TASK API.

ORA-13634: The task *string* **needs to be reset before being re-executed.**
Cause: The task must be in an inital state to be executed.
Action: Reset the task to its initial state and retry the operation.

ORA-13635: The value provided for parameter *string* **cannot be converted to a number.**
Cause: A numeric parameter was incorrectly supplied in string form.
Action: Retry by supplying valid numeric value.

ORA-13636: The specified value provided for parameter *string* **is not valid for this advisor.**
Cause: The user supplied an invalid parameter value.
Action: Retry by supplying valid value.

ORA-13637: Executing or modifying task *string* **is disallowed until the task is reset to its initial state.**

Cause: The user attempted to execute or modify the task that is in not in its INITIAL state.

Action: Reset the task and retry the operation.

ORA-13638: The user interrupted the current operation.

Cause: The user signaled an interrupt during a task or object operation.

Action: None

ORA-13639: The current operation was interrupted because it timed out.

Cause: The task or object operation timed out.

Action: None

ORA-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.

Cause: The task or object operation timed out.

Action: None

ORA-13641: Task cannot be interrupted yet. You may cancel it instead.

Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

ORA-13642: The specified string *string* **provided for** *string* **cannot be converted to a date. The acceptable date format is** *string***.**

Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

ORA-13643: The task can not be interrupted or cancelled.

Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

ORA-13644: The user "*string***" is invalid.**

Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

ORA-13645: The specified execution *string* **does not exist for this task.**

Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13646: The specified execution *string* **already exists**

Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

ORA-13647: Setting of parameter *string* **is disallowed during task execution.**

Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

ORA-13648: The specified execution type does not exist for this advisor.

Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13649: The type of execution is not specified for this advisor or task.

Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

ORA-13650: The specified object does not exist for this execution.

Cause: You attempted to associate an object to a task execution that id not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

ORA-13651: The specified list of execution parameters is invalid.

Cause: The list did not include pairs of (parameter_name, parameter_value) where every parameter is a valid task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

ORA-13652: Cannot set execution parameters for this advisor

Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

ORA-13653: The directive with definition id *string* was not found.

Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

ORA-13654: The directive with instance id of *string* was not found.

Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

ORA-13655: The directive document contains a syntax error and cannot be loaded.

Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according the documented DTD.

ORA-13656: The parameter was not found in directive *string*.

Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

ORA-13657: The filter Xpath specification has invalid syntax.

Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

ORA-13658: The specified directive already has an instance

　　Cause: An attempt was made to create multiple instances of a directive when not permitted

　　Action: Verify the parent directive identifier and the instance name.

ORA-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.

　　Cause: The specified directive is not unique among the directives.

　　Action: Choose a directive name and domain that is distinct for the associated advisor.

ORA-13660: A directive instance with the name "*string*" already exists.

　　Cause: The specified directive instance is not unique among instances for this directive.

　　Action: Choose an instance name that is distinct for the associated directive.

ORA-13661: A directive instance with the name "*string*" was not found.

　　Cause: An attempt was made to update or delete a non-existent directive instance.

　　Action: Verify the parent directive identifier and the instance name.

ORA-13662: The specified value provided for parameter *string* is not valid for this task.

　　Cause: The supplied parameter value was not valid for the current task configuration.

　　Action: Retry by supplying valid value. Check the current task configuration.

ORA-13663: The task *string* contains no results for execution *string*.

　　Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

　　Action: Run a new execution and then retry the operation.

ORA-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".

　　Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

　　Action: Create a new task to use a different SQL Tuning Set.

ORA-13665: Execution names are not correctly ordered.

　　Cause: The supplied execution names were not properly ordered by execution start date.

　　Action: Retry by supplying a valid order.

ORA-13666: Task ID *string* does not exist.

　　Cause: The supplied task ID was invalid.

　　Action: Check the task ID and try again.

ORA-13667: Execution ID *string* does not exist.

　　Cause: The supplied execution ID was invalid.

　　Action: Check the execution ID and try again.

ORA-13699: Advisor feature is not currently implemented.

　　Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

ORA-13701: Snapshot pair [*string, string*] seems to be specified in reverse order.

Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

ORA-13702: Snapshot IDs specified by the range [*string, string*] are equal.

Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

ORA-13703: The snapshot pair [*string, string*] for database_id *string* and instance_id *string* are not found in the current repository.

Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

ORA-13704: Invalid value "*string*" specified for parameter "*string*".

Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

ORA-13705: There was a instance shutdown/startup between the snapshots in the range [*string, string*].

Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

ORA-13706: Invalid value "*string*" specified for parameter "*string*" in "*string*" analysis mode.

Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

ORA-13707: Either the start snapshot *string* or the end snapshot *string* is incomplete or missing key statistics.

Cause: Either the start or the end snaphots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the start/end snapshots. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

ORA-13708: Some snapshots in the range [*string, string*] were purged before the analysis was complete.

Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

ORA-13709: Required parameter "*string*" must be set before execution.

Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

ORA-13710: Parameter "*string*" must have a higher value than parameter "*string*". The values supplied were "*string*" and "*string*" respectively.

Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

ORA-13711: Some snapshots in the range [*string*, *string*] are missing key statistics.

Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the given snapshot range. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

ORA-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "*string*" do not match the database version "*string*".

Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using ?/rdbms/admin/awrrpt and ?/rdbms/admin/ashrpt on these snapshots to analyze the data in them.

ORA-13713: Finding name "*string*" does not exist. Look in DBA_ADVISOR_ FINDING_NAMES for all valid values

Cause: Attempt to refer to an advisor"s finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA_ADVISOR_ FINDING_NAMES

ORA-13714: "*string*" is not a valid SQL_ID value

Cause: The specified value of SQL_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from "0" to "9" and from "a" to "z".

ORA-13715: "*string*" is not recognized by ADDM as a parameter name

Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V$PARAMETER.

ORA-13716: Diagnostic Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_ PACK_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

ORA-13717: Tuning Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_ PACK_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

ORA-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.

Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL_MANAGEMENT_PACK_ACCESS.

ORA-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.

Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user"s privileges and retry the operation.

ORA-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".

Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user"s privileges and retry the operation.

ORA-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.

Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user"s privilege and retry the operation.

ORA-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".

Cause: The user attempted to create a "\SQL Tuning"\ Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

ORA-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".

Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the speelling of the SQL Tuning Set name and retry the operation.

ORA-13755: invalid "SQL Tuning Set" name

Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

ORA-13756: Cannot update attribute "*string*".

Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING_SCHEMA_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

ORA-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.

Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

ORA-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.

Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

ORA-13759: User "*string*" cannot remove reference "*string*".

Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

ORA-13761: invalid filter

Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

ORA-13762: The *string* ranking measure is invalid.

Cause: The user attempted to select data from a data source using an invlaid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

ORA-13763: illegal ranking attribute "*string*"

Cause: The user attempted to use an attribute element that is not allowed in a ranking meseare.

Action: Check the attribute in the ranking meseare and retry the operation.

ORA-13764: Value "*string*" is illegal as a result percentage.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

ORA-13765: Value "*string*" is illegal for a result limit.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive interger.

Action: Correct the result limit value and retry the operation.

ORA-13766: A ranking measure is required.

Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

ORA-13767: End snapshot ID must be greater than begin snapshot ID.

Cause: The user attempted to select data from the workload repository using an invalid snaphot ID range.

Action: Adjust the snapshot ID range and retry the operation.

ORA-13768: Snapshot ID must be between *string* and *string*.

Cause: The user attempted to select data from the workload repository using a snaphot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

ORA-13769: Snapshots *string* and *string* do not exist.

Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

ORA-13770: Baseline "*string*" does not exist.

Cause: The user attempted to access a baseline that does not exsit.

Action: Check the speelling of the baseline name and retry the operation.

ORA-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "*string*" owned by user "*string*"

Cause: Unexpected error from DBMS_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13772: unexpected deadlock on "SQL Tuning Set" "*string*" owned by user "*string*"

Cause: Unexpected error from DBMS_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13773: insufficient privileges to select data from the cursor cache

Cause: The user attempted to perform an operation without having the appropriate privileges on V$SQL and V$SQL_BIND_CAPTURE.

Action: Adjust the user"s privileges and retry the operation.

ORA-13774: insufficient privileges to select data from the workload repository

Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA_HIST_BASELINE, DBA_HIST_SQLTEXT, DBA_HIST_SQLSTAT, DBA_HIST_SQLBIND, DBA_HIST_OPTIMIZER_ENV, and DBA_HIST_SNAPSHOT.

Action: Adjust the user"s privileges and retry the operation.

ORA-13775: inconsistent datatype in input cursor

Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET_ROW.

Action: Check the rows type in the cursor and retry the operation.

ORA-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.

Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

ORA-13777: invalid list of attribute names

Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION_STATISTICS, OBJECT_LIST, BIND_LIST and SQL_PLAN.

Action: Adjust the attribute list and retry the operation.

ORA-13778: no new name or owner specified for "SQL Tuning Set"

Cause: The user attempted to call remap_stgtab_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

ORA-13779: invalid load option

Cause: The user attempted to call load_sqlset with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

ORA-13780: SQL statement does not exist.

Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the sql_id and the plan hash value of the statement and retry the operation.

ORA-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task

Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

ORA-13783: invalid tuning scope

Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

ORA-13784: cannot accept SQL profiles for all statements in the "*string*"

Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

ORA-13785: missing target object for tuning task "*string*"

Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

ORA-13786: missing SQL text of statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13787: missing SQL profile for statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13788: invalid recommendation type

Cause: The user passed an invalid recommendation type in the rec_type argument to script_tuning_task. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the rec_type arg and retry the operation.

ORA-13789: invalid process action

Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-seperated list of EXECUTE and EXPLAIN_PLAN.

Action: Check the action argument and retry the operation.

ORA-13790: invalid value for time limit

Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

ORA-13791: cannot resume a task created to process a single statement

Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

ORA-13793: invalid comparison metric

Cause: An invalid metric to compare SQL performance was specified.

Action: s.

ORA-13794: execution type mismatch

Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different

Action: check the name and type of task executions to analyze and retry the operation.

ORA-13795: missing task execution

Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

ORA-13796: invalid value *string* specified for problem type

Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the PROBLEM_TYPE_* defined in "admin/dbmsdiag.sql".

Action: Specify valid problem type.

ORA-13797: invalid SQL Id specified, *string*

Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

ORA-13798: Parameter *string* cannot be NULL.

Cause: A call to GET_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13799: threshold not found

Cause: No threshold was found with the specified threshold key.

Action: No action required.

ORA-13800: concurrent DDL failure on SQL repository objects

Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

ORA-13801: invalid value for SQLTUNE_CATEGORY parameter
   Cause: An invalid Oracle identifier was used as the value of the parameter.
   Action: Specify the parameter conforming to the rules for Oracle identifiers.

ORA-13802: failed to purge SQL Tuning Base entry from sql$
   Cause: An error occured while try to delete a SQL Tuning Base object.
   Action: Look at the underlying error(s) on the error stack.

ORA-13825: missing SQL statement text for create SQL profile
   Cause: No SQL text was provided to the create SQL profile operation.
   Action: Retry with properly specified SQL text.

ORA-13826: empty SQL profile not allowed for create or update SQL profile
   Cause: No attributes were specified to the create SQL profile operation.
   Action: Retry with at least one hint specified.

ORA-13827: null or zero length attribute specified in SQL profile collection
   Cause: One of the attributes within the SQL profile was not properly specified.
   Action: Retry with a fully specified SQL profile.

ORA-13828: generated SQL profile name *string* already exists
   Cause: A SQL profile already exists with the name generated by the system.
   Action: Retry the operation as the generated name is time sensitive.

ORA-13829: SQL profile named *string* already exists
   Cause: A SQL profile already exists with the name specified.
   Action: Specify a different name or drop the existing SQL profile.

ORA-13830: SQL profile with category *string* already exists for this SQL statement
   Cause: A SQL profile already exists for the given SQL statement and category.
   Action: Drop or update the existing SQL profile.

ORA-13831: SQL profile name specified is invalid
   Cause: An invalid SQL profile name was specified.
   Action: Look for the underlying error on the error message stack.

ORA-13832: category name specified is invalid
   Cause: An invalid category name swas pecified.
   Action: Look for the underlying error on the error message stack.

ORA-13833: SQL profile named *string* doesn"t exist
   Cause: A SQL profile name was specified that doesn"t exist.
   Action: Verify the name of the SQL profile.

ORA-13834: name of SQL profile to be cloned must be provided
   Cause: A SQL profile name was not provided as the from target of a clone SQL profile operation.
   Action: Provide the name of the SQL profile being cloned.

ORA-13835: invalid attribute name specified

Cause: An invalid attribute name was specified for an alter SQL profile operation.

Action: Verify the name of the attribute.

ORA-13836: invalid attribute value specified

Cause: An invalid attribute value was specified for an alter SQL profile operation.

Action: Verify the attribute value.

ORA-13837: invalid HASH_VALUE

Cause: An invalid HASH_VALUE was passed to a create SQL profile operation

Action: Verify the HASH_VALUE.

ORA-13838: invalid ADDRESS value

Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

ORA-13839: V$SQL row doesn"t exist with given HASH_VALUE and ADDRESS.

Cause: A HASH_VALUE and ADDRESS combination passed to the create SQL profile operation doesn"t coorespond to an existing V$SQL entry.

Action: Verify the HASH_VALUE and ADDRESS in V$SQL.

ORA-13840: Concurrent DDL Error in create SQL profile operation.

Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

ORA-13841: SQL profile named *string* already exists for a different signature/category pair

Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

ORA-13842: no SELECT privilege on DBA_SQL_PROFILES

Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA_SQL_PROFILES view.

Action: Either perform the operation as another user or get the privilege

ORA-13843: no SQL profile with name like "*string*" exists for category like "*string*"

Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

ORA-13844: no new SQL profile name or category specified.

Cause: A user called remap_stgtab_sqlprof without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

ORA-13845: invalid SQL profile XML specification provided

Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

ORA-13850: Tracing for client identifier *string* is not enabled

> **Cause:** Attempt to disable a client identifier tracing which was never enabled
>
> **Action:** Supply correct client identifier

ORA-13851: Tracing for client identifier *string* is already enabled

> **Cause:** Attempt to enable a client identifier tracing which has been already enabled
>
> **Action:** Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

ORA-13852: Tracing for service(module/action) *string* is not enabled

> **Cause:** Attempt to disable a service-level tracing which was never enabled
>
> **Action:** Supply correct service(module/action) name

ORA-13853: Tracing for service (module/action) *string* is already enabled

> **Cause:** Attempt to enable a service-level tracing which has been already enabled
>
> **Action:** Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13854: Tracing for service(module/action) *string* on instance *string* is not enabled

> **Cause:** Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance
>
> **Action:** Supply correct service(module/action) name

ORA-13855: Tracing for service (module/action) *string* on instance *string* is already enabled

> **Cause:** Attempt to enable a service-level tracing which has been already enabled on a specific instance
>
> **Action:** Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13856: Service name must be specified

> **Cause:** Omitting service name while enabling/disabling tracing or aggregation
>
> **Action:** Supply the service name

ORA-13857: Invalid module name

> **Cause:** Module name is too long (exceeding 48 characters)
>
> **Action:** Supply correct name

ORA-13858: Invalid action name

> **Cause:** Action name is too long (exceeding 32 characters)
>
> **Action:** Supply correct name

ORA-13859: Action cannot be specified without the module specification

> **Cause:** Action name is specified, but the module name is not
>
> **Action:** Supply the module name

ORA-13860: Invalid service name

> **Cause:** Service name is too long (exceeding 64 characters)
>
> **Action:** Supply correct name

ORA-13861: Statistics aggregation for client identifier *string* **is already enabled**

Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

ORA-13862: Statistics aggregation for client identifier *string* **is not enabled**

Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

ORA-13863: Statistics aggregation for service(module/action) *string* **is not enabled**

Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

ORA-13864: Statistics aggregation for service (module/action) *string* **is already enabled**

Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

ORA-13865: Module name must be specified

Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

ORA-13866: Client identifier must be specified

Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

ORA-13867: Database-wide SQL tracing is already enabled

Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

ORA-13868: Instance-wide SQL tracing on instance *string* **is not enabled**

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

ORA-13869: Instance-wide SQL tracing on instance *string* **is already enabled**

Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

ORA-13870: Database-wide SQL tracing is not enabled

Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

ORA-13871: Invalid instance name

Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

ORA-13900: missing or invalid parameter *string*

    Cause: A call to SET_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

    Action: Specify a valid value for this parameter.

ORA-13901: Object *string* **was not found.**

    Cause: An object name was passed to SET_THRESHOLD procedure that did not map to a valid object.

    Action: Specify a valid object name.

ORA-13902: The specified file *string* **is not a data file.**

    Cause: The object name was passed to a SET_THRESHOLD procedure that did not map to a valid data file.

    Action: Specify a valid data file name.

ORA-13903: Invalid combination of *string* **threshold value and operator.**

    Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

    Action: Use a positive number for the threshold value or use "greater than" operator.

ORA-13904: The file has been dropped and recreated during the procedure call.

    Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

    Action: Retry this operation.

ORA-13905: Critical or warning threshold have incorrect values

    Cause: The tablespace threshold values can be in the range 0 to 100 only.

    Action: Check the threshold values

ORA-13906: The tablepace is not of the right type.

    Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

    Action: Check the tablespace type and reissue the command.

ORA-13907: Threshold value is invalid.

    Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

    Action: Use non-negative integers only for threshold values.

ORA-13908: Invalid combination of metrics id and object type parameters.

    Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

    Action: Specify a valid combination of metrics id and object type parameters.

ORA-13909: Invalid combination of threshold value and operator.

    Cause: An attempt was made to specify an invalid combination of threshold value and operator.

    Action: Check the operator and threshold values and reissue statement.

ORA-13910: Parameter *string* **cannot be NULL.**

Cause: An attempt was made to call GET_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13911: Threshold not found

Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

ORA-13912: Critical threshold value is less than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13913: The threshold cannot be set when SYSAUX is offline.

Cause: SET_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET_THRESHOLD procedure when SYSAUX is online.

ORA-13914: Threshold notification failed.

Cause: An error occurred when sending notification for this threshold.

Action: Make sure you have enough space on SYSAUX tablespace and retry this operation.

ORA-13915: Critical byte based free space threshold value is greater than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13916: Invalid value "*string*" specified for parameter "*string*"

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-13917: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

ORA-13918: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI$_ALERT_OUTSTANDING.

Action: Do not delete from WRI$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-13919: Cannot specify values for parameter "*string*" and for parameter "*string*"

Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

ORA-13920: Threshold cannot be set when database is in read-only mode.

Cause: SET_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET_THRESHOLD procedure when database is open in read/write mode.

ORA-13951: MMON sub-action time limit exceeded

Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

ORA-13970: Invalid name of "*string*" given

Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore (_) character.

Action: Try again with a valid name

ORA-13971: *string* "*string*" unknown

Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

ORA-13972: *string* "*string*" unknown for *string* "*string*"

Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

ORA-13973: *string* unknown for *string* "*string*"

Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

ORA-13974: *string* with name "*string*" already exists

Cause: An object with the given name already exists

Action: Give a different name

ORA-13975: *string* with name "*string*" already exists for *string* "*string*"

Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

ORA-13976: Improperly-formed report tag

Cause: The top-level report tag was not built properly

Action: Make sure that the report tag is built using the common tag library function

ORA-13977: Invalid content type

Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in dbmsrep.sql

ORA-13978: Invalid reference string parameter or value

Cause: An invalid parameter/value was passed to a dbms_report API

Action: Ensure that the parameter names and values are alphanumeric.

ORA-13979: Filename too long

Cause: An invalid file name was passed to STORE_FILE

Action: Ensure that the filename is less than 500 bytes

ORA-13980: Invalid file URL

    Cause: A URL with invalid syntax was provided, either directly to the function or via an XML IMPORT or INCLUDE.

    Action: Check the URL.

ORA-13981: Invalid file URL or path prefix

    Cause: Either a URL or path prefix with invalid syntax was provided.

    Action: Check the URL

ORA-13982: Could not find file at URL provided

    Cause: The file requested could not be found in the given location.

    Action: Check the URL provided.

ORA-13983: Missing <body> tag from HTML

    Cause: An HTML document was passed to the function missing its <body> tag.

    Action: Check the HTML source.

ORA-13984: Invalid reference string

    Cause: The given reference string could not be parsed.

    Action: Check the reference string syntax.

ORA-13985: Invalid URL provided to servlet

    Cause: An invalid URL was provided to the servlet.

    Action: Check the URL.

ORA-13986: Error *string* received from XPath engine

    Cause: An error was received from the xpath library during an xpath operation.

    Action: Check xmlerr.h to understand the cause of the error.

ORA-13987: Invalid input to build common <*string*> tag

    Cause: Invalid input was given when attempting to build a common tag.

    Action: Check the function input to make sure all necessary information is given.

ORA-13988: Invalid input given to variable argument list report function.

    Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

    Action: Check the function input and try again.

ORA-13989: Invalid input given to structured argument list report function.

    Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

    Action: Check the function input and try again.

ORA-13990: Invalid tag name given to common tag callout function.

    Cause: This is an internal Server Manageability Error

    Action: Contact Oracle Support Services

ORA-14000: only one LOCAL clause may be specified

    Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

ORA-14001: LOCAL clause contradicts previosly specified GLOBAL clause

Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

ORA-14002: only one GLOBAL clause may be specified

Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

ORA-14003: GLOBAL clause contradicts previosly specified LOCAL clause

Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

ORA-14004: missing PARTITION keyword

Cause: keyword PARTITION missing

Action: supply missing keyword

ORA-14005: missing RANGE keyword

Cause: keyword RANGE missing

Action: supply missing keyword

ORA-14006: invalid partition name

Cause: a partition name of the form <identifier> is expected but not present.

Action: enter an appropriate partition name.

ORA-14007: missing LESS keyword

Cause: keyword LESS missing

Action: supply missing keyword

ORA-14008: missing THAN keyword

Cause: keyword THAN missing

Action: supply missing keyword

ORA-14009: partition bound may not be specified for a LOCAL index partition

Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, <partition-description> of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

ORA-14010: this physical attribute may not be specified for an index partition

Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14011: names assigned to resulting partitions must be distinct

Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14012: resulting partition name conflicts with that of an existing partition

Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14013: duplicate partition name

Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

ORA-14014: maximum number of partitioning columns is 16

Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

ORA-14015: too many partition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

ORA-14016: underlying table of a LOCAL partitioned index must be partitioned

Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

ORA-14017: partition bound list contains too many elements

Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14018: partition bound list contains too few elements

Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14020: this physical attribute may not be specified for a table partition

Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

ORA-14021: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

ORA-14022: creation of LOCAL partitioned cluster indices is not supported

Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with <partition description>s, if any, from the CREATE INDEX statement.

ORA-14023: creation of GLOBAL partitioned cluster indices is not supported

Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with <partition description>s from the CREATE INDEX statement.

ORA-14024: number of partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

ORA-14025: PARTITION may not be specified for a materialized view or a materialized view log

Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

ORA-14026: PARTITION and CLUSTER clauses are mutually exclusive

Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

ORA-14027: only one PARTITION clause may be specified

Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

ORA-14028: missing AT or VALUES keyword

Cause: keyword AT or VALUES missing

Action: supply missing keyword

ORA-14029: GLOBAL partitioned index must be prefixed

Cause: partitioning columns of a global partitioned index must form a prefix of the index" key columns

Action: Ensure that the GLOBAL partitioned index being created is prefixed

ORA-14030: non-existent partitioning column in CREATE TABLE statement

Cause: Partitioning column specified in CREATE TABLE statement is not one of columns of the table being created.

Action: Ensure that all columns in the partitioning column list are columns of the table being created.

ORA-14031: partitioning column may not be of type LONG or LONG RAW

Cause: Partitioning column specified by the user was of type LONG or LONG RAW, which is illegal.

Action: Ensure that no partitioning column is of type LONG or LONG RAW.

ORA-14032: partition bound of partition number *string* is too high

Cause: High bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14036: partition bound value too large for column

Cause: Length of partition bound value is longer than that of the corresponding partitioning column.

Action: Ensure that lengths of high bound values do not exceed those of corresponding partitioning columns

ORA-14037: partition bound of partition "*string*" is too high

Cause: High bound of the partition whose name (explicitly specified by the user) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14038: GLOBAL partitioned index must be prefixed

Cause: User attempted to create a GLOBAL non-prefixed partitioned index which is illegal

Action: If the user, indeed, desired to create a non-prefixed index, it must be created as LOCAL; otherwise, correct the list of key and/or partitioning columns to ensure that the index is prefixed

ORA-14039: partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose partitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or partitioning columns to ensure that the index" partitioning columns form a subset of its key columns

ORA-14041: partition bound may not be specified for resulting partitions

Cause: while parsing an ALTER {TABLE|INDEX} SPLIT PARTITION statement, <partition-description> of a resulting partition was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description(s) of partitions resulting from splitting an existing table or index partition

ORA-14042: partition bound may not be specified for a partition being moved, modified or rebuilt

Cause: while parsing an ALTER {TABLE|INDEX} MODIFY PARTITION, ALTER TABLE MOVE PARTITION, or ALTER INDEX REBUILD PARTITION statement, description of new physical attributes of the partition being moved, modified, or rebuilt was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description of new attributes of the partition being moved, modified, or rebuilt

ORA-14043: only one partition may be added

Cause: ALTER TABLE ADD PARTITION contained descriptions of more than one partition to be added

Action: Ensure that the statement contains exactly one partition definition and that it does not contain any commas

ORA-14044: only one partition may be moved

Cause: ALTER TABLE MOVE PARTITION contained descriptions of more than one partition to be moved

Action: Ensure that the statement describes exactly one partition to be moved and that it does not contain any commas

ORA-14045: only one partition may be modified

Cause: ALTER TABLE|INDEX MODIFY PARTITION contained descriptions of more than one partition to be modified

Action: Ensure that the statement describes exactly one partition to be modified and that it does not contain any commas

ORA-14046: a partition may be split into exactly two new partitions

Cause: ALTER TABLE|INDEX SPLIT PARTITION did not contain descriptions of exactly two new partitions into which an existing table or index partition was to be split

Action: Ensure that the statement describes exactly two partition into which an existing partition is to be split

ORA-14047: ALTER TABLE|INDEX RENAME may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a RENAME operation with some other operation which is illegal

Action: Ensure that RENAME operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement;

ORA-14048: a partition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a partition maintenance operation (e.g. MOVE PARTITION) with some other operation (e.g. ADD PARTITION or PCTFREE which is illegal

Action: Ensure that a partition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14049: invalid ALTER TABLE MODIFY PARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, BACKUP, ALLOCATE EXTENT, or DEALLOCATE UNUSED was specified in an ALTER TABLE MODIFY PARTITION statement for a Range or Composite Range partition.

Action: Specify only legal options.

ORA-14050: invalid ALTER INDEX MODIFY PARTITION option

Cause: An option other than INITRANS, MAXTRANS, STORAGE, or DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY PARTITION statement.

Action: Specify only legal options.

ORA-14051: invalid ALTER MATERIALIZED VIEW option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or BACKUP was specified in an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-14052: partition-extended table name syntax is disallowed in this context

Cause: User attempted to use partition-extended table name syntax in illegal context (i.e. not in FROM-clause or INSERT, DELETE, or UPDATE statement)

Action: Avoid use of partition-extended table name in contexts other those mentioned above.

ORA-14053: illegal attempt to modify *string* in *string* statement

Cause: Certain attributes of objects (e.g. tables) may be specified at creation time, but may not be modified using ALTER statement. Unfortunately, user specified one of such attributes.

Action: Ensure that ALTER statement specifies new values only for attributes which may be changed once an object has been created

ORA-14054: invalid ALTER TABLE TRUNCATE PARTITION option

Cause: Name of the partition to be truncated may be followed by DROP STORAGE or REUSE STORAGE

Action: Ensure that no options besides DROP STORAGE or REUSE STORAGE are specified with ALTER TABLE TRUNCATE PARTITION

ORA-14055: keyword REBUILD in ALTER INDEX REBUILD must immediately follow <index name>

Cause: ALTER INDEX statement contained REBUILD keyword following some index attributes (e.g. INITRANS.)

Action: Ensure that keyword REBUILD immediately follows the name of the index being altered

ORA-14056: partition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose number (partitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14057: partition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14058: partition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose number (partitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explcitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14059: partition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explcitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14060: data type or length of a table partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table partitioning column(s)

ORA-14061: data type or length of an index partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index partitioning column(s)

ORA-14062: one or more of table''s partitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more partitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aformentioned operations on a partitioned table one or more partitions of which reside in read-only tablespaces

ORA-14063: Unusable index exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index marked Index Unusable.

Action: Drop the existing index or rebuild it using ALTER INDEX REBUILD

ORA-14064: Index with Unusable partition exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index one or more partitions of which are marked Index Unusable.

Action: Drop the existing index or rebuild unusable partitions it using ALTER INDEX REBUILD PARTITION

ORA-14065: ALLOCATE STORAGE may not be specified for a partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION statement.

ORA-14066: illegal option for a non-partitioned index-organized table

Cause: An attempt was made to issue a CREATE or ALTER TABLE command on a non-partitioned IOT, but the command contains an option that is legal only for partitioned index-organized tables. Such options are: ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT.

Action: Remove the illegal option(s) from the command.

ORA-14067: duplicate TABLESPACE_NUMBER specification

Cause: TABLESPACE_NUMBER clause was specified more than once for an table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14068: TABLESPACE and TABLESPACE_NUMBER may not be both specified

Cause: Both TABLESPACE and TABLESPACE_NUMBER clauses were specified for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14069: invalid TABLESPACE_NUMBER value

Cause: The TABLESPACE_NUMBER value is not an integer between 0 and 0x7FFFFFFF

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14070: option may be specified only for partitioned indices or with REBUILD

Cause: User issued ALTER INDEX statament containing an option which is legal only for partitioned indices or in conjunction with REBUILD against a non-partitioned index. Such options are: PCTFREE, TABLESPACE, [NO]PARALLEL and INITIAL, FREELISTS, and FREELIST GROUPS inside STORAGE clause

Action: Remove illegal option(s).

ORA-14071: invalid option for an index used to enforce a constraint

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified for an index used to enforce a constraint.

Action: Choose one of the valid index options.

ORA-14072: fixed table may not be truncated

Cause: User attempted to truncate a fixed table which is illegal.

Action: Ensure that the table being truncated is not a fixed table.

ORA-14073: bootstrap table or cluster may not be truncated

Cause: User attempted to truncate a bootstrap table or cluster which is illegal

Action: Ensure that the table (or cluster) being truncated is not a bootstrap table (or cluster)

ORA-14074: partition bound must collate higher than that of the last partition

Cause: Partition bound specified in ALTER TABLE ADD PARTITION statement did not collate higher than that of the table"s last partition, which is illegal.

Action: Ensure that the partition bound of the partition to be added collates higher than that of the table"s last partition.

ORA-14075: partition maintenance operations may only be performed on partitioned indices

Cause: Index named in ALTER INDEX partition maintenance operation is not partitioned, making a partition maintenance operation, at best, meaningless

Action: Ensure that the index named in ALTER INDEX statement specifying a partition maintenance operation is, indeed, partitioned

ORA-14076: submitted alter index partition/subpartition operation is not valid for local partitioned index

Cause: User attempted to either drop, split, add or coalesce a partition or a subpartition of a local index which is illegal.

Action: Ensure that the index named in such statement is a global partitioned index.

ORA-14078: you may not drop the highest partition of a GLOBAL index

Cause: User attempted to drop highest partition of a GLOBAL index, which is illegal.

Action: Ensure that the partition specified in ALTER INDEX DROP PARTITION statement is not the highest partition of the index.

ORA-14079: illegal option for a partition marked Index Unusable

    Cause: ALTER INDEX MODIFY PARTITION statement against an index partition marked Index Unusable contained STORAGE and/or DEALLOCATE SPACE clauses which is illegal

    Action: Ensure that only valid optins are specified

ORA-14080: partition cannot be split along the specified high bound

    Cause: User attempted to split a partition along a bound which either collates higher than that of the partition to be split or lower than that of a partition immediately preceding the one to be split

    Action: Ensure that the bound along which a partition is to be split collates lower than that of the partition to be split and higher that that of a partition immediately preceding the one to be split

ORA-14081: new partition name must differ from the old partition name

    Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying <new-partition-name> which is identical to the name of the partition being renamed

    Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

ORA-14082: new partition name must differ from that of any other partition of the object

    Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying <new-partition-name> which is identical to the name of some existing partition of the object

    Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

ORA-14083: cannot drop the only partition of a partitioned table

    Cause: A drop partition command is being executed when there is only one partition in the table

    Action: Ensure that there is at least one partition. Drop table to remove all partitions

ORA-14084: you may specify TABLESPACE DEFAULT only for a LOCAL index

    Cause: User attempted to specify TABLESPACE DEFAULT for an object other than a LOCAL index, which is illegal.

    Action: Reenter the statement without TABLESPACE DEFAULT clause.

ORA-14085: partitioned table cannot have column with LONG datatype

    Cause: User tried to create a partitioned table with a LONG datatype or tried to add a LONG datatype column to a partitioned table.

    Action: LONG data types are not supported with partitioned tables. Create table without LONG column or change table to not partitioned. If adding column, do not use LONG datatype. If modifying attributes of a column to change data type to LONG, it has to be a non partitioned table.

ORA-14086: a partitioned index may not be rebuilt as a whole

    Cause: User attempted to rebuild a partitioned index using ALTER INDEX REBUILD statement, which is illegal

Action: Rebuild the index a partition at a time (using ALTER INDEX REBUILD PARTITION) or drop and recreate the entire index

ORA-14094: invalid ALTER TABLE EXCHANGE PARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING | EXCLUDING} INDEX][{WITH | WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE PARTITION

ORA-14095: ALTER TABLE EXCHANGE requires a non-partitioned, non-clustered table

Cause: The table in the EXCHANGE operation is either clustered or partitioned

Action: Ensure that the table with which the partition is being exchanged for is not partitioned or clustered.

ORA-14096: tables in ALTER TABLE EXCHANGE PARTITION must have the same number of columns

Cause: The two tables specified in the EXCHANGE have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14097: column type or size mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14098: index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14099: all rows in table do not qualify for specified partition

Cause: There is at least one row in the non partitioned table which does not qualify for the partition specified in the ALTER TABLE EXCHANGE PARTITION

Action: Ensure that all the rows in the segment qualify for the partition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that partition to find out the invalid rows and delete them.

ORA-14100: partition extended table name cannot refer to a remote object

Cause: User attempted to use partition-extended table name syntax in conjunction with remote object name which is illegal

Action: Correct the statement and reenter

ORA-14101: partition extended table name cannot refer to a synonym

Cause: User attempted to use partition-extended table name syntax in conjunction with synonym name which is illegal

Action: Correct the statement and reenter

ORA-14102: only one LOGGING or NOLOGGING clause may be specified

Cause: LOGGING was specified more than once, NOLOGGING was specified more than once, or both LOGGING and NOLOGGING were specified.

Action: Remove all but one of the LOGGING or NOLOGGING clauses and reissue the statement.

ORA-14103: LOGGING/NOLOGGING may not be combined with RECOVERABLE/UNRECOVERABLE

Cause: A statement contained both [NO]LOGGING and [UN]RECOVERABLE clauses which is disallowed.

Action: Remove one of the offending clauses. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14104: RECOVERABLE/UNRECOVERABLE may not be specified for partitioned tables/indices

Cause: CREATE TABLE/INDEX statement used to create a partitioned table/index contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14105: RECOVERABLE/UNRECOVERABLE may not be specified in this context

Cause: RECOVERABLE/UNRECOVERABLE clause is not allowed in this context.

Action: Remove offending clause. RECOVERABLE/UNRECOVERABLE may only be specified in CREATE TABLE/INDEX statement describing a non-partitioned table or index and ALTER INDEX REBUILD statement. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14106: LOGGING/NOLOGGING may not be specified for a clustered table

Cause: User attempted to specify LOGGING or NOLOGGING clausein CREATE TABLE or ALTER TABLE statement involving a clustered table

Action: Remove offending clause.

ORA-14107: partition specification is required for a partitioned object

Cause: parameter which supplies partition name is missing. This parameter is optional for non-partitioned objects, but is required for partitioned objects.

Action: supply missing parameter

ORA-14108: illegal partition-extended table name syntax

Cause: Partition to be accessed may only be specified using its name. User attempted to use a partition number or a bind variable.

Action: Modify statement to refer to a partition using its name

ORA-14109: partition-extended object names may only be used with tables

Cause: User attempted to use a partition-extended object name with an object which is not a table.

Action: Avoid using partition-extended name syntax with objects which are not tables

ORA-14110: partitioning column may not be of type ROWID

Cause: Partitioning column specified by the user was of type ROWID, which is illegal.

Action: Ensure that no partitioning column is of type ROWID.

ORA-14111: creation of a GLOBAL partitioned index on clustered tables is not supported

Cause: An attempt was made to create a GLOBAL partitioned index on a clustered table which is currently illegal.

Action: Remove PARTITION BY RANGE/HASH clause along with any partition descriptions to create a GLOBAL non-partitioned index on a clustered table

ORA-14112: RECOVERABLE/UNRECOVERABLE may not be specified for a partition or subpartition

Cause: Description of a partition or subpartition found in CREATE TABLE/INDEX statement contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. Use LOGGING or NOLOGGING instead.

ORA-14113: partitioned table cannot have column with LOB datatype

Cause: User tried to create a partitioned table with a LOB datatype or tried to add a LOB datatype column to a partitioned table.

Action: LOB data types are not supported with partitioned tables. Create table without LOB column or change table to not partitioned. If adding column, do not use LOB datatype. If modifying attributes of a column to change data type to LOB, it has to be a non partitioned table.

ORA-14114: partitioned table cannot have column with object, REF, nested table, array datatype

Cause: User tried to create a partitioned table with a object datatype (object, REF, nested table, array) or tried to add a object datatype column to a partitioned table.

Action: object data types are not supported with partitioned tables. Create table without object column or change table to not partitioned. If adding column, do not use object datatypes. If modifying attributes of a column to change data type to object, it has to be a non partitioned table.

ORA-14115: partition bound of partition number *string* is too long

Cause: Length of linear key representation of a high bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14116: partition bound of partition "*string*" is too long

Cause: Length of linear key representation of a high bound of the partition whose name (explicitly specified by the user) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14117: partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a partition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14118: CHECK constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14119: specified partition bound is too long

Cause: Length of a linear key representation of a high bound of a table partition being added or along which an existing table or index partition is being split exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14120: incompletely specified partition bound for a DATE column

Cause: An attempt was made to use a date expression whose format does not fully (i.e. day, month, and year (including century)) specify a date as a partition bound for a DATE column. The format may have been specified explicitly (using TO_DATE() function) or implicitly (NLS_DATE_FORMAT).

Action: Ensure that date format used in a partition bound for a DATE column supports complete specification of a date (i.e. day, month, and year (including century)). If NLS_DATE_FORMAT does not support complete (i.e. including the century) specification of the year, use TO_DATE() (e.g. TO_DATE("01-01-1999", "MM-DD-YYYY") to fully express the desired date.

ORA-14121: MODIFY DEFAULT ATTRIBUTES may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14122: only one REVERSE or NOREVERSE clause may be specified

Cause: Both REVERSE and NOREVERSE were specified in CREATE INDEX statement.

Action: Remove all but one of the REVERSE or NOREVERSE clauses and reissue the statement.

ORA-14123: duplicate NOREVERSE clause

Cause: NOREVERSE was specified more than once in ALTER INDEX statement.

Action: Remove all but one of the NOREVERSE clauses and reissue the statement.

ORA-14124: duplicate REVERSE clause

Cause: REVERSE was specified more than once in ALTER INDEX or CREATE INDEX statements.

Action: Remove all but one of the REVERSE clauses and reissue the statement.

ORA-14125: REVERSE/NOREVERSE may not be specified in this context

Cause: REVERSE/NOREVERSE clause is not allowed in this context.

Action: Remove offending clause. REVERSE may be specified as an attribute of an index (not of an individual partition, if creating a partitioned index) in CREATE INDEX statement and ALTER INDEX REBUILD statement. NOREVERSE may be specified only in ALTER INDEX REBUILD statement.

ORA-14126: only a \<parallel clause\> may follow description(s) of resulting partitions

Cause: Descriptions of partition(s) resulting from splitting of a table or index partition may be followed by an optional \<parallel clause\> which applies to the entire statement and which, in turn, may not be followed by any other clause.

Action: Ensure that all partition attributes appear within the parenthesized list of descriptions of resulting partitions in ALTER TABLE/INDEX SPLIT PARTITION statement.

ORA-14128: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14129: INCLUDING INDEXES must be specified as tables have enabled UNIQUE constraints

Cause: Matching UNIQUE constraints in both table are enabled and validated but INCLUDING INDEXES is not specified in ALTER TABLE EXCHANGE PARTITION|SUBPARTITION command.

Action: Disable currently enabled matching UNIQUE constraints on both tables or ensure that INCLUDING INDEXES option is used.

ORA-14130: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE PARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE PARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constrains are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14131: enabled UNIQUE constraint exists on one of the tables

Cause: One of the tables referenced in the ALTER TABLE EXCHANGE PARTITION|SUBPARTITION statement has enabled UNIQUE constraint(s) defined on it, which prevents EXCHANGE from proceeding.

Action: Disable constraints defined on tables referenced in the ALTER TABLE EXCHANGE PARTITION|SUBPARTITION statement and retry the statement.

ORA-14132: table cannot be used in EXCHANGE

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but the non-partitioned table cannot be used in the EXCHANGE because one or more of the following apply:

- it is a typed table

- it is a temporary table

- it contains ADT columns

- it contains nested-table columns

- it contains REF columns

- it contains array columns

- it is an index-organized table

- it contains LOB columns

- it is a nested table

- it is created with row dependency and the partitioned table is not

- it is created without row dependency and the partitioned table is

Action: Make sure the non-partitioned table does not violate any of the above restrictions for the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command.

ORA-14133: ALTER TABLE MOVE cannot be combined with other operations

Cause: An attempt was made to combine an ALTER TABLE MOVE statement with another operation, such as MODIFY.

Action: Make sure that MOVE is the only operation specified in ALTER TABLE statement;

ORA-14134: indexes cannot use both DESC and REVERSE

Cause: An attempt was made to make a reverse index with some index columns marked DESC.

Action: Do not use DESC in reverse indexes. The rule-based optimizer can scan indexes backwards, which allows a normal reverse index to simulate a reverse index with columns marked DESC.

ORA-14135: a LOB column cannot serve as a partitioning column

Cause: An attempt was made to specify a column of type BLOB or CLOB as a partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type BLOB or CLOB.

ORA-14136: ALTER TABLE EXCHANGE restricted by fine-grained security

Cause: User doing exchange does not have full table access due to VPD policies.

Action: Grant exempt priviliges to this user.

ORA-14137: Table in partially dropped state, submit DROP TABLE PURGE

Cause: An attempt was made to access a partitioned table in a partially dropped state.

Action: Submit DROP TABLE <table> PURGE to drop the table.

ORA-14138: An unexpected error encountered during drop table operation

Cause: Drop table encountered an unexpected error.

Action: a. Submit drop table <table> purge, or b. If the situation described in the next error on the stack can be corrected, do so. c. Contact Oracle Support.

ORA-14139: table *string.string* is already in read-only mode

Cause: an attempt was made to set a read-only table in read-only mode

Action: this DDL can only be executed on a read/write table

ORA-14140: table *string.string* is already in read/write mode

Cause: an attempt was made to set a read/write table in read/write mode

Action: this DDL can only be executed on a read-only table

ORA-14141: ALTER INDEX VISIBLE | INVISIBLE may not be combined with other operations

Cause: ALTER INDEX statement attempted to combine a VISIBLE | INVISIBLE operation with some other operation which is illegal

Action: Ensure that VISIBLE | INVISIBLE operation is the sole operation specified in ALTER INDEX statement

ORA-14142: ALTER INDEX VISIBLE | INVISIBLE may not be used with certain types of index

Cause: Using the ALTER INDEX VISIBLE | INVISIBLE statement on certain types of indexes (IOT-TOP, Cluster indexes) is illegal.

Action: Remove the option VISIBLE | INVISIBLE.

ORA-14143: CREATE INDEX INVISIBLE may not be used with this type of index

Cause: Certain types of indexes (IOT-TOP, Cluster indexes) cannot be created invisible.

Action: Remove the option INVISIBLE

ORA-14150: missing SUBPARTITION keyword

Cause: keyword SUBPARTITION missing

Action: supply missing keyword

ORA-14151: invalid table partitioning method

Cause: Invalid partitioning method was specified in CREATE TABLE statement. A table may be partitioned by RANGE, HASH, LIST, SYSTEM, or Composite Range-Hash/List/Range (R+H/L/R).

Action: Specify one of valid partitioning methods

ORA-14152: invalid number of partitions specified in PARTITIONS clause

Cause: number-of-partitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of partitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-partitions clause

ORA-14153: only one of STORE IN or <partition-description> clause may be specified

Cause: both STORE IN and <partition-description> clauses were specified in a CREATE TABLE|INDEX command

Action: Remove one of offending clauses

ORA-14154: only one of STORE IN or <subpartition-description> clause may be specified

Cause: both STORE IN and <subpartition-description> clauses were specified in a CREATE TABLE|INDEX, or ALTER TABLE ADD|SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS command for a Composite Range partitioned object

Action: Remove one of offending clauses

ORA-14155: missing PARTITION or SUBPARTITION keyword

Cause: expect either PARTITION or SUBPARTITION keyword but none was supplied

Action: supply missing keyword

ORA-14156: invalid number of subpartitions specified in [SUBPARTITIONS | SUBPARTITION TEMPLATE] clause

Cause: number-of-subpartitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of subpartitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-subpartitions clause

ORA-14157: invalid subpartition name

Cause: a subpartition name of the form <identifier> is expected but not present.

Action: enter an appropriate subpartition name.

ORA-14158: too many subpartition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many subpartition descriptions; maximum number of subpartitions is 1048575.

Action: Reduce number of subpartitions to not exceed 1024K-1.

ORA-14159: duplicate subpartition name

Cause: Name of a subpartition of a table or index being created is not unique

Action: rename subpartition(s) to ensure that their names are unique among subpartitions of the table or index being created

ORA-14160: this physical attribute may not be specified for a table subpartition

Cause: unexpected option was encountered while parsing physical attributes of a table subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14161: subpartition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified,

default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14162: subpartition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14163: subpartition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14164: subpartition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14165: MODIFY DEFAULT ATTRIBUTES FOR PARTITION may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES OF PARTITION with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14166: missing INTO keyword

    Cause: keyword INTO missing

    Action: supply missing keyword

ORA-14167: only one subpartition may be moved

    Cause: ALTER TABLE MOVE SUBPARTITION contained descriptions of more than one subpartition to be moved

    Action: Ensure that the statement describes exactly one subpartition to be moved and that it does not contain any commas

ORA-14168: only one subpartition may be modified

    Cause: ALTER TABLE | INDEX MODIFY SUBPARTITION contained descriptions of more than one subpartition to be modified

    Action: Ensure that the statement describes exactly one subpartition to be modified and that it does not contain any commas

ORA-14169: invalid ALTER TABLE MODIFY SUBPARTITION option

    Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, was specified in an ALTER TABLE MODIFY SUBPARTITION statement.

    Action: Specify only legal options.

ORA-14170: cannot specify <partition-description> clause in CREATE TABLE | INDEX

    Cause: User requested to generate default partition description(s) (possibly via PARTITIONS <number-of-partitions>) while at the same time specified <partition-description> clause which is illegal

    Action: Remove one of offending clauses.

ORA-14171: cannot specify <subpartition-description> clause in CREATE | ALTER TABLE

    Cause: User requested to generate default subpartition description(s) (possibly via SUBPARTITIONS) while at the same time specified <subpartition-description> clause which is illegal

    Action: Remove one of offending clauses.

ORA-14172: invalid ALTER TABLE EXCHANGE SUBPARTITION option

    Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING | EXCLUDING} INDEX][{WITH | WITHOUT} VALIDATION]

    Action: Ensure that no options besides INCLDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE SUBPARTITION

ORA-14173: illegal subpartition-extended table name syntax

    Cause: Subpartition to be accessed may only be specified using its name. User attempted to use a subpartition number or a bind variable.

    Action: Modify statement to refer to a subpartition using its name

ORA-14174: only a <parallel clause> may follow COALESCE PARTITION | SUBPARTITION

    Cause: ALTER TABLE COALESCE PARTITION | SUBPARTITION may be followed by an optional <parallel clause>. No partition/subpartition attributes may be specified

Action: Ensure that no partition/subpartition attribute was specified.

ORA-14175: a subpartition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a subpartition maintenance operation (e.g. MOVE SUBPARTITION) with some other operation (e.g. MODIFY PARTITION ADD SUBPARTITION or PCTFREE) which is illegal

Action: Ensure that a subpartition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with subpartitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14176: this attribute may not be specified for a hash partition

Cause: An invalid option was encountered while parsing physical attributes of a partition of an object partitioned using the HASH method. The TABLESPACE option is the only valid option for such partitions.

Action: Remove the invalid option(s).

ORA-14177: STORE-IN (Tablespace list) can only be specified for a LOCAL index on a Hash or Composite Range Hash table

Cause: STORE-IN (Tablespace list) clause was used while creating a local index on a range/list/composite range list partitioned table

Action: Do not use the STORE_IN (Tablespace list) clause while creating a local index on range/list/composite range list partitioned table

ORA-14178: STORE IN (DEFAULT) clause is not supported for hash partitioned global indexes

Cause: STORE IN (DEFAULT) is valid only for local indexes.

Action: a) Specify a tablespace list in place of DEFAULT, or b) Remove STORE IN clause and specify tablespaces individually for each index partition.

ORA-14183: TABLESPACE DEFAULT can be specified only for Composite LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for a partition of a Range/System/Hash partitioned LOCAL index object, which is illegal.

Action: Replace TABLESPACE DEFAULT with TABLESPACE <ts_name> or remove it.

ORA-14185: incorrect physical attribute specified for this index partition

Cause: unexpected option was encountered while parsing physical attributes of a local index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, PCTUSED, LOGGING and TABLESPACE; but only TABLESPACE may be specified for Hash partitions STORE IN () is also disallowed for all but Composite Range partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14186: number of sub-partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of sub-partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of sub-partitions

ORA-14187: partitioning method for LOCAL index is inconsistent with that of the underlying table

Cause: User attempted to create a LOCAL partitioned index that is not equi-partitioned with the underlying table. The partitioning types are mismatched.

Action: Correct the CREATE INDEX statement to ensure that the index partitinining method is consistent with that of the base table

ORA-14188: sub-partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose sub-partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose subpartitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or subpartitioning columns to ensure that the index" subpartitioning columns form a subset of its key columns

ORA-14189: this physical attribute may not be specified for an index subpartition

Cause: unexpected option was encountered while parsing physical attributes of an index subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14190: only one ENABLE/DISABLE ROW MOVEMENT clause can be specified

Cause: One of three possible actions caused the error: 1) ENABLE ROW MOVEMENT was specified more than once. 2) DISABLE ROW MOVEMENT was specified more than once. 3) Both ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT were specified.

Action: Remove all but one of the ENABLE ROW MOVEMENT or DISABLE ROW MOVEMENT clauses; then, reissue the command.

ORA-14191: ALLOCATE STORAGE may not be specified for Composite Range partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a range-partitioned index which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE/INDEX MODIFY PARTITION statement.

ORA-14192: cannot modify physical index attributes of a Hash index partition

Cause: User attempted to modify one of INITRANS/MAXTRANS/LOGGING/STORAGE clause for an index partition of a Hash partitioned index

Action: Remove the physical attributes one is trying to modify

ORA-14193: invalid ALTER INDEX MODIFY SUBPARTITION option

Cause: An option other than UNUSABLE, ALLOCATE EXTENT, DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY SUBPARTITION statement.

Action: Specify only legal options.

ORA-14194: only one subpartition may be rebuilt

Cause: ALTER INDEX REBUILD SUBPARTITION contained descriptions of more than one subpartition to be rebuilt

Action: Ensure that the statement describes exactly one subpartition to be rebuilt and that it does not contain any commas

ORA-14195: ALLOCATE STORAGE may not be specified for RANGE or LIST partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a range-partitioned index which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE/INDEX MODIFY PARTITION statement.

ORA-14196: Specified index cannot be used to enforce the constraint.

Cause: The index specified to enforce the constraint is unsuitable for the purpose.

Action: Specify a suitable index or allow one to be built automatically.

ORA-14201: specified subpartition bound is too long

Cause: Length of a linear key representation of a high bound of a table subpartition being added or along which an existing table or index subpartition is being split exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14202: subpartition bound of subpartition "*string*" is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14203: subpartition bound of subpartition "*string*" is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14204: subpartition bound of subpartition number *string* is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14205: subpartition bound of subpartition number *string* is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14206: table is not subpartitioned by List or Range methods

Cause: A subpartition maintenance operation such as ALTER TABLE DROP|SPLIT|MERGE SUBPARTITION can only be performed on List or Range subpartitioned objects

Action: Issue the command only against a List or Range subpartitioned object.

ORA-14207: maximum number of subpartitioning columns is 16

Cause: number of columns in a subpartitioning column list exceeded the legal limit of 16

Action: modify subpartitioning column list so that it consists of at most 16 columns

ORA-14208: lower-bound subpartition must be specified first

Cause: A higher-bound subpartition was specified before the lower-bound subpartition in ALTER TABLE MERGE SUBPARTITIONS statement.

Action: Specify lower-bound subpartition first and then higher-bound subpartition

ORA-14209: subpartitions being merged are not adjacent

Cause: Attempted to merge two subpartitions that are not adjacent to each other.

Action: Specify two subpartitions that are adjacent

ORA-14210: cannot reuse lower-bound subpartition as resulting subpartition

Cause: Attempted to reuse the lower-bound subpartition of the subpartitions being merged.

Action: Specify new resulting subpartition name or reuse the higher-bound subpartition only

ORA-14211: subpartition bound must collate higher than that of the last subpartition

Cause: Subpartition bound specified in ALTER TABLE MODIFY PARTITION ADD SUBPARTITION statement did not collate higher than that of the partition"s last subpartition.

Action: Ensure that the subpartition bound of the subpartition to be added collates higher than that of the table partition"s last subpartition.

ORA-14212: subpartition cannot be split along the specified high bound

Cause: Attempted to split a subpartition along a bound which either collates higher than that of the subpartition to be split or lower than that of a subpartition immediately preceding the one to be split

Action: Ensure that the bound along which a subpartition is to be split collates lower than that of the subpartition to be split and higher than that of a subpartition immediately preceding the one to be split

ORA-14213: VALUES LESS THAN or AT clause cannot be used for List subpartitioned tables

Cause: VALUES LESS THAN or AT clause was used for List subpartitioned tables

Action: Use VALUES (<value list>) clause for List subpartitioned tables

ORA-14214: VALUES (<value list>) cannot be used for Range subpartitioned tables

Cause: VALUES (<value list>) clause was used for Range subpartitioned tables

Action: Use VALUES LESS THAN or AT clause with Range subpartitioned tables

ORA-14215: subpartition bound list contains too many elements

Cause: Subpartition bound list contained more elements than there are subpartitioning columns

Action: Ensure that the number of elements in subpartition bound list is equal to the number of subpartitioning columns of the table or index

ORA-14216: subpartition bound list contains too few elements

Cause: Subpartition bound list contained fewer elements than there are subpartitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14217: VALUES (<value list>) clause expected

Cause: VALUES (<value list>) clause was not specified for the list subpartition being added

Action: Specify a VALUES (<value list>) clause

ORA-14251: Specified subpartition does not exist

Cause: Subpartition not found for the object.

Action: Retry with correct subpartition name.

ORA-14252: invalid ALTER TABLE MODIFY PARTITION option for a Hash partition

Cause: Only ALLOCATE EXTENT and DEALLOCATE UNUSED may be specified in ALTER TABLE MODIFY PARTITION for a Hash partition.

Action: Specify only legal options.

ORA-14253: table is not partitioned by Composite Range method

Cause: The table in a subpartition maintenance operation (ALTER TABLE EXCHANGE/MODIFY/MOVE/TRUNCATE SUBPARTITION, or ALTER TABLE MODIFY PARTITION ADD/COALESCE SUBPARTITION command must be partitioned by Composite Range method

Action: Ensure that the table is partitioned by Composite Range method

ORA-14254: cannot specify ALLOCATE STORAGE for a (Composite) Range or List partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a Range or Composite Range partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions/subpartitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION/SUBPARTITION statement. If it is desired to add storage to all subpartitions of a Composite partition, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION.

ORA-14255: table is not partitioned by Range, List, Composite Range or Composite List method

Cause: The table was not partitioned by Range, List, Composite Range or Composite List method.

Action: ALTER TABLE SPLIT/DROP PARTITION or ALTER TABLE MERGE PARTITIONS command is only valid for table partitioned by Range, List, Composite Range or Composite List methods. Ensure that the table is partitioned appropriately.

ORA-14256: invalid resulting partition description(s)

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or <subpartition-description> clause in partition description(s) in ALTER TABLE

SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS statement but the table in the maintenance operation is not a Composite Range partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range method

ORA-14257: cannot move partition other than a Range, List, System, or Hash partition

Cause: User attempt to move a partition that is not a Range,List,System, or Hash partition which is illegal

Action: Specify MOVE PARTITION for a Range,List,System, or Hash partition only

ORA-14258: invalid partition description

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or <subpartition-description> clause in ALTER TABLE ADD PARTITION statement but the table in the maintenance operation is not a Composite Range/Hash partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range/Hash method

ORA-14259: table is not partitioned by Hash method

Cause: ALTER TABLE COALESCE PARTITION is only valid for table partitioned by Hash method

Action: Specify valid ALTER TABLE option for the table, or ensure that the table is partitioned by Hash method

ORA-14260: incorrect physical attribute specified for this partition

Cause: User specified INITRANS, MAXTRANS, STORAGE, PCTFREE, PCTUSED, and/or [NO]LOGGING option to a Hash partition via ALTER TABLE ADD/MOVE PARTITION command which is illegal. Only TABLESPACE may be specified.

Action: Remove invalid option(s)

ORA-14261: partition bound may not be specified when adding this Hash partition

Cause: User specified VALUES LESS THAN clause when adding a partition (via ALTER TABLE ADD PARTITION) to a Hash partitioned table which is illegal

Action: Remove VALUES LESS THAN clause from the description of partition being added

ORA-14262: new subpartition name must differ from the old subpartition name

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying <new-subpartition-name> which is identical to the name of the subpartition being renamed

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

ORA-14263: new subpartition name must differ from that of any other subpartition of the object

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying <new-subpartition-name> which is identical to the name of some existing subpartition of the object

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

ORA-14264: table is not partitioned by Composite Range method
Cause: The table in the MODIFY DEFAULT ATTRIBUTES FOR PARTITION operation is partitioned by method other than Composite method

Action: Ensure that the table is partitioned by Composite method

ORA-14265: data type or length of a table subpartitioning column may not be changed
Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table subpartitioning column(s)

ORA-14266: data type or length of an index subpartitioning column may not be changed
Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index subpartitioning column(s)

ORA-14267: cannot specify PARALLEL clause when adding a (Composite) Range partition
Cause: User issued ALTER TABLE ADD PARTITION statement with PARALLEL clause for a Range or Composite Range partition which is illegal

Action: Remove the PARALLEL clause.

ORA-14268: subpartition "*string*" of the partition resides in offlined tablespace
Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14269: cannot exchange partition other than a Range,List,System, or Hash partition
Cause: User attempt to exchange a partition with a non-partitioned table but the specified partition is not a Range,List,System, or Hash partition which is illegal

Action: Specify EXCHANGE PARTITION for a Range,List,System, or Hash partition only

ORA-14270: table is not partitioned by Range, System, Hash or List method
Cause: The table in ALTER TABLE MODIFY PARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Range,List,System, or Hash method which is illegal.

Action: Ensure that the table is partitioned by Range,List,System, or Hash method

ORA-14271: table is not partitioned by Composite Range method

Cause: The table in ALTER TABLE MODIFY SUBPARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Composite Range method which is illegal.

Action: Ensure that the table is partitioned by Composite Range method

ORA-14272: only a partition with higher bound can be reused

Cause: User attempt to reuse a lower-bound partition in ALTER TABLE MERGE PARTITIONS statement as the resulting partition which is illegal.

Action: Use the higher-bound partition to be the resulting partition or specify a new partition name

ORA-14273: lower-bound partition must be specified first

Cause: User specified higher-bound partition before lower-bound partition in ALTER TABLE MERGE PARTITIONS statement which is illegal

Action: Specify lower-bound partition then higher-bound partition

ORA-14274: partitions being merged are not adjacent

Cause: User attempt to merge two partitions that are not adjacent to each other which is illegal

Action: Specify two partitions that are adjacent

ORA-14275: cannot reuse lower-bound partition as resulting partition

Cause: User attempt to reuse lower-bound partition of the partitions being merged which is illegal

Action: Specify new resulting partition name or reuse the higher-bound partition only

ORA-14276: EXCHANGE SUBPARTITION requires a non-partitioned, non-clustered table

Cause: The table in the ALTER TABLE EXCHANGE SUBPARTITION operation is either clustered or partitioned

Action: Ensure that the table with which the subpartition is being exchanged for is not partitioned or clustered.

ORA-14277: tables in EXCHANGE SUBPARTITION must have the same number of columns

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14278: column type or size mismatch in EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14279: index mismatch for tables in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14280: all rows in table do not qualify for specified subpartition

Cause: There is at least one row in the non partitioned table which does not qualify for the subpartition specified in the ALTER TABLE EXCHANGE SUBPARTITION

Action: Ensure that all the rows in the segment qualify for the subpartition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that subpartition to find out the invalid rows and delete them.

ORA-14281: CHECK constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14282: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14283: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constrains are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14284: one or more of table''s subpartitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more subpartitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aformentioned operations on a partitioned table one or more subpartitions of which reside in read-only tablespaces

ORA-14285: cannot COALESCE the only partition of this hash partitioned table or index

Cause: A COALESCE PARTITION command was issued when there is only one partition in the table or index, which is illegal

Action: Ensure that there is at least one partition. Drop the table or index to remove all partitions.

ORA-14286: cannot COALESCE the only subpartition of this table partition

Cause: A COALESCE SUBPARTITION command was issued when there is only one subpartition in the partition which is illegal

Action: Ensure that there is at least one subpartition. Drop partition to remove all subpartitions.

ORA-14287: cannot REBUILD a partition of a Composite Range partitioned index

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: REBUILD the index partition, a subpartition at a time

ORA-14288: index is not partitioned by Composite Range method

Cause: The index in a partition or subpartition maintenance operation (ALTER INDEX MODIFY [SUBPARTITION | DEFAULT ATTRIBUTES FOR PARTITION] or ALTER INDEX REBUILD SUBPARTITION command must be partitioned by Composite Range method

Action: None

ORA-14289: cannot make local index partition of Composite Range partitioned table unusable

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: None

ORA-14290: PRIMARY KEY constraint mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement have different PRIMARY KEY constraints.

Action: Ensure that the two tables do not have PRIMARY KEY constraints defined on any column or disable all PRIMARY KEY constraints on both tables. Then retry the operation.

ORA-14291: cannot EXCHANGE a composite partition with a non-partitioned table

Cause: A composite partition can only be exchanged with a partitioned table.

Action: Ensure that the table being exchanged is partitioned or that that the partition being exchanged is non-composite.

ORA-14292: Partitioning type of table must match subpartitioning type of composite partition

Cause: When exchanging a partitioned table with a composite partition the partitioning type of the table must match the subpartitioning type of the composite partition.

Action: Ensure that the partitioning type of partitioned table is the same as the subpartitioning type of the composite partition.

ORA-14293: Number of partitioning columns does not match number of subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the number of partitioning columns of the table must match the number of subpartitioning columns of the composite partition.

Action: Ensure that the number of partitioning columns in the partitioned table is the same as the number of subpartitioning columns in the the composite partition.

ORA-14294: Number of partitions does not match number of subpartitions

Cause: When exchanging a partitioned table with a composite partition the number of partitions of the table must match the number of subpartitions of the composite partition.

Action: Ensure that the number of partitions in the partitioned table is the same as the number of subpartitions in the the composite partition.

ORA-14295: column type or size mismatch between partitioning columns and subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the type and size of the partitioning columns of the table must match the type and size of the subpartitioning columns of the composite partition.

Action: Ensure that the type and size of the partitioning columns of the partitioned is the same as the type and size of the subpartitioning columns of the composite partition.

ORA-14296: Table block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different. For index organized tables, either the block sizes of the index or the overflow (or both) do not match.

Action: Ensure that the block sizes of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same. For index organized tables, ensure that the block sizes of both the index and the overflow of the two tables match.

ORA-14297: Index block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of indexes being exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of the corresponding pairs of indexes that need to be exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14298: LOB column block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of corresponding LOB columns of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of corresponding pairs of LOB columns of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14299: total number of partitions/subpartitions exceeds the maximum limit

Cause: The total number of combined fragments specified in partitions /subpartitions exceeds 1048575.

Action: Reissue the statement with fewer number of fragments

ORA-14301: table-level attributes must be specified before partition-level attributes

Cause: While processing an ALTER TABLE ADD COLUMN statement, table-level attributes of LOB columns were encountered after processing partition-level attributes of LOB columns or while processing CREATE TABLE statement, table-level attributes of LOB columns were encountered after processing partition descriptions.

Action: Modify the SQL statement to specify table-level attributes prior to partition-level attributes or partition descriptions; then retry the statement.

ORA-14302: only one list of added-LOB-storage-clauses can be specified in a statement

Cause: While parsing an ALTER TABLE ADD COLUMN statement, one list of added-LOB-storage-clauses was parsed when another list of added-LOB-storage-clauses was encountered. There cannot be more than one list of added-LOB-storage-clauses in a statement; all added-LOB-storage-clauses must be combined into one list.

Action: Combine all of the lists of added-LOB-storage-clauses into one list and retry the statement.

ORA-14303: partitions or subpartitions are not in the right order

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: Re-order the partitions or subpartitions in the added LOB storage clause by partition or subpartition DDL order, and retry the statement.

ORA-14304: List partitioning method expects a single partitioning column

Cause: number of columns in a partitioning column list exceeded the legal limit of 1 for List partitioned objects

Action: modify partitioning column list so that it consists of at most 1 column

ORA-14305: List value "*string*" specified twice in partition "*string*"

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14306: List value "*string*" specified twice in partitions "*string*", "*string*"

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14307: partition contains too many list values

Cause: Partition list contains more than 524288 list values

Action: Reduce the number of values to not exceed 524288 values

ORA-14308: partition bound element must be one of: string, datetime or interval literal, number, or NULL

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or NULL)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14309: Total count of list values exceeds maximum allowed

Cause: Partitioned object contains more than 524288 list values

Action: Reduce number of values to less than 524288.

ORA-14310: VALUES LESS THAN or AT clause cannot be used with List partitioned tables
Cause: VALUES LESS THAN or AT clause can be used only with Range partitioned tables
Action: Use VALUES (<value list>) clause with List partitioned tables

ORA-14311: Expecting VALUES LESS THAN or AT clause
Cause: VALUES (<value list>) clause can be used only with List partitioned tables
Action: Use VALUES LESS THAN clause with Range partitioned tables

ORA-14312: Value *string* **already exists in partition** *string*
Cause: One of the list values in the ADD PARTITION or ADD VALUES statement already exists in another partition
Action: Remove the duplicate value from the statement and try again

ORA-14313: Value *string* **does not exist in partition** *string*
Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the partition
Action: Remove the value from the statement and try again

ORA-14314: resulting List partition(s) must contain atleast 1 value
Cause: After a SPLIT/DROP VALUE of a list partition, each resulting partition(as applicable) must contain at least 1 value
Action: Ensure that each of the resulting partitions contains atleast 1 value

ORA-14315: cannot merge a partition with itself
Cause: The same partition name was specified twice for the merge operation
Action: Re-submit operation with 2 distinct partition names

ORA-14316: table is not partitioned by List method
Cause: ALTER TABLE ADD|DROP VALUES can only be performed on List partitioned objects
Action: Re-issue the command against a List partitioned object.

ORA-14317: cannot drop the last value of partition
Cause: ALTER TABLE DROP VALUES tried to drop the last value of the partition
Action: Cannot execute the command, unless two or more values exist for partition

ORA-14318: DEFAULT partition must be last partition specified
Cause: A partition description follows the one describing the default partition
Action: Ensure that the DEFAULT partition is the last partition description

ORA-14319: DEFAULT cannot be specified with other values
Cause: DEFAULT keyword has been specified along with other values when specifying the values for a list partition
Action: Ensure that if DEFAULT is specified, it is the only value specified

ORA-14320: DEFAULT cannot be specified for ADD/DROP VALUES or SPLIT
Cause: DEFAULT keyword has been specified when doing a ADD VALUES or DROP VALUES or SPLIT partition or subpartition.

Action: Ensure that DEFAULT is not specified for ADD/DROP VALUES or SPLIT partition/subpartition operation.

ORA-14321: cannot add/drop values to DEFAULT partition
Cause: A ADD/DROP VALUES operation is being done on the default partition
Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT partition

ORA-14322: DEFAULT partition already exists
Cause: A partition already exists with DEFAULT value
Action: None

ORA-14323: cannot add partition when DEFAULT partition exists
Cause: An ADD PARTITION operation cannot be executed when a partition with DEFAULT values exists
Action: Issue a SPLIT of the DEFAULT partition instead

ORA-14324: values being added already exist in DEFAULT partition
Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT partition
Action: Issue a SPLIT of the DEFAULT partition and then MERGE the split partition into the partition to which values need to be added

ORA-14325: only LOCAL indexes may be specified in this clause
Cause: A global index has been specified in the UPDATE INDEXES (..) clause
Action: Only specify local indexes when using this clause

ORA-14326: Primary index on an IOT, DOMAIN and LOB indexes may not be specified in the UPDATE INDEXES clause
Cause: A Primary index on an IOT, DOMAIN or LOB index has been specified in the UPDATE INDEXES (..) clause
Action: Do not specify any of these indexes when using this clause

ORA-14327: Some index [sub]partitions could not be rebuilt
Cause: The first phase (partition DDL and index [sub]partition placement) completed successfully. During the second phase, some of the index [sub]partitions could not be rebuilt.
Action: .

ORA-14329: domain index [sub]partitions cannot be renamed in this clause
Cause: The user tried to rename a domain index [sub]partition in the UPDATE INDEXES clause of a ALTER TABLE MOVE [SUB]PARTITION operation. This is not allowed.
Action: Leave the name blank or use the same name.

ORA-14330: Cannot drop a partition of a global hash-partitioned index
Cause: An attempt was made to drop a partition of a hash-partitioned global index.
Action: Try COALESCE PARTITION instead.

ORA-14400: inserted partition key does not map to any partition
Cause: An attempt was made to insert a record into, a Range or Composite Range object, with a concatenated partition key that is beyond the concatenated partition

bound list of the last partition -OR- An attempt was made to insert a record into a List object with a partition key that did not match the literal values specified for any of the partitions.

Action: Do not insert the key. Or, add a partition capable of accepting the key, Or add values matching the key to a partition specification

ORA-14401: inserted partition key is outside specified partition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated partition bound lists that delimit the partition named in the INSERT statement

Action: do not insert the key or insert it in another partition

ORA-14402: updating partition key column would cause a partition change

Cause: An UPDATE statement attempted to change the value of a partition key column causing migration of the row to another partition

Action: Do not attempt to update a partition key column or make sure that the new partition key is within the range containing the old partition key.

ORA-14403: cursor invalidation detected after getting DML partition lock

Cause: cursor invalidation was detected after acquiring a partition lock during an INSERT, UPDATE, DELETE statement. This error is never returned to user, because is caught in opiexe() and the DML statement is retried.

Action: nothing to be done, error should never be returned to user

ORA-14404: partitioned table contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose partitions are not completely contained in this tablespace

Action: find tables with partitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move partitions to a different tablespace

ORA-14405: partitioned index contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose partitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with partitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14406: updated partition key is beyond highest legal partition key

Cause: At attempt was made to update a record with a concatenated partition key that is beyond the concatenated partition bound list of the last partition.

Action: Do not update the key. Or, add a partition capable of accepting the key.

ORA-14407: partitioned table contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose subpartitions are not completely contained in this tablespace

Action: find tables with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move subpartitions to a different tablespace

ORA-14408: partitioned index contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose subpartitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14409: inserted partition key is outside specified subpartition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated subpartition bound lists that delimit the subpartition named in the INSERT statement

Action: do not insert the key or insert it in another subpartition

ORA-14411: The DDL cannot be run concurrently with other DDLs

Cause: Another conflicting DDL was already running.

Action: Retry after the conflicting DDL has finished.

ORA-14450: attempt to access a transactional temp table already in use

Cause: An attempt was made to access a transactional temporary table that has been already populated by a concurrent transaction of the same session.

Action: do not attempt to access the temporary table until the concurrent transaction has committed or aborted.

ORA-14451: unsupported feature with temporary table

Cause: An attempt was made to create an IOT, specify physical attributes, specify partition or parallel clause.

Action: do not do that.

ORA-14452: attempt to create, alter or drop an index on temporary table already in use

Cause: An attempt was made to create, alter or drop an index on temporary table which is already in use.

Action: All the sessions using the session-specific temporary table have to truncate table and all the transactions using transaction specific temporary table have to end their transactions.

ORA-14453: attempt to use a LOB of a temporary table, whose data has alreadybeen purged

Cause: An attempt was made to use LOB from a temporary table whose data has been dropped either because table was transaction-specific and transaction has commited or aborted, table was truncated or session which created this LOB has ended.

Action: This LOB locator is invalid and cannot be used.

ORA-14454: attempt to reference temporary table in a referential integrity constraint

Cause: An attempt was made to reference temporary table in a referencial integrity constraint. This is not supported.

Action: Use triggers.

ORA-14455: attempt to create referential integrity constraint on temporary table

Cause: An attempt was made to create a referential integrity constraint on a temporary table. This is not supported.

Action: Use triggers.

ORA-14456: cannot rebuild index on a temporary table

Cause: An attempt was made to rebuild an index on a temp table.

Action: The index data is anyway lost at end of session/transaction.

ORA-14457: disallowed Nested Table column in a Temporary table

Cause: An attempt made to create a Nested Table column in a temporary table. This is not supported.

Action: Do not specify these datatypes for temporary tables.

ORA-14458: attempt was made to create a temporary table with INDEX organization

Cause: An attempt was made to create an Index Organized Temporary table. This is not supported.

Action: Create the table with HEAP organization and the primary key.

ORA-14459: missing GLOBAL keyword

Cause: keyword GLOBAL is missing while creating temporary table.

Action: supply keyword.

ORA-14460: only one COMPRESS or NOCOMPRESS clause may be specified

Cause: COMPRESS was specified more than once, NOCOMPRESS was specified more than once, or both COMPRESS and NOCOMPRESS were specified.

Action: specify each desired COMPRESS or NOCOMPRESS clause option only once.

ORA-14461: cannot REUSE STORAGE on a temporary table TRUNCATE

Cause: REUSE STORAGE was specified with TRUNCATE on a temporary table. This is unsupported as it is meaningless.

Action: Specify DROP STORAGE instead (which is the default).

ORA-14462: cannot TRUNCATE temporary table in an autonomous transaction which is already in use by the parent transaction

Cause: An attempt was made to TRUNCATE a temporary table in an autonomous transaction which is already in use by the parent transaction.

Action: Make sure the temporary table is not being used by the parent transaction before trying to TRUNCATE in an autonomous transaction.

ORA-14463: OPERATIONS keyword not specified

Cause: OPERATIONS keyword was not specified in the Compression Clause.

Action: specify OPERATIONS in the Compression Clause.

ORA-14464: Compression Type not specified

Cause: Compression Type was not specified in the Compression Clause.

Action: specify Compression Type in the Compression Clause.

ORA-14500: LOCAL option not valid without partition name

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14501: object is not partitioned

Cause: Table or index is not partitioned. Invalid syntax.

Action: Retry the command with correct syntax.

ORA-14503: only one partition name can be specified
  Cause: More than one partition name has been specified for analyze
  Action: Specify one partition name.

ORA-14504: syntax not supported for analyze
  Cause: A partition/subpartition number or bind variable has been used
  Action: Specify a valid partition/subpartition name.

ORA-14505: LOCAL option valid only for partitioned indexes
  Cause: Incorrect syntax specified
  Action: Retry the command

ORA-14506: LOCAL option required for partitioned indexes
  Cause: Incorrect syntax specified
  Action: Retry the command

ORA-14507: partition corrupt. all rows do not fall within partition bounds
  Cause: The partition contains rows which should really be in some other partition. Possibly due to an exchange partition without validation
  Action: Delete rows in partition which do not qualify

ORA-14508: specified VALIDATE INTO table not found
  Cause: The specified table either does not exist or user does not have the proper privleges.
  Action: Specify the correct table to use.

ORA-14509: specified VALIDATE INTO table form incorrect
  Cause: The specified table does not have the proper field definitions.
  Action: Specify the correct table to use. See utlvalid.sql for more information.

ORA-14510: can specify VALIDATE INTO clause only for partitioned tables
  Cause: The VALIDATE INTO has been specified for a non partitioned table or cluster or index.
  Action: Use syntax correctly

ORA-14511: cannot perform operation on a partitioned object
  Cause: An attempt was made to perform an operation that is not allowed on partitioned tables or indexes.
  Action: Retry the command with correct syntax.

ORA-14512: cannot perform operation on a clustered object
  Cause: An attempt was made to perform an operation that is not allowed on clustered tables or indexes.
  Action: Retry the command with correct syntax.

ORA-14513: partitioning column may not be of object datatype
  Cause: Partitioning column specified by the user was an object datatype (object, REF, nested table, array) which is illegal.
  Action: Ensure that no partitioning column is an object datatype.

ORA-14514: LOCAL option not valid without subpartition name

    Cause: Incorrect syntax specified

    Action: Retry the command

ORA-14515: only one aubpartition name can be specified

    Cause: More than one subpartition name has been specified for analyze

    Action: Specify one subpartition name.

ORA-14516: subpartition corrupt. all rows do not fall within subpartition bounds

    Cause: The subpartition contains rows which should really be in some other subpartition. Possibly due to an exchange subpartition without validation

    Action: Delete rows in subpartition which do not qualify

ORA-14517: subpartition of index "*string.string*" is in unusable state

    Cause: An attempt has been made to access an index subpartition that has been marked unusable by a direct load or by a DDL operation

    Action: REBUILD the unusable index subpartition

ORA-14518: partition contains rows corresponding to values being dropped

    Cause: table partition contains rows for the values being dropped.

    Action: DELETE all rows for the values being dropped and reissue statement

ORA-14519: Conflicting tablespace blocksizes for *string string*: Tablespace *string* block size *string* [*string*] conflicts with previously specified/implied tablespace *string* block size *string* [*string*]

    Cause: An attempt has been made to create a partitioned object in a manner that would require the partitioned object to span tablespaces of more than one block size.

    Action: Ensure that all tablespaces specified in the DDL command for the given object as well as any tablespaces implicitly assigned to partitions or subpartitions of the object being created are all of the same block size.

ORA-14520: Tablespace *string* block size [*string*] does not match existing object block size [*string*]

    Cause: A DDL statement was issued that would require a tablespace of a block size different from the block size of the specified partitioned object to be assigned either: (1) As the object"s default tablespace (or one of the object"s partition-level default tablespaces, if composite partitioning is being used) OR (2) To one of the object"s partitions/subpartitions.

    Action: Specify a tablespace of the same block size as the partitioned object.

ORA-14521: Default tablespace *string* block size [*string*] for *string string* does not match existing *string* block size [*string*]

    Cause: A DDL statement was issued that would require creation of a new partition/subpartition in the object-level default tablespace of an existing partitioned object. However, the object-level default tablespace block size does not match the block size of the partitioned object.

    Action: Either (1) Modify the default tablespace of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created.

ORA-14522: Partition-level default tablespace *string* **block size [***string***] for** *string* *string* **does not match existing** *string* **block size [***string***]**

Cause: A DDL statement was issued that would require creation of a new subpartition in one of the partition-level default tablespaces of an existing composite partitioned object. However, the partition-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the partition-level default tablespace of the appropriate partition of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new subpartitions being created.

ORA-14523: Cannot co-locate [sub]partition of *string string* **with table [sub]partition because** *string* **block size [***string***] does not match table block size [***string***]**

Cause: A DDL statement was issued that would require a partition/subpartition of a local index/LOB column to be co-located with the corresponding partition/subpartition of the base table. However, this is not possible because the block sizes of the table and the LOB column/local index are different.

Action: Either (1) Specify an object-level default tablespace (or partition-level default tablespace for the appropriate partition, if composite partitioning is used) for the partitioned local index/LOB column and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created. Also ensure that neither of TABLESPACE DEFAULT and STORE IN (DEFAULT) is specified for a local index whose block size does not match that of the base table.

ORA-14530: row mismatches found in table *string.string* **and index** *string.string*

Cause: rows in table and index inconsistent

Action: run complete analyze to determine corrupt rows

ORA-14551: cannot perform a DML operation inside a query

Cause: DML operation like insert, update, delete or select-for-update cannot be performed inside a query or under a PDML slave.

Action: Ensure that the offending DML operation is not performed or use an autonomous transaction to perform the DML operation within the query or PDML slave.

ORA-14552: cannot perform a DDL, commit or rollback inside a query or DML

Cause: DDL operations like creation tables, views etc. and transaction control statements such as commit/rollback cannot be performed inside a query or a DML statement.

Action: Ensure that the offending operation is not performed or use autonomous transactions to perform the operation within the query/DML operation.

ORA-14553: cannot perform a lob write operation inside a query

Cause: A lob write operation cannot be performed inside a query or a PDML slave.

Action: Ensure that the offending lob write operation is not performed or use an autonomous transaction to perform the operation within the query or PDML slave.

ORA-14554: cannot perform requested operation during database startup

Cause: Requested operation requires the Cost Based Optimizer(CBO) which is not available during database startup. Features like partitioning, IOTs, grouping sets, and flashback cursor require the CBO.

Action: Retry the query after the database is open.

ORA-14601: Illegal to specify SUBPARTITIONS or STORE-IN while specifying a subpartition template

Cause: Cannot specify these clauses while specifying a template

Action: Correct the subpartition template clause.

ORA-14602: SUBPARTITION TEMPLATE is legal only for a composite partitioned table

Cause: SUBPARTITION TEMPLATE can be specified only for composite partitioned tables

Action: Do not use SUBPARTITION TEMPLATE on non-partitioned or non-composite partitioned tables.

ORA-14603: [SUBPARTITIONS | SUBPARTITION TEMPLATE] subpartition_count syntax is valid only for range-hash tables

Cause: This syntax is valid only if subpartitioning dimension is hash

Action: None

ORA-14604: During CREATE TABLE time it is illegal to specify SUBPARTITIONS or STORE IN once a SUBPARTITION TEMPLATE has been specified

Cause: Once a subpartition template has been specified during a CREATE TABLE it is illegal to specify SUBPARTITIONS or STORE IN anywhere else

Action: Remove either the SUBPARTITIONS | STORE IN or remove the SUBPARTITION TEMPLATE clause

ORA-14605: Name missing for subpartition / lob segment in template

Cause: A subpartition / lob segment was not specified a name in the template descriptions

Action: All subpartitions / lob segments must have names specified in the template

ORA-14606: Tablespace was specified for previous subpartitions in template but is not specified for *string*

Cause: Tablespaces may either be specified for all subpartitions or must not be specified for any subpartitions

Action: Either specify tablespaces for all or for none of the subpartitions

ORA-14607: Tablespace was not specified for previous subpartitions in template but is specified for *string*

Cause: Tablespaces may either be specified for all subpartitions or must not be specified for any subpartitions

Action: Either specify tablespaces for all or for none of the subpartitions

ORA-14608: Tablespace was specified for the previous lob segments of column *string* in template but is not specified for *string*

Cause: Tablespaces may either be specified for all lob segments of a column or must not be specified for any lob segments of this column

Action: Either specify tablespaces for all or for none of the lob segments

ORA-14609: Tablespace was not specified for the previous lob segments of column *string* **in template but is specified for** *string*

Cause: Tablespaces may either be specified for all lob segments of a column or must not be specified for any lob segments of this column

Action: Either specify tablespaces for all or for none of the lob segments

ORA-14610: Lob attributes not specified for lob column *string* **for subpartition** *string*

Cause: Lob attributes of a column must be specified for all subpartitions or must not be specified at all

Action: Ensure lob attributes of a column are specified for all subpartitions or not specified at all

ORA-14611: Duplicate subpartition name *string* **in template**

Cause: A subpartition name cannot be duplicated within the template

Action: Rename one of the subpartitions.

ORA-14612: Duplicate lob segment name *string* **for lob column** *string* **in template**

Cause: Two lob segments of the same column were given the same name in the template

Action: Rename one of the lob segments

ORA-14613: Attempt to generate name from parent name *string* **and template name** *string* **failed as the combine named would have been longer than allowed**

Cause: Any name generated from a partition name and template name must be less than the maximum permissible name for an identifier

Action: Shorten either partition or template name.

ORA-14614: List value "*string***" specified twice in subpartition "***string***"**

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14615: List value "*string***" specified twice in subpartitions "***string***", "***string***"**

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14616: table is not subpartitioned by List method

Cause: A subpartition maintenance operation, such as ALTER TABLE MODIFY SUBPARTITION ADD|DROP VALUES, was performed on a non-List subpartitioned object.

Action: Reissue the command against a List subpartitioned object.

ORA-14617: cannot add/drop values to DEFAULT subpartition

Cause: A ADD/DROP VALUES operation is being done on the default subpartition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT subpartition

ORA-14618: cannot drop the last value of subpartition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the subpartition

Action: Cannot execute the command, unless two or more values exist for subpartition

ORA-14619: resulting List subpartition(s) must contain at least 1 value
    Cause: After a SPLIT/DROP VALUE of a list subpartition, each resulting subpartition(as applicable) must contain at least 1 value

    Action: Ensure that each of the resulting subpartitions contains atleast 1 value

ORA-14620: DEFAULT subpartition already exists
    Cause: A subpartition already exists with DEFAULT value

    Action: Remove the DEFAULT value from the list specified

ORA-14621: cannot add subpartition when DEFAULT subpartition exists
    Cause: An ADD SUBPARTITION operation cannot be executed when a subpartition with DEFAULT values exists

    Action: Issue a SPLIT of the DEFAULT subpartition instead

ORA-14622: Value *string* already exists in subpartition *string*
    Cause: One of the list values in the ADD SUBPARTITION or ADD VALUES statement already exists in another subpartition

    Action: Remove the duplicate value from the statement and try again

ORA-14623: Value *string* does not exist in subpartition *string*
    Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the subpartition

    Action: Remove the value from the statement and try again

ORA-14624: DEFAULT subpartition must be last subpartition specified
    Cause: A subpartition description follows the one describing the default subpartition

    Action: Ensure that the DEFAULT subpartition is the last subpartition description

ORA-14625: subpartition contains rows corresponding to values being dropped
    Cause: table subpartition contains rows for the values being dropped.

    Action: DELETE all rows for the values being dropped and reissue statement

ORA-14626: values being added already exist in DEFAULT subpartition
    Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT subpartition

    Action: Issue a SPLIT of the DEFAULT subpartition and then MERGE the split subpartition into the subpartition to which values need to be added

ORA-14627: Invalid operation was specified on a GLOBAL partitioned index
    Cause: An invalid operation such as ALTER INDEX DROP|SPLIT SUBPARTITION was specified on the global index

    Action: Ensure that subpartition level operations are not specified on a GLOBAL index, since these are only RANGE partitioned

ORA-14628: specification of bounds is inconsistent with LIST method
    Cause: An operation such as ALTER TABLE SPLIT|ADD SUBPARTITION specified bounds that were inconsistent with List subpartitioning method

    Action: Specify VALUES/subpartition descriptions correctly for SPLIT/ADD of List subpartitions

ORA-14629: cannot drop the only subpartition of a partition

Cause: A drop subpartition command is being executed when there is only one subpartition in the partition

Action: None

ORA-14630: subpartition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14631: the partition bounds do not match the subpartition bounds of the partition

Cause: When exchanging a partitioned table with a composite partition the bounds that describe the partitions of the table must match the bounds that describe the subpartitions of the composite partition.

Action: Ensure that the bounds describing partitions in the partitioned table is the same as the bounds of the subpartitions in the the composite partition.

ORA-14632: cannot specify PARALLEL clause when adding a List subpartition

Cause: User issued ALTER TABLE ADD SUBPARTITION statement with PARALLEL clause for a List subpartition of a Range/List partitioned object which is illegal

Action: Remove the PARALLEL clause.

ORA-14633: Index maintainence clause not allowed for ADD list subpartition to a Composite partitioned table

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD hash subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-14634: Subpartition descriptions cannot be specified during the SPLIT/MERGE of a partition of a Range-List partitioned table

Cause: During a split or a merge of a partition of a range list partitioned table you cannot specify any subpartitioning information for the resulting partition (s)

Action: Remove all subpartitioning information from the DDL.

ORA-14635: only one resulting subpartition can be specified for MERGE SUBPARTITIONS

Cause: ALTER TABLE MERGE SUBPARTITIONS contained more than one resulting subpartition for the MERGE

Action: Ensure that the statement describes exactly one subpartition as the target that need to be MERGEd

ORA-14636: only 2 resulting subpartition can be specified for SPLIT SUBPARTITION

Cause: ALTER TABLE SPLIT SUBPARTITION contained more than 2 resulting subpartition for the SPLIT

Action: Ensure that the statement describes exactly 2 subpartitions as the target of the SPLIT operation

ORA-14637: cannot merge a subpartition with itself

Cause: The same subpartition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct subpartition names within the same composite partition

ORA-14638: cannot MERGE subpartitions in different Range Composite partitions

Cause: Attempted to MERGE subpartitions in different Range Composite partitions

Action: Reissue the command after ensuring that the 2 subpartitions being merged lie in the same composite partition

ORA-14639: SUBPARTITIONS clause can be specfied only for Hash, Composite Range Hash table/partition

Cause: Attempted to specify SUBPARTITIONS clause on table that is not partitioned by the Composite Range-Hash method

Action: Reissue the command after ensuring that the SUBPARTITIONS clause is not specified, to specify a template for a Composite Range List object use the SUBPARTITION TEMPLATE clause

ORA-14640: add/coalesce index partition operation is valid only for hash partitioned global indexes

Cause: User attempted to add or coalesce an index partition of a global index not partitioned by hash method.

Action: Issue the statement on a global index partitioned by hash method. or if the index is partitioned by range method consider using split/drop instead of add/coalesce.

ORA-14641: STORE-IN clause can be specified only for a Hash, Composite Range Hash table/partition

Cause: Specifying a STORE-IN clause during CREATE/ALTER of a Range, Composite Range List partitioned table which is not allowed"

Action: Re-issue the stament after removing the STORE-IN clause

ORA-14642: Bitmap index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables in the EXCHANGE have usable bitmap indexes, and the INCLUDING INDEXES option has been specified and the tables have different hakan factors.

Action: Perform the exchange with the EXCLUDING INDEXES option or alter the bitmap indexes to be unusable.

ORA-14643: Hakan factor mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: Either records_per_block has been minimized for one of the tables to be exchanged, but not the other, or the hakan factors for the tables to be exchanged are not equal.

Action: If records_per_block has been minimized for one of the tables, but not the other, either perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables, or perform alter table with the MINIMIZE RECORDS_PER_ BLOCK for both tables. If the hakan factors do not match perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables.

ORA-14644: table is not subpartitioned by Hash method

Cause: A subpartition maintenance operation such as ALTER TABLE MODIFY PARTITION COALESCE SUBPARTITION can only be performed on Hash subpartitioned objects

Action: Re-issue the command against a Hash subpartitioned object.

ORA-14645: STORE IN clause cannot be specified for Range List objects

Cause: A STORE IN clause was specified for Range List partitioned object

Action: Re-issue the command after removng the STORE IN clause

ORA-14646: Specified alter table operation involving compression cannot be performed in the presence of usable bitmap indexes

Cause: The first time a table is altered to include compression, it cannot have a usable bitmap index (partition). Subsequent alter table statements involving compression do not have this same restriction.

Action: A) Drop any bitmap indexes defined on the table, and re-create them once the operation is complete or, B) Mark all index fragments of all bitmap indexes defined on the table UNUSABLE and rebuild them once the operation is complete.

ORA-14650: operation not supported for reference-partitioned tables

Cause: Attempted to perform an operation on a reference-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

ORA-14651: reference partitioning constraint is not supported

Cause: The specified partitioning constraint was not supported for reference-partitioned tables. The partitioning constraint must be enabled, validated, and not deferrable. The partitioning constraint must not have ON DELETE SET NULL semantics.

Action: Correct the statement to specify a supported partitioning constraint.

ORA-14652: reference partitioning foreign key is not supported

Cause: The specified partitioning foreign key was not supported for reference-partitioned tables. All columns of the partitioning foreign key must be constrained NOT NULL with enabled, validated, and not deferrable constraints. Furthermore, a virtual column cannot be part of the partitioning foreign key.

Action: Correct the statement to specify a supported partitioning foreign key.

ORA-14653: parent table of a reference-partitioned table must be partitioned

Cause: Attempted to create a reference-partitioned table with a non-partitioned parent table.

Action: Correct the statement and reenter.

ORA-14654: number of partitions of reference-partitioned table must equal that of the parent table

Cause: Attempted to create a reference-partitioned table with a number of partitions which was different from that of the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

ORA-14655: reference partitioning constraint not found

Cause: Partitioning constraint specified in CREATE TABLE ... PARTITION BY REFERENCE was not one of the referential constraints on the table being created.

Action: Ensure that the specified partitioning constraint is one of the referential constraints on the table being created.

ORA-14656: cannot drop the parent of a reference-partitioned table

Cause: Attempted to drop the parent of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the parent table.

ORA-14657: cannot cascade row migration to reference-partitioned child table

Cause: Update of a parent key may require migration of rows in reference-partitioned child tables, however this is not supported because the parent key was not suitably indexed.

Action: Replace the existing index on the parent key with a unique index that does not contain any columns in addition to the parent key.

ORA-14658: specified dependent table is not affected by this operation

Cause: A table has been specified in the DEPENDENT TABLES clause that is not a reference-partitioned table affected by the operation.

Action: Correct the statement and reenter.

ORA-14659: Partitioning method of the parent table is not supported

Cause: An attempt was made to create a reference-partitioned table with an interval partitioned parent table.

Action: Do not create a reference-partitioned table with an interval partitioned parent table.

ORA-14660: parent table of a reference-partitioned table cannot be index-organized

Cause: Attempted to create a reference-partitioned table with a index-organized parent table.

Action: Correct the statement and reenter.

ORA-14661: row movement must be enabled

Cause: Attempted to disable row movement for a reference-partitioned table, although row movement was enabled for its parent table.

Action: Disable row movement for parent table before disabling row movement for the reference-partitioned table.

ORA-14662: row movement cannot be enabled

Cause: Attempted to enable row movement for a partitioned table, although row movement was disabled for a reference-partitioned child table.

Action: Enable row movement for reference-partitioned child tables before enabling row movement for the parent table.

ORA-14663: reference partitioning parent key is not supported

Cause: Parent key of the reference-partitioned table"s partitioning constraint contained virtual columns.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14700: Object(s) owned by SYS cannot be locked by non-SYS user

Cause: Attempt to issue a LOCK TABLE statement on SYS owned object(s) by a non-SYS user, user should minimally have DML privileges

Action: Re-issue LOCK TABLE statement for non-SYS user after granting DML privileges on object, or non-SYS user should connect as SYS

ORA-14701: partition-extended name or bind variable must be used for DMLs on tables partitioned by the System method

Cause: User attempted not to use partition-extended syntax for a table partitioned by the System method

Action: Must use of partition-extended syntax in contexts mentioned above.

ORA-14702: The partition number is invalid or out-of-range

Cause: Attempted to use nonnumerical value or the number was out of range of the partitions.

Action: Use a valid partition number.

ORA-14703: The AFTER clause can be used to ADD PARTITION only to a System Partitioned table.

Cause: The table is not partitioned by the System method

Action: Skip the AFTER clause.

ORA-14704: Create table as select disallowed for SYSTEM patitioned tables

Cause: User attempted to create a SYSTEM partitioned table by doing a create table as select.

Action: Do a create table followed by an insert as select into each partition.

ORA-14750: Range partitioned table with INTERVAL clause has more than one column

Cause: You attempted to create an interval partitioned table with more than one partitioning column.

Action: Use a single partitioning column.

ORA-14751: Invalid data type for partitioning column of an interval partitioned table

Cause: You attempted to use interval partitioning on a table partitioned on a column of data type other than number or date/time.

Action: Use only number or date/time columns as partitioning columns for interval partitioned tables.

ORA-14752: Interval expression is not a constant of the correct type

Cause: You attempted to use either a nonconstant interval or an interval whose data type does not correspond to the partitioning column

Action: Use only constant expressions for the interval. If the data type of partitioning column is numeric, the interval must be a numeric constant. If the data type is of type date/time, the interval must be a constant of interval type

ORA-14753: Interval cannot be zero

Cause: The interval mapped to zero.

Action: You must use a nonzero interval.

ORA-14754: Interval string is too long

Cause: The interval string was too long

Action: Specify interval using a shorter string

ORA-14755: Invalid partition specification for FOR VALUES clause.

Cause: The [SUB]PARTITION FOR VALUES (...) clause can only take constants. In addition it takes as many arguments as there are partitioning columns and the values must be coercible to the partitioning columns.

Action: Specify a valid FOR VALUES clause.

ORA-14756: Table is not partitioned by Interval method.

Cause: The table was not partitioned by Interval method.

Action: ALTER TABLE SET STORE IN is only valid for Interval partitioned tables. Ensure that the table by Interval.

ORA-14757: Table is already a range partitioned table

Cause: SET INTERVAL () is used to convert an interval partitioned table to a range partitioned table. It is not legal on a range partitioned table

Action: Use SET INTERVAL () only on an interval partitioned table.

ORA-14758: Last partition in the range section cannot be dropped

Cause: An attempt was made to drop the last range partition of an interval partitioned table.

Action: Do not attempt to drop this partition.

ORA-14759: SET INTERVAL is not legal on this table.

Cause: ALTER TABLE SET INTERVAL is only legal on a range partitioned table with a single partitioning column. Additionally this table cannot have a maxvalue partition.

Action: Use SET INTERVAL only on a valid table

ORA-14760: ADD PARTITION is not permitted on Interval partitioned objects

Cause: ALTER TABLE ADD PARTITION was attempted on an Interval partitioned object.

Action: Do not perform the operation on an Interval partitioned object. Insert a row to create the new partition.

ORA-14761: MAXVALUE partition cannot be specified for Interval partitioned objects

Cause: An attempt was made to create a partition with a MAXVALUE highbound on an Interval partitioned object.

Action: Do not create a partition with a MAXVALUE highbound.

ORA-14762: Domain index creation on interval partitioned tables is not permitted

Cause: An attempt was made to create a domain index on an interval partitioned table.

Action: Do not create a domain index on an interval partitioned table.

ORA-14763: Unable to resolve FOR VALUES clause to a partition number

Cause: Could not determine the partition corresponding to the FOR VALUES clause.

Action: Remove bind variables and dependencies on session parameters from the values specified in the FOR VALUES clause.

ORA-14764: FOR VALUES clause cannot be specified for only one partition

Cause: An attempt was made to specify the FOR VALUES clause for only one of the two partitions being merged.

Action: Specify a FOR VALUES clause for each of the two partitions being merged or do not specify the FOR VALUES clause for either.

ORA-14765: Cannot create a partition while doing a create index

Cause: An attempt was made to create a partition concurrently with index creation.

Action: Retry the statement after the index build is finished.

ORA-14766: Unable to obtain a stable metadata snapshot

Cause: This operation was not able to obtain a stable snapshot of the interval partitioning metadata.

Action: Retry the statement.

ORA-14767: Cannot specify this interval with existing high bounds

Cause: The interval specified conflicts with the existing high bound for the last partition. The combination might lead to invalid dates for high bounds in the future.

Action: If this is a CREATE TABLE, try specifying a different high bound value for the last partition, or a different interval. If this is an ALTER TABLE SET INTERVAL, please choose either a different interval, or, modify the table to change the high bound for the last partition.

ORA-14801: Hash composite partitioning is not supported

Cause: An attempt was made to partition a table using a Hash composite method.

Action: Do not partition the table by a Hash composite method.

ORA-14802: Specified operation is not permitted on Hash composite partitioned objects

Cause: An unsupported operation was attempted on a Hash composite partitioned object.

Action: Do not perform the operation on a Hash composite partitioned object.

ORA-14803: partition bound may not be specified for hash subpartitioned tables

Cause: A VALUES LESS THAN or VALUES clause was specified with a subpartition description.

Action: Remove the VALUES LESS THAN or VALUES clause from the subpartition description.

ORA-15000: command disallowed by current instance type

Cause: The user has issued a command to a conventional RDBMS instance that is only appropriate for an ASM instance. Alternatively, the user has issued a command to an ASM instance that is only appropriate for an RDBMS instance.

Action: Connect to the correct instance type and re-issue the command.

ORA-15001: diskgroup "*string*" does not exist or is not mounted

Cause: An operation failed because the diskgroup specified does not exist or is not mounted by the current ASM instance.

Action: Verify that the diskgroup name used is valid, that the diskgroup exists, and that the diskgroup is mounted by the current ASM instance.

ORA-15002: parameter LOCK_NAME_SPACE exceeds limit of *string* characters

Cause: The LOCK_NAME_SPACE initialization parameter contained a value that is too long.

Action: Correct the LOCK_NAME_SPACE initialization parameter.

ORA-15003: diskgroup "*string*" already mounted in another lock name space

Cause: The diskgroup could not be mounted by the ASM instance because it was operating in a lockspace different than another existing ASM instance which had already mounted the diskgroup.

Action: Check the LOCK_NAME_SPACE initialization parameter value, or dismount the diskgroup from the other ASM instances.

ORA-15004: alias "*string*" does not exist

Cause: The specified alias did not exist within the diskgroup.

Action: Check the alias name and diskgroup name.

ORA-15005: name "*string*" is already used by an existing alias

Cause: An existing alias in the diskgroup used the same name.

Action: Select another alias name, or drop the existing alias.

ORA-15006: template "*string*" does not exist

Cause: The specified template did not exist within the diskgroup.

Action: Check the template name and diskgroup name.

ORA-15007: name is already used by an existing template

Cause: A template with the same name already exists.

Action: Select another template name, or drop the existing template.

ORA-15008: cannot drop system template

Cause: The specified template was created by the system and must always exist for proper operation.

Action: Select another template name.

ORA-15009: ASM disk "*string*" does not exist

Cause: The specified ASM disk was not found.

Action: Check the ASM disk name.

ORA-15010: name "*string*" is already used by an existing ASM disk

Cause: The specified name was already used in this diskgroup.

Action: Specify a different ASM disk name.

ORA-15011: failure group "*string*" does not exist in diskgroup "*string*"

Cause: The specified name did not match the failure group of any disks in the diskgroup. This usually indicates that the failure group name was specified incorrectly.

Action: Check the failure group name.

ORA-15012: ASM file "*string*" does not exist

Cause: The ASM file was not found.

Action: Check the ASM file name.

ORA-15013: diskgroup "*string*" is already mounted

Cause: An ALTER DISKGROUP MOUNT command specified the name of a diskgroup which is already mounted by the current ASM instance.

Action: Check the name of the diskgroup.

ORA-15014: path "*string*" is not in the discovery set

Cause: The operating system path specified was outside the set of disks that are discovered by the instance.

Action: Specify a operating system path within the set of disks that are discovered based upon the ASM_DISKSTRING parameter. Alternatively, check the setting of the ASM_DISKSTRING parameter.

ORA-15015: Specified path "*string*" conflicts with path "*string*"

Cause: The ASM instance previously discovered specified disk with an ASM library using a different path.

Action: Use the discovery string of the ASM library to add the disk.

ORA-15016: inconsistent respecification of path "*string*"

Cause: The specified path was provided more than once with different properties.

Action: Do not provide a path more than once. Alternatively, provide consistent properties.

ORA-15017: diskgroup "*string*" cannot be mounted

Cause: The specified diskgroup could not be mounted.

Action: Check for additional errors reported.

ORA-15018: diskgroup cannot be created

Cause: The specified diskgroup could not be created.

Action: Check for additional errors reported.

ORA-15019: discovered duplicate path "*string*" for "*string*"

Cause: The discovery encountered multiple paths to the same disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15020: discovered duplicate ASM disk "*string*"

Cause: The discovery encountered two disks claiming to be the same named ASM disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15021: parameter "*string*" is not valid in *string* instance

Cause: The specified parameter was not supported when starting an instance of this type.

Action: Delete the specified parameter from the INIT.ORA file.

ORA-15023: reached maximum allowable number of disks *string*

Cause: An attempt was made to add another disk to a diskgroup which already contains the maximum number of disks allowed.

Action: Consider dropping existing disks from the diskgroup before adding additional ones, or create a new diskgroup.

ORA-15024: discovered duplicately numbered ASM disk *string*

Cause: The discovery encountered two disks claiming to have the same ASM disk number.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15025: could not open disk "*string*"

Cause: The specified disk could not be opened.

Action: Check the additional error messages, if any.

ORA-15026: disk "*string*" is not an ASM disk

Cause: The disk did not contain a valid ASM disk header.

Action: Check to see if the data on the disk has been changed by some system administrator action.

ORA-15027: active use of diskgroup "*string*" precludes its dismount

Cause: An ALTER DISKGROUP ... DISMOUNT command specified a diskgroup which had database client instances with open files in the diskgroup. Diskgroups cannot be dismounted until all open files in the diskgroup are closed by the database client instances.

Action: Stop all clients that are using this diskgroup and retry the ALTER DISKGROUP ... DISMOUNT command. The V$ASM_CLIENT fixed view in an ASM instance provides a list of its active database client instances.

ORA-15028: ASM file "*string*" not dropped; currently being accessed

Cause: An attempt was made to drop an ASM file, but the file was being accessed by one or more database instances and therefore could not be dropped.

Action: Shut down all database instances that might be accessing this file and then retry the drop command.

ORA-15029: disk "*string*" is already mounted by this instance

Cause: An attempt was made to add to a diskgroup a disk that was already mounted by the current instance as part of some (possibly other) diskgroup.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to correct the situation until the diskgroup containing the disk becomes dismounted by this instance.

ORA-15030: diskgroup name "*string*" is in use by another diskgroup

Cause: A CREATE DISKGROUP command specfied a diskgroup name that was already assigned to another diskgroup.

Action: Select a different name for the diskgroup.

ORA-15031: disk specification "*string*" matches no disks

Cause: The device specification string to a CREATE DISKGROUP command did not match any devices which could be discovered.

Action: Check the device specification string matches a disk on the system.

ORA-15032: not all alterations performed

Cause: At least one ALTER DISKGROUP action failed.

Action: Check the other messages issued along with this summary error.

ORA-15033: disk "*string*" belongs to diskgroup "*string*"

Cause: An attempt was made to ADD to a diskgroup a disk that was already part of another diskgroup, or an attempt was made to DROP / OFFLINE / ONLINE / CHECK a disk that was not part of the specified diskgroup.

Action: For ADD, check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check. For the other commands, check the name of the specified disk.

ORA-15034: disk "*string*" does not require the FORCE option

Cause: An attempt was made to add the disk to the diskgroup using the FORCE option. The disk was not found to be in use at the present time, so the FORCE option was not permitted.

Action: Avoid gratuitous use of the FORCE option.

ORA-15035: no disks belong to diskgroup "*string*"

Cause: An attempt was made to mount a diskgroup for which no member disks were discovered.

Action: Specify a valid diskgroup name that contains disks.

ORA-15036: disk "*string*" is truncated

Cause: The size of the disk, as reported by the operating system, was smaller than the size of the disk as recorded in the disk header block on the disk.

Action: Check if the system configuration has changed.

ORA-15037: disk "*string*" is smaller than mimimum of *string* MBs

Cause: The size of the disk, as reported by the operating system, was too small to allow the disk to become part of the diskgroup.

Action: Check if the system configuration is correct.

ORA-15038: disk "*string*" size mismatch with diskgroup [*string*] [*string*] [*string*]

Cause: An attempt was made to mount into a diskgroup a disk whose recorded allocation unit size, metadata block size, or physical sector size was inconsistent with the other diskgroup members.

Action: Check if the system configuration has changed.

ORA-15039: diskgroup not dropped

Cause: An attempt to drop a diskgroup failed.

Action: See the associated messages for details about why the drop was not successful.

ORA-15040: diskgroup is incomplete

Cause: Some of the disks comprising a diskgroup were not present.

Action: Check the hardware to ensure that all disks are functional. Also check that the setting of the ASM_DISKSTRING initialization parameter has not changed. Alternatively, for normal or high redundancy diskgroups, use MOUNT FORCE to offline missing disks as part of mounting the diskgroup.

ORA-15041: diskgroup space exhausted

Cause: The diskgroup ran out of space.

Action: Add more disks to the diskgroup, or delete some existing files.

ORA-15042: ASM disk "*string*" is missing

Cause: The specified disk, which is a necessary part of a diskgroup, could not be found on the system.

Action: Check the hardware configuration.

ORA-15043: ASM disk "*string*" is not a diskgroup member

Cause: The specified disk has been removed from the diskgroup, but a disk matching its name was found.

Action: Check the hardware configuration.

ORA-15044: ASM disk "*string*" is incorrectly named

Cause: Either the specified disk had its contents changed such that it no longer contained an ASM disk name in its header that matches the diskgroup information or its FAILGROUP information may have become inconsistent.

Action: Drop the disk from the diskgroup.

ORA-15045: ASM file name "*string*" is not in reference form

Cause: The ASM file name was not in a form that can be used to reference an existing file because a file/incarnation number or an alias name was not present or a template name was included.

Action: Correct the specified ASM file name.

ORA-15046: ASM file name "*string*" is not in single-file creation form

Cause: The ASM file name was not in a form that can be used to create an single file because a file/incarnation number was present.

Action: Correct the specified ASM file name.

ORA-15047: ASM file name "*string*" is not in multiple-file creation form

Cause: The ASM file name was not in a form that can be used to create multiple files because either a fully-qualified file name or an alias name was present.

Action: Correct the specified ASM file name.

ORA-15048: ASM internal files cannot be deleted

Cause: An attempt was made to delete a metadata file used by ASM to manage the diskgroup.

Action: Check the specified ASM file name.

ORA-15049: diskgroup "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK command.

Action: See the alert log for details of the errors.

ORA-15050: disk "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK DISK command.

Action: See the alert log for details of the errors.

ORA-15051: file "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK FILE command.

Action: See the alert log for details of the errors.

ORA-15052: ASM file name "*string*" is not in diskgroup "*string*"

Cause: The ASM file name did not contain a diskgroup name that specified the correct diskgroup as implied by the other arguments to the command.

Action: Correct the specified ASM file name or diskgroup name.

ORA-15053: diskgroup "*string*" contains existing files

Cause: An attempt was made to drop a diskgroup that still contains existing files.

Action: Specify the INCLUDING CONTENTS option to drop the diskgroup and all of its existing files.

ORA-15054: disk "*string*" does not exist in diskgroup "*string*"

Cause: An attempt was made to DROP (or CHECK) a disk that is not part of the specified diskgroup.

Action: Check the name of the specified disk and the specified diskgroup.

ORA-15055: unable to connect to ASM instance

Cause: The RDBMS instance was unable to connect to the required ASM instance when accessing a disk group.

Action: Check the additional error messages. May need to configure correct ASM sid or make sure the RDBMS instance has OS privileges for ASM SYSDBA.

ORA-15056: additional error message

Cause: An operating system error occured.

Action: Correct the operating system error and retry the operation.

ORA-15057: specified size of *string* MB is larger than actual size of *string* MB

Cause: A disk size expression exceeded the amount of storage actually availalable, as reported by the operating system.

Action: Specify a valid size.

ORA-15058: disk "*string*" belongs to an incompatible diskgroup

Cause: An attempt was made to ADD to a diskgroup a disk which was already part of another diskgroup. The other diskgroup was written by a more recent software release.

Action: Check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check.

ORA-15059: invalid device type for ASM disk

Cause: The device type of the discovered disk was not valid for use as an ASM disk.

Action: Check the file path and retry or exclude it from the discovery set. See the accompanying operating system error for additional information.

ORA-15060: template "*string*" does not exist

Cause: A command specified a template name, either directly or as part of an ASM file name, which did not exist.

Action: Check the template specifier in the command.

ORA-15061: ASM operation not supported [*string*]

Cause: An ASM operation was attempted that is invalid or not supported by this version of the ASM instance.

Action: This is an internal error code that is used for maintaining compatibility between software versions and should never be visible to the user; contact Oracle support Services.

ORA-15062: ASM disk is globally closed

Cause: The disk to which the I/O request was issued has gone offline or has been globally closed by the background process. Check other messages in the trace files for more information.

Action: Bring the disk online for I/Os to get through.

ORA-15063: ASM discovered an insufficient number of disks for diskgroup "*string*"

Cause: ASM was unable to find a sufficient number of disks belonging to the diskgroup to continue the operation.

Action: Check that the disks in the diskgroup are present and functioning, that the owner of the ORACLE binary has read/write permission to the disks, and that the ASM_DISKSTRING initialization parameter has been set correctly. Verify that ASM discovers the appropriate disks by querying V$ASM_DISK from the ASM instance.

ORA-15064: communication failure with ASM instance

Cause: There was a failure to communicate with the ASM instance, most likely because the connection went down.

Action: Check the accompanying error messages for more information on the reason for the failure. Note that database instances will always return this error when the ASM instance is terminated abnormally.

ORA-15065: hash collision for diskgroup names "*string*" and "*string*"

Cause: There was a collision in the group name used for the diskgroup. The diskgroup(s) cannot be mounted using colliding names.

Action: Use a different diskgroup name and also report to Oracle Support Services the two diskgroup names which collided.

ORA-15066: offlining disk "*string*" may result in a data loss

Cause: Following I/O failures, the disks holding all copies of a data block were attempted to be taken offline.

Action: Check the accompanying error messages for more information on the reason for the disk I/O failures.

ORA-15067: command or option incompatible with diskgroup redundancy

Cause: An attempt was made to use a feature which is not permitted by the diskgroup"s redundancy policy. Common examples are forcibly dropping a disk from an EXTERNAL REDUNDANCY diskgroup, using the FAILGROUP clauses with an EXTERNAL REDUNDANCY diskgroup, or using invalid template attributes.

Action: Omit the option from the command.

ORA-15068: maximum number of diskgroups *string* already mounted

Cause: An attempt was made to mount more diskgroups than the instance is capable of mounting at one time.

Action: Dismount a mounted diskgroup and retry the command.

ORA-15069: ASM file "*string*" not accessible; timed out waiting for lock

Cause: An attempt was made to access an ASM file, but the file is currently being created, resized, or deleted and therefore cannot be accessed.

Action: No action required, or try again later, after the create or resize has completed.

ORA-15070: maximum number of files *string* exceeded in diskgroup "*string*"

Cause: The diskgroup ran out of space.

Action: Delete some existing ASM files or create files in a new diskgroup.

ORA-15071: ASM disk "*string*" is already being dropped

Cause: An attempt was made to drop a disk from a diskgroup that was already in the process of being dropped from the diskgroup. Alternatively, an attempt was made to forcibly drop a disk from a diskgroup using the FORCE option that was already being forcibly dropped from the diskgroup.

Action: Check the ASM disk name and FORCE option as specified in the command.

ORA-15072: command requires at least *string* failure groups, discovered only *string*

Cause: An attempt was made to create either a normal redundancy diskgroup for which fewer than two failure groups were both specified and discovered, or a high redundancy diskgroup for which fewer than three failure groups were both specified and discovered.

Action: Check the that the command does specify the required number of failure groups, and that all of the specified disks are discovered by ASM. A query of the V$ASM_DISK fixed view will show which disks are discovered by ASM.

ORA-15073: diskgroup *string* is mounted by another ASM instance

Cause: An attempt was made to drop a diskgroup that is still mounted somewhere in the cluster by another instance.

Action: dismount the diskgroup from all nodes except the one performing the drop diskgroup command.

ORA-15074: diskgroup *string* requires rebalance completion

Cause: An attempt was made to repeatedly add or drop disks from a diskgroup. ASM could not perform the operation given the current state of the diskgroup.

Action: Manually invoke the ALTER DISKGROUP REBALANCE command and allow the rebalance to run to completion. Alternatively, invoke the ALTER DISKGROUP UNDROP DISKS command and allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

ORA-15075: disk(s) are not visible cluster-wide

Cause: An ALTER DISKGROUP ADD DISK command specified a disk that could not be discovered by one or more nodes in a RAC cluster configuration.

Action: Determine which disks are causing the problem from the GV$ASM_DISK fixed view. Check operating system permissions for the device and the storage sub-system configuration on each node in a RAC cluster that cannot identify the disk.

ORA-15076: Emulating I/O errors on the OSM disk

Cause: The disk to which the I/O request was issued is in an error emulation mode.

Action: Bring the disk online for I/Os to get through.

ORA-15077: could not locate ASM instance serving a required diskgroup

Cause: The instance failed to perform the specified operation because it could not locate a required ASM instance.

Action: Start an ASM instance and mount the required diskgroup.

ORA-15078: ASM diskgroup was forcibly dismounted

Cause: The diskgroup to which the I/O request was issued was forcibly dismounted (with the ALTER DISKGROUP DISMOUNT FORCE command) so that it could not be accessed.

Action: Mount the diskgroup to allow access again.

ORA-15079: ASM file is closed

Cause: The file to which the I/O request was issued was closed. This could have been a consequence of the diskgroup being dismounted.

Action: Make sure the diskgroup is mounted and the file is open.

ORA-15080: synchronous I/O operation to a disk failed

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Make sure that all the disks are operational.

ORA-15081: failed to submit an I/O operation to a disk

Cause: A submission of an I/O operation to a disk has failed.

Action: Make sure that all the disks are operational.

ORA-15082: ASM failed to communicate with database instance

Cause: There was a failure when ASM tried to communicate with a database instance (most likely because the connection went down).

Action: Check the accompanying error messages for more information on the reason for the failure. Note that the ASM instances may return this error when a database instance is terminated abnormally.

ORA-15083: failed to communicate with ASMB background process

Cause: A database instance failed to communicate with its ASMB background process when attempting to access an ASM file.

Action: Check the alert log for more information on the reason for the failure.

ORA-15084: ASM disk "*string*" is offline and cannot be dropped.

Cause: An attempt was made to drop a disk that is offline.

Action: Check the ASM disk name as specified in the command; or, if needed, use the DROP DISK FORCE option.

ORA-15090: handle *string* is not a valid descriptor

Cause: The file handle was not valid in this session.

Action: Submit a handle obtained from a successful call to DBMS_DISKGROUP.OPEN().

ORA-15091: operation incompatible with open handle in this session

Cause: The current session contained an open handle from the DBMS_DISKGROUP PL/SQL package which precluded performing the command.

Action: Close the hanlde with DBMS_DISKGROUP.CLOSE() before executing the command, or execute the command in a different session.

ORA-15092: I/O request size *string* is not a multiple of logical block size *string*

Cause: The length of the request was not a multiple of logical block size.

Action: Correct the error and retry the operation.

ORA-15093: buffer only contains *string* bytes, I/O requested is *string* bytes

Cause: The buffer supplied for write was too small to satisfy the request.

Action: Correct the error and retry the operation.

ORA-15094: attempted to write to file opened in read only mode

Cause: The file handle passed to DBMS_DISKGROUP.WRITE() did not have write privileges.

Action: Obtain a file handle in read-write mode and retry the write operation.

ORA-15095: reached maximum ASM file size (*string* GB)

Cause: An ASM file creation or file resize operation exceeded the maximum file size permitted by ASM.

Action: Use smaller files.

ORA-15096: lost disk write detected

Cause: A failure either by disk hardware or disk software caused a disk write to to be lost, even though ASM received acknowledgement that the write completed. Alternatively, a clustering hardware failure or a clustering software failure resulted in an ASM instance believing that another ASM instance had crashed, when in fact it was still active.

Action: The disk group is corrupt and cannot be recovered. The disk group must be recreated, and its contents restored from backups.

ORA-15097: cannot SHUTDOWN ASM instance with connected RDBMS instance

Cause: A SHUTDOWN command was issued to an ASM instance that had one or more connected RDBMS instances.

Action: Connect to each RDBMS instance and shut it down, and then reissue the SHUTDOWN command to the ASM instance. Alternatively, use the SHUTDOWN ABORT command. Note that issuing the SHUTDOWN ABORT command to an ASM instance results in abormal termination of all RDBMS instances connected to that ASM instance.

ORA-15098: file type not recognized by ASM instance

Cause: An attempt was made by DB instance to create a file for a file type that is not recognized by current version of ASM instance.

Action: Upgrade ASM to higher version that recognizes this file type.

ORA-15100: invalid or missing diskgroup name

Cause: The command did not specify a valid diskgroup name.

Action: Specify a valid diskgroup name.

ORA-15101: no action specified

Cause: The ALTER DISKGROUP command did not specify any alterations.

Action: Specify at least one operation clause.

ORA-15102: invalid POWER expression

Cause: The syntax of the POWER expression was invalid.

Action: Specify a valid POWER expression.

ORA-15103: conflicting or duplicate REPAIR options

Cause: The command specified conflicting or duplicate REPAIR keywords.

Action: Specify only one REPAIR action.

ORA-15104: conflicting CONTENTS options

Cause: The command specified conflicting or duplicate INCLUDING CONTENTS or EXCLUDING CONTENTS options.

Action: Specify only one option.

ORA-15105: missing or invalid FAILGROUP name

Cause: The command did not specify a valid failure group name.

Action: Specify a valid failure group name.

ORA-15106: missing or invalid operating system disk locator string

Cause: The command did not specify a valid operating system path for the device as a string.

Action: Specify a valid operating system path for the device.

ORA-15107: missing or invalid ASM disk name

Cause: The command did not specify a valid ASM disk name identifier.

Action: Specify a valid ASM disk name identifier.

ORA-15108: missing or invalid template name

Cause: The command did not specify a valid template name identifier.

Action: Specify a valid template name identifier.

ORA-15109: conflicting protection attributes specified

Cause: The command contained an invalid combination of the UNPROTECTED, MIRROR, or PARITY keywords.

Action: Specify only one keyword.

ORA-15110: no diskgroups mounted

Cause: No diskgroups were specified in the ASM_DISKGROUPS parameter, so instance startup or the ALTER DISKGROUP ALL MOUNT command did not mount any diskgroups.

Action: Specify valid diskgroups in the ASM_DISKGROUPS parameter or ignore the error.

ORA-15111: conflicting or duplicate STRIPE options

Cause: The command contained both a FINE and COARSE keyword, or contained the FINE keyword more than once, or contained the COARSE keyword more than once.

Action: Specify only one keyword.

ORA-15112: no diskgroups currently mounted

Cause: An ALTER DISKGROUP ALL command did not find any mounted diskgroups upon which to operate. Either instance shutdown or an ALTER DISKGROUP ALL DISMOUNT command did not dismount any diskgroups, or an ALTER DISKGROUP ALL UNDROP DISKS command did not undrop any disks.

Action: Mount the diskgroups on which you wish to operate or ignore the error.

ORA-15113: alias name "*string*" refers to a directory

Cause: The name specified referred to a directory in the alias directory and not a valid alias entry.

Action: Check the alias name and retry.

ORA-15114: missing or invalid ASM file name

Cause: The command did not specify a valid ASM file name identifier.

Action: Specify a valid ASM file name identifier.

ORA-15115: missing or invalid ASM disk size specifier

Cause: The command did not specify a valid ASM disk size.

Action: Specify a valid ASM disk size.

ORA-15116: invalid combination of ALTER DISKGROUP options

Cause: The ALTER DISKGROUP options may not be combined in this manner.

Action: Issue separate ALTER DISKGROUP commands to accomplish the desired action.

ORA-15117: command only operates on one diskgroup

Cause: An ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP command specified a list of diskgroups or the keyword ALL in a context where only a single diskgroup was permitted.

Action: Issue separate ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP commands to accomplish the desired action.

ORA-15120: ASM file name "*string*" does not begin with the ASM prefix character

Cause: A file name was specified to ASM which did not begin with the ASM prefix character (currently "+"). ASM uses the prefix to determine that a file specification is in fact an ASM file.

Action: Correct the file name specification.

ORA-15121: ASM file name "*string*" contains an invalid diskgroup name

Cause: A file name was specified that did not contain a valid diskgroup name. The diskgroup name follows immediately after the ASM prefix character. It must start with an alphabetic character, and consist of up to 30 characters which are alphabetic, numeric, or the characters "$" and "_".

Action: Correct the file name specification.

ORA-15122: ASM file name "*string*" contains an invalid file number

Cause: A numeric file name was specified which did not contain a valid ASM file number. The ASM file number follows immediately after the diskgroup name. It must be preceded by a "." character, and contain only numeric characters.

Action: Correct the file name specification.

ORA-15123: ASM file name "*string*" contains an invalid incarnation number

Cause: A numeric file name was specified which did not contain a valid ASM incarnation number. The ASM incarnation number follows immediately after the ASM file number. It must be preceded by a "." character, and contain only numeric characters.

Action: Correct the file name specification.

ORA-15124: ASM file name "*string*" contains an invalid alias name

Cause: A file name was specified which did not contain a valid ASM alias name. The ASM alias name, if present, follows immediately after the diskgroup name, in place of the ASM file number. It must be preceded by a slash, start with an alphabetic character, and consist of up to 48 characters which are alphabetic, numeric, or the characters "$", "_", "-", or "#". A space can separate two parts of an alias name.

Action: Correct the file name specification.

ORA-15125: ASM file name "*string*" contains an invalid template name

Cause: A file name was specified to ASM which did not contain a valid template name. The template name, if present, follows immediately after the ASM incarnation number or the ASM alias name, if such is used in place of the ASM file number. It must be enclosed in parenthesis, start with an alphabetic character, and consist of up to 30 characters which are alphabetic, numeric, or the characters "$" and "_".

Action: Correct the file name specification.

ORA-15126: component within ASM file name "*string*" exceeds maximum length

Cause: The maximum identifier length of 30 characters was exceeded for the diskgroup name, template name, or alias name field within the ASM file name.

Action: Correct the file name specification.

ORA-15127: ASM file name "*string*" cannot use templates

Cause: A fully qualified ASM file name was specified. Such a specification does not permit the inclusion of a template name in the ASM file name.

Action: Correct the file name specification.

ORA-15128: ASM file name "*string*" exceeds maximum length *string*

Cause: The maximum ASM file name length of 256 characters was exceeded for the combination of diskgroup name, file number, template name, alias name plus punctuation within the ASM file name.

Action: Correct the file name specification.

ORA-15129: entry "*string*" does not refer to a valid directory

Cause: The entry indicated did not refer to a directory. Attempt was made to access the contents of this directory.

Action: Correct the error and try again.

ORA-15130: diskgroup "*string*" is being dismounted

Cause: The diskgroup is being dismounted by request or because an I/O error was encountered that could not be handled by taking the disks offline. A disk cannot be offlined whenever doing so could result in all copies of a redundant extent being unavailable.

Action: Repair the hardware problem and re-mount the diskgroup. Refer to the alert log to determine which disks have failed.

ORA-15131: block *string* of file *string* in diskgroup *string* could not be read

Cause: A block could not be read because the disk containing the block is either offline or an I/O error occured while reading the block. If this is mirrored file, then all disks that contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15132: block *string* **of file** *string* **in diskgroup** *string* **could not be written**

Cause: A block could not be written because the disk containing the block is either offline or an I/O error occured while writing the block. If this is mirrored file, then insufficient disks which contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15133: instance recovery required for diskgroup *string*

Cause: An instance in the cluster crashed making instance recovery necessary.

Action: None. This error should not normally be seen by an ASM client. ASM will trap this error and retry the operation after doing instance recovery automatically.

ORA-15150: instance lock mode "*string***" conflicts with other ASM instance(s)**

Cause: Some other ASM instance used the lock name space in a conflicting mode.

Action: Shut down the other instance or start up in compatible mode. Alternatively, set the DB_UNIQUE_NAME initialization parameter to avoid the conflict.

ORA-15151: missing or invalid version number for rolling migration

Cause: The command did not sepcify a valid version number.

Action: Correct the version number in the command. It should be of the form v#.#.#.#.# or other forms with fewer numbers delimited by a period. The version number must be different from the current software version of the instance.

ORA-15152: cluster in rolling upgrade

Cause: The cluster was already in the middle of rolling upgrade.

Action: Rolling upgrade needs to be stopped before attempting to start again.

ORA-15153: cluster not in rolling upgrade

Cause: The cluster was not in rolling upgrade.

Action: Start the rolling upgrade using the ALTER SYSTEM START ROLLING command.

ORA-15154: cluster rolling upgrade incomplete

Cause: The cluster was still performing rolling upgrade.

Action: Ensure that all the instances in the cluster are upgraded before retrying the command.

ORA-15155: version incompatible with the cluster

Cause: The current software version of the instance was incompatible with the other members of the cluster.

Action: Make sure that all the members of the cluster are at the same version. If you are attempting to perform rolling upgrade, execute ALTER SYSTEM START ROLLING command. Ensure that the version being upgraded to is compatible with the existing version of the cluster.

ORA-15156: cluster in rolling upgrade from version [*string***] to [***string***]**

Cause: The current software version of the instance was incompatible with the rolling upgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling upgrade.

ORA-15157: rolling migration is not allowed

Cause: The cluster was not capable of handling ASM rolling migration.

Action: The Oracle Cluster Services is using vendor clusterware. Oracle cannot perform rolling upgrade or downgrade using vendor cluster ware. Restart ASM instances using Oracle cluster ware and retry the operation.

ORA-15158: rolling upgrade prevented by *string*

Cause: One or more instances were blocking the rolling upgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling upgrade to the cluster.

ORA-15160: rolling migration internal fatal error in module *string,string*

Cause: Rolling migration experienced a fatal error.

Action: Please contact Oracle support services.

ORA-15161: invalid SYS_CLUSTER_PROPERTIES parameter

Cause: The parameter passed in for SYS_CLUSTER_PROPERTIES is invalid

Action: Pass in the correct parameter, refer to user documentation for a list of allowed parameter values.

ORA-15162: cluster in rolling downgrade

Cause: The cluster was already in the middle of rolling downgrade.

Action: Rolling downgrade needs to be stopped before attempting to start again.

ORA-15163: cluster not in rolling downgrade

Cause: The cluster was not in rolling downgrade.

Action: Start the rolling downgrade using the ALTER SYSTEM START ROLLING command.

ORA-15164: cluster rolling downgrade incomplete

Cause: The cluster was still performing rolling downgrade.

Action: Ensure that all the instances in the cluster are downgraded before retrying the command.

ORA-15166: cluster in rolling downgrade from version [*string***] to [***string***]**

Cause: The current software version of the instance was incompatible with the rolling downgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling downgrade.

ORA-15168: rolling downgrade prevented by *string*

Cause: One or more instances were blocking the rolling downgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling downgrade to the cluster.

ORA-15169: destination "*string***" is a subdirectory of "***string***"**

Cause: Attempt to rename directory failed because the new directory name was a subdirectory of the original directory.

Action: Correct the path of the destination and try again.

ORA-15170: cannot add entry "*string***" in directory "***string***"**

Cause: Other errors prevented directory/alias creation.

Action: Correct the errors and try again.

ORA-15171: invalid syntax in the alias path after "*string*"
 Cause: An invalid alias/directory name syntax was specified.
 Action: Correct the alias path and try again.

ORA-15173: entry "*string*" does not exist in directory "*string*"
 Cause: The specified alias did not exist in the given directory.
 Action: Correct the alias path and try again.

ORA-15175: cannot create alias for diskgroup metadata file "*string*"
 Cause: An attempt was made to create an alias for a diskgroup metadata file.
 Action: Correct the alias path and try again.

ORA-15176: file "*string*" already has an alias associated with it
 Cause: An attempt was made to create an alias for a file that already had an existing alias.
 Action: Correct the file name and try again or drop existing alias.

ORA-15177: cannot operate on system aliases
 Cause: An attempt was made to modify a system alias.
 Action: Correct the alias name and try again.

ORA-15178: directory "*string*" is not empty; cannot drop this directory
 Cause: An attempt was made to drop a directory that contained valid entries.
 Action: Correct the directory path or specify the FORCE option to drop a directory that is not empty.

ORA-15179: missing or invalid alias name
 Cause: The command did not specify a valid alias identifier.
 Action: Specify a valid alias identifier.

ORA-15180: could not open dynamic library *string*, error [*string*]
 Cause: The library was not accessible
 Action: Correct the permissions of the library and try again.

ORA-15181: symbol [*string*] not found in library *string*, error [*string*]
 Cause: An error was encountered while loading the specified ASMLIB symbol.
 Action: Correct the error reported and try again.

ORA-15182: ASMLIB [*string*] version mismatch, ORACLE version [*string*]
 Cause: The ASMLIB version reported is not supported by the ORACLE binary.
 Action: Install the correct library and try again.

ORA-15183: ASMLIB initialization error [*string*]
 Cause: Unable to initialize the ASMLIB in ORACLE.
 Action: Contact ASMLIB library vendor support with the error details.

ORA-15184: ASMLIB error could not be determined [*string*] [*string*]
 Cause: An error was encountered which cannot be diagnosed further.
 Action: Contact ASMLIB libary vendor for support.

ORA-15185: could not close dynamic library *string*, **error [***string***]**

    Cause: Could not close the dynamic library.

    Action: Contact ASMLIB libary vendor for support.

ORA-15186: ASMLIB error function = [*string***], error = [***string***], mesg = [***string***]**

    Cause: An error occured during a call to function listed in the error.

    Action: The detailed message associated with the error is listed along with the error. Correct the error and try again or contact ASMLIB library vendor for support.

ORA-15192: invalid ASM disk header [*string***] [***string***] [***string***] [***string***] [***string***]**

    Cause: ASM encountered an invalid disk header.

    Action: Contact Oracle Support Services.

ORA-15196: invalid ASM block header [*string:string***] [***string***] [***string***] [***string***] [***string != string***]**

    Cause: ASM encountered an invalid metadata block.

    Action: Contact Oracle Support Services.

ORA-15197: suppressing *string* **additional ASM messages**

    Cause: The ASM command generated so many erorrs that this summary message was reported in place of many individual messages.

    Action: If the command contained multiple actions, try separating each action into its own command and executing each command by itself. Otherwise, try not to generate so many errors.

ORA-15198: operation *string* **is not yet available**

    Cause: An unimplemented operation was attempted.

    Action: Consider upgrading to later releases as they become available.

ORA-15200: initialization parameter *string* **(***string***) is not a power of two**

    Cause: The value specified for this initialization parameter was not a power of two.

    Action: Correct the initialization parameter value and restart the instance.

ORA-15201: disk *string* **contains a valid RDBMS file**

    Cause: A disk specified in a CREATE DISKGROUP or ALTER DISKGROUP ... ADD DISK command appeared to contain a file from an existing database. By default, ASM will not allow a diskgroup to be created using this disk, as a safeguard against damaging an existing database.

    Action: Check that the ASM disk specification is correct. Otherwise, when storage from a defunct database is reused as part of an ASM diskgroup, specify the FORCE option to the ASM SQL command.

ORA-15202: cannot create additional ASM internal change segment

    Cause: The mount of a diskgroup by an additional instance in a RAC cluster required more space for internal use by ASM than was available in the diskgroup.

    Action: Delete unused files from the diskgroup or add additional disks to the diskgroup and retry the operation.

ORA-15203: diskgroup *string* **contains disks from an incompatible version of ASM**

Cause: Diskgroup was created by an ASM instance with a higher compatibility setting.

Action: Use an ASM instance with the appropriate software version to mount the diskgroup.

ORA-15204: database version *string* is incompatible with diskgroup *string*

Cause: The database compatibility of the diskgroup was advanced to a later version.

Action: Upgrade the database instance to appropriate version of ORACLE.

ORA-15205: requested mirror side unavailable

Cause: The requested mirror side of a block is either unallocated or allocated on a disk that has been dropped from the diskgroup.

Action: Resubmit the request or try another mirror side.

ORA-15206: duplicate diskgroup *string* specified

Cause: A command specified the same diskgroup twice.

Action: Specify each diskgroup only once.

ORA-15210: conflicting or duplicate PERMISSION options

Cause: The PERMISSION clause contained the USER, GROUP, or OTHER keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15211: conflicting or duplicate OWNERSHIP options

Cause: The OWNERSHIP clause contained either the OWNER or the GROUP keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15212: missing or invalid OWNER or GROUP name

Cause: The command did not specify a valid name for either the OWNER or the GROUP keyword.

Action: Specify a valid name for either the OWNER or the GROUP keyword.

ORA-15213: command operates on only one attribute

Cause: More than one disk group attribute was specified in the ALTER DISKGROUP statement.

Action: Specify only one disk group attribute per ALTER DISKGROUP statement.

ORA-15214: missing or invalid attribute specification

Cause: The command did not specify a valid attribute name or a valid attribute value.

Action: Specify a valid attribute name and value pair.

ORA-15215: missing or invalid user name

Cause: The command did not specify a valid user name.

Action: Specify a valid user name.

ORA-15216: missing or invalid user group name

Cause: The command did not specify a valid user group name.

Action: Specify a valid user group name.

ORA-15217: missing or invalid timeout value after DROP AFTER

Cause: The command did not specify a valid timeout value after the DROP AFTER clause.

Action: Specify a valid timeout value after the DROP AFTER clause.

ORA-15218: timeout value exceeded range

Cause: The OFFLINE timeout value exceeded the range of 0-136 years, inclusive. 136 years are 49674 days, 1192176 hours, and 71530560 minutes.

Action: Specify a timeout value within the range of 0-136 years, inclusive.

ORA-15219: conflicting or duplicate ZONE options

Cause: The command contained one or more of the following:

- both the HOT and the COLD keywords

- both the MIRRORHOT and the MIRRORCOLD keywords

- the HOT keyword more than once

- the COLD keyword more than once

- the MIRRORHOT keyword more than once

- the MIRRORCOLD keyword more than once

Action: Specify either the HOT or the COLD keyword and either the MIRRORHOT or the MIRRORCOLD keyword, at most, once.

ORA-15220: invalid file attribute specification

Cause: The keyword UNPROTECTED, MIRROR, HIGH, FINE, or COARSE was specified in a MODIFY FILE clause. These file attributes are immutable once a file is created.

Action: Specify a ZONE keyword; for example, HOT, COLD, MIRRORHOT, or MIRRORCOLD.

ORA-15221: ASM operation requires compatible.asm of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.asm.

Action: Set the disk group attribute compatible.asm to or above the requested version.

ORA-15230: diskgroup "*string*" does not require the FORCE option

Cause: An attempt was made to MOUNT or DROP a disk group with the FORCE option.

Action: MOUNT and DROP diskgroup with the FORCE option are only permitted if the diskgroup cannot be mounted normally.

ORA-15231: advancing diskgroup compatibility would exclude connected clients

Cause: Disk group compatibility could not be advanced because connected clients were at a lower compatibility than the target value.

Action: Make sure all connected clients are at target compatibility level or higher.

ORA-15232: cannot advance diskgroup compatibility due to offline disks

Cause: Disk group compatibilty could not be advanced because some disks are offline.

Action: Retry the command after offline disks are dropped.

ORA-15233: cannot advance diskgroup compatibility due to [*string*]

    Cause: Disk group compatibilty could not be advanced because of errors.

    Action: Check the alert log for more information on the reason for the failure.

ORA-15234: target RDBMS compatibility (*string*) exceeds ASM compatibility (*string*)

    Cause: An attempt was made to advance RDBMS compatibility beyond the disk group"s ASM compatibility.

    Action: Advance ASM compatibility before advancing RDBMS compatibility.

ORA-15235: diskgroup *string* mount mode conflicts with existing mount

    Cause: The mode specified in the diskgroup mount command conflicted with the mode in which it was mounted on some other instance.

    Action: Specify a compatible mode in the diskgroup mount command.

ORA-15236: diskgroup *string* mounted in restricted mode

    Cause: The specified diskgroup was mounted in restricted mode prohibiting client access.

    Action: Dismount the diskgroup and remount it in appropriate mode.

ORA-15237: attribute *string* cannot be set in CREATE DISKGROUP

    Cause: The specified attribute may not be set with the CREATE DISKGROUP command.

    Action: Check the attribute name or use ALTER DISKGROUP SET ATTRIBUTE.

ORA-15238: *string* is not a valid value for attribute *string*

    Cause: The specified value was not valid for the attribute.

    Action: Check the attribute name and value.

ORA-15239: allocation unit size higher than *string* requires RDBMS compatibility *string*

    Cause: The allocation unit size requested exceeded the limit imposed by the RDBMS compatibility setting.

    Action: Use a smaller allocation unit size or specify a higher RDBMS compatibility setting.

ORA-15240: attribute name *string* is invalid

    Cause: The attribute name was not valid or was not recognized.

    Action: Check the attribute name.

ORA-15241: attribute *string* is read only

    Cause: The attribute value is read-only and cannot be changed.

    Action: None. The attribute value cannot be changed.

ORA-15242: could not set attribute *string*

    Cause: An error occurred while setting the attribute.

    Action: Look at the underlying error(s) on the error stack.

ORA-15243: *string* is not a valid version number

    Cause: The given version number was not valid.

    Action: Check the version number.

ORA-15244: new compatibility setting less than current [*string*]

Cause: The compatibility setting was invalid. The compatibility setting can only be advanced.

Action: Check the version number.

ORA-15245: ASM disk *string* is already being brought online

Cause: An attempt was made to bring online a disk that is already being brought online.

Action: Change the ONLINE statement to exclude the disk.

ORA-15246: cannot bring ASM disk *string* both online and then offline in the same statement

Cause: An attempt was made to bring the specified disk both online and offline in the same statement.

Action: Revise the statement to either bring the disk online or take the disk offline.

ORA-15247: cannot specify both WAIT and NOWAIT options in the same statement

Cause: An attempt was made to specify both WAIT and NOWAIT options in the same statement.

Action: Revise the statement and include at most one option.

ORA-15248: ASM attributes feature not enabled

Cause: The ASM attributes feature was not enabled.

Action: Advance disk group ASM compatibility to version 11.1.0 or newer.

ORA-15249: could not locate ASM attribute *string*

Cause: The specified attribute could not be accessed.

Action: Check the attribute name and examine underlying error(s) on the error stack.

ORA-15250: insufficient diskgroup space for rebalance completion

Cause: The command attempted to reduce the available diskgroup space below the current space used.

Action: Consult V$ASM_DISK to determine the space requirements for the diskgroup contents, and repeat the command after making the required storage available.

ORA-15251: only restricted mount is allowed in the ASM instance

Cause: The ASM instance was started in restricted mode, and an attempt was made to mount a diskgroup in non-restricted mode.

Action: Start the ASM instance in non-restricted mode and mount the diskgroup again, or mount the diskgroup in restricted mode.

ORA-15281: not all specified disks were brought ONLINE

Cause: Some of the disks specified either experienced I/O errors while being brought ONLINE, or were simultaneously brought OFFLINE or dropped in another session, or were full.

Action: Query V$ASM_DISK or use ASMCMD LSDSK to determine which disks were not brought ONLINE. Inspect any additional error messages and the alert log to determine the exact cause. If some of the disks failed, either fix the cause of

the failures or drop the disks. If some of the disks are full, either free space in the disk group or add new disks to the diskgroup.

ORA-15282: ASM disk "*string*" is not visible cluster-wide

Cause: An ALTER DISKGROUP ONLINE command specified a disk that could not be discovered by one or more nodes in a RAC cluster configuration.

Action: Check operating system permissions for the device and the storage sub-system configuration on each node in the RAC cluster that cannot identify the disk.

ORA-15283: ASM operation requires compatible.rdbms of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.rdbms.

Action: Set the disk group attribute compatible.rdbms to or above the requested version.

ORA-15284: ASM terminated ALTER DISKGROUP ONLINE

Cause: None of the disks specified by ALTER DISKGROUP ONLINE could be brought ONLINE.

Action: Inspect additional error messages and the alert log to determine why the specified disks cannot be brought ONLINE.

ORA-15285: disk "*string*" violates disk group attribute *string*

Cause: Including the specifed disk would violate a restriction imposed by the specified disk group attribute.

Action: Retry the operation while omitting the offending disk or change the attribute.

ORA-15286: could not set disk group attribute *string* due to offline disks

Cause: The specified disk group attribute could not be set because the disk group includes offline disks.

Action: Retry the operation after the offline disks in this disk group are dropped or brought online.

ORA-15287: could not set disk group attribute *string* due to incompatible disks

Cause: The specified disk group attribute could not be set because the disk group includes disks that conflict with the new value.

Action: Retry the operation after dropping the conflicting disks in this disk group.

ORA-15288: disk(s) require disk group attribute *string* clause

Cause: Some of the disks specified by the command also require the specified disk group attribute to be stated.

Action: Retry the command including an ATTRIBUTE clause for the required disk group attribute. Alternatively, omit the disks that require setting the disk group attribue. See the alert log for additional information on the disks that require setting the disk group attribute.

ORA-15289: ASM disk *string* cannot be resized beyond *string* M

Cause: A resize disk command specified a size beyond the maximum allowed for this disk.

Action: Check alert logs from all ASM instances to identify the reason for the size limitation. If there are any 10g database instances using this disk group, shut down those instances and retry the resize operation.

ORA-15290: operation not permitted on offline disk *string*

Cause: An attempt was made to specify an operation that is only permitted on disks that are online. The specified disk was not online.

Action: Online the disk or wait for online to complete before retrying the operation.

ORA-15291: ASM could not add disk "*string***" to disk group "***string***"**

Cause: An attempt was made to add a disk to a disk group while the distribution of disks in failure groups was too uneven.

Action: Add or drop disks to or from failure groups to balance their distribution in all failure groups and retry the operation.

ORA-15450: invalid volume name specifier

Cause: The volume name specified was invalid

Action: Specify a valid volume name.

ORA-15451: missing or invalid volume size specifier

Cause: The volume size specified was invalid.

Action: Specify a valid volume size.

ORA-15452: missing or invalid stripe width specifier

Cause: The volume stripe width specified was invalid.

Action: Specify a valid volume stripe width.

ORA-15453: invalid STRIPE_COLUMNS specifier

Cause: An ADD VOLUME command did not specify a valid number of stripe columns.

Action: Specify a valid number of stripe columns.

ORA-15454: ALTER DISKGROUP ALL cannot use single volume names

Cause: An ALTER DISKGROUP ALL command specified a single volume or a list of volumes

Action: Use the ALL keyword when specifying volumes on multiple diskgroups.

ORA-15455: FORCE option cannot be used when specifying ALL volumes

Cause: The FORCE option was used to disable ALL volumes.

Action: Use FORCE option to disable one volume at a time.

ORA-15456: missing or invalid volume usage specifier

Cause: The command did not specify a valid volume usage string.

Action: Specify a valid volume usage string with alphanumeric characters.

ORA-15457: first letter of the volume name is not alphabetic

Cause: A volume name was specified with a nonalphabetic first character.

Action: Set the first character of the volume name to be alphabetic.

ORA-15458: invalid character in volume name

Cause: A volume name was specified with an invalid character.

Action: Use a volume name with only alphanumeric characters.

ORA-15459: STRIPE_WIDTH of *string* **is not a power of two**

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was not a power of two.

Action: Select a STRIPE_WIDTH that is a power of two; for example, 4K, 8K, etc.

ORA-15460: volume name "*string*" is already in use

Cause: An ADD VOLUME command specified a volume name that was already used by another volume.

Action: Select a different name for the volume.

ORA-15461: STRIPE_WIDTH of *string* bytes is less than the minimum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too small.

Action: Select a larger STRIPE_WIDTH.

ORA-15462: STRIPE_WIDTH of *string* bytes is greater than the maximum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too large.

Action: Select a smaller STRIPE_WIDTH.

ORA-15463: volume size of *string*K is less then the minimum of *string*M

Cause: The volume size specified was too small.

Action: Select a larger volume size.

ORA-15464: STRIPE_COLUMNS of *string* is greater than the maximum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was that was too large.

Action: Select a smaller STRIPE_COLUMNS value.

ORA-15465: STRIPE_COLUMNS of *string* is less than the minimum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was too small.

Action: Select a larger STRIPE_COLUMNS value.

ORA-15466: volume name "*string*" does not exist

Cause: The command specified a volume name that does not exist.

Action: Ensure a valid volume name is used.

ORA-15467: volume operation is already in progress

Cause: Another command is currently operating on the specified volume.

Action: Wait a short time before retrying the command.

ORA-15468: operation not permitted; volume "*string*" currently being accessed

Cause: An attempt was made to communicate with the volume driver. The volume was being accessed by another application and, therefore, could not be changed.

Action: Shut down all applications that might be accessing this volume and then retry the command.

ORA-15469: VBG process terminated with error

Cause: A volume background process terminated with error.

Action: Wait for process to restart.

ORA-15470: VDBG process terminated with error
Cause: The volume driver background process terminated with error.
Action: Warm start instance.

ORA-15471: volume redundancy incompatible with diskgroup redundancy
Cause: An ADD VOLUME command specified a volume redundancy that was incompatible with the diskgroups redundancy.
Action: Specfy a valid volume redundancy. A volume cannot have external redundancy with a high redundancy diskgroup. Also, a volume cannot have high redundancy with an external redundancy diskgroup.

ORA-15472: volume library cannot be loaded. Platform may not support volume creation.
Cause: The volume library could not be loaded. Either the platform does not support volume operations, or there is a problem with the library.
Action: Ensure that the platform supports volumes. If the platform does support volumes, check the alert log for library loading failure information.

ORA-15473: access to a volume"s storage through an unsupported interface
Cause: An attempt was made to access or modify a volume"s storage through an unsupported interface.
Action: Use supported interfaces for access to volume devices.

ORA-15474: volume name is greater than *string* characters
Cause: An ADD VOLUME command specified a volume name that was too long.
Action: Select a smaller volume name.

ORA-15475: usage string is greater than *string* characters
Cause: The usage string specified was too long.
Action: Select a smaller usage string.

ORA-15476: resize of OFS volume must use OFS resize command
Cause: An attempt was made to resize an OFS volume through SQL.
Action: Use the supported OFS commands to resize the volume.

ORA-15477: cannot communicate with the volume driver
Cause: An attempt was made to communicate with the volume driver.
Action: Check that the ASM volume driver is loaded. If so, check the alert log to identify the reason for failure and take necessary action to prevent such failures in the future.

ORA-15478: OFSC process terminated with error
Cause: The ofs background process terminated with error
Action: Wait for process restart

ORA-15479: diskgroup version incompatible with ASM volumes
Cause: The diskgroup"s version was incompatible with creating volumes.
Action: Upgrade the diskgroup version in order to use volume functionality.

ORA-15480: error reported in the ASM volume driver

Cause: An error was reported in the ASM volume driver.

Action: Check the operating system log files to identify the reason for the failure and take necessary action to prevent such failures in the future.

ORA-15481: missing or invalid volume mountpath specifier

Cause: A invalid volume mountpath string was specified.

Action: Specify a valid volume mountpath string with alphanumeric characters.

ORA-15482: failed to create/remove path to volume device file

Cause: Improper driver installation.

Action: Check the alert log for device file creation failure information. Reload the driver using the supported installation method.

ORA-15501: cannot start workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to start the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15502: cannot stop workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to stop the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15503: cannot startup instance when procedures in "DBMS_WORKLOAD_ CAPTURE" or "DBMS_WORKLOAD_REPLAY" are in the middle of their execution

Cause: The new instance could not be started because the database was executing a procedure in either the DBMS_WORKLOAD_CAPTURE or DBMS_ WORKLOAD_REPLAY package.

Action: Start the new instance after such procedures in the given packages have finished execution.

ORA-15504: cannot start workload capture because instance *string* **not present in RESTRICTED SESSION mode**

Cause: The NO_RESTART_MODE option in DBMS_WORKLOAD_ CAPTURE.START_CAPTURE was FALSE, therefore all the active instances were expected to be in the RESTRICTED SESSION mode.

Action: Start all instances using STARTUP RESTRICT or execute ALTER SYSTEM ENABLE RESTRICTED SESSION on all active instances before issuing DBMS_ WORKLOAD_CAPTURE.START_CAPTURE.

ORA-15505: cannot start workload capture because instance *string* **encountered errors while accessing directory "***string***"**

Cause: Given instance could not access the specified CAPTURE directory or the specified CAPTURE directory already had a workload capture in it.

Action: Provide a directory object that is valid, empty and accessible from all the instances in the database cluster.

ORA-15506: cannot prepare instance *string* **for replay**

Cause: Given instance encountered unexpected errors while trying to prepare for a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15507: cannot start workload replay on instance *string*

    Cause: Given instance encountered unexpected errors while trying to start a workload replay.

    Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15508: cannot cancel workload replay on instance *string*

    Cause: Given instance encountered unexpected errors while trying to cancel a workload replay.

    Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15509: workload replay has been cancelled

    Cause: Workload replay was cancelled.

    Action: Restart the workload replay.

ORA-15510: cannot perform operation when "STATISTICS_LEVEL" is "BASIC"

    Cause: The STATISTICS_LEVEL initialization parameter was set to BASIC.

    Action: Change the STATISTICS_LEVEL initialization parameter setting to either TYPICAL or ALL.

ORA-15511: cannot process workload capture because no user sessions were recorded

    Cause: No user sessions were recorded in the given workload capture. Processing this capture failed because no user workload was captured.

    Action: Capture a workload in which at least one user session connects and performs some operations.

ORA-15512: directory "*string***" does not contain a valid processed workload capture**

    Cause: One or more files created by DBMS_WORKLOAD_REPLAY.PROCESS_ CAPTURE were missing.

    Action: Process the workload capture using DBMS_WORKLOAD_ REPLAY.PROCESS_CAPTURE and then retry the command.

ORA-15513: cannot access the input directory

    Cause: Given input directory is either invalid or inaccessible.

    Action: Verify that the input directory is valid and accessible and then retry the command.

ORA-15514: cannot find a match for the remote procedure call during replay

    Cause: The corresponding PL/SQL program was either dropped or modified.

    Action: Verify that the corresponding PL/SQL program is defined the same way during replay as it was defined during workload capture.

ORA-15515: error while replaying remote procedure call: "*string.string.string***"**

    Cause: Error encountered during the replay of a remote procedure call.

    Action: Correct the cause of the preceding error and restart workload replay.

ORA-15551: workload replay client cannot connect to database server

Cause: The server connection identifier was invalid.

Action: Restart the client with correct server connection identifier.

ORA-15552: workload replay client cannot login to database server

Cause: 1) the replay client used an invalid username or password; 2) the replay user does not have the privilege to switch user; 3) the recorded username does not exist in the replay database.

Action: 1) restart replay client with correct username and password 2) grant user switching prvilege to the replay user 3) verify whether the replay database was restored properly

ORA-15553: workload replay client cannot execute the DBMS_WORKLOAD_ REPLAY package

Cause: Workload Replay Client"s replay user did not have EXECUTE permission on the DBMS_WORKLOAD_REPLAY package.

Action: Grant execute permission on the DBMS_WORKLOAD_REPLAY package to replay user and restart the Workload Replay Client.

ORA-15554: cannot start workload replay client because the database server is not in PREPARE mode

Cause: The Workload Replay Client could not connect to the database server because the database server was not in the PREPARE mode.

Action: Put the database in PREPARE mode by using DBMS_WORKLOAD_ REPLAY.PREPARE_REPLAY, and restart the Workload Replay Client.

ORA-15555: workload replay client encountered unexpected error: "*string*"

Cause: Workload Replay Client encountered an unexpected error.

Action: Check the Workload Replay Client"s log files and the database server alert log to diagnose the problem.

ORA-15556: invalid input specified to the workload replay client

Cause: Invalid input was specified.

Action: Use the Workload Replay Client"s HELP=Y option to know more about valid input options.

ORA-15557: workload replay client cannot access the replay directory or the database version do not match the preprocessing one

Cause: The Workload Replay Client could not access the directory that contained the workload to be replayed, or the workload was preprocessed by a different version of the database.

Action: Restart the workload replay after specifying the correct replay directory, or preprocess it with the correct database.

ORA-15558: replay thread encountered unexpected error

Cause: A single replay thread got disconnected from the server due to an unexpected error.

Action: Check the Workload Replay Client"s log files and the database server alert log to diagnose the problem.

ORA-15559: workload replay client cannot open workload capture file

Cause: The Workload Replay Client could not access one or more workload capture files from the replay directory.

Action: Restart the workload replay after copying all the workload capture files to the replay directory.

ORA-15560: workload replay client cannot access the work directory

Cause: The Workload Replay Client could not access the work directory to write log files for debug information.

Action: Restart the Workload Replay Client after specifying the correct work directory.

ORA-15561: workload replay client cannot connect to the remapped connection with conn_id : *string*

Cause: The specified connection is invalid or the specified host is inaccessible.

Action: Test the specified connection using other methods and redefine the connection remapping, if necessary. Consult the view DBA_WORKLOAD_ CONNECTION_MAP to inspect connection remappings.

ORA-15562: workload replay client cannot read the DBA_WORKLOAD_ CONNECTION_MAP view

Cause: The DBA_WORKLOAD_CONNECTION_MAP view did not exist or was not accessible.

Action: Re-create the workload capture and replay views. For additional information, see the documentation.

ORA-15563: workload replay client cannot spawn new threads

Cause: The Workload Replay Client does not have enough resource (CPU or memory) to spawn new threads.

Action: Restart the workload replay after allocating more resource (CPU and memory) to the Workload Replay Client or use more hosts as replay clients to drive the workload.

ORA-15564: contents of the replay directory provided to the workload replay client do not match with the replay directory provided to the database server

Cause: The processed workload capture files given to the workload replay client directory did not match the contents of the replay directory given as input to DBMS_WORKLOAD_REPLAY.INITIALIZE_REPLAY.

Action: Provide the same processed workload capture files to both the database server and all the workload replay clients and restart the replay. If the same workload capture files were processed more than once, provide a copy of the latest processed workload capture files to all the workload replay clients and the database server.

ORA-15566: workload replay client cannot replay user call in the current version

Cause: The workload replay client encountered a user call in the captured workload that was not supported for replay in the current version.

Action: Look in the DBA_WORKLOAD_REPLAY_DIVERGENCE view for details about the call that encountered this error. Refer to the documentation for more details on the types of workload that are not supported in the current version.

ORA-15590: encountered an incomplete workload capture file

Cause: The captured workload contained one or more incomplete recording files. This can happen when the original workload capture"s FINISH_CAPTURE command timed out while waiting for all the active sessions to close their workload capture files.

Action: Incomplete capture files will not interfere with the processing and replaying of the captured workload. This is simply a warning message to point out that some database calls might not have been recorded due to FINISH_CAPTURE command timing out.

ORA-15601: Invalid value specified for parameter "*string*"

Cause: An invalid value was specified for the given parameter.

Action: Correct the value being specified for the parameter.

ORA-15602: Parameter "*string*" cannot be NULL.

Cause: An attempt was made to call a procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-15603: Action cannot be performed when database is in read-only mode.

Cause: A procedure in DBMS_AUTO_TASK_ADMIN package was invoked when database was open in read-only mode.

Action: Retry when database is open in read/write mode.

ORA-15604: Initialization parameters prevent client from being enabled.

Cause: An attempt was made to enable a client that was disabled for automatic execution by an initialization parameter.

Action: Check the related client parameters and try again.

ORA-15605: "*string*" is not a Maintenance Window

Cause: Window name passed to DBMS_AUTO_TASK_ADMIN.ENABLE procedure must be a member of the MAINTENANCE_WINDOW_GROUP.

Action: Make the window a member of the MAINTENANCE_WINDOW_ GROUP and retry the call.

ORA-16000: database open for read-only access

Cause: The database has been opened for read-only access. Attempts to modify the database using inappropriate DML or DDL statements generate this error.

Action: In order to modify the database, it must first be shut down and re-opened for read-write access.

ORA-16001: database already open for read-only access by another instance

Cause: The database has been opened for read-only access by another instance, and cannot be opened for read-write access by this instance.

Action: This instance must be opened for read-write access, or all other instances must first be shut down and re-opened for read-only access.

ORA-16002: database already open for read-write access by another instance

Cause: The database has been opened for read-write access by another instance, and cannot be opened for read-only access by this instance.

Action: This instance must be opened for read-only access, or all other instances must first be shut down and re-opened for read-write access.

ORA-16003: standby database is restricted to read-only access

Cause: To ensure its integrity, a standby database can only be opened for read-only access.

Action: Re-issue the ALTER DATABASE OPEN specifying READ ONLY.

ORA-16004: backup database requires recovery

Cause: The control file is for a backup database which requires recovery, and cannot be opened for read-only access by this instance.

Action: Perform the necessary recovery and re-open for read-only access.

ORA-16005: database requires recovery

Cause: The database requires recovery, and therefore cannot be opened for read-only access by this instance.

Action: Perform the necessary recovery and re-open for read-only access.

ORA-16006: audit_trail destination incompatible with database open mode

Cause: The audit_trail initialization parameter was set to "DB" (or TRUE), which is incompatible with a database opened for read-only access.

Action: When the database is opened for read-only access, the audit_trail initialization parameter can only be set to "OS" or "NONE" (FALSE).

ORA-16007: invalid backup control file checkpoint

Cause: The backup control file being opened for read-only access does not contain a valid control file checkpoint. Therefore the database cannot be opened for read-only access.

Action: First open the database for read-write access which will result in valid control file checkpoint. Then re-open the database for read-only access.

ORA-16008: indeterminate control file checkpoint

Cause: The control file for the database being opened for read-only access was created via CREATE CONTROLFILE. Therefore a control file checkpoint could not be calculated and the database cannot be opened for read-only access.

Action: First open the database for read-write access which will result in valid control file checkpoint. Then re-open the database for read-only access.

ORA-16009: remote archive log destination must be a STANDBY database

Cause: The database associated with the archive log destination service name is other than the required STANDBY type database. Remote archival of redo log files is not allowed to non-STANDBY database instances.

Action: Take the necessary steps to create the required compatible STANDBY database before retrying the ARCHIVE LOG processing.

ORA-16011: Archivelog Remote File Server process in Error state

Cause: The archivelog remote file server (RFS) process at the specified standby database site has experienced an unrecoverable error and is unable to receive further archive log data.

Action: Correct the problem at the standby database site.

ORA-16012: Archive log standby database identifier mismatch

Cause: The database identifiers of the Primary and Standby database do not match. Remote archival of redo log files is not allowed to incompatible STANDBY database instances.

Action: Take the necessary steps to create the required compatible STANDBY database before retrying the ARCHIVE LOG processing.

ORA-16013: log *string* sequence# *string* does not need archiving

Cause: An attempt was made to archive the named file manually, but the file did not require archiving. The file had previously been successfully archived.

Action: No action is required.

ORA-16014: log *string* sequence# *string* not archived, no available destinations

Cause: An attempt was made to archive the named log, but the archive was unsuccessful. The archive failed because there were no archive log destinations specified or all destinations experienced debilitating errors.

Action: Verify that archive log destinations are being specified and/or take the necessary step to correct any errors that may have occurred.

ORA-16015: log *string* sequence# *string* not archived, media recovery disabled

Cause: An attempt was made to archive the named log, but the archive was unsuccessful. A standby archive log destination was specified and the database was not media recovery enabled. This is not allowed.

Action: Disable the standby destination or enable media recovery and retry.

ORA-16016: archived log for thread *string* sequence# *string* unavailable

Cause: The managed standby database recovery operation has timed out waiting for the requested archived log file.

Action: Verify that the primary database is still archiving redo logs to the standby recovery database site and reissue the RECOVER STANDBY DATABASE WAIT command.

ORA-16017: cannot use LOG_ARCHIVE_DUPLEX_DEST without a primary archive destination

Cause: The parameter LOG_ARCHIVE_DUPLEX_DEST was set to a non-NULL value when the primary archive destination was set to NULL explicitly.

Action: Set the primary archive destination to a valid non-NULL value.

ORA-16018: cannot use *string* with LOG_ARCHIVE_DEST_n or DB_RECOVERY_ FILE_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when a LOG_ ARCHIVE_DEST_n (n = 1...10) parameter was encountered while fetching initialization parameters. 2) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when a LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 3) A LOG_ARCHIVE_DEST_ n parameter was in use when an ALTER SYSTEM command was used to define a value for either the LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter. 4) Parameter DB_RECOVERY_FILE_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST.

Action: Eliminate any incompatible parameter definitions.

ORA-16019: cannot use *string* with LOG_ARCHIVE_DEST or LOG_ARCHIVE_ DUPLEX_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when the specified LOG_ARCHIVE_DEST_n (n = 1...10) or DB_RECOVERY_FILE_DEST parameter was encountered while fetching initialization parameters. 2) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to

define a value for the specified LOG_ARCHIVE_DEST_n or DB_RECOVERY_ FILE_DEST parameter. 3) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when the specified LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 4) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n parameter.

Action: Eliminate any incompatible parameter definitions.

ORA-16020: less destinations available than specified by LOG_ARCHIVE_MIN_ SUCCEED_DEST

Cause: With automatic archiving enabled, the number of archive log destinations that could be used for the database was less than the LOG_ARCHIVE_MIN_ SUCCEED_DEST parameter value.

Action: Either adjust the settings of the log archive destination parameters, or lower the value of LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16021: session *string* destination cannot be the same as session *string* destination

Cause: An attempt was made to change the first specified archive log parameter using ALTER SESSION to have a destination value that duplicates the session-level destination value of the second specified archive log parameter.

Action: Specify a different session destination value for one of the LOG_ ARCHIVE_DEST_n parameters.

ORA-16022: LOG_ARCHIVE_DEST cannot be NULL because LOG_ARCHIVE_ DUPLEX_DEST is non-NULL

Cause: An attempt was made to change parameter LOG_ARCHIVE_DEST to NULL when parameter LOG_ARCHIVE_DUPLEX_DEST is non-NULL.

Action: Either set parameter LOG_ARCHIVE_DEST to a non-NULL value, or set parameter LOG_ARCHIVE_DUPLEX_DEST to a NULL value.

ORA-16023: system *string* destination cannot be the same as session *string* destination

Cause: An attempt to change the first specified LOG_ARCHIVE_DEST_n (n = 1...10) parameter produced a destination that duplicates the session destination value of the second specified LOG_ARCHIVE_DEST_n parameter. This error can occur when setting a non-NULL value with the ALTER SYSTEM command. Or, this error can occur when setting a NULL value with ALTER SESSION command, because then the associated system destination value may appear as a duplicate.

Action: Specify a different destination value for the first specified LOG_ ARCHIVE_DEST_n parameter.

ORA-16024: parameter *string* cannot be parsed

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...10) parameter could not be parsed. Common causes for this error are a misplaced equal sign, an unrecognized attribute, or an attribute that is missing a required value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16025: parameter *string* contains repeated or conflicting attributes

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...10) parameter contained either repeated attributes or attributes that conflicted with each other.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16026: parameter *string* contains an invalid attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...10) parameter contained an attribute with an invalid value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16027: parameter *string* is missing a destination option

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...10) parameter failed to include a destination option. A destination option is specified using either the LOCATION or SERVICE attrbute.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16028: new *string* causes less destinations than LOG_ARCHIVE_MIN_ SUCCEED_DEST requires

Cause: With automatic archiving enabled, an attempt was made to change the indicated LOG_ARCHIVE_DEST_n or a LOG_ARCHIVE_DEST_STATE_n parameter (n = 1...10) to a value that reduces the number of archive log destinations to less than the specified LOG_ARCHIVE_MIN_SUCCEED_DEST value.

Action: Either select different options for the LOG_ARCHIVE_DEST_n or LOG_ ARCHIVE_DEST_STATE_n parameters, or reduce the value for parameter LOG_ ARCHIVE_MIN_SUCCEED_DEST.

ORA-16029: cannot change LOG_ARCHIVE_MIN_SUCCEED_DEST, no archive log destinations

Cause: An attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_ DEST parameter when there are no archive log destinations.

Action: Define one or more log archive destinations using parameters LOG_ ARCHIVE_DEST, LOG_ARCHIVE_DUPLEX_DEST, or LOG_ARCHIVE_DEST_n (n = 1...10). Then, change the value of parameter LOG_ARCHIVE_MIN_ SUCCEED_DEST.

ORA-16030: session specific change requires a LOG_ARCHIVE_DEST_n destination

Cause: The following event caused an incompatibility: Parameter LOG_ ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter with an ALTER SESSION command.

Action: Replace any LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_ DEST parameters with LOG_ARCHIVE_DEST_n (n = 1...10) parameters.

ORA-16031: parameter *string* destination string exceeds *string* character limit

Cause: The value for the specified parameter contained a destination string that is too long.

Action: Replace the destination value for the specified parameter with a character string that has a length below the limit specified in the error message.

ORA-16032: parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-16033: parameter *string* **destination cannot be the same as parameter** *string* **destination**

Cause: An attempt was made to change the first specified archive log parameter to have a destination value that duplicates the system-level destination value of the second specified archive log parameter.

Action: Specify a different value for one of the archive log parameters.

ORA-16034: FROM parameter is incompatible with MANAGED recovery

Cause: Use of the FROM "location" parameter is not allowed when MANAGED recovery has been specified.

Action: Correct the syntax and retry the command.

ORA-16035: missing required keyword *string*

Cause: The indicated keyword is required but was not specified.

Action: Correct the syntax and retry the command.

ORA-16036: invalid MANAGED recovery CANCEL option

Cause: A mode other than IMMEDIATE follows the CANCEL keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or IMMEDIATE following CANCEL.

ORA-16037: user requested cancel of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user request.

Action: No action is required.

ORA-16038: log *string* **sequence#** *string* **cannot be archived**

Cause: An attempt was made to archive the named file, but the file could not be archived. Examine the secondary error messages to determine the cause of the error.

Action: No action is required.

ORA-16039: RFS request version mismatch

Cause: A request to archive a redo log to a standby site failed because the request was incompatible with the Remote File Server (RFS) at the standby site.

Action: Verify that compatible versions of Oracle are running on the primary and all standby sites.

ORA-16040: standby destination archive log file is locked

Cause: The target standby destination archive log file is currently locked. This indicates that the file is being archived to by another Remote File Server (RFS) process.

Action: Check for and eliminate duplicate standby destination archive log service names defined for the primary database.

ORA-16041: Remote File Server fatal error

Cause: The Remote File Server (RFS) process at the standby destination archive log site has encountered a disabling error and is no longer available. Further archiving to the standby site may not be possible.

Action: Refer to the appropriate RFS trace file located at the standby site for details regarding the error encountered and if possible take corrective action.

ORA-16042: user requested cancel immediate of managed recovery operation

Cause: The managed standby database recovery operation has been canceled immediately per user request. Processing of the current archive log file has been interrupted and therefore the database is in an inconsistent state.

Action: No action is required.

ORA-16043: managed recovery session canceled

Cause: The standby database managed recovery operation has been canceled per user request or operation timeout.

Action: More specific messages will accompany this message.

ORA-16044: destination *string* attribute cannot be specified at session level

Cause: An archive log destination attribute was attempted to be modified at the session level.

Action: Use the ALTER SYSTEM command to modify the destination attribute.

ORA-16045: circular archive log destination dependency chain

Cause: An archive log destination contains a dependency to another archive log destination that also contains a dependency.

Action: The parent archive log destination cannot be dependent on another archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16046: Archive log destination failed due to failed dependent destination

Cause: The archive log destination is dependent upon another destination, which has failed. Therefore, this destination also fails.

Action: No action required.

ORA-16047: DGID mismatch between destination setting and standby

Cause: The DB_UNIQUE_NAME specified for the destination does not match the DB_UNIQUE_NAME at the destination.

Action: Make sure the DB_UNIQUE_NAME specified in the LOG_ARCHIVE_ DEST_n parameter defined for the destination matches the DB_UNIQUE_NAME parameter defined at the destination.

ORA-16050: destination exceeded specified quota size

Cause: An archive log was attempted to be created in a destination with a specified maximum quota size. The creation of the archive log exceeded the specified quota size. Therefore, the destination has been made inaccessible to future archival operations.

Action: No action is required.

ORA-16051: parameter *string* contains an invalid delay time

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...10) parameter contained a DELAY attribute with an invalid numeric value. The valid range is 0-5760 (in minutes).

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16052: DB_UNIQUE_NAME attribute is required

Cause: The DB_UNIQUE_NAME attribute is required when DG_CONFIG is enabled.

Action: Use the DB_UNIQUE_NAME attribute to specify a valid Data Guard Name for the destination. The list of valid DB_UNIQUE_NAMEs can be seen with the V$DATAGUARD_CONFIG view.

ORA-16053: DB_UNIQUE_NAME *string* **is not in the Data Guard Configuration**

Cause: The specified DB_UNIQUE_NAME is not in the Data Guard Configuration.

Action: If the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter is enabled, you must specify a valid DB_UNIQUE_NAME. The list of valid DB_UNIQUE_NAMEs can be seen with the V$DATAGUARD_CONFIG view. This problem can also occur when specifying a non-standby destination with an DB_UNIQUE_NAME attribute that does not match the DB_UNIQUE_NAME initialization parameter for the current instance.

ORA-16055: FAL request rejected

Cause: FAL server rejects the FAL request from the FAL client. This may be caused by different reasons.

Action: to solve the problem.

ORA-16056: backup control file archival requires proper syntax

Cause: An attempt was made to perform an online log file archival using a backup control file. However, the USING BACKUP CONTROLFILE syntax was not specified.

Action: If the archival operation is correct when using a backup control file, then the USING BACKUP CONTROLFILE syntax is required.

ORA-16057: DGID from server not in Data Guard configuration

Cause: The Data Guard name of the primary database or the FAL server is not in the Data Guard configuration of the standby.

Action: In order for the primary database or the FAL server to archive logs to the standby database, the Data Guard name of the primary or FAL server must be in the Data Guard configuration of the standby.

ORA-16058: standby database instance is not mounted

Cause: The RFS process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16059: Log file is empty or invalid next available block

Cause: Archiving not allowed of an empty or invalid log file.

Action: No action is required.

ORA-16060: Log file is current

Cause: The current log file cannot be archived using its file name.

Action: No action is required.

ORA-16061: Log file status has changed

Cause: It is possible the online log file was reclaimed as a new log file either before archival started, or during the archival operation.

Action: No action is required.

ORA-16062: DGID from standby not in Data Guard configuration

Cause: The Data Guard name from the standby is not in the Data Guard configuration of the server.

Action: In order for the server to be allowed to archive logs to the standby, the Data Guard name of the standby must be in the Data Guard configuration of the server.

ORA-16063: remote archival is enabled by another instance

Cause: Remote archival of database REDO log files has been enabled by another instance, and cannot be disabled for this instance.

Action: Set the REMOTE_ARCHIVE_ENABLE parameter to TRUE and restart this instance.

ORA-16064: remote archival is disabled by another instance

Cause: Remote archival of database REDO log files has been disabled by another instance, and cannot be enabled for this instance.

Action: Set the REMOTE_ARCHIVE_ENABLE parameter to FALSE and restart this instance.

ORA-16065: remote archival disabled at standby destination

Cause: Receipt of remote archived REDO log files has been disabled at the associated standby destination host database.

Action: If appropriate change the associated archive log parameter to specify a local destination with the LOCATION keyword or defer the associated archive log destination. Or, if possible, set the standby REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the RECEIVE attribute of the LOG_ARCHIVE_CONFIG parameterand restart the standby database instance before further REDO log file archivals occur.

ORA-16066: remote archival disabled

Cause: An archive log destination parameter has specified a remote destination with the SERVICE keyword. Remote archival of REDO log files has been disabled for this database. The associated archive log destination has been disabled.

Action: If appropriate change the archive log parameter to specify a local destination with the LOCATION keyword or (if appropriate) set the REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the SEND attribute of the LOG_ARCHIVE_CONFIG parameter and restart the database instance before further REDO log file archivals occur.

ORA-16067: activation identifier mismatch in archive log *string*

Cause: The activation identifier contained in the archive log file header does not match the activation identifier of the database being recovered. The indicated archive log cannot be applied to the database.

Action: Locate the appropriate archive log for the database.

ORA-16068: redo log file activation identifier mismatch

Cause: The activation identifier of the indicated redo log file does not match the activation identifier of the database.

Action: None

ORA-16069: Archive Log standby database activation identifier mismatch

Cause: The activation identifiers of the Primary and Standby database do not match. Remote archival of redo log files is not allowed to incompatible STANDBY database instances. This can occur when trying to apply an incorrect archive log to a standby database, or when trying to archive to a standby database that does not match the primary database.

Action: Take the necessary steps to create the required compatible STANDBY database before retrying the ARCHIVE LOG processing.

ORA-16070: parameter *string* **contains an invalid REGISTER attribute value**

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...10) parameter contained a REGISTER attribute that specified an invalid file name template string. If specified, the REGISTER file name template string must indicate an O/S-specific file path name including thread and log sequence number substitution directives (%t, %T, %s, %S).

Action: Correct the value for the LOG_ARCHIVE_DEST_n parameter.

ORA-16071: dependency archived log file not found *string*

Cause: The specified archived log file was not found at the indicated standby destination.

Action: Verify the correctness of the dependency archived log file name template specified for the indicated standby destination against the actual dependency archived log file.

ORA-16072: a minimum of one standby database destination is required

Cause: No standby database archive log destinations were specified.

Action: Specify a standby archive log destination in the initialization parameter file.

ORA-16073: archiving must be enabled

Cause: Online log file archiving is disabled.

Action: Enable log file archiving.

ORA-16074: ARCH processes must be active

Cause: There are no active ARCH processes.

Action: It is required that at least one ARCH process be active.

ORA-16075: standby database destination mismatch

Cause: A standby database destination was specified that is not accessed by another instance.

Action: All database instances must access the same standby databases.

ORA-16076: unknown standby database destination

Cause: A standby database destination was specified that is not accessed by another instance.

Action: All database instances must access the same standby databases.

ORA-16078: media recovery disabled

Cause: The database is not in ARCHIVELOG mode.

Action: Place the database in ARCHIVELOG mode.

ORA-16079: standby archival not enabled

Cause: The standby database does not have archival enabled.

Action: In order to allow the standby database to access the standby log files, the ARCH process must be enabled and active.

ORA-16080: invalid LogMiner session *string* **for APPLY**

Cause: Logical standby apply engine was started with an invalid LogMiner session identifier.

Action: Fix the problem with the LogMiner session or create a new session.

ORA-16081: insufficient number of processes for APPLY

Cause: Logical standby apply engine was started with fewer processes available than needed.

Action: Increase the values of the initialization parameters PROCESSES and or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view.

ORA-16082: logical standby is not initialized correctly

Cause: Logical standby apply engine was started but it found inconsistencies in its metadata.

Action: Look in the trace file for more information.

ORA-16083: LogMiner session has not been created

Cause: Logical standby apply engine was started without creating a LogMiner session.

Action: Create a LogMiner session and restart the apply engine.

ORA-16084: an apply engine is already running

Cause: A logical standby apply engine was running when another was created.

Action: Shut down the previous apply engine before starting a new one.

ORA-16086: standby database does not contain available standby log files

Cause: The primary database is in "no data loss" mode, but the standby database does not contain any "standby log files".

Action: Add one or more standby log files to the standby database. This can be done while the standby database is mounted.

ORA-16087: graceful switchover requires standby or current control file

Cause: An attempt was made to perform a graceful switchover operation using a backup or clone control file.

Action: Convert the backup control file into a current control file prior to attempting a graceful switchover operation. A clone control file cannot be used for a graceful switchover operation.

ORA-16088: archive log has not been completely archived

Cause: An attempt was made to register an archive log that has not been completely archived. The specified archive log may be a "current" log file.

Action: Specify a completed archive log.

ORA-16089: archive log has already been registered

Cause: An attempt was made to register an archive log that already has a corresponding thread# and sequence# entry in the standby database control file. Duplicate information is not permitted.

Action: Use the V$ARCHIVED_LOG fixed view to verify the archive log information.

ORA-16090: archive log to be replaced not created by managed standby process

Cause: An attempt was made to replace an archive log entry that was not originally created by the managed standby operation.

Action: No user action required.

ORA-16091: dependent archive log destination already archived

Cause: An archive log destination contains a dependency to another archive log destination that has previously been archived.

Action: The parent archive log destination cannot be dependent on another archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16092: dependent archive log destination is not active

Cause: An archive log destination contains a dependency to another archive log destination that is not active"

Action: The child archive log destination cannot be dependent on another invalid archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16093: dependent archive log destination is not LGWR-enabled

Cause: An archive log destination contains a dependency to another archive log destination that is not enabled for the LGWR process"

Action: The child archive log destination cannot be dependent on another archive log destination not archived by the LGWR. Use the ALTER SYSTEM command to change the parent archive log to specify the LGWR process.

ORA-16094: database shutdown during archival operation

Cause: The database was shut down while an online log file archival was active.

Action: None required. The ARCH process is terminated.

ORA-16095: Dependent destination removal for inactivation

Cause: A dependent archive log destination was inactivated due to the parent archive log destination becoming inelligible for archival. This may be due to the parent destination being manually deferred by an application user.

Action: None required.

ORA-16098: inaccessible standby database forced shutdown to protect primary

Cause: No standby database archive log destinations remain accessible and the primary database is in "protected" no-data-loss mode.

Action: Specify an alternate standby archive log destination in the initialization parameter file.

ORA-16099: internal error ORA-00600 occurred at standby database

Cause: The RFS process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16100: not a valid Logical Standby database

Cause: This database has not been completely configured as a Logical Standby database.

Action: Verify that the database is the intended Logical Standby database. Ensure that you already started logical standby apply with the ALTER DATABASE START LOGICAL APPLY INITIAL statement. See the Oracle8i SQL Reference manual for the statement syntax.

ORA-16101: a valid start SCN could not be found

Cause: An SCN from which to start could not be found.

Action: Register the first log file following the backup from which this database was generated. Using the ALTER DATABASE REGISTER LOGILE statement to register the database is recommended. Alternatively, you can provide a starting SCN value with this startement.

ORA-16102: remote information is not available on the specified primary

Cause: The new primary has not completed generating the necessary information for the standby to begin consuming its log stream.

Action: Verify that the database link provided references a system that is about to become a new primary. Wait a short time before retrying the command to allow the primary some time to generate the necessary information.

ORA-16103: Logical Standby apply must be stopped to allow this operation

Cause: Logical Standby is currently applying changes. The apply must complete or be stopped to allow the requested operation.

Action: Execute the ALTER DATABASE STOP LOGICAL STANDBY APPLY statement, then re-enter or respecify the operation.

ORA-16104: Invalid Logical Standby parameter

Cause: The specified parameter is not valid.

Action: Check spelling or refer to the DBMS_LOGSTDBY PL/SQL package documentation for the correct statement syntax.

ORA-16105: Logical Standby is already running in background

Cause: A Logical Standby apply operation is already running.

Action: None

ORA-16107: all log data from primary has been processed

Cause: On the primary system, the log stream has been ended by the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY command.

Action: Issue one of the following commands to make this standby a primary or resume applying changes from a new primary. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL PRIMARY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16108: database is no longer a standby database

Cause: The current database has already been made a primary database.

Action: Issue the following commands to make this primary a standby. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16109: failed to apply log data from previous primary

Cause: Log data from previous primary could not be completely applied.

Action: . Then, re-issue command.

ORA-16110: user procedure processing of logical standby apply DDL

Cause: A user provided stored procedure has been called to inspect a DDL statement prior to it being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16111: log mining and apply setting up

Cause: This logical standby process is setting up to begin processing changes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16112: log mining and apply stopping

Cause: This logical standby process is cleaning up and stopping Logical Standby apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16113: applying change to table or sequence *string*

Cause: The process is applying changes to a specific schema object.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16114: applying DDL transaction with commit SCN *string*

Cause: The process is applying a DDL change that"s committed at the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16115: *string* \% **of LogMiner dictionary loading is done**

Cause: The process is loading dictionary information from the redo stream. This activity may take a few minutes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16116: no work available

Cause: The process is idle waiting for additional changes to be made available.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16117: processing

Cause: The process is performing its primary function and is not waiting on any significant event.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16119: building transaction at SCN *string*

Cause: The transaction being committed at the given SCN is being prepared for apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16120: dependencies being computed for transaction at SCN *string*

Cause: The transaction committed at the given SCN is being analyzed for dependencies.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16121: applying transaction with commit SCN *string*

Cause: The transaction committed at the given SCN is being applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16122: applying large dml transaction at SCN *string*

Cause: A large transaction is being applied before the commit has been seen. The current redo being applied ends as the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16123: transaction *string string string* **is waiting for commit approval**

Cause: The apply process is waiting for approval to commit a transaction. This transaction may depend on another or other synchronization activity may delay the committing of a transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16124: transaction *string string string* **is waiting on another transaction**

Cause: The apply process is waiting to apply additional changes. This transaction likely depends on another.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16125: large transaction *string string string* **is waiting for more data**

Cause: The apply process is waiting until additional changes for a large transaction are retrieved from the log stream.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16126: loading table or sequence *string*

Cause: Information on the given table or sequence is being loaded into an in memory cache for future use.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16127: stalled waiting for additional transactions to be applied

Cause: This process is waiting for additional memory before continuing. Additional log information cannot be read into memory until more transactions have been applied to the database, thus freeing up additional memory.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes. If this message occurs often and changes are not being applied quickly, increase available SGA or the number of apply processes.

ORA-16128: User initiated stop apply successfully completed

Cause: Logical standby was shutdown in an orderly fashion.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16129: unsupported dml encountered

Cause: DML to tables in the SYS schema have been updated and are not part of a DDL operation. This may be due to some DBA activity or DML associated with a kernel PL/SQL request that Logical Standby does not yet support.

Action: Check the DBA_LOGSTDBY_EVENTS table for the name of the table being processed. Possibly use Log Miner to understand the transaction, and provide a compensating transaction on the standby system. Once complete, call DBMS_LOGSTDBY.SKIP_TRANSACTION with the associated transaction id, and resume apply.

ORA-16130: supplemental log information is missing from log stream

Cause: Supplemental logging is not enabled at the primary database.

Action: Issue the following command to enable supplemental logging. ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS;

ORA-16131: An error occurred during a Terminal Recovery of the standby.

Cause: An error occurred during a Terminal Recovery of the standby.

Action: Check the standby alert log additional information.

ORA-16132: An error occurred during activation of the standby.

Cause: An error occurred during activation of the standby database following a Terminal Recovery.

Action: Check the standby alert log additional information.

ORA-16133: Datafile *string* has incorrect terminal recovery stamp.

Cause: After activation of a standby database following a terminal recovery (recovery of standby using current logs), recovery of a datafile from before the activation must have completed the same terminal recovery to avoid corruption.

Action: A backup of the datafile taken after the terminal recovery and before activating the standby must be used for recovery.

ORA-16134: invalid MANAGED recovery FINISH option

Cause: A mode other than NOWAIT follows the FINISH keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or NOWAIT following FINISH.

ORA-16135: Invalid LOG_ARCHIVE_CONFIG modification while in protected mode

Cause: The LOG_ARCHIVE_CONFIG parameter can not be modified while any RAC instance is open in either maximum protection or maximum availability mode. Also, the parameter can not be modified in such way that would cause all destinations to fail while in maximum protection mode.

Action: Make the modification before the database is opened by any instance.

ORA-16136: Managed Standby Recovery not active

Cause: An attempt was made to cancel a managed recovery session but no managed recovery session was active.

Action: No action is necessary.

ORA-16138: end of log stream not received from primary

Cause: The standby system has not received notification that the primary system log stream has been terminated. A graceful switchover is not possible.

Action: Verify that the primary log stream has been terminated. Ensure that the standby has applied all necessary redo from the primary system and, if appropriate, reissue the graceful switchover command.

ORA-16139: media recovery required

Cause: The database has not been recovered through the end of log stream. Graceful switchover is not possible.

Action: Ensure that the entire log stream has been applied. If appropriate, reissue the graceful switchover command.

ORA-16140: standby online logs have not been recovered

Cause: The standby database has online logs containing redo that has not been recovered. Activating the standby would lose redo contained in the online logs.

Action: To recover the standby online logs issue the following command: ALTER DATABASE RECOVER MANAGED STANDBY DATABASE FINISH. Then re-issue the ALTER DATABASE ACTIVATE STANDBY DATABASE command. To activate the standby without recovering the online logs, issue the following command: ALTER DATABASE ACTIVATE STANDBY DATABASE SKIP STANDBY LOGFILE.

ORA-16143: RFS connections not allowed during or after terminal recovery

Cause: An attempt was made, by an RFS process, to access a standby online log file during or after a terminal recovery.

Action: The primary must not attempt to archive to the standby after a terminal recovery.

ORA-16145: archival for thread# *string* sequence# *string* in progress

Cause: The indicated archived log file is not available for recovery due to the fact that it is still being archived.

Action: Verify that archival of the indicated log file has completed and reissue the RECOVER STANDBY DATABASE command.

ORA-16146: standby destination control file enqueue unavailable

Cause: The target standby destination control file is currently unavailable to the Remote File Server (RFS) process. This indicates that the target destination is the primary database itself.

Action: Check for and eliminate the standby destination archive log parameter in question.

ORA-16147: standby database referenced by multiple archive log destinations

Cause: Multiple archive log destinations reference the same standby database, using different service names. This is not allowed.

Action: Remove one of the duplicate archive log destinations.

ORA-16148: user requested expiration of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user specified EXPIRE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16150: FINISH recovery performed on another, older standby database

Cause: An archive log containing a FINISH recovery indicator was received by a standby database that has received archive logs in the future of the received

archive log. Because of the possibility that these future archive logs have been applied to this standby database, the received archive log must be rejected.

Action: No action is required.

ORA-16151: Managed Standby Recovery not available

Cause: The attempted operation failed because of a pending CANCEL of the managed standby recovery operation.

Action: Wait for the managed standby recovery session to end. Then retry the operation.

ORA-16152: standby database is in "no-data-loss" protected mode

Cause: The attempted database operation is not allowed while the standby database is in "no-data-loss" protected mode.

Action: Verify that the attempted database operation is warranted, ALTER DATABASE SET STANDBY DATABASE UNPROTECTED and reissue the statement.

ORA-16154: suspect attribute: *string*

Cause: Use of the indicated attribute is illegal in the given context.

Action: Make the appropriate changes and reissue the statement.

ORA-16156: LGWR archive log dependency not allowed if database is standby protected

Cause: The use of a LGWR archive log dependency is not allowed when the primary is protected by a standby database, as this requires use of the standby redo log files.

Action: Remove the LGWR archive log dependency and use normal LGWR archival instead.

ORA-16157: media recovery not allowed following successful FINISH recovery

Cause: A RECOVER MANAGED STANDBY DATABASE FINISH command has previously completed successfully. Another media recovery is not allowed.

Action: Issue one of these operations following a FINISH recocvery: ALTER DATABASE OPEN READ ONLY or ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

ORA-16159: Cannot change protected standby destination attributes

Cause: An attempt was made to change the LGWR/ARCH or SYNC/ASYNC attributes for a destination that is participating in the standby protection mode of the database.

Action: No action is required.

ORA-16160: Cannot change protected standby database configuration

Cause: An attempt was made to change the standby database configuration when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16161: Cannot mix standby and online redo log file members for group *string*

Cause: An attempt was made to add a log file member that does not match the other member types. This problem typically occurs when adding a standby log file member to an online redo logfile group, or adding an online redo log file member to a standby redo log file group.

Action: Verify the log file group type using the TYPE column of the V$LOG fixed view.

ORA-16162: Cannot add new standby databases to protected configuration

Cause: An attempt was made to enable a new standby database destination when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16163: LGWR network server host attach error

Cause: The LGWR network server could not attach to remote host

Action: The alert log contains more problem-specific information

ORA-16164: LGWR network server host detach error

Cause: The LGWR network server could not detach from remote host

Action: The alert log contains more problem-specific information

ORA-16165: LGWR failed to hear from network server

Cause: The LGWR lost its connection to the network server

Action: The alert log contains more problem-specific information

ORA-16166: LGWR network server failed to send remote message

Cause: The LGWR network server could not communicate with the remote host

Action: The alert log contains more problem-specific information

ORA-16167: LGWR network server could not switch to non-blocking mode

Cause: The LGWR network server could not switch to non-blocking mode

Action: The alert log contains more problem-specific information

ORA-16168: LGWR network server could not switch to blocking mode

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16169: LGWR network server invalid parameters

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16170: Terminal recovery may have left the database in an inconsistent state

Cause: When terminal recovery is invoked in a standby database without synchronous log shipping, in the rare case of the recovery session being in an unrecoverable state, terminal recovery cannot bring the standby database to a consistent SCN boundary if the primary database continues to have redo thread(s) open.

Action: Continue standby recovery with additional log shipping from primary.

ORA-16171: RECOVER...FINISH not allowed due to gap for thr *string*, **seq** *string-string*

Cause: See alert log for more details

Action: Copy missing archived logs from primary or another standby. Register the logs and re-issue the RECOVER...FINISH command. If the logs are not available, issue the ALTER DATABASE RECOVER MANAGED STANDBY SKIP command to ignore the standby redo log files.

ORA-16172: archive logs detected beyond Terminal End-Of-Redo

Cause: An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due the existence, at the remote site, of archive logs containing REDO in the future of the Terminal EOR.

Action: None

ORA-16173: incompatible archival network connections active

Cause: One of two situations can cause this error: 1) An attempt to start a Terminal Incomplete Recovery operation failed due to an active Remote File Server process detected. 2) An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due to an active Remote File Server process at the remote site. An active Remote File Server (RFS) process implies connectivity with the primary database which may indicate that a Terminal Incomplete Recovery operation is not warrented.

Action: Verify the Managed Standby environment and re-evaluate the necessity of a Terminal Incomplete Recovery operation.

ORA-16174: user requested thread/sequence termination of managed recovery

Cause: The managed standby database recovery operation has been terminated per user specified THROUGH THREAD/SEQUENCE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16175: cannot shut down database when media recovery is active

Cause: An attempt was made to shut down a standby database while media recovery was active.

Action: Cancel media recovery to proceed with the shutdown.

ORA-16176: background dictionary build cannot be running

Cause: The background process dedicated to dictionary build is active.

Action: wait and try it later.

ORA-16177: media recovery is not required

Cause: The THROUGH LAST SWITCHOVER clause of the ALTER DATABASE RECOVER MANAGED STANDBY DATABASE was specified and the database has been recovered to the most recent End-Of-Redo marker. All known archived logs have been applied. Managed recovery is not required.

Action: No action is necessary. The standby database may be activated as a new primary or may continue as a standby.

ORA-16178: Cannot specify remote destinations in archivelog manual mode

Cause: The database is operating in ARCHIVELOG MANUAL mode. Remote archivelog destinations are not allowed in this mode.

Action: Use the ALTER DATABASE ARCHIVELOG command to place the database in automatic archivelog mode, or defer the archivelog destinations that specify the SERVICE= attribute.

ORA-16179: incremental changes to "*string*" not allowed with SPFILE

Cause: Incremental changes to a log_archive_dest_n parameter cannot be made when using an SPFILE.

Action: Specify either LOCATION or SERVICE plus all other attributes to be set in one ALTER SYSTEM/SESSION SET command.

ORA-16180: number of processes specified is too large

Cause: The number of server processes available for Logical Standby is currently limited to 1024 LogMiner processes and 1024 apply processes or a total of 2048.

Action: Retry with a lower value.

ORA-16181: SGA specified for Logical Standby is too large

Cause: MAX_SGA is larger than the larger of initialization parameters SHARED_POOL_SIZE and SGA_TARGET.

Action: Specify the value of MAX_SGA to be less than the maximum of SHARED_POOL_SIZE and SGA_TARGET. Likely only 75% or lower.

ORA-16182: Internal error on internal channel during remote archival

Cause: An internal error was encountered on the internal channel between LGWR and Network Server.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16184: DB_UNIQUE_NAME *string* hashes to the same value as DB_UNIQUE_ NAME *string*

Cause: The internal hash value generated for one DB_UNIQUE_NAME collided with the hash value of another DB_UNIQUE_NAME.

Action: Slightly modify one of the DB_UNIQUE_NAMEs so it hashes to a different value.

ORA-16185: REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG mutually exclusive

Cause: Both the REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG parameters are defined in the initialization file and they are mutually exclusive.

Action: The REMOTE_ARCHIVE_ENABLE parameter has been made obsolete. Use only the LOG_ARCHIVE_CONFIG parameter.

ORA-16186: Modifying LOG_ARCHIVE_CONFIG requires SID="*" qualifier

Cause: The setting for the LOG_ARCHIVE_CONFIG parameter must be exactly the same on all RAC instances so the SID="*" qualifier is required.

Action: Re-enter the command using the SID="*" qualifier.

ORA-16187: LOG_ARCHIVE_CONFIG contains duplicate, conflicting or invalid attributes

Cause: The LOG_ARCHIVE_CONFIG parameter was specified with duplicate, conflicting or invalid attributes.

Action: Check the documentation regarding the correct specification of the LOG_ ARCHIVE_CONFIG parameter.

ORA-16188: LOG_ARCHIVE_CONFIG settings inconsistent with previously started instance

Cause: The settings for the LOG_ARCHIVE_CONFIG parameter are inconsistent with the settings of a previously started instance. The settings for this parameter must be exactly the same for all instances.

Action: Make sure all instances use the exact same LOG_ARCHIVE_CONFIG settings.

ORA-16191: Primary log shipping client not logged on standby

Cause: An attempt to ship redo to standby without logging on to standby or with invalid user credentials.

Action: Check that primary and standby are using password files and that both primary and standby have the same SYS password. Restart primary and/or standby after ensuring that password file is accessible and REMOTE_LOGIN_ PASSWORDFILE initialization parameter is set to SHARED or EXCLUSIVE.

ORA-16192: Primary and standby network integrity mismatch

Cause: Standby wants sqlnet network integrity for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network integrity and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16193: Primary and standby network encryption mismatch

Cause: Standby wants sqlnet network encryption for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network encryption and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16194: Modifying DB_UNIQUE_NAME requires SID="*" qualifier

Cause: The setting for the DB_UNIQUE_NAME parameter must be exactly the same on all RAC instances so the SID="*" qualifier is required.

Action: Re-enter the command using the SID="*" qualifier.

ORA-16195: DG_CONFIG requires DB_UNIQUE_NAME be explicitly defined

Cause: The DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter can only be used if the DB_UNIQUE_NAME parameter has been explicitly defined.

Action: Explicitly define a valid DB_UNIQUE_NAME.

ORA-16196: database has been previously opened and closed

Cause: The instance has already opened and closed the database, which is allowed only once in its lifetime.

Action: Shut down the instance.

ORA-16197: Invalid DB_UNIQUE_NAME parameter specification

Cause: The DB_UNIQUE_NAME parameter has an invalid specification. The DB_ UNIQUE_NAME parameter has a maximum length of 30 characters and the only characters allowed are alpha-numeric characters and "_", "$" and "#".

Action: Check the documentation and re-enter the parameter.

ORA-16198: Timeout incurred on internal channel during remote archival

Cause: A timeout was incurred during remote archival.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16199: Terminal recovery failed to recover to a consistent point

Cause: See alert log for more details

Action: Try to resolve the problem. Retry terminal recovery. If the problem occurs repeatedly and cannot be resolved, call Oracle support.

ORA-16200: Skip procedure requested to skip statement

Cause: Logical standby called a skip procedure that requested for a particular statement not to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16201: Skip procedure requested to apply statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16202: Skip procedure requested to replace statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be replaced with a new statement.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16203: Unable to interpret skip procedure return values

Cause: The skip procedure returned conflicting or invalid values.

Action: Ensure that the new_statement output parameter is non-NULL when returning DBMS_LOGSTDBY.SKIP_ACTION_REPLACE and NULL otherwise. Also ensure SKIP_ACTION is specified correctly.

ORA-16204: DDL successfully applied

Cause: A DDL statement has successfully commited on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16205: DDL skipped due to skip setting

Cause: A setting in the logical standby skip table indicates that this type of DDL should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16206: database already configured as Logical Standby database

Cause: This database has been previously configured as a Logical Standby database. A Logical Standby database is not capable of processing the requested operation.

Action: Ensure that you entered the command on the correct database as this database is a Logical Standby and is not capable of servicing the request.

ORA-16207: Logical standby dictionary build not permitted.

Cause: A dictionary build is currently in progress. Only one build can be active at a time.

Action: Wait for the active build to complete before invoking a new build.

ORA-16208: Logical standby dictionary build failed to start.

Cause: Failure to start the logical standby dictionary build process (LSP1)

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the

instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16209: Logical standby dictionary build failed to complete.

Cause: The logical standby dictionary build process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16210: Logical standby coordinator process terminated with error

Cause: The logical standby coordinator process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16211: unsupported record found in the archived redo log

Cause: Log apply services encountered a record in the archived redo log that could not be interpreted.

Action: 1. Use DBMS_LOGSTDBY.INSTANTIATE_TABLE to re-create the table on the standby database or simply drop the table if it"s unimportant.

2. ALTER DATABASE START LOGICAL STANDBY APPLY;

3. Examine the current_scn column in the DBA_LOGSTDBY_EVENTS view to determine which log file contains the unsupported record.

4. Provide the log file to Oracle Support Services.

ORA-16212: number of processes specified for SQL Apply is too great

Cause: Logical standby apply engine was started with more processes requested than are available.

Action: Adjust the values of the initialization parameters PROCESSES or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view. If you did not specify MAX_SERVERS, but instead specified PREPARE_SERVERS and APPLY_SERVERS through the dbms_logstdby.apply_set procedure, you will need to decrease either one or both of them.

ORA-16213: ddl encountered, stopping apply engine

Cause: stop_on_ddl callout specified and DDL was encountered.

Action: Either disable stop_on_ddl callout or remove DDL.

ORA-16214: apply stalled for apply delay

Cause: A delay has been specified on the primary database for this destination.

Action: Either turn off the delay on the primary or use DBMS_LOGSTDBY.APPLY_UNSET("APPLY_DELAY"); to override.

ORA-16215: history metadata inconsistency

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16216: Log stream sequence error

Cause: The log stream being processed did not follow the last processed stream.

Action: If the database is in an active configuration, issue an ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY command to synchronize log stream data with the current primary database. If the database is not in an active configuration, manually add the next dictionary-begin logfile that followed the previous log stream.

ORA-16217: prepare to switchover has not completed

Cause: An ALTER DATABASE PREPARE TO SWITCHOVER command was issued, but the prepare activity did not complete.

Action: Verify that the standby was prepared properly. You may cancel the prepare and perform an unprepared switchover which requires a database link to complete. Or reissue the prepare operation on the standby.

ORA-16218: This database is already preparing to switch over.

Cause: The database was already preparing to switch over and was not able to accomodate another prepare attempt.

Action: Cancel the current prepare attempt with the ALTER DATABASE PREPARE TO SWITCHOVER CANCEL command, then reissue the prepare request.

ORA-16219: This database is not preparing to switch over.

Cause: The database was not preparing to switch over. Therefore, it was not possible to cancel the SWITCHOVER command.

Action: Preparing for the SWITCHOVER command can be accomplished with the ALTER DATABASE PREPARE TO SWITCHOVER command.

ORA-16220: no failed transaction found

Cause: No failed transaction was found.

Action: Retry the ALTER DATABASE START LOGICAL STANDBY APPLY command without the SKIP FAILED TRANSACTION option.

ORA-16221: history table synchronization error

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16222: automatic Logical Standby retry of last action

Cause: A failure occurred while running Logical Standby apply. A new attempt is automatically being made by Logical Standby apply.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16223: DDL skipped, unsupported in current version

Cause: The given DDL statement was not supported in the current version of Logical Standby and was skipped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16224: Database Guard is enabled

Cause: Operation could not be performed because database guard is enabled

Action: Verify operation is correct and disable database guard

ORA-16225: Missing LogMiner session name for Streams

Cause: An attempt was made to register the log file for Streams without a specified LogMiner session name.

Action: Specify a valid LogMiner session name to which the log file will be registered.

ORA-16226: DDL skipped due to lack of support

Cause: Logical Standby does not support this type of DDL in this version, so the DDL is skipped.

Action: The DBA may apply the DDL explicitly at a later time or a procedure to handle this type of DDL can be created. see DBMS_LOGSTDBY.SKIP procedure for details.

ORA-16227: DDL skipped due to missing object

Cause: A table or other database object upon which this DDL depends is not defined on the Logical Standby database.

Action: No action is necessary, this infomational statement is provided to record the event for diagnostic purposes.

ORA-16228: Insufficient recovery for logical standby

Cause: Insufficient amount of recovery was run for logical standby instantiation.

Action: Continue to recover the database using ALTER DATABASE RECOVER MANAGED STANDBY DATABASE.

ORA-16229: PDML child *string string string* for parent *string string string* cannot be skipped.

Cause: A request was made to skip a parallel DML child transaction id. This is not supported.

Action: Using the DBMS_LOGSTDBY.UNSKIP_TRANSACTION procedure, remove the child transaction id, then specify the parent transaction id using DBMS_LOGSTDBY.SKIP_TRANSACTION if appropriate.

ORA-16230: committing transaction *string string string*

Cause: Logical Standby apply was committing changes for the given transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16232: adding Logical Standby skip entry for table *string.string*

Cause: Table was previously unsupported due to datatype or storage attribute definitions. Table is now capable of being supported.

Action: To have Logical Standby maintain the table, import that table directly from the primary.

ORA-16233: The table *string.string* is unsupported now

Cause: Table was previously supported but now is unsupported due to altered datatype or storage attribute definitions.

Action: None

ORA-16234: restarting to reset Logical Standby apply

Cause: Logical Standby encountered a work load that required a restart to properly reschedule.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16235: DDL skipped because import has occurred

Cause: An object was exported from the primary database and imported into the Logical Standby database. This DDL occurred before the export.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16236: Logical Standby metadata operation in progress

Cause: The requested operation failed because a Logical Standby metadata operation, such as DBMS_LOGSTDBY.SET_TABLESPACE or DBMS_LOGSTDBY.INSTANTIATE_TABLE, has not finished.

Action: Wait for the Logical Standby metadata operation to finish, then re-enter or respecify the operation.

ORA-16237: SGA specified for Logical Standby is too small

Cause: MAX_SGA must be at least 10 Megabytes for proper functioning of Logical Standby.

Action: Specify the value of MAX_SGA to be greater than or equal to 10Mb. Alternatively, increase the shared_pool_size/sga_target so that 1/4 of it will amount to 10 Megabytes.

ORA-16238: attempt to use version 9 log

Cause: Version 9 log files are not supported.

Action: Use log files of a supported version.

ORA-16239: IMMEDIATE option not available without standby redo logs

Cause: The IMMEDIATE option cannot be used without standby redo logs.

Action: Do not specify the IMMEDIATE option unless standby redo logs are being used.

ORA-16240: Waiting for logfile (thread# *string*, sequence# *string*)

Cause: Reader process is idle waiting for additional logfile to be available.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16241: Waiting for gap logfile (thread# *string*, sequence# *string*)

Cause: Reader process is idle waiting for the logfile to fill the log sequence gap.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16242: Processing logfile (thread# *string*, sequence# *string*)

Cause: Reader process is processing the logfile.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16243: paging out *string* bytes of memory to disk

Cause: Builder process is paging out momery to free up space in lcr cache.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16246: User initiated abort apply successfully completed

Cause: SQL Apply was stopped using the abort option.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16247: DDL skipped on internal schema

Cause: Logical Standby ignores DDLs on internal schemas such as SYS and SYSTEM. For a complete list of internal schemas ignored by Logical Standby perform the following query: SELECT owner FROM dba_logstdby_skip WHERE statement_opt = "INTERNAL SCHEMA".

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16248: RFS connections not permitted during Terminal Apply

Cause: Writes by RFS are not permitted while Logical Standby is performing Terminal Apply.

Action: Permit any outstanding Logical Standby operations to complete.

ORA-16249: Terminal apply failed to complete during failover

Cause: The logical standby coordinator process terminated abnormally."

Action: Examine the DBA_LOGSTDBY_EVENTS view for the reason behind the abnormal shutdown, and resolve accordingly. Once the problem has been rectified, reissue the ALTER DATABASE ACTIVATE LOGICAL STANDBY DATABASE command to complete the failover.

ORA-16250: Failed to acquire starting scn of new log stream

Cause: The starting SCN for the new log stream could not be determined.

Action: Please reissue the ACTIVATE LOGICAL STANDBY DATABASE command.

ORA-16251: LSP1 Background Build not permitted

Cause: The LSP1 background process is not permitted to start because it had previously been attempted.

Action: This is an internal error. Contact Oracle support.

ORA-16252: Rebuild operation not permitted

Cause: The REBUILD operation is not permitted.

Action: Only on a primary database that has failed to complete the LogMiner dictionary build may the REBUILD operation take place. Reissue the ACTIVATE LOGICAL STANDBY DATABASE command if it previously failed to complete.

ORA-16253: Logical Standby cannot start due to incomplete terminal apply

Cause: A previous ACTIVATE of the logical standby failed to complete.

Action: Reissue the ALTER DATABASE ACTIVATE LOGICAL STANDBY DATABASE FINISH APPLY command.

ORA-16254: change db_name to *string* in the client-side parameter file (pfile)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a server parameter file (spfile).

Action: The client-side parameter file must be edited so that db_name is set to the given name before mounting the database again.

ORA-16255: Log Auto Delete conflicts with another LogMiner session

Cause: Log Auto Delete cannot be on while another LogMiner session is running on the same database.

Action: Start Logical Standby without Log Auto Delete or destroy other LogMiner sessions first.

ORA-16256: Failure to complete standby redo logfile archival after failover

Cause: The standby redo logfiles processed during the failover of a logical standby were not archived.

Action: Execute DBMS_LOGSTDBY.REBUILD to reattempt the archival.

ORA-16257: Switchover initiated stop apply successfully completed

Cause: SQL Apply was stopped because of a switchover.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16258: marking index unusable due to a constraint violation

Cause: A constraint violation occurred during the apply of a direct path load. The index will be marked unusable and the apply will be restarted.

Action: No action necessary. See alert log for index schema and name.

ORA-16259: Switchover to logical standby requires a log archive destination

Cause: A valid log archive destination was not found to which the local system could archive the EOR logfile. A minimum of one destination is required.

Action: Ensure all log archive destinations are properly configured and, if applicable, have network connectivity before re-issuing the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY DDL operation.

ORA-16260: Waiting to replace partial or corrupt logfile (thread# *string*, sequence# *string*)

Cause: LogMiner Reader process reached end of a partial logfile or encountered a corrupted block. It is now waiting for the logfile to be recovered and re-registered.

Action: No action necessary. Once the FAL archiver replaces the logfile, standby will automatically restart to process the replaced file.

ORA-16261: Identification key mismatch for table "*string*"."*string*".

Cause: Internal error in SQL Apply.

Action: Contact Oracle Support Services.

ORA-16262: Invalid value specified for Logical Standby parameter

Cause: The value specified in APPLY_SET is invalid for the parameter.

Action: Specify correct parameter value. Please refer to documentation on DBMS_LOGSTDBY PL/SQL package for details.

ORA-16263: Dynamic parameters can only be set on SQL apply instance

Cause: Attempt to set a Logical standby dynamic parameter on an instacne other than where SQL apply coordinator is running.

Action: Connect to the instance where SQL apply coordinator is running and re-issue the statement.

ORA-16264: invalid value for PREPARE_SERVERS parameter

Cause: attempt to set PREPARE_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set PREPARE_SERVERS parameter to a non zero value and or increase MAX_SERVERS parameter accordingly.

ORA-16265: Unsupported PL/SQL procedure encountered

Cause: Apply encountered an unsupported procedure from an Oracle supplied PL/SQL package that is otherwise supported

Action: Either add a skip rule for this procedure or manually apply the procedure and restart apply skipping the failed transaction Please refer to documentation on the PL/SQL package for details.

ORA-16266: Cannot instantiate a Logical Standby from another Logical Standby

Cause: An instantiation of a Logical Standby has been attempted for another database with the Logical Standby role, which is not supported.

Action: Instantiate a Logical Standby database only from a Primary Database.

ORA-16267: Cannot instantiate a Logical Standby during a switchover

Cause: An instantiation of a Logical Standby has been attempted for a primary database that is in the middle of a switchover.

Action: Execute ALTER DATABASE PREPARE TO SWITCHOVER CANCEL to cancel the switchover, and attempt the instantiation again.

ORA-16268: user procedure processing of logical standby apply PL/SQL

Cause: A user-provided stored procedure was called to inspect a PL/SQL statement prior to the statement being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16269: PL/SQL procedure skipped due to failure on primary database

Cause: Because the PL/SQL procedure failed when executed on the primary database, it could not be executed on the standby database.

Action: This informational statement is provided to record the event for diagnostic purposes. The failed PL/SQL procedure needs to be investigated to ensure it did not commit interesting data before it failed.

ORA-16270: PL/SQL procedure skipped due to unmaintained standby objects

Cause: Because the PL/SQL procedure manipulated objects not being maintained by the standby database, it was skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16271: PL/SQL successfully applied

Cause: A PL/SQL procedure was successfully applied on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16272: PL/SQL procedure skipped due to skip setting

Cause: A setting in the logical standby skip table indicated that this PL/SQL procedure should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16273: invalid value for APPLY_SERVERS parameter

Cause: attempt to set APPLY_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set APPLY_SERVERS parameter to a non zero value or increase MAX_SERVERS parameter accordingly.

ORA-16274: failure to perform DDL on all RAC instances

Cause: One or more instances encountered an error while performing an operation.

Action: Ensure every instance in the RAC meets the requirements for the operation, and retry the operation.

ORA-16275: prior failed CTAS detected and pre-existing table dropped

Cause: During the processing of a CTAS operation, an existing empty table with the same name and attributes as the CTAS source table was found, and the table was dropped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16276: specified database link does not correspond to primary database

Cause: The database link specified to DBMS_LOGSTDBY.INSTANTIATE_TABLE did not link to the primary database for this logical standby database.

Action: Specify a database link that corresponds to the primary database for this logical standby database. The link should have privileges to read and lock the table being instantiated, as well as the SELECT_CATALOG_ROLE.

ORA-16277: specified table is not supported by logical standby database

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE to instantiate an unsupported table on the logical standby database. Tables with unsupported data types cannot be replicated to a logical standby database.

Action: Specify a table which is not listed in the DBA_LOGSTDBY_UNSUPPORTED_TABLE view.

ORA-16278: specified table has a multi-object skip rule defined

Cause: A table that is instantiated via DBMS_LOGSTDBY.INSTANTIATE_TABLE must not have any skip rules defined with wildcard characters.

Action: Remove or rewrite any skip rules defined for the specified table so that they no longer contain wildcard characters, or no longer affect the specified table.

ORA-16279: Supplied dblink must have CONNECT, RESOURCE, and SELECT_CATALOG_ROLE roles

Cause: A dblink was specified to DBMS_LOGSTDBY.INSTANTIATE_TABLE that lacked one or more of the CONNECT, RESOURCE, or SELECT_CATALOG_ROLE roles.

Action: Grant the CONNECT, RESOURCE, and SELECT_CATALOG_ROLE roles to the specified dblink, and retry the operation.

ORA-16280: cannot change master key on a logical standby database

Cause: An attempt was made to change the master key for transparent data encryption on a logical standby database.

Action: Set GUARD to NONE and reissue the command. This prevents you from replicating tables with encrypted columns from the primary database.

ORA-16281: missing identification key for table "*string*"."*string*".

Cause: No identification key was created for specified table.

Action: Create a primakey key or unique index for specified table.

ORA-16282: operation not permitted during rolling upgrade

Cause: An operation was attempted that is not supported during a rolling upgrade.

Action: Retry the operation upon completion of the upgrade.

ORA-16400: quota attributes are not allowed with DB_RECOVERY_FILE_DEST

Cause: Quota attributes for the destination parameters are not allowed when the parameter DB_RECOVERY_FILE_DEST is defined.

Action: No action is required.

ORA-16401: archivelog rejected by RFS

Cause: An attempt was made to re-archive an existing archivelog. This usually happens because either a multiple primary database or standby database(s) or both are trying to archive to this standby database.

Action: See alert log and trace file for more details. No action is necessary; this is an informational statement provided to record the event for diagnostic purposes.

ORA-16402: ONDEMAND archival requires FAL_CLIENT and FAL_SERVER support

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database. Use of the TRANSPORT=ONDEMAND attributes requires that the corresponding standby database explicitly specify the FAL_CLIENT and FAL_SERVER initialization parameters.

Action: Make sure the FAL_CLIENT and FAL_SERVER initialization parameters are explicitly specified on the standby database that received this error.

ORA-16403: shutdown in progress - remote connection is not permitted

Cause: The SHUTDOWN command was used to shut down a running remote primary or standby ORACLE instance, so the LGWR or ARCH processes cannot connect to ORACLE.

Action: Wait for the remote instance to be restarted, or contact your DBA.

ORA-16406: Primary and standby database software version mismatch

Cause: The primary database and standby database Oracle software is not compatible.

Action: Install the correct Oracle software and try again.

ORA-16407: Standby database is in the future of the archive log

Cause: An archive log, from a different Redo Branch, was received by a standby database that has applied Redo in the future of Redo contained within the archive log. The standby database has rejected the REDO Branch archive logs.

Action: No action is required.

ORA-16408: Incompatible archival Redo Branch lineage

Cause: An archive log, from an incompatible different Redo Branch, was received by a standby database. The standby database has rejected the Redo Branch archive logs.

Action: No action is required.

ORA-16409: Archive log switchover reference number mismatch

Cause: The archive log switchover reference numbers of the Primary and Standby database do not match. Remote archival of redo log files is not allowed to incompatible STANDBY database instances.

Action: No action is required.

ORA-16411: ONDEMAND archival requires active managed recovery operation

Cause: The use of the ONDEMAND attribute for a physical standby database destination requires that the managed recovery operation be active prior to establishing the network connection.

Action: Start the managed recovery operation on the standby database.

ORA-16412: ONDEMAND archival requires active SQL apply operation

Cause: The use of the ONDEMAND attribute for a logical standby database destination requires that the SQL apply operation be active prior to establishing the network connection.

Action: Start the SQL apply operation on the standby database.

ORA-16413: Unsupported database type for ONDEMAND archivelog destinations

Cause: The use of the ONDEMAND attribute for a standby database destination is supported for only physical and logical standby database types. Cross-Instance-Archival and repository database types are not valid for the ONDEMAND attribute.

Action: Verify the database corresponding to the archivelog destination is either a physical standby database or a logical standby database.

ORA-16416: Switchover target is not synchronized with the primary

Cause: The switchover target incurred an error or has a gap at the time the switchover operation was attempted.

Action: Allow the switchover target to become synchronized and then re-attempt the switchover.

ORA-16417: Activation occurred after recovery from standby redo log files; a full database backup is required

Cause: Activation occurred after recovery from standby redo log files.

Action: Take a full database backup.

ORA-16419: Snapshot standby must be converted from physical standby

Cause: The database is not physical standby.

Action: Convert to physical standby and retry the operation.

ORA-16420: fast-start failover target cannot be converted to snapshot standby

Cause: The database chosen for conversion to a snapshot standby was the fast-start failover target standby database.

Action: Choose another physical standby database and retry the operation.

ORA-16424: Terminal recovery cannot start due to GAP on Physical Standby

Cause: Terminal Recovery failed because of gap behind the start point of standby recovery.

Action: Issue ALTER DATABASE ACTIVATE STANDBY DATABASE

ORA-16425: Terminal recovery branch *string* older than target branch *string*

Cause: Terminal Recovery failed because of new branch on Physical Standby.

Action: Issue real time apply recovery and see if recovery can proceed on the new branch by checking if logs on the new branch are applied by recovery. If so, issue another terminal recovery. Otherwise, issue ALTER DATABASE ACTIVATE STANDBY DATABASE

ORA-16426: log requested by recovery is not the correct log

Cause: Media recovery has selected an incorrect log

Action: Verify that the proper log has been properly registered and restart media recovery.

ORA-16427: Potential archive log gap too large to service

Cause: Standby destination is too far behind the primary database for automatic archive log gap detection/resolution to take place.

Action: Standby database should be recreated with a recent backup copy of the primary database.

ORA-16431: Cannot expand control file

Cause: More threads were added on the primary database after this standby control file was created.

Action: Shut down the standby database, either replace the control file with a new standby control file from primary database or change the COMPATIBLE parameter to 10.2.0 or above, and restart the standby database.

ORA-16432: inconsistent set of terminal logs detected

Cause: Media Recovery stopped because it detected an inconsistency between the first log in the new incarnation and the state of the previous incarnation. If this database is a bystander standby database, this is most likely because there was a failover operation, and this database applied terminal logs generated from that failover operation for some redo threads but applied corresponding logs from the old primary database of that failover operation for some other redo threads.

Action: Flashback or restore this database to before the standby_became_primary_scn of that failover operation and restart media recovery. The standby_became_primary_scn of the failover operation can be obtained from V$DATABASE on the new primary.

ORA-16501: the Data Guard broker operation failed

Cause: The Data Guard broker operation failed.

Action: See accompanying messages for details.

ORA-16502: the Data Guard broker operation succeeded with warnings

Cause: The Data Guard broker operation succeeded with warnings.

Action: See accompanying messages for details.

ORA-16504: the Data Guard configuration already exists

Cause: A request to create a Data Guard configuration was made while connected to a database that is part of an existing configuration.

Action: To create a new configuration, the existing configuration must be deleted.

ORA-16505: site ID is invalid

Cause: The request contained an invalid site ID.

Action: Make the request again with a valid site ID.

ORA-16506: out of memory

Cause: Process exceeded private or shared memory limits.

Action: Check for memory leaks, increase system parameters and restart.

ORA-16507: unrecognized request identifier

Cause: The specified request identifier was not recognized by the Data Guard broker.

Action: Reissue the request using a valid request identifier.

ORA-16509: request timed out

Cause: The Data Guard broker timed out out the request.

Action: Check the Data Guard broker log file for more information. Ensure that the network connections between the databases are functioning properly and retry the request.

ORA-16513: maximum requests exceeded

Cause: The maximum number of requests that the broker can service

Action: Wait for the broker to complete processing the requests before issuing more requests.

ORA-16514: request was not found

Cause: An attempt was made to read a response but a matching request was not found.

Action: Verify request identifier is valid and that it references a previously issued request.

ORA-16516: current state is invalid for the attempted operation

Cause: The broker may have returned this error for either switchover operations or for database state change operations. If this error was returned for a switchover operation, the broker determined that either:

- The databases changing roles are shut down.

- The primary database is not shipping redo data.

- The standby database that will become the primary database is not applying redo data. If this error was returned for database state change operations, the database state specified was invalid.

Action: If this error is returned when attempting a switchover operation, make sure that:

- The databases changing roles are started.

- The primary database is shipping redo data.

- The standby database is applying redo data. If this error is returned when attempting a database state change operation, make sure a valid database state is specified.

ORA-16523: operation requires the client to connect to instance "*string*"

Cause: The switchover or failover operation required the client to connect to the apply instance of the target database.

Action: Connect to the indicated instance and reissue the SWITCHOVER or FAILOVER command.

ORA-16524: unsupported operation

Cause: A command or option was not supported in this release.

Action: Contact Oracle Support Services.

ORA-16525: the Data Guard broker is not yet available

Cause: The Data Guard broker process was either not yet started, was initializing, or failed to start.

Action: If the broker has not been started, set the DG_BROKER_START initialization parameter to true and allow the broker to finish initializing before making the request. If the broker failed to start, check the Data Guard log for possible errors. Otherwise, retry the operation.

ORA-16526: unable to allocate task element

Cause: The Data Guard broker was unable to allocate memory for a request.

Action: Increase the size of the SGA.

ORA-16527: unable to allocate broker SGA memory

Cause: The Data Guard broker was unable to allocate memory within the SGA.

Action: Increase the size of the SGA memory.

ORA-16528: unable to allocate PGA memory

Cause: There was insufficient space in PGA to allocate memory.

Action: Increase process virtual memory.

ORA-16530: invalid buffer or length

Cause: A NULL buffer or a length of zero was specified.

Action: Correct the command parameters and retry the command.

ORA-16532: Data Guard broker configuration does not exist

Cause: A broker operation was requested that required a broker configuration to already be created.

Action: Create a Data Guard broker configuration prior to performing other broker operations.

ORA-16534: no more requests accepted

Cause: The Data Guard broker returned this status because either:

- A failover operation was submitted or was in progress.

- A switchover operation was submitted or was in progress.

- An instance restart was pending for one or more databases.

Action: Wait until the operation is complete and reissue the request.

ORA-16535: CRS is preventing execution of a broker operation

Cause: The broker was unable to have CRS stop management of all of the instances of this database.

Action: Suspend CRS management of this database using the SRVCTL STOP DATABASE -D <name> -O NONE command. Then reissue the broker request.

ORA-16541: database is not enabled

Cause: The database specified in the request was not enabled.

Action: Select an enabled database and reissue the request.

ORA-16544: modifying DG_BROKER_START requires SID="*" qualifier

Cause: The setting for the DG_BROKER_START parameter must be exactly the same on all RAC database instances. The SID="*" qualifier was required in the command.

Action: Reenter the command using the SID="*" qualifier.

ORA-16545: unable to get response

Cause: The Data Guard broker was unable to return the result of a previous request.

Action: Contact Oracle Support Services.

ORA-16546: missing or invalid value

Cause: The value of the request to return was not specified or was invalid.

Action: Specify the value of the response starting from one.

ORA-16547: cannot disable the primary database

Cause: An attempt was made to explicitly disable broker management of the primary database.

Action: Broker management of the primary database cannot be explicitly disabled. Instead the entire broker configuration must be disabled in order to disable the primary database.

ORA-16548: database not enabled

Cause: An attempt was made to modify or query a disabled Data Guard database. This error is also returned on an attempt to enable, modify, or query a database that the broker has disabled because of a switchover or failover operation. The broker disables its management of a database when it detects that the database needs to be re-created because of a failover or switchover operation.

Action: If broker management of the database is disabled, enable it and reissue the request.

ORA-16549: invalid string

Cause: An invalid or NULL string value was specified.

Action: Correct command parameters and retry.

ORA-16550: truncated result

Cause: A string property value was truncated due to insufficient buffer size.

Action: Specify a larger receive buffer.

ORA-16551: short string copied

Cause: A string property value that did not fill the receive buffer was placed in the receive buffer.

Action: This is an informational message only.

ORA-16552: an error occurred when generating the CLIENT OPERATION table

Cause: An error occurred while Data Guard broker was generating the CLIENT OPERATION table.

Action: See the next error message for more detailed information. Execute the action described in the next error or contact Oracle Support Services.

ORA-16555: database is not active

Cause: An operation was attempted on a database that was not active. not active.

Action: Verify that the database is active and retry the operation.

ORA-16556: observer version mismatch

Cause: This version of the observer was incompatible with the version of the specified Oracle database server to which the observer had been connected. This observer client cannot be used to observe the specified Oracle server.

Action: Use a version of the observer that is compatible with the Oracle database server to be observed.

ORA-16557: database is already in use

Cause: An attempt was made to create a duplicate database in the broker configuration.

Action: Check the database to be added to ensure there are no duplicates.

ORA-16558: database specified for switchover is not a standby database

Cause: An attempt was made to switchover to a database that was not a standby database.

Action: Locate an enabled standby database and select that database as the target of the switchover.

ORA-16561: cannot remove an active instance

Cause: The instance to be removed was running.

Action: Shut down the instance and reissue the REMOVE command.

ORA-16568: cannot set property *string*

Cause: The specified property could not be modified because it was either a monitorable property or a property that did not exist.

Action: Retry the command with a valid configurable property.

ORA-16569: Data Guard configuration is not enabled

Cause: The requested operation required that broker management of the Data Guard configuration must be enabled.

Action: Enable the Data Guard configuration and reissue the request.

ORA-16570: database needs restart

Cause: The Data Guard broker operation required this database instance to be shut down and restarted.

Action: If DGMGRL or Enterprise Manager has not already done so, shutdown the Oracle instance and then restart it.

ORA-16571: Data Guard configuration file creation failure

Cause: The Data Guard broker was unable to create the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters and retry the operation.

ORA-16572: Data Guard configuration file not found

Cause: The Data Guard broker configuration file was either unavailable or did not exist.

Action: Verify that the configuration file was successfully created. If the DG_BROKER_CONFIG_FILE[1|2] initialization parameters were changed, ensure the file name on disk and the parameter value match, there is space on the device, and the proper permissions are granted.

ORA-16573: attempt to change or access configuration file for an enabled broker configuration

Cause: The operation was rejected because the Data Guard broker configuration file was in use. The attempted operation was unsafe while broker management of the configuration was enabled. For example:

- An attempt was made to alter the DG_BROKER_CONFIG_FILE[1|2] initialization parameters while the broker was running.

- Non-broker access (such as DBMS_FILE_TRANSFER) to the configuration files was attempted. See the alert log for additional information.

Action: Disable the broker configuration and shut down the Data Guard broker, then retry the operation. If the operation includes altering the DG_BROKER_CONFIG_FILE[1|2] initialization parameters, be sure that the new parameter values correctly specify the files at their expected location before reenabling broker management of the configuration.

ORA-16574: switchover disallowed when required databases are shut down

Cause: Switchover failed because either the primary database or the designated standby database were shut down.

Action: Ensure that the primary and standby databases are running and that primary database is shipping redo data to the designated standby database. Also ensure that that the designated standby database is applying the redo data received from the primary database.

ORA-16575: request terminated at broker discretion

Cause: This error was returned when the broker terminated a command because it was processing a failover command.

Action: Wait for failover to complete and then retry the command.

ORA-16576: failed to update Data Guard configuration file

Cause: A failure was encountered while the broker was updating the Data Guard broker configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

ORA-16577: corruption detected in Data Guard configuration file

Cause: The Data Guard broker detected errors while loading the configuration file.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters. Contact Oracle Support Services.

ORA-16578: failed to read Data Guard configuration file

Cause: A failure was encountered while the broker was reading the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

ORA-16582: cannot change instance-specific property

Cause: An attempt was made to change an instance-specific property for a database that had more than one instance.

Action: Retry the command and identify a specific instance whose property value is to be changed.

ORA-16586: cannot change database property with EDIT INSTANCE command

Cause: An attempt was made to change a database property using an EDIT INSTANCE command instead of an EDIT DATABASE command.

Action: Use an EDIT DATABASE command to change database properties.

ORA-16587: ambiguous object specified to Data Guard broker

Cause: An object was specified that the broker could not uniquely distinguish from other objects in the configuration.

Action: Try to further distinguish the object specified for the operation and reissue the command.

ORA-16589: Data Guard broker detected network transfer error

Cause: The Data Guard broker detected an error while transferring data from one database to another. This may happen when:

- the broker detects an inconsistency in the block count of configuration file when the file is transmitted between databases.

- the broker encountered an error when writing the configuration file.

Action: Contact Oracle Support Services.

ORA-16594: DMON background process is not running

Cause: The Data Guard broker background process, DMON, was not running.

Action: Check the Data Guard broker log and DMON process trace file to determine why the DMON process is not running.

ORA-16595: process *string* failed to terminate

Cause: The specified process did not terminate at the request of the Data Guard broker.

Action: Contact Oracle Support Services.

ORA-16596: database not part of the Data Guard broker configuration

Cause: The specified database is not in the Data Guard broker configuration.

Action: Retry the command with a database that is in the broker configuration.

ORA-16597: Data Guard broker detects two or more primary databases

Cause: The Data Guard broker detected two or more primary databases in the broker configuration and could not continue.

Action: Contact Oracle Support Services.

ORA-16598: Data Guard broker detected a mismatch in configuration

Cause: The Data Guard broker detected a significant mismatch while performing configuration membership validation between two or more databases in the broker configuration. This can occur when the primary database has stale broker configuration files.

Action: Contact Oracle Support Services.

ORA-16599: Data Guard broker detected a stale configuration

Cause: The Data Guard broker detected a stale configuration during initialization for this database.

Action: The broker will automatically resolve this situation once the primary database completes its initialization.

ORA-16600: not connected to target standby database for failover

    Cause: The failover command failed because the client was not connected to the target standby database.

    Action: Explicitly connect to the standby database to be failed over to and retry the failover command.

ORA-16602: database must be disabled to perform this operation

    Cause: An attempt was made to edit a database property while the database was enabled.

    Action: Disable the database and retry the command.

ORA-16603: Data Guard broker detected a mismatch in configuration ID

    Cause: There was a mismatch in configuration unique ID. This could occur if the original configuration was re-created while this database was disconnected from the network or the same database was added to two different Data Guard broker configurations.

    Action: Make sure the database belongs to only one broker configuration. Shut down the broker by setting the DG_BROKER_START initialization parameter to false. Then remove the Data Guard broker configuration files. Finally restart the broker by setting the DG_BROKER_START initialization parameter to true.

ORA-16606: unable to find property "*string*"

    Cause: The specified property did not exist.

    Action: Specify a valid property name and reissue the request.

ORA-16607: one or more databases have failed

    Cause: A failure was detected for one or more databases in the Data Guard broker configuration.

    Action: Locate the database(s) with a failure status and correct it.

ORA-16608: one or more databases have warnings

    Cause: A warning was detected for one or more databases in the Data Guard broker configuration.

    Action: Locate the database(s) with a warning status and correct it.

ORA-16609: database is being disabled

    Cause: A command was attempted on a database that was being disabled. For example, attempting to reinstate the old primary database, the database that was the primary database prior to the most recent failover, before it was ready to be reinstated.

    Action: Wait for the Data Guard broker to disable the database and then retry the command.

ORA-16610: command "*string*" in progress

    Cause: The specified broker command was already running and the command issued could not be completed.

    Action: Wait for the specified command to finish and then retry the command.

ORA-16611: command aborted at user request

    Cause: The command was aborted at the user"s request.

    Action: No action required.

ORA-16612: string value too long for attribute "*string*"

Cause: The string value for the named attribute was too long.

Action: Specify a shorter string value.

ORA-16613: initialization in progress for database

Cause: A request was made to modify the Data Guard broker configuration before the Data Guard broker had completed initialization.

Action: Wait until the Data Guard broker has completed initialization before attempting to modify the broker configuration.

ORA-16614: Data Guard broker configuration is disabled

Cause: An attempt to enable a database failed because the Data Guard broker configuration was disabled.

Action: Enable the Data Guard broker configuration and issue the DGMGRL CLI SHOW CONFIGURATION command to see if there are any databases that are still disabled. If the database you tried to enable is still disabled, issue the DGMGRL CLI SHOW DATABASE command to check the status of the database. If the database status indicates that the database needs to be reinstated then issue the DGMGRL CLI REINSTATE DATABASE command to reinstate and enable the database. If the database does not require reinstatement then issue the DGMGRL CLI ENABLE DATABASE command to enable the database.

ORA-16617: unknown object identifier specified in request

Cause: Object identifier specified in the request was invalid or unknown.

Action: Verify that a valid object identifier is specified and reissue reissue the request.

ORA-16619: health check timed out

Cause: The standby database could not be reached during a routine health check.

Action: This typically indicates a network problem where the standby database is unable to respond to the primary database within a predefined time frame. Check the network connections between the primary and standby databases.

ORA-16620: one or more databases could not be reached for a delete operation

Cause: One or more standby databases could not be reached for either a DGMGRL CLI REMOVE DATABASE or a REMOVE CONFIGURATION command.

Action: This typically indicates a network problem where the standby database is unable to respond to the primary database. In the event of this situation, examine the primary database Data Guard broker log to determine which standby databases could not be reached. For each standby database not reached, connect to that database and shut down the broker by setting the initialization parameter, DG_BROKER_START, to false. After the broker has been shut down for the standby database, locate the Data Guard broker configuration files from the standby database DG_BROKER_CONFIG_FILE[1|2] initialization parameter values and delete them. Then restart the broker by setting DG_BROKER_START to true.

ORA-16621: database name for ADD DATABASE must be unique

Cause: An attempt was made to add a database to the broker configuration that already included a database with the specified name. The database names must be unique.

Action: Verify that a unique name is specified for the new database to be added. Also, the database name must match the DB_UNIQUE_NAME initialization parameter of the database.

ORA-16622: two or more broker database objects resolve to the same database

Cause: Multiple database objects referred to the same database.

Action: Examine the details of all databases in the broker configuration and verify that there are not two or more databases referring to the same database. If two or more database profiles in the broker configuration have the same value for the DGConnectIdentifier database property, either:

- Remove and re-add the erroneously defined database(s) to resolve the ambiguity.

- Ensure that the DGConnectIdentifier database property for each database allows the broker to properly connect to that database.

ORA-16623: database detected role change

Cause: A successful switchover or failover operation had been completed and was detected during database startup or broker health check. If this database was unavailable during a switchover or failover operation, it may not be a viable standby database for the new primary database and was disabled by the Data Guard broker.

Action: Connect to the new primary database and examine the broker configuration for databases that were disabled and that may require reinstatement or re-creation.

ORA-16624: broker protocol version mismatch detected

Cause: A network protocol version number mismatch was detected. This could happen if the databases in the broker configuration were not running the same version of Oracle. The broker would disable standby databases that were not running the same version of Oracle as the primary database if this situation was detected.

Action: Examine the version of Oracle installed on all databases in the broker configuration to ensure they are identical. Once all of the datbases in the broker configuration are running the same version of Oracle, reenable the standby databases that were disabled.

ORA-16625: cannot reach the database

Cause: The command could not be executed because the database required to complete the command was not reachable from the database where the command was issued. If the command modifies the configuration, the command must be processed by the copy of the broker running on an instance of the primary database.

Action: Check the network connections between all of the databases in the configuration. Alternatively, connect to a different database in the Data Guard broker configuration and retry the command. If an attempt was made to determine the status of a particular database in the configuration, connect to that database and get the current value of the StatusReport property for that database.

ORA-16626: failed to enable specified database

Cause: This status was returned when attempting to enable a standby database that:

- Could not locate itself in the broker configuration file.

- Failed to distinguish itself from two or more databases in the configuration file.

- Determined it missed a role change within the configuration.

Action: To correct the problem, try one of these actions:

- Confirm that the host and SID names for the database exactly match the values in the HOST_NAME and INSTANCE_NAME columns of V$INSTANCE.

- Confirm that there are not two or more databases with the same connect identifier. That is, multiple databases in the broker configuration should not reach the same database.

- If a failover had been performed and the old primary database has been re-created (or a standby database has been re-created), make sure the Data Guard broker configuration files have been removed for that database. Do NOT remove the configuration files that are in use by the new primary database.

ORA-16627: operation disallowed since no standby databases would remain to support protection mode

Cause: This status was returned because of one of the following:

- The broker rejected an attempt to change the overall configuration protection mode since it could not find any enabled standby databases that supported the proposed protection mode.

- The broker rejected an attempt to enable the configuration if it determined that there were no enabled standby databases that supported the overall protection mode.

- The broker rejected an attempt to disable or remove a database that, if disabled or deleted, would result in no remaining standby databases that could support the overall configuration protection mode.

- The broker rejected an attempt to switchover if doing so would violate the overall configuration protection mode.

- Performing automatic health check if the broker determined that no standby datbases supported the overall protection mode.

Action: - If changing the overall protection mode, confirm that at least one standby database satisfies the new protection mode.

- For enable failures, confirm that at least one standby database has a LogXptMode configurable property setting that supports the current overall protection mode.

- For delete and disable failures, confirm that at least one other standby database has a LogXptMode configurable property setting that supports the overall protection mode.

- For switchover failures that occur when the configuration is operating in maximum protection or maximum availability mode, confirm that at least one other standby database has its LogXptMode configurable property set to the value "SYNC". If the configuration contains a primary database and a single standby database and is operating in either maximum protection or maximum availability mode, ensure that the LogXptMode configurable property of the primary database is set to the value "SYNC". Since the old primary database will become the standby database after switchover completes, its LogXptMode configurable property setting must support the configuration protection mode.

- For health check error, confirm that at least one standby database has a LogXptMode configurable property setting that supports the current overall protection mode.

ORA-16628: broker protection mode inconsistent with the database setting

Cause: The Data Guard broker protection mode saved in the broker configuration file was inconsistent with the actual database setting.

Action: Reset the protection mode through the Data Guard broker.

ORA-16629: database reports a different protection level from the protection mode

Cause: The actual or current database protection level was different from the configured protection mode. This typically is caused by redo transport problems.

Action: Check the database alert logs and Data Guard broker logs for more details. Also, check the redo transport status. Ensure that one standby database supports the configured protection mode and that the network to that standby database is working properly.

ORA-16630: database property has been deprecated

Cause: The property that was specified in the command was deprecated.

Action: Check the broker documentation to identify a replacement property or SQL command for the deprecated property.

ORA-16631: operation requires shutdown of database or instance "*string*"

Cause: The Data Guard broker operation required a shutdown of the database or instance.

Action: If database or instance has not been shutdown by the DGMGRL CLI or Enterprise Manager, shutdown the database or instance manually.

ORA-16632: instance being added to database profile

Cause: The Data Guard broker determined that an instance successfully found its database profile within the broker configuration file, but lacked an instance-specific profile. The broker automatically created an instance-specific profile and associated the instance with its database profile.

Action: No user action is required. The broker will automatically associate the instance with its database profile and incorporate the instance into broker activity.

ORA-16633: the only instance of the database cannot be removed

Cause: The instance to be removed was the only instance of the corresponding database that was known to the broker.

Action: Remove the corresponding database object from the broker configuration instead of the individual instance object of the database.

ORA-16635: network connection failed during transmission

Cause: The Data Guard broker detected a connection failure to a remote database in the broker configuration. This failure happened in the middle of a transmission session. A transmission session usually requires more than one send operation for sending a large amount of data (for example, the broker configuration file) to the remote database.

Action: In most cases, no user action is required. The Data Guard broker always tries to resend the data. This error will be reported if the problem persists. This error indicates there are some problems with the network connection between broker managed databases. Further network troubleshooting should be done to identify and correct the actual problem.

ORA-16636: fast-start failover target standby in error state, cannot stop observer

Cause: A STOP OBSERVER operation could not be completed when Fast-Start Failover was enabled because the target standby database could not participate in the STOP OBSERVER operation.

Action: Additional information about this failure is recorded in the Data Guard broker log file for the primary database. This information helps to identify the reason why the target standby database was unable to participate in the STOP OBSERVER operation. If the problem can be corrected by the information in the broker log file, retry the operation. Alternatively, fast-start failover may be forcibly disabled by connecting to the primary database and issuing the DISABLE FAST_ START FAILOVER FORCE command from the DGMGRL CLI. Once fast-start failover has been forcibly disabled, the observer can be stopped regardless of the current state of the target standby database.

ORA-16637: an instance failed to access the Data Guard broker configuration

Cause: The broker could not access the broker configuration files on one or more database instances. This can happen when the DG_BROKER_CONFIG_FILE[1|2] initialization parameter values are not to the same set of file locations for a RAC database.

Action: Shut off the broker by setting the DG_BROKER_START initialization parameter to false. Then set the DG_BROKER_CONFIG_FILE1 and DG_BROKER_ CONFIG_FILE2 initialization parameters to file locations that are shared by all instances of a RAC database. Finally, restart the broker by setting the DG_ BROKER_START initialization parameter to true.

ORA-16638: could not get the instance status

Cause: The broker could not determine whether the specified instance was running.

Action: See the next error message in the error stack for more detailed information. If the situation described in the next error in the stack can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-16639: specified instance inactive or currently unavailable

Cause: An attempt was made to perform an operation on an instance that was not running or was unavailable.

Action: Ensure that the instance specified in the operation is running and then retry the operation.

ORA-16640: CRS warns that multiple instances may still be running

Cause: The broker failed to have CRS stop instance monitoring and shut down all but one instance. CRS instance monitoring did stop, but CRS may not have been able to shut down all but one instance. The broker operation was canceled.

Action: Suspend CRS management of this database using SRVCTL STOP DATABASE -D <name> -O NONE. Reissue the broker request.

ORA-16642: DB_UNIQUE_NAME mismatch

Cause: The expected DB_UNIQUE_NAME value did not match the actual DB_ UNIQUE_NAME value for the database that the broker contacted using the connect identifier that was associated with that database.

Action: Verify that the connect identifier correctly connects to the intended database. Verify that the name of the database the broker expects to find by that connect identifier matches the actual DB_UNIQUE_NAME for that database.

ORA-16643: unable to determine location of broker configuration files

Cause: The Data Guard broker was unable to determine the location of its configuration files from the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-16644: apply instance not available

Cause: The broker operation could not finish, because it requires a running apply instance for the standby database, and either there was no such instance designated for the standby database or the designated apply instance was not currently available.

Action: Start the designated apply instance or wait until the broker specifies an instance to be the apply instance and reissue the command.

ORA-16645: unexpected new instance interrupted current operation

Cause: A new instance unexpectedly joined the Data Guard configuration at a point when the current operation may proceed only if the set of known instances is not changing dynamically.

Action: Reissue the operation after the new instance has joined the Data Guard configuration.

ORA-16646: fast-start failover is disabled

Cause: The operation was not allowed because fast-start failover was disabled.

Action: Enable fast-start failover and retry the operation.

ORA-16647: could not start more than one observer

Cause: The observer could not start because there was another observer already observing the Data Guard configuration for which fast-start failover may have been enabled.

Action: Stop the running observer. Retry the operation.

ORA-16648: a new observer registered with identifier *string*

Cause: The observer was registered with the Data Guard broker and will begin observing the Data Guard configuration for conditions that warrant doing a fast-start failover.

Action: None

ORA-16649: possible failover to another database prevents this database being opened

Cause: An attempt to open the database was made either when a failover occurred or while fast-start failover was enabled and the fast-start failover status could not be evaluated.

Action: Check if a failover did occur. If fast-start failover is enabled, and a failover did not occur, ensure that connectivity exists between this database and either the observer or the target standby database. Then, try opening the database again.

ORA-16650: command incompatible when fast-start failover is enabled

Cause: An attempt was made to issue a command that is not permitted when fast-start failover is enabled. The command was not issued using the Data Guard broker.

Action: The command must be issued using the Data Guard broker.

ORA-16651: requirements not met for enabling fast-start failover

Cause: The attempt to enable fast-start failover could not be completed because one or more requirements were not met:

- The Data Guard configuration must be in either MaxAvailability or MaxPerformance protection mode.

- The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to SYNC if the configuration protection mode is set to MaxAvailability mode.

- The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to ASYNC if the configuration protection mode is set to MaxPerformance mode.

- The primary database and the fast-start failover target standby database must both have flashback enabled.

- No valid target standby database was specified in the primary database FastStartFailoverTarget property prior to the attempt to enable fast-start failover, and more than one standby database exists in the Data Guard configuration.

Action: Retry the command after correcting the issue:

- Set the Data Guard configuration to either MaxAvailability or MaxPerformance protection mode.

- Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to SYNC if the configuration protection mode is set to MaxAvailability.

- Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to ASYNC if the configuration protection mode is set to MaxPerformance.

- Ensure that both the primary database and the fast-start failover target standby database have flashback enabled.

- Set the primary database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the desired target standby database and the desired target standby database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the primary database.

ORA-16652: fast-start failover target standby database is disabled

Cause: The command to enable or disable fast-start failover could not be completed because Data Guard broker management of the Fast-Start Failover target standby database is currently disabled.

Action: Enable broker management of the target standby database and reissue the command. If an attempt was made to disable Fast-Start Failover when this error was reported, disable fast-start failover forcibly using the DGMGRL DISABLE FAST_START FAILOVER FORCE command. Consult the documentation for more information.

ORA-16653: failed to reinstate database

Cause: The Data Guard broker failed to reinstate the specified database because the REINSTATE command failed or because the database is already enabled.

Action: Additional information about this failure is recorded in the primary database or the specified database Data Guard broker log files. This information is helpful in determining how to proceed.

ORA-16654: fast-start failover is enabled

Cause: The attempted command was not allowed while fast-start failover was enabled:

- The FastStartFailoverTarget property may not be modified.

- The LogXptMode property for either the primary database or the fast-start failover target standby database may not be modified.

- The configuration"s protection mode may not be modified.

- Neither the broker configuration nor the fast-start failover target standby database may be disabled using the DGMGRL CLI DISABLE command.

- Neither the broker configuration nor the fast-start failover target standby database may be removed using the DGMGRL CLI REMOVE command.

- The FAILOVER IMMEDIATE command is not allowed.

- The DG_BROKER_START initialization parameter may not be set to FALSE.

Action: Disable fast-start failover, using the FORCE option if required. Then retry the attempted command.

ORA-16655: specified target standby database invalid

Cause: The attempted command was not allowed because fast-start failover was enabled for this Data Guard configuration and the target standby database specified in the command differs from the standby database that was indicated by the FastStartFailoverTarget property associated with the current primary database.

Action: Retry the attempted command by specifying the standby database that is indicated by the FastStartFailoverTarget property that is associated with the current primary database. Alternatively, fast-start failover may be disabled. Then retry the command using the originally specified target standby database.

ORA-16656: Data Guard broker detected role change

Cause: The Data Guard broker detected a role during database startup or health check.

Action: Additional information about this failure is recorded in the Data Guard broker log files, one for the primary database and one for each standby database in the Data Guard configuration. This information is helpful in determining how best to proceed from this failure.

ORA-16657: reinstatement of database in progress

Cause: Reinstatement of this database was in progress.

Action: None

ORA-16658: unobserved fast-start failover configuration

Cause: The fast-start failover configuration was currently unobserved so failover was disallowed.

Action: Make sure the observer is running and has connectivity to both the primary and the target standby databases. Otherwise, disable fast-start failover to perform a failover in the absence of the observer process.

ORA-16659: failover operation in progress

Cause: A primary database that restarted contacted a standby database that is being failed over to.

Action: Shut down the primary database and wait for failover to complete on the standby database. Once failover is complete, restart the old primary database. If the failover occurred due to fast-start failover, restarting the primary database after failover is complete allows it to be automatically reinstated as a standby database to the new primary database.

ORA-16660: fast-start failover operation attempted in absence of a broker configuration

Cause: An attempt was made to enable or disable fast-start failover when connected to a standby database for which broker configuration details are currently unavailable. For instance, the standby database may currently require re-creation (or flashback reinstantiation) before it may respond to broker client commands.

Action: 1) An attempt to enable or disable (non-FORCE) fast-start failover at this standby database will be rejected until such time that the broker configuration details have been made available to that standby database from the primary database. This normally occurs when the standby database is successfully re-created or flashed back, and then reenabled at the primary database. 2) Use the FORCE option to override fast-start failover that has been enabled at the standby database even when the broker configuration details are currently unavailable to the standby database. In this case, this status message is only a warning. Note that fast-start failover is not formally disabled in the broker configuration. The effect of this command issued under these circumstances may or may not be permanent, depending upon when the primary and standby databases regain full communication between each other and if the state of fast-start failover has been altered at the primary database in the meantime.

ORA-16661: the standby database needs to be reinstated

Cause: A switchover or failover operation has caused this database to require reinstatement.

Action: Use the DGMGRL REINSTATE DATABASE command or Enterprise Manager to reinstate the database. If the target database has flashback enabled and it has sufficient flashback logs, the database will be reinstated as a standby database for the current primary database.

ORA-16662: network timeout when contacting a database

Cause: In response to the issued command, the Data Guard broker attempted to contact a database in the Data Guard configuration. That attempt failed because there was no response from that database after the period of time specified by the NetTimeout property for that database.

Action: Check the Data Guard broker log for the details of the failure. Fix the problem and try the command again.

ORA-16664: unable to receive the result from a database

Cause: During execution of a command, a database in the Data Guard broker configuration failed to return a result.

Action: Check Data Guard broker logs for the details of the failure. Fix any possible network problems and try the command again.

ORA-16665: timeout waiting for the result from a database

Cause: The Data Guard broker was forced to time out a network connection

Action: Check Data Guard broker logs for the details of the failure. Fix any possible network problems and reissue the command.

ORA-16666: unable to initiate fast-start failover on a standby database

Cause: The request to initiate a fast-start failover using DBMS_DG.INITIATE_FS_ FAILOVER was made to a standby database. An application may only request that fast-start failover be initiated by calling DBMS_DG.INITIATE_FS_FAILOVER on a primary database.

Action: Call DBMS_DG.INITIATE_FS_FAILOVER on the primary database.

ORA-16667: request Data Guard broker client to reissue command

Cause: The Data Guard broker operation required the same command be issued again from the client.

Action: If DGMGRL or Enterprise Manager has not already done so, reissue the same command to the Data Guard broker manually.

ORA-16668: operation invalid on fast-start failover target database

Cause: The attempted command was not allowed on the fast-start failover target standby database when fast-start failover is currently enabled.

Action: Retry the attempted command on a database other than the Fast-Start Failover target standby database. Alternatively, disable fast-start failover and reissue the same command to the fast-start failover target standby database.

ORA-16669: convert database operation cannot be issued on target database

Cause: This error was returned because a DGMGRL CLI CONVERT DATABASE command was issued on the database to be converted.

Action: Explicitly connect to another database in the broker configuration and reissue the CONVERT command.

ORA-16700: the standby database has diverged from the primary database

Cause: The primary database may have been flashed back or restored from a backup set and then reopened with the RESETLOGS option.

Action: Re-create the standby database from the primary database or flash back the standby database to the same point the primary database had been flashed back to.

ORA-16701: Data Guard broker command failed

Cause: Command to modify or query the database failed.

Action: Check the Data Guard broker log for the reason for the failure, and reissue the command.

ORA-16702: Data Guard broker command warning

Cause: A command to modify or query the database resulted in a warning.

Action: Check the Data Guard broker log for the warning and, if necessary, reissue the command.

ORA-16703: cannot set property while the database is enabled

Cause: An attempt was made to change a database property while the database was enabled.

Action: Disable the database first, update the property and then, reenable the database.

ORA-16704: cannot modify a read-only property

Cause: An attempt was made to change a read-only property.

Action: The property is controlled internally by the Data Guard broker and cannot be modified.

ORA-16706: no resource guard is available

Cause: Resource guard was not available to service the request.

Action: Contact Oracle Support Services.

ORA-16707: the value of the property *string* **is invalid, valid values are** *string*

    Cause: An invalid property value was entered while broker management of the database was disabled.

    Action: Reset the property to a valid value.

ORA-16708: the state supplied to broker is invalid

    Cause: The state name specified was invalid for the database.

    Action: Check the state name and reissue the request.

ORA-16709: standby archived log location settings conflict with database recovery area

    Cause: The StandbyArchiveLocation or AlternateLocation property was set to USE_DB_RECOVERY_FILE_DEST, but the initialization parameter DB_RECOVERY_FILE_DEST did not specify a valid destination.

    Action: Use a value other than USE_DB_RECOVERY_FILE_DEST for StandbyArchiveLocation or AlternateLocation, or set up a valid database recovery area by setting DB_RECOVERY_FILE_DEST to a valid destination.

ORA-16713: the Data Guard broker command timed out

    Cause: The Data Guard broker timed out the command.

    Action: Verify that the command is valid for the database and then retry the command.

ORA-16714: the value of property *string* **is inconsistent with the database setting**

    Cause: The value of the specified configuration property was inconsistent with database in-memory settings or server parameter file settings. This may be caused by changing an initialization parameter that corresponds to a configuration property.

    Action: Query the InconsistentProperties property on the database to determine the which properties are set inconsistently. Reset the properties to make them with the database settings.

ORA-16715: redo transport-related property *string* **of standby database "***string***" is inconsistent**

    Cause: The value of the specified redo transport-related configuration property of the given standby database was inconsistent with the primary database redo transport service setting. This may be caused by changing an initialization parameter that corresponds to a configuration property.

    Action: Query the InconsistentLogXptProps property on the primary database to determine which redo transport properties are set inconsistently Reset the properties on the standby database to make them consistent with the primary database redo transport settings.

ORA-16716: clearing parameter LOG_ARCHIVE_DEST failed

    Cause: An attempt to clear the LOG_ARCHIVE_DEST parameter failed.

    Action: Contact Oracle Support Services.

ORA-16717: clearing parameter LOG_ARCHIVE_DUPLEX_DEST failed

    Cause: An attempt to clear the LOG_ARCHIVE_DUPLEX_DEST parameter failed.

    Action: Contact Oracle Support Services.

ORA-16718: failed to locate database

Cause: The Data Guard broker was unable to locate the database in the broker configuration.

Action: Add the database to the broker configuration and then reissue the command.

ORA-16719: unable to query V$ARCHIVE_DEST fixed view

Cause: The broker failed to query the V$ARCHIVE_DEST fixed view."

Action: Test and clear the problem using SQL*Plus.

ORA-16720: no LOG_ARCHIVE_DEST_n initialization parameters available

Cause: All LOG_ARCHIVE_DEST_n initialization parameters were in use.

Action: Clear one or more LOG_ARCHIVE_DEST_n initialization parameters so that broker can use them to setup the primary database redo transport.

ORA-16721: unable to set LOG_ARCHIVE_DEST_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_n initialization parameters.

Action: Check the Data Guard broker log and Oracle alert logs for more details.

ORA-16722: unable to set LOG_ARCHIVE_DEST_STATE_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_STATE_n initialization parameters.

Action: Check the Data Guard broker log and Oracle alert logs for more details.

ORA-16723: setting AlternateLocation property conflicts with the redo transport setting

Cause: The standby database was not using standby redo logs, and the redo transport service to the standby database is set to a nonzero value for the ReopenSecs property and a value of zero for the MaxFailure property. In this case, the redo transport service will attempt to send redo data to the standby database indefinitely and never switch to the alternate destination.

Action: Any one of the following actions will solve the problem:

- add standby redo logs to the standby database.

- set ReopenSecs property to zero.

- set MaxFailure property to a nonzero value. After performing one of the above actions, reset the standby database AlternateLocation property.

ORA-16727: cannot close database

Cause: The Data Guard broker could not close the database.

Action: Terminate any active sessions connected to the database and then reissue the request.

ORA-16728: consistency check for property *string* found *string* error

Cause: The consistency check for the specified property failed due to the error shown.

Action: Check the error message and clear the error.

ORA-16729: validation of value for property *string* found *string* error

Cause: The property value validation failed due to the error shown.

Action: Check the error message and clear the error.

ORA-16730: error executing DBMS_LOGSTDBY.SKIP_TXN procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16731: error executing DBMS_LOGSTDBY.UNSKIP_TXN procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16732: error executing DBMS_LOGSTDBY.SKIP procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16733: error executing DBMS_LOGSTDBY.UNSKIP procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16734: error executing DBMS_LOGSTDBY.SKIP_ERROR procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16735: error executing DBMS_LOGSTDBY.UNSKIP_ERROR procedure

Cause: Logical standby database package may not be installed.

Action: Install logical standby database packages and reissue the request.

ORA-16736: unable to find the destination entry of standby database "*string*" in V$ARCHIVE_DEST

Cause: Either the standby destination was manually changed or deleted outside of Data Guard broker, or no entry was available for the Data Guard broker to use.

Action: Clean up the destination setting, remove the unused settings, and reset the redo transport service.

ORA-16737: the redo transport service for standby database "*string*" has an error

Cause: A communication problem with the standby database caused the redo transport to fail.

Action: Query the LogXptStatus property to see the error message. Check the Data Guard broker log and Oracle alert log for more details.

ORA-16738: redo transport service for database "*string*" is not running

Cause: The redo transport service for the specified standby database was not running.

Action: Check the Data Guard broker log and/or the alert log for more details. If necessary, start the redo transport service for the standby database.

ORA-16739: redo transport service for standby database "*string*" is running

Cause: The redo transport service for the standby database was running.

Action: Check the Data Guard broker log for more details. If necessary, stop the redo transport service for the standby database.

ORA-16740: redo transport service for standby database "*string*" incorrectly set to ALTERNATE

Cause: The redo transport service to the standby database was set to ALTERNATE when no other destination was set to alternate to this destination.

Action: Reenable the standby database or the entire configuration to allow the configuration property settings to be propagated to the initialization parameters.

ORA-16741: the destination parameter of standby database "*string*" has incorrect syntax

Cause: The destination defined in the server parameter file of the primary database had incorrect syntax and Data Guard broker failed to update the destination when redo transport services were enabled.

Action: Fix the syntax error in the primary database server parameter file or remove the entry from the server parameter file. Also, check the values of the redo transport-related properties for the specified standby database.

ORA-16742: the standby database "*string*" has exhausted its quota

Cause: The standby database exhausted its quota for storing archived redo logs.

Action: Remove some archived redo logs from the standby database or increase its quota.

ORA-16743: cannot determine status of redo transport service for standby database "*string*"

Cause: The status of redo transport to the specified standby database could not be determined.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16744: the DG_CONFIG list of LOG_ARCHIVE_CONFIG parameter is full

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Data Guard broker was not able to add a new DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list, then reenable the database.

ORA-16745: unable to add DB_UNIQUE_NAME "*string*" into the DG_CONFIG list because it is full

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Data Guard broker was not able to add the specified DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list, then reenable the database.

ORA-16746: Data Guard broker cannot mount the database

Cause: The Data Guard broker failed to mount the database."

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16747: logical standby database guard could not be turned on

Cause: The Data Guard broker could not turn on the logical standby database guard.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16748: Data Guard broker cannot open the primary database

Cause: The Data Guard broker failed to open the primary database" the database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16749: switchover to logical standby database failed

Cause: The Data Guard broker failed to switch a logical standby database over to a primary database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16750: failed to activate logical standby database

Cause: The Data Guard broker failed to activate a logical standby database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16751: failed to switchover to physical standby database

Cause: The Data Guard broker failed to switch a physical standby database over to a primary database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16753: Data Guard broker cannot open standby database

Cause: The Data Guard broker failed to open the standby database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16754: failed to activate physical standby database

Cause: The Data Guard broker failed to activate the physical standby database.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16755: failed to set initialization parameter

Cause: The Data Guard broker failed to set an initialization parameter using either the ALTER SYSTEM SET or ALTER SYSTEM RESET command.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16757: failed to get property value

Cause: The Data Guard broker failed to get the value for the specified property.

Action: Check the Data Guard broker log for more details.

ORA-16758: the specified apply instance is not running

Cause: The Data Guard broker could not start apply services on the specified instance because that instance was not running.

Action: Start the instance and then retry the command.

ORA-16759: cannot start SQL Apply with initial SCN

Cause: The Data Guard broker failed to start SQL Apply with an initial SCN.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16760: cannot start SQL Apply

Cause: The Data Guard broker failed to start SQL Apply.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16761: cannot stop SQL Apply

Cause: The Data Guard broker failed to stop SQL Apply.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16762: invalid database state

Cause: Database was not in the intended state.

Action: Determine the reason why the database is not running in the intended state and reissue the command.

ORA-16763: redo transport service for a standby database is running

    Cause: The redo transport service for a standby database was running.

    Action: Query the StatusReport property of the primary database for more details. If necessary, stop the redo transport service for the database.

ORA-16764: redo transport service to a standby database is not running

    Cause: The redo transport service to a standby database was not running.

    Action: Query the StatusReport property of the primary database for more details. If necessary, start the redo transport service.

ORA-16765: Redo Apply is running

    Cause: Redo Apply was running when it should have been stopped.

    Action: If necessary, stop Redo Apply.

ORA-16766: Redo Apply is stopped

    Cause: Redo Apply was stopped when it should have been running.

    Action: If necessary, start Redo Apply.

ORA-16767: SQL Apply is running

    Cause: SQL Apply was running when it should have been stopped."

    Action: If necessary, stop SQL Apply.

ORA-16768: SQL Apply is stopped

    Cause: SQL Apply was stopped when it should have been running."

    Action: If necessary, start SQL Apply.

ORA-16769: the physical standby database is open read-only

    Cause: All instances in the physical standby database were put into a read-only state instead of APPLY-OFF.

    Action: Issue the EDIT DATABASE SET STATE command to set the database to the APPLY-OFF state.

ORA-16770: Redo Apply not started since physical standby database is opening

    Cause: Redo Apply services could not be started on the physical standby database because it was being opened. The Data Guard broker will start Redo Apply services once the physical standby database has been opened.

    Action: No action required.

ORA-16771: failover to a physical standby database failed

    Cause: The Data Guard broker encountered errors when converting a physical standby database to a primary database.

    Action: Check the Data Guard broker log and the Oracle alert log for more details about the error.

ORA-16772: switchover to a standby database failed

    Cause: The Data Guard broker encountered errors when switching over to the specified standby database.

    Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16773: cannot start Redo Apply

    Cause: The Data Guard broker failed to start Redo Apply.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16774: cannot stop Redo Apply

Cause: The Data Guard broker failed to stop Redo Apply.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16775: target standby database in broker operation has potential data loss

Cause: The target standby database specified for the broker operation did not have all the redo data from the primary database.

Action: Confirm that the redo transport service on the primary database is functioning correctly by checking its status using the StatusReport monitorable property. Reissue the broker command once all redo data is available on the target standby database.

ORA-16776: health check of the redo transport service failed

Cause: The Data Guard broker could not complete the health check for the redo transport service.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16777: unable to find the destination entry of a standby database in V$ARCHIVE_DEST

Cause: Either a destination was manually deleted or no entry was available for Data Guard.

Action: Check the Data Guard broker log and the Oracle alert log for more details. The redo transport service may need to be reset.

ORA-16778: redo transport error for one or more databases

Cause: The redo transport service was unable to send redo data to one or more standby databases.

Action: Check the Data Guard broker log and Oracle alert log for more details. Query the LogXptStatus property to see the errors.

ORA-16779: the destination parameter of a database is set incorrectly

Cause: The destination was defined in the LOG_ARCHIVE_DEST_n server parameter file with incorrect syntax. The Data Guard broker failed to update the destination when the redo transport was turned on.

Action: Check the Data Guard broker log to see which database has the problem. Fix the syntax error in the server parameter file or remove the entry from the server parameter file. Check if the syntax of the redo transport-related properties are correct.

ORA-16780: a database has exhausted its archived redo log storage quota

Cause: A database has exhausted its quota for storing archived redo logs.

Action: Check the Data Guard broker log to see which database has the problem. Remove some archived logs at the standby database or increase its quota.

ORA-16781: cannot determine status of redo transport service for standby database

Cause: The status of redo transport to the specified standby database could not be determined.

Action: Check the Data Guard broker log and Oracle alert log for more details.

ORA-16782: instance not open for read and write access

Cause: The database was mounted on an instance but not opened for read and write access.

Action: Check the StatusReport property for more details and, if possible, open the instance manually.

ORA-16783: instance *string* not open for read and write access

Cause: The database was mounted on an instance but not opened for read and write access.

Action: Check the StatusReport property for more details and, if possible open the instance manually.

ORA-16784: database name specified by Dependency property is incorrect

Cause: The database name, that should be the value of the DB_UNIQUE_NAME initialization parameter, specified in the Dependency property was incorrect.

Action: Reset the Dependency property to the correct name of the database.

ORA-16785: the database is in NOARCHIVELOG mode

Cause: The database was in NOARCHIVELOG mode when it was either a primary database or when it was a standby database that was being switched over to be a primary database.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

ORA-16786: unable to access Data Guard broker metadata

Cause: The Data Guard broker configuration files did not exist or for some other reason the Data Guard broker configuration metadata could not be accessed.

Action: Check the Data Guard broker log for more details.

ORA-16788: unable to set one or more database configuration property values

Cause: This situation occurred when the broker attempted to set database configurable property values into the database by issuing ALTER SYSTEM or ALTER DATABASE commands. Typical causes of this error are:

- The values of redo transport-related properties contain syntax syntax errors.

- The value of the LogArchiveTrace property was out of range.

Action: Check the Data Guard broker log to see which property has the problem and set the property to the correct value.

ORA-16789: standby redo logs not configured

Cause: Standby redo logs were not configured for the database.

Action: Standby redo logs are required when the redo transport mode is set to SYNC or ASYNC. Check the Data Guard documentation to see how to create standby redo logs.

ORA-16790: the value of the configurable property is invalid

Cause: An invalid property value was entered.

Action: Reset the property to a correct value.

ORA-16791: unable to check the existence of the standby redo logs

Cause: The database may not be mounted, or the query of the V$STANDBY_LOG fixed view failed.

Action: Ensure the database is mounted and query the V$STANDBY_LOG fixed view to see if the problem has been corrected, and retry the operation.

ORA-16792: configurable property value is inconsistent with database setting

Cause: The values of one or more configurable properties were inconsistent with database in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Data Guard broker.

Action: Query the InconsistentProperties property on the database or check the Data Guard broker log to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the database or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16793: logical standby database guard is off

Cause: The logical standby database guard was turned off.

Action: Issue the ALTER DATABASE GUARD ALL command to turn the guard on and verify that Data Guard health check error or warning is cleared.

ORA-16794: database guard is on for primary database

Cause: The database guard was turned on for the primary database.

Action: Issue the ALTER DATABASE GUARD NONE command to turn off the guard and verify that Data Guard health check error or warning is cleared.

ORA-16795: the standby database needs to be re-created

Cause: A switchover or failover operation caused this database to require re-creation. The database was marked for re-creation because it was not a viable standby database for the new primary database. Until this error status is resolved for this database, information about this database and the broker configuration to which it belongs is unavailable to a broker client that is connected to this database. Therefore, all commands directed by that client to this database cannot be completed.

Action: Re-create (or flash back) the standby database. Connect to the primary database in the broker configuration and reenable broker management of that database. Once enabled, it is possible to connect to that standby database and manage it with the broker. Alternatively, many client commands that cannot be completed at the standby database when in this error state can be completed successfully when issued to the primary database. In this case, simply reconnect to the primary database and retry the command.

ORA-16796: one or more properties could not be imported from the database

Cause: The broker was unable to import property values for the database being added to the broker configuration. This error indicates:

- The Oracle Net service name specified in DGMGRL CREATE CONFIGURATION or ADD DATABASE command was not one that provides access to the database being added.

- There were no instances running for the database being added.

Action: Remove the database from the configuration using the REMOVE CONFIGURATION or REMOVE DATABASE command. Make sure that the database to be added has at least one instance running and that the Oracle Net service name provides access to the running instance. Also check the broker log file for additional information. Then, reissue the CREATE CONFIGURATION or ADD DATABASE command.

ORA-16797: database is not using a server parameter file

Cause: The database was not using a server parameter file or the broker was unable to access the server parameter file.

Action: Issue the CREATE SPFILE=".." FROM PFILE="..."" command to create a server parameter file and then restart the database to use it.

ORA-16798: unable to complete terminal recovery on the standby database

Cause: Terminal recovery on the standby database failed during the failover operation.

Action: Check the Data Guard broker log and the Oracle alert logs to see more details on the reason for the failure.

ORA-16799: Redo Apply is not running

Cause: Either the Data Guard broker metadata indicates that Redo Apply was turned off, or the recovery process, MRP0, was not running. As a result, Redo Apply-related properties could not be set.

Action: Turn on Redo Apply through Data Guard broker and reissue the command to set a Redo Apply-related property.

ORA-16800: redo transport service for a standby database incorrectly set to ALTERNATE

Cause: The redo transport service for a standby database was set to ALTERNATE when no other destination is set to alternate to this destination.

Action: Reenable the standby database or the entire configuration to allow the configuration property settings to be propagated to the initialization parameters.

ORA-16801: redo transport-related property is inconsistent with database setting

Cause: The values of one or more redo transport-related configuration properties were inconsistent with database in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Data Guard broker.

Action: Query the InconsistentLogXptProps property on the primary database or check the Data Guard broker log to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the database or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16802: downgrading redo transport mode from SYNC disallowed

Cause: An attempt was made to downgrade the redo transport mode of a standby database from SYNC to ASYNC when the configuration was in Maximum Protection or Maximum Availability mode and the primary database was a RAC database. This was not disallowed even though there may have been other standby databases with redo transport modes set to SYNC to support the protection mode.

Action: Do one of the following if the redo transport mode of the standby must be downgraded:

- Shut down all instances of the primary database and restart one instance with the initialization parameter CLUSTER_DATABASE set to FALSE. Downgrade the redo transport mode of the standby database of interest. Then, shutdown the instance, set the the CLUSTER_DATABASE initialization parameter to TRUE, and restart all primary database instances.

- Downgrade the protection mode to Maximum Performance mode and then, downgrade the redo transport mode of the standby database of interest. Finally, upgrade the protection mode. This will require a restart of all primary database instances if upgrading to Maximum Protection mode. Note that the above only works when there is at least one standby database in the configuration that has its redo transport mode set to SYNC.

ORA-16803: unable to query a database table or fixed view

Cause: Failed to query a database table or fixed view. The database may not be opened or mounted.

Action: Check the Data Guard broker log for more details.

ORA-16804: one or more configuration properties in metadata have invalid values

Cause: Data Guard broker health check detected that one or more configuration properties in the broker configuration had invalid values. The property values were changed while broker management of the database was disabled.

Action: Check Data Guard broker log for more details on which properties have invalid values and reset them through the Data Guard broker.

ORA-16805: change of LogXptMode property violates overall protection mode

Cause: The broker disallowed the attempt to change the LogXptMode configurable property for the standby database because, if allowed, the overall protection mode for the configuration would have been violated.

Action: If the LogXptMode configuration property must be changed for the specified standby database, first downgrade the overall protection mode for the broker configuration. After that operation has completed, the LogXptMode configuration property for the standby database can be changed.

ORA-16806: supplemental logging is not turned on

Cause: Supplemental logging was not turned on while there was a logical standby database in the configuration. This could happen either on the primary database or on the logical standby database that was being switched over to be the primary database.

Action: Check the Data Guard broker log for more details. Issue the ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS to add supplemental logging.

ORA-16807: unable to change database protection mode

Cause: An attempt to issue the ALTER DATABASE SET STANDBY TO MAXIMIZE {PROTECTION | AVAILABILITY | PERFORMANCE} failed.

Action: Check the Data Guard broker log and the Oracle log for more information.

ORA-16809: multiple warnings detected for the database

Cause: The broker detected multiple warnings for the database.

Action: Check the StatusReport monitorable property of the specifed database to get a detailed status report.

ORA-16810: multiple errors or warnings detected for the database

Cause: The broker detected multiple errors or warnings for the database.

Action: Check the StatusReport monitorable property of the specified database to get a detailed status report.

ORA-16811: apply instance not recorded by the Data Guard broker

Cause: The broker did not register an apply instance for a standby database.

Action: Reenable the standby database to clear the error.

ORA-16812: log apply service not running on apply instance recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16813: log apply service not running on apply instance *string* recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16814: incorrect redo transport setting for AlternateLocation for standby database

Cause: The Data Guard broker detected an incorrect redo transport setting for a standby database AlternateLocation property. The incorrect setting could be one of the following:

- The AlternateLocation property was empty, but the redo transport to the standby database had an ALTERNATE setting.

- The AlternateLocation property was not empty and the redo transport to the standby database had no ALTERNATE setting.

- The AlternateLocation property did not match the ALTERNATE setting in the redo transport. The mismatch may include service string, directory specification of the alternate location, or the DB_UNIQUE_NAME attribute.

- The LOG_ARCHIVE_DEST_STATE_n parameter corresponding to the alternate location was not set to ALTERNATE.

- The flash recovery area was being used by the standby database for archived logs, but the redo transport to the standby database still had an ALTERNATE setting for the AlternateLocation property. Data Guard broker logs provide more details on which of the above cases caused the error.

Action: Reenable the primary database to clear the error.

ORA-16815: incorrect redo transport setting for AlternateLocation for standby database "*string*"

Cause: The Data Guard broker detected an incorrect redo transport setting for a standby database AlternateLocation property. The incorrect setting could be one of the following:

- The AlternateLocation property was empty, but the redo transport to the standby database had an ALTERNATE setting.

- The AlternateLocation property was not empty and the redo transport to the standby database had no ALTERNATE setting.

- The AlternateLocation property did not match the ALTERNATE setting in the redo transport. The mismatch may include service string, directory specification of the alternate location, or the DB_UNIQUE_NAME attribute.

- The LOG_ARCHIVE_DEST_STATE_n parameter corresponding to the alternate location was not set to ALTERNATE.

- The flash recovery area was being used by the standby database for archived logs, but the redo transport to the standby database still had an ALTERNATE setting for the AlternateLocation property. Data Guard broker logs provide more details on which of the above cases caused the error.

Action: Reenable the primary database to clear the error.

ORA-16816: incorrect database role

Cause: The Data Guard broker detected that the specified database had a database role that was different from the database role recorded in the Data Guard configuration. This could be the result of a failed switchover or failover operation, or an out-of-band switchover or failover operation done to the database.

Action: Manually fix the database to convert it to the appropriate database role, then issue an ENABLE DATABASE command to reenable the database.

ORA-16817: unsynchronized fast-start failover configuration

Cause: The fast-start failover target standby database was not synchronized with the primary database. As a result, a Fast-Start Failover could not happen automatically in case of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases will then be synchronized. The Data Guard configuration may then fail over automatically to the standby database in the event of loss of the primary database.

ORA-16818: fast-start failover suspended

Cause: The primary database was intentionally shutdown. As a result, a fast-start failover could not happen automatically.

Action: Start the primary database. This effectively restores the ability to automatically perform a fast-start failover in the event of a failure of the primary database.

ORA-16819: fast-start failover observer not started

Cause: The observer for fast-start failover was not started. As a result, fast-start failover could not happen in the case of a primary database failure.

Action: Start the fast-start failover observer by using, for example, the DGMGRL START OBSERVER command.

ORA-16820: fast-start failover observer is no longer observing this database

Cause: A previously started observer was no longer actively observing this database. A significant amount of time elapsed since this database last heard from the observer. Possible reasons were:

- The host where the observer was running was not available.

- The network connection between the observer and this database was not available.

- The observer process was terminated unexpectedly.

Action: Check the reason why the observer cannot contact this database. If the problem cannot be corrected, stop the current observer by connecting to the Data Guard configuration and issue the DGMGRL STOP OBSERVER command. Then, restart the observer on another host. Finally, use the DGMGRL START OBSERVER command to start the observer on the other host.

ORA-16821: logical standby database dictionary not yet loaded

Cause: The logical standby database had not loaded the dictionary. This status was detected by the broker health check mechanism. Alternatively, this status may be returned when attempting to switch or fail over to a logical standby database that had not yet loaded its dictionary.

Action: Start SQL Apply on the logical standby database, if it is not already running, and wait for it to reach the APPLYING state.

ORA-16822: new primary database not yet ready for standby database reinstatement

Cause: The new primary database, as a result of a logical standby database failover operation, had not fully completed the failover operation. An attempt to reinstate a disabled standby database could not be completed until failover completed on the new primary database.

Action: Wait until the failover operation has completed on the new primary database. Then retry the reinstate operation.

ORA-16823: redo transport mode is incompatible for current operation

Cause: The redo transport mode of this database was incompatible for this broker operation.

Action: Reset the LogXptMode database property for this database and retry the broker operation.

ORA-16824: multiple warnings, including fast-start failover-related warnings, detected for the database

Cause: The broker detected multiple warnings for the database. At least one of these warnings may have prevented Fast-Start Failover from occurring.

Action: Check the StatusReport monitorable property of the database specified.

ORA-16825: multiple or errors or warnings, including fast-start failover-related errors or warnings, detected for the database

Cause: The broker detected multiple errors or warnings for the database. At least one of these errors or warnings may have prevented a fast-start failover from occurring.

Action: Check the StatusReport monitorable property of the database specified.

ORA-16826: apply service state is inconsistent with the DelayMins property

Cause: This warning was caused by one of the following reasons:

- The apply service was started without specifying the real-time apply option or without the NODELAY option when the DelayMins property was set to zero.

- The apply service was started with the real-time apply option or with the NODELAY option when the DelayMins property was set to a value greater than zero.

Action: Reenable the standby database to allow the broker to restart the apply service with the apply options that are consistent with the specified value of the DelayMins property.

ORA-16827: Flashback Database is disabled

Cause: The broker detected that the Flashback Database feature was disabled. With Flashback Database disabled, the broker would not be able to:

- reinstate a database that required reinstatement.

- convert a physical standby database to a snapshot standby database.

- convert a snapshot standby database to a physical standby database. Flashback Database may been disabled manually with the ALTER DATABASE FLASHBACK DATABASE OFF command or automatically by the database in the event of an error.

Action: Check the database alert log to determine whether Flashback Database was disabled due to errors and then correct the problem. If Flashback Database had been manually disabled, reenable Flashback Database with the ALTER DATABASE FLASHBACK DATABASE ON command. If, after enabling Flashback Database, the database still cannot be reinstated or converted, you must re-create the database from a copy of the primary database.

ORA-16828: invalid value specified for REDO_TRANSPORT_USER initialization parameter
Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded 30 characters.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

ORA-16829: fast-start failover configuration is lagging
Cause: The fast-start failover target standby database was not within the lag limit specified by the FastStartFailoverLagLimit configuration property. As a result, a fast-start failover could not happen in the event of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully trasmitting redo data. If this condition persists consider raising the value of the FastStartFailoverLagLimit configuration property.

ORA-16830: primary isolated from fast-start failover partners longer than FastStartFailoverThreshold seconds: shutting down
Cause: The primary database was isolated from both the observer and target standby database for longer than the seconds specified by the FastStartFailoverThreshold property. A fast-start failover probably occurred. If the FastStartFailoverPmyShutdown configuration property was set to TRUE, the broker will shut down the primary database in this situation.

Action: Ensure one instance of this database is running and the database is mounted on that instance so that the broker may reinstate the old primary database.

ORA-16831: operation disallowed on this standby database type
Cause: The Data Guard broker operation was disallowed on the standby database type.

Action: Check the documentation for the correct standby database type and reissue the Data Guard broker command to another standby database that is of the correct standby database type.

ORA-16950: Remote mapped cursors are not supported by this feature.
Cause: This cursor is a remote mapped cursor which could not be processed locally.

Action: Try to process this statement directly on the remote site.

ORA-16951: Too many bind variables supplied for this SQL statement.
Cause: Binding this SQL statement failed because too many bind variables were supplied.

Action: Pass the correct number of bind variables.

ORA-16952: Failed to bind this SQL statement.

    Cause: Binding this SQL statement failed.

    Action: Check if bind variables for that statement are properly specified.

ORA-16953: Type of SQL statement not supported.

    Cause: This type of SQL statement could not be processed.

    Action: None

ORA-16954: SQL parse error.

    Cause: The specified SQL statement failed to be parsed.

    Action: Check if syntax is correct and ensure that this statement can be parsed by the specified user name.

ORA-16955: Unknown error during SQL analyze.

    Cause: The specified SQL statement failed to be analyzed.

    Action: This is an internal error, please contact Oracle support.

ORA-16956: Only SELECT or DML statements are supported for test execute.

    Cause: The specified SQL statement cannot be tested for execute.

    Action: None

ORA-16957: SQL Analyze time limit interrupt

    Cause: This is an internal error code used indicate that SQL analyze has reached its time limit.

    Action: None

ORA-16958: DML statements running parallel are not supported for test execute.

    Cause: The specified DML statement cannot be tested for execute because part of it is running parallel.

    Action: None

ORA-16959: Statement type has been disabled for SQL Analyze

    Cause: The system attempted to analyze a type of statement that was disabled by the current feature.

    Action: Try a different feature capable of analyzing this statement type.

ORA-16960: SQL Analyze could not reproduce the desired plan.

    Cause: SQL Analyze failed to reproduce a particular plan using an outline.

    Action: Check the outline data.

ORA-16961: SQL statement with SQL patch is ignored

    Cause: SQL statements with SQL patches are not supported by SQL tuning advisor.

    Action: Check the SQL patch information. Rerun SQL repair advisor on that SQL statement for a potential better SQL patch.

ORA-17500: ODM err:*string*

    Cause: An error returned by ODM library

    Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17501: logical block size *string* is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: check INIT.ORA file parameters

ORA-17502: ksfdcre:*string* Failed to create file *string*

Cause: file creation failed due to either insufficient OS permission or the file already exists

Action: check additional error messages

ORA-17503: ksfdopn:*string* Failed to open file *string*

Cause: file open failed due to either insufficient OS permission or the name of file exceeds maximum file name length.

Action: check additional error messages

ORA-17504: ksfddel:Failed to delete file *string*

Cause: The file that was being deleted is still in use or the process has insufficient permission to delete file.

Action: check additional error messages

ORA-17505: ksfdrsz:*string* Failed to resize file to size *string* blocks

Cause: There is insufficient space left on the device or the process has insufficient permission to resize file.

Action: check additional error messages

ORA-17506: I/O Error Simulation

Cause: The i/o request is marked with error because the i/o error simulation event is turned on.

Action: None

ORA-17507: I/O request size *string* is not a multiple of logical block size

Cause: i/o"s are done in multiple of logical block size

Action: Check additional error messages

ORA-17508: I/O request buffer ptr is not alligned

Cause: i/o request buffer should be alligned, check additional information for buffer ptr value

Action: Call Oracle Support Services

ORA-17509: Attempt to do i/o beyond block1 offset

Cause: When a file is identified with logical block size of 0, only i/o"s to block1 is allowed.

Action: check additional error messages and call Oracle Support Services

ORA-17510: Attempt to do i/o beyond file size

Cause: The i/o request points to a block beyond End Of File

Action: check additional error messages and call Oracle Support Services

ORA-17512: Block Verification Failed

Cause: Block Verification after a read operation on a database file failed since the block is media corrupt.

Action: check additional error messages in the trace file and call Oracle Support Services

ORA-17610: file "*string*" does not exist and no size specified

Cause: An attempt to create a file found neither an existing file nor a size for creating the file.

Action: Specify a size for the file.

ORA-17611: ksfd: file "*string*" cannot be accessed, global open closed

Cause: An attempt to write to a file which has gone offline/unidentified

Action: Check for other errno in the stack

ORA-17612: Failed to discover Oracle Disk Manager library, return value *string*

Cause: Discovery of the odm library by calling odm_discover() failed

Action: Contact your storage vendor who has provided the ODM library or call Oracle Support

ORA-17613: Failed to initialize Oracle Disk Manager library: *string*

Cause: ODM initialization for the thread failed due to insufficient previlige or memory.

Action: Make sure there is enough system resources available for the oracle process and it has access to the ODM library

ORA-17618: Unable to update block 0 to version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: Check additional error messages and call Oracle Support Services

ORA-17619: max number of processes using I/O slaves in a instance reached

Cause: An attempt was made to start large number of processes requiring I/O slaves.

Action: There can be a maximum of 35 processes that can have I/O slaves at any given time in a instance.

ORA-17620: failed to register the network adapter with Oracle Disk Manager library: *string*

Cause: The ODM library returned an error while trying to register the network adapter.

Action: Make sure the network adapter name given in the fileio_network_adapters is a valid name, and that the Oracle user has the correct access privileges.

ORA-17621: failed to register the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to register the memory.

Action: Contact the Oracle Disk Manager Library provider.

ORA-17622: failed to deregister the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to deregister the memory.

Action: Contact the Oracle Disk Manager Library provider

ORA-17624: Failed to delete directory *string*

Cause: The directory that was being deleted is still in use or the process had insufficient permission to delete the directory.

Action: check additional error messages.

ORA-17626: ksfdcre: *string* **file exists**

    Cause: trying to create a database file, but file by that name already exists

    Action: verify that name is correct, specify REUSE if necessary

ORA-17627: *string*

    Cause: An error returned by OCI while sending/receiving message from remote instance

    Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17628: Oracle error *string* **returned by remote Oracle server**

    Cause: Oracle server on the remote instance has returned an error.

    Action: Look at remote instance alert log/trace file for more information and take appropriate action or contact Oracle Support Services for further assistance

ORA-17629: Cannot connect to the remote database server

    Cause: Connecting to the remote server specified by database connect string for netowrk file transfer failed.

    Action: Check additional error messages

ORA-17630: Mismatch in the remote file protocol version client *string* **server** *string*

    Cause: Cannot communicate with the remote database server as there is a mismatch in the Oracle file protocol version.

    Action: Check additional error messages

ORA-17631: dbname "*string***" specified by remote server does not match the instance name "***string***"**

    Cause: The dbname specified by the remote server is not intended for this instance.

    Action: Check the dbname specified in the command of the remote instance and look for further error messages.

ORA-17632: file "*string***" is a formatted ASM disk**

    Cause: An attempt to create a datafile on a device that was formatted for ASM disk failed.

    Action: Check that the device specified is not an ASM disk. If you would like to use the disk for datafiles, please clear the disk before you retry the operation.

ORA-18000: invalid outline name

    Cause: The parser detected a missing or invalid outline name

    Action: None

ORA-18001: no options specified for ALTER OUTLINE

    Cause: The parser detected that no clause was specified on the command Our performance tests, which are not typical as they exercise all branches of the code, have shown approximately a 30% performance increase line for ALTER OUTLINE.

    Action: Re-issue the command, specifying a valid ALTER OUTLINE clause.

ORA-18002: the specified outline does not exist

    Cause: Either the outline did not exist to begin with, or a timing window allowed for another thread to drop or alter the outline midstream.

    Action: None

ORA-18003: an outline already exists with this signature

Cause: The signature generation algorithm generates signatures that are are 16 bytes in length so it is highly unlikely that any 2 signatures will be identical. This message is raised in such a rare case.

Action: Either re-issue the statement that led to the outline being created with some whitespace added or force the outline to be created in a different category.

ORA-18004: outline already exists

Cause: An outline already exists, either with the specified name, or for the specified SQL text.

Action: None

ORA-18008: cannot find OUTLN schema

Cause: The database creation script that creates this schema must not have been executed.

Action: Review the log files to see what happened when the database was created.

ORA-18009: one or more outline system tables do not exist

Cause: Either the database creation script that creates these tables was not executed or a user accidently deleted the table

Action: Review the log files to see what happened when the database was created.

ORA-18010: command missing mandatory CATEGORY keyword

Cause: User failed to specify the CATEGORY keyword

Action: Re-issue the command with the CATEGORY keyword included

ORA-18015: invalid source outline signature

Cause: User imported an 8i outline into a 9i database without updating signatures

Action: execute dbms_outln.update_signatures

ORA-19000: missing RELATIONAL keyword

Cause: The keyword RELATIONAL in the work OBJECT RELATIONAL is missing in the XMLTYPE storage clause specification.

Action: Supply the RELATIONAL keyword in the storage clause

ORA-19001: Invalid storage option specified

Cause: An invalid storage option was specified for the XMLType.

Action: Supply a valid storage option.

ORA-19002: Missing XMLSchema URL

Cause: A XML schema URL must be specified in the storage option.

Action: Specify a URL for the XMLSchema.

ORA-19003: Missing XML root element name

Cause: A root element in the XMLSchema must be specified if the XML schema is given.

Action: Specify a root element in the XML schema.

ORA-19004: Duplicate XMLType OBJECT RELATIONAL storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

ORA-19005: Duplicate XMLType LOB storage option
    Cause: A duplicate storage option for the XMLType column was specified

    Action: Specify a single storage option for an XMLType column

ORA-19006: XMLType TYPE storage option not appropriate for storage type
    Cause: The TYPE option can only be used in case of OBJECT RELATIONAL storage option

    Action: Remove the TYPE option or specify an OBJECT RELATIONAL storage for the XMLType column

ORA-19007: Schema *string* does not match expected *string*.
    Cause: The given XML document conformed to a different schema than expected.

    Action: Insert/Update only the XML documents that conform to that particular schema.

ORA-19008: Invalid version of the XMLType
    Cause: An invalid version of the XMLType was found.

    Action: This is possible due to data corruption or an internal error or running an older client against a newer version of the database. Make sure that the version of the client can understand the XMLType in the database.

ORA-19009: Missing XMLSchema keyword
    Cause: The XMLSchema keyword is missing

    Action: Specify the XMLSchema URL and element name.

ORA-19010: Cannot insert XML fragments
    Cause: XML fragments got from extractNode cannot be inserted into the database.

    Action: Convert the fragment into a proper XML document before insertion.

ORA-19011: Character string buffer too small
    Cause: The string result asked for is too big to return back

    Action: Get the result as a lob instead

ORA-19012: Cannot convert XML fragment to the required datatype
    Cause: A conversion to a datatype was requested which cannot be performed

    Action: The XMLType may contain fragments and other elements which cannot be converted to the appropriate datatype.

ORA-19013: Cannot create VARRAY columns containing XMLType
    Cause: An attempt was made to create a VARRAY column which contains a XMLType

    Action: You cannot store VARRAYs containing XMLTypes in tables. Use nested tables instead

ORA-19015: Invalid XML tag identifier (*string*)
    Cause: An invalid XML identifer was detected during XML generation

    Action: Fix the offending tag to not contain characters or symbols that are not allowed by the XML specification

ORA-19016: attributes cannot occur after element specifications

Cause: Attributes specified using the "@" identifier can only occur before any other element definition when creating XML

Action: Change the order of the types so that the attributes occur in the begining

ORA-19017: Attributes can only be simple scalars

Cause: Attribute values can only be simple scalar values

Action: Use only simple datatypes for attribute values

ORA-19018: Invalid character in XML tag "*string*"

Cause: A tag name was found to have an invalid XML character during XML generation.

Action: Rewrite the query so that the generated XML tag, corresponding to a column name or alias, contains only valid characters.

ORA-19019: Invalid context passed to DBMS_XMLGEN.GETXML

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19020: invalid dereference of XMLType columns

Cause: An attempt was made to dereference the attributes of an XMLType column which is not part of a base table

Action: You can only dereference the attributes of a base table XMLType column

ORA-19023: The first argument to UPDATEXML operator has to be an XMLTYPE

Cause: The first argument passed to the update value operator was not an XMLTYPE.

Action: Rewrite the query so that the first argument to the UPDATEXML operator is XMLTYPE.

ORA-19024: Cursor expression must be named

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19025: EXTRACTVALUE returns value of only one node

Cause: Given XPath points to more than one node.

Action: Rewrite the query so that exactly one node is returned.

ORA-19026: EXTRACTVALUE can only retrieve value of leaf node

Cause: Given XPath does not point to a leaf node.

Action: Rewrite the query so that a leaf node is returned.

ORA-19028: Invalid ADT parameter passed to toObject() function

Cause: The object passed as ADT parameter to sys.XMLType.toObject() is not the same type, or a super-type, of the mapped type.

Action: Pass an object of the correct type to toObject().

ORA-19029: Cannot convert the given XMLType to the required type

Cause: The passed in XMLType could not be convert to the required type

Action: Binary XMLtype instances or other objects cannot be converted to the required object or collection types.

ORA-19030: Method invalid for non-schema based XML Documents.

Cause: The method can be invoked on only schema based xmltype objects.

Action: Don''t invoke the method for non schema based xmltype objects.

ORA-19031: XML element or attribute *string* does not match any in type *string.string*

Cause: The passed in XML tag does not match any in the object type

Action: Pass a valid canonical XML that can map to the given object type

ORA-19032: Expected XML tag *string* got *string*

Cause: When converting XML to object, a wrong tag name was present

Action: Pass a valid canonical XML that can map to the given object type

ORA-19033: schema specified in the XML document does not match the schema parameter

Cause: When creating schema-based XML, the schema specified in the XML document is different from the schema passed in as the "schema" parameter.

Action: Change the schema parameter to match the schema specified in the XML document.

ORA-19034: Type not supported during schema generation

Cause: The object type contained a type that is not supported for schema generation.

Action: Use a different type or do not generate a schema.

ORA-19035: Invalid select item of the query in newContextFromHierarchy()

Cause: The query does not have a number select item followed by an XMLType select item only.

Action: Make sure the result set of the query used in the newContextFromHierarchy() must have only two selected items: the first item must be number type and the second item must be XMLType.

ORA-19036: Invalid query result set in newContextFromHierarchy()

Cause: The result set of the query used in the newContextFromHierarchy() does not have the same property as the result set generated by a CONNECT BY query.

Action: Make sure the query used in newContextFromHierarchy() is a CONNECT BY query or the query returns the result set have the same property as the result set generated by a CONNECT BY query.

ORA-19037: XMLType result can not be a fragment

Cause: The select item of the query in newContextFromHierarchy() is an XML fragment.

Action: Make sure the select item of the query in newContextFromHierarchy() is NOT an XML fragment

ORA-19038: Invalid opertions on query context

Cause: SetMaxRows, SetSkipRows, SetRowTagName opertions are applied to a query context created from newContextFromHierarchy().

Action: SetMaxRows, SetSkipRows, SetRowTagName opertions can not be applied to a query context created from newContextFromHierarchy().

ORA-19039: Keyword *string* reserved for future use

Cause: The keyword is reserved for future use as a builtin function.

Action: Change the name mentioned above to a different one.

ORA-19040: Element *string* **does not match expected** *string***.**
 Cause: The given XML document had a different root element than expected.
 Action: Insert/Update only the XML documents that conform to that particular schema and element.

ORA-19041: Comment data cannot contain two consecutive "-"s
 Cause: The given comment string expression has two consecutive "-"s.
 Action: Modify comment string to eliminate one or both of the consevutive "-"s.

ORA-19042: Enclosing tag *string* **cannot be xml in any case combination**
 Cause: The given enclosing tag matched "xml" in some case combination
 Action: Modify the enclosing tag so that it is not xml in any case combination.

ORA-19043: Multiply nested XMLROOT function disallowed
 Cause: An XMLROOT function has an operand that is also an XMLROOT function.
 Action: Modify the query so that there are no multiply nested XMLROOT functions.

ORA-19044: character length specified for XMLSerialize is too small.
 Cause: An XMLSerialize function was called with a type of character type (e.g. VARCHAR2(27)), and the length specified (27 in the example) was too small.
 Action: Modify the query so that the character length specified is larger.

ORA-19045: character set id specified for XMLSerialize not valid
 Cause: An XMLSerialize function was called with an invalid value for the caracter set id.
 Action: Modify the query so that the character set id is valid.

ORA-19100: PASSING or RETURNING keyword expected
 Cause: The keyword PASSING or RETURNING was missing.
 Action: Specify the PASSING or RETURNING keyword.

ORA-19101: CONTENT keyword expected
 Cause: The keyword CONTENT was missing.
 Action: Specify the CONTENT keyword.

ORA-19102: XQuery string literal expected
 Cause: The string literal containing the XQuery expression was missing.
 Action: Specify the XQuery expression as a string literal.

ORA-19103: VALUE keyword keyword
 Cause: The keyword VALUE was missing.
 Action: Specify the VALUE keyword.

ORA-19104: invalid XQueryX: missing attribute *string*
 Cause: The XQueryX expression was not assigned the expected attribute.
 Action: Specify a valid XQueryX.

ORA-19105: invalid XQueryX: expected text node - got *string*

Cause: The XQueryX expression did not contain a text node as expected.

Action: Specify a valid XQueryX.

ORA-19106: invalid XQueryX: expected *string* **- got** *string*

Cause: The XQueryX expression did not contain the node as expected.

Action: Specify a valid XQueryX.

ORA-19107: invalid XQueryX - unsupported construct - *string*

Cause: The given XQuery expression contains an unsupported construct.

Action: Specify a valid XQueryX.

ORA-19108: WHITESPACE keyword expected

Cause: The keyword WHITESPACE was missing.

Action: Specify the WHITESPACE keyword.

ORA-19109: RETURNING keyword expected

Cause: The keyword RETURNING was missing.

Action: Specify the RETURNING keyword.

ORA-19110: unsupported XQuery expression

Cause: The program specified an XQuery expression that is not supported.

Action: Rewrite the XQuery with a expression that is supported.

ORA-19111: error during evaluation of the XQuery expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19112: error raised during evaluation: *string*

Cause: The error function was called during evaluation of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19113: trace function called during evaluation: *string*

Cause: The trace function was called during evaluation of the XQuery expression.

Action: Check the log file for the trace message.

ORA-19114: XPST0003 - error during parsing the XQuery expression: *string*

Cause: An error occurred during the parsing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19115: too many context items specified

Cause: More than one context item was specified as input to the XMLQuery function.

Action: Specify a single context item for the XMLQuery function.

ORA-19116: too many xmlspace declarations

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19117: XQST0070 - invalid redefinition of predefined namespace prefix "*string***"**

Cause: The given predefined namespace was being redefined in a namespace declaration.

Action: Remove the namespace declaration that redefines the predefined namespace prefix.

ORA-19118: XQST0066 - duplicate default namespace definition - *string*

Cause: More than one default namespace declaration used the given namespace URI.

Action: Remove the duplicate default namespace definition.

ORA-19121: duplicate attribute definition - *string*

Cause: More than one attribute with the same name.

Action: Remove the duplicate attribute definition.

ORA-19122: unsupported XQuery declaration

Cause: The program specified an XQuery declaration that is not supported.

Action: Rewrite the XQuery with a declaration that is supported.

ORA-19123: FORG0003: fn:zero-or-one() called with a sequence containing more than one item

Cause: sequence with more than one item was passed into fn:zero-or-one() function

Action: correct input argument to fn:zero-or-one() function

ORA-19124: FORG0004: fn:one-or-more() called with a sequence containing no items

Cause: sequence containing no items was passed into fn:one-or-more() function

Action: correct input argument to fn:one-or-more() function

ORA-19125: FORG0005: fn:exactly-one() called with a sequence containing zero or more than one item

Cause: sequence containing zero or more than one item was passed into fn:exactly-one() function

Action: correct input argument to fn:exactly-one() function

ORA-19126: XQuery extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: No expression was enclosed in curly braces for the extension expression or the pragma content was not recognized.

Action: Correct inputs to extension expression.

ORA-19127: XQST0067: XQST0067: A static error is raised if a Prolog contains more than one construction declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19128: XQST0068: A static error is raised if a Prolog contains more than one boundary-space declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19129: XQST0069: A static error is raised if a Prolog contains more than one empty order declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19130: XQST0070: A static error is raised if the predefined namespace prefix xml or xmlns is redeclared by a namespace declaration or namespace declaration attribute

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19131: XQST0071: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19132: XQDY0072: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19133: XQST0073: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19134: XQDY0074: It is a dynamic error if the value of the name expression in a computed element constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19135: XQST0075: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19136: XQST0076: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19137: XQST0079: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19138: The target type of a cast or castable expression must be an atomic type that is in the in-scope schema types and is not xs:NOTATION or

xs:anyAtomicType, optionally followed by the occurrence indicator "?"; otherwise a static error is raised

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19139: XPST0081: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19140: XPST0083: It is a static error if the target type of a cast expression or constructor function is xs:QName or a type derived from xs:QName or xs:NOTATION, and the argument of the cast expression or constructor function is not a string literal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19141: XQDY0084: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19142: FONC0001 = FONC0001: undefined context item

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19143: XQTY0086: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19145: XQST0087: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0]

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19146: XQST0088: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19147: XQST0089: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19148: XQST0090: It is a static error if a character reference does not identify a valid character in the version of XML that is in use

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19149: XQDY0091: An implementation may raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19150: XQDY0092: An implementation may raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19151: XQST0093: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19152: FOCH0001 = FOCH0001: codepoint not valid

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19153: FOCH0002: unsupported collation

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19154: FOCH0003: unsupported normalization form

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19155: FOCH0004: collation does not support collation units

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19156: FODC0001: no context document

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19157: FODC0002: error retrieving resource

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19158: FODC0004: invalid argument to fn:collection()

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19159: FODC0005: invalid argument to fn:doc

 Cause: An error occurred during the processing of the XQuery expression.

 Action: Check the detailed error message for the possible causes.

ORA-19160: XPST0003 - syntax error: invalid variable name *string*

 Cause: The given XQuery variable does not begin with the "$" sign

 Action: Fix the variable name to start with the "$" sign.

ORA-19161: XPTY0004 - XQuery type mismatch: invalid argument type "*string*" for function "*string*"

 Cause: The type of the argument that was passed to the given function was not valid.

 Action: Fix the argument to be of a type supported by the given function.

ORA-19162: XPTY0004 - XQuery type mismatch: invalid argument types "*string*", "*string*" for function "*string*"

 Cause: The type of the arguments that were passed to the given function was not valid.

 Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19163: XPTY0004 - XQuery type mismatch: argument type mismatch: expected - "*string*" got - "*string*" for function "*string*"

 Cause: The type of the arguments that were passed to the given function was not valid.

 Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19164: XQST0085 - It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19165: FONS0003: no prefix defined for namespace

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19166: FONS0003: FONS0004: no namespace found for prefix

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19167: FONS0005: base uri not defined in the static context

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19168: FORG0002: invalid argument to fn:resolve-uri()

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19169: FORG0006: invalid argument type in "*string*"

 Cause: There was a zero-length URI in namespace declaration.

 Action: Fix the namespace declaration.

ORA-19171: FORG0007: invalid argument to aggregate function

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19172: FORG0008: both arguments to fn:dateTime have a specified timezone

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19173: FORG0009: error in resolving a relative URI against a base URI in fn:resolve-uri

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19174: FORX0001: invalid regular expression flags

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19175: FORX0002: invalid regular expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19176: FORX0003: regular expression matches zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19177: FORX0004: invalid replacement string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19178: FOTY0001: type error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19179: FOTY0011: Type error. Context item is not a node

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19180: FOTY0012: argument node does not have a typed value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19181: FOTY0014: type exception

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19182: FORT0001: invalid number of parameters

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19183: FOTY0002: type definition not found

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19184: FOTY0021: invalid node type

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19185: FOAR0002: numeric operation overflow/unflow

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19186: FOCA0001: input value too large for decimal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19187: FOCA0002: invalid lexical value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19188: FOCA0003: input value too large for integer

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19189: FOCA0005: NaN supplied as float/double value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19190: FOER0000: Unidentified error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19191: FOAR0001: division by zero

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19192: XQST0047: It is a static error if multiple module imports in the same Prolog specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19193: XQST0045: It is a static error if the function name in a function declaration is in one of the following namespaces: http://www.w3.org/XML/1998/namespace, http://www.w3.org/2001/XMLSchema, http://www.w3.org/2001/XMLSchema-instance, http://www.w3.org/2005/04/xpath-functions, http://www.w3.org/2005/04/xpath-datatypes

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19194: XQDY0026: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string "?>"

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19200: Invalid column specification

Cause: All input arguments must be valid columns

Action: Specify a valid list of columns

ORA-19201: Datatype not supported

Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

ORA-19202: Error occurred in XML processing*string*

Cause: An error occurred when processing the XML function

Action: Check the given error message and fix the appropriate problem

ORA-19203: Error occurred in DBMS_XMLGEN processing*string*

Cause: An error occurred when processing the DBMS_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

ORA-19204: Non-scalar value "*string*" is marked as XML attribute

Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute,i.e. is prefixed by "@". In this case, a non-scalar value was prefixed with "@"

Action: Remove the "@" sign, or make the value a scalar.

ORA-19205: Attribute "*string*" qualifies a non-scalar value in the select list

Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the "@" sign, or make the previous value a scalar.

ORA-19206: Invalid value for query or REF CURSOR parameter

Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query, or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

ORA-19207: scalar parameter *string* of XMLELEMENT cannot have an alias.

Cause: The scalar parameter to XMLELEMENT has been qualified with an alias.

Action: Remove the AS clause of the scalar element.

ORA-19208: parameter *string* of function *string* must be aliased

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression using the AS clause.

ORA-19209: invalid or unsupported formatting argument

Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

ORA-19210: column "*string*", specified to be a key or update column for DBMS_ XMLSTORE, does not not exist in table "*string*"

Cause: The column specified using setKeyColumn()/setUpdateColumn() did not exist in the table.

Action: Change the column specified to be a column in the table

**ORA-19211: column "*string*", specified as key using DBMS_
XMLSTORE.setKeyColumn() , must be of scalar type**

Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

**ORA-19212: no key columns specified before call to DBMS_
XMLSTORE.updateXML()**

Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns

ORA-19221: XPST0001 - XQuery static context component *string* not initialized

Cause: An unitialized static context component was encountered during the static analysis of the expression.

Action: initialize the given static context.

ORA-19222: XPDY0002 - XQuery dynamic context component *string* not initialized

Cause: An unitialized dynamic context component was encountered during the evaluation of the expression.

Action: Initialize the particular dynamic context component.

ORA-19223: XPST0003 - syntax error in XQuery expression

Cause: The given XQuery expression contains syntax errors.

Action: Fix the syntax error in the XQuery expression.

ORA-19224: XPTY0004 - XQuery static type mismatch: expected - *string* got - *string*

Cause: The expression could not be used because it"s static type is not appropriate for the context in which it was used.

Action: Fix the expression to be of the required type or add appropriate cast functions around the expression.

ORA-19225: XPST0005 - XQuery static type error: expected non empty type got empty sequence

Cause: The static type assigned to an expression other than the () expression must not be the empty type.

Action: Fix the expression so it does not return empty sequences.

ORA-19226: XPTY0006 - XQuery dynamic type mismatch: expected *string* got *string*

Cause: The expression could not be used because it"s dynamic type did not match the required type as specified by XQuery sequencetype matching rules.

Action: Fix the expression to return the expected type or use appropriate cast functions.

ORA-19227: XPTY0007 - fn:data function is applied to a node (type (*string*)) whose type annotation denotes a complex type with non-mixed complex content.

Cause: The input node for atomization contained a type annotation that denoted a complex type with non-mixed complex content.

Action: Fix the input expression to fn:data to be a node that does not contain non-mixed complex content.

ORA-19228: XPST0008 - undeclared identifier: prefix "*string*" local-name "*string*"

Cause: The given identifier refers to either a type name, function name, namespace prefix, or variable name that is not defined in the static context.

Action: Fix the expression to remove the identifier, or declare the appropriate variable, type, function or namespace.

ORA-19229: XQST0009 - schema import not supported

Cause: A schema import was encountered in the query.

Action: remove the schema import.

ORA-19230: XPST0010 - unsupported axis *string*

Cause: An unsupported axis was encountered in the given expression.

Action: Remove the unsupported axis from the expression.

ORA-19232: XQST0012 - imported schemas violate validity rules

Cause: The imported schemas did not satisfy the conditions for schema validity specified in the XMLSchema specification.

Action: Fix the imported schemas to satisfy the validity rules.In particular, the definitions must be valid, complete, and unique -- that is, the pool of definitions must not contain two or more schema components with the same name and target namespace.

ORA-19233: XQST0013 - invalid pragma

Cause: A pragma was specified whose contents are invalid.

Action: Specify the pragma with the correct contents.

ORA-19234: XQST0014 - invalid or unsupported must-understand extension

Cause: The must-understand extension specified was either invalid or unsupported.

Action: remove the unsupported must-understand extension or fix the error.

ORA-19235: XQST0015 - unsupported must-understand extension

Cause: The XQuery flagger was enabled and the query contained a must-understand extension.

Action: remove the unsupported must-understand extension.

ORA-19236: XQST0016 - module declaration or import not supported

Cause: The given query had a module declaration or module import.

Action: Remove the import module or module declaration.

ORA-19237: XPST0017 - unable to resolve call to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19238: XPTY0018 - It is a type error if the result of the last step in a path expression contains both nodes and atomic values

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19239: XPTY0019 - It is a type error if the result of an step (other than the last step) in a path expression contains an atomic value

Cause: The step expression returned a sequence containing an atomic value.

Action: Fix the path expression to return only nodes.

ORA-19240: XPTY0020 - context item must be node in an axis expression

Cause: The context item that was used in the axis epression is not a node.

Action: Change the context item to be a node.

ORA-19241: XPDY0021 - cast to type *string* failed

Cause: The value inside a cast expression could not be cast to the required type.

Action: Fix the input to the cast expression to be of a castable type.

ORA-19242: XQST0022 - namespace declaration attribute must be a literal

Cause: The namespace declaration attribute was not a literal string.

Action: Fix the namespace declaration to be a literal string.

ORA-19243: XQTY0023 - invalid document node content in element constructor

Cause: The content sequence in an element constructor contained a document node.

Action: Change the content of the element constructor so that it does not contain a document node.

ORA-19244: XQTY0024 - invalid attribute node in element constructor

Cause: The content sequence in an element constructor contained an attribute node following a node that was not an attribute node.

Action: Change the content sequence of the element constructor so that it does not contain the attribute node.

ORA-19245: XQDY0025 - duplicate attribute name *string*

Cause: The content sequence of the element constructor contained more than one attribute that had the same name.

Action: Remove the duplicate attributes.

ORA-19246: validation failed - element *string* not found in in-scope element declarations

Cause: The validation mode was strict and the element-constructor contained an element name that was not present in the in-scope element declarations.

Action: Fix the validation mode to be lax or import the schema definition that contains the required element declaration.

ORA-19247: XQDY0027 - validation error

Cause: An error was encountered during the validation of the expression.

Action: Fix the validation error.

ORA-19248: XQTY0028 - invalid node in document constructor

Cause: The content sequence in a document constructor contained either a document or an attribute node.

Action: Fix the content so it does not contain any of the above node types.

ORA-19249: XQDY0029 - value does not match facet of the target type

Cause: The input value to a cast expression did not satisfy the facets of the target type.

Action: Fix the value to conform to the facets of the target type.

ORA-19250: XQTY0030 - too many values to validate expression

Cause: The argument of a validate expression returned more than one element or document node.

Action: Fix the argument of the validate expression to return a single element or document node.

ORA-19251: XQST0031 - unsupported query version

Cause: The query version specified in the prolog was not supported.

Action: Supply the version of the query that is supported.

ORA-19252: XQST0032 - too many declarations for base URI

Cause: The query prolog contained multiple declarations for the base URI.

Action: Remove the duplicate definitions for the base URI.

ORA-19253: XQST0033 - too many declarations for namespace prefix *string*

Cause: The query prolog contained multiple declarations for the same namespace prefix.

Action: Remove the duplicate definitions for the namespace prefix.

ORA-19254: XQST0034 - too many declarations for function *string*

Cause: The query module contained more than one function, either declared or imported, which have the same expanded QName.

Action: Remove the duplicate function definitions.

ORA-19255: XQST0035 - too many declarations of *string* **in imported schemas**

Cause: Two schemas were imported that defined the same name in the same symbol space and in the same scope.

Action: Fix the schema imports to remove the name conflict.

ORA-19256: XQST0036 - missing type definitions in imported module

Cause: A module was imported, which contains references to type names that are not defined in the in-scope type definitions inside the module.

Action: Fix the module definintion to include the in-scope type definition.

ORA-19257: XQST0037 - function or variable *string* **in module already defined**

Cause: A module being imported contained the function or variable that is already declared in the static context of the importing module.

Action: Remove the conflicting declarations.

ORA-19258: XQST0038 - unsupported or duplicate default collation specified

Cause: The query prolog prolog either specified more than one default collation or the collation specified was not supported.

Action: Remove the duplicate definition or specify a supported collation.

ORA-19259: XQST0039 - duplicate parameter name *string* **in function declaration**

Cause: The function declaration contained more than one parameter with the same name.

Action: Fix the function declaration to remove the duplicate parameters.

ORA-19260: XQST0040 - invalid namespace node in element constructor

Cause: The content sequence in an element constructor contained a namespace node node following a node that was not a namespace node.

Action: Remove the namespace node in the element constructor.

ORA-19261: XQDY0041 - non empty URI in QName

Cause: The name expression in a computed processing instruction or computed namespace constructor returned a QName whose URI part was not empty.

Action: Fix the processing instruction or computed namespace constructor to return the QName with an empty URI part.

ORA-19262: XQST0042 - namespace constructor not inside an element constructor

Cause: The enclosing expression of a computed namespace constructor was not a computed element constructor.

Action: Fix the namespace constructor to be inside an element constructor.

ORA-19263: XQST0043 - duplicate namespace prefix *string*

Cause: Two or more computed namespace constructors within the same computed element constructor attempted to bind the same namespace prefix.

Action: Remove the duplicate namespace definitions.

ORA-19264: XQDY0044 - invalid namespace in attribute constructors

Cause: A computed attribute constructor returned a QName that is in the pre-defined XML namespace (corresponding to namespace prefix xmlns).

Action: Change the namespace for the computed attribute constructor.

ORA-19265: XQST0045 - invalid or unknown prefix *string* in function declaration

Cause: The declared function name in a function declaration had no namespace prefix or had one of the predefined namespace prefixes other than local.

Action: Fix the function declaration to have the correct prefix.

ORA-19266: XQST0046 - invalid URI

Cause: The given URI contained a lexical form that was not valid according to the definition of xs:anyURI in XML Schema.

Action: Fix the URI.

ORA-19267: module *string* not found

Cause: The module with the given target URI could not be found.

Action: Fix the prolog to import only available modules.

ORA-19268: XQST0048 - namespace *string* does not match target namespace *string*

Cause: The module contained a function or variable whose namespace did not match the target namespace of the module.

Action: Fix the namespace of the function or variable to match the target namespace of the module.

ORA-19269: XQST0049 - variable *string* defined multiple times

Cause: The module defined or imported the same variable multiple times.

Action: Fix the import or the module definition to remove duplicate definitions.

ORA-19270: XPDY0050 - treat failed - expected *string* got *string*

Cause: The type of the operand to the treat expression did not match the required type.

Action: Fix the input operand to be of the correct type.

ORA-19271: XPST0051 - invalid atomic type definition

Cause: The QName used as an AtomicType in a SequenceType was not defined in the in-scope type definitions as an atomic type.

Action: Use the correct atomic type name.

ORA-19272: XQDY0052 - invalid atomic value in attribute or element constructor

Cause: The content of the element or attribute constructor included an atomic value that could not be cast into a string.

Action: Fix the content to contain atomic values that can be cast to a string.

ORA-19273: XQST0053 - empty string in namespace declaration

Cause: An empty string was used in a namespace declaration.

Action: Fix the namespace declaration to have a non-empty string.

ORA-19274: XQST0054 - variable initialization failed due to circularity

Cause: A circular definition was encountered when the variable was initialized.

Action: Remove the circularity in the initialization.

ORA-19275: XQST0055 - schema path *string* not found in list of in-scope schema definitions

Cause: The ElementTest specified a schema path that could not be found in the list of in-scope schema definitions.

Action: Include the appropriate schema that can be used to resolve the ElementTest.

ORA-19276: XPST0005 - XPath step specifies an invalid element/attribute name: (*string*)

Cause: The XPath step specified invalid element or attribute name that did not match any nodes according to the input XML schema or structure.

Action: Correct the element or attribute name as the name may be mis-spelled.

ORA-19277: XPST0005 - XPath step specifies an item type matching no node: (*string*)

Cause: The XPath step specified an item type that did not match any nodes according to the input XML schema or structure.

Action: Correct the item type defintion as node of such type does not exit in the input XML schema or structure.

ORA-19278: Invalid value: (*string*) for type: (*string*)

Cause: The value was invalid for the type.

Action: Correct the value or change the type.

ORA-19279: XPTY0004 - XQuery dynamic type mismatch: expected singleton sequence - got multi-item sequence

Cause: The XQuery sequence passed in had more than one item.

Action: Correct the XQuery expression to return a single item sequence.

ORA-19280: XQuery dynamic type mismatch: expected atomic value - got node

Cause: A node was passed in to the expression where an atomic value was expected.

Action: Correct the XQuery expression to return an atomic value.

ORA-19281: XQST0055 - It is a static error if a Prolog contains more than one copy-namespaces declaration

Cause: The query prolog contained multiple copy-namespaces declarations.

Action: Remove the duplicate copy-namespaces declarations.

ORA-19282: XQST0068 - It is a static error if a Prolog contains more than one xmlspace declaration

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19283: XQST0031 - It is a static error if the version number specified in a version declaration is not supported by the implementation.

Cause: The query contained a version declaration not supported by this implementation.

Action: Change the version declaration to 1.0 which is the version supported by this implementation.

ORA-19284: Encoding specification in version declaration not supported

Cause: The query contained an encoding specification.

Action: Remove the encoding specification.

ORA-19285: FODC0002 - error retrieving resource

Cause: The URI provided could not be resolved to a valid resource.

Action: Provide a valid URI for a resource.

ORA-19286: XPST0017 - unable to resolve call to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19287: XPST0017 - invalid number of arguments to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19288: XPST0017 - invalid number of arguments to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19289: XQST0034 - function *string:string* declared or defined multiple times

Cause: Multiple functions declared or imported by a module had the same expanded QName and the same number of arguments.

Action: Fix the function declaraction or definition to remove duplicates.

ORA-19290: XQST0069 - more than one empty order declaration declared in the prolog

Cause: A prolog had more than one empty order declaration.

Action: Fix the prolog to have just one empty order declaration.

ORA-19291: XPST0081 - specified QName cannot be expanded into a namespace URI

Cause: The namespace prefix of the QName could not be expanded into a namespace URI by using the statically known namespaces.

Action: Use a namespace prefix that can be resolved into a namespace URI from the statically known namespaces.

ORA-19292: XQST0057: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19293: XQST0058: It is a static error if multiple schema imports specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19294: XQST0059: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19295: XQST0060: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19296: XQDY0061: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19297: XQDY0064: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19298: XQST0065: A static error is raised if a Prolog contains more than one ordering mode declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19299: XQST0066: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19300: Error occurred in uri processing*string*

Cause: An error occurred when processing the URL

Action: Check the given error message and fix the appropriate problem

ORA-19320: Host name not specified in HTTP URL

Cause: A host name was not specified in the HTTP url

Action: Specify a host name in the HTTP url when creating the URL string

ORA-19321: Could not open HTTP connection to host (*string*): port (*string*)

Cause: A HTTP connection could not be opened to the host

Action: Specify a valid host name and port to connect to

ORA-19322: An error occurred while reading from host (*string*): port (*string*)

Cause: An error occurred while reading from the HTTP host

Action: Specify a valid host name and port to read from

ORA-19323: Invalid url string

Cause: The URL must be a valid URL string

Action: Specify a valid url string

ORA-19330: Type "*string*"."*string*" not installed. Please install the type before using the CREATE_DBURI operator

Cause: The type required for the CREATE_DBURI operator has not been installed correctly.

Action: Read the installation notes to install the type correctly.

ORA-19331: Last argument to CREATE_DBURI operator must be a column

Cause: The final argument to the CREATE_DBURI operator must be a column to which the reference is being created.

Action: Specify a valid column name in the query.

ORA-19332: Invalid column in the CREATE_DBURI operator

Cause: The argument to the CREATE_DBURI operator can only be a column.

Action: Specify a valid column name for the operator

ORA-19333: Invalid flags for the CREATE_DBURI operator

Cause: The flags argument given to the DBURI operator is invalid

Action: Specify a valid flag value (TEXT) for the DBURI operator

ORA-19334: Invalid column specification for CREATE_DBURI operator

Cause: All columns must be valid and pointing to the same table or view

Action: Specify valid list of columns that are from the same table or view.

ORA-19335: Invalid format type object

Cause: An invalid format type object was specified for the XML function

Action: Specify a valid format type object

ORA-19336: Missing XML root element

Cause: The XML being generated does not have an enclosing root element.

Action: The XML generated must have a root element

ORA-19361: ONLINE option not allowed with this type of index

Cause: The ONLINE option was specified to validate the structure of a system-generated metadata index

Action: The ONLINE option can not be used with system-generated metadata indexes such as an LOB index, an IOT Top index, an Index on Clusters etc., Run query without using the ONLINE option.

ORA-19371: invalid update option

Cause: The user attempted to call load_sqlset with an update option that is different than REPLACE and ACCUMULATE.

Action: Adjust the update option and retry the operation.

ORA-19372: invalid update condition

Cause: The user attempted to call load_sqlset with an invalid update condition.

Action: Check the update condition (e.g., NEW.COL1_NAME >= OLD.COL2_NAME) and retry the operation.

ORA-19373: invalid staging table or tablespace

Cause: The user attempted to create a staging table and specified an invalid staging table (or one that already exists) or tablespace

Action: Check the arguments and try again.

ORA-19374: invalid staging table

Cause: The user specified an invalid staging table to one of the pack, unpack, or remap stgtab routines, or the user does not have the correct privileges on the staging table

Action: Provide a correct staging table or grant the appropriate privileges

ORA-19375: no CREATE TABLE privilege on schema "*string*"

Cause: The user tried to create a staging table when he is missing the CREATE TABLE privilege on the specified schema.

Action: Grant the privilege to the user and retry

ORA-19376: no privileges on tablespace provided or tablespace is offline

Cause: The user tried to create a staging table on a tablespace on which he does not have any space allocated, or it is offline

Action: Allocate space on the tablespace, bring it online, and retry

ORA-19377: no "SQL Tuning Set" with name like "*string*" exists for owner like "*string*"

Cause: The user specified a filter to a pack/unpack function for the SQL Tuning Set that targets no STS in the SYS schema or the staging table, respectively

Action: Provide a different filter after checking the state of the system

ORA-19378: invalid mode

Cause: The user specified an invalid mode argument to the capture function.

Action: Provide a mode argument that was defined in the dbmssqlt file

ORA-19379: invalid time_limit or repeat_interval

Cause: The user specified a NULL value for either the time_limit or the repeat_interval, or a repeat_interval that is greater than the time_limit

Action: Provide a non-null value and make sure time_limit >= repeat_interval

ORA-19380: invalid plan filter

Cause: The user specified an invalid filter for the plan when calling the select_ sqlset table function.

Action: Adjust the the filter to be one of the following values and retry the operation: MAX_ELAPSED_TIME, MAX_CPU_TIME, MAX_DISK_READS, MAX_OPTIMIZER_COST, MAX_BUFFER_GETS, FIRST_LOADED LAST_ LOADED, FIRST_GENERATED, or LAST_GENERATED.

ORA-19381: cannot create staging table in SYS schema

Cause: The user attempted to create a staging table in the sys schema

Action: Create the table in another schema.

ORA-19384: cannot pack into staging table from previous version

Cause: An attempt was made to perform a pack operation on a staging table from a previous version.

Action: Create a staging table in the current version and retry the operation.

ORA-19385: staging table is empty

Cause: An attempt was made to perform an operation on an empty staging table.

Action: Check the staging table to make sure that it has rows.

ORA-19386: target object already exists for tuning task "*string*"

Cause: An attempt was made to set a target object for a tuning task when one had already been set.

Action: Create a new task if another target object is needed.

ORA-19387: "SQL Tuning Set" "*string*" belongs to another tuning task

Cause: The user attempted to tune a task-managed SQL Tuning Set belonging to one task within the scope of another task.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19388: operation not supported for "SQL Tuning Set" type

Cause: The attempted operation was unsupported for the type of the given SQL Tuning Set.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19400: System type conflict with object SYS.*string*

Cause: The user had an object with the same name as one of the system types. The system types were not initialized properly.

Action: Remove the conflicting object and rerun migration.

14

ORA-19500 to ORA-19960

ORA-19500: device block size *string* **is invalid**

    Cause: the device block size returned by sequential I/O OSD is invalid

    Action: If the block size was set by using the PARMS option of the Recovery Manager ALLOCATE CHANNEL command, then the specified block size must be changed. If no PARMS option was specified on the ALLOCATE CHANNEL command, then this is an internal error that should be reported to Oracle.

ORA-19501: read error on file "*string***", block number** *string* **(block size=***string***)**

    Cause: read error on input file

    Action: check the file

ORA-19502: write error on file "*string***", block number** *string* **(block size=***string***)**

    Cause: write error on output file

    Action: check the file

ORA-19503: cannot obtain information on device, name="*string***", type="***string***", parms="***string***"**

    Cause: call to get device information returned an error

    Action: check device name, type and parameters

ORA-19504: failed to create file "*string***"**

    Cause: call to create file returned an error

    Action: check additional messages, check access permissions

ORA-19505: failed to identify file "*string***"**

    Cause: call to identify the file returned an error

    Action: check additional messages, and check if the file exists

ORA-19506: failed to create sequential file, name="*string***", parms="***string***"**

    Cause: call to create the sequential file returned an error

    Action: check additional messages, check access permissions

ORA-19507: failed to retrieve sequential file, handle="*string***", parms="***string***"**

    Cause: call to retrieve the sequential file returned an error

    Action: check additional messages, and check if the file exists

ORA-19508: failed to delete file "*string***"**

    Cause: call to delete the file returned an error

Action: check additional messages

ORA-19509: failed to delete sequential file, handle="*string*", parms="*string*"
    Cause: call to delete the sequential file returned an error
    Action: check additional messages

ORA-19510: failed to set size of *string* blocks for file "*string*" (block size=*string*)
    Cause: call to resize the file returned an error
    Action: check additional messages

ORA-19511: Error received from media manager layer, error text: *string*
    Cause: An error occurred in the media management software which is linked with the Oracle server to perform backup and restore in cooperation with Recovery Manager.
    Action: If the text of message 19511 does not provide enough information to resolve the problem, then you should contact the vendor of the media management software.

ORA-19512: file search failed
    Cause: Recovery manager or Oracle Server attempted to discover files that matched the specified pattern but failed.
    Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-19513: failed to identify sequential file
    Cause: Unable to identify the sequential file.
    Action: Check additional messages, and check if the file exists on media.

ORA-19525: tempfile for the clone database must be renamed
    Cause: Opening a clone database failed because Oracle server forces the tempfile to be renamed, in order to avoid overwriting the primary tempfile.
    Action: Rename the tempfiles manually or automatically by using the DB_FILE_NAME_CONVERT initialization parameter.

ORA-19526: only one location allowed for parameter *string*
    Cause: A list of default locations was provided in an Oracle-managed files parameter.
    Action: Edit the parameter to include a single location.

ORA-19527: physical standby redo log must be renamed
    Cause: The CLEAR LOGFILE command was used at a physical standby database. This command cannot be used at a physical standby database unless the LOG_FILE_NAME_CONVERT initialization parameter is set. This is required to avoid overwriting the primary database"s log files.
    Action: Set the LOG_FILE_NAME_CONVERT initialization parameter.

ORA-19528: redo logs being cleared may need access to files
    Cause: The redo logs are being cleared. This procedure may need the files this operation is being applied to.
    Action: Wait for the redo logs to be cleared.

ORA-19529: Pattern *string* **in initialization parameter** *string* **has an Oracle Managed Files file name.**

Cause: An attempt was made to convert a database file name to an Oracle Managed Files file name using DB_FILE_NAME_CONVERT or LOG_FILE_ NAME_CONVERT initialization parameter. This was not a valid operation.

Action: Retry the operation with a pattern template instead of a full Oracle Managed Files file name.

ORA-19550: cannot use backup/restore functions while using dispatcher

Cause: Attempted to use backup/restore functions while connected to the dispatcher in a shared server. This is not allowed because the device that is used for backup and restore must remain allocated to a single process.

Action: Connect directly to the instance then re-execute the backup or restore function.

ORA-19551: device is busy, device type: *string*, **device name:** *string*

Cause: The indicated device could not be allocated because it is allocated to another session, or no device was named, or all devices of the requested type are busy.

Action: Either attempt to allocate another device or wait until the required device is no longer busy.

ORA-19552: device type *string* **is invalid**

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19553: device name *string* **is invalid**

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19554: error allocating device, device type: *string*, **device name:** *string*

Cause: The specified device could not be allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19555: invalid LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value

Cause: The value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was not set within the valid range.

Action: Specify a correct value for parameter LOG_ARCHIVE_MIN_SUCCEED_ DEST. If the archive log parameters LOG_ARCHIVE_DEST or LOG_ARCHIVE_ DUPLEX_DEST are in use, set parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to either 1 or 2.

ORA-19556: required destination LOG_ARCHIVE_DUPLEX_DEST currently is deferred

Cause: The destination for parameter LOG_ARCHIVE_DUPLEX_DEST was deferred when it was required to be enabled. The destination was deferred automatically when an ALTER SYSTEM command for parameter LOG_ ARCHIVE_DEST defined a destination which duplicated an existing LOG_ ARCHIVE_DUPLEX_DEST parameter destination.

Action: Change the destination value for the LOG_ARCHIVE_DUPLEX_DEST parameter.

ORA-19557: device error, device type: *string*, **device name:** *string*

    Cause: An error occurred in the platform-specific device code

    Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19558: error de-allocating device

    Cause: The specified device could not be de-allocated.

    Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19559: error sending device command: *string*

    Cause: An error occurred while sending the indicated command to the session device.

    Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19560: *string* **is not a valid device limit**

    Cause: An invalid type of device limit was specified in a call to DBMS_BACKUP_RESTORE.SETLIMIT.

    Action: Use one of the documented limits: KBYTES, READRATE, or PARALLEL.

ORA-19561: *string* **requires a DISK channel**

    Cause: The attempted command requires that a DISK device channel be allocated to the session, but a non-DISK device was found.

    Action: Deallocate the current device and allocate a DISK channel, then then retry the command.

ORA-19562: file *string* **is empty**

    Cause: The indicated file, which is an archived log, control file, or datafile was found to be empty during a copy, backup, or scan] operation.

    Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19563: *string* **header validation failed for file** *string*

    Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

    Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19564: error occurred writing *string* **bytes at block number** *string*

    Cause: An error occurred while writing to a file.

    Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error if possible, then retry the copy, backup, or restore operation.

ORA-19565: BACKUP_TAPE_IO_SLAVES not enabled when duplexing to sequential devices

    Cause: An attempt was made to specify duplexing to sequential devices, but the BACKUP_TAPE_IO_SLAVES initialization parameter was not enabled.

Action: Specify BACKUP_TAPE_IO_SLAVES=TRUE in the INIT.ORA file, or do not specify duplexing to sequential devices.

ORA-19566: exceeded limit of *string* corrupt blocks for file *string*

Cause: The user specified limit of allowable corrupt blocks was exceeded while reading the specified datafile for a datafile copy or backup.

Action: None. The copy or backup operation fails. The session trace file contains detailed information about which blocks were corrupt.

ORA-19567: cannot shrink file *string* because it is being backed up or copied

Cause: An ALTER statement attempted to reduce the size of the indicated file while the same file is being backed up or copied.

Action: Retry the resize after the backup or copy is complete.

ORA-19568: a device is already allocated to this session

Cause: A device cannot be allocated to a session if another device is already allocated.

Action: Deallocate the current device

ORA-19569: no device is allocated to this session

Cause: An operation was attempted which requires a device to be allocated to the current session, and there is no device allocated.

Action: Allocate a device then retry the operation.

ORA-19570: file number *string* is outside valid range of 1 through *string*

Cause: A file number used in a copy, backup, or restore operation is not valid for the current database.

Action: Specify a valid file number.

ORA-19571: *string* RECID *string* STAMP *string* not found in control file

Cause: The input file specified for a copy or backup operation could not be opened because the record describing the file is not found in the control file.

Action: Specify a correct RECID/STAMP and retry the copy or backup.

ORA-19572: cannot process file *string*, file is being being resized

Cause: The input file specified for a copy or backup operation could not be opened because the file is being resized.

Action: Wait for the resize to complete then retry the copy or backup.

ORA-19573: cannot obtain *string* enqueue for datafile *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation. If the enqueue type shown is "shared", then the file is the input file for a backup or copy. If the type is "exclusive", then the file is the output file for a datafile copy or restore which is attempting to overwrite the currently active version of that file - in this case, the file must be offline or the database must be closed. If the type is "read-only", then you are attempting to back up or copy this file while the database is in NOARCHIVELOG mode.

Action: Wait until the conflicting operation is complete, then retry the copy or backup. If the database is in NOARCHIVELOG mode, then all files being backed up must be closed cleanly.

ORA-19574: output file name must be specified

Cause: This type of copy or restore requires an output file name.

Action: Specify an output file name and retry the copy.

ORA-19575: expected *string* **blocks in file** *string*, **found** *string*

Cause: During a backup, restore, copy, or scan operation, the indicated file did not contain as many blocks as were indicated in the file header.

Action: The input copy or backup piece is probably corrupt. If another backup or copy exists of the file that is being restored, then the corrupt file can be deleted from the recovery catalog and the operation can be restarted.

ORA-19576: datafile *string* **not defined in control file**

Cause: The specified file number was not found in the control file.

Action: Specify a correct file number and retry the operation.

ORA-19577: file *string* **is MISSING**

Cause: A COPYDATAFILECOPY, RESTOREDATAFILETO or PROXYRESTOREDATAFILE function specified a file number but no output file name, indicating that the output file name should be taken from the control file. However, the control file entry for this file indicates that it was created for a file that was present in the data dictionary but not named during the last CREATE CONTROLFILE statement, so the name in the control file cannot be used for restoration.

Action: Either specify an output file name or issue a SQL RENAME command to enter a valid name for this file in the control file.

ORA-19578: end of volume while duplexing to sequential files, backup piece incomplete

Cause: An end of volume (EOV) condition was detected while duplexing to sequential files, and this condition cannot be handled currently.

Action: Before retrying the backup, make sure the backup pieces will fit in the volume, or disable duplexing.

ORA-19579: archived log record for *string* **not found**

Cause: No archived log record corresponding to input file could be found in the control file.

Action: Specify a valid archived log file name and retry the operation.

ORA-19580: *string* **conversation not active**

Cause: A backup or restore operation was attempted before a conversation was started.

Action: Start a conversation then retry the operation.

ORA-19581: no files have been named

Cause: An attempt was made to proceed from the file naming phase to the piece processing phase of a backup or restore conversation before any files have been specified for backup or restore.

Action: Specify some files then retry the operation.

ORA-19582: archived log file header validation for *string* **failed**

Cause: Archived log file header is corrupt and could not be validated.

Action: Provide a valid archived log file and retry the operation.

ORA-19583: conversation terminated due to error

Cause: An error occurred which forced the termination of the current backup or restore conversation.

Action: There should be other error messages to help identify the cause of the problem. Correct the error and begin another conversation.

ORA-19584: file *string* **already in use**

Cause: The indicated file, which was specified as the target for a copy, restore, or delete operation is already in use by the database.

Action: Specify a different name and retry the operation.

ORA-19585: premature end of volume on piece *string*

Cause: While creating the indicated backup piece, an end-of-volume condition was encountered before all of the backup set control data was written to the backup piece. This is most likely a media error, because the amount of backup set control data is very small in relation to the total amount of data in a backup set.

Action: Retry the piece with a larger piece of output media.

ORA-19586: *string* **k-byte limit is too small to hold piece directory**

Cause: The user-specified limit of k-bytes per backup piece is not enough to hold the backup set control data.

Action: Use the SETLIMIT procedure to increase the k-byte limit and retry the operation.

ORA-19587: error occurred reading *string* **bytes at block number** *string*

Cause: An error occurred while reading from a file.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error then retry the copy, backup, or restore operation.

ORA-19588: *string* **RECID** *string* **STAMP** *string* **is no longer valid**

Cause: The indicated record has been marked as deleted. This indicates that the corresponding file has either been overwritten by another copy or restore, or that the copy was "consumed" by a SWITCHTOCOPY operation.

Action: If you know the name of the file you wish to copy, then inspect it and then retry the copy specifying the new RECID.

ORA-19589: *string* **is not a snapshot or backup control file**

Cause: The control file that is the source for a backup or copy operation is not a snapshot or backup control file.

Action: Specify the name of a snapshot or backup control file.

ORA-19590: conversation already active

Cause: You tried to begin a backup or restore conversation, but another conversation is already active in this session.

Action: Either continue the current conversation, or call BACKUPCANCEL or RESTORECANCEL to end the current conversation before starting a new one.

ORA-19591: backup aborted because job time exceeded duration time

Cause: You tried to backup with duration option and the time provided was not sufficient to complete the backup.

Action: Adjust the duration time and re-run the command. Or run the backup command without duration option.

ORA-19592: wrong *string* conversation type

Cause: You attempted to specify a type of file to be backed-up or restored, but the current conversation cannot process this type of file. For example, you specified an archived log to be included in a datafile backup set. The specified file will not be included in the backup or restore operation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19593: datafile number *string* already included as *string*

Cause: This datafile is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of a datafile.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19594: control file already included as *string*

Cause: The control file is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the control file.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19595: archived log *string* already included in backup conversation

Cause: The indicated archived log has already been specified for inclusion in this backup conversation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19596: SPFILE already included

Cause: The SPFILE is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the SPFILE.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19597: file *string* block size *string* does not match set block size of *string*

Cause: A file was specified for inclusion in a backup set but it has a logical block size different from the rest of the files in the backup set. All files in a backup set must have the same logical block size.

Action: Specify a file that has the same block size as the rest of the files in the backup set. The conversation is still active and more files can be specified.

ORA-19598: can not backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE.

ORA-19599: block number *string* is corrupt in *string string*

Cause: A corrupt block was found in a control file, archived log, or backup piece that is being read for a backup or copy. Corruption shall not be tolerated in control files, archived logs, or backup pieces.

Action: None. The copy or backup operation fails. Note that in the case of a backup set, the conversation is still active and the piece may be retried.

ORA-19600: input file is *string string* **(***string***)**

Cause: This message identifies the input file for a failed copy operation. Both the file number and name (if the name has been determined) are shown. For a datafile, the file number refers to the datafile"s absolute file number as shown in the DBA_DATA_FILES view. For a datafile copy, the file number refers to the copy"s control file record number as shown in the RECID column of the V$DATAFILE_COPY view. For an archived log, the file number refers to the log"s control file record number as shown in the RECID column of the V$ARCHIVED_LOG view.

Action: See other error message.

ORA-19601: output file is *string string* **(***string***)**

Cause: This message identifies the output file for a failed copy operation. The fields are as described in message 19600. When creating a new datafile copy, its control file record number may not have been determined when the message is printed. In that case, the record number shown is zero.

Action: See other error message.

ORA-19602: cannot backup or copy active file in NOARCHIVELOG mode

Cause: You tried to copy or backup a file that was not closed cleanly, and the database was in NOARCHIVELOG mode. This is not allowed because when restored, the file will require redo application before it is usable, and redo is not currently being saved beyond the contents of the online redo logs.

Action: Take the tablespace offline clean or close the database and retry the copy or backup.

ORA-19603: cannot backup or copy active file with KEEP .. UNRECOVERABLE option

Cause: The user tried to copy or backup a file that was not closed cleanly, with KEEP .. UNRECOVERABLE option. This is not allowed because when restored, the file will require redo application before it is usable, and redo will not be saved because of KEEP .. UNRECOVERABLE option.

Action: Take the tablespace offline cleanly, or close the database and retry the copy or backup.

ORA-19604: conversation file naming phase is over

Cause: A call was made to specify a file to be backed up or restored after the first backup piece has been processed.

Action: You cannot specify more files to be processed during a backup or restore conversation after the first backup piece has been processed. If more files must be specified, you must begin a new conversation.

ORA-19605: input file name must be specified

Cause: The input file name was not specified for a control file copy operation.

Action: Specify an input file name and retry the operation.

ORA-19606: Cannot copy or restore to snapshot control file

Cause: A control file copy or restore operation specified the name of the snapshot control file as the output file. It is not permitted to overwrite the snapshot control file in this manner. Other methods are available to create the snapshot control file.

Action: Specify a different file name and retry the operation. If this is a restore, then the restore conversation remains active and more files may be specified.

ORA-19607: *string* **is an active control file**

Cause: A control file copy, restore, or backup specified the name of a control file named in the INIT.ORA file as the input or output file.

Action: Specify a different file name and retry the operation. If this is a backup or restore conversation, then the conversation remains active and more files may be specified.

ORA-19608: *string* **is not a backup piece**

Cause: The specified file is not a backup piece produced by the DBMS_BACKUP_ RESTORE package. Either the first block of the backup piece is corrupt or this file is not a backup piece.

Action: Specify a different file name and retry the operation.

ORA-19609: *string* **is from different backup set: stamp** *string* **count** *string*

Cause: The specified file is not from the backup set which is currently being processed. It is part of a different backup set. The identification of the set containing this piece is shown.

Action: Specify the correct backup piece and retry the operation.

ORA-19610: directory block *string* **is corrupt**

Cause: The indicated directory block failed checksum validation. This backup piece is unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation.

ORA-19611: backup piece out of order. Expected *string* **but found** *string*

Cause: This backup piece is out of sequence.

Action: Supply the correct backup piece.

ORA-19612: datafile *string* **not restored due to** *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19613: datafile *string* **not found in backup set**

Cause: The indicated file could not be restored, because it is not in this backup set. If the file number is zero, then this refers to the control file.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19614: archived log thread *string* **sequence** *string* **not found in backup set**

Cause: The indicated archived log file was named explicitly for restoration but is not contained in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore

conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19615: some files not found in backup set

Cause: Some files that were specified for restoration were not found in the backup set directory. Message 19613 or 19614 is issued for each file that was not found.

Action: See the instructions for message 19613.

ORA-19616: output file name must be specified if database not mounted

Cause: A datafile restore specified no target file name, but the database is not mounted. The database must be mounted when no target file name is specified, so that the target file name can be obtained from the control file.

Action: The restore conversation remains active. If you wish to restore datafiles without their target file names, then mount the database before continuing. Otherwise, a target file name must be specified on all datafile restoration calls.

ORA-19617: file *string* contains different RESETLOGS data

Cause: The indicated file contains RESETLOGS data which is different from the archived log files which are already included in the backup set. All archived log files in a backup set must have the same RESETLOGS data.

Action: The restore conversation remains active, and you may continue to specify archived log files for inclusion in the backup set.

ORA-19618: cannot name files after RESTOREVALIDATE has been called

Cause: A call was made to specify a file to restore from a backup set, but a previous call to RESTOREVALIDATE has already been made.

Action: You must cancel and restart the conversation if you wish to specify files to restore.

ORA-19619: cannot call RESTOREVALIDATE after files have been named

Cause: RESTOREVALIDATE was called after some files had already been specified for restoration.

Action: You must cancel and restart the conversation if you wish to call RESTOREVALIDATE.

ORA-19620: *string* is not of *string* type

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: The indicated file cannot be processed. Ensure that the correct files are being specified for the copy or backup operation.

ORA-19621: archived log range has already been specified

Cause: A range of logs has already been specified. Only one SCN range may be specified per conversation.

Action: The restore conversation remains active and more logs may be specified by thread and sequence number, if desired.

ORA-19622: archived log thread *string* sequence *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19623: file *string* **is open**

Cause: A SWITCHTOCOPY operation specified a datafile copy whose parent datafile is open.

Action: Take the owning tablespace offline or close the database, then retry the operation.

ORA-19624: operation failed, retry possible

Cause: A backup, restore or image copy operation failed with an I/O error. If the source of the I/O error can be corrected, then the operation may be retried.

Action: This message is used by recovery manager to decide whether or not to retry the operation.

ORA-19625: error identifying file *string*

Cause: A file specified as input to a copy or backup operation, or as the target for an incremental restore, could not be identified as an Oracle file. An OS-specific error accompanies this error to help pinpoint the problem.

Action: Specify an different file and retry the operation.

ORA-19626: backup set type is *string* **- can not be processed by this conversation**

Cause: The data in the backup set is not compatible with the current conversation.

Action: Either supply the first piece from a backup set that matches the current conversation or start a new restore conversation which can process this backup set.

ORA-19627: cannot read backup pieces during control file application

Cause: This is a control file restore conversation, which is using the offline range information from one or more control files to update datafile checkpoint data. Backup sets are not used during this type of conversation.

Action: The conversation is still active and more control files may be applied.

ORA-19628: invalid SCN range

Cause: The starting SCN for RESTOREREDOLOGRANGE is greater than the ending SCN.

Action: Specify a starting SCN which is less than or equal to the ending SCN.

ORA-19629: no files in specified archived log SCN range

Cause: This backup set contains no files in the specified range.

Action: Either supply a backup set that contains files in the correct range or start a new conversation and specify a range which will select some files from this backup set.

ORA-19630: end of volume encountered while copying backup piece

Cause: While copying a backup piece from the OS native file system to an output device, the output device encountered end-of-volume.

Action: The copy fails. This could happen if a tape was used which is not large enough to hold the entire backup piece.

ORA-19631: archived log record contains no file name

Cause: This archived log record represents a switch into an active log that took place without archiving its prior contents. The prior contents of the log file are lost.

Action: Specify the RECID of an archived log record that contains a file name. Fixed view v$archived_log can be used to examine the archived logs.

ORA-19632: file name not found in control file

Cause: The name passed to GETFNO was not found in the control file.

Action: Supply a valid file name.

ORA-19633: control file record *string* **is out of sync with recovery catalog**

Cause: The control file record describing the file to be deleted in a call to DELETEBACKUPPIECE, DELETEDATAFILECOPY, PROXYDELETE or DELETEARCHIVEDLOG does not match the validation data supplied by recovery manager.

Action: contact Oracle support

ORA-19634: file name required for this function

Cause: The FNAME or HANDLE parameter was not specified for DELETEPIECE, DELETEDATAFILECOPY, DELETEREDOLOG or PROXYDELETE.

Action: Specify the FNAME or HANDLE parameter when calling these functions.

ORA-19635: input and output file names are identical: *string*

Cause: Identical input and output file names were specified for a datafile copy operation.

Action: Specify an output file name which is different from the input file name.

ORA-19636: archived log thread *string* **sequence** *string* **already included**

Cause: The indicated archived log has already been specified for inclusion in this restore conversation. A restore conversation may process only one copy of any archived log.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19637: BACKUPPIECECREATE requires file name when using DISK device

Cause: The session device is currently allocated to disk, and so a file name is required.

Action: Supply a file name and retry the operation.

ORA-19638: file *string* **is not current enough to apply this incremental backup**

Cause: The checkpoint of the target for this incremental backup is less than the start of the incremental backup. If this backup were applied, then any changes made between the datafile checkpoint and the start of the incremental backup could be lost.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19639: file *string* **is more current than this incremental backup**

Cause: The checkpoint of the target for this incremental backup is greater than or equal to the checkpoint of the file in the incremental backup set. This backup cannot advance the checkpoint of the target file, so there is no point in applying it.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19640: datafile checkpoint is SCN *string* **time** *string*

Cause: This message identifies the datafile checkpoint for a datafile that was too old to take an incremental backup from, or the target of an incremental restore that could not be applied.

Action: See other error message.

ORA-19641: backup datafile checkpoint is SCN *string* time *string*

Cause: This message identifies the checkpoint of a datafile in an incremental backup set that could not be applied.

Action: See other error message.

ORA-19642: start SCN of incremental backup is *string*

Cause: This message identifies the starting SCN of an incremental backup that could not be applied.

Action: See other error message.

ORA-19643: datafile *string*: incremental-start SCN is too recent

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is greater than the datafile checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start SCN.

ORA-19644: datafile *string*: incremental-start SCN is prior to RESETLOGS SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the RESETLOGS SCN.

Action: Specify a larger incremental-start SCN.

ORA-19645: datafile *string*: incremental-start SCN is prior to creation SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the datafile"s creation SCN.

Action: Specify a larger incremental-start SCN.

ORA-19646: cannot change size of datafile *string* from *string* to *string*

Cause: Restore needs to adjust the size of the file as indicated, but the file size adjustment failed.

Action: Examine the other messages which should be present to indicate the cause of the failure.

ORA-19647: non-zero LEVEL cannot be specified when INCREMENTAL is FALSE

Cause: BACKUPSETDATAFILE was called with a non-zero backup_level and a FALSE incremental indication.

Action: Either set incremental to TRUE or change backup_level to zero.

ORA-19648: datafile *string*: incremental-start SCN equals checkpoint SCN

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is equal to the datafile"s checkpoint SCN. Since an incremental backup can only be applied to a datafile whose checkpoint SCN is between the backup set incremental-start SCN (inclusive) and the backup set checkpoint SCN (exclusive), there is no datafile that this backup set could ever be applied to.

Action: Specify a smaller incremental-start SCN. NOTE that this message will usually only be encountered by the user while taking an incremental backup with Recovery Manager. Recovery Manager should intercept all usual cases of this error and simply ignore the incremental backup for this file. So, if you do encounter this error, please report it to Oracle Support.

ORA-19649: offline-range record RECID *string* STAMP *string* not found in file *string*

Cause: APPLYOFFLINERANGE was called with a RECID/STAMP which was not found in the indicated control file. This probably means that the specified control file is no longer the same control file that Recovery Manager thinks it is.

Action: Specify the RECID/STAMP of a record that exists in the control file copy.

ORA-19650: Offline-range record RECID *string* STAMP *string* in file *string* has SCN *string*

Cause: This messages identifies the offline-clean SCN from the indicated offline-range record in the indicated file.

Action: See other error message.

ORA-19651: cannot apply offline-range record to datafile *string*: SCN mismatch

Cause: APPLYOFFLINERANGE cannot apply an offline-range record to a target datafile unless the datafile"s checkpoint SCN exactly matches the offline-clean SCN in the specified offline-range record.

Action: Specify an offline-range record whose offline-clean SCN matches the target datafile"s checkpoint.

ORA-19652: cannot apply offline-range record to datafile *string*: file is fuzzy

Cause: The target datafile for an APPLYOFFLINERANGE call is fuzzy.

Action: Specify a target datafile that is closed cleanly.

ORA-19653: cannot switch to older file incarnation

Cause: SWITCHTOCOPY was called with a datafile copy for a datafile that was dropped prior to the time this control file was backed up.

Action: Restore and mount an earlier control file. It is acceptable to use a control file that was backed up prior to the creation of the specified datafile.

ORA-19654: must use backup control file to switch file incarnations

Cause: This SWITCHTOCOPY operation is attempting to switch incarnations of a datafile, but the currently mounted control file is not a backup control file.

Action: Restore and mount a backup control file.

ORA-19655: cannot switch to incarnation with different RESETLOGS data

Cause: This SWITCHTOCOPY operation is attempting to switch to a datafile which comes from a different RESETLOGS version of the database.

Action: Either restore a backup control file that was taken from the same database version as the target datafile copy, or switch to a different datafile copy.

ORA-19656: cannot backup, copy, or delete online log *string*

Cause: The indicated log file is an active log. You can only backup, copy, or delete archived logs.

Action: The indicated log file cannot be processed - select another file.

ORA-19657: cannot inspect current datafile *string*

Cause: The file being inspected is already part of the currently mounted database.

Action: None - the file is already part of the database.

ORA-19658: cannot inspect *string* - file is from different RESETLOGS

Cause: The RESETLOGS data in the log file being inspected does not match that in the currently mounted control file.

Action: The indicated file cannot be processed - inspect another file.

ORA-19659: incremental restore would advance file *string* past RESETLOGS

Cause: This incremental backup cannot be applied to the specified datafile, because the datafile is from an earlier incarnation of the database, and its checkpoint would be advanced too far to be recoverable in the current incarnation of the database.

Action: This incremental cannot be applied to this datafile. If you wish to recover the file to the RESETLOGS SCN so that the database can be opened with the RESETLOGS option, then you must use redo-log recovery, not incremental restore, to continue recovering this file.

ORA-19660: some files in the backup set could not be verified

Cause: A restore conversation was made to verify all the files in a backup set, and the files which were printed in messages 19661 or 19662 could not be verified because corrupt blocks for those files were found in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated files cannot be restored from this backup set.

ORA-19661: datafile *string* could not be verified

Cause: Some data blocks for the indicated datafile were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated datafile cannot be restored from this backup set.

ORA-19662: archived log thread *string* sequence *string* could not be verified

Cause: Some data blocks for the indicated archived log were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated archived log cannot be restored from this backup set.

ORA-19663: cannot apply current offline range to datafile *string*

Cause: An attempt was made to apply the current offline range to the specified datafile, but the datafile is either not current enough or is not at the correct SCN to apply the offline range.

Action: The datafile remains unchanged.

ORA-19664: file type: *string*, file name: *string*

Cause: This message is issued to identify the file which is the subject of an error.

Action: None - this is an informational message. There should be other Oracle messages explaining the cause of the error.

ORA-19665: size *string* in file header does not match actual file size of *string*

Cause: The size of the file as indicated in the file header does not match the true size of the file. The two differing sizes are shown in units of logical blocks.

Action: This file is not usable - it has most likely been truncated.

ORA-19666: cannot do incremental restore of the control file

Cause: The control file was included in an incremental restore conversation

Action: If you wish to restore the control file, you must do a full restore of the control file

ORA-19667: cannot do incremental restore of datafile *string*

Cause: The backup of the datafile is a full backup

Action: If you wish to restore the datafile, you must do a full restore of the datafile

ORA-19668: cannot do full restore of datafile *string*

Cause: The backup of the datafile is an incremental backup

Action: If you wish to restore the datafile, you must do an incremental restore of the datafile

ORA-19669: proxy copy functions cannot be run on DISK channel

Cause: A proxy copy procedure was called, but the device which is allocated to the current session has type DISK.

Action: Allocate a non-DISK channel and retry the operation. Note that proxy copy requires a 3rd-party media management software product that supports the this backup/restore feature.

ORA-19670: file *string* **already being restored**

Cause: A proxy restore function has already named this file as a restore destination.

Action: Use a different file name. If this message occurs during a recovery manager job, then this is an internal error in recovery manager, and you should contact Oracle support.

ORA-19671: media management software returned invalid proxy handle

Cause: During a proxy backup or restore, the media management software returned an invalid file handle.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19672: media management software returned invalid file status

Cause: During a proxy backup or restore, the media management software returned an invalid file status.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19673: error during proxy copy of file *string*

Cause: During a proxy backup or restore, an error occurred while copying this file, but other files may have been copied successfully.

Action: There should be other errors on the error stack which explain why the file could not be successfully copied.

ORA-19674: file *string* **is already being backed up with proxy copy**

Cause: Recovery manager attempted to back up the specified file with proxy copy, but the file is already being backed up by another recovery manager job.

Action: Wait until the other recovery manager backup of this file is complete, then retry the backup.

ORA-19675: file *string* **was modified during proxy copy**

Cause: A proxy backup of the specified file failed because the file was brought on-line or otherwise modified while the proxy backup was in progress. This file was off-line or read-only when the backup began, so the file was not put into hot-backup mode, therefore no modifications are permitted while the backup is in progress.

Action: Take another backup of this file.

ORA-19676: one or more files failed during proxy backup or restore

Cause: During a proxy backup or restore, errors were encountered while processing some files. The files for which no error messages are shown were processed successfully.

Action: Examine the messages regarding the specific files to determine the cause of the problems.

ORA-19677: RMAN configuration name exceeds maximum length of *string*

Cause: The configuration name string exceeds maximum length.

Action: Supply a correct configuration name and retry the function.

ORA-19678: RMAN configuration value exceeds maximum length of *string*

Cause: The configuration value string exceeds maximum length.

Action: Supply a correct configuration value and retry the operation.

ORA-19679: RMAN configuration number *string* **is outside valid range of 1 through** *string*

Cause: An invalid RMAN Configuration number was specified.

Action: Specify a correct datafile number and retry the operation.

ORA-19680: some blocks not recovered. See trace file for details

Cause: Some blocks are not recovered during block media recovery.

Action: See trace files for details of the problem.

ORA-19681: block media recovery on control file not possible

Cause: file number 0 specified in block media recovery

Action: check file number

ORA-19682: file *string* **not in block media recovery context**

Cause: Internal error

Action: None

ORA-19683: real and backup block size of file *string* **are unequal**

Cause: block size changed between backup & real file

Action: use right backup

ORA-19684: block media recovery failed because database is suspended

Cause: Database is suspended, probably by an ALTER SYSTEM SUSPEND statement

Action: Execute ALTER SYSTEM RESUME then retry block media recovery

ORA-19685: SPFILE could not be verified

Cause: Some data blocks for the SPFILE were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19686: SPFILE not restored due to *string*

Cause: The indicated file could not be restored, because some of its data blocks were not found in the backup piece.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19687: SPFILE not found in backup set

Cause: The SPFILE could not be restored, because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19688: control file AUTOBACKUP format(*string*) for *string* does not have %F

Cause: control file AUTOBACKUP format must contain %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE <type> TO <format>.

ORA-19689: cannot have more than one %F in control file AUTOBACKUP format(*string*) for *string*

Cause: control file AUTOBACKUP format contains more than one %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE <type> TO <format>.

ORA-19690: backup piece release *string* incompatible with Oracle release *string*

Cause: The backup piece was created by incompatible software.

Action: Either restart with a compatible software release or create another backup using the current release.

ORA-19691: *string* is from different database: id=*string*, name=*string*

Cause: The database name or database id in backup piece header does not match the one in control file.

Action: Supply the correct backup piece belonging to this database.

ORA-19692: missing creation stamp on piece *string*

Cause: The backup piece doesn"t have information about creation stamp.

Action: Supply another backup piece which is created by oracle 9i or later version.

ORA-19693: backup piece *string* already included

Cause: This backup piece was already specified for inclusion in the restore conversation. A restore conversation may process only a single instance of a backup piece.

Action: Remove the specified duplicate backup piece in restore steps and restart the conversation.

ORA-19694: some changed blocks were not found in the change tracking file

Cause: A backup or copy found that some changed blocks had not been recorded in the change tracking file. The details of which files and blocks are affected will be in an Oracle trace file.

Action: This indicates that there is a problem with the change tracking feature. Disable change tracking and re-start the backup.

ORA-19695: fixed table X$KRBMSFT has not been populated

Cause: This is an internal error. The fixed table X$KRBMAFT was not populated using the function DBMS_BACKUP_RESTORE.SEARCHFILES.

Action: Internal error - contact Oracle Customer Support.

ORA-19696: control file not found in backup set

Cause: The control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19697: standby control file not found in backup set

Cause: The standby control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19698: *string* is from different database: id=*string*, db_name=*string*

Cause: Catalog failed because the database id in file header does not match the one in control file.

Action: Supply the correct file belonging to this database.

ORA-19699: cannot make copies with compression enabled

Cause: Datafile copies with compression are not supported.

Action: If the function DBMS_BACKUP_RESTORE.BACKUPPIECECREATE is called outside RMAN, then the incompatible values are being passed for the parameters DOCOMPRESS and IMAGCP. If this message occurs during an RMAN job, then this is an internal error in RMAN, and you should contact Oracle support.

ORA-19700: device type exceeds maximum length of *string*

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19701: device name exceeds maximum length of *string*

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19703: device command string exceeds maximum length of *string*

Cause: The device command string exceeds maximum length.

Action: Correct the command and retry the operation.

ORA-19704: file name exceeds maximum length of *string*

Cause: The specified file name, which was a parameter to a copy, backup, or restore operation, exceeds the maximum file name length for this operating system.

Action: Retry the operation with a shorter file name.

ORA-19705: tag value exceeds maximum length of *string* characters

Cause: During a backup or copy operation, the user supplied a tag value too long to fit in the file header.

Action: Supply a shorter tag and retry the operation.

ORA-19706: invalid SCN

Cause: The input SCN is either not a positive integer or too large.

Action: Check the input SCN and make sure it is a valid SCN.

ORA-19707: invalid record block number - *string*

Cause: The input number is either negative or too large.

Action: Check the input record block number and make sure it is a valid number clauses in the create database statement.

ORA-19708: log destination exceeds maximum length of *string* **characters**

Cause: When starting a restore conversation, the user specified a log restore destination longer than the port-specific maximum.

Action: Supply a shorter destination and retry the operation.

ORA-19709: numeric parameter must be non-negative integer

Cause: A numeric parameter to an DBMS_BACKUP_RESTORE procedure is negative or contains a fractional portion.

Action: Supply a valid numeric parameter.

ORA-19710: unsupported character set *string*

Cause: When the target database is not mounted, RMAN sets the target database character set to the value specified in the users environment.

Action: Specify a valid character set in the environment. This is usually done via the NLS_LANG environment variable.

ORA-19711: cannot use RENORMALIZEALLFILENAMES while database is open

Cause: An attempt was made to re-normalize all the file names in the control file while the database is open.

Action: Close the database before using the RENORMALIZEALLFILENAMES procedure.

ORA-19712: table name exceeds maximum length of *string*

Cause: The table name string exceeds maximum length.

Action: Retry the operation with a shorter table name.

ORA-19713: invalid copy number: *string*

Cause: The copy number is not in a valid range or you have reached maximum limit.

Action: Report the error and other information to support.

ORA-19714: length for generated name longer than *string*

Cause: The specified format exceeds the maximum length for the piece name.

Action: Change the format to create shorter piece names.

ORA-19715: invalid format *string* **for generated name**

Cause: A restricted format or undefined format was used incorrectly.

Action: Change the format specified in the additional information by removing the restricted format.

ORA-19716: error processing format *string* **to generate name for backup**

Cause: There were errors while processing the format to generate name for backup.

Action: Change the format.

ORA-19717: for non-OMF search the pattern must be specified

Cause: The procedure DBMS_BACKUP_RESTORE.SEARCHFILES was called with an empty pattern while the parameter OMF was set to FALSE.

Action: Either specify the pattern or set the parameter OMF to TRUE.

ORA-19718: length for command id longer than *string*

Cause: The specified command id exceeds the maximum length for command id.

Action: Supply a shorter command id and retry the operation.

ORA-19719: length for operation name longer than *string*

Cause: The specified operation name exceeds the maximum length for operation name.

Action: Supply a shorter operation name and retry the operation.

ORA-19720: Error occurred when converting an OCI number into an SCN

Cause: This is most likely caused by an invalid SCN number that came from an external file, such as an export file.

Action: See other errors on the error stack to look for the source of the problem.

ORA-19721: Cannot find datafile with absolute file number *string* **in tablespace** *string*

Cause: Can not find one of the datafile that should be in the Pluggable Set.

Action: Make sure all datafiles are specified via import command line option or parameter files.

ORA-19722: datafile *string* **is an incorrect version**

Cause: The datafile is an incorrect version. It contains either less or more changes then the desired version.

Action: Make sure the right datafiles are transported. Make sure the datafile is copied while its tablespace is read only.

ORA-19723: Cannot recreate plugged in read-only datafile *string*

Cause: The datafile is plugged in read only. It can not recreated.

Action: Use ALTER DATABASE RENAME FILE command instead.

ORA-19724: snapshot too old: snapshot time is before file *string* **plug-in time**

Cause: The snapshot SCN is before the SCN at which the referred datafile is plugged into the database.

Action: retry the query.

ORA-19725: can not acquire plug-in enqueue

Cause: There maybe another "ALTER DATABASE RESET COMPATIBILITY" command issued concurrently, preventing this process from acquiring the plug-in enqueue.

Action: retry the operation.

ORA-19726: cannot plug data [*string***] at level** *string* **into database running at compatibility level** *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than what is currently allowed by the database. The string in square bracket is the name of the compatibility type associated with the data.

Action: Raise the "compatible" init.ora parameter and retry the operation.

ORA-19727: cannot plug data [*string*] at level *string* into database running Oracle *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than the release level of the Oracle executable. The string in square bracket is the name of the compatibility type associated with the data.

Action: Upgrade Oracle and retry the operation.

ORA-19728: data object number conflict between table *string* and partition *string* in table *string*

Cause: The non-partitioned table has the same data object number as one of the partitions in the partitioned table. One can not exchange the table with the partition in this case.

Action: Use "alter table move partition" command to move the offending partition, so that the partition will get a new data object number. Retry the operation then.

ORA-19729: File *string* is not the initial version of the plugged in datafile

Cause: The file is not the initial version of the plugged in datafile.

Action: Use the correct initial version of the plugged in datafile.

ORA-19730: can not convert offline plugged-in datafile *string*

Cause: As part of making a tablespace read-write, we need to convert datafiles that are plugged in read-only. The file must be online.

Action: Online the datafile and retry the operation.

ORA-19731: cannot apply change to unverified plugged-in datafile *string*

Cause: Recovery was not able to verify the referred datafile according to information in the control file. Before encountering this change vector for this file, somehow recovery did not encounter the file conversion redo that is supposed to verify the file. This may happen due to corrupted or incorrect control file used for media recovery.

Action: Use the correct control file and continue recovery.

ORA-19732: incorrect number of datafiles for tablespace *string*

Cause: d by a user editing the export file.

Action: Use the correct export file and retry the operation.

ORA-19733: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-19734: wrong creation SCN - control file expects converted plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the initial version of plugged-in datafile.

Action: Either restore the converted datafile or continue recovering the datafile.

ORA-19735: wrong creation SCN - control file expects initial plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the converted datafile.

Action: Either restore the initial version of the plugged-in datafile, or continue database recovery, which will recover the control file.

ORA-19736: can not plug a tablespace into a database using a different national character set

Cause: Oracle does not support plugging a tablespace into a database using a different national character set.

Action: Use import/export or unload/load to move data instead.

ORA-19738: cannot find language information for character set: "*string*"

Cause: The compatibility check failed because a character set name that was provided is not valid.

Action: Correct the character set name and retry.

ORA-19740: text is longer than *string*

Cause: The specified text exceeds the maximum length for text.

Action: Supply a shorter text and retry the operation.

ORA-19750: change tracking file: "*string*"

Cause: This message reports the name of a file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-19751: could not create the change tracking file

Cause: It was not possible to create the change tracking file.

Action: Check that there is sufficient disk space and no conflicts in file names and try to enable block change tracking again.

ORA-19752: block change tracking is already enabled

Cause: The ALTER DATABASE ENABLE BLOCK CHANGE TRACKING command was issued, but block change tracking is already turned on for this database.

Action: None, this is an informative message only.

ORA-19753: error writing to change tracking file

Cause: An I/O error occurred while writing to the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19754: error reading from change tracking file

Cause: An I/O error occurred while reading from the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19755: could not open change tracking file

Cause: The change tracking file could not be opened.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19756: corrupt block number *string* found in change tracking file

Cause: The specified block number is corrupt in the change tracking file.

Action: There will be other messages on the error stack that show details of the problem. There will also be a trace file that contains a complete dump of the corrupt block.

ORA-19757: could not resize change tracking file to *string* blocks

Cause: An error occurred while trying to change the size of the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19758: failed to enable/disable block change tracking: out of SGA memory

Cause: out of SGA memory

Action: Increase SGA and restart the instance.

ORA-19759: block change tracking is not enabled

Cause: A command was entered that requires block change tracking to be enabled, but block change tracking is not enabled.

Action: None, this is an informative message only.

ORA-19760: error starting change tracking

Cause: Change tracking is enabled, but a problem was encountered while enabling the change tracking subsystem in this instance. The alert log and the trace file from the CTWR process will contain more information about the error.

Action: Examine the trace and alert files. Correct the error if possible, otherwise disable change tracking.

ORA-19761: block size *string* is not valid for change tracking file

Cause: While opening the specified change tracking file, it was found that the file header did not contain a valid logical block size. This probably means that the file is corrupt.

Action: If the file can be repaired, do so, otherwise disable and re-enable change tracking to re-initialize the file.

ORA-19762: invalid file type *string*

Cause: An invalid file type was found in the change tracking file. Some other file was put in place of the change tracking file, or the file is corrupt.

Action: Disable then re-enable change tracking.

ORA-19763: compatibility version *string* is higher than maximum allowed: *string*

Cause: The compatibility version in the change tracking file is greater than what can be used by the current release of Oracle. This can happen when you upgrade, use change tracking with a new release, then downgrade.

Action: Disable then re-enable change tracking.

ORA-19764: database id *string* does not match database id *string* in control file

Cause: The change tracking file is not the correct one for this database. This can happen when the database ID for this database has been changed.

Action: Disable then re-enable change tracking.

ORA-19765: mount id *string* does not match mount id *string* in control file

Cause: d by having a change tracking file that cannot be consistently updated by all instances.

Action: In RAC, ensure that the name specified for the change tracking file truly represents the same disk location for all nodes in the cluster. Disable then re-enable change tracking.

ORA-19766: missing CHANGE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19767: missing TRACKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19768: USING clause only valid with ENABLE CHANGE TRACKING

Cause: The USING clause was specified with DISABLE CHANGE TRACKING

Action: Correct the statement.

ORA-19769: missing FILE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19770: invalid change tracking file name

Cause: The USING clause was specified with ALTER DATABASE ENABLE BLOCK CHANGE TRACKING, but no file name was given.

Action: Specify the change tracking file name, or omit the USING clause to allow Oracle to create a default name for the change tracking file.

ORA-19771: cannot rename change tracking file while database is open

Cause: The ALTER DATABASE RENAME FILE command was used to rename the change tracking file, and the database is open by one or more instances. The database must be mounted, and not open, to rename the change tracking file.

Action: Close the database and reissue the command.

ORA-19772: change tracking file name exceeds limit of *string* characters

Cause: The name specified for the change tracking file is too long.

Action: Specify a shorter change tracking file name.

ORA-19773: must specify change tracking file name

Cause: No file name was specified with the ALTER DATABASE ENABLE CHANGE TRACKING command, and the DB_CREATE_FILE_DEST parameter was not set.

Action: Either specify a file name, or set the DB_CREATE_FILE_DEST parameter.

ORA-19776: PROXY restore to ASM disk group "*string*" is not supported.

Cause: An attempt was made to proxy restore a file to ASM disk group using RMAN command. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19777: ASM file *string* **cannot be proxy backed up.**

Cause: An attempt was made to proxy backup a ASM file. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19779: could not obtain resilvering status for change tracking file

Cause: An error occurred while obtaining the mirror resilvering status of the change tracking file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-19800: Unable to initialize Oracle Managed Destination

Cause: The name given for an Oracle managed files destination cannot be initialized.

Action: , if possible, and retry the command or use a different name for destination.

ORA-19801: initialization parameter DB_RECOVERY_FILE_DEST is not set

Cause: An attempt was made to create a file in DB_RECOVERY_FILE_DEST when DB_RECOVERY_FILE_DEST was not set. There are number of possible causes of this error, including: 1) A LOG_ARCHIVE_DEST_n parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_ DEST and an archived log file creation was attempted. 2) STANDBY_ARCHIVE_ DEST parameter was specified using a LOCATION attribute whose value was DB_ RECOVERY_FILE_DEST and an archived log file creation was attempted.

Action: Specify a valid destination for DB_RECOVERY_FILE_DEST in initialization parameter file or with the ALTER SYSTEM SET command.

ORA-19802: cannot use DB_RECOVERY_FILE_DEST without DB_RECOVERY_ FILE_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_RECOVERY_FILE_ DEST parameter was in use when no DB_RECOVERY_FILE_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

ORA-19803: Parameter DB_RECOVERY_FILE_DEST_SIZE is out of range (1 - *string*)

Cause: Parameter DB_RECOVERY_FILE_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

ORA-19804: cannot reclaim *string* **bytes disk space from** *string* **limit**

Cause: Oracle cannot reclaim disk space of specified bytes from the DB_ RECOVERY_FILE_DEST_SIZE limit.

Action: There are five possible solutions: 1) Take frequent backup of recovery area using RMAN. 2) Consider changing RMAN retention policy. 3) Consider changing RMAN archived log deletion policy. 4) Add disk space and increase DB_ RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

ORA-19805: RECID *string* **of** *string* **was deleted to reclaim disk space**

Cause: The file described by the record in control file was deleted in order to reclaim disk space from flash recovery area for other operations.

Action: Wait and try again.

ORA-19806: cannot make duplex backups in recovery area

Cause: Duplex backup to recovery area is not supported.

Action: Remove duplex option and try again.

ORA-19808: recovery destination parameter mismatch

Cause: The value of parameters DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE must be same in all instances. instance. All databases must have same recovery destination parameters.

Action: Check DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE values in all instances.

ORA-19809: limit exceeded for recovery files

Cause: The limit for recovery files specified by the DB_RECOVERY_FILE_DEST_SIZE was exceeded.

Action: The error is accompanied by 19804. See message 19804 for further details.

ORA-19810: Cannot create temporary control file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to create a control file for a temporary purpose in DB_RECOVERY_FILE_DEST.

Action: Retry the operation with a new file name.

ORA-19811: cannot have files in DB_RECOVERY_FILE_DEST with keep attributes

Cause: An attempt was made to 1) Create a backup piece or image copy in the recovery area with KEEP option. 2) Update the KEEP attributes of an existing backup piece or image copy in the recovery area.

Action: Reissue RMAN command without KEEP options.

ORA-19812: cannot use *string* without DB_RECOVERY_FILE_DEST

Cause: There are three possible cause for this error: 1) The indicated parameter was in use when no DB_RECOVERY_FILE_DEST parameter was encountered while fetching the initialization parameter. 2) An attempt was made to set indicated the parameter with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST was in use. 3) An attempt was made to clear DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when the indicated parameter was in use.

Action: Eliminate any incompatible parameter definitions.

ORA-19813: cannot have unavailable file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to change a backup piece or image copy in recovery area to UNAVAILABLE.

Action: Correct and resubmit the RMAN command. Do not use messages 19814; it is used for simulating crash.

ORA-19815: WARNING: *string* of *string* bytes is *string*% used, and has *string* remaining bytes available.

Cause: DB_RECOVERY_FILE_DEST is running out of disk space.

Action: One of the following:

1. Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE.

2. Backup files to tertiary device using RMAN.

3. Consider changing RMAN retention policy.

4. Consider changing RMAN archived log deletion policy.

5. Delete files from recovery area using RMAN.

ORA-19816: WARNING: Files may exist in *string* that are not known to database.

Cause: One of the following events caused this:

1. A database crash happened during file creation.

2. A backup control file was restored.

3. The control file was re-created.

4. DB_RECOVERY_FILE_DEST has previously been enabled and then disabled.

Action: Use RMAN command CATALOG RECOVERY AREA to re-catalog any such files. If the file header is corrupted, then delete those files using an OS utility. Do not use messages 19817; it is used for simulating lock failure Do not use messages 19818; it is used for space reclamation before backup Do not use messages 19819; it is used to disable clearing file name

ORA-19830: error from target database: *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: No action required.

ORA-19831: incompatible *string.string.string.string* DBMS_BACKUP_RESTORE package: *string.string.string.string* required

Cause: This version of database was incompatible with the the indicated DBMS_BACKUP_RESTORE package installed in the database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary.

ORA-19851: OS error while managing auxiliary database *string*

Cause: An OS error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19852: error creating services for auxiliary instance *string* (error *string*)

Cause: An error was received while managing the services of the auxiliary instance.

Action: Check the accompanying errors.

ORA-19853: error preparing auxiliary instance *string* (error *string*)

Cause: An error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19854: error obtaining connect string from target

Cause: Could not obtain the connect string from the target database

Action: Check the accompanying errors.

ORA-19860: piece validation cannot be performed more than once

Cause: The user attempted to validate a list of backup pieces more than once. Validation may only be performed once for a given validation conversation.

Action: Do not attempt to validate the pieces more than once.

ORA-19861: additional backup pieces cannot be validated in this conversation

    Cause: The user tried to add new pieces to the list of files being validated after the validation had already been performed. In a validation conversation, the list can only be validated once.

    Action: Add all the backup pieces to the list before validating, or start a new validation conversation for the remaining pieces.

ORA-19862: backup pieces must be validated before accessing results

    Cause: The user tried to get validation results for backup pieces before the pieces were actually validated.

    Action: Validate the pieces before trying to access the results.

ORA-19863: device block size *string* is larger than max allowed: *string*

    Cause: The user specified a device BLKSIZE that is larger than the device BLKSIZE specified during compressed backup.

    Action: Change the device BLKSIZE to be smaller than the maximum allowed.

ORA-19865: Backup piece *string* has no data

    Cause: No data was returned for the specified backup piece.

    Action: This normally indicates a problem with the media management software which is linked with Oracle to provide backup and restore services. Contact the media management software vendor.

ORA-19866: error writing file header for datafile *string*

    Cause: During a block recovery, the header of the datafile could not be updated.

    Action: Contact Oracle Support Services.

ORA-19870: error while restoring backup piece *string*

    Cause: This error should be followed by other errors indicating the cause of the problem.

    Action: See other errors actions.

ORA-19873: cannot apply this backup section to file *string*

    Cause: RMAN cannot restore a multi-section backup to the indicated file, because this section is not a backup of this file, or the file was not prepared correctly for this restore.

    Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

ORA-19874: cannot finish multi-section restore to file *string*

    Cause: During a multi-section restore, the file being restored is not a file in which a multi-section restore is in progress.

    Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

ORA-19875: multi-section restore not complete for file *string*

    Cause: While completing a multi-section restore, it was found that all required sections for this file were not correctly applied.

    Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

ORA-19880: Corrupted space header for datafile *string*, block *string*

Cause: When reading the space header block to use Unused Block Optimization for the backup of the datafile, the space header block had corrupted information.

Action: The corrupt space header must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption in any case because it will affect the availability of the data in the file, beyond just taking backups.

ORA-19881: Corrupted space bitmap for datafile *string*, **block** *string*

Cause: When reading a space bitmap block to use Unused Block Optimization for the backup of the datafile, the space bitmap block had corrupted information.

Action: The corrupt space bitmap must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption in any case because it will affect the availability of the data in the file, beyond just taking backups.

ORA-19882: datafile *string* **checkpoint** *string* **is ahead of space bitmap datafile** *string* **checkpoint** *string*

Cause: When checkpointing the datafile containing the space bitmaps for the datafile being backed up in order to use Unused Block Optimization, the checkpoint of the datafile containing the space bitmaps did not advance.

Action: Examine the trace and alert files for possible causes. Fix underlying problem to use Unused Block Optimization for datafile"s backup.

ORA-19883: Unused Block Optimization stopped for datafile *string*

Cause: Accompanying errors detail the problem that prevented Unused Block Optimization from being used.

Action: See accompanying errors for appropiate action.

ORA-19900: RESETLOGS must be specified after recovery to new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN"s RESET DATABASE command.

Action: Open the database with the RESETLOGS option.

ORA-19901: database needs more recovery to create new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN"s RESET DATABASE command, but one or more of the recovered datafiles still belongs to the parent incarnation. This usually happens when recovery is ended before any logs from the desired incarnation have been applied.

Action: Continue recovery.

ORA-19902: incarnation key *string* **not found**

Cause: The specified incarnation was not found in the control file.

Action: Resubmit request with known incarnation key. To see which incarnations are available for this target database, query V$DATABASE_INCARNATION or use RMAN"s LIST INCARNATION command.

ORA-19903: test recovery not allowed when recovering to new incarnation

Cause: Either a new incarnation was set using RMAN"s RESET DATABASE command for a control file that was CURRENT, or the control file is from a prior incarnation. As recovery to a new incarnation requires changing the control file, test recovery is not allowed.

Action: Perform actual recovery or RESET DATABASE to incarnation that was last opened using the control file to do test recovery.

ORA-19904: test recovery not allowed for datafile *string*

Cause: The specified datafile has been restored from a backup that was taken before the last RESETLOGS. Recovering this datafile will require a file header update that is incompatible with test recovery.

Action: Perform actual recovery.

ORA-19905: log_archive_format must contain %s, %t and %r

Cause: log_archive_format is missing a mandatory format element. Starting with Oracle 10i, archived log file names must contain each of the elements %s(sequence), %t(thread), and %r(RESETLOGS ID) to ensure that all archived log file names are unique.

Action: Add the missing format elements to log_archive_format.

ORA-19906: recovery target incarnation changed during recovery

Cause: While a media recovery was active, a new incarnation was detected by the server due to inspection or cataloging of archived logs or backup files.

Action: If you want recovery to use the new incarnation, restart recovery. This is the most common action on a standby database when RESETLOGS is done in primary. If you do not want recovery to use the new incarnation, change the recovery destination using RMAN"s RESET DATABASE TO INCARNATION <incarnation#> command. To see which incarnations are available for this target database, query V$DATABASE_INCARNATION or use RMAN"s LIST INCARNATION command.

ORA-19907: recovery time or SCN does not belong to recovered incarnation

Cause: A point-in-time recovery to an SCN or time stamp prior to the last RESETLOGS was requested.

Action: Either change the specified recovery time/SCN, or change the recovery destination using RMAN"s RESET DATABASE command.

ORA-19908: datafile *string* **has invalid checkpoint**

Cause: The specified datafile has an invalid checkpoint.

Action: Restore the datafile from a backup.

ORA-19909: datafile *string* **belongs to an orphan incarnation**

Cause: Either the specified datafile was restored from a backup that was taken during a period of time that has already been discarded by a RESETLOGS operation, or Oracle cannot identify which database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belongs to either the current or a prior incarnation of the database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-19910: can not change recovery target incarnation in control file

Cause: The RESET DATABASE TO INCARNATION command was used while the database is open. This is not allowed.

Action: Close the database then re-issue the command.

ORA-19911: datafile *string* **contains future changes at the incarnation boundary**

Cause: The file did not hit end backup marker redo during recovery at the incarnation boundary, hence may contain changes discarded by new incarnation.

Action: Use older backup of the file and then re-issue the command.

ORA-19912: cannot recover to target incarnation *string*

Cause: The control file is not in the recovery path of the target incarnation, and does not contain enough information as to how to recover to the target incarnation.

Action: Restore the latest control file from the target incarnation and retry.

ORA-19913: unable to decrypt backup

Cause: A backup piece could not be decrypted. This message is accompanied with another message that indicates the name of the encrypted backup that could not be restored. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device is not open.

Action: If password-based restore was enabled for this backup, then supply the correct password using the RMAN SET DECRYPTION command. If transparent restore was enabled for this backup, then ensure that the database external security device is open.

ORA-19914: unable to encrypt backup

Cause: RMAN could not create an encrypted backup. This message will be accompanied by other messages that give more details about why the encrypted backup could not be created. The most common reason for this message is that you are trying to create a backup that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted backup that you can create is a password-based backup.

ORA-19915: unable to encrypt pre-10.2 files

Cause: An RMAN encrypted backup was requested, but this backup includes one or more archived logs that were generated by an older release of Oracle. These archived logs cannot be encrypted.

Action: Back up the older logs without encryption. Logs created with Oracle release 10.2 and greater can be encrypted.

ORA-19916: *string*

Cause: An error occurred when processing user request.

Action: Do not use message 19917; it is used internally for testing purpose. Do not use message 19918; it is an internal event used by encryption.

ORA-19919: encrypted backups to tertiary storage require Oracle Secure Backup

Cause: RMAN was configured to create encrypted backups, but the channel is neither a DISK channel nor an Oracle Secure Backup channel.

Action: Allocate a DISK channel or an Oracle Secure Backup channel to use backup encryption.

ORA-19921: maximum number of *string* **rows exceeded**

Cause: The maximum number of rows in the V$RMAN_STATUS or V$RMAN_OUTPUT table has been exceeded.

Action: Close some of existing and unused RMAN connections and sessions.

ORA-19922: there is no parent row with id *string* **and level** *string*

    Cause: RMAN tried to add a new V$RMAN_STATUS row, but the parent row did not exist.

    Action: This is an internal error. Contact Oracle Support.

ORA-19923: the session for row with id *string* **is not active**

    Cause: RMAN tried to update an V$RMAN_STATUS row but the process which owns this row died.

    Action: This is an internal error. Contact Oracle Support.

ORA-19924: there are no row with id *string*

    Cause: RMAN tried to update an V$RMAN_STATUS row, but the row don''t exist.

    Action: This is an internal error. Contact Oracle Support.

ORA-19926: Database cannot be converted at this time

    Cause: Another CONVERT DATABASE operation is already in progress.

    Action: Retry CONVERT DATABASE command later.

ORA-19927: CONVERT DATABASE operation cannot proceed

    Cause: An error occurred earlier during CONVERT DATABASE operation.

    Action: Retry CONVERT DATABASE command.

ORA-19930: file *string* **has invalid checkpoint SCN** *string*

    Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid checkpoint SCN. The indicated file cannot be processed.

    Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19931: file *string* **has invalid creation SCN** *string*

    Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid creation SCN. The indicated file cannot be processed.

    Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19932: control file is not clone or standby

    Cause: The operation failed because the control file was not mounted as standby or clone.

    Action: Mount the database as standby or clone and retry.

ORA-19941: invalid blocksize in cross platform datafile *string*

    Cause: Blocksize in header of datafile copy being converted at target was invalid. Either datafile has not been made read/write with compatibility 10.0 or greater at source database or datafile copy is corrupted.

    Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19942: datafile copy *string* **not created with compatibility 10.0 or greater**

    Cause: The specified datafile copy to be converted at the target was not produced after making the tablespace in read/write mode with compatibility 10.0 or greater at the source database.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19951: cannot modify control file until DBNEWID is completed

Cause: An operation requiring to modify the control file was attempted, but a NID change is in progress.

Action: Wait until NID completes before attempting the operation.

ORA-19952: database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

ORA-19953: database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and mount it in exclusive mode.

ORA-19954: control file is not current

Cause: The operation failed because a non-current, non-standby control file was mounted.

Action: Make the control file current and retry.

ORA-19955: only one open thread is allowed to change the DBID

Cause: The operation failed because there were active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

ORA-19956: database should have no offline immediate datafiles

Cause: The operation failed because the database had one or more datafiles that were in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

ORA-19957: database should have no datafiles in unknown state

Cause: The operation failed because the database had one or more datafiles that were in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

ORA-19958: potential deadlock involving DIAG process

Cause: DIAG requested a control file operation that may lead to a deadlock

Action: Try last operation later when the control file is released

ORA-19960: Internal use only

Cause: NID usage

Action: None

15

ORA-19999 to ORA-24279

ORA-19999: skip_row procedure was called

    Cause: The skip_row procedure was called which raises this error

    Action: Skip_row should only be called within a trigger or a procedure called by a trigger.

ORA-20000: *string*

    Cause: The stored procedure "raise_application_error" was called which causes this error to be generated.

    Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-21300: objects option not installed

    Cause: The objects option is not installed at this site. object types and other object features are, therefore, unavailable.

    Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

ORA-21301: not initialized in object mode

    Cause: This function requires the OCI process to be initialized in object mode.

    Action: Specify OCI_OBJECT mode when calling OCIInitialize().

ORA-21500: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

    Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

    Action: Report as a bug - the first argument is the internal error number.

ORA-21501: program could not allocate memory

    Cause: The operating system has run out of memory.

    Action: Take action to make more memory available to the program.

ORA-21503: program terminated by fatal error

    Cause: A program is in an unrecoverable error state.

    Action: Report as a bug.

ORA-21520: database server driver not installed

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

ORA-21521: exceeded maximum number of connections in OCI (object mode only)

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

ORA-21522: attempted to use an invalid connection in OCI (object mode only)

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

ORA-21523: functionality not supported by the server (object mode only)

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

ORA-21524: object type mismatch

Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

ORA-21525: attribute number or (collection element at index) *string* violated its constraints

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element"s schema information.

ORA-21526: initialization failed

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

ORA-21527: internal OMS driver error

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

ORA-21560: argument *string* is null, invalid, or out of range

Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-21561: OID generation failed

Cause: The handles passed in may not be valid

Action: Check the validity of the env, svc handles

ORA-21600: path expression too long

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

ORA-21601: attribute is not an object

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

ORA-21602: operation does not support the specified typecode

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

ORA-21603: property id [*string*] is invalid

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

ORA-21604: property [*string*] is not a property of transient or value instances

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

ORA-21605: property [*string*] is not a property of value instances

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

ORA-21606: can not free this object

Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

ORA-21607: memory cartridge service handle not initialized

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

ORA-21608: duration is invalid for this function

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_
DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or
external procedure duration, use OCIExtProcAllocCallMemory.

ORA-21609: memory being resized without being allocated first

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

ORA-21610: size [*string*] is invalid

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

ORA-21611: key length [*string*] is invalid

Cause: Attempt to use an invalid key length.

Action: Key length is invalid and valid range is 0 to 64

ORA-21612: key is already being used

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

ORA-21613: key does not exist

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

ORA-21614: constraint violation for attribute number [*string*]

Cause: Constraints on the attribute were violated

Action: Correct the value (of the attribute) so that it satisfies constraints

ORA-21615: copy of an OTS (named or simple) instance failed

Cause: see following message

Action: Check that no attribute value violates constraints.

ORA-21700: object does not exist or is marked for delete

Cause: User attempted to perform an inappropriate operation to an object that is
non-existent or marked for delete. Operations such as pinning, deleting and
updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or
the user needs to unmark the object.

ORA-21701: attempt to flush objects to different servers

Cause: User attempted to flush objects to different servers in one function call.
These objects are obtained by calling a callback functions provided by the
program.

Action: User should avoid performing such operation.

ORA-21702: object is not instantiated or has been de-instantiated in cache

Cause: User attempted to perform an inappropriate operation to a transient object
that is not instantiated in the object cache. Operations that cannot be applied to a
not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an
operation without instantiating the object first, or performing such an operation
after the allocation duration of the object has expired.

ORA-21703: cannot flush an object that is not modified

Cause: See the error message.

Action: The object should not be flushed.

ORA-21704: cannot terminate cache or connection without flushing first

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

ORA-21705: service context is invalid

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

ORA-21706: duration does not exist or is invalid

Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

ORA-21707: pin duration is longer than allocation duration

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

ORA-21708: inappropriate operation on a transient object

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

ORA-21709: cannot refresh an object that has been modified

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

ORA-21710: argument is expecting a valid memory address of an object

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

ORA-21779: duration not active

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

ORA-21780: Maximum number of object durations exceeded.

Cause: This typically happens if there is infinite recursion in the PL/SQL function that is being executed.

Action: User should alter the recursion condition in order to prevent infinite recursion.

ORA-22053: overflow error

Cause: This operation"s result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

ORA-22054: underflow error

Cause: This operation"s result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

ORA-22055: unknown sign flag value [*string*]

Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

ORA-22056: value [*string*] is divided by zero

Cause: Given value is divied by zero.

Action: Modify divisor value to be non-zero.

ORA-22057: bad integer length [*string*]

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

ORA-22059: buffer size [*string*] is too small - [*string*] is needed

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

ORA-22060: argument [*string*] is an invalid or uninitialized number

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

ORA-22061: invalid format text [*string*]

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer"s Guide.

ORA-22062: invalid input string [*string*]

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer"s Guide.

ORA-22063: reading negative value [*string*] as unsigned

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

ORA-22064: invalid NLS parameter string [*string*]

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer"s Guide.

ORA-22065: number to text translation for the given format causes overflow

Cause: Rounding done due to the given string format causes overflow.

Action: Change the string format such that overflow does not occur.

ORA-22130: buffer size [*string*] is less than the required size [*string*]

    Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

    Action: Provide a buffer of the required size.

ORA-22131: hexadecimal string length is zero

    Cause: The given hexadecimal string length must be greater than zero.

    Action: Specify a length greater than zero.

ORA-22132: hexadecimal string does not correspond to a valid REF

    Cause: The given hexadecimal string is invalid.

    Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

ORA-22140: given size [*string*] must be in the range of 0 to [*string*]

    Cause: The given resize size is invalid.

    Action: Ensure that the given size is in the required range.

ORA-22150: variable-length array has not been initialized

    Cause: An un-initialized variable-length array is being operated upon.

    Action: Initialize the variable-length array prior to calling this function.

ORA-22151: cannot resize non-zero variable-length array to zero elements

    Cause: Trying to resize a non-zero variable-length array to 0 elements.

    Action: Specify a non-zero size.

ORA-22152: destination variable-length array is not initialized

    Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

    Action: Initialize the destination variable-length array prior to calling this function.

ORA-22153: source variable-length array is not initialized

    Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

    Action: Initialize the destination variable-length array prior to calling this function.

ORA-22160: element at index [*string*] does not exist

    Cause: Collection element at the given index does not exist.

    Action: Specify the index of an element which exists.

ORA-22161: type code [*string*] is not valid

    Cause: Given type code is not valid.

    Action: Use one of the typecodes enumerated in OCITypeCode.

ORA-22162: element at index [*string*] has been previously deleted

    Cause: Trying to delete a non-existent collection element.

    Action: Check for the existence of the element prior to calling this function.

ORA-22163: left hand and right hand side collections are not of same type

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

ORA-22164: delete element operation is not allowed for variable-length array

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

ORA-22165: given index [*string*] must be in the range of [*string*] to [*string*]

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

ORA-22166: collection is empty

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

ORA-22167: given trim size [*string*] must be less than or equal to [*string*]

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

ORA-22275: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only; (5) the locator is for a BFILE/BLOB and the routine expects a CLOB/NCLOB locator; (6) the locator is for a CLOB/NCLOB and the routine expects a BFILE/BLOB locator;

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2),(3), (5) and (6)pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

ORA-22276: invalid locator for LOB buffering

Cause: There are several causes: (1) the locator was never enabled for buffering (2) it is not an updated locator but is being used for a write/flush operation

Action: For (1) enable the locator for buffering; (2) ensure that only an updated locator is used for a LOB update operation

ORA-22277: cannot use two different locators to modify the same LOB

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

ORA-22278: must update the LOB only through the LOB buffers

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

ORA-22279: cannot perform operation with LOB buffering enabled

Cause: The operation attempted is not allowed when LOB buffering is enabled.

Action: If the operation is required, LOB buffering should not be used. In this case, flush buffers associated with the input LOB locator as necessary, disable buffering on the input LOB locator and reissue the command.

ORA-22280: no more buffers available for operation

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

ORA-22281: cannot perform operation with an updated locator

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

ORA-22282: non-contiguous append to a buffering enabled LOB not allowed

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

ORA-22283: filename contains characters that refer to parent directory

Cause: Filename contains a path "../" which references a parent directory

Action: Ensure that the filename does not contain characters which reference a parent directory.

ORA-22285: non-existent directory or file for *string* operation

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

ORA-22286: insufficient privileges on file or directory to perform *string* operation

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

ORA-22287: invalid or modified directory occurred during *string* operation

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occured, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

ORA-22288: file or LOB operation *string* failed *string*

Cause: The operation attempted on the file or LOB failed.

Action: See the next error message in the error stack for more detailed information. Also, verify that the file or LOB exists and that the necessary privileges are set for the specified operation. If the error still persists, report the error to the DBA.

ORA-22289: cannot perform *string* operation on an unopened file or LOB

Cause: The file or LOB is not open for the required operation to be performed.

Action: Precede the current operation with a successful open operation on the file or LOB.

ORA-22290: operation would exceed the maximum number of opened files or LOBs

Cause: The number of open files or LOBs has reached the maximum limit.

Action: Close some of the opened files or LOBs and retry the operation.

ORA-22291: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: Close the LOBs before committing the transaction.

ORA-22292: Cannot open a LOB in read-write mode without a transaction

Cause: An attempt was made to open a LOB in read-write mode before a transaction was started.

Action: Start a transaction before opening the LOB in read-write mode. Ways to start a transaction include issuing a SQL DML or SELECT FOR UPDATE command. Opening hte LOB in read-only mode does not require a transaction.

ORA-22293: LOB already opened in the same transaction

Cause: An attempt was made to open a LOB that already is open in this transaction.

Action: Close the LOB before attempting to re-open it.

ORA-22294: cannot update a LOB opened in read-only mode

Cause: An attempt was made to write to or update a LOB opened in read-only mode.

Action: Close the LOB and re-open it in read-write mode before attempting to write to or update the LOB.

ORA-22295: cannot bind more than 4000 bytes data to LOB and LONG columns in 1 statement

Cause: An attempt was made to bind data more than 4000 bytes of data to both LOB and LONG columns in the same insert or update statement. You can bind more than 4000 bytes of data to either a LONG column or one or more LOB columns but not both.

Action: Bind more than 4000 bytes of data to either the LONG column or one or more LOB columns but not both.

ORA-22296: invalid ALTER TABLE option for conversion of LONG datatype to LOB

Cause: An attempt was made to specify ALTER TABLE options which are disallowed during conversion of LONG datatype to LOB. The only ALTER TABLE options allowed during conversion of LONG datatype to LOB are the default clause and LOB storage clause for the column being converted to LOB.

Action: Remove the disallowed options.

ORA-22297: warning: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: This is just a warning. The transaction was commited successfully, but any domain or functional indexes on the open LOBs were not updated. You may want to rebuild those indexes.

ORA-22298: length of directory alias name or file name too long

Cause: The length of directory alias name or file name given for a BFILE is too long.

Action: Use a shorter alias or file name.

ORA-22303: type "*string*"."*string*" not found

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

ORA-22304: input type is not an object type

Cause: The user is trying to obtain the supertype information for a non-object type.

Action: Pass in only an object type.

ORA-22305: attribute/method/parameter "*string*" not found

Cause: Type element with the given name is not found in the type.

Action: Check to make sure that the type element exists.

ORA-22306: type "*string*"."*string*" already exists

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

ORA-22307: operation must be on a user-defined type

Cause: attempt to perform an operation that is allowed only on a user-defined type, and the type is not a user-defined type.

Action: Check to make sure that only user-defined types are being operated on.

ORA-22308: operation not allowed on evolved type

Cause: An attempt was made to replace a type whose attribute definition been been altered.

Action: Submit ALTER TYPE ADD/DROP statement instead of ALTER TYPE REPLACE.

ORA-22309: attribute with name "*string*" already exists

Cause: The user is attempting to create an object type where more than one attributes have the same name.

Action: Check to make sure that all attribute names are unique.

ORA-22310: ALTER TYPE error. Refer to table "*string*"."*string*" for errors

Cause: An invalid alter type statement was submitted.

Action: Correct the errors listed in specified table and resubmit statement.

ORA-22311: type for attribute "*string*" does not exist

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute"s type in the DDL transaction.

ORA-22312: must specify either CASCADE or INVALIDATE option

Cause: An attempt was made to alter a type which has a dependent type or table without specifying the CASCADE or INVALIDATE option.

Action: Resubmit the statement with either the CASCADE or INVALIDATE option. Specify CASCADE if you want to cascade the type change to dependent types and tables; otherwise, specify INVALIDATE to invalidate all dependents.

ORA-22313: cannot use two versions of the same type "*string*"

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

ORA-22314: method information mismatch in ALTER TYPE

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

ORA-22315: type "*string*" does not contain a map or order function

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

ORA-22316: input type is not a collection type

Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

ORA-22317: typecode *number* is not legal as a number type

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

ORA-22318: input type is not an array type

Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

ORA-22319: type attribute information altered in ALTER TYPE

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

ORA-22320: missing user version string

Cause: The VERSION option is specified without a user version string.

Action: Resubmit the statement with the version string following the VERSION keyword.

ORA-22321: method does not return any result

Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

ORA-22322: error table "*string*"."*string*" has incorrect structure

Cause: The specified error table does not have the expected table structure.

Action: Execute the DBMS_UTILITY.CREATE_ALTER_TYPE_ERROR_TABLE procedure to create an error table, then resubmit the statement using the new error table.

ORA-22323: error table "*string*"."*string*" does not exist

Cause: The error table does not exist.

Action: Resubmit the statement with a correct error table name.

ORA-22324: altered type has compilation errors

Cause: The use of the ALTER TYPE statement caused a compilation error.

Action: Correct the error reported and resubmit the statement.

ORA-22326: cannot change a type to FINAL if it has subtypes

Cause: An attempt was made to change a type with subtypes to FINAL.

Action: Drop all subtypes of the target type before changing it to FINAL.

ORA-22327: cannot change a type to NOT INSTANTIABLE if it has dependent tables

Cause: An attempt was made to change a type with dependent tables to NOT INSTANTIABLE.

Action: Drop all dependent tables of the target type and resubmit the statement.

ORA-22328: object "*string*"."*string*" has errors. *string*

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22329: cannot alter a non-object type

Cause: An attempt was made to execute ALTER TYPE on a non-object type.

Action: Drop the non-object type first, then re-create it as an object type.

ORA-22330: cannot alter a type that is not valid

Cause: An attempt was made to perform ALTER TYPE on an invalid type.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-22331: cannot alter an incomplete type

Cause: An attempt was made to perform ALTER TYPE on an incomplete type.

Action: Use CREATE TYPE to completely define the original type before executing the ALTER TYPE.

ORA-22332: a dependent object in schema "*string*" has errors. *string*

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22333: cannot reset type "*string*"."*string*" due to invalid dependent types and tables

Cause: An attempt was made to reset the type version with invalid dependent types and tables.

Action: Use the ALTER TYPE COMPILE statement to compile all invalid dependent types and use the ALTER TABLE UPGRADE INCLUDING DATA to upgrade all the dependent tables then resubmit the statement.

ORA-22334: cannot reset type "*string*"."*string*". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the type version when the data in the dependent table has not been upgraded to the latest type version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22335: The client cannot work with an altered type

Cause: A pre 8.2 client has requested a type that has been altered on the server.

Action: Only 8.2 or higher clients could access altered types

ORA-22336: table contained 8.0 image format, must specify INCLUDING DATA

Cause: One of the following: 1) An attempt was made to alter a type with a dependent table in 8.0 image format and the NOT INCLUDING TABLE DATA option was specified. 2) An attempt was made to upgrade a table in 8.0 image format with the NOT INCLUDING DATA option specified.

Action: Resubmit the statement with INCLUDING DATA option.

ORA-22337: the type of accessed object has been evolved

Cause: The type of the accessed object has been altered and the client"s object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

ORA-22338: must specify CASCADE INCLUDING DATA when altering the final property

Cause: An attempt was made to alter the final property of a type with dependent table(s) without specifying the CASCADE INCLUDING DATA . option.

Action: Resubmit the statement with the CASCADE INCLUDING DATA option.

ORA-22339: cannot alter to not final since its attribute column is substitutable

Cause: An attempt was made to alter a type to not final when its embedded attribute is defined as substitutable in some tables. Note, this is a restriction in 9.0 version because when a type is altered to not final, column of that type is set to not substitutable at all levels; thus, it is an error if one of its embedded attribute column is already marked substitutable.

Action: Recreate the table and specify NOT SUBSTITUTABLE AT ALL LEVELS for all columns of non final type. Then resubmit the ALTER TYPE statement.

ORA-22340: cannot *string* type "*string*"."*string*". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the version, drop or alter a type when the data in dependent table has not been upgraded to the latest version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22341: cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

ORA-22342: dependent VARRAY column exceeds the maximum inline column size

Cause: An attempt was made to alter a type (add or modify attribute) which causes the size of its dependent VARRAY column to exceed the maximum inline column size. However, the VARRAY column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY column to be stored as LOB at the table level when the table is created.

ORA-22343: Compilation error for type invalidated by ALTER TYPE

Cause: Compilation failed for a type which was invalidated by ALTER TYPE. We throw this error and rollback the compilation effort so that the user may be able to fix whatever is causing the compilation error and try again. It is important that we do not chnage status here and modify the dependency information as this will affect the creation of versions.

Action: Check what is causing teh compilation error and correct it and try again.

ORA-22344: can not specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change

Cause: An attempt was made to specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change.

Action: Specify CONVERT TO SUBSTITUTABLE option only for ALTER TYPE NOT FINAL change.

ORA-22345: recompile type *string.string* before attempting this operation

Cause: An attempt was made to perform an operation which requires the specified datatype to be valid, but the datatype is invalid

Action: Recompile the specified type and retry the operation

ORA-22346: Type has cyclical dependency. Should use CASCADE option

Cause: An attempt was made to alter a type which has a cyclical dependency, with invalidate option.

Action: Give CASCADE option instead of INVALIDATE

ORA-22347: No changes to type specified for ALTER TYPE

Cause: The ALTER TYPE does not contain any changes to the type.

Action: If any change is required for the type, modify the ALTER TYPE to specify the change. Else no need for the ALTER.

ORA-22369: invalid parameter encountered in method *string*

Cause: An invalid parameter is being passed to this method of SYS.AnyType ,SYS.AnyData or SYS.AnyDataSet

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

ORA-22370: incorrect usage of method *string*

Cause: This method of SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

ORA-22371: Table contains data of type *string.string*, **version** *string*, **which does not exist**

Cause: Some of the older versions of the type may have got deleted because one or more of the types it were referencing was dropped.

Action: These data could not be read as the whole ADT. Read the data at individual scalar attribute level.

ORA-22372: Event for type dictionary upgrade

Cause: This is an internally used event for type dictionary upgrades from 8.0 to 8.1.

Action: None

ORA-22373: Older version hashcode encountered

Cause: An older version HC is encountered when creating a new version hahscode. Currently this is handled internally.

Action: None

ORA-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

ORA-22601: pickler TDS context [*string*] is not initialized

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

ORA-22602: pickler TDS handle [*string*] is not well-formed

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

ORA-22603: cannot add an attribute to the already generated TDS handle

    Cause: Attempt to add an attribute to the already constructed TDS.

    Action: Use a TDS handle that is initialized but not yet constructed.

ORA-22604: TDS handle already generated

    Cause: Attempt to geneate TDS that is already genearated.

    Action: Use a TDS handle that is initialized but not yet generated.

ORA-22605: FDO handle [*string*] is not initialized

    Cause: Attempt to use an uninitialized FDO handle.

    Action: Use OCIPicklerFdoInit to initialize FDO handle".

ORA-22606: pickler image handle [*string*] is not well-formed

    Cause: Attempt to use the image handle without initializing/ constructing it.

    Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

ORA-22607: image handle already generated

    Cause: Attempt to geneate image that is already genearated.

    Action: Use a image handle that is initialized but not yet generated.

ORA-22608: cannot add an attribute to the already generated image handle

    Cause: Attempt to add an attribute to the already constructed image.

    Action: Use a image handle that is initialized but not yet constructed.

ORA-22609: error *string* during initialization of FDO

    Cause: Error during FDO initialization.

    Action: Take an action based on the specified error.

ORA-22610: error while adding a scalar to the image handle

    Cause: Error while adding a scalar attribute to the image handle

    Action: Make sure image handle is initialized before adding scalar

ORA-22611: TDS version is not recognized

    Cause: Incorrect TDS handle is passed

    Action: Make sure image handle is initialized with the correct TDS

ORA-22612: TDS does not describe a collection TDS

    Cause: collection construct/access routines are being on an image but the TDS does not describe that a collection TDS

    Action: Make sure a collection TDS is used before invoking collection routines on the image handle

ORA-22613: buflen does not match the size of the scalar

    Cause: buflen is incorrect

    Action: Make sure buflen is correct and matches the size of the scalar

ORA-22614: error while construction the collection in the image

    Cause: Error during the construction of collection

Action: Make sure image handle is initialized and OCIPicklerImageCollBegin is called to begin collection

ORA-22615: attribute is not a collection

    Cause: collection routine is invoked upon a non-collection attribute

    Action: Make sure attribute is a collection

ORA-22616: image is not of Oracle 8.1 format

    Cause: The function being invoked is applicable only for 8.1 images

    Action: Make sure image is of 8.1 format

ORA-22617: error while accessing the image handle collection

    Cause: Error while accessing collection in the image handle

    Action: Make sure image is initialized correctly and the collection is constructed properly.

ORA-22618: attribute is a BAD NULL in the image handle

    Cause: attribute in question is probably the attribute of a null embedded image

    Action: Make sure attribute number is valid or it is NULL or NOT NULL.

ORA-22619: all collection elements have already been accessed

    Cause: Accessing a collection element after all the collection elements are already accessed

    Action: This function should not be invoked any more.

ORA-22620: buffer size too small to hold the value

    Cause: Buffer size is not enough to hold the value. Most likely while doing the character set conversion, a bigger buffer is needed.

    Action: Pass in a bigger buffer. If the client character set format differs from that of server, doing the conversion may result in 4X expansion.

ORA-22621: error transfering an object from the agent

    Cause: Any error returned from pickler routines on the agent side.

    Action: Contact Oracle Support.

ORA-22625: OCIAnyData is not well-formed

    Cause: Attempt to use the OCIAnyData without initializing constructing it.

    Action: Use OCIAnyDataBeginConstruct to initialize the handle before it is adding attributes. Use OCIAnyDataEndConstruct to complete the construction. Or use OCIAnyDataConvert to do the construction. MAke sure it is properly constructed before accessing attributes.

ORA-22626: Type Mismatch while constructing or accessing OCIAnyData

    Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

    Action: Make sure the type supplied matches the type of object to to be constucted or accessed.

ORA-22627: tc [*string*] must be that of object/varray/nested table

    Cause: Type code is not that of object/varray/nested table

Action: Make sure the type code is OCI_TYPECODE_OBJECT or OCI_TYPECODE_VARRAY or OCI_TYPECODE_TABLE

ORA-22628: OCIAnyData already constructed

Cause: Attempt to add attributes to OCIAnyData that is already constructed.

Action: Use the OCIAnyData that is initialized but not yet constructed.

ORA-22629: OCIAnyData is null

Cause: Attempting an operation that is not valid on null OCIAnyData

Action: Make sure OCIAnyData is not null.

ORA-22630: attribute [*string*] is null or it is not well-formed

Cause: Passing an attribute that is null or not well-formed

Action: Make sure the attribute is not null or is well-formed.

ORA-22631: attribute [*string*] is is not well-formed or does not match the type

Cause: Passing an attribute that is not well-formed or does not match the input type.

Action: Make sure the attribute is well-formed and matches the type specified.

ORA-22632: AnyDataSet parameter is not valid for the current operation

Cause: The AnyDataSet parameter is null or it is somehow invalid for the current operation.

Action: Check the documentation for the current operation.

ORA-22633: Error freeing AnyDataSet

Cause: AnyDataSet that is passed in may not be valid.

Action: Check all the AnyDataSet parameters.

ORA-22634: Error adding new instance to AnyDataSet

Cause: Current instance in the AnyDataSet has not been fully constructed.

Action: Make sure that the current instance is fully constructed before adding new instance.

ORA-22800: invalid user-defined type

Cause: An attempt was made to use an incomplete type as a constructor.

Action: Complete the type definition before using it in a query.

ORA-22801: invalid object row variable

Cause: The specified object row variable is not available in the scope of name resolution.

Action: Verify the specified object row variable is correct, or use an object row variable visible in scope.

ORA-22803: object type contains zero attributes

Cause: An attempt was made to create or specify a column or constructor of an object type that has no attributes. Only object types that have at least one attribute are allowed in this context.

Action: specify a valid object type

ORA-22804: remote operations not permitted on object tables or user-defined type columns

Cause: An attempt was made to perform queries or DML operations on remote object tables or on remote table columns whose type is one of object, REF, nested table or VARRAY.

Action: None

ORA-22805: cannot insert NULL object into object tables or nested tables

Cause: An attempt was made to insert a NULL object into an object table or a Nested Table.

Action: Ensure that a non-NULL object is inserted into the table or insert an object with attributes whose values are NULL.

ORA-22806: not an object or REF

Cause: An attempt was made to extract an attribute from an item that is neither an object nor a REF.

Action: Use an object type or REF type item and retry the operation.

ORA-22807: cannot resolve to a scalar type or a collection type

Cause: Invalid use of a non-scalar (for example, object type) item.

Action: Change the item"s data type and retry the operation.

ORA-22808: REF dereferencing not allowed

Cause: An attempt was made to access an object type"s attributes by dereferencing a REF item.

Action: Make the item an object type instead of a REF to an object type.

ORA-22809: nonexistent attribute

Cause: An attempt was made to access a non-existent attribute of an object type.

Action: Check the attribute reference to see if it is valid. Then retry the operation.

ORA-22810: cannot modify object attributes with REF dereferencing

Cause: An attempt was made to modify the attributes an object by dereferencing a REF column in an UPDATE statement.

Action: Update the table containing the object that the REF points to, or change the REF column to an object type column.

ORA-22812: cannot reference nested table column"s storage table

Cause: An attempt to access the nested table column"s storage table is not allowed in the given context.

Action: Issue the statement against the parent table containing the nested table column.

ORA-22813: operand value exceeds system limits

Cause: Object or Collection value was too large. The size of the value might have exceeded 30k in a SORT context, or the size might be too big for available memory.

Action: Choose another value and retry the operation.

ORA-22814: attribute or element value is larger than specified in type

Cause: Value provided for the object type attribute or collection element exceeded the size specified in the type declaration.

Action: Choose another value and retry the operation.

ORA-22816: unsupported feature with RETURNING clause

Cause: RETURNING clause is currently not supported for object type columns, LONG columns, remote tables, INSERT with subquery, and INSTEAD OF Triggers.

Action: Use separate select statement to get the values.

ORA-22817: subquery not allowed in the default clause

Cause: An attempt was made to use a subquery in the column default clause expression.

Action: Remove the subquery from the default clause.

ORA-22818: subquery expressions not allowed here

Cause: An attempt was made to use a subquery expression where these are not supported.

Action: Rewrite the statement without the subquery expression.

ORA-22819: scope of input value does not correspond to the scope of the target

Cause: An attempt to operate on a REF value scoped to a different table than the expected one

Action: Use a ref which is scoped to the expected table and retry the operation

ORA-22826: cannot construct an instance of a non instantiable type

Cause: An attempt was made to use a non instantiable type as a constructor.

Action: None

ORA-22828: input pattern or replacement parameters exceed 32K size limit

Cause: Value provided for the pattern or replacement string in the form of VARCHAR2 or CLOB for LOB SQL functions exceeded the 32K size limit.

Action: Use a shorter pattern or process a long pattern string in multiple passes.

ORA-22833: Must cast a transient type to a persistent type

Cause: An attempt was made to use the transient type in the query result.

Action: Cast the transient type to a structurally equivalent persistent type.

ORA-22835: Buffer too small for CLOB to CHAR or BLOB to RAW conversion (actual: *string*, **maximum:** *string*)

Cause: An attempt was made to convert CLOB to CHAR or BLOB to RAW, where the LOB size was bigger than the buffer limit for CHAR and RAW types. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Do one of the following:

1. Make the LOB smaller before performing the conversion, for example, by using SUBSTR on CLOB

2. Use DBMS_LOB.SUBSTR to convert CLOB to CHAR or BLOB to RAW.

ORA-22837: Relational hint or keyword is disallowed for user-level DML

Cause: An attempt was made to use relational hint or keyword in user- level DML.

Action: Avoid using DML with relational hint or keyword.

ORA-22839: Direct updates on SYS_NC columns are disallowed

Cause: An attempt was made to update SYS_NC columns directly.

Action: Avoid direct updates on SYS_NC columns.

ORA-22850: duplicate LOB storage option specified

Cause: A LOB storage option (CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, SECUREFULE/BASICFILE, [A]SYNC) was specified more than once.

Action: Specify all LOB storage options only once.

ORA-22851: invalid CHUNK LOB storage option value

Cause: The specified CHUNK LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22852: invalid PCTVERSION LOB storage option value

Cause: The specified PCTVERSION LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22853: invalid LOB storage option specification

Cause: A LOB storage option was not specified

Action: Specify one of CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, [A]SYNC or DATA SYNC as part of the LOB storage clause.

ORA-22854: invalid option for LOB storage index

Cause: A valid LOB store index option was not specified.

Action: Specify one of (INITRANS, MAXTRANS, TABLESPACE, STORAGE) as part of the LOB storage index.

ORA-22855: optional name for LOB storage segment incorrectly specified

Cause: The optional name for LOB storage segment was specified with multiple columns in the column list.

Action: Specify each column LOB storage only with optional name(s).

ORA-22856: cannot add columns to object tables

Cause: An attempt was made to add columns to an object table. Object tables cannot be altered to add columns since its definition is based on an object type.

Action: Create a new type with additional attributes, and use the new type to create an object table. The new object table will have the desired columns.

ORA-22857: cannot modify columns of object tables

Cause: An attempt was made to alter the object table by modifing existing columns. An object table cannot be altered to modify existing columns since it is based on an object type. The table definition must be in sync with the corresponding type.

Action: Create a new type with the desired attribute types and use it to create an object table. The new object table will have the desired columns.

ORA-22858: invalid alteration of datatype

Cause: An attempt was made to modify the column type to object, REF, nested table, VARRAY or LOB type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22859: invalid modification of columns

Cause: An attempt was made to modify an object, REF, VARRAY, nested table, or LOB column type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22860: object type expected

Cause: An attempt was made to create an object table using a non- object type, or to create a column that is a REF to a non-object type.

Action: Use a valid object type in the table or column definition.

ORA-22861: invalid user-defined type

Cause: An attempt was made to create a column or object table of a non- existent type.

Action: Specify a valid type in the table or column definition.

ORA-22862: specified object identifier doesn''t match existing object identifier

Cause: An attempt was made to specify an object identifier for the type that does not match the existing identifier of the incomplete type of the same name.

Action: Specify the correct object identifier or leave it out of the statement.

ORA-22863: synonym for datatype *string.string* not allowed

Cause: A synonym specification for a datatype is not supported

Action: do not use the synonym for the datatype

ORA-22864: cannot ALTER or DROP LOB indexes

Cause: An attempt was made to ALTER or DROP a LOB index.

Action: Do not operate directly on the system-defined LOB index. Perform operations on the corresponding LOB column.

ORA-22865: more than one column specified

Cause: An attempt was made to specify multiple columns where only one is allowed.

Action: Specify a single column and retry the operation.

ORA-22868: table with LOBs contains segments in different tablespaces

Cause: An attempt was made to drop a tablespace which contains the segment(s) for the LOB columns of a table but does not contain the table segment.

Action: Find table(s) with LOB columns which have non-table segments in this tablespace. Drop these tables and reissue drop tablespace.

ORA-22869: depth of type dependency hierarchy exceeds maximum limit

Cause: The type dependency hierarchy was structured to have depth greater than 1024.

Action: Re-structure the type dependency hierarchy to a shorter depth.

ORA-22870: ALTER TYPE with REPLACE option a non-object type

Cause: attempt to perform ALTER TYPE with REPLACE option a non-object type

Action: drop the non-object type first, then re-create it as an object type

ORA-22871: ALTER TYPE with REPLACE is not allowed for pure incomplete types

Cause: An attempt to perform ALTER TYPE with REPLACE option for a pure incomplete type

Action: Completely define the original type, before using the ALTER TYPE with REPLACE option.

ORA-22872: OID INDEX clause not allowed on tables with primary key based object identifiers

Cause: An attempt to create an OID INDEX on a table with primary key based object identifiers.

Action: Remove the OID INDEX clause

ORA-22873: primary key not specified for primary key based object table

Cause: An attempt to create a primary key based object table without specifying a primary key

Action: Specify a primary key and retry the operation

ORA-22874: attribute "*string*" is not part of the type "*string*"

Cause: Attribute specified in the user_defined clause is not an attribute of the REF type

Action: Ensure that the name specified in the user_defined clause is the name of a valid attribute of the REF type

ORA-22875: cannot drop primary key of an object table whose object identifier is primary key based

Cause: An attempt to drop the primary key of an object table which has a primary key based object identifier

Action: Remove the drop primary key clause

ORA-22876: this user-defined type is not allowed or it cannot be used in this context

Cause: An attempt to create a kind of user-defined type which is not allowed, or an attempt to create table columns or use default constructor with a type on which these are not supported.

Action: Ensure that the type is permitted in this context.

ORA-22877: invalid option specified for a HASH partition or subpartition of a LOB column

Cause: One or more invalid options were encountered while parsing the physical attributes of a LOB partition or subpartition. Either the LOB partition is in a table partitioned using the HASH method, or the LOB subpartition is in a table subpartitioned using the HASH method. TABLESPACE is the only valid option for a HASH partition or subpartition.

Action: Remove the invalid option(s).

ORA-22878: duplicate LOB partition or subpartition specified

Cause: An attempt was made to specify a partition or subpartition that has already been specified for the LOB column.

Action: Remove the duplicate specification.

ORA-22879: cannot use the LOB INDEX clause for partitioned tables

Cause: An attempt was made to specify a LOB INDEX clause in a CREATE TABLE or ALTER TABLE statement for a partitioned table.

Action: Remove the LOB INDEX clause.

ORA-22880: invalid REF

Cause: An invalid REF was accessed.

Action: Modify the REF and retry the operation.

ORA-22881: dangling REF

Cause: The object corresponding to the REF that was accessed does not exist.

Action: Ensure that the REF value is pointing to an existing object.

ORA-22882: object creation failed

Cause: The object cannot be created in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22883: object deletion failed

Cause: The object could not be deleted from the database.

Action: Check to see if the object table exists.Then retry the operation.

ORA-22884: object modification failed

Cause: The object could not be modified in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22885: cannot get REF to a non-persistent object

Cause: An attempt was made to get a REF for something other than an object in an object table. REFs can only be taken for objects in object tables.

Action: Rewrite the query to obtain REF values from object tables.

ORA-22886: scoped table "*string*" in schema "*string*" is not an object table

Cause: The scoped table specified for a REF column is not an object table.

Action: Ensure that the scoped table is an object table.Then retry the operation.

ORA-22887: type of REF column is not the same as that of its scoped table

Cause: The type specified for the REF column and the type specified for the scope table are different.

Action: Ensure that the types of a REF column and its scoped table are the same.

ORA-22888: duplicate SCOPE clauses for a REF column

Cause: Multiple SCOPE clauses were specified for a single REF column.

Action: Remove the duplicate SCOPE clauses and retry the operation.

ORA-22889: REF value does not point to scoped table

Cause: An attempt was made to insert a REF value that does not point to the scoped table.

Action: Ensure that the REF values point to the scoped table.

ORA-22890: cannot specify name for REF column constraint

Cause: An attempt was made to specify a constraint name for a constraint on a REF column.

Action: Remove the constraint name and retry the operation.

ORA-22891: cannot have multiple columns in REF constraint

Cause: An attempt was made to specify multiple columns in a single REF constraint.

Action: Specify separate constraints for each column and retry the operation.

ORA-22892: scoped table "*string*" does not exist in schema "*string*"

Cause: The scoped table specified for a REF column does not exist.

Action: Ensure that the scoped table exists and retry the operation.

ORA-22893: constraint can be specified only for REF columns

Cause: The constraint specified does not apply to non-REF columns.

Action: Remove the constraint and retry the operation.

ORA-22894: cannot add constraint on existing unscoped REF columns of non-empty tables

Cause: An attempt was made to add a constraint to existing unscoped REF columns of a table which contains one or more rows.

Action: Remove the constraint specification or add the constraint after emptying the table.

ORA-22895: referenced table "*string*" in schema "*string*" is not an object table

Cause: The referenced table specified for a REF column is not an object table.

Action: Ensure that the referenced table is an object table.Then retry the operation.

ORA-22896: cannot have both scope and referential constraint on REF column "*string*"

Cause: REF column has both a referential and a scope constraint. A referential constraint implies a scope constraint.

Action: Remove either the referential or scope constraint and then retry the operation.

ORA-22897: no scope clause specified for user-defined REF column "*string*"

Cause: User-defined REF column does not have a scope constraint.

Action: Specify a scope constraint for the user-defined REF column and retry the operation.

ORA-22898: existing scope clause on "*string*" points to a table other than the one mentioned in the referential constraint

Cause: Table mentioned in the referential integrity constraint is different from the scope table of the REF column.

Action: Specify the scope table of the REF column in the referential integrity constraint and then retry the operation.

ORA-22899: cannot specify both scope and rowid constraint on ref column

Cause: An attempt was made to specify both a scope and a rowid constraint on a REF column.

Action: Remove either the rowid or scope constraint and then retry the operation.

ORA-22900: the SELECT list item of THE subquery is not a collection type

Cause: The THE subquery must SELECT a nested table or VARRAY item.

Action: change the subquery to SELECT a nested table or VARRAY item.

ORA-22901: cannot compare nested table or VARRAY or LOB attributes of an object type

Cause: Comparison of nested table or VARRAY or LOB attributes of an object type was attempted in the absence of a MAP or ORDER method.

Action: define a MAP or ORDER method for the object type.

ORA-22902: CURSOR expression not allowed

Cause: CURSOR on a subquery is allowed only in the top-level SELECT list of a query.

Action: None

ORA-22903: MULTISET expression not allowed

Cause: MULTISET expressions are allowed only inside a CAST to a nested table or VARRAY type.

Action: put the MULTISET(subquery) expression inside a CAST to a nested table or VARRAY type.

ORA-22904: invalid reference to a nested table column

Cause: invalid use of a nested table column

Action: remove invalid reference to the nested table column

ORA-22905: cannot access rows from a non-nested table item

Cause: attempt to access rows of an item whose type is not known at parse time or that is not of a nested table type

Action: use CAST to cast the item to a nested table type

ORA-22906: cannot perform DML on expression or on nested table view column

Cause: Attempted to perform a DML on an expression or on a nested table view column where a nested table column of a base table is expected.

Action: Only nested table column of a base table is allowed in the DML.

ORA-22907: invalid CAST to a type that is not a nested table or VARRAY

Cause: Attempted to CAST to a type that is not a nested table or VARRAY

Action: Re-specify CAST to a nested table or VARRAY type.

ORA-22908: reference to NULL table value

Cause: The evaluation of the THE subquery or nested table column resulted in a NULL value implying a NULL table instance. The THE subquery or nested table column must identify a single non-NULL table instance.

Action: Ensure that the evaluation of the THE subquery or nested table column results in a single non-null table instance. If happening in the context of an insert statement where the THE subquery is the target of an insert, then ensure that an empty nested table instance is created by updating the nested table column of the parent table"s row specifying an empty nested table constructor.

ORA-22909: exceeded maximum VARRAY limit

Cause: The total number of elements used in VARRAY construction exceeds the specified VARRAY limit.

Action: Don"t use the more than the specified limit of elements for VARRAY construction.

ORA-22910: cannot specify schema name for nested tables

Cause: Table name was qualified with schema name in the nested table column"s (or attribute"s) storage clause.

Action: Re-specify the nested table item"s storage clause without the schema name qualification. By default, the storage table for the nested table item is created in the same schema as the containing table.

ORA-22911: duplicate storage specification for the nested table item

Cause: The storage clause is specified more than once for the NESTED TABLE column.

Action: Remove the duplicate storage specification.

ORA-22912: specified column or attribute is not a nested table type

Cause: The storage clause is specified for a column or attribute that is not a nested table column or attribute.

Action: Specify a valid nested table column or attribute.

ORA-22913: must specify table name for nested table column or attribute

Cause: The storage clause is not specified for a nested table column or attribute.

Action: Specify the nested table storage clause for the nested table column or attribute.

ORA-22914: DROP of nested tables not supported

Cause: Attempted to DROP a nested table.

Action: nested tables cannot be explicitly dropped. nested tables can only be dropped by dropping their containing parent table.

ORA-22915: cannot ALTER a nested table"s storage table to ADD/MODIFY columns

Cause: any such change.

Action: Columns cannot be added or modified for a nested table"s storage table. You must alter the parent table"s nested table column to

ORA-22916: cannot do an exact FETCH on a query with Nested cursors

Cause: Exact FETCH on a query was specified which is not allowed if the query returns any cursors.

Action: Do not use an exact FETCH.

ORA-22917: use VARRAY to define the storage clause for this column or attribute

Cause: Not using VARRAY to define storage clause for VARRAY column or attribute.

Action: Specify VARRAY before the column storage clause and resubmit statement.

ORA-22918: specified column or attribute is not a VARRAY type

Cause: Attemp to define a VARRAY storage clause for a column or attribute which is not VARRAY type.

Action: Specify VARRAY storage clause for a VARRAY column or attribute.

ORA-22919: dangling REF error or lock object failed for no wait request

Cause: The error could be one of the following. The object corresponding to the REF does not exist or the object was locked by another user and the lock with nowait request failed.

Action: Ensure that the REF value is pointing to an existing object or issue a lock request without the nowait option.

ORA-22920: row containing the LOB value is not locked

Cause: The row containing the LOB value must be locked before updating the LOB value.

Action: Lock the row containing the LOB value before updating the LOB value.

ORA-22921: length of input buffer is smaller than amount requested

Cause: The buffer length is not big enough to hold the amount of data requested.

Action: Verify that the number of bytes/characters specified in the input amount parameter is not bigger than the number of bytes specified in the input buffer length parameter. Allocate more space for the input buffer if necessary.

ORA-22922: nonexistent LOB value

Cause: The LOB value associated with the input locator does not exist. The information in the locator does not refer to an existing LOB.

Action: Repopulate the locator by issuing a select statement and retry the operation.

ORA-22923: amount of data specified in streaming LOB write is 0

Cause: Trying to write LOB value via the streaming mechanism (i.e. unlimited write) but the input amount of data to stream was specified as 0. Thus, the user is trying to write 0 bytes to the LOB value.

Action: Write more than 0 bytes to the LOB value.

ORA-22924: snapshot too old

Cause: The version of the LOB value needed for the consistent read was already overwritten by another writer.

Action: Use a larger version pool.

ORA-22925: operation would exceed maximum size allowed for a LOB value

Cause: Trying to write too much data to the LOB value. LOB size is limited to 4 gigabytes.

Action: Either start writing at a smaller LOB offset or write less data to the LOB value.

ORA-22926: specified trim length is greater than current LOB value"s length

Cause: The input length for which to trim the LOB value to is greater than the current length of the LOB value.

Action: May not need to trim the LOB value because it"s already smaller than the trim length specified. Or, if trimming the LOB value really is required, use a smaller trim length.

ORA-22927: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only.

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2) and (3), pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

ORA-22928: invalid privilege on directories

Cause: An attempt was made to grant or revoke an invalid privilege on a directory.

Action: Only CREATE, DELETE, READ and WRITE privileges can be granted or revoked on directories. Do not grant or revoke other privileges.

ORA-22929: invalid or missing directory name

Cause: The required directory name is invalid or missing.

Action: Specify a valid name.

ORA-22930: directory does not exist

Cause: Attempt to access a directory that does not exist.

Action: Make sure the name is correct.

ORA-22933: cannot change object with type or table dependents

Cause: Attempt to replace, drop or rename an object with type or table dependents.

Action: Drop depending objects or use FORCE option if available.

ORA-22950: cannot ORDER objects without MAP or ORDER method

Cause: an object type must have a MAP or ORDER method defined for all comparisons other than equality and inequality comparisons.

Action: Define a MAP or ORDER method for the object type

ORA-22951: NULL returned by ORDER method

Cause: ORDER method used to compare two object values returned NULL which is not allowed.

Action: Redefine the ORDER method to not return a NULL.

ORA-22952: Nested Table equality requires a map method on the element ADT

Cause: Nested Table equality was tried where the element ADT did not have a map method defined on it.

Action: Define a map method on the element ADT..

ORA-22953: Cardinality of the input to powermultiset exceeds maximum allowed

Cause: The cardinality of the input nested table to the powermultiset should not exceed 32 elements

Action: Reduce the number of elements to the input.

ORA-22954: This multiset operation is not supported for this element type.

Cause: The multiset operation attempted was not supported for the nested table element type.

Action: Use a supported element type.

ORA-22955: The cardinality parameter is not within the allowed limits

Cause: The cardinality parameter has to be greater than 1 and less than or equal to the cardinality of the input.

Action: Give a valid cardinality value.

ORA-22956: The set contains no elements

Cause: An empty set was given as input to the powermultiset function.

Action: Give a non-empty set as input

ORA-22957: NULL is an invalid input to powermultiset and COLLECT functions

Cause: NULL was given as input to the powermultiset or COLLECT function.

Action: Give a non-null value as input

ORA-22958: This operation is not allowed in check constraints or triggers

Cause: An invalid operation is used in a check constraint or trigger

Action: Do not use the operation

ORA-22970: name does not correspond to an object view

Cause: Either the expression is not a view name or the name specified does not correspond to an object view.

Action: Replace the expression with the name of an object view.

ORA-22971: invalid datatype for PRIMARY KEY-based object identifier

Cause: When creating an object view, the datatype of an expression in the WITH OBJECT OID clause is not allowed for PRIMARY KEY-based OID.

Action: Replace the expression with one of appropriate scalar datatype.

ORA-22972: NULL value not allowed in PRIMARY KEY-based object identifier

Cause: A value constituting the PRIMARY KEY-based object identifier is NULL.

Action: Ensure the expressions in MAKE_REF system function or attributes in the WITH OBJECT OID clause of an object view do not evaluate to NULL.

ORA-22973: size of object identifier exceeds maximum size allowed

Cause: Size of the PRIMARY KEY-based object identifier of an object view exceeds the maximum size of 4000 bytes.

Action: Specify fewer or smaller PRIMARY KEY attributes in the WITH object OID clause when creating the object view.

ORA-22974: missing WITH OBJECT OID clause

Cause: WITH OBJECT OID clause is not specified when creating an object view.

Action: Specify the WITH OBJECT OID clause.

ORA-22975: cannot create a PRIMARY KEY-based REF to this object view

Cause: The object view specified in the MAKE_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE_REF function.

ORA-22976: incorrect number of arguments to MAKE_REF

Cause: Number of arguments for MAKE_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE_REF.

ORA-22977: missing or invalid attribute

Cause: Either the attribute name is missing in the WITH OBJECT OID clause or it is invalid.

Action: Specify a valid attribute of the object type of the object view.

ORA-22978: only simple attribute name is allowed in the WITH OBJECT OID clause

Cause: Attempted to specify a Nested attribute in the WITH OBJECT OID clause.

Action: Specify a top-level attribute of the object type of the object view.

ORA-22979: cannot INSERT object view REF or user-defined REF

Cause: Attempt to insert an object view REF or user-defined REF in a REF column created to store system generated REF values"

Action: Make sure the REF to be inserted is not from an object view or from a user-defined REF column

ORA-22980: must specify a set of attributes for the WITH OBJECT OID clause

Cause: The WITH OBJECT OID DEFAULT clause was used, but the underlying view or table does not have a OID.

Action: Specify attributes for the WITH OBJECT OID clause to create a primary key based object identifier for the object view.

ORA-22981: must specify a table/view having system generated OID

Cause: The super-view is based on a table/view having the system generated OID and the sub-view must also be based on a similar table/view.

Action: Specify table/view having system generated OID and retry the the operation.

ORA-22982: cannot create sub-view under this view

Cause: The view derives its OID from a table/view having primary key based OID and sub-views cannot be created under such views.

Action: Specify view having system generated OID or a view created with the specification of attributes in the WITH OBJECT ID clause and retry the operation.

ORA-22983: not a user-defined REF

Cause: Attempt to use a system generated REF value where a user-defined REF value should be used.

Action: Make sure the REF value is user-defined.

ORA-22984: view query cannot contain references to a super view

Cause: The query defining the view contains references to a super-view of the view being created.

Action: Make sure that the view query does not reference a super-view.

ORA-22990: LOB locators cannot span transactions

Cause: A LOB locator selected in one transaction cannot be used in a different transaction.

Action: Re-select the LOB locator and retry the operation.

ORA-22991: insufficient space allocated for argument *string*

Cause: The data to be returned in the argument is greater than the amount of space allocated for the argument.

Action: Allocate more space for the argument.

ORA-22992: cannot use LOB locators selected from remote tables

Cause: A remote LOB column cannot be referenced.

Action: Remove references to LOBs in remote tables.

ORA-22993: specified input amount is greater than actual source amount

Cause: (1) For LOB write, the amount of data received is different from the amount that was indicated would be sent. (2) For LOB copy and loadfromfile, the end of the source LOB/FILE value was reached before the specified input amount was copied/loaded.

Action: (1) will happen when using OCI''s piecewise mechanism with polling or with a callback function. Modify the code either to send the amount specified or to pass 0 as the input amount so that any amount of data can be sent. (2) will happen if the specified input amount is too large for the source LOB/FILE given the starting source offset. Either decrease the starting source offset, or decrease the amount to copy/load.

ORA-22994: source offset is beyond the end of the source LOB

Cause: The source offset for a LOB COPY or LOB LOADFROMFILE is beyond the end of the source LOB.

Action: Check the length of the LOB and then adjust the source offset.

ORA-22995: TABLESPACE DEFAULT option is invalid in this context

Cause: TABLESPACE DEFAULT option can be specified for LOB columns only in the following contexts:

- at the table level for a partitioned table

- at the partition level for a composite partition. An attempt was made to use the TABLESPACE DEFAULT option in a different context.

Action: Remove the TABLESPACE DEFAULT option.

ORA-22996: NEXT extent size is smaller than LOB chunksize

Cause: An attempt was made to create or alter a LOB segment so that its NEXT extent size was less than the LOB chunksize

Action: Specify a NEXT extent size that is greater than or equal to the LOB chunksize

ORA-22997: VARRAY | OPAQUE stored as LOB is not specified at the table level

Cause: An attempt was made to specify a VARRAY|OPAQUE column to be stored as LOB at the partition/subpartition/template level. However the VARRAY|OPAQUE column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY | OPAQUE column to be stored as LOB at the table level when the table is created. Alternatively, do not specify the VARRAY | OPAQUE column to be stored as LOB at the partition/subpartition/template level if it is not specified at the table level when the table is created.

ORA-22998: CLOB or NCLOB in multibyte character set not supported

Cause: A CLOB or NCLOB in a fixed-width or varying-width multibyte character set was passed to a SQL character function which does not support multibyte LOB data.

Action: Use DBMS_LOB functions such as DBMS_LOB.INSTR() and DBMS_LOB.SUBSTR()

ORA-22999: CLOB or NCLOB data may have been corrupted

Cause: CLOB or NCLOB contains invalid character data. One possible cause is that the wrong csid was specified for the external file when calling DBMS_

LOB.LOADCLOBFROMFILE or DBMS_XSLPROCESSOR.READ2CLOB to load CLOB or NCLOB data from external files.

Action: Reload the CLOB/NCLOB data with the correct csid specified for the external file.

ORA-23290: This operation may not be combined with any other operation

Cause: ALTER TABLE RENAME COLUMN/CONSTRAINT operation was given in conjunction with another ALTER TBALE Operation. This is not allowed.

Action: Ensure that RENAME COLUMN/CONSTRAINT is the only operation specified in the ALTER TABLE.

ORA-23291: Only base table columns may be renamed

Cause: Tried to rename a column of a non-base table, like object table/ nested table/ materialized view table.

Action: None. This is not allowed.

ORA-23292: The constraint does not exist

Cause: The given constraint name does not exist.

Action: Give an existing constraint"s name.

ORA-23293: Cannot rename a column which is part of a join index

Cause: The column participates in a join index.

Action: If you need to rename the column, you need to drop the join index.

ORA-23300: *string*

Cause: The stored procedure "raise_system_error" was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-23301: mixed use of deferred rpc destination modes

Cause: Replication catalog determined deferred RPC destinations were mixed with destination determined by other mechanisms in the same transaction.

Action: Do not mix destination types in the same transaction.

ORA-23302: application raised communication failure during deferred RPC

Cause: An application declared a communication failure during a defered RPC.

Action: Retry the application when communication is restored.

ORA-23303: application raised generic exception during deferred RPC

Cause: An application declared a generic failure during a defered RPC.

Action: Determined by the application

ORA-23304: malformed deferred rpc at arg *string* **of** *string* **in call** *string*, **in tid** *string*

Cause: A deferred RPC call was issued without the correct number of arguments as determined by the count parameter to dbms_defer.call

Action: Be sure the number of actuals matches the count.

ORA-23305: internal deferred RPC error: *string*

Cause: An internal error occurred in deferred rpc.

Action: Report the error and other information to support.

ORA-23306: schema *string* **does not exist**

Cause: The schema name was null or misspelled, or the schema does not exist locally.

Action: Specify the schema correctly, or create it with CREATE USER.

ORA-23307: replicated schema *string* **already exists**

Cause: The given database already replicates the given schema.

Action: Choose a different schema or a different database.

ORA-23308: object *string.string* **does not exist or is invalid**

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_repobject.

ORA-23309: object *string.string* **of type** *string* **exists**

Cause: An object in the same namespace exists, perhaps with a different type or shape, or the same object has already been registered as an repobject in another object group.

Action: Remove the offending object with the SQL DROP command, unregister the offending object with dbms_repcat.drop_master_repobject(), or reinvoke the request using TRUE for a boolean parameter such as retry or use_existing_object.

ORA-23310: object group "string**"."**string**" is not quiesced**

Cause: The requested operation requires the object group to be suspended.

Action: Invoke suspend_master_activity at the repgroup"s masterdef, wait until the status has changed to quiesced, and then retry the original request.

ORA-23312: not the masterdef according to *string*

Cause: The group name is null, the group name is misspelled, the invocation or given database is not the masterdef, or one of the masters does not believe the invocation database is the masterdef.

Action: If the given group name and masterdef were both correct, connect to the masterdef and retry the request, or relocate the masterdef at the (errant) databases using relocate_masterdef.

ORA-23313: object group "string**"."**string**" is not mastered at** *string*

Cause: The group name is null, the group name is misspelled, the invocation database is not a master, or the invocation database does not believe the given database is a master.

Action: If the given group name was correct, connect to a current master and retry the request, make the invocation database a master with add_master_database, or use switch_mview_master if the invocation database is a materialized view site.

ORA-23314: database is not a materialized view site for "string**"."**string**"**

Cause: The invocation database is not a materialized view database for the given object group.

Action: Connect to the desired materialized view database and retry the request, or make the invocation database a materialized view site with create_mview_repschema or create_mview_repgroup.

ORA-23315: repcatlog version or request *string* **is not supported by version** *string*

Cause: Either incompatible repcat versions are used, or a repcatlog record has been corrupted.

Action: Convert the master to a compatible version of repcat or retry the request.

ORA-23316: the masterdef is *string*

Cause: The requested operation is not permitted on a masterdef site.

Action: Relocate the masterdef to another master and retry the operation.

ORA-23317: a communication failure has occurred

Cause: The remote database is inaccessible.

Action: Ensure the remote database is running, the communications network is functioning, and the appropriate database links are present.

ORA-23318: a ddl failure has occurred

Cause: User-supplied or system-generated ddl did not execute successfully.

Action: Examine ddl, database state, repcatlog, and all_errors to determine why the failure occurred.

ORA-23319: parameter value *string* **is not appropriate**

Cause: The given value of a parameter is either null, misspelled, or not supported.

Action: Refer to the documentation and use parameter values that are appropriate for the given situation.

ORA-23320: the request failed because of values *string* **and** *string*

Cause: A missing ddl record for a repcatlog record, or inconsistency in repcat views.

Action: Retry the request, or make the views consistent.

ORA-23321: Pipename may not be null

Cause: You called dbms_pipe with a null pipe name.

Action: Find out the name of the pipe and call function with non-null pipename.

ORA-23322: Privilege error accessing pipe

Cause: You either tried to create a pipe that already existed and belonged to someone else, or remove a pipe that you were not authorized to use, or put a message into a pipe that you were not authorized for, or get a message from a pipe that you were not authorized for.

Action: You may have to use a different pipename.

ORA-23323: parameter length exceeds deferred RPC limits

Cause: A deferred rpc parameter was longer than the deferred rpc limits of 4000 bytes for char/varchar2 parameters and 2000 bytes for raw parameters.

Action: Use smaller parameters.

ORA-23324: error *string***, while creating deferror entry at "***string***" with error** *string*

Cause: The given error was encountered while attempting to create a deferor entry for the give error code and the give database.

Action: Correct the cause of the given error.

ORA-23325: parameter type is not *string*

Cause: A conflict resolution priority function was given a type different than the type assigned to the priority group; or the priority group has no type assigned or a

function; or dbms_defer_sys_query was called to retrieve a deferred rpc parameter from the deferred rpc queue, but the type of the parameter does not match the return type of the function.

Action: Use the function corresponding to the parameter type.

ORA-23326: object group "*string*"."*string*" is quiesced

Cause: Either suspend_master_activity has been called before the object group has resumed normal operation or a (deferred) rpc operation was attempted while the object group was quiesced.

Action: If suspend_master_activity has been called and a resume_master_activity request is pending, wait until it completes, and then reinvoke suspend_master_activity. Otherwise, resume database activity with the resume_master_activity call.

ORA-23327: imported deferred rpc data does not match *string* of importing db

Cause: Deferred rpc queues were imported from a database with a different global name or operating system than importing database.

Action: Deferred rpc data should only be imported into a database with the same global name and hardware and operating system.

ORA-23328: mview base table "*string*"."*string*" differs from master table "*string*"."*string*"

Cause: When creating a materialized view through repcat, the materialized view base table name did not match a replicated table name at the master.

Action: Change the materialized view ddl to use the same base table as the replicated table name at the master.

ORA-23329: successful user-provided ddl but no materialized view "*string*"."*string*"

Cause: The DDL provided by the user to create a materialized view was executed without error, but materialized view does not exist.

Action: Manually back-out the DDL, and reregister with matching ddl and materialized view.

ORA-23330: column group *string* already exists

Cause: The column group was already registered in the object group.

Action: Use a column group name not yet registered in the replicated object group.

ORA-23331: column group *string* does not exist

Cause: The given column group is either null, misspelled or not registered.

Action: Use a registered column group.

ORA-23332: group *string* is in use; cannot drop

Cause: The given column group or priority group is being used to resolve conflicts.

Action: Call dbms_repcat procedures drop_update_resolution, drop_delete_resolution, drop_unique_resolution so that the column group or priority group is no longer in use before dropping.

ORA-23333: column *string* is already part of a column group

Cause: Attempted to add a column to a column group when the column was already a member of a column group.

Action: Drop the column from its existing column group before trying to add it to another.

ORA-23334: column *string* **does not exist in table or column group**

Cause: The given column is either null, misspelled or is not part of the given table or column group.

Action: Use a column that is a member of the table or column group.

ORA-23335: priority group *string* **already exists**

Cause: The priority group was already registered in the object group.

Action: Use a column group name not yet registered in the object group.

ORA-23336: priority group *string* **does not exist**

Cause: The priority group was already registered in the object group.

Action: Use a priority group name not yet registered in the object group.

ORA-23337: priority or value not in priority group *string*

Cause: The specified value or priority has not been registered as part of the priority group.

Action: Either specify a different value or priority that is already part of the priority group, or add the value to the priority group.

ORA-23338: priority or value already in priority group *string*

Cause: The specified value or priority has already been registered as part of the priority group.

Action: Either specify a different value or priority that not already part of the priority group, or drop the value to the priority group.

ORA-23339: duplicate conflict resolution information

Cause: The specified combination of column group, sequence, conflict type and/or parameter table name, parameter column name, and parameter sequence number has already been registered.

Action: Verify that additional conflict resolution information needs to be added and provide a new sequence number. If modifying existing information, the existing information must be dropped first.

ORA-23340: incorrect resolution method *string*

Cause: User function is specified when conflict resolution method was not "USER FUNCTION" or specified resolution method is not one of the predefined methods.

Action: If user function is specified when conflict resolution method was not "USER FUNCTION", either reregister function with method as "USER FUNCTION" or specify a NULL user function. Otherwise Specify one of the documented supported conflict resolution methods.

ORA-23341: user function required

Cause: A NULL user function was specified for the "USER FUNCTION" method.

Action: Provide user function name (e.g., "schema"."package"."function") that conforms to the documented user function specifications or specify one of the documented supported conflict resolution methods.

ORA-23342: invalid parameter column *string*

Cause: The parameter column name is null or misspelled, the invocation database is not a master, or is of the wrong type for the specified conflict resolution method.

Action: Specify a parameter column from the specified column group that has a correct type for the conflict resolution method.

ORA-23343: no match for specified conflict resolution information

Cause: The specified combination of column group, sequence, conflict type has not been registered (e.g., for adding a comment).

Action: Specify a combination of column group, sequence, conflict type has been registered.

ORA-23344: constraint (*string.string*) does not exist

Cause: A null, misspelled or nonexistent constraint was specified when registering a uniqueness conflict.

Action: Register a named constraint for the specified table.

ORA-23345: table "*string*"."*string*" not registered to collect statistics

Cause: A procedure that deals with conflict resolution statistics-gathering was called for a table that was not registered to collect statistics.

Action: Call dbms_repcat.register_statistics to register the table.

ORA-23346: primary key or object ID is undefined for table or materialized view *string*

Cause: Trying to generate replication support for a table or materialized view without a primary key (as defined by a constraint or dbms_repcat.set_columns) or an object ID.

Action: For a table, add a primary key constraint or define a primary key using dbms_repcat.set_columns or use object tables. For a ROWID materialized view, set min_communication to false or use primary key or object ID materialized views.

ORA-23347: datatype *string* for column *string* table *string* not supported

Cause: The table has a column whose datatype is not supported by repcat.

Action: Remove the column from the table, or alter the column to have one of the supported datatypes.

ORA-23348: cannot replicate procedure *string*; only IN parameters supported

Cause: Trying to generate replication support for a package that has a procedure with OUT or IN OUT parameters.

Action: Remove the procedure from the package, or remove the OUT or IN OUT parameters from the procedure.

ORA-23349: cannot generate replication support for functions

Cause: Trying to generate replication support for a package that has a public function, or for a stand-alone function.

Action: Remove the public function from the package, or alter the function to be a procedure.

ORA-23350: maximum number of recursive calls exceeded

Cause: This usually occurs when trying to resolve conflicts in a table while concurrent updates to the same row create more conflicts.

Action: Re-execute the deferred transaction from DefError using dbms_defer_sys.execute_error

ORA-23351: parameter datatype *string* for procedure *string* not supported

Cause: The procedure has a parameter whose datatype is not supported by repcat.

Action: Remove the parameter from the procedure, or alter the parameter to have one of the supported datatypes.

ORA-23352: duplicate destination for deferred transaction

Cause: A duplicate destination was specified for a deferred transaction either in a dbms_defer.call call or an earlier dbms_defer.transaction call or a dbms_defer_sys.add_default_dest call.

Action: Remove the duplicate entry

ORA-23353: deferred RPC queue has entries for object group "*string*"."*string*"

Cause: The requested action cannot be performed until the queue is empty for the given object group

Action: Use dbms_defer_sys.execute or dbms_defer_sys.delete_tran to empty the queue.

ORA-23354: deferred RPC execution disabled for "*string*" with "*string*"

Cause: Deferred RPC can not be executed at the destination with the specified catchup value because their propogation has been disabled.

Action: Enable deferred RPC execution with the dbms_defer_sys.set_disabled call.

ORA-23355: object *string.string* does not exist or is invalid at master site

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object at the master site, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the master database, and is visible to the user, and, if appropriate, is a valid object in all_repobject.

ORA-23356: masterdef recognizes a master which does not recognize the masterdef

Cause: Possibly drop_master_repgroup was run at a master site but remove_master_databases was not run at master definition site for that master.

Action: Run remove_master_databases from master definition site to remove the appropriate master (see associated error messages).

ORA-23357: the propagator does not exist

Cause: The propagator does not exist.

Action: Register a new propagator.

ORA-23358: invalid remote user

Cause: The local user does not match the remote user connected via a database link.

Action: Drop and recreate the identified database link with the connect-to user identical to the owner of the database link.

ORA-23359: error on creating a ddl record for a repcatlog record

Cause: The userid in the repcatlog record does not match the userid of the connected user.

Action: Retry the operation with a different user.

ORA-23360: only one materialized view for master table "*string*" can be created

Cause: Trying to create more than one materialized view on a given master table in the same rep group.

Action: Create these other materialized views in a different rep group at another site.

ORA-23361: materialized view "*string*" does not exist at master site

Cause: The materialized view does not exist at the master site for offline instantiation of the materialized view.

Action: The correct procedure is to create the materialized view in a different schema at the master site, and then follow the instructions for offline instantiation of materialized views.

ORA-23362: invalid user

Cause: The given user does not exist.

Action: None

ORA-23363: mismatch of mview base table "*string*" at master and mview site

Cause: The name of the base table of the materialized view at the master site is different from the base table at the materialized view site. This error may arise during offline instantiation of materialized views.

Action: Retry offline instantiation with a materialized view name less than 24 bytes

ORA-23364: Feature not enabled: Advanced replication

Cause: The Advanced Replication feature is not enabled at this site. Updatable materialized views, deferred RPCs, and other replication features are, therefore, unavailable.

Action: Do not attempt to use this feature. Contact an Oracle Customer Support representative if the Advanced Replication feature has been purchased but not enabled.

ORA-23365: site *string* does not exist

Cause: site specified in argument "reference_site" or argument "comparison_site" in call to "differences()" routine or "rectify()" routine does not name an existing site.

Action: Make sure that database sites specified really do exist, and re-run the routine.

ORA-23366: integer value *string* is less than 1

Cause: Value of argument "max_missing" to routine "differences()" cannot be less than 1. Value of argument "commit_rows" to routines "differences()" and "rectify()" cannot be less than 1.

Action: Choose an integer value for those arguments to be 1 or greater.

ORA-23367: table *string* is missing the primary key

Cause: Table specified in argument "oname1" or "oname2" in call to "differences()" routine does not contain either a primary key or a virtual primary key (defined through dbms_repcat package under symmetric replication).

Action: Make sure the tables specified have a primary key defined.

ORA-23368: name *string* cannot be null or the empty string

Cause: Argument "sname1," "sname2," "oname1," "oname2," "missing_rows_ sname," "missing_rows_oname1," "missing_rows_oname2" to "differences()" or "rectify()" cannot be NULL or "" (empty string).

Action: Change argument to non-null or non-empty string.

ORA-23369: value of "*string*" argument cannot be null

    Cause: Argument "max_missing" to "differences()" routine cannot be NULL.

    Action: Legal values for "max_missing" are integers 1 or greater.

ORA-23370: table *string* and table *string* are not shape equivalent (*string*)

    Cause: The tables specified are not shape equivalent, which means intuitively that the number of columns, the names, their datatypes and lengths are not the same. Specifically, problem is in the parentheses and is one of the following: the number of columns are not equal, datatypes of columns with same name in different tables are different, lengths of varchar2 and char columns are not equal, precision and scale of number datatypes are not equal.

    Action: Make sure the two tables being compared have the same number of columns, same column names, and same datatypes.

ORA-23371: column *string* unknown in table *string*

    Cause: Some column in "array_columns" argument (or "column_list" argument) to "differences()" routine does not correspond to a column in the specified table.

    Action: Make sure that all the columns in either "array_columns" or "column_list" are present in the specified table.

ORA-23372: type *string* in table *string* is unsupported

    Cause: Certain types in the table comparison utility are not supported.

    Action: Make sure that the types of columns in the tables to be compared are the ones supported by symmetric replication.

ORA-23373: object group "*string*"."*string*" does not exist

    Cause: The group name was null or misspelled, or the group does not exist locally.

    Action: Specify the group correctly, or create it with dbms_repcat.create_master_repgroup().

ORA-23374: object group "*string*"."*string*" already exists

    Cause: The given database already replicates the given object group. A materialized view repgroup cannot be created at a given site where a master repgroup with the same name already exists.

    Action: Choose a different group or a different database.

ORA-23375: feature is incompatible with database version at *string*

    Cause: A feature not compatible with the specified database was used

    Action: Set or raise the value of the "compatible" INIT.ORA parameter to match the necessary compatibility level.

ORA-23376: node *string* is not compatible with replication version "*string*"

    Cause: A feature not compatible with the remote database was used

    Action: Upgrade the remote database and retry the operation

ORA-23377: bad name *string* for missing_rows_oname1 argument

    Cause: An attempt was made to use the name of the reference site table as the name of the missing_rows_oname1 argument.

Action: Provide a separately created table with a different name for missing_rows_oname1 argument. The separately created table will contain the differences between the tables being compared.

ORA-23378: connection qualifier "*string*" is not valid for object group "*string*"."*string*"

Cause: The connection qualifier used in the database link for the specified object group does not match the qualifier specified for the group in create_master_repgroup.

Action: Use or create a database link which contains the correct connection qualifier.

ORA-23379: connection qualifier "*string*" is too long

Cause: The maximum length of a database link, including the connection qualifier, is 128 bytes.

Action: Use a shorter connection qualifier, or shorten the name of the database link

ORA-23380: propagation mode "*string*" is not valid

Cause: The specified propagation may be misspelled, or is not supported. For materialized view sites, all materialized view object groups at the same materialized view site with the same master object group must all have the same propagation method.

Action: Refer to the manual on replicated data for valid propagation modes. For materialized view sites, also ensure that the propagation modes of all materialized view object groups with the same master object group are the same.

ORA-23381: generated object for base object *string.string@string* does not exist

Cause: The system generated object(s) for the specified base object do not exist at the specified site. The current operation requires the base object to have generated replication support.

Action: Ensure that the generated replication object(s) for the base object exist and are valid at the specified site. If the generated object(s) do not exist, then the procedure dbms_repcat.generate_replication_support() needs to be called from the master definition site for the base object. missing_rows_oname1 argument. The separately created table will contain the differences between the tables being compared.

ORA-23382: materialized view repgroup "*string*"."*string*" is not registered at site *string*

Cause: The materialized view repgroup is not currently registered at the master and so cannot be unregistered.

Action: None

ORA-23383: registration for materialized view repgroup "*string*"."*string*" failed at site *string*

Cause: Insertion into local repschema table failed.

Action: None

ORA-23384: replication parallel push *string* argument out of range

Cause: Specified numeric argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23385: replication parallel push *string* argument not valid

Cause: Specified string argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23386: replication parallel push cannot create slave processes

Cause: An error was occurred while creating slave processes for parallel push.

Action: None

ORA-23387: replication parallel push dequeue error

Cause: An attempt to dequeue a deferred transaction failed while trying to assign a new queue batch number.

Action: None

ORA-23388: replication parallel push watermark error

Cause: An error occurred during parallel push while trying to update the high-water-mark information in system.def$_destination.

Action: None

ORA-23389: obsolete procedure; drop objects and recreate using new master

Cause: dbms_repcat.switch_mview_master is no longer supported.

Action: Drop the objects in the object group and recreate them using the new master.

ORA-23392: could not find materialized view to be associated with "*string*"."*string*"

Cause: Could not find materialized view associated with a trigger or index that is being pulled from the master site.

Action: Ensure that materialized view, master, and master index or trigger is registered as replicated objects.

ORA-23393: the user is already the propagator

Cause: The given user is already the current propagator.

Action: None

ORA-23394: duplicate propagator

Cause: More than one valid propagator exist.

Action: Unregister any duplicate propagator.

ORA-23395: object "*string*"."*string*" of type "*string*" does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_repobject.

ORA-23396: database link "*string*" does not exist or has not been scheduled

Cause: the database link does not exist in the schema of the replication propagator or has not been scheduled.

Action: Ensure that the database link exists in the database, is accessible and is scheduled for execution.

ORA-23397: global name "*string*" does not match database link name "*string*"

Cause: the database link name at the local node does not match the global name of the database that the link accesses.

Action: Ensure that global names is set to true and the link name matches the global name.

ORA-23398: user name "*string*" at database link "*string*" does not match local user name "*string*"

Cause: the user name of the replication administration user at the local node and the user name at the node corresponding to the database link are not the same. Symmetric replication expects the two users to be the same.

Action: Ensure that the user ID of the replication administration user at the local node and the user ID at the node corresponding to the database link are the same.

ORA-23399: generation of replication support for "*string*"."*string*" is not complete

Cause: Replication support for the specified object has not been generated or the generation process is not yet complete.

Action: Ensure that replication support has been generated for the object. Use DBMS_REPCAT.GENERATE_REPLICATION_SUPPORT() to generate replication support for the object.

ORA-23400: invalid materialized view name "*string*"

Cause: A null, misspelled, or badly formed materialized view name was given to dbms_mview.refresh.

Action: Provide a valid materialized view name to dbms_mview.refresh.

ORA-23401: materialized view "*string*"."*string*" does not exist

Cause: A materialized view name was given to dbms_mview.refresh that is not in sys.snap$ or its associated views.

Action: Provide a materialized view name that is in sys.snap$, all_mviews or user_mviews.

ORA-23402: refresh was aborted because of conflicts caused by deferred txns

Cause: There are outstanding conflicts logged in the DefError table at the materialized view"s master.

Action: Resolve the conflicts in the master DefError table and refresh again after the table is empty. Alternatively, refresh with refresh_after_errors set to TRUE, which will proceed with the refresh even if there are conflicts in the master"s DefError table. Proceeding despite conflicts can result with an updatable materialized view"s changes appearing to be temporarily lost (until a refresh succeeds after the conflicts are resolved).

ORA-23403: refresh group "*string*"."*string*" already exists

Cause: Making a new refresh group when there is already a group of the same name in sys.rgroup$.

Action: Choose a diifferent refresh group name.

ORA-23404: refresh group "*string*"."*string*" does not exist

Cause: A refresh group name was given that is not in sys.rgroup$.

Action: Provide a refresh group name that is in sys.rgroup$ or dbs_rgroup.

ORA-23405: refresh group number *string* does not exist

Cause: A refresh group number was given that is not in sys.rgroup$.

Action: Provide a refresh group number that is in sys.rgroup$ or dbs_rgroup.

ORA-23406: insufficient privileges on user "*string*"

Cause: The caller is not the owner of the materialized view and does not have ALTER ANY MATERIALIZED VIEW privileges.

Action: Perform the operation as the owner of the materialized view or as a user with ALTER ANY MATERIALIZED VIEW privileges.

ORA-23407: object name *string* must be shaped like "schema"."object" or "object"

Cause: The object name (e.g., the rollback segment, the materialized view name, the refresh group) was incorrectly specified.

Action: Retry the operation with the object name properly specified (like "schema"."object" or "object")

ORA-23408: this replication operation is not supported in a mixed configuration

Cause: operation is not supported if the object group is replicated at a pre-V8 node.

Action: Ensure that all nodes of the replicated object group are V8.

ORA-23409: could not find an unused refresh group number

Cause: 1000 consecutive refresh group numbers, as defined by the rgroupseq number, were already used by rows in sys.rgroup$.

Action: Alter the sequence number to be within a legal unused range and destroy unneeded refresh groups.

ORA-23410: materialized view "*string*"."*string*" is already in a refresh group

Cause: A materialized view of the same name is already in a refresh group.

Action: Subtract the materialized view from the current refresh group and add it to its new refresh group, or combine the two refresh groups into a single refresh group.

ORA-23411: materialized view "*string*"."*string*" is not in refresh group "*string*"."*string*"

Cause: The specified materialized view is not in the specified refresh group.

Action: Try again with the proper materialized view and refresh group names.

ORA-23412: master table"s primary key columns have changed

Cause: The master table"s primary key constraint was modified after the primary key materialized view was created.

Action: Drop and recreate the primary key materialized view

ORA-23413: table "*string*"."*string*" does not have a materialized view log

Cause: The fast refresh can not be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

ORA-23414: materialized view log for "*string*"."*string*" does not record rowid values

Cause: A rowid materialized view is being fast refreshed, but the materialized view log does not record rowid information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD ROWID command to begin recording rowid information in the materialized view log.

ORA-23415: materialized view log for "*string*"."*string*" does not record the primary key

Cause: A primary key materialized view is being fast refreshed, but the materialized view log does not record primary key information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD PRIMARY KEY command to begin recording primary key information in the materialized view log.

ORA-23416: table "*string*"."*string*" does not contain a primary key constraint

Cause: The master table does not constaint a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-23417: unknown materialized view type: *string*

Cause: A fast refresh is being performed on a materialized view of an unknown or unsupported type.

Action: Check all_mviews and ensure that the materialized view being refreshed a valid materialized view.

ORA-23418: cannot unregister the propagator who is currently in use

Cause: The propagator is currently used in propagating replication RPCs.

Action: Try again later when there is no transaction active in propagating replication RPCs.

ORA-23419: regenerate replication support before resuming master activity

Cause: There are tables in the object group that require regeneration of replication support.

Action: Check the generation_status column in the all_repobjects view. Regenerate replication support for any table in the object group with a "NEEDSGEN" status. Resume master activity.

ORA-23420: interval must evaluate to a time in the future

Cause: The parameter "interval" evaluates to a time earlier than SYSDATE.

Action: Choose an expression that evaluates to a time later than SYSDATE.

ORA-23421: job number *string* is not a job in the job queue

Cause: There is no job visible to the caller with the given job number.

Action: Choose the number of a job visible to the caller.

ORA-23422: Oracle Server could not generate an unused job number

Cause: Oracle Server could not generate a job number that was not used to identify another job.

Action: Retry the operation.

ORA-23423: job number *string* is not positive

Cause: The given job number is less than 1.

Action: Choose a positive integer.

ORA-23424: materialized view "*string*"."*string*" at *string* not registered

Cause: The specified materialized view has not be successfully registered at this site.

Action: Register the materialized view manually at either the master site or the materialized view site.

ORA-23425: invalid materialized view identifier *string*

Cause: The argument provided to dbms_mview.purge_mview_from_log is an invalid materialized view identifer or it does not identify an Oracle 8 fast refreshable materialized view or the materialized view has been already purged.

Action: If the materialized view is an Oracle 8 fast refreshable materialized view then provide purge_mview_from_log with its valid materialized view identifier.

ORA-23426: deferred RPC queue has entries for *string*

Cause: The requested action cannot be performed until the queue is empty for the given site/dblink

Action: Use dbms_defer_sys.push, dbms_defer_sys.purge_queue or dbms_defer_sys.delete_tran to empty the queue.

ORA-23427: deferred purge queue argument *string* **out of range**

Cause: Specified numeric argument to dbms_defer_sys.purge_queue is invalid.

Action: Fix the argument value and try again.

ORA-23428: job associated instance number *string* **is not valid**

Cause: A job is associated with an instance that is not running.

Action: Choose a running instance for job affinity, or set force parameter to TRUE.

ORA-23430: argument "*string***" cannot be NULL or empty string**

Cause: The caller has provided an argument whose value cannot be NULL or the empty string.

Action: Check that the varchar2 value provided is not NULL or the empty string, and retry the call.

ORA-23431: wrong state: *string*

Cause: The routine was executed against a replicated object group that was in the wrong state.

Action: Make sure that the replicated object group is in the state given in the error message.

ORA-23432: master site *string* **already exists**

Cause: An attempt was made to instantiate a replicated object group at a master site that was already a part of the object group.

Action: If you were trying to add this site, do nothing because it already exists; otherwise, pick the name of another site, and re-run the routine.

ORA-23433: executing against wrong master site *string*

Cause: An attempt was made to execute the routine at a site that is different from the site specified in the argument of the routine.

Action: Provide an argument to the routine that correctly indicates the site against which the routine should be executing.

ORA-23434: master site *string* **not known for object group**

Cause: The site name given as an argument to a routine was not already known to the replicated object group.

Action: Execute the dbms_offline_og.begin_instantiation() routine to add a new site to the replicated object group.

ORA-23435: cannot create an updatable ROWID materialized view with LOB columns

Cause: The propagation of LOB data from materialized view sites to the master site requires a primary key on the replicated table. Thus updatable ROWID materialized views that contain LOB columns are not supported.

Action: Create a primary key materialized view instead of a ROWID materialized view. If the materialized view already exists, it can be converted to a primary key materialized view using the ALTER MATERIALIZED VIEW DDL command.

ORA-23436: missing template authorization for user

Cause: The specified template authorization does not exist.

Action: Check the values for user name and refresh template name to ensure a valid row exists in the DBA_REPCAT_USER_AUTHORIZATIONS view.

ORA-23437: template authorization already exists for user

Cause: The specified user already has been authorized to use the specified refresh group template.

Action: Check the values for user name and refresh template name or query the DBA_REPCAT_USER_AUTHORIZATIONS view to ensure that the correct values were passed as parameters.

ORA-23438: missing refresh group template

Cause: The specified refresh group template does not exist.

Action: Verify that the refresh group template does not exist by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

ORA-23439: refresh group template already exists

Cause: The specified refresh group template already exists.

Action: Verify that the refresh group template exists by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

ORA-23440: incorrect public template value

Cause: The public template parameter is not "Y", "N" or NULL.

Action: Correct the value of the public template parameter. It must be "Y","N" or NULL.

ORA-23441: object does not exist for refresh group template

Cause: The specified object does not exist in the refresh group template.

Action: Correct the object name and object type parameters. Check the DBA_REPCAT_TEMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23442: object already exists for the refresh group template

Cause: The specified object already exists in the refresh group template.

Action: Change the object name and object type parameters. Query the DBA_REPCAT_REMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23443: missing template parameter

Cause: The specified template parameter does not exist.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARMS view to verify the name of the refresh group template and parameter name.

ORA-23444: duplicate template parameter

Cause: The template parameter already exists for the specified refresh group template.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARMS view to verify the name of the refresh group template and parameter name.

ORA-23445: missing template site

Cause: The template site specified by the site name, user name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23446: duplicate template site

Cause: The template site specified by the site name, user name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23447: missing user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARMS view to query the existing user parameters.

ORA-23448: duplicate user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARMS view to query the existing user parameters.

ORA-23449: missing user name

Cause: The user specified by the user name parameter does not exist in the database.

Action: Correct an invalid user name or create the user in the master database. Use the DBA_USERS view to select the valid database users.

ORA-23450: flavor already contains object "*string*"."*string*"

Cause: The flavor already contains the specified object.

Action: Check that the specified object is correct. To add all columns of a table object, delete the object from the flavor and then add it again.

ORA-23451: flavor *string* already defined for object group "*string*"."*string*"

Cause: The given object group already contains a (possibly unpublished) definition of the specified flavor.

Action: Check the spelling of the flavor name. Check for an unpublished flavor of the desired name.

ORA-23452: flavor *string* of object group "*string*"."*string*" is already published

Cause: The given object group already contains a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name.

ORA-23453: requested operation is not supported on top flavor

Cause: The TOP flavor has a NULL name and may not be directly defined or deleted.

Action: Supply the name of a flavor other than the TOP flavor or use dbms_repcat routines to implicitly change the TOP flavor.

ORA-23454: flavor *string* **not defined for object group "***string***"."***string***"**

Cause: The given object group does not contain a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name. Ensure the flavor has been defined (and published) for the object group.

ORA-23455: flavor *string* **contains object "***string***"**

Cause: The given flavor contains the object to be dropped.

Action: Purge the flavor or choose another object to drop.

ORA-23456: flavor *string* **does not contain "***string***"**

Cause: The flavor does not contain the given object, column, or attribute.

Action: Either drop the flavor or choose a different object, column, or attribute.

ORA-23457: invalid flavor ID *string*

Cause: The given flavor ID is invalid.

Action: Make sure this flavor has been instantiated. If the flavor ID is outside the range (-2147483647, 2147483647), contact customer support.

ORA-23458: inappropriate flavor *string* **at** *string*

Cause: The given flavor at the given database prevents the operation from succeeding.

Action: Either change the database flavor or choose a different operation.

ORA-23459: flavor *string* **must contain "***string***"**

Cause: The flavor must contain the given object, column, or attribute.

Action: Either choose a different database flavor or ensure the object, column, or attribute is available.

ORA-23460: missing value for column *string* **in resolution method "***string***" for "***string***"."***string***"."***string***"**

Cause: before resolving conflicts, some values necessary resolving conflicts are not available, or after resolving conflicts, some values necessary for re-trying of the SQL are not available

Action: define appropriate flavors, provide necessary values through availability vector in USER FLAVOR FUNCTION for conflict resolution

ORA-23462: flavor *string* **in use at site** *string*

Cause: The given flavor cannot be deleted because it is being used at the given site.

Action: Change the flavor of the site, or unregister it if it is a materialized view site.

ORA-23463: flavor incompatible with object "*string*"."*string*"

    Cause: An existing flavor includes the specified object with an incompatible type.

    Action: Change the type of the object, or delete the flavor if it is not in use.

ORA-23464: flavor lacks column *string* of "*string*"."*string*"

    Cause: The flavor includes some columns of an object group but not all the required columns.

    Action: Change the flavor definition to include all required columns.

ORA-23465: flavor already includes column *string* of "*string*"."*string*"

    Cause: The flavor includes the specified column which is being added.

    Action: Check that the specified column is correct.

ORA-23466: flavor requires missing object "*string*"."*string*"

    Cause: The flavor includes the specified object which does not exist

    Action: Check that the specified object name is correct, and create the object if appropriate.

ORA-23467: flavor lacks object "*string*"."*string*"

    Cause: The flavor does not include the specified object which is being dropped.

    Action: Check that the specified object is correct.

ORA-23468: missing *string string*

    Cause: The template is missing the object with the specified key.

    Action: Add the object to the template.

ORA-23469: *string* is different between templates

    Cause: The values for the specified columns are different in each template for the same key values.

    Action: Correct the column values to make the templates the same.

ORA-23470: invalid status

    Cause: The status should be DELETED, INSTALLING or INSTALLED. Any other status is invalid.

    Action: Check that the specified status value is correct.

ORA-23471: template not authorized for user

    Cause: The refresh template is private and the user has not been authorized to instantiate the template.

    Action: Authorize the user to use the template.

ORA-23472: materialized view "*string*"."*string*" must be atomically refreshed

    Cause: Non-atomic refresh is not supported for the specified materialized view.

    Action: Set the value of the ATOMIC parameter to FALSE in the refresh procedure being used or remove the specified materialized view from the set of materialized views being refreshed.

ORA-23473: replication RPC processing for "*string*"."*string*" is disabled

    Cause: The processing of replication RPCs for the object group that contains this object is disabled. This includes RPCs in the error queue.

Action: Processing of replication RPCs is disabled when the object group is being offline instantiated. Wait until offline instantiation is finished.

ORA-23474: definition of "*string*"."*string*" has changed since generation of replication support

Cause: The current columns in the specified table and their column types do not match the columns and column types when replication support was last generated.

Action: Regenerate replication support for the affected table. All flavors that include the specified table should be checked for validity. Types for any UDT columns should also be checked for validity.

ORA-23475: key column *string* must be sent and compared

Cause: The specified column is a key column and must be sent and compared during replication propagation.

Action: Make sure every key column is sent and compared.

ORA-23476: cannot import from *string* to *string*

Cause: This object was imported from a database with a different global name than the importing database.

Action: Only import this object into a database with the same global name.

ORA-23477: unable to alter propagation mode for object group "*string*"."*string*"

Cause: The propagation method of a materialized view object group can only be altered when no other object groups with the same master object group are sharing the materialized view site.

Action: Ensure that there are no other materialized view object groups at the local site with the same master object group.

ORA-23478: object group "*string*" is already mastered at *string*

Cause: There is at least one other materialized view repgroup at the local site with the same group name but a different master site.

Action: Ensure that all materialized view repgroups at the local site with the same group name have the same master.

ORA-23480: Column *string* is not a top-level column of "*string*"."*string*".

Cause: The column is either not a top-level column or is not present in the table or materialized view.

Action: Ensure only valid top-level columns are used.

ORA-23482: column *string* of "*string*"."*string*": object types not allowed.

Cause: The column is of Object Type.

Action: Ensure that all the columns are not of Object Type.

ORA-23483: object "*string*"."*string*" not allowed in this operation.

Cause: The specified operation does not support the given object.

Action: Do not invoke the operation for this object.

ORA-23484: internal internet Application Server error: *string*

Cause: An internal error occurred in internet Application Server.

Action: Report the error and other information to support.

ORA-23485: Column group "*string*" must consist of a single numeric column only

Cause: The column group doesn"t contain only one numeric column.

Action: Use a column group containing a single numeric column.

ORA-23487: object groups "*string*"."*string*" and "*string*"."*string*" do not have the same connection qualifier

Cause: The specified two object groups do not have the same connection qualifier.

Action: Do not invoke the operation on the above object groups, or ensure they have the same connection qualifier.

ORA-23488: propagation mode "*string*" for "*string*" is not allowed for this operation

Cause: This operation does not support the specified dblink in the above propagation mode.

Action: Do not invoke the operation for this dblink, or change the propagation mode for this dblink.

ORA-23489: duplicate entry "*string*"

Cause: The specified value is duplicated in the parameter list.

Action: Remove duplicated entries in the parameter list.

ORA-23490: extension request "*string*" with status "*string*" not allowed in this operation

Cause: The specified operation is not allowed for the extension request with the specified status.

Action: Ensure the extension request has the appropriate status before retrying this operation.

ORA-23491: no valid extension request at "*string*"

Cause: The specified database does not have a valid extension request.

Action: Ensure there is a valid extension request in DBA_REPEXTENSIONS view before retrying this operation.

ORA-23492: no new sites for extension request "*string*"

Cause: There is no new site with the specified extension request.

Action: Ensure there is at least one new site in DBA_REPSITES_NEW view for this request before retrying this operation.

ORA-23493: "*string*" is not a new site for extension request "*string*"

Cause: The specified extension request does not include the specified site as a new site.

Action: Ensure the specified site is a new site for this extension request before retrying this operation.

ORA-23494: too many rows for destination "*string*"

Cause: The specified destination has too many rows in system.def$_destination table.

Action: Ensure the specified destination has at most two valid rows before retrying this operation.

ORA-23495: serial propagation can not be used for "*string*"

Cause: The sites involved may be in the process of adding a new site without quiescing.

Action: Check the def$_destination table for this destination and try parallel propagation.

ORA-23496: can not change disabled status for "*string*" and "*string*"

Cause: The disabled status for this site is set internally for synchronization during adding a new master without quiescing.

Action: Ensure adding a new master without quiescing finished before invoking this procedure.

ORA-23497: repgroup name cannot be null

Cause: The array of Repgroup names contains a null value.

Action: Ensure that the array of Repgroup names is dense and is not null terminated.

ORA-23498: repgroups specified must have the same masters

Cause: The Repgroup names specified do not have the same masters.

Action: Ensure that the Repgroup names specified have the same masters.

ORA-23500: cannot switch master for a multi-tier materialized view repgroup "*string*"."*string*"

Cause: An attempt was made to switch master for a materialized view repgroup when its parent repgroup is also a materialized view repgroup. This is not allowed.

Action: Drop and recreate the materialized view repgroup based on a proper parent repgroup.

ORA-23501: refresh template cannot be instantiated for database with compatibilty equal to or less than 8.0

Cause: Instantiation of a refresh template is not supported for database compatibility 8.0 or less.

Action: Be sure the database compatibility is 8.1 or above.

ORA-23502: valid directory for offline instatiation is not specified

Cause: An attempt was made to offline instantiate to a directory which is not specified or null.

Action: There are two ways to specify the directory: o As a parm offline_dirpath to the API o As an init.ora parm named utl_file_dir Make sure you have specified an appropriate directory in which the offline file can be created.

ORA-23503: error occurred during IAS instantiation

Cause: An attempt was made to instantiate a IAS site. Error occurred during IAS instantiation.

Action: See other errors on the error stack to look for the source of the problem. If the error still persists, contact Oracle Support.

ORA-23504: columns added to table do not match list of columns to be added

Cause: The list of columns passed as a parameter does not match the columns to be added to the table.

Action: Correct the DDL string or list of columns and rexecute.

ORA-23505: Object "*string*"."*string*" is missing.

Cause: The specified object does not exist.

Action: Check that the specified object is correct.

ORA-23514: invalid or incorrect number of arguments
    Cause: The arguments passed to the online redefinition API were invalid or missing.

    Action: Call the online redefinition API with the right number of valid arguments.

ORA-23515: materialized views and/or their indices exist in the tablespace
    Cause: An attempt was made to drop a tablespace which contains materialized views and/or their indices.

    Action: Drop the materialized views in this tablespace. Also, find indices belonging to materialized views in this tablespace and drop then. Then try dropping the tablespace.

ORA-23531: site owner already exists in the template.
    Cause: Site owner for the template already exists.

    Action: Do not create multiple siteowners for this template.

ORA-23532: tables with different synchronization mechanisms are in the same group
    Cause: Tables belonging to the same replication group were specified to be cached with different synchronization mechanisms.

    Action: Do not specify different synchronization mechanisms while caching tables belonging to the same replication group.

ORA-23533: object "*string*"."*string*" can not be cached
    Cause: An attempt was made to cache an object which is not supported.

    Action: Do not cache an object which is not supported.

ORA-23534: missing column in materialized view container table "*string*"."*string*"
    Cause: After import, the materialized view container table has missing columns.

    Action: Check if materialized view container table was imported correctly.

ORA-23535: instantiating templates from multiple back ends is not allowed.
    Cause: An attempt was made to set a new non-null back end database for an iAS site.

    Action: Call dbms_ias_configure.set_back_end_db procedure with null dblink. Then, call the same procedure with the new non-null dblink.

ORA-23536: the object "*string*"."*string*" is not cached at the middle tier as expected.
    Cause: The object may have been dropped or renamed at the back end after dbms_ias_inst.start_ias_inst was executed.

    Action: Check the validity of the object at the back end and retry the instantiation.

ORA-23537: function or procedure *string* is not allowed to be invoked from this site.
    Cause: This function or procedure is restricted to the backend or middle tier site

    Action: Connect to the proper site before calling this function or procedure.

ORA-23538: cannot explicitly refresh a NEVER REFRESH materialized view ("*string*")
    Cause: An attempt was made to explicitly refresh a NEVER REFRESH MV.

    Action: Do not perform this refresh operation or remove the MV(s) from the list.

ORA-23539: table "*string*"."*string*" currently being redefined

Cause: An attempt was made to redefine a table which is currently involved in an ongoing redefinition.

Action: Do not perform this redefinition operation on this table or wait till the ongoing redefinition of the table is completed.

ORA-23540: Redefinition not defined or initiated

Cause: An attempt was made to continue or complete a redefinition which was not defined or initiated.

Action: Define or initiate the redefinition before performing this operation.

ORA-23541: tables do not match tables used while defining the redefinition

Cause: An attempt was made to continue or complete a redefinition by providing different tables than those used while defining or initiating the redefinition.

Action: Repeat this operation and specify the same tables as those that were specified while defining or initiating the redefinition.

ORA-23542: dependent object "*string*"."*string*" already registered

Cause: An attempt was made to register an already registered dependent object to an ongoing redefinition.

Action: Do not attempt to register an already registered dependent object to an ongoing redefinition.

ORA-23543: materialized view log on "*string*"."*string*" is in an inconsistent state

Cause: There was an error while creating the materialized view log and the log is currently in an inconsistent state. A possible cause could be that schema redefinition has occurred on the master table while the log was being created. Another possible cause could be that there were DMLs being applied on the master table concurrently in another session at the time the materialized view log creation started and those DML transactions haven"t committed even after a very long period of time.

Action: Drop the materialized view log and recreate it.
///
///////////////// 23600-23999 Reserved for Log Based Replication PL/SQL
packages
///
/////////////////

ORA-23600: cannot create PROPAGATION, *string* already exists

Cause: The propagate_name already exists.

Action: Drop the propagate_name usign DROP_PROPAGATEcommand or specify propagate_name.

ORA-23601: PROPAGATION_NAME *string* does not exist

Cause: Propagation does not exist.

Action: Query DBA_PROPAGATION view to find existing propagation_name

ORA-23602: Invalid streams process type *string*

Cause: Specified streams process type is not valid.

Action: Specify either capture or apply.

ORA-23603: STREAMS enqueue aborted due to low SGA

Cause: An attempt to enqueue a STREAMS message was aborted because ORACLE is running low on memory allotted for STREAMS.

Action: Either start consuming messages by enabling any STREAMS propagation or apply which might be disabled. An alternative is to allot more memory to STREAMS, which can be done by increasing the streams_pool_size initialization parameter if one was defined or by increasing the shared_pool_size.

ORA-23605: invalid value "*string*" for STREAMS parameter *string*

Cause: An attempt was made to specify an invalid parameter value.

Action: Specify a valid value for the parameter. Check the documentation for valid parameter values.

ORA-23606: invalid object *string*

Cause: An attempt was made to specify an invalid object.

Action: Specify a valid object.

ORA-23607: invalid column "*string*"

Cause: An invalid column was specified in the column list.

Action: Check the columns in the object and specify the right column name.

ORA-23608: invalid resolution column "*string*"

Cause: An invalid column was specified as the resolution column. The resolution column must belong to the list of columns specified in the "column_list" parameter.

Action: Check the columns in the column_list and specify the right resolution column name.

ORA-23609: unable to find directory object for directory *string*

Cause: There was no entry in ALL_DIRECTORIES corresponding to the specified directory.

Action: Grant to the current user appropriate privileges on either a new directory object or an existing directory object.

ORA-23610: internal dbms_streams_tablespaces error: [*string*] [*string*] [*string*] [*string*]

Cause: Streams detected an erroneous result.

Action: Look for information in the session trace file and contact customer support.

ORA-23611: tablespace "*string*" has more than one data file

Cause: The specified tablespace had more than one data file and hence did not qualify as a simple tablespace.

Action: Choose a self-contained tablespace with a single data file, or use a procedure that supports any tablespace.

ORA-23612: unable to find tablespace "*string*"

Cause: Either the tablespace did not exist, or the current user did not have sufficient privileges on the tablespace.

Action: Grant appropriate privileges on the tablespace to the current user or choose a different tablespace.

ORA-23613: Script *string* already exists

Cause: A script for the specified invoking package already existed.

Action: Complete the previous invocation or drop the previous invocation before proceeding with the current invocation.

ORA-23614: Script *string* does not exist

Cause: The named script did not exist.

Action: Create the script.

ORA-23615: Block number *string* does not exist for script *string*

Cause: The specified block number did not exist for the script.

Action: Add the block or check the block number and reexecute.

ORA-23616: Failure in executing block *string* for script *string* with *string*

Cause: The execution of specified block failed.

Action: Check the error. Query DBA_RECOVERABLE_SCRIPT_BLOCKS to view the failed block. Rectify and rerun the block or script.

ORA-23617: Block *string* for script *string* has already been executed

Cause: The specified block was already executed.

Action: Check the block number and reissue the command.

ORA-23618: Generation of script *string* is not complete.

Cause: Script generation for the specified script was not completed in a prior invocation.

Action: Purge the specified script by calling the RECOVER_OPERATION API in the package DBMS_STREAMS_ADM and reattempt the entire operation.

ORA-23619: non-Oracle system error: *string*

Cause: A non-Oracle database has returned an error message to STREAMS when attempting to apply a DML statement. The non-Oracle system error message is a parameter to this Oracle error.

Action: Corrective action may or may not be possible (depending on the non-Oracle system error). If corrective action is possible, correct the problem and try applying the transaction again.

ORA-23620: bind value size too large for PL/SQL CALL operation

Cause: In a PL/SQL CALL to a stored procedure, the bind string size exceeded 4K.

Action: Either make the bind string size shorter (less than 4K) or use BEGIN-END to call the procedure instead of CALL.

ORA-23621: Operation corresponding to script *string* is in progress.

Cause: The script was already being run in a different session or was terminated before status for the script was updated to ERROR or EXECUTED.

Action: Make sure the script is not being run in a parallel session. Then call the RECOVER_OPERATION API in the DBMS_STREAMS_ADM package with the appropriate OPERATION_MODE argument.

ORA-23622: Operation *string.string.string* is in progress.

Cause: An attempt was made to execute a procedure which was being executed in a parallel session or failed execution.

Action: Query the DBA_RECOVERABLE_SCRIPT view to identify the operation that is currently in progress for the specified invoking procedure. Complete the operation before proceeding.

ORA-23623: internal DBMS_COMPARISON error: [*string*] [*string*] [*string*] [*string*]

Cause: DBMS_COMPARISON detected an erroneous result.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-23624: A comparison operation is currently in progress for *string*.

Cause: Another session was already performing an operation on this object.

Action: Retry the operation once other sessions are done with the specific comparison object.

ORA-23625: Table shapes of *string.string* and *string.string@string* did not match.

Cause: Table shapes of local and remote tables to compare did not match.

Action: Retry by explicitly specifying columns that match in column_list or create views on the tables as appropriate.

ORA-23626: No eligible index on table *string.string*

Cause: Table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23627: Comparison object *string* already existed.

Cause: A comparison object by the specified name already exists.

Action: Retry with a different name.

ORA-23628: Comparison query too long (actual *string*, allowed *string*).

Cause: A generated query for comparison was too long.

Action: Comparison is unsupported for very large tables with long column names. Retry with a subset of columns or with shorter column names.

ORA-23629: *string.string* is not an eligible index on table *string.string* for comparison

Cause: The specified index was not an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Please specify an eligible index for the table to be compared.

ORA-23630: Cannot switch to checkpoint-free mode (value "*string*", STREAMS parameter *string*), due to the following reason:

Cause: Could not switch to checkpoint-free mode, or already in checkpoint-free mode.

Action: Can switch to checkpoint-free mode only if the capture is new (it never ran), the capture wasn"t cloned from a capture with checkpoints, the capture doesn"t include any extra attributes, and combined capture and apply is enabled.

ORA-23631: Checkpoint-free mode cannot change (value "*string*", STREAMS parameter *string*)

Cause: Could not switch to checkpoints because checkpoint-free mode was set.

Action: Drop the checkpoint-free capture and create a new one that will / take checkpoints.

ORA-23632: Cannot force checkpoints in checkpoint-free mode (value "*string***", STREAMS parameter *string*)**

Cause: The capture process was in checkpoint-free mode.

Action: Cannot take checkpoints in checkpoint-free mode.

ORA-23633: Cannot turn off combined capture and apply mode in checkpoint-free mode (value "*string***", STREAMS parameter *string*)**

Cause: The capture was running in checkpoint-free mode and had to run in combined capture and apply mode also.

Action: Ensure that this capture runs in combined capture and apply by dropping additional propagation or apply processes for the same queue.

ORA-23634: Cannot include extra attributes in checkpoint-free mode

Cause: The capture process was in checkpoint-free mode.

Action: Extra attributes are not supported in checkpoint-free mode.

ORA-23635: MAINTAIN_TTS: tablespace(s) already exist(s) in target database.

Cause: The tablespaces were already in existence in the target database when the streams MAINTAIN_TTS APIs were called."

Action: Check whether you can drop the tablespaces to be maintained in the target database. If not, don"t use streams MAINTAIN_TTS APIs to setup streams. Check the Oracle documentation on how to setup streams.

ORA-23636: MAINTAIN_TTS: Invalid tablespace name, reason: *string*.

Cause: The tablespace name was either NULL or too long when the streams MAINTAIN_TTS APIs were called.

Action: Check that the specified tablespace names are not NULL and are spelled correctly. If there are too many tablespaces, group them together and call the streams MAINTAIN_TTS APIs for the group.

ORA-23642: Cannot switch to checkpoint mode (value "*string***", STREAMS parameter *string*)**

Cause: Capture was cloned from a capture in checkpoint-free mode.

Action: Clone from a capture with checkpoints.

ORA-23644: Cannot switch to checkpoint-free mode (Capture *string*)

Cause: Switch to checkpoint-free mode was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23645: Cannot switch to checkpoints (Capture *string*)

Cause: Switch to checkpoints was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23646: Streams *string* process *string* does not exist

Cause: Capture or Apply did not exist.

Action: Create a Capture or Apply process, then try again.

ORA-23647: Streams *string* process *string* is not running

Cause: Capture or Apply were not running.

Action: Start Capture or Apply process, then try again

ORA-23648: Capture *string* **is for Change Data Capture**
  Cause: Capture was for Change Data Capture, and checkpoints were required.
  Action: None

ORA-23649: Capture *string* **is for Audit Vault**
  Cause: Capture was for Audit Vault, and checkpoints were required.
  Action: None

ORA-23650: No progress Capture *string*
  Cause: Capture was not capturing changes.
  Action: Make sure Capture is running and capturing changes.

ORA-23651: Capture *string* **is already in** *string* **mode**
  Cause: Capture was already in the desired mode.
  Action: None

ORA-23652: The oldest SCN could not be updated at Apply *string*
  Cause: The oldest SCN was not updated before the switch was performed.
  Action: Make sure Apply is running and the switch package version is the same at both databases.

ORA-23653: LogMiner session does not exist
  Cause: LogMiner session did not exist.
  Action: Make sure the Capture process exists.

ORA-23654: Attempting to set the oldest SCN to a greater value (*string***) than the current one (***string***) at Apply** *string*
  Cause: The new value for the oldest SCN was not computed correctly.
  Action: Make sure Capture and Apply are running, and Capture is making progress.

ORA-23655: The SCN range cannot be smaller than 0, (SCN range = *string***)**
  Cause: The function was invoked with a negative SCN range.
  Action: Use a positive SCN range.

ORA-23656: Timeout occurred while *string* **Streams process** *string*
  Cause: The Streams process could not be stopped or started.
  Action: Call the switch procedure again.

ORA-23657: the converted file *string* **already exists**
  Cause: The converted file was already in existence. CONVERT FILE call does not overwrite the existing file.
  Action: Check whether the existing file can be deleted. If the existing file can be deleted, delete it. Otherwise, specify a different directory or file extension.

ORA-24000: invalid value *string***,** *string* **should be of the form [SCHEMA.]NAME**
  Cause: An invalid value was specified for the paramerter.
  Action: Specify a string of the form [SCHEMA.]NAME .

ORA-24001: cannot create QUEUE_TABLE, *string* **already exists**

Cause: The queue table already exists in the queueing system.

Action: Drop the table first using the DROP_QUEUE_TABLE() command or specify another table.

ORA-24002: QUEUE_TABLE *string* does not exist

Cause: Queue_table not exist.

Action: Query on the user view USER_QUEUE_TABLES to find out existing queue tables.

ORA-24003: Queue table index *string* inconsistent with queue table *string*

Cause: The queue table index has not yet been successfully imported.

Action: Import the queue table index before attempting to use the queue table. If the import failed, correct the problem and try to import the queue table index again.

ORA-24004: invalid column name *string* in SORT_LIST, should be ENQ_TIME or PRIORITY

Cause: Invalid column name was specified in the SORT_LIST.

Action: The valid column names are ENQ_TIME and PRIORITY.

ORA-24005: must use DBMS_AQADM.DROP_QUEUE_TABLE to drop queue tables

Cause: An attempt was made to use the SQL command DROP TABLE for queue tables, but DROP TABLE is not supported for queue tables.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE procedure instead of the DROP TABLE command.

ORA-24006: cannot create QUEUE, *string* already exists

Cause: The queue requested to be created already exists.

Action: Specify another queue name. Query USER_QUEUES for all the exisiting queues in the users"s schema.

ORA-24007: invalid value *string*, MAX_RETRIES should be non-negative integer

Cause: An invalid value was specified for MAX_RETRIES.

Action: Specify a non-negative integer.

ORA-24008: queue table *string.string* must be dropped first

Cause: An error was detected when dropping a queue table in a cluster, tablespace, or schema.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE procedure to drop the specified queue table first; then, retry the operation.

ORA-24009: invalid value *string*, QUEUE_TYPE should be NORMAL_QUEUE or EXCEPTION_QUEUE

Cause: Invalid queue type parameter

Action: Valid values are NORMAL_QUEUE for normal queue and EXCEPTION_QUEUE for exception queue.

ORA-24010: QUEUE *string* does not exist

Cause: The specified queue does not exist.

Action: Specify a valid queue. Query USER_QUEUES for all the valid queues.

ORA-24011: cannot drop QUEUE, *string* should be stopped first

Cause: The queue has not been stopped i.e. either enqueue or dequeue is still enabled.

Action: Stop the queue first using the STOP_QUEUE command and disable it from both enqueueing and dequeueing.

ORA-24012: cannot drop QUEUE_TABLE, some queues in *string* have not been dropped

Cause: A queue exists in the queue table which has not been dropped. All queues need to be dropped first.

Action: Drop all queues belonging to this queue table using the drop_queue() command. Be sure to stop the queues appropriately before dropping them. Alternately, use the force option in drop_queuetable.

ORA-24013: invalid value *string*, RETRY_DELAY should be non-negative

Cause: A negative value was specified for RETRY_DELAY.

Action: Specify a non-negative value for RETRY_DELAY.

ORA-24014: invalid value *string*, RETENTION_TIME should be FOREVER or non-negative

Cause: Queue retention was specified, but the retention time was specified to be less than zero.

Action: Specify the retention time to be non-negative or FOREVER. Alternately don"t specify retention.

ORA-24015: cannot create QUEUE_TABLE, QUEUE_PAYLOAD_TYPE *string.string* does not exist

Cause: An invalid QUEUE_PAYLOAD_TYPE specified during create_queue_table.

Action: The QUEUE_PAYLOAD_TYPE should be RAW or an object type that already exists in the database.

ORA-24016: cannot create QUEUE_TABLE, user *string* does not have execute privileges on QUEUE_PAYLOAD_TYPE *string.string*

Cause: An invalid object type specified for QUEUE_PAYLOAD_TYPE during create_queue_table.

Action: The user should have execute priviliges on the object type specified for the queue.

ORA-24017: cannot enable enqueue on QUEUE, *string* is an exception queue

Cause: User tried to enable enqueueing to an exception queue.

Action: None

ORA-24018: STOP_QUEUE on *string* failed, outstanding transactions found

Cause: There were outstanding transactions on the queue, and WAIT was set to false, so STOP_QUEUE was unsucessful in stopping the queue.

Action: Set WAIT to TRUE and try STOP_QUEUE again. It will hang till all outstanding transactions are completed.

ORA-24019: identifier for *string* too long, should not be greater than *string* characters

Cause: The identifier specified is too long.

Action: Try again with a shorter identifier.

ORA-24020: Internal error in DBMS_AQ_IMPORT_INTERNAL, *string*

    Cause: Internal Error occured in the package DBMS_AQ_IMPORT_INTERNAL.

    Action: Internal error, call Oracle Support.

ORA-24021: queue table definition not imported for *string.string*

    Cause: The queue definition is not updated because the queue table was not imported properly

    Action: Import the queue table again.

ORA-24022: the specified parameters has no effect on the queue

    Cause: The parameter combination will not cause the queue to be started or stoped.

    Action: None. This is just a warning.

ORA-24023: Internal error in DBMS_AQ_EXP_INTERNAL._string_ **[**_string_**] [**_string_**]**

    Cause: Internal Error occured in the package DBMS_AQ_EXP_INTERNAL.

    Action: Internal error, call Oracle Support.

ORA-24024: Internal error in DBMS_AQ_IMP_INTERNAL._string_ **[**_string_**] [**_string_**]**

    Cause: Internal Error occured in the package DBMS_AQ_IMP_INTERNAL.

    Action: Internal error, call Oracle Support.

ORA-24025: invalid value *string***, QUEUE_PAYLOAD_TYPE should be RAW or an object type**

    Cause: Parameter queue_payload_type has invalid value.

    Action: Specify a valid object type or RAW.

ORA-24026: operation failed, queue *string.string* **has errors**

    Cause: An attempt was made to enqueue, dequeue or administer a queue which has errors.

    Action: Drop the queue table setting the force option to true.

ORA-24027: AQ HTTP propagation encountered error, status-code *string***,** *string*

    Cause: AQ propagation"s HTTP request to the propagation servlet at the specified address encountered an error

    Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-24028: cannot create a reciever non-repudiable single consumer queue

    Cause: Tried to create a reciever non-repudiable single consumer queue

    Action: This feature is not supported

ORA-24029: operation not allowed on a single-consumer queue

    Cause: Tried an operation not allowed on a single-consumer queue.

    Action: Specify the operation on a multi-consumer queue.

ORA-24030: Only one of rule or rule-set must be specified

    Cause: Specified both a rule and rule-set for the operation.

    Action: Specify only one of rule or rule-set.

ORA-24031: invalid value, *string* **should be non-NULL**

   Cause: Parameter is NULL.

   Action: Specify a non NULL value for the parameter.

ORA-24032: object *string* **exists, index could not be created for queue table** *string*

   Cause: Oracle AQ tried to create an index with the name specified in the error message. The index could not be created for the specified queue table because a object exists with the same name.

   Action: Drop the object specified in the error message and retry the command. You can also choose a different name for the queue table.

ORA-24033: no recipients for message

   Cause: An enqueue was performed on a queue that has been set up for multiple dequeuers but there were neither explicit recipients specified in the call nor were any queue subscribers determined to be recipients for this message.

   Action: Either pass a list of recipients in the enqueue call or add subscribers to the queue for receiving this message.

ORA-24034: application *string* **is already a subscriber for queue** *string*

   Cause: An application name that was already a subscriber for the queue was specified in the dbms_aq.subscribe call.

   Action: None

ORA-24035: AQ agent *string* **is not a subscriber for queue** *string*

   Cause: An AQ agent that was not a subscriber for the queue was specified.

   Action: Check the name and/or address of the agent and retry the call.

ORA-24036: invalid SORT_ORDER column *string* **specified for queue table**

   Cause: The create queue table command was issued with message_grouping set to TRANSACTIONAL and a sort order column other than priority. Only the priority column can be specified in the sort order for queue tables with transactional grouping.

   Action: Change the sort order list in the create queue table command and retry the call.

ORA-24037: schema *string* **in QUEUE_NAME is not same as schema** *string* **in QUEUE_TABLE**

   Cause: The schema specified in the QUEUE_NAME parameter of CREATE_ QUEUE is not the same as the schema specified in the QUEUE_TABLE parameter.

   Action: Use the same schema name for both the QUEUE_NAME and QUEUE_ TABLE parameters and retry the command.

ORA-24038: RETRY_DELAY and MAX_RETRIES cannot be used for a 8.0 compatible multiple consumer queue

   Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and a QUEUE_TABLE that was created for multiple consumers and with COMPATIBLE parameter set to "8.0".

   Action: Either set the RETRY_DELAY to zero or upgrade the queue table to 8.1 compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24039: Queue *string* **not created in queue table for multiple consumers**

Cause: Either an ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_ SUBSCRIBER procedure, or an ENQUEUE with a non-empty recipient list, was issued on a queue that was not created for multiple consumers.

Action: Create the queue in a queue table that was created for multiple consumers and retry the call. NLS_DO_NOT_TRANSLATE [24040,24040]

ORA-24041: propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: A SCHEDULE_PROPAGATION was issued for a queue and destination pair which has an existing propagation schedule.

Action: Issue UNSCHEDULE_PROPAGATION to remove the existing schedule and then reissue the SCHEDULE_PROPAGATION call.

ORA-24042: no propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: AN UNSCHEDULE_PROPAGATION was issued for a queue and destination pair which has no existing propagation schedule.

Action: Verify the spelling of the specified QUEUE and DESTINATION and then reissue the call with the correct spelling.

ORA-24043: destination *string* uses a reserved name, names with AQ$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a destination.

Action: Enter a different value or NULL for the local destination. Then retry the operation.

ORA-24044: source *string* and destination *string* object types do not match

Cause: A message recipient"s queue has a different object structure than the sender"s queue. The message cannot be propagated.

Action: Either remove the recipient from the subscriber"s list for the sender"s queue or create the destination queue with an object type that matches the source queue"s object type.

ORA-24045: invalid agent address *string*, agent address should be of the form [SCHEMA.]NAME[@DATABASE LINK]

Cause: An invalid value was specified for the agent address parameter.

Action: Specify a string of the form [SCHEMA.]NAME[@DATABASE LINK].

ORA-24046: protocol attribute reserved for future use

Cause: The protocol attribute of the AQ agent object type is reserved for future use.

Action: Do not specify the protocol attribute in the agent object type.

ORA-24047: invalid agent name *string*, agent name should be of the form NAME

Cause: An invalid value was specified for the agent name parameter.

Action: Specify a string of the form NAME. Then retry the operation.

ORA-24048: cannot create QUEUE_TABLE, user does not have access to AQ object types

Cause: An attempt was made to issue the CREATE_QUEUE_TABLE command, but the user who issued the command does not have access to internal AQ object types.

Action: Use the DBMS_AQADM.GRANT_TYPE_ACCESS procedure to grant the user access to the AQ object types.

ORA-24049: invalid agent name *string*, names with AQ$_ prefix are not valid

Cause: An attempt was made to use a reserved prefix in the agent name.

Action: Enter a different value for the agent name. Then, retry the operation.

ORA-24050: subscribers are not supported for exception queue *string*

Cause: An ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_ SUBSCRIBER procedure was issued on a queue that was created as an EXCEPTION_QUEUE.

Action: Specify a NORMAL_QUEUE in the procedure.

ORA-24051: cannot propagate object type payloads that have a REF attribute

Cause: An ADD_SUBSCRIBER or ENQUEUE procedure with a non-NULL address field in the agent type was issued on a queue whose payload has a REF attribute. Propagation of object type payloads that have a REF attribute currently is not supported.

Action: Specify an agent with a NULL address field so that the agent can dequeue from the same queue. Or, change the object type definition to one that does not use REF attributes.

ORA-24052: cannot propagate object type payloads with LOB attributes to an 8.0 release

Cause: The recipient of a message with LOB attributes was using an Oracle 8.0 release. Propagation of LOB attributes is supported only in Oracle 8.1 and higher releases.

Action: Upgrade the target release to Oracle 8.1 and retry. Or, change the object type definition to one that does not use LOBs.

ORA-24053: PRIMARY_INSTANCE and SECONDARY_INSTANCE must be non-negative

Cause: One of PRIMARY_INSTANCE or SECONDARY_INSTANCE was negative.

Action: Specify non-negative integers for PRIMARY_INSTANCE and SECONDARY_INSTANCE.

ORA-24054: cannot propagate to an Oracle 8.0.3 release or lower release

Cause: The recipient of a message was using an Oracle 8.0.3 release or lower release. Propagation is supported only in Oracle 8.0.4 and higher releases.

Action: Upgrade the target release to Oracle 8.0.4 or higher and retry.

ORA-24055: cannot delete propagation status rows that are in prepared state

Cause: An attempt was made to use the internal administration procedure to delete status rows from the SYS.AQ$_PROPAGATION_STATUS table that were in the prepared state.

Action: Wait for the propagation to complete successfully before retrying the operation.

ORA-24056: internal inconsistency for QUEUE *string* and destination *string*

Cause: The sequence numbers used in the SYS.AQ$_PROPAGATION_STATUS table were inconsistent for the given queue and destination.

Action: Contact Oracle Worldwide Support.

ORA-24057: cannot define subscriber with rule for queue *string*

Cause: An ADD_SUBSCRIBER or ALTER_SUBSCRIBER procedure with a rule was issued on a queue for which rule based subscribers are not supported. Rule based subscribers currently are supported only for NORMAL (persistent) multi-consumer queues created using an Oracle release 8.1.0 or higher compatible queue table.

Action: Create a NORMAL multi-consumer queue in an Oracle release 8.1.0 or higher compatible queue table, and retry the call. Or, if the queue is a normal (persistent) multi-consumer queue, convert the queue table to Oracle 8.1.0 or higher compatibility and retry.

ORA-24058: cannot downgrade QUEUE_TABLE that has propagation in a prepared state

Cause: An attempt was made to downgrade the queue table when there were messages being propagated that were in the prepared state.

Action: Wait for the propagation to complete before retrying the operation.

ORA-24059: invalid COMPATIBLE parameter setting *string* **specified in DBMS_ AQADM.***string*

Cause: An invalid compatible parameter was specified in the DBMS_AQADM procedure. The parameter setting must be of the form "8.x.y" where x is the release number and y is the update number.

Action: Specify a valid COMPATIBLE parameter setting, and retry the operation.

ORA-24060: cannot convert QUEUE_TABLE, *string* **already is compatible with release** *string*

Cause: The source queue table in the DBMS_AQADM procedure is compatible with the specified COMPATIBLE parameter setting.

Action: Choose a different COMPATIBLE parameter setting to convert the queue table to the desired compatibility.

ORA-24061: cannot specify non-zero SECONDARY_INSTANCE if PRIMARY_ INSTANCE was zero

Cause: A non-zero value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was zero.

Action: Specify a non-zero primary instance before you specify a non-zero secondary instance.

ORA-24062: Subscriber table *string* **inconsistent with queue table** *string*

Cause: The subscriber table has not yet been successfully imported.

Action: Import the subscriber table before attempting to use the queue table. If the import failed, correct the problem and try to import the subscriber table again.

ORA-24063: cannot downgrade QUEUE_TABLE that has queues with rule-based subscribers

Cause: An attempt was made to downgrade the queue table when there were queues on which rule based subscribers are defined.

Action: Remove the rule based subscribers for all queues in this queue table and retry.

ORA-24064: propagation for QUEUE *string* **and DESTINATION** *string* **already enabled**

Cause: An ENABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was enabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the ENABLE_SCHEDULE_PROPAGATION command.

ORA-24065: propagation for QUEUE *string* and DESTINATION *string* already disabled

Cause: A DISABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was disabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the DISABLE_SCHEDULE_PROPAGATION command.

ORA-24066: invalid privilege specified

Cause: An invalid privilege is specified for granting or revoking privilege

Action: Specify a valid privilege.

ORA-24067: exceeded maximum number of subscribers for queue *string*

Cause: An attempt was made to add new subscribers to the specified, but the number of subscribers for this queue has exceeded the maximum number (1024) of subscribers allowed per queue.

Action: Remove existing subscribers before trying to add new subscribers.

ORA-24068: cannot start queue *string*, queue table *string* is being migrated

Cause: An attempt was made to start a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24069: cannot downgrade queue table *string* while it is being upgraded

Cause: An attempt was made to downgrade a queue table, but a previous command to upgrade the queue table has not yet completed successfully.

Action: Complete the upragde of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, downgrade the queue table.

ORA-24070: cannot upgrade queue table *string* while it is being downgraded

Cause: An attempt was made to upgrade a queue table, but a previous command to downgrade the queue table has not yet completed succesfully.

Action: Complete the downgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, upgrade the queue table.

ORA-24071: cannot perform operation *string*, queue table *string* is being migrated

Cause: An attempt was made to perform an operation on a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24072: cannot execute MIGRATE_QUEUE_TABLE procedure; must own queue table

Cause: An attempt was made to upgrade or downgrade a queue table using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure, but the user who executed the procedure does not own the queue.

Action: Reconnect as the owner of the queue table, and then execute the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24073: cannot specify RETENTION_TIME on exception queue *string.string*

    Cause: An attempt was made to create or alter an exception queue by specifying a non-zero RETENTION_TIME.

    Action: Use the default RETENTION_TIME parameter value for exception queues.

ORA-24074: RETRY_DELAY and MAX_RETRIES cannot be used for exception queue *%.string*

    Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and an exception queue.

    Action: Do not specify RETRY_DELAY or MAX_RETRIES for exception queues.

ORA-24075: cannot specify agent with NULL address and non-NULL protocol

    Cause: An ADD_SUBSCRIBER or enqueue was attemoted with an agent that had a NULL address and a non-NULL protocol.

    Action: Either specify a non-NULL address or set the protocol to NULL.

ORA-24076: cannot perform operation *string* **for NON_PERSISTENT queue** *string.string*

    Cause: One of the operations, SCHEDULE_PROPAGATION, ALTER_QUEUE, LISTEN, DEQUEUE was issued for a NON_PERSISTENT queue.

    Action: Do not specify a NON_PERSISTENT queue for these operations.

ORA-24077: cannot create propagation schedule for EXCEPTION queue *string.string*

    Cause: A SCHEDULE_PROPAGATION was issued for an EXCEPTION queue. Propagation schedules can be created only for NORMAL queues.

    Action: To propagate messages from a queue specify the queue type as NORMAL.

ORA-24078: cannot specify a non-NULL SECONDARY_INSTANCE if PRIMARY_INSTANCE was NULL

    Cause: A non-NULL value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was NULL.

    Action: Specify a non-NULL primary instance before you specify a non-NULL secondary instance.

ORA-24079: invalid name *string*, **names with AQ$_ prefix are not valid for** *string*

    Cause: An attempt was made to use a reserved prefix for the object name.

    Action: Enter a different name for this object. Then, retry the operation.

ORA-24080: unschedule_propagation pending for QUEUE *string* **and DESTINATION** *string*

    Cause: A propagation administration command was issued for a queue and destination pair whose propagation is being unscheduled.

    Action: Do not issue propagation administration commands for a propagation schedule on which there is a pending unschedule request.

ORA-24081: compatible parameter needs to be *string* **or greater**

    Cause: The compatible parameter was not high enough to allow the operation.

    Action: shutdown and startup with a higher compatibility setting.

ORA-24082: propagation may still be happening for the schedule for QUEUE *string* **and DESTINATION** *string*

Cause: The snapshot process executing the propagation schedule did not respond to the disable propagation command.

Action: Make sure that the job for the propagation schedule has been ended.

ORA-24083: cannot specify remote subscribers for *string* **QUEUE** *string*

Cause: An add_subscriber call with a non-null address field was issued on a queue which does not support remote subscribers. Remote subscribers are not supported for NON_PERSISTENT QUEUES.

Action: Specify a null address field and retry the call.

ORA-24084: DBLINK name in address field of agent *string* **is not unique within the first 24 bytes**

Cause: Advanced Queuing requires that the agent"s dblink name should be unique within the first 24 bytes (for 8.0 compatible queuetables)

Action: Specify a dblink name that is unique within the first 24 bytes or migrate to 8.1 compatible queuetables where this restriction is not there.

ORA-24085: operation failed, queue *string* **is invalid**

Cause: An attempt was made to enqueue, dequeue or administer a queue which is invalid. This could have occured because the payload type of the queue"s queue table was dropped.

Action: Drop the queue table setting the force option to true.

ORA-24086: cannot create a 8.0 compatible *string* **queue**

Cause: An attempt was made to create a 8.0 compatible queue table and enable a feature that is supported only on 8.1 style queue tables

Action: This feature is not supported

ORA-24087: Invalid database user *string*

Cause: An invalid database username was specified

Action: Specify a valid database user

ORA-24088: AQ Agent *string* **does not exist**

Cause: This AQ Agent does not exist

Action: Specify a valid AQ agent. Check the DBA_AQ_AGENTS view for a list of valid aq agents

ORA-24089: AQ Agent *string* **already exists**

Cause: This AQ agent has already been created

Action: Specify another agent name or use the ALTER api to modify the agent information.

ORA-24090: at least one protocol must be enabled

Cause: No protocol was enabled for aq agent

Action: Enable one of the protocols by setting one of the enable parameters to true.

ORA-24091: Destination queue *string* **is the same as the source queue**

Cause: Propagation cannot be scheduled when the destination queue is the same as the source queue.

Action: Specify a different destination queue.

ORA-24092: invalid value *string* **specified**

Cause: A queue, queue table, rule, or ruleset name that requires double quotes was specifed when the database compatibility was less than 10.0.

Action: Specify a value that does not require double quotes and retry the operation.

ORA-24093: AQ agent *string* **not granted privileges of database user** *string*

Cause: The specified AQ agent does not have privileges of the specified database user

Action: Specify a valid combination of AQ agent and database user. Check the DBA_AQ_AGENT_PRIVS or USER_AQ_AGENT_PRIVS view for user/agent mappings

ORA-24094: invalid transformation, target type does not match that of the queue

Cause: The target type of the transformation specified was different from the type of the queue.

Action: Provide a valid transformation whose target type is the same as the queue type.

ORA-24095: invalid transformation, source type does not match that of the queue

Cause: The source type of the transformation specified was different from the type of the queue.

Action: Provide valid transformation whose source type is the same as the queue type.

ORA-24096: invalid message state specified

Cause: Invalid value is specified for message state

Action: Provide a valid message state as specified in the documentation

ORA-24097: Invalid value *string, string* **should be non-negative**

Cause: A negative value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-24098: invalid value *string* **for** *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-24099: operation not allowed for 8.0 compatible queues

Cause: The specified operation is only supported for queues with compatibility 8.1 or greater

Action: Upgrade the 8.0 compatible queue to release 8.1 using DBMS_ AQADM.MIGRATE_QUEUE_TABLE or specify a queue with compatibility 8.1

ORA-24100: error in ktz testing layer

Cause: There is an error in the Transaction layer test ICDs

Action: None

ORA-24101: stopped processing the argument list at: *string*

Cause: One of the arguments of the requested operation contained a list of scheduler objects. While processing this list an error was encountered with the specified item.

Action: Resolve the error for this element of the list and then re-issue the command with the remainder of the argument list. See the rest of the error stack to find out what the exact error is.

ORA-24102: invalid prefix for generate_job_name

Cause: generate_job_name was called with a prefix longer than 18 characters or a prefix ending in a digit.

Action: Re-issue the command using a prefix no longer than 18 characters and not ending in a digit.

ORA-24120: invalid *string* parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid parameter was passed to the specified DBMS_REPAIR procedure.

Action: Specify a valid parameter value or use the parameter"s default.

ORA-24121: both cascade and a block range passed to DBMS_REPAIR.CHECK_OBJECT procedure

Cause: Both cascade and a block range were specified in a call to DBMS_REPAIR.CHECK_OBJECT.

Action: Use either cascade or a block range, or do not use either one.

ORA-24122: invalid block range specification

Cause: An incorrect block range was specified.

Action: Specify correct values for the BLOCK_START and BLOCK_END parameters.

ORA-24123: feature *string* is not yet implemented

Cause: An attempt was made to use the specified feature, but the feature is not yet implemented.

Action: Do not attempt to use the feature.

ORA-24124: invalid ACTION parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid ACTION parameter was specified.

Action: Specify CREATE_ACTION, PURGE_ACTION or DROP_ACTION for the ACTION parameter.

ORA-24125: Object *string.string* has changed

Cause: An attempt was made to fix corrupt blocks on an object that has been dropped or truncated since DBMS_REPAIR.CHECK_OBJECT was run.

Action: Use DBMS_REPAIR.ADMIN_TABLES to purge the repair table and run DBMS_REPAIR.CHECK_OBJECT to determine whether there are any corrupt blocks to be fixed.

ORA-24126: invalid CASCADE_FLAG passed to DBMS_REPAIR.*string* procedure

Cause: CASCADE_FLAG was specified for an object that is not a table.

Action: Use CASCADE_FLAG only for tables.

ORA-24127: TABLESPACE parameter specified with an ACTION other than CREATE_ACTION

Cause: The TABLESPACE parameter can only be used with CREATE_ACTION.

Action: Do not specify TABLESPACE when performing actions other than CREATE_ACTION.

ORA-24128: partition name specified for a non-partitioned object

Cause: A partition name was specified for an object that is not partitioned.

Action: Specify a partition name only if the object is partitioned.

ORA-24129: table name *string* does not start with *string* prefix

Cause: An attempt was made to pass a table name parameter without the specified prefix.

Action: Pass a valid table name parameter.

ORA-24130: table *string* does not exist

Cause: An attempt was made to specify a map, repair, or sync table that does not exist.

Action: Specify a valid table name parameter.

ORA-24131: table *string* has incorrect columns

Cause: An attempt was made to specify a map, repair, or sync table that does not have a correct definition.

Action: Specify a table name that refers to a properly created table.

ORA-24132: table name *string* is too long

Cause: An attempt was made to specify a table name is greater than 30 characters long"

Action: Specify a valid table name parameter.

ORA-24141: rule set *string.string* does not exist

Cause: An attempt to access or modify a ruleset was made, which failed because the ruleset does not exist.

Action: Only access or modify existing rulesets.

ORA-24142: invalid ruleset name

Cause: An attempt to create a ruleset with an invalid name was made. The ruleset name can not be NULL, and can not be more than 26 characters, unless a rules_table_name is also specified, in which case the ruleset name may be up to 30 characters.

Action: Retry the create with a valid ruleset name.

ORA-24143: invalid evaluation context name

Cause: An attempt to create a rule/ruleset on an invalid evaluation name was made. The evaluation_context can not be more than 30 characters. The evaluation context with the name specified must exist.

Action: Retry the create with a valid evaluation context name.

ORA-24144: rules engine internal error, arguments: [*string*], [*string*]

Cause: An internal error occurred in the rules engine. This indicates that the rules engine has encountered an exception condition.

Action: Please report this error as a bug. The first argument is the error and the second argument is the package.

ORA-24145: evaluation context *string.string* **already exists**
>   **Cause:** An evaluation context of the given name already exists
>
>   **Action:** Specify another name for the evaluation context being created

ORA-24146: rule *string.string* **already exists**
>   **Cause:** A rule of the given name already exists
>
>   **Action:** Specify another name for the rule being created.

ORA-24147: rule *string.string* **does not exist**
>   **Cause:** The rule of the given name does not exist
>
>   **Action:** create the rule or specify one that exists

ORA-24148: cannot drop rule *string.string* **with dependents**
>   **Cause:** The rule still belongs to some rulesets, cannot be dropped
>
>   **Action:** do not drop a rule that belongs to rulesets without force option

ORA-24149: invalid rule name
>   **Cause:** An attempt to create a rule with an invalid name was made. The rule name can not be NULL, and can not be more than 30 characters
>
>   **Action:** None

ORA-24150: evaluation context *string.string* **does not exist**
>   **Cause:** The evaluation context of the given name does not exist
>
>   **Action:** create the evaluation context or specify one that exists

ORA-24151: no evaluation context is associated with rule *string.string* **or rule set** *string.string*
>   **Cause:** Whening adding a rule to a rule set, either the rule or the rule set must have an evaluation context associated with it
>
>   **Action:** do not add a rule without an evaluation context to a ruleset that does not have a default evaluation context

ORA-24152: cannot drop evaluation context *string.string* **with dependents**
>   **Cause:** The evaluation context still belongs to some rules or rule sets, cannot be dropped
>
>   **Action:** do not drop an evaluation context with dependents without force option

ORA-24153: rule set *string.string* **already exists**
>   **Cause:** A rule set of the given name already exists
>
>   **Action:** Specify another name for the rule set being created.

ORA-24154: rule *string.string* **already in rule set** *string.string*
>   **Cause:** a rule can be added to a rule set only once
>
>   **Action:** do not add a rule to a rule set that already contains this rule

ORA-24155: rule *string.string* **not in rule set** *string.string*
>   **Cause:** the rule to be removed from the rule set is not in the rule set
>
>   **Action:** do not remove a rule from a rule set that does not contain the rule

ORA-24156: duplicate table alias *string*
>   **Cause:** there is a table alias of the same name in the evaluation context

Action: do not add two table aliases of the same name to an evaluation context

ORA-24157: duplicate variable name *string*

    Cause: there is a variable of the same name in the evaluation context

    Action: do not add two variables of the same name to an evaluation context

ORA-24158: invalid table alias

    Cause: table alias name or base table name is not specified in the table alias definiton

    Action: specify both alias name and alias base table in the table alias structure

ORA-24159: invalid variable definiton

    Cause: variable name or variable type is not specified in the variable definiton

    Action: specify both variable name and variable type in the variable definition structure

ORA-24160: name *string* **already exists in the name value pair list**

    Cause: there is already a name-value pair with the same name in the NVlist

    Action: try another name.

ORA-24161: name *string* **does not exist in the name value pair list**

    Cause: there is not such a name-value pair in the NVlist

    Action: check the name-value pair exists in the NVList.

ORA-24162: name value pair list is full, cannot add another entry

    Cause: The NVList is full (1024 elements) and cannot hold more elements

    Action: do not add elements to a full list.

ORA-24163: dblink is not supported in rules engine DDLs

    Cause: the object name has a database link in it, which is not supported

    Action: Do not specify remote objects in rules engine DDLs.

ORA-24164: invalid rule engine system privilege: *string*

    Cause: no such system privilege number for rule engine objects

    Action: check specfication of dbms_rule_adm for valid system privilege numbers

ORA-24165: invalid rule engine object privilege: *string*

    Cause: no such object privilege number for rule engine objects

    Action: check specfication of dbms_rule_adm for valid object privilege numbers

ORA-24166: evaluation context *string.string* **has errors**

    Cause: cannot resolve the table aliases and the variable types specified in the evaluation context

    Action: make sure all base tables exist and all variable types correct

ORA-24167: incompatible rule engine objects, cannot downgrade

    Cause: there are rule engine objects in the database that cannot be downgraded.

    Action: check utlincmp.sql and remove all incompatible rules engine objects before downgrade.

ORA-24168: rule *string.string* **cannot have default evaluation context**

Cause: If a rule is added to a rule set with more than one evaluation contexts, it must not have an evaluation context itself.

Action: Do not set the evaluation context of such rules to a not-null value

ORA-24169: rule condition has unrecognized variables

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24170: *string.string* **is created by AQ, cannot be dropped directly**

Cause: This object is created by AQ, thus cannot be dropped directly

Action: use dbms_aqadm.drop_subscriber to drop the object

ORA-24171: creation properties are only for internal use

Cause: user specified not null creation properties when creating rules engine objects, which are not for external use

Action: do not set creation properties when creating rules engine objects

ORA-24172: rule set *string.string* **has errors**

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24173: nested query not supported for rule condition

Cause: user specified nested query in rule condition.

Action: do not use nested query in rule condition.

ORA-24180: invalid transformation expression, the transformation expression does not evaluate to the target type/attribute

Cause: The transformation expression does not evaluate to the target type or the target type"s specified attribute.

Action: Provide valid transformation expression which evaluates to the target type or the target type"s specified attribute.

ORA-24181: The type *string* **does not exist**

Cause: The source or destination type for the transformation does not exist

Action: Create the type or specify one that exists

ORA-24182: attribute number specified does not exist

Cause: The target type of the transformation does not have the attribute number specified in the ADD_ATTRIBUTE_TRANSFORMATION command

Action: check the target type definition and specify a valid attribute number

ORA-24183: invalid transformation

Cause: The transformation specified is invalid because the source or the target type have been dropped/modified.

Action: Drop and recreate the transformation

ORA-24184: transformation *string.string* **already exists**

Cause: The named transformation already exists.

Action: Specify another name for the transformation being created.

ORA-24185: transformation *string.string* **does not exist**

Cause: The specified transformation does not exist.

Action: Create the transformation before using it or specify an existing transformation.

ORA-24186: wrong object type, could not transform message

Cause: The object type of the message to be transformed does not match the source type of the specified transfomation.

Action: Specify another transformation, or specify a message of the correct type.

ORA-24190: length of payload exceeds *string*

Cause: the length of payload being taken exceeds the limit of varchar2 or raw.

Action: use clob type or blob type to call get_text or get_bytes.

ORA-24191: the property name *string* has existed

Cause: the property name being set has existed.

Action: use another property name.

ORA-24192: the property name cannot be null

Cause: the property name cannot be null.

Action: make sure the property name not null.

ORA-24193: the property value exceeds the valid range *string*

Cause: the property valus being set exceeds the valid range.

Action: make sure the property value is within the valid range.

ORA-24194: attempt to read data in a message as the wrong type

Cause: According to JMS specification, some type conversions were not allowed.

Action: Make sure to use the correct READ function to retrieve message data.

ORA-24195: attemp to retrieve the name list of a map message with size exceeding 1024

Cause: The GET_NAMES function returns the names in a varray with a size limit of 1024.

Action: Retrieve in several smaller steps using the GET_NAMES function with OFFSET and LENGTH parameters.

ORA-24196: access the message in a wrong access mode

Cause: StreamMessage and BytesMessage could not be read when they were in write only mode and vice versa.

Action: Change the access mode using PREPARE, CLEAR_BODY and RESET procedures.

ORA-24197: JAVA stored procedure throws JAVA exceptions

Cause: The JAVA stored procedure threw some exceptions that could not be catergorized.

Action: Use GET_EXCEPTION procedure to see what the exception is about.

ORA-24198: attempt to use an invalid operation ID

Cause: An attempt was made to use an invalid operation ID to access messages.

Action: Use the correct operation ID returned by PREPARE or CLEAR_BODY procedure.

ORA-24199: message store is overflow

Cause: An attemp was made to access too many messages at the same time.

Action: Use the CLEAN procedure to clean up some of the messages.

ORA-24201: duplicate publisher, publisher already added to the queue

Cause: Attempted to add a publisher to the queue again.

Action: Specify another publisher or user DBMS_AQADM.ALTER_PUBLISHER to alter the publisher"s properties.

ORA-24202: publisher does not exist for the queue

Cause: Attempted to alter or drop a non existent publisher from a queue.

Action: Specify another publisher.

ORA-24203: operation failed, queue table *string.string* has errors

Cause: An operation attempt was made to a queue table which has errors.

Action: Drop the queue table setting the force option to true.

ORA-24204: existing *string* propagation schedules

Cause: A propagation administrative interface was called when the existing propagation schedules were running in different mode (10.2/11g).

Action: Set appropriate internal parameter and unschedule existing schedules if required.

ORA-24230: input to DBMS_DDL.WRAP is not a legal PL/SQL unit

Cause: The input supplied to DBMS_DDL.WRAP or DBMS_DDL.CREATE_WRAPPED did not specify a legal PL/SQL package specification, package body, type specification, type body, function or procedure. This error can occur if you used incorrect syntax in the CREATE OR REPLACE statement or specified a unit that cannot be wrapped (e.g., a trigger or anonymous block).

Action: Provide a legal PL/SQL unit as input.

ORA-24231: database access descriptor (DAD) *string* not found

Cause: The specified Database Access Descriptor (DAD) did not exist.

Action: Make sure the name of the Database Access Descriptor (DAD) is correct and the DAD exists.

ORA-24232: unknown Embedded PL/SQL Gateway attribute *string*

Cause: The specified Embedded PL/SQL Gateway attribute was not known.

Action: Make sure the name of the Embedded PL/SQL Gateway attribute is correct.

ORA-24233: argument passed to DBMS_UTILITY.VALIDATE is not legal

Cause: One or more input arguments to the DBMS_UTILITY.VALIDATE routine was not legal. This error occurred because the object name or owner or namespace arguments (if specified) were NULL or illegal.

Action: Identify and correct the illegal argument.

ORA-24234: unable to get source of *string* "*string*"."*string*", insufficient privileges or does not exist

Cause: The specified PL/SQL object in a DBMS_PREPROCESSOR subprogram did not exist or you did not have the privileges necessary to view its source.

Action: Make sure the specified object exists and you have the privileges necessary to view its source.

ORA-24235: bad value for object type: *string*

Cause: The specified object type was not appropriate.

Action: Make sure the specified object type is one of the following: package, package body, procedure, function, trigger, type, and type body.

ORA-24236: source text is empty

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was empty.

Action: Pass a non-empty input source text as the input.

ORA-24237: object id argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_object_id argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL, there was no object with the specified object id, or the user calling the routine did not have sufficient privileges to invalidate the object.

Action: Correct the illegal argument.

ORA-24238: object settings argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_plsql_object_settings argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL or malformed.

Action: Correct the illegal argument.

ORA-24239: object could not be invalidated

Cause: A call to the DBMS_UTILITY.INVALIDATE routine failed. This error occurred because the object type of the object specified by the p_object_id argument is not one of the types that can be handled by this routine. Alternately, the object was an object type specification with table dependents, or the object was the specification of the STANDARD, DBMS_STANDARD, DBMS_UTILITY package, or the body of the DBMS_UTILITY package.

Action: Call DBMS_UTILITY.INVALIDATE only on supported object types.

ORA-24240: invalid database access descriptor (DAD) name

Cause: The specified Database Access Descriptor (DAD) name was invalid.

Action: Make sure the name of the Database Access Descriptor (DAD) is valid and its length does not exceed its limit.

ORA-24241: source text is in wrapped format

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was in wrapped format.

Action: Pass a nonwrapped source text as the input.

ORA-24242: anonymous access through a dynamically authenticated Database Access Descriptor (DAD) prohibited

Cause: An attempt to allow anonymous access through a dynamically authenticated Database Access Descriptor (DAD) was prohibited.

Action: Make sure the Database Access Descriptor (DAD) is not dynamically authenticated before allowing anonymous access through it.

ORA-24243: access control entry (ACE) already exists

Cause: An access control entry (ACE) for the principal with the same grant or deny attribute in the IS_GRANT argument already existed.

Action: Add the privilege to the existing access control entry (ACE) instead.

ORA-24244: invalid host or port for access control list (ACL) assignment

Cause: The host or port to which the access control list (ACL) was assigned was invalid.

Action: Ensure the host and port to which you are assigning the access control list (ACL) are valid.

ORA-24245: invalid network privilege

Cause: The network privilege being added to the access control list (ACL) was invalid.

Action: Ensure the network privilege that you are adding to the access control list (ACL) is valid.

ORA-24246: empty access control list (ACL) not allowed

Cause: An attempt was made to store an empty access control list (ACL).

Action: Ensure that the access control list (ACL) has at least one

ORA-24247: network access denied by access control list (ACL)

Cause: No access control list (ACL) has been assigned to the target host or the privilege necessary to access the target host has not been granted to the user in the access control list.

Action: Ensure that an access control list (ACL) has been assigned to the target host and the privilege necessary to access the target host has been granted to the user.

ORA-24248: XML DB extensible security not installed

Cause: XML DB extensible security necessary for this operation has not been installed.

Action: Ensure that XML DB has been installed.

ORA-24265: Insufficient privileges for SQL profile operation

Cause: A DDL operation was attempted on a SQL profile by a session without the proper privileges.

Action: Grant the user the appropriate privilege.

ORA-24270: a row already exists in the *string* table for these parameters

Cause: A call was made to create a new row in the specified table. A row already exists in the table with the specified values.

Action: Delete the existing row using the appropriate API or check the parameters used to create the row.

ORA-24271: translation type must be either T, S or M

Cause: The translation type parameter is not a T, S or an M. A value other than T, S or M was specified.

Action: Correct the translation type and reexecute the API call.

ORA-24272: initialization value must be either F or T

Cause: The initialization value must be either F or T. A value other than F or T was specified.

Action: Correct the initialization value and reexecute the API call.

ORA-24273: translation text is required if translation type is T or S

Cause: If a translation type of T or S is specified, translation text must be supplied.

Action: Provide translation text and reexecute the API call.

ORA-24274: no row exists in the *string* table for these parameters

Cause: A call was made to update a row that does not exist or a foreign key value supplied to create a table does not exist.

Action: Create the row using the appropriate API or check the parameters used to create the new row to ensure that all specified values exist.

ORA-24275: function "*string*" parameter "*string*" missing or invalid

Cause: The function <pkgname.funcname> was called with a parameter <parmname> that was null, 0 length, or had an invalid value.

Action: Correct the parameter to supply values that comply with its datatype and limits as specified in the documentation.

ORA-24276: function "*string*" output "*string*" maximum value exceeded

Cause: The function <pkgname.funcname> computed a value for the output <parmname> that exceeded the maximum allowed. This can occur when multiple input parameters, each valid separately, combine to specify an invalid result. For example, when a length parameter multiplied by a copies parameter yields a total length exceeding the maximum for the output datatype.

Action: Correct the input values to produce a result that will comply with the limits as specified in the documentation.

ORA-24277: invalid database link *string*

Cause: The database link did not exist.

Action: Make sure the database link name is correct.

ORA-24278: remote table *string* not found

Cause: The table did not exist in the remote database.

Action: Make sure the remote table name is correct.

ORA-24279: view *string* is not a parallel access view

Cause: The view was not created by CREATE_OR_REPLACE_VIEW API.

Action: Provide the correct view name that was created by CREATE_OR_REPLACE_VIEW API.

16

ORA-24280 to ORA-28674

ORA-24280: invalid input value for parameter *string*

   Cause: The parameter has been provided a negative, out of range, or NULL input value.

   Action: Correct the input value such that it is valid, and is within the range as specified in the documentation.

ORA-24281: invalid access past the maximum size of LOB parameter *string*

   Cause: The value of positional or size parameters exceeds the maximum allowed LOB size of 4 Gigabytes.

   Action: Correct the input values for amount and offset such that their sum is less than or equal to 4 Gigabytes. If error occurs in a read or write loop, check the looping conditions and/or offset increments.

ORA-24292: no more tables permitted in this sorted hash cluster

   Cause: A sorted hash cluster only supports a maximum of 2 tables

   Action: None

ORA-24295: max key length (*string***) for sorted hash cluster exceeded**

   Cause: Sorted hash clusters have a maximum key size

   Action: None

ORA-24300: bad value for mode

   Cause: An undefined mode value was specified.

   Action: Check that the correct mode is selected and that an allowed value for that mode is specified.

ORA-24301: null host specified in thread-safe logon

   Cause: An HDA was not specified in the logon call while running in a thread safe environment.

   Action: Make sure that HDA is not NULL when calling the logon routine.

ORA-24302: host connection in use by another thread

   Cause: An attempt was made to use the host connection while it was in use by another thread.

   Action: Wait for another thread to finish before using this connection.

ORA-24303: call not supported in non-deferred linkage

   Cause: One of the calls that is supported in deferred mode linkage exclusively was invoked when the client was linked non-deferred.

Action: Use this call in deferred mode of linkage.

ORA-24304: datatype not allowed for this call

Cause: Data of this datatype cannot be sent or fetched in pieces.

Action: Use other bind or define calls for this datatype.

ORA-24305: bad bind or define context

Cause: The call was executed on a cursor for which this is invalid.

Action: Verify that this call is valid for this cursor. For example, Get piece information and set piece information are valid on a cursor if appropriate binds and defines have been done on this cursor.

ORA-24306: bad buffer for piece

Cause: A zero length buffer or a null buffer pointer was provided.

Action: Verify that the buffer pointing to this piece or its length is non-zero. The buffer pointer for the next piece or its length can be zero if it is the last piece to be inserted and there are no more data for the column.

ORA-24307: invalid length for piece

Cause: The length of the piece exceeded the maximum possible size.

Action: Verify that the length of this piece and the cumulative length of all the previous pieces is not more than the desired value supplied by the application.

ORA-24308: illegal define position

Cause: Call to modify attributes was done for a non-existent position

Action: Verify that a define has been done for this position

ORA-24309: already connected to a server

Cause: This server handle is already attached to a server.

Action: Disconnect from the server and then retry the call to establish a connection.

ORA-24310: length specified for null connect string

Cause: The connect string is null, but a length was specified for it.

Action: Set length to zero if connect string is null.

ORA-24311: memory initialization failed

Cause: Cannot initialize user memory.

Action: Contact customer support.

ORA-24312: illegal parameters specified for allocating user memory

Cause: An illegal size or null pointer was specified for user memory.

Action: Specify a legal size and a valid pointer for user memory.

ORA-24313: user already authenticated

Cause: A user has already been authenticated on this service handle.

Action: Terminate the service context before using it for another user.

ORA-24314: service handle not initialized

Cause: The server context does not done exist.

Action: Establish the server context in the service context.

ORA-24315: illegal attribute type

    Cause: An illegal attribute type was specified for the handle.

    Action: Consult user manual to specify an attribute valid for this handle.

ORA-24316: illegal handle type

    Cause: An illegal handle type was specified.

    Action: Consult user manual to specify a valid handle type.

ORA-24317: define handle used in a different position

    Cause: A define was done with an existing handle on a different position.

    Action: Specify the same position as before on a re-define.

ORA-24318: call not allowed for scalar data types

    Cause: This call is valid only for object types.

    Action: Verify that the data-type for this variable is an object type

ORA-24319: unable to allocate memory

    Cause: Process was unable to allocate memory to store diagnostics.

    Action: Terminate other processes in order to reclaim needed memory.

ORA-24320: unable to initialize a mutex

    Cause: An attempt to initialize a mutex failed.

    Action: Contact customer support.

ORA-24321: inconsistent parameters passed

    Cause: One of the three memory function pointers is null or non-null.

    Action: Verify that either all the memory functions are null or non-null.

ORA-24322: unable to delete an initialized mutex

    Cause: An attempt to delete an initialized mutex failed.

    Action: Contact customer support.

ORA-24323: value not allowed

    Cause: A null value or a bogus value was passed in for a mandatory parameter.

    Action: Verify that all mandatory parameters are properly initialized.

ORA-24324: service handle not initialized

    Cause: An attempt was made to use an improper service context handle.

    Action: Verify that the service context handle has all the parameters initialized prior to this call.

ORA-24325: this OCI operation is not currently allowed

    Cause: An attempt was made to use a context handle outside its scope.

    Action: Verify that the context handle is set to a service context handle that has been converted to a logon data area for other OCI calls. The logon data area must be converted back to a service context before it can be used.

ORA-24326: handle passed in is already initialized

    Cause: An attempt was made to pass an initialized handle.

    Action: Verify that the parameter passed in to retrieve a handle does not already point to a handle.

ORA-24327: need explicit attach before authenticating a user

Cause: A server context must be initialized before creating a session.

Action: Create and initialize a server handle.

ORA-24328: illegal attribute value

Cause: The attribute value passed in is illegal.

Action: Consult the users manual and specify a legal attribute value for the handle.

ORA-24329: invalid character set identifier

Cause: The character set identifier specifed is invalid

Action: Specify a valid character set identifier in the OCI call.

ORA-24330: internal OCI error

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24331: user buffer too small

Cause: The user buffer to contain the output data is too small.

Action: Specify a bigger buffer.

ORA-24332: invalid object type

Cause: An invalid object type is requested for the describe call.

Action: Specify a valid object type to the describe call.

ORA-24333: zero iteration count

Cause: An iteration count of zero was specified for the statement

Action: Specify the number of times this statement must be executed

ORA-24334: no descriptor for this position

Cause: The application is trying to get a descriptor from a handle for an illegal position.

Action: Check the position number.

ORA-24335: cannot support more than 1000 columns

Cause: The number of columns exceeds the maximum number supported.

Action: None

ORA-24336: invalid result set descriptor

Cause: The result set descriptor should have valid data fetched into it before it can be converted to a statement handle

Action: Fetch valid data into the descriptor before attempting to convert it into a statement handle

ORA-24337: statement handle not prepared

Cause: A statement cannot be executed before making preparing a request.

Action: Prepare a statement before attempting to execute it.

ORA-24338: statement handle not executed

Cause: A fetch or describe was attempted before executing a statement handle.

Action: Execute a statement and then fetch or describe the data.

ORA-24339: cannot set server group name after connecting to server

Cause: An attempt was made to set the server group in a server handle after connecting to the server. However, once the connection is established to a server, the server group name cannot be set anymore.

Action: Attach to the server after setting the server group name in the server handle.

ORA-24340: cannot support more than 255 columns

Cause: The number of columns exceeds maximum supported by the server.

Action: Limit your operation to 255 columns.

ORA-24341: bad mode specified

Cause: OCI_ENV_NO_MUTEX mode was specified for a non-threaded client.

Action: OCI_ENV_NO_MUTEX may be specified when OCI_THREADED had been specified at process initialization.

ORA-24342: unable to destroy a mutex

Cause: An attempt to destroy a mutex failed.

Action: None

ORA-24343: user defined callback error

Cause: The only valid return value for a user defined callback function is OCI_CONTINUE or OCI_ROWCBK_DONE. Any other value will cause this error.

Action: Please insure that OCI_CONTINUE or OCI_ROWCBK_DONE is returned from the user defined callback function.

ORA-24344: success with compilation error

Cause: A sql/plsql compilation error occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code

ORA-24345: A Truncation or null fetch error occurred

Cause: A truncation or a null fetch error"

Action: Please ensure that the buffer size is long enough to store the returned data.

ORA-24346: cannot execute without binding variables

Cause: None of the bind variables in the SQL statement are bound.

Action: Please bind all the variables before the execute is done.

ORA-24347: Warning of a NULL column in an aggregate function

Cause: A null column was processed by an aggregate function

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24348: Update or Delete without Where

Cause: An update or delete was executed without where clause

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24350: OCI call not allowed

Cause: OCI used is not permitted from external procedures.

Action: Refer to user manual for usage restrictions.

ORA-24351: invalid date passed into OCI call

Cause: A bad date was passed into one of the OCI calls.

Action: Check your date bind values and correct them.

ORA-24352: invalid COBOL display type passed into OCI call

Cause: A bad COBOL display type was passed into one of the OCI calls.

Action: Check your COBOL display type bind values and correct them.

ORA-24353: user buffer too small to accommodate COBOL display type

Cause: User supplied buffer for a COBOL display type was too small to accommodate fetched number.

Action: Increase the allocation for COBOL display type buffer.

ORA-24354: number fetched too large to fit in COBOL display type buffer.

Cause: The number fetched was beyond the range that can be displayed.

Action: Please check the number in the database.

ORA-24355: attempt to store a negative number in an Unsigned Display type.

Cause: An attempt was made to convert a negative number into an unsigned display type.

Action: Please check the number in the database or change the defined datatype.

ORA-24356: internal error while converting from to COBOL display type.

Cause: An internal error was encountered during conversion to COBOL display type.

Action: Contact customer support.

ORA-24357: internal error while converting from to OCIDate.

Cause: An internal error was encountered during conversion to OCIDate type.

Action: Contact customer support.

ORA-24358: OCIBindObject not invoked for a Object type or Reference

Cause: OCIBindObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIBindObject call for all Object Types and References.

ORA-24359: OCIDefineObject not invoked for a Object type or Reference

Cause: OCIDefineObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIDefineObject call for all Object Types and References.

ORA-24360: Type Descriptor Object not specified for Object Bind/Define

Cause: Type Descriptor Object is a mandatory parameter for Object Types Binds and Defines.

Action: Please invoke the OCIBindObject() or OCIDefineObject() call with a valid Type Descriptor Object.

ORA-24361: basic bind call not invoked before invoking advanced bind call

Cause: One of the basic bind calls was not invoked on this bind handle before performing an advanced bind call.

Action: Please invoke the advanced bind call on this bind handle only after performing a basic bind call.

ORA-24362: improper use of the character count flag

Cause: When the character count flag is set, then the maximum size of the buffer in the server should be specified as a non-zero value.

Action: Please use a non-zero value for the mamimum size of the buffer in the server.

ORA-24363: measurements in characters illegal here

Cause: Measurements in characters instead of bytes are illegal if either the server"s or client"s character set is varying width.

Action: If either the client"s or server"s character set is varying width then do not use the OCI_ATTR_CHAR_COUNT attribute for the bind handle. Use OCI_ATTR_MAXDATA_SIZE instead.

ORA-24364: internal error while padding blanks

Cause: An internal error has occurred while attempting to blank pad string data. This error should not occur normally.

Action: Contact customer support.

ORA-24365: error in character conversion

Cause: This usually occurs during conversion of a multibyte character data when the source data is abnormally terminated in the middle of a multibyte character.

Action: Make sure that all multibyte character data is properly terminated.

ORA-24366: migratable user handle is set in service handle

Cause: This occurs during user authentication, a migratable user handle has been set in the service handle.

Action: Service handle must not be set with migratable user handle when it is used to authenticate another user.

ORA-24367: user handle has not been set in service handle

Cause: This occurs during authentication of a migratable user. the service handle has not been set with non-migratable user handle.

Action: Service handle must be set with non-migratable user handle when it is used to authenticate a migratable user.

ORA-24368: OCI mutex counter non-zero when freeing a handle

Cause: This is an internal OCI error.

Action: Contact customer support.

ORA-24369: required callbacks not registered for one or more bind handles

Cause: No callbacks have been registered for one or more of the bind handles which are part of the RETURNING clause.

Action: The bind handles which are to receive data in a DML statememt with a RETURNING clause must have their mode set as DATA_AT_EXEC and callback functions must be registered for these bind handles using OCIBindDynamic.

ORA-24370: illegal piecewise operation attempted

Cause: Data of a certain datatype that does not support piecewise operation is being sent or fetched in pieces.

Action: Always set the piece value to OCI_ONE_PIECE for datatypes that does not support piecewise operation.

ORA-24371: data would not fit in current prefetch buffer

    Cause: An internal OCI error has occurred.

    Action: Please contact Oracle customer support.

ORA-24372: invalid object for describe

    Cause: The object to be described is not valid. It either has compilation or authorization errors.

    Action: The object to be described must be valid.

ORA-24373: invalid length specified for statement

    Cause: The length specified for the statement is either 0 or too large.

    Action: Specify a valid length for the statement.

ORA-24374: define not done before fetch or execute and fetch

    Cause: The application did not define output variables for data being fetched before issuing a fetch call or invoking a fetch by specifying a non-zero row count in an execute call.

    Action: Issue OCI define calls for the columns to be fetched.

ORA-24375: Cannot use V6 syntax when talking to a V8 server

    Cause: V6 syntax is no longer supported in V8 server.

    Action: Change syntax to V7 syntax or higher.

ORA-24376: cannot register/get user callback for non-environment handle

    Cause: A user callback registration or get was attempted on a handle which is not an environment handle.

    Action: Pass the environment handle to register/get user callback.

ORA-24377: invalid OCI function code

    Cause: An invalid function code was used to register or get user callback"

    Action: Use a valid OCI function code.

ORA-24378: user callbacks not allowed for this call

    Cause: An attempt was made to register a user callback for an OCI call for which it not allowed to register user callbacks.

    Action: Do not register user callback for this OCI call.

ORA-24379: invalid user callback type

    Cause: An invalid type of user callback was specified.

    Action: Specify a valid user callback type.

ORA-24380: invalid mode specification

    Cause: The mode parameter in an OCIU* call is invalid

    Action: Use only valid mode parameter

ORA-24381: error(s) in array DML

    Cause: One or more rows failed in the DML.

    Action: Refer to the error stack in the error handle.

ORA-24382: statement handled already executed or described

    Cause: The Statement handle was executed or described successfuly before.

Action: Perform a OCIStmtPrepare again before OCI_PARSE_ONLY.

ORA-24383: Overflow segment of an IOT cannot be described

Cause: The name specified in the OCIDescribeAny call referred to an IOT overflow segment.

Action: Use OCIDescribeAny to describe only documented objects.

ORA-24384: Application context size is not initialized

Cause: The size of the application context must be initialized before populating each context element.

Action: Issue OCIAttrSet with OCI_ATTR_CTX_SIZE to initialize context size

ORA-24385: Application context size or index is not valid

Cause: The size or index of the application context must be non-zero and non-negative.

Action: Use an appropriate value for the size.

ORA-24386: statement/server handle is in use when being freed

Cause: This is an internal OCI error.

Action: The user should reset in-use flag in statement handle before freeing the handle.

ORA-24387: Invalid attach driver

Cause: Trying to attach using the wrong driver

Action: Relink the application in the right mode

ORA-24388: Unsupported functionality in fast path mode

Cause: Feature not supported in fast path mode

Action: Avoid using the functionality in this mode

ORA-24389: Invalid scrollable fetch parameters

Cause: All the requested rows in this fetch could not be received.

Action: Check the fetch orientation, scroll offset, OCI_ATTR_CURRENT_POSITION and number of rows in OCIStmtFetch2 call. If required, change some of above parameters and fetch again.

ORA-24390: Unsupported scrollable cursor operation

Cause: The scrollable cursor execute or fetch has failed.

Action: Check the documentation for supported types, and other restrictions while using scrollable cursors.

ORA-24391: invalid fetch operation

Cause: Scrollable cursor operation requested with non-scrollable cursor.

Action: Check if the statement was executed in the scrollable mode. Else the only acceptable orientation is OCI_FETCH_NEXT that ignores the scroll offset parameter.

ORA-24392: no connection pool to associate server handle

Cause: OCIServerAttach called in OCI_POOL mode but no connection pool found to associate the server handle.

Action: 1) Verify that OCIConnectionPoolCreate is called before calling OCIServerAttach. 2) Verify that the database link specified in OCIServerAttach matches with that of the connection pool database link.

ORA-24393: invalid mode for creating connection pool

Cause: Mode specified in OCIConnectionPoolCreate is invalid.

Action: Use a valid mode.

ORA-24394: invalid mode for destroying connection pool

Cause: Mode specified in OCIConnectionPoolDestroy is invalid.

Action: Use a valid mode.

ORA-24395: cannot reinitialize non-existent pool

Cause: OCIConnectionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a connection pool prior to reinitializing it.

ORA-24396: invalid attribute set in server handle

Cause: Attribute OCI_ATTR_NONBLOCKING_MODE has been set on the server handle and attached in OCI_POOL mode. Connection pooling does not support non blocking mode.

Action: Do not set the OCI_ATTR_NONBLOCKING_MODE attribute on the server handle while attaching in OCI_POOL mode.

ORA-24397: error occured while trying to free connections

Cause: An internal error occured while trying to free connections.

Action: Contact customer support.

ORA-24398: connection pool already exists

Cause: A connection pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new connection pool. 2) If you wish to modify the pool parameters, call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode.

ORA-24399: invalid number of connections specified

Cause: An invalid combination of minimum, maximum and increment number of connections was specified in the OCIConnectionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24400: error occured while creating connections in the pool

Cause: The database link specified in OCIConnectionPoolCreate might be an invalid one.

Action: Specify a valid database link.

ORA-24401: cannot open further connections

Cause: Sufficient number of connections are not present in the pool to execute the call. No new connections can be opened as the connMax parameter supplied in OCIConnectionPoolCreate has been reached.

Action: Call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode and increase the value of the connMax parameter.

ORA-24402: error occured while creating connections in the pool

Cause: The username and password specified in OCIConnectionPoolCreate might be invalid.

Action: Specify a valid username and password.

ORA-24403: error occured while trying to destroy the connection pool

Cause: Some connections in the pool were busy when an attempt to destroy the connection pool was made.

Action: Ensure no connections from the pool are being used.

ORA-24404: connection pool does not exist

Cause: An attempt was made to use the connection pool before creating it.

Action: Create the connection pool.

ORA-24405: error occured while trying to create connections in the pool

Cause: An internal error occured while creating connections in the pool.

Action: Contact customer support.

ORA-24406: API mode switch is disallowed when a call is in progress.

Cause: A mode switch from OCI8 to OCI7 was attempted in a callback.

Action: The user should perform the API mode switch either prior to initiating the top call or after the main call is done.

ORA-24407: connection pool already exists

Cause: A connection pool has already been created for the specified pool name.

Action: Specify a different pool name to create a new connection pool.

ORA-24408: could not generate unique server group name

Cause: An internal error occured while generating unique server group name.

Action: Contact customer support.

ORA-24409: client cannot understand the object

Cause: The client cannot process all the new features in the object.

Action: Upgrade the client so that features like inheritance and SQLJ objects can be used.

ORA-24410: scrollable cursor max size exceeded

Cause: Result set size exceeded the max limits.

Action: Check the documentation for allowable maximum result set size for scrollable cursors. Re-execute with a smaller expected result set size or make the cursor non-scrollable.

ORA-24411: Session pool already exists.

Cause: A session pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new session pool. 2) If you wish to modify the pool parameters, call OCISessionPoolCreate in OCI_SPOOL_ REINITIALIZE mode.

ORA-24412: Cannot reinitialize non-existent pool

Cause: OCISessionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a session pool prior to reinitializing it.

ORA-24413: Invalid number of sessions specified

Cause: An invalid combination of minimum, maximum and increment number of sessions was specified in the OCISessionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24414: Only *number* sessions could be started.

Cause: The number of sessions specified by the minSess parameter of OCISessionPoolCreate could not be started, possibly because the value supplied was larger than that supported by the server."

Action: This is a warning. Check the maximum number of sessions allowed on the server.

ORA-24415: Missing or null username.

Cause: Username and password must be specified when pool is created in this mode.

Action: Specify a valid username and password.

ORA-24416: Invalid session Poolname was specified.

Cause: An attempt was made to use a Session Pool that does not exist.

Action: Create a Session Pool before using it.

ORA-24417: Session pool size has exceeded the maximum limit

Cause: The number of sessions has exceeded the maximum size of the Session Pool.

Action: This is a warning. You can tune the session pool with appropriate minimum and maximum parameters.

ORA-24418: Cannot open further sessions.

Cause: Sufficient number of sessions are not present in the pool to execute the call. No new sessions can be opened as the sessMax parameter supplied in OCISessionPoolCreate has been reached.

Action: Call OCISessionPoolCreate in OCI_SPOOL_REINITIALIZE mode and increase the value of the sessMax parameter.

ORA-24419: Proxy sessions are not supported in this mode.

Cause: A proxy session was requested for from a Session Pool which does not support proxy sessions.

Action: Do not specify mode OCI_CRED_PROXY.

ORA-24420: OCISessionRelease must be used to release this session.

Cause: The session was retrieved using OCISessionGet, and an attempt has been made to release it using a call other than OCISessionRelease.

Action: Call OCISessionRelease.

ORA-24421: OCISessionRelease cannot be used to release this session.

Cause: The session was not retrieved using OCISessionGet, and an attempt has been made to release it using OCISessionRelease.

Action: Release the session using an appropriate call.

ORA-24422: error occurred while trying to destroy the Session Pool

Cause: An attempt was made to destroy the session pool while some sessions in the pool were busy.

Action: Ensure that no sessions from the pool are being used OR call OCISessionPoolDestroy with mode set to OCI_SPD_FORCE.

ORA-24423: Cannot set the ROWID attribute - OCI_ATTR_FETCH_ROWID

Cause: An attempt was made to set the implicit ROWID attribute.

Action: Use a SELECT ... FOR UPDATE statement that has not previously been described or executed before setting this ROWID attribute.

ORA-24424: Invalid attempt to define at position 0

Cause: An invalid attempt was made to call OCIDefineByPos for position 0.

Action: Ensure that the implicit ROWID attribute, OCI_ATTR_FETCH_ROWID, is set on the statement handle before doing the execute.

ORA-24425: Invalid mode passed when defining at position 0

Cause: An invalid mode was passed to OCIDefineByPos.

Action: Ensure a valid mode is passed to OCIDefineByPos when defining at position 0.

ORA-24430: Null values for sqltext and key were specified.

Cause: An attempt was made to call OCIStmtPrepare2 and neither sqltext nor key were specified.

Action: Specify valid values for sqltext or key or both.

ORA-24431: Statement does not exist in the cache

Cause: The statement that was requested for does not exist in the statement cache.

Action: Please request for a valid statement.

ORA-24432: The statement that was returned is not tagged.

Cause: A tagged statement was requested for, but an untagged statement has been returned.

Action: This is a warning. Please modify and tag the statement as desired.

ORA-24433: This statement has already been prepared using OCIStmtPrepare2.

Cause: A statement that was earlier prepared using OCIStmtPrepare2 is now being reprepared using OCIStmtPrepare."

Action: Please use a different statement handle.

ORA-24434: OCIStmtRelease called before OCIStmtPrepare2.

Cause: An attempt was made to release a statement without first preparing it using OCIStmtPrepare2.

Action: Call OCIStmtPrepare2 before OCIStmtRelease.

ORA-24435: Invalid Service Context specified.

Cause: The statement was prepared using a service context that is different from the one specified in OCIStmtExecute.

Action: Please specify the same service context that the statement was prepared with.

ORA-24436: Invalid statement Handle.

Cause: OCIHandleFree called on a statement that was prepared using OCIstmtPrepare2.

Action: Release the statement using OCIStmtRelease.

ORA-24437: OCIStmtExecute called before OCIStmtPrepare2.

Cause: An attempt was made to execute a statement without first preparing it using OCIStmtPrepare2.

Action: Call OCIStmtPrepare2 before OCIStmtExecute.

ORA-24438: Invalid Authentication Handle specified.

Cause: The statement was prepared using an authentication handle that is different from the one specified in OCIStmtExecute.

Action: None

ORA-24439: success with PLSQL compilation warning

Cause: A plsql compilation warning occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code.

ORA-24440: OCI Easy Install mode cannot be initialized

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24441: Invalid cookie, resend sql text

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24450: Cannot pre-process OCI statement

Cause: An error occured during statement pre-processing. E.g., SQL statement has invalid usage of N" or Q" literals.

Action: Correct the SQL statement.

ORA-24451: *string*, **Maximum call depth exceeded**

Cause: Your program has too many levels of recursion.

Action: Restructure your program to eliminate some levels of recursion.

ORA-24460: Native Net Internal Error

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24500: invalid UTF16 mode

Cause: UTF16 mode is allowed only at environment handle creation time.

Action: Remove UTF16 mode for functions other than OCIEnvCreate()

ORA-24501: invalid UTF16 string passed in

Cause: Non-UTF16 string is passed in while UTF16 string is expected

Action: Check the parameter which is actually a string

ORA-24502: codepoint length overflows

Cause: Returned buffer has more codepoints than allowed

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24503: codepoint length overflows for piecewise operation

Cause: Accumulated codepoint length exceeds allowed codepoint length

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24504: data length larger than expected

    Cause: Incoming data larger than receiving buffer

    Action: Set OCI_MAXDATA/MAXCHAR_SIZE appropriately or remove the setting

ORA-24505: cannot change character set id on the handle

    Cause: Attempts to change character set id on non-environment handles

    Action: Only try to change character set id on environment handles

ORA-24506: invalid attempt to change character set id on env handle

    Cause: Attempts to change character set id after other handles have been allocated from the env handle

    Action: Change character set id after creating environment handle but before allocating any handles from it.

ORA-24507: invalid combination of character set ids

    Cause: Attempts to set one character set id as zero

    Action: Set both charset and ncharset as zero or non-zero in OCIEnvNlsCreate()

ORA-24508: Buffer is not aligned correctly.

    Cause: Alignment error ocurred in buffer when converting between character sets.

    Action: Align buffer appropriately. For UTF16 buffer, pass a ub2 pointer.

ORA-24550: unhandled signal #*number* received. *string*

    Cause: Serious error: signal received

    Action: Refer to the platform-specific signal code, and see if the application code caused the error. Otherwise, record all error state and notify Oracle Support Services.

ORA-24750: incorrect size of attribute

    Cause: Transaction ID attribute size is incorrect.

    Action: Verify that the size parameter is correct.

ORA-24752: OCI_TRANS_NEW flag must be specified for local transactions

    Cause: Application attempted to start a local transaction without using OCI_TRANS_NEW.

    Action: Use OCI_TRANS_NEW when starting local transactions.

ORA-24753: local transactions cannot be detached

    Cause: An attempt to detach a local transaction was made.

    Action: Local transactions may only be committed or rolled back.

ORA-24754: cannot start new transaction with an active transaction

    Cause: An attempt to start a new transaction was made when there was an active transaction.

    Action: Commit, rollback or detach the existing transaction before starting a new transaction.

ORA-24755: OCI_TRANS_NOMIGRATE, OCI_TRANS_JOIN options are not supported

    Cause: These flags are currently not supported.

Action: None

ORA-24756: transaction does not exist

Cause: An invalid transaction identifier or context was used or the transaction has completed.

Action: Supply a valid identifier if the transaction has not completed and retry the call.

ORA-24757: duplicate transaction identifier

Cause: An attempt was made to start a new transaction with an identifier already in use by an existing transaction.

Action: Verify that the identifier is not in use.

ORA-24758: not attached to the requested transaction

Cause: An attempt was made to detach or complete a transaction that is not the current transaction.

Action: Verify that the transaction context refers to the current transaction.

ORA-24759: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that only one of the following values is specified: OCI_TRANS_ NEW, OCI_TRANS_JOIN, OCI_TRANS_RESUME, or OCI_TRANS_PROMOTE.

ORA-24760: invalid isolation level flags

Cause: An invalid isolation level flag was passed.

Action: Verify that only one of following values - OCI_TRANS_READONLY, OCI_TRANS_READWRITE, OCI_TRANS_SERIALIZABLE is used.

ORA-24762: server failed due to unspecified error

Cause: An internal error has occured in the server commit protocol.

Action: Contact customer support.

ORA-24763: transaction operation cannot be completed now

Cause: The commit or rollback cannot be performed now because the session cannot switch to the specified transaction.

Action: Retry the operation later.

ORA-24767: transaction branch prepare returns read-only

Cause: The transaction is read-only, or this is the outcome of an optimization for two-phase commit protocol.

Action: None. Informational only.

ORA-24769: cannot forget an active transaction

Cause: Transaction identifier refers to an active transaction.

Action: Verify that the identifier of an active transaction was not passed as an argument.

ORA-24770: cannot forget a prepared transaction

Cause: Transaction identifier refers to a prepared transaction.

Action: Verify that the identifier of a prepared transaction was not passed as an argument.

ORA-24771: cannot detach, prepare or forget a local transaction

    Cause: Service handle contains a local transaction context.

    Action: Verify that the transaction context does not refer to a local transaction.

ORA-24772: Cannot mix tightly-coupled and loosely-coupled branches

    Cause: Application attempted to start a transaction with a global transaction identifier and a wrong option.

    Action: Verify that all branches of a global transaction are started with either OCI_TRANS_TIGHT or OCI_TRANS_LOOSE option. If the application is correct and uses distributed updates, contact customer support.

ORA-24773: invalid transaction type flags

    Cause: OCI_TRANS_TIGHT or OCI_TRANS_LOOSE mode was not specified.

    Action: Verify that the right parameters are being used.

ORA-24774: cannot switch to specified transaction

    Cause: The transaction specified in the call refers to a transaction created by a different user.

    Action: Create transactions with the same authentication so that they can be switched.

ORA-24775: cannot prepare or commit transaction with non-zero lock value

    Cause: An attempt was made to detach the transaction with a non-zero lock value.

    Action: Detach the transaction with lock value set to zero and then try to prepare or commit the transaction.

ORA-24776: cannot start a new transaction

    Cause: An attempt was made to start a new transaction when session was already attached to an existing transaction.

    Action: End the current transaction before creating a new transaction.

ORA-24777: use of non-migratable database link not allowed

    Cause: The transaction, which needs to be migratable between sessions, tried to access a remote database from a non-multi threaded server process.

    Action: Perform the work in the local database or open a connection to the remote database from the client. If multi threaded server option is installed, connect to the Oracle instance through the dispatcher.

ORA-24778: cannot open connections

    Cause: The migratable transaction tried to access a remote database when the session itself had opened connections to remote database(s).

    Action: Close the connection(s) in the session and then try to access the remote database from the migratable transaction. If the error still occurs, contact Oracle customer support.

ORA-24779: detach not allowed with open remote cursor

    Cause: The migratable transaction tried to detach from the current session while having an open remote cursor.

    Action: Close any open remote cursor prior to detach.

ORA-24780: cannot recover a transaction while in an existing transaction

Cause: An attempt was made to commit or roll back a transaction while in a different transaction, and the transaction for which the action is requested is in a recovery state (this happens if it is idle too long).

Action: Detach from the current transaction and retry the operation.

ORA-24781: branches don"t belong to the same global transaction
Cause: The list of xids passed into kpotxmp() don"t have the same gtrid
Action: None

ORA-24782: Cannot detach from a non-migratable transaction
Cause: An attempt was made to detach from a non-migrateable transaction.
Action: Either commit or rollback the transaction.

ORA-24783: Cannot switch non-migratable transactions
Cause: An attempt was made to prepare/commit a txn different from current.
Action: None

ORA-24784: Transaction exists
Cause: An attempt was made to start a transaction, while attached to a non-migrateable transaction
Action: None

ORA-24785: Cannot resume a non-migratable transaction
Cause: An attempt was made to resume a non-migrateable transaction.
Action: None

ORA-24786: separated transaction has been completed
Cause: The current transaction has been completed by another process.
Action: Start a new transaction

ORA-24787: remote cursors must be closed before a call completes
Cause: The previous operation did not close all the remote cursors it opened. Since separated transactions are enabled, this is not allowed.
Action: Close all remote cursors in each call, or start a regular (non-separated) transaction.

ORA-24788: cannot switch to specified transaction (server type)
Cause: The transaction specified was created by a shared server and the requestor is a dedicated server, or the transaction was created by a dedicated server and the requestor is a shared server.
Action: All parts of this application should connect as dedicated or as shared.

ORA-24789: start not allowed in recursive call
Cause: Oracle RM will not start/resume a branch in a recursive call
Action: Reconsider your application stack design

ORA-24790: cannot mix OCI_TRANS_RESUME and transaction isolation flags
Cause: An attempt was made to change the isolation level of an existing transaction.
Action: No action required

ORA-24791: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that OCI_TRANS_LOOSE was not passed along with OCI_TRANS_JOIN, OCI_TRANS_RESUME. Also, verify that other flags (such as OCI_TRANS_SEPARABLE) passed by the client are supported by the version of the Oracle server.

ORA-24792: cannot mix services in a single global transaction

Cause: Oracle RM will not serve global (distributed) transaction requests if branches are created using different services

Action: Configure clients such that those participating in the same distributed transaction use the same service name.

ORA-24794: no active DTP service found

Cause: Oracle RM will not serve global (distributed) transaction requests until DTP services are configured in RAC. It is possible that a service was stopped while transactions were in-flight.

Action: Provision/Start DTP services first.

ORA-24795: Illegal *string* attempt made

Cause: An illegal attempt was made to commit/rollback current transaction

Action: Use appropriate commit/rollback mechanism

ORA-24796: operation completed; resume of original transaction rolled back

Cause: The commit, rollback, or prepare completed successfully, but the current transaction for this thread was rolled back.

Action: If desired, retry the current transaction. If the operation was prepare, then end transaction appropriately with a commit or rollback operation.

ORA-24797: cannot promote the current transaction to a distributed transaction

Cause: An illegal attempt was made to promote the current transaction.

Action: Verify that OCI_ATTR_XID, OCI_ATTR_INTERNAL_NAME, and OCI_ATTR_EXTERNAL_NAME attributes have been set properly, and verify that the current transaction has neither performed IDL or PDML operations, nor already been a distributed transaction. Also, verify that the local transaction is in the same isolation level if the isolation flag value is set.

ORA-24798: cannot resume the distributed transaction branch on another instance

Cause: An attempt was made to resume a distributed transaction branch that is physically located on another RAC instance.

Action: Get a connection to the instance where the transaction branch is located.

ORA-24801: illegal parameter value in OCI lob function

Cause: One of the parameter values in the OCI lob function is illegal.

Action: Check every parameter in the OCI Lob function call to make sure they are correct. Offsets should be greater than or equal to one.

ORA-24802: user defined lob read callback error

Cause: The only valid return value for a user defined lob read callback function is OCI_CONTINUE. Any other value will cause this error.

Action: Verify that OCI_CONTINUE is returned from the user defined lob read callback function.

ORA-24803: illegal parameter value in lob read function

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24804: Lob read/write functions called while another OCI LOB read/write streaming is in progress

Cause: Internal error.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() abort the current LOB streaming call.

ORA-24805: LOB type mismatch

Cause: When copying or appending LOB locators, both source and desctination LOB locators should be of the same type.

Action: Pass the same type of LOB locators for copying or appending.

ORA-24806: LOB form mismatch

Cause: When reading from or writing into LOBs, the character set form of the user buffer should be same as that of the LOB.

Action: Make sure that the buffer you are using to read or write has the same form as that of the LOB.

ORA-24807: LOB form mismatch

Cause: When copying or appending LOBs, both source and desctination LOB locators should have the same character set form.

Action: Pass locators of the same character set form for copying or appending LOBs.

ORA-24808: streaming of lob data is not allowed when using lob buffering

Cause: Attempted to stream lob data via the polling mode or a callback when lob buffering was enabled for the input lob locator.

Action: Lob buffering is useful when reading/writing small amounts of lob data so streaming should not be necessary. Rewrite the OCILobRead/OCILobWrite call so that it does not use streaming. If streaming of data is required, lob buffering should not be used. In this case, flush buffers associated with the input lob locator as necessary, disable buffering on the input lob locator and reissue the OCILobRead/OCILobWrite call.

ORA-24809: amount specified will not fit in the lob buffers

Cause: LOB buffering is enabled for the input lob locator so buffering will be used. However, the amount of lob data to read or write is larger than what the lob buffers can hold.

Action: Either disable buffering on the input lob locator and reissue the command or pass a smaller amount.

ORA-24810: attempting to write more data than indicated

Cause: While writing into a LOB, more data was supplied than indicated.

Action: If data is written in pieces, then make sure that you do not provide more data in the pieces (cumulatively), than you indicated.

ORA-24811: less data provided for writing than indicated

Cause: While writing into a LOB, less data was provided than indicated.

Action: If writing data in single pieces, then make sure that the buffer length specified is big enough to accommodate tha data being provided. If data is written in pieces, then make sure that all the data has been provided before specifying OCI_LAST_PIECE.

ORA-24812: character set conversion to or from UCS2 failed

Cause: If the database character set is varying-width, the CLOB/NCLOB value is implicitly converted to or from UCS2. This implicit conversion failed.

Action: Contact Oracle Worldwide Support.

ORA-24813: cannot send or receive an unsupported LOB

Cause: An attempt was made to send a LOB across the network, but either the server does not support the LOB sent by the client, or the client does not support the LOB sent by the server. This error usually occurs when the client and server are running different versions of Oracle.

Action: Use a version of the Oracle that supports the LOB on both the client and the server.

ORA-24814: operation not allowed for temporary LOBs

Cause: Temporary LOB locators are not allowed in the operation. For example: OCILobAssign only takes persistent LOB locators as parameters, not temporary LOBs.

Action: Use OCILobLocatorAssign for temporary LOBs instead. Note that OCILobLocatorAssign can also be used for persistent LOBs, in which case it will behave the same as OCILobAssign.

ORA-24815: Invalid character set form

Cause: An invalid character set form was passed into an OCI LOB function. For example, the only valid cs form for OCILobCreateTemporary() is OCI_DEFAULT(0), SQLCS_IMPLICIT(1) or SQLCS_NCHAR(2).

Action: Specify a valid character set form.

ORA-24816: Expanded non LONG bind data supplied after actual LONG or LOB column

Cause: A Bind value of length potentially > 4000 bytes follows binding for LOB or LONG.

Action: Re-order the binds so that the LONG bind or LOB binds are all at the end of the bind list.

ORA-24817: Unable to allocate the given chunk for current lob operation

Cause: The given size is increased to accomodate the number of bytes from server due to varying width db char/nchar set.

Action: Use smaller chunk sizes when you have character set conversion between client/server or perform piece-wise read or write.

ORA-24850: failed to startup shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in starting up the shared subsystem.

Action: Contact Oracle Customer support.

ORA-24851: failed to connect to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the process to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24852: protocol error during statement execution

Cause: An internal protocol error occurred while receiving describe data from the server during execution of a statement.

Action: Contact Oracle Customer Support.

ORA-24853: failed to connect thread to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the thread to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24854: invalid pieceinfo provided

Cause: While making the first call to write LOB data, an invalid pieceinfo value provided.

Action: Correct the call to use OCI_ONE_PIECE or OCI_FIRST_PIECE. If using OCCI, make sure to call writeBuffer before calling writeLastBuffer.

ORA-24900: invalid or unsupported mode parameter passed in call

Cause: The mode parameter passed into the OCI Client Notification call is incorrect.

Action: Please correct the mode parameter passed into OCI.

ORA-24901: handles belonging to different environments passed into an OCI call

Cause: All handles passed into an OCI call should belong to the same environment. In the call that returned this error, handles belonging to different environments were passed in.

Action: Please ensure that the handle parameters in the call to come from the same OCI Environment.

ORA-24902: invalid subscription name or name-length in subscription handle

Cause: The subscription handle passed into the OCI call does not have a proper name or name-length attribute.

Action: Please set the name and name-length attributes using the OCIAttrSet() call.

ORA-24903: invalid namespace attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper namespace attribute.

Action: Please set the namespace attribute using the OCIAttrSet() call.

ORA-24904: invalid callback attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper callback attribute.

Action: Please set the callback attribute using the OCIAttrSet() call.

ORA-24905: invalid recipient protocol attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient protocol attribute.

Action: Please set the recipient protocol attribute using the OCIAttrSet() call.

ORA-24906: invalid recipient attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient attribute.

Action: Please set the recipient attribute using the OCIAttrSet() call.

ORA-24907: invalid pair of callback and recipient protocol attributes

Cause: The subscription handle passed into the OCI call can"t have both the callback defined and a recipient protocol other than OCI_SUBSCR_PROTO_OCI at the same time.

Action: Please set the appropriate callback and recipient protocol attributes using the OCIAttrSet() call.

ORA-24908: invalid recipient presentation attribute

Cause: The subscription handle passed into the OCI call does not have a valid recipient presentation attribute.

Action: Set the recipient presentation attribute using the OCIAttrSet() call

ORA-24909: call in progress. Current operation cancelled

Cause: The OCI call was invoked when another call on the connection was in progress.

Action: Check if the OCI call is supported when the call is in progress under special conditions; for example, if it is being used by a signal handler. NLS_DO_NOT_TRANSLATE [24910,24910]

ORA-24911: Cannot start listener thread at specified port

Cause: Thread already running at a different port.

Action: Set the correct port in the environment handle or let the system choose the port.

ORA-24912: Listener thread failed. *string*

Cause: Thread listening for event notification exited because of an error. The error encountered is appended to the error message.

Action: The client needs to be restarted.

ORA-24940: invalid combination of *string* namespace, *string* presentation and *string* receive protocol

Cause: An invalid combination of namespace, presentation and receive protocol was specified during notification registration. Currently, only AQ namespace is supported with XML presentation. Non-AQ namespace is not supported for e-mail and HTTP receive protocols.

Action: Please change the register call appropriately.

ORA-24941: invalid combination of notification grouping attributes

Cause: An invalid combination of notification grouping attributes was specified. Currently, only TIME notification grouping class is supported. If notification grouping class is zero, all other notification grouping attributes must be zero.

Action: Refer to documentation and change the attributes appropriately.

ORA-24942: cannot use ntfn grouping attributes on before release 11.0 compatible ntfns

Cause: An attempt was made to use notification grouping on before release 11.0 compatible notifications.

Action: Change the compatibility to 11.0.

ORA-24943: cannot use ntfn grouping with this receive protocol, presentation and/or QoS

Cause: An attempt was made to use notification grouping with e-mail or HTTP receive protocol or XML presentation or payload delivery or reliable QoS. Currently, only OCI and PLSQL receive protocols and default presentation are supported with notification grouping.

Action: Refer to documentation and change the call appropriately.

ORA-24944: cannot use timeout or grouping with ANONYMOUS namespace

Cause: An attempt was made to use timeout or grouping with ANONYMOUS namespace. Currently, timeout and grouping are supported only with AQ and DBCHANGE namespaces.

Action: Refer to documentation and change the call appropriately.

ORA-24945: cannot use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications

Cause: An attempt was made to use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications.

Action: Change the database compatibility to 10.2.

ORA-24950: unregister failed, registration not found

Cause: The registration that was asked to be unregistered could not be found.

Action: Please check the callback function name and the subscription name in the unregister call.

ORA-24952: register, unregister or post has incorrect collection count

Cause: The register, unregister or post function was invoked with a collection that was smaller than the size specified by the parameter to the function.

Action: Please check the function"s use and ensure that the size parameter is correct.

ORA-24960: the attribute *string* is greater than the maximum allowable length of *number*

Cause: The user attempted to pass an attribute that is too long

Action: Shorten the specified attribute and retry the operation.

ORA-25000: invalid use of bind variable in trigger WHEN clause

Cause: A bind variable was used in the when clause of a trigger.

Action: Remove the bind variable. To access the table columns use (new/old).column_name.

ORA-25001: cannot create this trigger type on this type of view

Cause: INSTEAD OF triggers can be created on any view which is not an Editioning View, while BEFORE and AFTER triggers may only be created on Editioning Views.

Action: Change the trigger type to INSTEAD OF or change the view on which you are attempting to create a DML trigger.

ORA-25002: cannot create INSTEAD OF triggers on tables

Cause: Only BEFORE or AFTER triggers can be created on a table.

Action: Change the trigger type to BEFORE or AFTER.

ORA-25003: cannot change NEW values for this column type in trigger

Cause: Attempt to change NEW trigger variables of datatype object, REF, nested table, VARRAY or LOB datatype which is not supported.

Action: Do not change the NEW trigger variables in the trigger body.

ORA-25004: WHEN clause is not allowed in INSTEAD OF triggers

Cause: WHEN clause is specified in an INSTEAD OF trigger.

Action: Remove the WHEN clause when creating an INSTEAD OF trigger.

ORA-25005: cannot CREATE INSTEAD OF trigger on a read-only view

Cause: attempt to create an INSTEAD OF trigger on a view created with read-only option. The view cannot be updated using INSTEAD OF triggers.

Action: Do not create the trigger.

ORA-25006: cannot specify this column in UPDATE OF clause

Cause: Attempt to create a trigger on update of a column whose datatype is disallowed in the clause, such as LOB and nested table.

Action: Remove the UPDATE OF clause.

ORA-25007: functions or methods not allowed in WHEN clause

Cause: PLSQL function call or method invocation is not allowed in the WHEN clause when creating a trigger.

Action: Remove the function call or method invocation from the WHEN clause.

ORA-25008: no implicit conversion to LOB datatype in instead-of trigger

Cause: When inserting or updating a view using instead-of trigger, the new value for a LOB view column is of a different datatype.

Action: Specified a LOB value as the new value for the LOB view column.

ORA-25009: Nested table clause allowed only for INSTEAD OF triggers

Cause: Triggers on nested tables can only be created on view columns using INSTEAD OF triggers.

Action: Use view nested table columns for defining nested table triggers.

ORA-25010: Invalid nested table column name in nested table clause

Cause: The column name specified in the nested table clause of an INSTEAD OF trigger does not correspond to a nested table column.

Action: Specify a nested table column on which the trigger is to be defined.

ORA-25011: cannot create trigger on internal AQ table

Cause: An attempt was made to try to create a trigger on a table that is used internally to support the Advanced Queueing (AQ) feature.

Action: Do not create the trigger.

ORA-25012: PARENT and NEW values cannot be identical

Cause: The referencing clause specifies identical values for PARENT and OLD.

Action: Re-specify either the PARENT or NEW referencing value.

ORA-25013: OLD and PARENT values cannot be identical

Cause: The referencing clause specifies identical values for OLD and PARENT.

Action: Re-specify either the OLD or PARENT referencing value.

ORA-25014: cannot change the value of a PARENT reference variable

    Cause: Parent values can only be read and not changed.

    Action: Do not attempt to change a Parent variable.

ORA-25015: cannot perform DML on this nested table view column

    Cause: DML cannot be performed on a nested table view column except through an INSTEAD OF trigger

    Action: Create an INSTEAD OF trigger over the nested table view column and then perform the DML.

ORA-25016: cannot specify column list for insert into nested table view column

    Cause: A column list cannot be specified for inserts into the nested table view column.

    Action: Specify all the columns for insert into the nested table.

ORA-25017: cannot reference NEW ROWID for movable rows in before triggers

    Cause: NEW ROWID was referenced in a before row trigger which is defined on an index-organized table, or a partitioned table with enabled movement of rows. The ROWID cannot be computed in a before row update trigger because it depends on the actual values of the row

    Action: Remove references to NEW ROWID from the trigger definition.

ORA-25018: conflicting trigger *string* already exists

    Cause: Conflicting instead of DDL trigger on schema/database already exists.

    Action: Remove the old trigger

ORA-25019: too much concurreny

    Cause: cannot pin the database/schema because of too much concurrency

    Action: try the operation later

ORA-25020: renaming system triggers is not allowed

    Cause: renaming system triggers is not allowed

    Action: Drop the trigger, and create a new one for the same

ORA-25021: cannot reference a trigger defined on another table

    Cause: Referenced trigger in the FOLLOWS clause was defined on another table.

    Action: Create the referenced trigger on the same table

ORA-25022: cannot reference a trigger of a different type

    Cause: Referenced trigger in the FOLLOWS or PRECEDES clause was either a different type or not a compound trigger.

    Action: Create the referenced trigger as the same type or a compound trigger.

ORA-25023: Cyclic trigger dependency is not allowed

    Cause: A cycle of trigger dependency can be formed.

    Action: Do not create a trigger that can formed a cyclic dependency.

ORA-25024: cannot specify FOLLOWS for a REVERSE CROSSEDITION trigger

    Cause: The FOLLOWS clause was specified when creating the REVERSE CROSSEDITION trigger.

Action: Do not create a REVERSE CROSSEDITION trigger with a FOLLOWS clause.

ORA-25025: cannot specify PRECEDES clause

Cause: The PRECEDES clause was specified when creating a FORWARD CROSSEDITION trigger or a regular trigger.

Action: Do not create a FORWARD CROSSEDITION or a regular trigger with a PRECEDES clause.

ORA-25026: FOR EACH ROW was specified with compound triggers

Cause: FOR EACH ROW is not allowed with compound triggers.

Action: Remove the FOR EACH ROW clause.

ORA-25027: compound triggers cannot be used as system triggers

Cause: Compound trigger was defined as system trigger.

Action: Do not use compound trigger as system trigger.

ORA-25028: regular trigger body can not start with keyword COMPOUND

Cause: Regular triggers body should start with BEGIN/DECLARE etc .

Action: Fix the syntax and recompile.

ORA-25029: compound triggers should always start with keyword COMPOUND

Cause: Compound trigger body was started with incorrect keyword.

Action: Fix the syntax and recreate.

ORA-25030: crossedition trigger cannot be created by a non-editioned user

Cause: An attempt was made to create crossedition trigger by a non-editioned user.

Action: Enable editions for the user and then create the crossedition trigger.

ORA-25031: only a forward crossedition trigger may be specified

Cause: The trigger specified was not a forward crossedition trigger.

Action: Specify a forward crossedition trigger.

ORA-25032: crossedition trigger cannot be created in ORA$BASE

Cause: An attempt was made to create crossedition trigger in the ORA$BASE edition.

Action: Do not create a crossedition trigger in the ORA$BASE edition.

ORA-25100: TABLESPACE option can only be used with ALTER INDEX REBUILD

Cause: The TABLESPACE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD TABLESPACE tablespace name.

ORA-25101: duplicate REBUILD option specification

Cause: The REBUILD option to ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-25102: PARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The PARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25103: NOPARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The NOPARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25104: UNRECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The UNRECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25105: RECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The RECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25106: only one of PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses.

ORA-25107: duplicate TABLESPACE option specification

Cause: the TABLESPACE was specified more than once in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the TABLESPACE clauses.

ORA-25108: standby lock name space exceeds size limit of *string* characters

Cause: The lock name space for the standby database exceeded the maximum string length.

Action: Change initialization parameter _STANDBY_LOCK_NAME_SPACE to a character string of less than the specified characters.

ORA-25109: standby lock name space has illegal character "*string*"

Cause: An invalid lock name space was specified for the standby database. The lock name space for the standby database can only contain A-Z, 0-9, "_", "#", "$", "." and "@" characters.

Action: Change initialization parameter _STANDBY_LOCK_NAME_SPACE to a valid character string.

ORA-25110: NOSORT may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the NOSORT option.

Action: Remove NOSORT from the CREATE BITMAP INDEX statement.

ORA-25111: creation of BITMAP cluster indices is not supported

Cause: An attempt was made to create a cluster index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-25112: maximum number of BITMAP index columns is 30

Cause: Too many columns were specified for the index.

Action: Create an index on fewer columns.

ORA-25113: GLOBAL may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the GLOBAL option.

Action: Remove GLOBAL from the CREATE BITMAP INDEX statement, and/or add a LOCAL partition descriptor if the table is partitioned.

ORA-25114: invalid file number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid file number was used in dumping a datafile or tempfile.

Action: Specify a valid file number.

ORA-25115: duplicate BLOCK option specification

Cause: BLOCK (MIN/MAX) was specified more than once in the DUMP DATAFILE/TEMPFILE command.

Action: Specify only one BLOCK option.

ORA-25116: invalid block number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid block number was used in dumping a datafile or tempfile.

Action: Specify a valid block number.

ORA-25117: MIN/MAX/Block Number expected

Cause: A value other than MIN/MAX, or a block number was entered in the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25118: invalid DUMP DATAFILE/TEMPFILE option

Cause: An invalid option was specified for the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25119: LOGGING/NOLOGGING option already specified

Cause: In CREATE TABLESPACE, the LOGGING and/or NOLOGGING options were specified more than once.

Action: Remove all but one of the logging specifications.

ORA-25120: MINIMUM EXTENT option already specified

Cause: In CREATE TABLESPACE, the MINIMUM EXTENT option was specified more than once.

Action: Remove all but one of the MINIMUM EXTENT specifications.

ORA-25121: MINIMUM EXTENT value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the MINIMUM EXTENT option was greater than the maximum extent size.

Action: Choose a lower value for the MINIMUM EXTENT option.

ORA-25122: Only LOCAL bitmap indexes are permitted on partitioned tables

Cause: An attempt was made to create a global bitmap index on a partioned table.

Action: create a local bitmap index instead.

ORA-25123: Too many components specified in the name.

Cause: Specifying more components to a name than allowed.

Action: Check the name specified for the operation.

ORA-25124: Database link name not allowed.

Cause: Specifying a database link name when it is not permitted.

Action: Check the name specified for the operation.

ORA-25125: BUFFER_POOL storage option not allowed

Cause: The user attempted to specify the BUFFER_POOL storage option. This option may only be specified during CREATE/ALTER TABLE/CLUSTER/INDEX.

Action: Remove this option and retry the statement.

ORA-25126: Invalid name specified for BUFFER_POOL

Cause: The name of the buffer pool specified by the user is invalid. The only valid names are KEEP, RECYCLE and DEFAULT.

Action: Use a valid name or remove the BUFFER_POOL clause.

ORA-25127: RELY not allowed in NOT NULL constraint

Cause: An attempt to set RELY on for NOT NULL constraint.

Action: only NORELY may be specified for a NOT NULL constraint.

ORA-25128: No insert/update/delete on table with constraint (*string.string*) disabled and validated

Cause: Try to insert/update/delete on table with DISABLE VALIDATE constraint.

Action: Change the constraint"s states.

ORA-25129: cannot modify constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-25130: cannot modify primary key - primary key not defined for table

Cause: Attempted to modify a primary key that is not defined for the table.

Action: None

ORA-25131: cannot modify unique(*string*) - unique key not defined for table

Cause: attempted to modify a unique key that is not deined for the table.

Action: None

ORA-25132: UNIQUE constraint (*string.string*) disabled and validated in ALTER TABLE EXCHANGE PARTITION

Cause: cannot ALTER TABLE EXCHANGE PARTITION when the partition and the table have a disabled and validated unique constraints AND the unique keys in the partion is not mutually exclusive from the rest of the table.

Action: Change the constraint"s status.

ORA-25133: duplicate SINGLE TABLE option specified

Cause: The SINGLE TABLE option was specified more than once.

Action: Specify the SINGLE TABLE option only once.

ORA-25134: keyword TABLE expected

Cause: The keyword TABLE is missing from the SINGLE TABLE option.

Action: Place the keyword TABLE after the keyword SINGLE in the command.

ORA-25135: cannot use the SINGLE TABLE option
    Cause: The SINGLE TABLE option is only valid for hash clusters.
    Action: Do not specify the SINGLE TABLE option.

ORA-25136: this cluster can contain only one table
    Cause: An attempt was made to store more than one table in a cluster that was created with the SINGLE TABLE option.
    Action: Do not attempt to store more than one table in the cluster.

ORA-25137: Data value out of range
    Cause: Value from cast operand is larger than cast target size.
    Action: Increase size of cast target.

ORA-25138: *string* **initialization parameter has been made obsolete**
    Cause: An obsolete initialization parameter has been specified
    Action: The system will come up, but parameters must be examined

ORA-25139: invalid option for CREATE TEMPORARY TABLESPACE
    Cause: An invalid option appears.
    Action: Specify one of the valid options: TEMPFILE, EXTENT MANAGEMENT LOCAL, UNIFORM

ORA-25140: *string* **space policy cannot be specified for the** *string* **extent management**
    Cause: An invalid option appears.
    Action: Make sure that for LOCAL extent management UNIFORM or AUTOALLOCATE is specified, and for DICTIONARY extent management UNIFORM or AUTOALLOCATE are not specified

ORA-25141: invalid EXTENT MANAGEMENT clause
    Cause: An invalid option appears for EXTENT MANAGEMENT clause
    Action: Specify one of the valid options: UNIFORM SIZE, AUTOALLOCATE

ORA-25142: default storage clause specified twice
    Cause: default storage clause was specified twice for create tablespace
    Action: Specify it once.

ORA-25143: default storage clause is not compatible with allocation policy
    Cause: default storage clause was specified for a tablespace with AUTOALLOCATE or UNIFORM policy
    Action: Omit the storage clause

ORA-25144: invalid option for CREATE TABLESPACE with TEMPORARY contents
    Cause: An invalid option appears.
    Action: Specify one of the valid options: EXTENT MANAGEMENT DICTIONARY, USER

ORA-25145: allocation policy already specified
    Cause: In CREATE TABLESPACE, the allocation policy was specified more than once, for example, AUTOALLOCATE and UNIFORM.
    Action: Remove all but one of the allocation policy specifications.

ORA-25146: EXTENT MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the EXTENT MANAGEMENT option was specified more than once.

Action: Remove all but one of the EXTENT MANAGEMENT specifications.

ORA-25147: UNIFORM SIZE value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the UNIFORM SIZE option was greater than the maximum extent size.

Action: Choose a lower value for the UNIFORM SIZE option.

ORA-25148: ONLINE option not permitted

Cause: An attempt was made to specify ONLINE for ALTER TABLE MOVE on a table that is not index-organized. The ONLINE option is currently supported only for index-organized tables.

Action: Remove the ONLINE option from the command.

ORA-25149: Columns of UROWID type may not be indexed

Cause: An attempt was made to create an index on a column of UROWID type

Action: Remove the column from the list of indexed columns

ORA-25150: ALTERING of extent parameters not permitted

Cause: An attempt was made to alter the extent parameters for a segment in a tablespace with autoallocate or uniform extent allocation policy.

Action: Remove the appropriate extent parameters from the command.

ORA-25151: Rollback Segment cannot be created in this tablespace

Cause: An attempt was made to create a rollback segment in a tablespace with autoallocate extent allocation policy.

Action: Specify a different tablespace for the rollback segment

ORA-25152: TEMPFILE cannot be dropped at this time

Cause: An attempt was made to drop a TEMPFILE being used by online users

Action: The TEMPFILE has been taken offline. Try again, later.

ORA-25153: Temporary Tablespace is Empty

Cause: An attempt was made to use space in a temporary tablespace with no files.

Action: Add files to the tablespace using ADD TEMPFILE command.

ORA-25154: column part of USING clause cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25155: column used in NATURAL join cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25156: old style outer join (+) cannot be used with ANSI joins

Cause: When a query block uses ANSI style joins, the old notation for specifying outer joins (+) cannot be used.

Action: Use ANSI style for specifying outer joins also.

ORA-25157: Specified block size *string* is not valid

Cause: An attempt was made to create a tablespace with a block size which is not supported.

Action: Specify one of the valid blocksizes i.e the standard blocksize or one of (2k, 4k, 8k, 16k, 32k) subject to the maximum and minimum blocksizes supported by the platform.

ORA-25158: Cannot specify RELY for foreign key if the associated primary key is NORELY

Cause: RELY is specified for the foreign key contraint, when the associated primary key constraint is NORELY.

Action: Change the option of the primary key also to RELY.

ORA-25175: no PRIMARY KEY constraint found

Cause: A PRIMARY KEY constraint must be defined for a table with this organization

Action: Define a PRIMARY KEY

ORA-25176: storage specification not permitted for primary key

Cause: Storage parameters cannot be defined for a PRIMARY KEY constraint for a table with this organization

Action: Remove storage specification for primary key

ORA-25177: UNRECOVERABLE option not permitted

Cause: The UNRECOVERABLE option may not be specified for a primary key for a table with this organization

Action: Remove UNRECOVERABLE option for primary key

ORA-25178: duplicate PCTTHRESHOLD storage option specification

Cause: The storage option PCTTHRESHOLD is specified more than once.

Action: Specify storage options at most once.

ORA-25179: invalid PCTTHRESHOLD storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-25180: PCTTHRESHOLD only valid for certain table organizations

Cause: PCTTHRESHOLD can only be specified for tables with certain organizations.

Action: Remove the PCTTHRESHOLD option.

ORA-25181: missing ON keyword for NESTED INDEX

Cause: ON keyword required to specify nested index column nest

Action: Add ON keyword

ORA-25182: feature not currently available for index-organized tables

Cause: An attempt was made to use one or more of the following feature(s) not currently supported for index-organized tables: CREATE TABLE with LOB/BFILE/VARRAY columns, partitioning/PARALLEL/CREATE TABLE AS

SELECT options, ALTER TABLE with ADD/MODIFY column options, CREATE INDEX

Action: Do not use the disallowed feature(s) in this release.

ORA-25183: index-organized table top index segment is in a different tablespace

Cause: An attempt was made to drop a tablespace which contains an index only table"s overflow segment but not the top index segment"

Action: find index-organized tables which span the tablespace being dropped and some other tablespace(s). Drop these tables.

ORA-25184: column name expected

Cause: A column name is not present where required by the CREATE TABLE for specifying last column to be included in the index segment of the index-organized table

Action: Specify a column name where required by the syntax.

ORA-25185: index column other than last can not be specified for INCLUDE clause

Cause: An index column name other than the last is specified as including column

Action: Specify either a column name which is not part of index-organized table primary key index , or the last key column of the primary key for the INCLUDING clause.

ORA-25186: INCLUDING clause specified for index-organized table without OVERFLOW

Cause: INCLUDING clause of a CREATE TABLE is an valid option only for index-organized tables with OVERFLOW clause (at creation time) or if an OVERFLOW segment already exists (at ALTER time).

Action: Specify OVERFLOW clause for the index-organized table : For ALTER, perform ADD OVERFLOW first.

ORA-25187: specified exceptions table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-25189: illegal ALTER TABLE option for an index-organized table

Cause: During ALTER of a index-organized table, the user attempted to enter one or more of the following options: TABLESPACE, ALLOCATE/DEALLOCATE EXTENT, PCTFREE/PCTUSED for IOT top index segment

Action: Remove the illegal option(s).

ORA-25190: an index-organized table maintenance operation may not be combined with other operations

Cause: ALTER TABLE statement attempted to combine an index-organized table maintenance operation (e.g. changing physical attributes) with some other operation (e.g. ADD constraint) which is illegal

Action: Ensure that a index-organized table maintenance operation is the sole operation specified in ALTER TABLE statement;

ORA-25191: cannot reference overflow table of an index-organized table

Cause: An attempt to directly access the overflow table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified overflow table.

ORA-25192: invalid option for an index-organized table

Cause: An attempt to specify one or more of the following options for an index-organized table: [NO]CACHE, NO LOGGING, CLUSTER

Action: Remove the illegal option(s)

ORA-25193: cannot use COMPRESS option for a single column key

Cause: An attempt to use COMPRESS option on single column key

Action: Remove the COMPRESS option.

ORA-25194: invalid COMPRESS prefix length value

Cause: The specified value must be a positive integer less than the number of key columns

Action: Specify an appropriate value.

ORA-25195: invalid option for index on an index-organized table

Cause: An attempt to specify one or more of the following options for index on an IOT: BITMAP, REVERSE, PCTUSED

Action: None

ORA-25196: keyword MOVE in ALTER TABLE MOVE must immediately follow <table name>

Cause: MOVE specified after one/more other ALTER options

Action: Remove the illegal option(s)

ORA-25197: an overflow segment already exists for the indexed-organized table

Cause: An attempt was made to ADD OVERFLOW segment on an index-organized table that already has an overflow segment

Action: None

ORA-25198: only range, list, and hash partitioning are supported for index-organized table

Cause: System, or Composite partitioning schemes are not supported yet

Action: Select a different partitioning scheme

ORA-25199: partitioning key of a index-organized table must be a subset of the primary key

Cause: An attempt to specify a partitioning key which is not a prefix of the primary key of the index-organized table

Action: Select a different partitioning key

ORA-25200: invalid value *string*, QUEUE_NAME should be [SCHEMA.]NAME

Cause: A NULL parameter was specified for QUEUE_NAME.

Action: Specify a non-NULL queue name.

ORA-25201: invalid value, VISIBILITY should be ON_COMMIT or IMMEDIATE

Cause: An invalid value specified for parameter VISIBILITY.

Action: Specify either ON_COMMIT or IMMEDIATE.

ORA-25202: invalid value NULL, *string* should be non-NULL

Cause: A NULL value was specified for the parameter.

Action: Specify a non-NULL value.

ORA-25203: invalid value *string*, DELAY should be non-negative

Cause: A negative value or NULL was specified for DELAY.

Action: Specify a non negative integer for DELAY.

ORA-25204: invalid value, SEQUENCE_DEVIATION should be BEFORE or TOP

Cause: An invalid SEQUENCE_DEVIATION was specified.

Action: Specify either the option "BEFORE" or "TOP".

ORA-25205: the QUEUE *string.string* does not exist

Cause: The specified queue does not exist.

Action: Create the queue first before specifying it for enqueue or dequeue.

ORA-25206: enqueue failed, enqueue to exception queue *string.string* not permitted

Cause: An attempt was made to enqueue to an exception queue.

Action: Try enqueueing to another queue.

ORA-25207: enqueue failed, queue *string.string* is disabled from enqueueing

Cause: The queue has been stopped to prevent any further enqueueing.

Action: Enable the queue first by using an administrative operation.

ORA-25208: RELATIVE_MSGID must be specified if SEQUENCE_DEVIATION is BEFORE

Cause: A relative message identifier should be specified if sequence deviation is specified as BEFORE.

Action: Either specify an existing relative message identifier or don"t specify sequence deviation as BEFORE.

ORA-25209: invalid value *string*, EXPIRATION should be non-negative or NEVER

Cause: The expiration is less than zero or NULL.

Action: Specify a valid value for expire_after which should be greater than or equal to zero or NEVER.

ORA-25210: invalid value for RELATIVE_MSGID, no message in queue with that msgid

Cause: No message inm the queue with the msgid equal to the specified RELATIVE_MSGID.

Action: Try again with a valid RELATIVE_MSGID.

ORA-25211: invalid DELAY specified when using sequence deviation

Cause: The DELAY specified in the enqueue is greater than the delay of the message with the given relative message id.

Action: Set the DELAY to be less than or equal to the delay of the message with the given relative message id. If the TOP option is used the delay must be less than or equal to the delay of all the messages in the queue.

ORA-25212: invalid PRIORITY specified when using sequence deviation

Cause: The PRIORITY specified in the enqueue is less than the priority of the message with the given relative message id.

Action: Set the PRIORITY to be less than the delay of the message with the given relative message id. If the TOP option is used the prioirty must be greater than or equal to the priority of all the messages in the queue.

ORA-25213: message with specified RELATIVE_MSGID has been dequeued

Cause: The message specified by the RELATIVE_MSGID field in the sequence deviation BEFORE option has been dequeued.

Action: None

ORA-25214: cannot specify delay or expiration for enqueue to exception queue

Cause: A message was enqueued to the exception queue with either delay or expiration specified.

Action: Enqueue a message without delay or expiration.

ORA-25215: user_data type and queue type do not match

Cause: A user tries to enqueue an object to a queue that was created for objects of different type.

Action: Try enqueue again with an object of the right type.

ORA-25216: invalid recipient, either NAME or ADDRESS must be specified

Cause: Both attributes, NAME and ADDRESS, were specified null for one of the recipients in the recipient list.

Action: Specify a non-null NAME or ADDRESS for the recipient.

ORA-25217: enqueue failed, visibility must be IMMEDIATE for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue without setting visibility to IMMEDIATE.

Action: Set visibility to IMMEDIATE.

ORA-25218: enqueue failed, delay must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with delay greater than zero seconds.

Action: Set delay to zero.

ORA-25219: enqueue failed, sequence deviation not allowed for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with sequence deviation specified.

Action: Do not specify sequence deviation.

ORA-25220: enqueue failed, signature not specified for a non-repudiable queue

Cause: An attempt was made to enqueue to a non-repudiable queue without specifying the signature

Action: Give the signature

ORA-25221: enqueue failed, signature specified queue not supporting non-repudiation

Cause: An attempt was made to enqueue to a queue specifying the signature for a queue not supporting non-repudiation

Action: Remove the signature

ORA-25222: enqueue failed, complete sender info. not provided for a queue supporting non-repudiation

Cause: An attempt was made to enqueue to a queue without giving the complete sender information (name) for a queue supporting non-repudiation

Action: Provide the sender information

ORA-25223: user_data type used is not supported

Cause: An attempt was made to enqueue data into a non persistent queue that is of a type other than the supported raw or object type.

Action: Enqueue the message again with data of raw or object type.

ORA-25224: sender name must be specified for enqueue into secure queues

Cause: An attempt was made to enqueue into a secure queue without specifying a sender name.

Action: Enqueue the message with sender name specified.

ORA-25225: invalid value *string*, DEQUEUE_MODE should be REMOVE or BROWSE or LOCKED

Cause: An invalid parameter has been specified for DEQUEUE_MODE.

Action: Specify either REMOVE, BROWSE or LOCKED.

ORA-25226: dequeue failed, queue *string.string* is not enabled for dequeue

Cause: The queue has not been enabled for dequeue.

Action: Enable the queue using START_QUEUE.

ORA-25227: Propagation job *string* doesn"t exist

Cause: The job doesn"t exist in AQ$_SCHEDULES or cache.

Action: None

ORA-25228: timeout or end-of-fetch during message dequeue from *string.string*

Cause: User-specified dequeue wait time has passed or the end of the queue has been reached but no message has been retrieved.

Action: Try dequeue again with the appropriate WAIT_TIME or the FIRST_ MESSAGE option.

ORA-25229: error on transformation of message *string string*

Cause: There was an error when transforming a message at enqueue, dequeue or propagation time.

Action: Correct the transformation function.

ORA-25230: invalid value *string*, WAIT should be non-negative

Cause: A negative value has been specified for WAIT.

Action: specify a non negative value or FOREVER.

ORA-25231: cannot dequeue because CONSUMER_NAME not specified

Cause: A user tried to dequeue from a queue that has been created for multiple consumers but a CONSUMER_NAME was not been specified in the dequeue options.

Action: Specify the CONSUMER_NAME in the dequeue options.

ORA-25232: duplicate recipients specified for message

Cause: An enqueue was performed with duplicate queue agents in the recipients parameter.

Action: Remove the duplicate queue agent and retry the call.

ORA-25233: invalid parameter specified for NAVIGATION

Cause: An invalid parameter has been specified for NAVIGATION.

Action: Choose one of FIRST_MESSAGE, NEXT_MESSAGE or NEXT_TRANSACTION. Use FIRST_MESSAGE for dequeuing the first message that satisifies the criterion, NEXT_MESSAGE for dequeuing the next message that satisifies the criterion and NEXT_TRANSACTION for moving to a set of messages enqueued by another transaction.

ORA-25234: NEXT_TRANSACTION navigation option invalid for queue table *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue from a queue in a queue table that was not created for transactional grouping.

Action: Specify either FIRST_MESSAGE or NEXT_MESSAGE as the navigation option. If you want to dequeue messages using transactional grouping create the queue in a queue table that has transactional grouping enabled.

ORA-25235: fetched all messages in current transaction from *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue when there were no more messages that belong to the same transaction.

Action: Use the NEXT_TRANSACTION navigation option to move to the next also use the FIRST_MESSAGE option to start from the head of the queue again.

ORA-25236: buffer too small for user data

Cause: The variable or buffer used for the out parameter payload is too small for the user data dequeued.

Action: Increase the size of the buffer or the size of the variable. Maximum size allowed is 32K.

ORA-25237: navigation option used out of sequence

Cause: The NEXT_MESSAGE or NEXT_TRANSACTION option was specified after dequeuing all the messages.

Action: Reset the dequeuing position using the FIRST_MESSAGE naviagtion option and then specify the NEXT_MESSAGE or NEXT_TRANSACTION option.

ORA-25238: too many recipients specified for message destination *string*

Cause: An ENQUEUE was performed with more than 32 recipients for the given destination (address).

Action: Reduce the number of recipients to 32 or less, and retry the call.

ORA-25239: message ID not supplied when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from a release 8.0-compatible exception queue without including a message ID in the dequeue options.

Action: Check the application to ensure that the queue name has been specified correctly. If the queue name is correct supply a message ID when dequeuing from a release 8.0-compatible exception queue. Otherwise, upgrade the queue_table containing the queue to release 8.1-compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-25240: message ID and dequeue condition/correlation ID specified in dequeue options

Cause: An attempt was made to dequeue by including both a message ID and a dequeue condition/correlation ID in the dequeue options. In the dequeue options,

you are permitted to specify either message ID or dequeue condition/correlation ID, or neither.

Action: To dequeue a message, specify a message ID or a dequeue condition/correlation ID in the dequeue options, but do not specify both. If you want to dequeue in the queue"s sort order, then do not specify either the message ID or dequeue condition/correlation ID in the dequeue options.

ORA-25241: cannot change correlation ID from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the correlation ID while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a correlation ID that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25242: cannot change subscriber name from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the subscriber name while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a subscriber name that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25243: CONSUMER_NAME cannot be specified when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from an exception queue by specifying the CONSUMER_NAME in the dequeue options. CONSUMER_NAME can only be specified when dequeuing from a normal queue created for multiple consumers.

Action: Specify only the message id in the dequeue options to dequeue a message from an exception queue.

ORA-25244: dequeue index key not found, QUEUE *string*, rowid *string*

Cause: An internal error was encountered. There may be an inconsistency in the queue table index.

Action: Contact your Oracle customer support representative. You may need to provide the trace file and information about reproducing the error.

ORA-25245: agent name cannot be specified if address is a single-consumer queue or an exception queue

Cause: The agent name for the agent in the LISTEN call was specified when the agent address was a single-consumer queue or an exception queue.

Action: Do not specify the agent name.

ORA-25246: listen failed, the address *string* is an 8.0 style exception queue

Cause: An 8.0 style exception queue was specified in the agent-list for the LISTEN call.

Action: Specify a normal 8.0 style queue or an 8.1 style queue in the agent-list.

ORA-25247: *string* is not a recipient of specified message

Cause: The consumer name specified in the dequeue options is not a recipient of the message specified by the message id.

Action: Ensure that the agent specified by the consumer name is a recipient of the message specified by the message id.

ORA-25248: duplicate agent specified in the agent list

    Cause: An agent was specified more than once in the agent list of the LISTEN call.

    Action: Remove the duplicate agent specification(s), and retry the call.

ORA-25249: dequeue failed, dequeue not allowed for queue *string.string*

    Cause: An attempt was made to dequeue from a non-persistent queue.

    Action: Dequeue from a different queue.

ORA-25250: Cannot specify a remote recipient for the message

    Cause: A recipient for the message enqueued to a non-persistent queue had a non-local address.

    Action: Do not specify the address field or specify the queue which is the target of the enqueue

ORA-25251: exceeded maximum number of recipients for message

    Cause: An attempt was made to issue an ENQUEUE call that exceeded the the maximum number (1024) of recipients per message.

    Action: Reduce the number of recipients to 1024 or less, and retry the call.

ORA-25252: listen failed, the address *string* is a non-persistent queue

    Cause: A non-persistent queue was specified as an address for an agent in the LISTEN call.

    Action: Specify a normal queue as address for the agent, and retry the the LISTEN call.

ORA-25253: listen failed, queue *string.string* is not enabled for dequeue

    Cause: An attempt was made to specify a queue that is not enabled for dequeue in a LISTEN call.

    Action: Enable the queue for dequeue using START_QUEUE, and retry the LISTEN call.

ORA-25254: time-out in LISTEN while waiting for a message

    Cause: The specified wait time has elapsed and there were no messages for any of the agents in the agent-list.

    Action: Try the LISTEN call with an appropriate time-out.

ORA-25255: incorrect subscription string *string*

    Cause: An incorrect subscription string was specified with OCIRegister.

    Action: Specify a subscription string using the [CONSUMER:]SCHEMA.QUEUE form.

ORA-25256: consumer cannot be specified with a single-consumer queue or an exception queue

    Cause: An attempt was made to specify a consumer in the subscription string when registering for notification on a single-consumer queue or an exception queue.

    Action: Do not specify the consumer in the subscription string.

ORA-25257: consumer must be specified with a multi-consumer queue

    Cause: An attempt was made to register on a multi-consumer queue without specifying a consumer in the subscription string.

    Action: Specify a consumer in the subscription string.

ORA-25258: cannot register for notifications on an 8.0 style exception queue
    Cause: An attempt was made to specify an 8.0 style exception queue in the subscription string of OCIRegister.

    Action: Specify a normal queue or a non-persistent queue.

ORA-25259: cannot specify protocol for agent
    Cause: The user specified the protocol attribute for an agent in the agent list.

    Action: Do not specify the protocol attribute of the agent object type.

ORA-25261: JOB_QUEUE_PROCESSES must be at least 2 for AQ propagation
    Cause: AQ Propagator encountered a setting for JOB_QUEUE_PROCESSES that is insufficient for AQ propagation.

    Action: Set the number of JOB_QUEUE_PROCESSES to at least 2 for AQ propagation.

ORA-25262: agent name cannot be NULL if address is a multi-consumer queue
    Cause: The name for the agent in the LISTEN call was not specified when the agent address was a multi-consumer queue.

    Action: Specify a non-NULL name for the agent.

ORA-25263: no message in queue *string.string* with message ID *string*
    Cause: An attempt was made to dequeue a message with a specific message ID, but no such message exists in the queue.

    Action: Try dequeue again with a valid message ID.

ORA-25264: cant get signature for this queue
    Cause: An attempt was made to dequeue the signature from this queue, which is not reciever non-repidiable.

    Action: Try dequeue again without the get signature option

ORA-25265: specified signature for a queue which does not support reciever non-repudiation
    Cause: An attempt was made to dequeue the message from a queue which does not support reciever non-repudiation, but the signature was specified for verification

    Action: Try dequeue again without the signature

ORA-25266: didnt try to dequeue by message id. with the signature
    Cause: The signature was specified for a queue, but the dequeue was not done by message id.

    Action: Try dequeue again by message id.

ORA-25267: didnt specify the signature for a reciever non-repudiable queue
    Cause: The signature was not specified for a reciever non-repudiable queue

    Action: Try dequeue again along with the signature

ORA-25268: didnt dequeue in browse mode with get signature option
    Cause: The dequeue was not performed in browse mode with get signature option

    Action: Try dequeue again in browse mode

ORA-25269: cant specify sognature with get signature option

Cause: The signature is not required for the dequeue with get signature option

Action: Try dequeue again without the signature in dequeue options

ORA-25270: sender info does not match with the actual sender of the message

Cause: The sender info. and the message id. do not match

Action: Try dequeue again without the signature in dequeue options

ORA-25271: queue table not found for the given queue

Cause: The queue table does not exist for the given queue

Action: Provide the right queue name

ORA-25272: Signature does not exist for the given reciever and message id.

Cause: Signature does not exist for the given reciever and message id.

Action: Check the message id. and the reciever"s information

ORA-25276: table specified is not a queue table

Cause: An invalid queue table name is specified.

Action: Check the dictionary views to see if the table is a queue table.

ORA-25277: cannot grant or revoke object privilege on release 8.0 compatible queues

Cause: An attempt was made to grant or revoke object privilege on release 8.0 style queues.

Action: Convert the release 8.0 compatible queue table to release 8.1 compatible using DBMS_AQADM.MIGRATE_QUEUE_TABLE before granting or revoking object privilege.

ORA-25278: grantee name cannot be NULL

Cause: An attempt was made to specify NULL for the grantee parameter.

Action: Specify a valid grantee parameter.

ORA-25279: dequeue as select not supported before 8.2

Cause: Dequeue as select not supported before 8.2.

Action: Dont use select condition while dequeuing

ORA-25280: complete sender information not provided to non-repudiate sender

Cause: complete sender information not provided to non-repudiate sender

Action: Provide the complete sender information

ORA-25281: complete reciever information not provided to non-repudiate reciever

Cause: complete reciever information not provided to non-repudiate reciever

Action: Provide the complete reciever information

ORA-25282: message id. not provided for non-repudiation

Cause: message id. was not provided

Action: Provide the message id.

ORA-25283: either agent"s name or address needed for non-repudiation

Cause: neither agent"s name nor address provided for non-repudiation"

Action: Provide the agent info.

ORA-25284: Invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-25285: Invalid value *string* for array_mode

Cause: An Invalid value or NULL was specified for the array_mode.

Action: Check the documentation for valid values.

ORA-25286: Invalid number of elements in the message properties array

Cause: Number of elements in the message properties array do not match the number of elements in the payload array.

Action: Create a message property array with one element (that applies for all the elements in the payload array) or create a message property array with the same number of elements as there are in the payload array.

ORA-25287: Invalid value *string*, *string* should be non-negative

Cause: An Invalid value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-25288: AQ HTTP propagation encountered error, status-code *number*, *string*

Cause: AQ propagation"s HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-25289: Buffer Already Exists

Cause: Buffer already exists for the specified queue.

Action: None

ORA-25290: Cannot complete operation on queue *string* with existing messages

Cause: Queue already has messages. Cannot complete operation

Action: Truncate the queue before adding/dropping a buffer

ORA-25291: Buffer does not exist for the specified queue

Cause: Buffer does not exist for the specified queue

Action: Operation on the buffer cannot be performed. create the buffer

ORA-25292: Buffer operations are not supported on the queue

Cause: Buffer operations are not supported on the specified queue type

Action: Buffered operations are only supported on to 8.1 style queues, which do not have transaction grouping.

ORA-25293: Lob attributes must be null for buffered operations

Cause: Enqueue of a buffered message with a non-null lob attribute was attempted

Action: Set the lob attributes to null before enqueuing the buffered message

ORA-25294: Cannot propagate user buffered messages to a database with version lower than 10.2

Cause: Propagation of user buffered messages was attempted to a database with version lower than 10.2.

Action: Do not propagate buffered messages to the database.

ORA-25295: Subscriber is not allowed to dequeue buffered messages

Cause: Subscriber is only allowed to dequeue persistent messages

Action: Drop the subscriber and re-create it, or dequeue only persistent messages for the subscriber

ORA-25296: Queue Table *string* **has a buffered queue** *string*

Cause: Buffered message was enqueued by specifying delay or sequence deviation.

Action: Do not specify delay of sequence deviation when enqueuing buffered messages.

ORA-25298: Only immediate visibility mode supported for buffered message enqueue or dequeue

Cause: A visibility of dbms_aq.ON_COMMIT was supplied with the buffered message enqueue or dequeue

Action: Supply a visibility of dbms_aq.IMMEDIATE

ORA-25299: Invalid message delivery_mode

Cause: Invalid value was specified for delivery mode

Action: Specify dbms_aq.BUFFERED or dbms_aq.PERSISTENT during Enqueue or dbms_aq.BUFFERED, dbms_aq.PERSISTENT or dbms_aq.PERSISTENT_OR_BUFFERED during Dequeue and Listen.

ORA-25300: Cannot drop buffer for queue with buffered subscribers

Cause: Cannot drop buffer for queue with buffered subscribers

Action: Either drop buffered subscribers or forcibly drop the buffer

ORA-25301: Cannot enqueue or dequeue user buffered messages to a database with version lower than 10.2

Cause: Enqueue or dequeue of user buffered messages was attempted to queues in a database with version lower than 10.2.

Action: Do not attempt to enqueue or dequeue user buffered messages.

ORA-25302: Operation not possible for non-buffered queue *string*

Cause: Last enqd/ackd message is only supported for buffered queues

Action: The operation is not supported.

ORA-25303: Buffered operation allowed only on the owner instance

Cause: Operation was not performed on the owner instance.

Action: Perform operation on the owner instance.

ORA-25304: Cannot use priority order queues for capture LCRs

Cause: Capture LCRs can only use commit time or enqueue time ordered queues.

Action: Use the appropriate type of queue for captured LCRs.

ORA-25305: enqueue failed, expiration must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a buffered queue with expiration greater than zero seconds.

Action: Set expiration to zero.

ORA-25306: **Cannot connect to buffered queue''s owner instance**

Cause: cannot connect to the owner instance of the buffered queue

Action: set listener information in REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter.

ORA-25307: **Enqueue rate too high, flow control enabled**

Cause: Subscribers could not keep pace with the enqueue rate.

Action: Try enqueue after waiting for some time.

ORA-25310: **Subscriber is Notification only; dequeue not supported**

Cause: Notification only subscribers are not allowed to dequeue.

Action: Recreate subscriber if necessary.

ORA-25311: *string* **not supported for non-persistent queue**

Cause: Specified QOS is not supported for non-persistent queues.

Action: Specify the right QOS.

ORA-25312: **Cannot specify nonzero sender protocol**

Cause: Sender protocol was specified during an enqueue operation.

Action: Specify the enqueue sender protocol as null or zero.

ORA-25313: **a queue may not subscribe to itself for propagation**

Cause: The specified subscriber had a NULL name and an address equal to the queue name.

Action: Provide a valid subscriber and retry the operation.

ORA-25314: **a commit-time queue table cannot be migrated to 8.0**

Cause: An attempt was made to migrate a commit-time queue table to an unsupported compatibility level.

Action: Provide an appropriate compatibility level, and retry the operation.

ORA-25315: **unsupported configuration for propagation of buffered messages**

Cause: An attempt was made to propagate buffered messages with the database link pointing to an instance in the destination database which is not the owner instance of the destination queue.

Action: Use queue to queue propagation for buffered messages.

ORA-25316: **Late in the current transaction to begin an Enqueue/Dequeue operation**

Cause: Check if the Enqueue/Dequeue operation is performed via triggers on Materialized Views which isn''t supported.

Action: Triggers on materialized views aren''t supported. Workarounds are on-demand materialized views or execution of trigger code within an autonomous txn.

ORA-25317: **Propagation stopped because of instance shutdown**

Cause: A propagation job has stopped because the instance is shutting down.

Action: No user action is required.

ORA-25318: **Propagation stopped because of instance affinity change**

Cause: A propagation job has stopped because its instance affinity has changed.

Action: No user action is required. The job will restart on the appropriate instance.

ORA-25321: enqueue failed, user property specified but queue *string.string* **is not an 8.1 style queue**

Cause: user properties can only be specified when enqueueing into 8.1 style queues.

Action: Specify an 8.1 style queue or pass user property as NULL.

ORA-25326: Array *string* **operation failed for message at index** *string*

Cause: Array operation fails for the message at specified index. Look at the remainder of the error stack to see what the problem was.

Action: Fix cause of error and retry array operation.

ORA-25327: Array size is invalid

Cause: Array size must be a positive, non-zero integer.

Action: Use corrected array size and retry array operation.

ORA-25328: *string* **argument size** *string* **is smaller than array size**

Cause: The size of the argument is smaller than the given array size.

Action: Lower array size or use a larger sized input argument.

ORA-25329: AQ array operations not allowed on 8.0 queues

Cause: An array enqueue/dequeue was attempted on an 8.0 queue.

Action: Use single enqueue/dequeue with this queue.

ORA-25330: PL/SQL associative arrays may not be used with AQ array operations

Cause: A PL/SQL associative array was provided for the payload parameter in an enqueue/dequeue array operation.

Action: Use VARRAY or NESTED TABLE types with AQ array operations.

ORA-25331: cannot downgrade because there are commit-time queue tables

Cause: An attempt was made to downgrade a database that has commit-time queue tables.

Action: Drop all commit-time queue tables before attempting the downgrade.

ORA-25332: Invalid release value *string* **for queue table compatible parameter**

Cause: The release level given for the queue table compatible parameter is invalid

Action: Specify a valid release value for the queue table compatible parameter

ORA-25333: Buffered Queue to Queue propagation did not connect to the correct instance

Cause: Queue to Queue propagation for buffered messages didn"t connect to the correct instance, most likely because service was not started for the destination queue.

Action: No user action is required. Propagation will start the service for the destination queue and retry.

ORA-25334: Buffered propagation must restart as the destination queue was recreated/moved

Cause: Buffered propagation destination queue was recreated or its ownership was moved to another instance during propagation.

Action: No user action is required. Propagation will reinitialize its metadata and retry.

ORA-25335: AQ array operations not allowed for buffered messages

Cause: An array enqueue/dequeue was attempted for buffered messages

Action: Use single enqueue/dequeue for buffered messages or an array size of one.

ORA-25336: Cannot contact instance *string* during Streams AQ operation

Cause: The specified instance was not responding to AQ requests.

Action: Set parameter aq_tm_processes to a non-zero value. If the problem persists, contact Oracle Support Services.

ORA-25337: Cannot propagate in queue-to-queue mode to a database with version lower than 10.2

Cause: Remote subscriber with queue_to_queue mode set to TRUE was added. The remote subscriber is on a database version lower than 10.2. Propagation was scheduled to a destination database with version lower than 10.2.

Action: Remove the remote subscriber with queue_to_queue mode and add the subscriber back with queue_to_queue set to FALSE. Unschedule the queue-to-queue propagation and schedule propagation in queue-to-dblink mode.

ORA-25338: operation "*string*" is not allowed for sync_capture "*string*"

Cause: An attempt was made to execute the specified operation for a sync_ capture process.

Action: Remove the offending call.

ORA-25339: STREAMS "*string*" must be sync_capture

Cause: The specified capture STREAMS did not exist or was not a sync_capture process.

Action: Remove the offending call.

ORA-25340: must use commit-time queue for sync_capture

Cause: An attempt was made to create a sync_capture without using a commit-time queue.

Action: Rerun statement with a commit-time queue.

ORA-25341: sync_capture does not support "*string*"."*string*" because of the following reason:

Cause: sync_capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One option is to remove the rule that captures changes from the unsupported table. Check DBA_ STREAMS_TABLE_RULES to determine the rule on the table specified in the error. Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by STREAMS and for what reason. For potential workarounds to certain unsupported properties, see Metalink.

ORA-25342: cannot downgrade because there are apply processes for user buffered messages

Cause: An attempt was made to downgrade a database that has apply process for user-buffered messages.

Action: Drop all the apply processes for user-buffered messages before attempting the downgrade.

ORA-25350: maximum number of concurrent transaction branches exceeded

Cause: the limit on the number of concurrent transaction branches has been reached

Action: Increase the INIT.ORA parameter "transactions" and restart the system.

ORA-25351: transaction is currently in use

Cause: The transaction is currently used by a different session.

Action: Do not switch to a transaction attached to some other session.

ORA-25352: no current transaction

Cause: The user session is not attached to any transaction.

Action: Do not attempt to detach when there is no current transaction.

ORA-25353: branch marked for deletion

Cause: The branch specified cannot be killed immediately because another session is using the branch, but it has been marked for kill. This means it will be deleted as soon as possible after the current uninterruptable operation is completed.

Action: No action is required for the branch to be deleted.

ORA-25400: must replay fetch

Cause: A failure occured since the last fetch on this statement. Failover was able to bring the statement to its original state to allow continued fetches.

Action: This is an internally used error message and should not be seen by the user.

ORA-25401: can not continue fetches

Cause: A failure occured since the last fetch on this statement. Failover was unable to bring the statement to its original state to allow continued fetches.

Action: Reexecute the statement and start fetching from the beginning

ORA-25402: transaction must roll back

Cause: A failure occured while a transaction was active on this connection.

Action: The client must roll back.

ORA-25403: could not reconnect

Cause: The connection to the database has been lost, and attempts to reconnect have failed.

Action: Manually reconnect.

ORA-25404: lost instance

Cause: The primary instance has died.

Action: This is an internally used error message and should not be seen by the user.

ORA-25405: transaction status unknown

Cause: A failure occured while a transaction was attempting to commit. Failover could not automatically determine instance status.

Action: The user must determine the transaction"s status manually.

ORA-25406: could not generate a connect address

Cause: Failover was unable to generate an address for a backup instance.

Action: Contact Oracle customer support.

ORA-25407: connection terminated

Cause: The connection was lost while doing a fetch.

Action: This is an internally used error message and should not be seen by the user.

ORA-25408: can not safely replay call

Cause: The connection was lost while doing this call. It may not be safe to replay it after failover.

Action: Check to see if the results of the call have taken place, and then replay it if desired.

ORA-25409: failover happened during the network operation,cannot continue

Cause: The connection was lost when fetching a LOB column.

Action: Failover happened when fetching LOB data directly or indirectly. Please replay the top level statement.

ORA-25425: connection lost during rollback

Cause: The connection was lost while issuing a rollback and the application failed over.

Action: The connection was lost and failover happened during rollback. If the transaction is not externally coordinated, then Oracle implicitly rolled back, so no action is required. Otherwise examine pending_trans$ to determine if "rollback force" is required.

ORA-25426: remote instance does not support shared dblinks

Cause: A shared dblink is being used to connect to a remote instance that does not support this feature because it is an older version.

Action: Use a normal dblink if you need to connect to this instance.

ORA-25427: cannot downgrade database links after database link data dictionary has been upgraded

Cause: An attempt was made to downgrade after the upgrade of the database link data dictionary.

Action: Drop the database links before attempting the downgrade.

ORA-25436: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the table values specified had an invalid alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid alias.

ORA-25437: duplicate table value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because some of the table values specified had the same table alias.

Action: Check the table values specified, and try again with only one value per table.

ORA-25438: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had an invalid name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25439: duplicate variable value for variable: *string*

Cause: An attempt to evaluate was made, which failed because some of the variable values specified had the same variable name.

Action: Check the variable names specified, and try again with only one value per variable.

ORA-25440: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values specified had an invalid table alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid name.

ORA-25441: duplicate column value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values supplied a value for a table alias, which already had a table value supplied.

Action: Check the table and column values specified, and try again with either a table value or column values for each table alias.

ORA-25442: too many column values for table alias: *string*

Cause: An attempt to evaluate was made, which failed because too many column values were supplied for the specified table alias.

Action: Check the column values specified, and try again with the right number of column values.

ORA-25443: duplicate column value for table alias: *string*, **column number:** *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column number.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25444: invalid ROWID: *string* **for table alias:** *string*

Cause: An attempt to evaluate was made, which failed because an invalid ROWID was supplied for the specified table alias.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25445: invalid column number: *string* **for table alias:** *string*

Cause: An attempt to evaluate was made, which failed because an invalid column number was supplied for the specified table alias as a part of a column value.

Action: Check the column values specified, and try again with a valid column number.

ORA-25446: duplicate column value for table alias: *string*, **column:** *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column name.

Action: Check the column values specified, and try again with only one column value for each table alias, and column name.

ORA-25447: encountered errors during evaluation of rule *string.string*

Cause: An attempt to evaluate was made, which failed during the evaluation of the specified rule.

Action: Check the rule and the values passed to evaluate, and try again with valid values.

ORA-25448: rule *string.string* **has errors**

Cause: An attempt to load the specified rule failed due to errors in the rule.

Action: Check the rule and retry the operation.

ORA-25449: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values specified had an invalid variable name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25450: error *string* **during evaluation of rule set** *string.string*

Cause: The specified error occurred during evaluation of the rule set.

Action: Check the error and take appropriate action.

ORA-25451: too many attribute values for variable: *string*

Cause: An attempt to evaluate was made, which failed because too many attribute values were supplied for the specified variable.

Action: Check the attribute values specified, and try again with the right number of attribute values.

ORA-25452: duplicate attribute value for variable: *string***, attribute:** *string*

Cause: An attempt to evaluate was made, which failed because duplicate attribute values were supplied for the specified variable and attribute name.

Action: Check the attribute values specified, and try again with only one attribute value for each variable, and attribute name.

ORA-25453: invalid iterator: *string*

Cause: An attempt to get rule hits or to close an iterator was made, which failed because an invalid iterator was passed in.

Action: Check the iterator, and try again with a valid iterator.

ORA-25454: error during evaluation of rule set: *string.string* **for iterator:** *string*

Cause: An attempt to get rule hits for an iterator was made, which failed because of an error in evaluation of the specified rule set.

Action: Check the validity of the rule set and try again.

ORA-25455: evaluation error for rule set: *string.string***, evaluation context:** *string.string*

Cause: An attempt to evaluate the specified rule set using the evaluation context specified failed due to some errors.

Action: Check additional errors signalled to determine the problem.

ORA-25456: rule set was modified or evaluation terminated for iterator: *string*

Cause: An attempt to get rule hits was made, which failed because the underlying rule set was modified after the iterator was returned.

Action: Try again after re-evaluating the rule set.

ORA-25457: evaluation function *string* **returns failure**

Cause: The specified evaluation function returned a failure during evaluation, causing evaluation to terminate.

Action: Check arguments to evaluate and retry.

ORA-25461: rule set not specified

Cause: An attempt to evaluate was made, which failed because the ruleset name specified was null.

Action: Check the rule set name, and try again with a valid name.

ORA-25462: evaluation context not specified

Cause: An attempt to evaluate was made, which failed because the evaluation context specified was null.

Action: Check the evaluation context name, and try again with a valid name.

ORA-25463: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the table values specified had a NULL alias name.

Action: Check the list of table values, and try again with a valid alias name.

ORA-25464: ROWID not specified for table alias: *string*

Cause: An attempt to evaluate was made, which failed because the table value for the specified table alias had a NULL ROWID.

Action: Check the list of table values, and try again with a valid ROWID.

ORA-25465: variable name not specified

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had a NULL variable name.

Action: Check the list of variable values, and try again with a valid variable name.

ORA-25466: data not specified for variable name: *string*

Cause: An attempt to evaluate was made, which failed because the variable value for the specified variable name had NULL data.

Action: Check the list of variable values, and try again with valid data.

ORA-25467: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the column values specified had a NULL alias name.

Action: Check the list of column values, and try again with a valid alias name.

ORA-25468: column name not specified for alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values for the specified alias name had a NULL column name.

Action: Check the list of column values, and try again with a valid column name.

ORA-25469: data not specified for alias: *string* **column name:** *string*

Cause: An attempt to evaluate was made, which failed because the column value for the specified alias and column name had NULL data.

Action: Check the list of column values, and try again with valid data.

ORA-25470: duplicate attribute value for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values supplied a value for a variable, which already had a variable value supplied.

Action: Check the variable and attribute values specified, and try again with either a variable value or attribute values for each variable.

ORA-25471: attribute name not specified for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values for the specified variable had a NULL attribute name.

Action: Check the list of attribute values, and try again with a valid attribute name.

ORA-25472: maximum open iterators exceeded

Cause: The open rule hit iterators in the session exceeded 2 * OPEN_CURSORS.

Action: Close some rule hit iterators.

ORA-25473: cannot store *string* in rule action context

Cause: The user attempted to put unsupported data types, such as LOBs and evolved ADTs, into the rule action context.

Action: Use only supported data types in rule action context.

ORA-25500: database is not open

Cause: Database must be open to perform ALTER SYSTEM QUIESCE RESTRICTED command.

Action: Open the database and retry this command.

ORA-25501: ALTER SYSTEM QUIESCE RESTRICTED command failed

Cause: Database resource manager failed to change plan.

Action: Look at the alert logs to see detailed description of the error.

ORA-25502: concurrent ALTER SYSTEM QUIESCE/UNQUIESCE command is running

Cause: There is a concurrent ALTER SYSTEM QUIESCE RESTRICTED or ALTER SYSTEM UNQUIESCE command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-25503: cannot open database because the database is being quiesced

Cause: Database cannot be opened because the system is being or has been quiesced.

Action: Open the database after the system has been quiesced.

ORA-25504: the system is already in quiesced state

Cause: Cannot quiesce the system because the system is already quiesced.

Action: None

ORA-25505: the system is not in quiesced state

Cause: Cannot unquiesce the system because the system is not in quiesced state.

Action: None

ORA-25506: resource manager has not been continuously on in some instances

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup in this or some other instances.

Action: None

ORA-25507: resource manager has not been continuously on

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup.

Action: None

ORA-25508: database is not mounted

Cause: Database must be mounted to perform ALTER SYSTEM UNQUIESCE command.

Action: Mount the database and retry this command.

ORA-25509: operation on "*string*"."*string*".*string* not allowed

Cause: A column has been added to a replicated table, but replication support processing has not completed.

Action: Wait until replication support processing has completed before updating the column

ORA-25526: bad format of _DB_MTTR_SIM_TARGET: *string*

Cause: One value in _DB_MTTR_SIM_TARGET is not a valid MTTR.

Action: Alter the value of _DB_MTTR_SIM_TARGET.

ORA-25527: bad format of _DB_MTTR_SIM_TARGET

Cause: One value in _DB_MTTR_SIM_TARGET is empty.

Action: Set the value of _DB_MTTR_SIM_TARGET properly.

ORA-25528: too many candidate MTTRs are specified in _DB_MTTR_SIM_ TARGET

Cause: Too many candidate MTTRs are specified in _DB_MTTR_SIM_TARGET.

Action: Alter the value of _DB_MTTR_SIM_TARGET.

ORA-25530: FAST_START_MTTR_TARGET is not specified

Cause: An attempt to start MTTR advisory was made, which failed because FAST_START_MTTR_TARGET was not specified.

Action: Set FAST_START_MTTR_TARGET.

ORA-25531: MTTR specified is too small: *string*

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too small for MTTR advisory.

Action: Set a larger FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25532: MTTR specified is too large: *string*

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too large for MTTR advisory.

Action: Set a smaller FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25533: FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL is specified

Cause: An attempt to start MTTR advisory was made, which failed because either FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL was specified.

Action: Set FAST_START_IO_TARGET and LOG_CHECKPOINT_INTERVAL to 0.

ORA-25950: missing where clause in join index specification

Cause: An attempt to create a join index was made, which failed because no valid where clause was found.

Action: Ensure that a where clause with valid join conditions is specified in the create index statement.

ORA-25951: join index where clause cannot contain OR condition

Cause: An attempt to create a join index was made, which failed because there was an OR branch in the where clause.

Action: Reformulate the where clause without using ORs.

ORA-25952: join index must only contain inner equi-joins

Cause: An attempt to create a join index was made, which failed because it included a predicate which wasn"t an equi-inner join.

Action: Remove the inappropriate predicate.

ORA-25953: join index cannot be a functional index

Cause: An attempt to create a join index was made, which failed because a functional index was requested or necessary (such as is the case for indexing columns using timezone).

Action: Remove any functional indexing columns.

ORA-25954: missing primary key or unique constraint on dimension

Cause: An attempt to create a join index was made, which failed because one or more dimensions did not have an appropriate constraint matching the join conditions.

Action: Ensure that the where clause is correct (contains all of the constraint columns) and that an enforced constraint is on each dimension table.

ORA-25955: all tables must be joined in the where clause

Cause: An attempt to create a join index was made, which failed because one of the tables in the from clause did not appear in the where clause.

Action: Ensure that the where clause contains all from clause tables.

ORA-25956: join index cannot be created on tables owned by SYS

Cause: An attempt to create a join index was made, which failed because one of the tables was owned by SYS.

Action: Ensure that no join index related table is owned by SYS.

ORA-25957: join index where clause cannot contain cycles

Cause: An attempt to create a join index was made, which failed because the where clause contains a cycle.

Action: Ensure that the where clause is in the form of a star or snowflake schema.

ORA-25958: join index where clause predicate may only contain column references

Cause: An attempt to create a join index was made, which failed because a predicate in the where clause contained something other than a simple column.

Action: Ensure that the where clause only contains columns.

ORA-25959: join index must be of the bitmap type
>**Cause:** An attempt to create a join index was made, which failed because no bitmap keyword was used.
>
>**Action:** Make the index a bitmap index.

ORA-25960: join index cannot be based on a temporary table
>**Cause:** An attempt to create a join index was made, which failed because one of the tables was temporary.
>
>**Action:** Ensure no underlying tables are temporary.

ORA-25961: join index prevents dml cascade constraint operation
>**Cause:** An attempt to execute dml resulted in the need to perform dml on another table because of a cascade constraint. The join index only allows one of its underlying tables to me modified at a time.
>
>**Action:** Drop the join index or remove the constraint.

ORA-25962: join index prevents multitable insert or merge
>**Cause:** An attempt to execute an merge or multitable insert on a table that was used to create a bitmap join index was made. Merge and multitable inserts are not supported on tables that were used to create a bitmap join index.
>
>**Action:** Drop the join index.

ORA-25963: join index must be created on tables
>**Cause:** An attempt to create a join index was made, which failed because the from clause contains non table object.
>
>**Action:** Ensure that the from clause only contains tables.

ORA-25964: column type incompatible with join column type
>**Cause:** The datatype of the join column is incompatible with the datatype of the joined column.
>
>**Action:** Select a compatible datatype for the join column.

ORA-25965: fact table must be included in the from clause
>**Cause:** An attempt to create a join index was made, which failed because the from clause does not contain the fact table.
>
>**Action:** Ensure that the from clause contains the fact table.

ORA-25966: join index cannot be based on an index organized table
>**Cause:** An attempt to create a join index was made, which failed because one of the tables was an index organized table.
>
>**Action:** Ensure no underlying tables are index organized.

ORA-26000: partition load specified but table *string* is not partitioned
>**Cause:** The Loader control file contains a PARTITION clause but the table being loaded is not partitioned.
>
>**Action:** Remove the partition specification from the SQL*Loader control file and retry the load.

ORA-26001: Index *string* specified in SORTED INDEXES does not exist on table *string*
>**Cause:** A nonexistent index was specified in the SORTED INDEXES clause.
>
>**Action:** Do not specify as a SORTED INDEX.

ORA-26002: Table *string* **has index defined upon it.**

Cause: Parallel load was specified into a table which has index defined upon it.

Action: Drop index(es) defined upon table, or don"t use parallel load, or use SKIP_INDEX_MAINTENANCE option.

ORA-26003: parallel load not supported for index-organized table *string*.

Cause: Parallel load is not supported for index-organized tables.

Action: load the index-organized table without the PARALLEL option.

ORA-26004: Tables loaded through the direct path may not be clustered

Cause: User attempted to load a clustered table via the direct path.

Action: Use the conventional path.

ORA-26005: Invalid handle for direct path load

Cause: In direct path load, the handle passed in does not match the type listed.

Action: Verify the handle and type are correct.

ORA-26006: Incorrect bind variable in column *string***"s sql expression -** *string*

Cause: In direct path load, the bind variables listed in the sql expression do not match the input argument column names.

Action: Verify all the input arguments are listed in the expression as bind variables, and all the bind variables are listed as input arguments to the expression. Or verify that there were no errors in executing the OCI statements when getting the bind variable list.

ORA-26007: invalid value for SETID or OID column

Cause: The value passed in a Direct Path API stream for a column containing a SETID or OID has an invalid value. SETIDs and Object IDs must be either 16 bytes of RAW data or 32 bytes of hexidecimal characters.

Action: Regenerate the Direct Path API stream with a valid value for the SETID column.

ORA-26008: Invalid syntax or bind variable in SQL string for column *string*. *string*

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

ORA-26010: Column *string* **in table** *string* **is NOT NULL and is not being loaded**

Cause: A column which is NOT NULL in the database is not being loaded and will cause every row to be rejected.

Action: Load the column by specifying the NOT NULL column in the INTO TABLE clause in the SQL*Loader control file.

ORA-26011: Cannot load type *string* **into column** *string* **in table** *string*

Cause: A column can only store data of type declared for that column. And a substitutable column can only store data of valid subtypes of the supertype declared for that column.

Action: Check that the type or subtype specified is valid for that column.

ORA-26012: header in file *string* **has an incompatible version number**

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

ORA-26013: List allocated may not be big enough

Cause: There seems to be a discrepancy between the size for a list or buffer allocated by direct path api and the size needed.

Action: Contact Oracle Customer Support.

ORA-26014: unexpected error on *string string* while retrieving *string string*

Cause: The SQL error was returned from an OCIStmtExecute call.

Action: Correct the SQL error that was returned.

ORA-26015: Array column *string* in table *string* is not supported by direct path

Cause: User attempted to load an array column via the direct path.

Action: Use the conventional path.

ORA-26016: Virtual column *string* in table *string.string* cannot be loaded by direct path

Cause: You attempted to load an virtual column using the direct path.

Action: Virtual columns cannot be loaded using the direct path.

ORA-26017: global indexes not allowed for direct path load of table partition *string*

Cause: Global indexes are defined on a table when direct path loading a single partition of the table.

Action: None

ORA-26018: Column *string* in table *string* does not exist

Cause: Column specified in the loader control file does not exist.

Action: Make sure the column exists and that you have privileges on it. Correct the loader control file if it is wrong.

ORA-26019: Column *string* in table *string* of type *string* not supported by direct path

Cause: The Specified column of SQL column type %s is not supported by the direct path loader.

Action: If the column is NULLable, remove it from the control file description. Then it will be loaded as a NULL.

ORA-26020: index *string.string* loaded successfully with *string* keys

Cause: Non-partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26021: index *string.string* partition *string* loaded successfully with *string* keys

Cause: Partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26022: index *string.string* was made unusable due to:

Cause: A Non-partitioned index was made index unusable due to the error displayed below this error.

Action: Depending on the error, either rebuild the index, or drop and re-create it.

ORA-26023: index *string.string* **partition** *string* **was made unusable due to:**

Cause: A partition of a partitioned index was made index unusable due to error displayed below this error.

Action: Depending on the error, either rebuild the index partition, or drop and re-create the entire index.

ORA-26024: SKIP_UNUSABLE_INDEXES requested and index segment was initially unusable

Cause: User requested SKIP_UNUSABLE_INDEXES option, and the index segment

* was in unusable state prior to the beginning of the load.

Action: Informational only. User will need to either rebuild the index

* or index partition, or re-create the index.

ORA-26025: SKIP_INDEX_MAINTENANCE option requested

Cause: User requested that index maintenance be skipped on a direct path load.

Action: The listed index was put into Index Unusable state due to the user requesting that index maintenance be skipped. Either rebuild the index or index partitions, or drop and re-create the index.

ORA-26026: unique index *string.string* **initially in unusable state**

Cause: A unique index is in IU state (a unique index cannot have

* index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use

* SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26027: unique index *string.string* **partition** *string* **initially in unusable state**

Cause: A partition of a unique index is in IU state (a unique index

* cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use

* SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26028: index *string.string* **initially in unusable state**

Cause: An index is in IU state prior to the beginning of a direct

* path load, it cannot be maintained by the loader.

Action: Either rebuild the index, re-create the index, or use either

* SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26029: index *string.string* **partition** *string* **initially in unusable state**

Cause: A partition of an index is in IU state prior to the beginning

* of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild index partition, re-create the index, or use either

* SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26030: index *string.string* had *string* partitions made unusable due to:

    Cause: A logical index error occurred on a partitioned index which

    * affected one or more index partitions, which are listed below

    * this message.

    Action: The affected index partitions will have to be re-built, or, the

    * entire index dropped and re-created.

ORA-26031: index maintenance error, the load cannot continue

    Cause: A index errror occurred during the index maintenance phase of

    * a direct path load. The load cannot continue. See error message

    * below this message.

    Action: See action for the error message which follows this one.

ORA-26032: index *string.string* loading aborted after *string* keys

    Cause: An index error occurred during direct-load of an index-organized table.

    * Loading had to be aborted. No rows were loaded.

    Action: Check the key just following the number of keys mentioned above.

    * This key caused the index problem mentioned in an earlier message. *

ORA-26033: column *string.string* encryption properties differ for source or target table

    Cause: The source and destination columns did not have the same

    * encryption properties.

    Action: For security reasons, check that the source and target table have

    * the same encryption properties. *

ORA-26034: Column *string* does not exist in stream

    Cause: Column specified in the column list does not exist in the stream.

    Action: Make sure the column exists or remove it from the list.

ORA-26035: Error attempting to encrypt or decrypt column

    Cause: An error occurred while attemping to encrypt or decrypt

    * a database column.

    Action: Verify correct encryption key was specified. *

ORA-26036: subpartition load specified but table *string* is not subpartitioned

    Cause: The Loader control file contains a PARTITION clause but the table being loaded is not subpartitioned.

    Action: Remove the subpartition specification from the SQL*Loader control file and retry the load.

ORA-26037: must specify partition name(s) for system partitioned table *string*

    Cause: An attempt was made to load a system partitioned table with no partition name(s) specified.

    Action: Specify the partition name(s) explicitly.

ORA-26040: Data block was loaded using the NOLOGGING option

Cause: Trying to access data in block that was loaded without

* redo generation using the NOLOGGING/UNRECOVERABLE option

Action: Drop the object containing the block.

ORA-26041: DATETIME/INTERVAL datatype conversion error

Cause: The column could not be converted from DATETIME

* datatype to internal DATETIME/CHARACTER datatype.

Action: Contact Oracle Customer Support.

ORA-26045: REF column *string* expects *string* arguments; found *string*.

Cause: The number of arguments for the REF column is incorrect.

Action: Specify the correct number of input arguments for REFs.

1. Unscoped system-generated REFs can have exactly 1 or 2 input arguments. a) It has exactly 1 input argument (one for the OID value) if a fixed table name was specified through OCI_DIRPATH_EXPR_REF_TBLNAME. b) It has exactly 2 input arguments (one for the table name and one for the OID value) if a fixed table name was not specified through OCI_DIRPATH_EXPR_REF_TBLNAME.

2. Scoped system-generated REFs can have 1 or 2 input arguments. Because a table name argument is not needed for a scoped ref, only 1 argument (OID value) is expected. But if the table name argument is given, it"s still accepted.

3. Scoped primary-key REFs with N columns in its primary-key OID can have N or N+1 input arguments. Because a table name argument is not needed for a scoped ref, only N arguments (making up the OID value) is expected. But if the table name argument is given, it"s still accepted.

ORA-26046: REF column *string* expects scoped table name *string*; user passed in *string*.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26048: Scoped REF column has wrong table name.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26049: Unscoped REF column has non-existent table name.

Cause: The table name passed in by the user does not exist in the schema.

Action: Specify a valid table name for the unscoped REF column.

ORA-26050: Direct path load of domain index is not supported for this column type.

Cause: Direct path can not load a domain index of that column type.

Action: Drop the index and try again or load using conventional path.

ORA-26051: internal error parsing packed decimal format string

Cause: A packed decimal field with a non-zero scale factor is mapped to a character column. In order to perform the datatype conversion, a numeric format string must be created based on the input field"s precision and scale specifications. Direct path loader encountered an error in creating this format string.

Action: Examine the packed decimal field"s precision and scale specifications and make sure that they contain valid values.

ORA-26052: Unsupported type *number* **for SQL expression on column** *string*.
> **Cause:** The direct path api does not support a SQL expression on a column of that type.
>
> **Action:** Make sure the types are correct.

ORA-26053: Row was not loaded due to conversion error.
> **Cause:** The current row was not loaded due to a conversion error.
>
> **Action:** Continue with the load anyways. 260xx - 260xx Direct Path API

ORA-26054: Direct Path Context prepared for a different mode than operation requested.
> **Cause:** The user prepared the direct path context for one operation (Load, Unload, Convert), but then tried to perform a different operation.
>
> **Action:** Make sure the direct path context mode and operation matches.

ORA-26055: Invalid buffer specified for direct path unload
> **Cause:** The user specified a zero length or null buffer to be used for the Direct Path Unload operation.
>
> **Action:** Specify a valid buffer and length.

ORA-26056: Requested direct path operation on a view is not supported.
> **Cause:** User attempted to unload or load from/into a view via direct path.
>
> **Action:** Unload from or load into a normal table.

ORA-26057: Conversion is not necessary for this direct path stream.
> **Cause:** User attempted to convert a direct path stream that does not require conversion.
>
> **Action:** Load the stream without conversion it.

ORA-26058: unexpected error fetching metadata for column *string* **in table** *string*
> **Cause:** The direct path API encountered an unexpected error while retrieving metadata for a column.
>
> **Action:** Contact Oracle support.

ORA-26059: Data is too large for column *string*
> **Cause:** The direct path API encountered a column that can not be loaded because the input data is too large for a column.
>
> **Action:** Make the target column larger.

ORA-26060: Can not convert type identifier for column *string*
> **Cause:** The direct path API encountered a type identifier for a column that can not be loaded because a mapping can not be found for the input value.
>
> **Action:** Verify the input data.

ORA-26061: Concurrent direct unloads is not allowed.
> **Cause:** User attempted a direct unload when another is still in progress.
>
> **Action:** Complete the current direct unload before starting another.

ORA-26062: Can not continue from previous errors.

Cause: User attempted to continue a direct path load after receiving an error which indicates the load can not continue.

Action: Address the original error that was returned.

ORA-26063: Can not flashback to specified SCN value - Wrap: *string* **Base:** *string*.

Cause: User specified an SCN which occurs before the last time the table definition was modified.

Action: Specify a more recent SCN.

ORA-26064: Invalid SCN specified - Wrap: *string* **Base:** *string*.

Cause: User specified an invalid SCN.

Action: Specify a valid SCN.

ORA-26065: check constraint cannot reference column, *string*, **in direct path load**

Cause: An enabled check constraint was found on a column stored as a lob.

Action: Either disable the check constraint before loading the table data

* using the direct path mode, or use the conventional path mode

* instead.

ORA-26076: cannot set or reset value after direct path structure is allocated

Cause: Client attempted to set or reset the number of rows in a direct path

* structure after it has already been allocated and initialized.

* Attributes used is one of the following:

* - OCI_ATTR_NUM_ROWS: to set # of rows in a direct path column array

* - OCI_ATTR_DIRPATH_DCACHE_SIZE: to set size of a date cache

* (default is 0)

* - OCI_ATTR_DIRPATH_DCACHE_DISABLE: to set whether date cache will be

* disabled on overflow (default is FALSE)

Action: Set the following attributes before:

* - OCI_ATTR_NUM_ROWS: before calling OCIHandleAlloc for column array

* - OCI_ATTR_DIRPATH_DCACHE_SIZE: before calling OCIDirPathPrepare

* - OCI_ATTR_DIRPATH_DCACHE_DISABLE: before calling OCIDirPathPrepare

ORA-26077: direct path column array is not initialized

Cause: Client attempted to allocate a column array for a direct path

* function context before allocating a column array for the

* table-level direct path context.

Action: Allocate the table-level direct path context"s column array

* via OCIHandleAlloc before allocating column arrays for

* direct path function contexts.

ORA-26078: file "*string***" is not part of database being loaded**

Cause: A parallel load file was specified which is not part

* of the database.

Action: Check filename and pathname for correctness.

ORA-26079: file "*string*" is not part of table *string.string*
Cause: A parallel load file was specified which is not in the

* tablespace of the table being loaded.

Action: Check to make sure that the specified parallel load file

* is in the tablespace of the table being loaded.

ORA-26080: file "*string*" is not part of table *string.string* partition *string*
Cause: A parallel load file was specified which is not in the

* tablespace of the table (partition, subpartition) being loaded.

* When a partitioned table is being loaded, the file must be

* in the tablespace of every partition or subpartition

* (i.e. each (sub)partition must be in the same tablespace).

Action: Specify a different parallel load file, or no file at all.

ORA-26082: load of overlapping segments on table *string.string* is not allowed
Cause: Client application is attempting to do multiple direct path load

* operations on the same table, but the segments overlap.

Action: Check the partition names (subname attribute of the direct path

* context) being loaded. Make sure you are not loading a table,

* and a partition of the same table. Make sure you are not

* loading a partition, and a sub-partition within the same

* partition.

ORA-26083: unsupported direct path stream version *string*
Cause: The stream version requested is not supported by the server.
Action: Check to make sure that the VERSION attribute of the direct

* stream is not being set to an invalid value.

ORA-26084: direct path context already finished
Cause: An OCIDirPathLoadStream operation was attempted after

* OCIDirPathFinish was called. Once a direct path operaton

* has been finished, no more data can be loaded.

Action: Check program logic to make sure OCIDirPathLoadStream is

* not called after OCIDirPathFinish.

ORA-26085: direct path operation must start its own transaction
Cause: A direct path operation is being attempted within a transaction

* that has already been started.

Action: Commit the transaction and Prepare the direct path operation again.

ORA-26086: direct path does not support triggers
Cause: A direct path operation is being attempted on a table which

* has enabled triggers.

Action: Disable the triggers on the table and try again.

ORA-26088: scalar column "*string*" must be specified prior to LOB columns
    Cause: All scalar columns (i.e. non-LOB and non-LONG columns) must be

    * specified by the client of the direct path API prior to

    * specifying any LOB columns.

    Action: Specify all scalar columns prior to specifying any LOB columns.

ORA-26089: LONG column "*string*" must be specified last
    Cause: A client of the direct path API specified a LONG column to be

    * loaded, but the LONG column was not the last column to be

    * specified.

    Action: Specify the LONG column last.

ORA-26090: row is in partial state
    Cause: A direct path operation is being finished or a data save request

    * has been made, but the table for which the request is being made

    * on has a row in partial state. The row must be completed before

    * the segment high water marks can be moved.

    Action: Either complete the row, or abort the direct path operation.

ORA-26091: requested direct path operation not supported
    Cause: A direct path operation was requested that is not supported
    Action: Do not use that operation. Currently, UNLOAD is not supported.

ORA-26092: only LONG or LOB types can be partial
    Cause: A column which is not a LONG or LOB had the

    * OCI_DIRPATH_COL_PARTIAL flag associated with it.

    * Only LONG or LOB type columns can be loaded in pieces.

    Action: Do not use the OCI_DIRPATH_COL_PARTIAL flag for the column.

ORA-26093: input data column size (*number*) exceeds the maximum input size (*number*)
    Cause: The user attempted to specify a column size (%d) that exceeded

    * the maximum allowable input size (%d)."

    Action: Make sure the input column metadata matches the column definition.

ORA-26094: stream format error: input column overflow
    Cause: An input stream contained data for more input columns

    * than specified by the client of the direct path API.

    Action: Make sure that the stream being loaded is for the

    * correct table. Check initialization sequence.

ORA-26095: unprocessed stream data exists
    Cause: Either a OCIDirPathLoadStream call was made which provided

    * more stream data prior to the server being able to fully

* process the stream data that it already has, or a

* OCIDirPathFinish call was made when the server had

* unprocessed stream data.

Action: Most likely an application mis-use of the direct path API.

* Make sure that the stream is not being reset inadvertently

* prior to any previous stream data being processed, or, that

* OCIDirPathFinish is not being called prematurely (i.e. stream

* pushed, error encountered and LoadStream not called to process

* the remainder of the stream before Finish is called.)

ORA-26096: transfer size too small for row data (*number* bytes required)
    Cause: Either the transfer buffer size specified, or the default

    * transfer buffer size (if you did not specify a size), is

    * too small to contain a single row of the converted row data.

    Action: Set the transfer buffer size attribute of the direct path

    * context to be larger.

ORA-26097: unsupported conversion for column *string* (from type *number* to type *number*)
    Cause: The direct path api does not support the required conversion.

    Action: Make sure the types are correct. *

ORA-26098: direct path context is not prepared
    Cause: A direct path api function was called with a direct path

    * context which has not been prepared.

    Action: Make sure all necessary attributes in the direct path

    * context have been set, and the context is prepared via

    * OCIDirPathPrepare.

ORA-26099: direct path context is already prepared
    Cause: OCIDirPathPrepare was called with a context that has already

    * been prepared.

    Action: Free the direct path context, set necessary attributes, and

    * call OCIDirPathPrepare.

ORA-26101: tablespace # in file header is *string* rather than *string* for file *string*
    Cause: The tablespace number in the file header is inconsistent with that in the control file.

    Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26102: relative file # in file header is *string* rather than *string* for file *string*
    Cause: The relative file number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26103: V6 or V7 data file used to create control file

Cause: The file header of the referenced file is in V6 or V7 format.

Action: Either remove the file from the create control file command, or somehow migrate the file header to V8 format.

ORA-26500: error on caching "*string*"."*string*"

Cause: Attempt to cache the replication information which is unavailable in the catalog for the object.

Action: Use dbms_reputil.sync_up_rep to validate the replication catalog, or use dbms_reputil.make_internal_pkg to validate internal package.

ORA-26501: RepAPI operation failure

Cause: An external RepAPI operation failed.

Action: consult detail error message.

ORA-26502: error resignal

Cause: An internal service failed and signalled an error"

Action: consult detail error message.

ORA-26503: internal RepAPI operation failure on object *string.string*

Cause: An unexpected internal RepAPI failure was detected

Action: Contact Oracle support.

ORA-26504: operation not implemented

Cause: The caller requested a RepAPI operation that was not implemented

Action: Do not issue this call.

ORA-26505: unexpected internal null

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26506: null global context

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26507: null master connection

Cause: The master connection handle was or became invalid.

Action: Verify that the master connection is valid.

ORA-26508: null materialized view connection

Cause: The client connection handle was or became invalid.

Action: Verify that the client connection is valid.

ORA-26509: null materialized view control structure

Cause: An internal materialized view control structure could not be obtained.

Action: Check that the owner and users provided are correct.

ORA-26510: materialized view name: "*string*" is greater than max. allowed length of *string* bytes

Cause: The specified materialized view name was too long.

Action: Shorten the materialized view name.

ORA-26511: master table "*string.string*" not found

Cause: A RepAPI operation was attempted against a non-existent or invalid master table

Action: Verify that the master table object exists.

ORA-26512: error pushing transaction to def$error

Cause: An unexpected error occurred while sending an def$error rpc to the master site

Action: Verify that the DBMS_DEFER package is valid and executable by the RepAPI client. Contact the local or master site administrator, if necessary.

ORA-26513: push error: master proc. *string*$RP.*string* failed for trans:*string* seq:*string*

Cause: A conflict/error occurred at the master site while executing a $RP.rep_insert(), rep_update(), or rep_delete() function which was not handled by conflict resolution logic at the master.

Action: Notify master site system adminstrator or DBA.

ORA-26514: object "*string.string*" not found

Cause: The specified object was expected but not found.

Action: Verify that the specified object exists and is valid.

ORA-26515: no master log available for "*string.string*"

Cause: The specified master log was not found or available for the named table.

Action: Create the master log at the master site or correct any problems that may exist with the log.

ORA-26516: no push transaction acknowledgement

Cause: RepAPI was unable to confirm that the last pushed transaction was successfully commited by the master site.

Action: Verify that the communications link between the local site and the master site is still valid. If the transaction has not been committed at the master, repush the transaction.

ORA-26517: materialized view control entry for "*string.string*" was not found

Cause: The specified materialized view catalog control reocrd was not found.

Action: Verify that the local materialized view catalog is valid and that the local materialized view is properly defined.

ORA-26518: push queue synchronization error detected

Cause: Client tried to repush a transaction has already been committed at the master site. A common cause of this problem is an error at the local site in initializing or updating the local site transaction sequence mechanism.

Action: Verify that transaction data that RepAPI was attempting to repushed to the master site exists at the master table and is valid and consistent with the local site. If this error occurs, redundantly identified transactions are ignored and then purged from the local updatable materialized view logs. Check that the local site is correctly assigning new transactionIDs and is not accidently generating non-unique values.

ORA-26519: no memory available to allocate

Cause: There was no memory left for the RepAPI process. This error may occur when RepAPI is trying to allocate a new table buffer area.

Action: Shutdown one or more local applications to attempt to free heap memory and retry the RepAPI operation.

ORA-26520: internal memory failure

Cause: An internal memory error was detected.

Action: Check if other errors have occurred or determine if any local application may have corrupted the memory subsystem.

ORA-26521: rpc initialization error

Cause: An error occurred during the initialization of a PL/SQL rpc.

Action: Verify that the procudure to be invoked exists and is valid at the master site and is executable by the RepAPI user.

ORA-26522: rpc execution error

Cause: An error occurred during the execution of a PL/SQL rpc.

Action: Check the error messages from the remote procedure and fix any remote site problems that may be preventing the execution of the invoked rpc.

ORA-26523: rpc termination error

Cause: An error occurred during the termination of a PL/SQL rpc. This is usually caused by master site being unable to close an opened cursor or if RepAPI cannot deallocate internal memory.

Action: Fix any server side problems first, determine if the RepAPI memory subsystem has been corrupted.

ORA-26524: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

ORA-26525: session connection attempt failed for *string* (@*string*)

Cause: A connection could not be established to the specified database using the provided connection string.

Action: Check that the user, password, connect string, names services, network, and any remote site listener process are properly installed and working.

ORA-26526: materialized view sql ddl parse/expansion failed for *string.string*

Cause: The client sql materialized view definition query could not be properly parsed by the master Oracle site.

Action: Check that materialized view ddl sql is compatible with the currently connected version of Oracle and does not violate any of the RepAPI sql limitations or restrictions.

ORA-26527: local store callback init phase failed for "*string.string*"

Cause: The client callback failed during its INIT phase for the named object.

Action: Verify that the objects referenced by the client callback exist and are valid. Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26528: local store callback proc phase failed for "*string.string*"

Cause: The client callback failed during its PROC phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26529: local store callback term phase failed for "*string.string*"

Cause: The client callback failed during its TERM phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26530: unable to build materialized view refresh control list

Cause: The materialized view control list could not be constructed. This is generally the result of an error while accessing the local materialized view catalog.

Action: Verify that the named materialized view(s) are properly defined and valid.
