Action: No action is required.

RMAN-08128: uncataloged backup piece
    Cause: This is an informational message only.
    Action: No action is required.

RMAN-08129: failover to piece handle=*string* tag=*string*
    Cause: This is an informational message to indicate the server found a corrupted block in a piece and had to switch to another copy of piece to get corresponding un-corrupted block.
    Action: See alert log for information on corruption block(s) and the name of the piece that has the corrupted block(s).

RMAN-08130: failover to copy on device type *string*
    Cause: This is an informational message to indicate the RMAN could not successfully restore the database using the specified backups. An attempt was made to restore the datafiles/archived logs/ control file/SPFILE using the same backup set on a different device type.
    Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08131: channel *string*: specifying datafile copies to recover
    Cause: This is an informational message only.
    Action: No action is required.

RMAN-08132: WARNING: cannot update recovery area reclaimable file list
    Cause: This error should be accompanied by other errors giving the cause of failure to update reclaimable file list.
    Action: Check the accompanying error.

RMAN-08133: channel *string*: the AUTOBACKUP does not contain a standby control file.
    Cause: The requested AUTOBACKUP did not contain a standby control file.
    Action: No action is required, RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08135: some corrupt blocks found during conversion of file *string*
    Cause: While converting the specified file from one platform to another, some corrupt blocks were discovered in the specified file. Details about the corruption have been written to a server trace file.
    Action: If these corrupt blocks are unexpected, you may be able to use Block Media Recovery at the source database to fix the problem, then re-convert the files.

RMAN-08136: channel *string*: deleting incremental backup(s)
    Cause: This is an informational message only.
    Action: No Action Required.

RMAN-08137: WARNING: archived log not deleted as it is still needed
    Cause: An archived log that should have been deleted was not as it was required by Streams, Data Guard or Guaranteed Restore Point. The next message identifies the archived log.

Action: This is an informational message. The archived log can be deleted after it is no longer needed. See the documentation for Data Guard to alter the set of active Data Guard destinations. See the documentation for Streams to alter the set of active streams. See the documentation for Guaranteed restore point for set of active restore points.

RMAN-08138: WARNING: archived log not deleted - must create more backups

Cause: An archived log that should have been deleted was not as it it did not meet the user specified archive log deletion policy of number of backups required before deleting the logs.

Action: This is an informational message. The archived log can be deleted after more backups are created to satify archivelog deletion policy.

RMAN-08139: WARNING: archived redo log not deleted, needed for guaranteed restore point

Cause: An archived log that should have been deleted was not because it is required for guaranteed restore point.

Action: This is an informational message. The archived redo log can be deleted after backups are created or after deleting the guaranteed restore point that requires the log.

    Cause: This is an informational message only.

    Action: No action is required.

RMAN-08602: channel *string*: no AUTOBACKUPS found in ASM disk group *string*

    Cause: The specified ASM area does not have desired AUTOBACKUP.

    Action: Check the option UNTIL TIME in case an existing AUTOBACKUP does satisfy the criteria specified in the restore command. Otherwise, verify the values used for the format of the CONFIGURE CONTROLFILE AUTOBACKUP FORMAT command and DB_UNIQUE_NAME to verify whether the ASM area location is set correctly. Note that the DB_UNIQUE_NAME can be specified as option to the restore command.

RMAN-08603: skipping *string*; file in use by another process

    Cause: The indicated file was not included in the backup because it is part of another restore or delete operation.

    Action: No action is required. Wait for the other operation to complete, then retry.

RMAN-08604: skipping *string*; file deleted from recovery area to reclaim disk space

    Cause: The indicated file was not included in the backup because it was deleted from the flash recovery area to reclaim disk space for other operations.

    Action: No action is required.

RMAN-08605: channel *string*: SID=*string* instance=*string* device type=*string*

    Cause: This is an informational message only.

    Action: No action is required.

RMAN-08606: WARNING: The change tracking file is invalid.

    Cause: Backup found changed blocks that were not marked in the change tracking file. See alert log for more information.

    Action: Do not use any of the incremental backups taken since the last full backup.

RMAN-08607: List of remote backup files

    Cause: RESTORE command detected that one or more remote backup files were required to perform restore operation.

    Action: Recall the media from remote site that contains the specified backup files before actual restore operation. The message should be accompanied with the list of remote backup files.

RMAN-08608: Initiated recall for the following list of remote backup files

    Cause: This is an informational message displayed when the specified RECALL option of the RESTORE command detected that one or more remote backup files were required to perform the restore operation. The message indicated that RMAN had initiated the request on SBT channel to recall the remote backup files.

    Action: No action required.

RMAN-08609: channel *string*: starting incremental datafile backup set

    Cause: This is an informational message only.

    Action: No action is required.

RMAN-08610: channel *string*: restoring datafile *string* to *string*

    Cause: This is an informational message only.

    Action: No action is required.

RMAN-08611: channel *string*: piece handle=*string* tag=*string*

    Cause: This is an informational message only.

    Action: No action is required.

RMAN-08612: channel *string*: failover to duplicate backup on device *string*

    Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the datafiles/archived logs/ control file/SPFILE using a previous existing backup.

    Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08613: channel *string*: failover to piece handle=*string* tag=*string*

    Cause: This is an informational message to indicate the server found a corrupted block in a backup piece and had to switch to another copy of the piece to get the same block.

    Action: See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08614: channel *string*: errors found reading piece handle=*string*

    Cause: This is an informational message to indicate the server found a corrupted block in a backup piece. Accompanying error will describe the action taken.

    Action: See alert log for more information.

RMAN-08615: channel *string*

> **Cause:** This is an informational message to indicate the server could not perform the restore due to the included errors. A least recent backup set will be used to perform the restore.

> **Action:** See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08616: validating blocks *string* **through** *string*

> **Cause:** This is an informational message only

> **Action:** No action is required.

RMAN-08617: validation failed for foreign archived log

> **Cause:** The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log could not be found or no longer contained the same data, so its record was marked expired.

> **Action:** None - this is an informational message.

RMAN-08618: validation succeeded for foreign archived log

> **Cause:** The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log still matches its data.

> **Action:** None - this is an informational message.

RMAN-08619: foreign archived log file name=*string* **RECID=***string* **STAMP=***string*

> **Cause:** This is an informational message only.

> **Action:** No action is required.

RMAN-08620: uncataloged foreign archived log

> **Cause:** This is an informational message only.

> **Action:** No action is required.

RMAN-08621: deleted foreign archived log

> **Cause:** This is an informational message only.

> **Action:** No action is required.

RMAN-10000: error parsing target database connect string "*string***"**

> **Cause:** An invalid target connect string was supplied.

> **Action:** Specify a valid connect string and re-run the job.

RMAN-10001: error parsing recovery catalog connect string "*string***"**

> **Cause:** An invalid recovery catalog connect string was supplied.

> **Action:** Specify a valid connect string and re-run the job.

RMAN-10002: ORACLE error: *string*

> **Cause:** The specified Oracle error was received. This message should be accompanied by other error message(s) indicating the cause of the error.

> **Action:** Check the accompanying errors.

RMAN-10003: unable to connect to target database

> **Cause:** Recovery manager was unable to connect to the target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Ensure that that the target database is started, and that the connect string is valid.

RMAN-10004: unable to connect to recovery catalog

Cause: Recovery manager was unable to connect to the recovery catalog

Action: Ensure that that the recovery catalog is started, and that the connect string is valid. This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-10005: error opening cursor

Cause: An error was received while trying to open a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10006: error running SQL statement: *string*

Cause: An error message was received while running the SQL statement shown.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10007: error closing cursor

Cause: An error was received while trying to close a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10008: could not create channel context

Cause: An error was received while trying create a channel context. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10009: error logging off of Oracle

Cause: An error was received while disconnecting from Oracle. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: This is an informational message only.

RMAN-10010: error while checking for RPC completion

Cause: Recovery Manager"s channel context had an error while checking to see if a remote procedure call had completed. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10011: synchronization error while polling for rpc *number*, **action=***string*

Cause: Recovery Manager could not synchronize properly with a remote procedure call.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10012: KGU error: *string*

Cause: An error occurred while initializing the KGU subsystem

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10013: error initializing PL/SQL

Cause: An error occurred while initializing the PL/SQL subsystem.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10014: PL/SQL error *number* on line *number* column *number*: *string*

Cause: PL/SQL error

Action: The text of this message will be issued by the PL/SQL subsystem. See the PL/SQL error message manual.

RMAN-10015: error compiling PL/SQL program

Cause: An error occurred while compiling a PL/SQL program.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10018: error cleaning up channel context

Cause: An error was received during inter-step cleanup of a channel context.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10020: error initializing Recovery Manager execution layer

Cause: An error was received while initializing the Recovery Manager execution layer in preparation for running a job. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10022: error in system-dependent sleep routine

Cause: An error was received while waiting for a remote RPC to complete. The error occurred in the system-dependent sleep routine.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10023: RPC attempted to unrecognized package

Cause: The Recovery Manager internal RPC router received a package name that it could not understand.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10024: error setting up for rpc polling

Cause: The Recovery Manager could not create the RPC polling context which is required to test for RPC completion. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10025: connection is already registered for events

Cause: The Recovery Manager could not enable the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10026: network error *number-number* **occurred registering connection**

Cause: An network error occurred while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support.

RMAN-10027: could not locate network layer context

Cause: Recovery Manager could not locate a necessary context area while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10028: network error *number-number* **occurred during remote RPC**

Cause: An network error occurred while waiting for a remote RPC to complete.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support.

RMAN-10029: unexpected return code *number* **from PL/SQL execution**

Cause: PL/SQL returned an unexpected return code while executing one channel program.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10030: RPC call appears to have failed to start on channel *string*

Cause: An RPC to a target database instance was issued, but was not observed to start within 5 timeouts.

Action: This error is probably accompanied by other error messages giving the precise cause of the failure.

RMAN-10031: RPC Error: ORA-*number* **occurred during call to** *string.string*

Cause: An RPC to the target database or recovery catalog database encountered an error.

Action: This error is accompanied with the error message from the server where the error occurred.

RMAN-10032: unhandled exception during execution of job step *number*: *string*

Cause: An unhandled PL/SQL exception occurred during a job step.

Action: This error is accompanied by the error messages describing the exception.

RMAN-10033: error during compilation of job step *number*: *string*

Cause: PL/SQL detected a problem during the compilation of a job step

Action: This error message is accompanied by the error messages describing

RMAN-10034: unhandled exception during execution of job step *number*, **error unknown**

Cause: PL/SQL detected an unhandled exception during execution of a job step, but no further information available

Action: None

RMAN-10035: exception raised in RPC: *string*

> **Cause:** A call to a remote package resulted in an exception.

> **Action:** The exception should indicate what went wrong.

RMAN-10036: RPC call OK on channel *string*

> **Cause:** This is just an informational message. It should be preceded by message 10030.

> **Action:** No action is required.

RMAN-10037: RPC anomaly detected on channel *string*, **UPINBLT=***number*

> **Cause:** This is an debugging message and can be ignored.

> **Action:** No action is required.

RMAN-10038: database session for channel *string* **terminated unexpectedly**

> **Cause:** The database connection for the specified channel no longer exists. Either the session was terminated by some external means or the channel terminated because of an internal error.

> **Action:** Check for an oracle trace file for detailed information on why the session terminated.

RMAN-10039: error encountered while polling for RPC completion on channel *string*

> **Cause:** This error should be accompanied by other errors giving the cause of the polling error.

> **Action:** Check the accompanying errors.

RMAN-10040: asynchronous support not detected, RMAN will run synchronously

> **Cause:** The database connection does not support asynchronous operation, so RMAN will not multi-task work among multiple channels. Multiple channels can still be allocated, but they will not run work concurrently.

> **Action:** Use a connection type that supports asynchronous operations.

RMAN-10041: Could not re-create polling channel context following failure.

> **Cause:** The RPC polling context, which is required to test for RPC completion, failed and Recovery Manager could not re-create this channel. This message should be accompanied by other error messages indicating the cause of the error.

> **Action:** If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-11000: message number *number* **not found in recovery manager message file**

> **Cause:** Recovery manager message file is out of date.

> **Action:** Make sure that the recovery manager error message file is current and installed in the correct location.

RMAN-11001: Oracle Error: *string*

> **Cause:** This is an informational message only.

> **Action:** No action is required.

RMAN-11002: could not open a cursor to the target database

> **Cause:** This is an informational message only.

> **Action:** No action is required.

RMAN-11003: failure during parse/execution of SQL statement: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-11004: format requires %c when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-11005: conflicting media information for piece "*string***"**

Cause: While restoring the specified backup piece, RMAN received conflicting information about the physical location of the piece from the Media Management software. This can cause poor restore performance.

Action: If RMAN does not parallelize the restore from all of the available channels, then you should contact the Media Management vendor.

RMAN-11006: WARNING: test recovery results: *string*

Cause: User called recover database with the test option

Action: None required

RMAN-12000: execution layer initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12001: could not open channel *string*

Cause: An ALLOCATE CHANNEL command could not be processed.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-12005: error during channel cleanup

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12007: cannot allocate more than *number* **channels**

Cause: The maximum number of RMAN channels has been exceeded. Note that one channel is reserved for RMAN.

Action: Allocate fewer channels. Contact Oracle if you have a need for more channels in a single job.

RMAN-12008: could not locate backup piece *string*

Cause: There was at least 1 backup set that could not be accessed by any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster

RMAN-12009: command aborted because some backup pieces could not be located

Cause: Same as 7008.

Action: Refer to 7008.

RMAN-12010: automatic channel allocation initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12011: multiple records for default device type found in catalog

Cause: configuration for default device type not consistent.

Action: re-run CONFIGURE DEFAULT DEVICE TYPE command to set device type.

RMAN-12012: multiple records for *string* parallelism found in catalog

Cause: configuration for device parallelism is not consistent.

Action: re-run CONFIGURE PARALLELISM command for device to set parallelism.

RMAN-12013: multiple records for *string* channel *number* found in catalog

Cause: configuration for the channel is not consistent.

Action: re-run CONFIGURE CHANNEL command to configure this channel.

RMAN-12014: multiple records for default channel configuration for *string* found in catalog

Cause: configuration for the channel is not consistent.

Action: re-run CONFIGURE CHANNEL command to configure the channel.

RMAN-12015: configuration for *string* channel *number* is ignored

Cause: This is an informational message only. Parallelism for the device is less than associated channel number.

Action: To use this configuration increase parallelism for this device. To clear this configuration use CONFIGURE CHANNEL... CLEAR command.

RMAN-12016: using channel *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-12017: could not locate pieces of backup set key *string*

Cause: No copies of the specified backup set key can be accessed on any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster, or, if the backup pieces have been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog entries.

RMAN-12018: channel *string* disabled, job failed on it will be run on another channel

Cause: This is an informational message displayed whenever a retryable error occurs for the job and there are channels available to run this step.

Action: No action is required.

RMAN-12019: continuing other job steps, job failed will not be re-run

Cause: This is an informational message displayed whenever there is a non-retryable error occurred for the job.

Action: No action is required.

RMAN-12020: error on step filtered for normal output *string*

Cause: This message is added when stacking errors for failed jobs after channel failover was performed. It will be filtered from normal output.

Action: No action is required.

RMAN-20000: abnormal termination of job step

Cause: A job step encountered an error and could not recover. This error should be followed by other errors indicating the cause of the problem.

Action: Check the accompanying error.

RMAN-20001: target database not found in recovery catalog

Cause: target database is not found in the recovery catalog

Action: make sure that the target database is registered in the recovery recovery catalog

RMAN-20002: target database already registered in recovery catalog

Cause: target database is already registered in the recovery catalog

Action: if the target database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20003: target database incarnation not found in recovery catalog

Cause: RESETLOGS CHANGE# and/or time of the target database doesn"t match any database incarnation in the recovery catalog.

Action: if target database was opened with RESETLOGS option then use "reset database" to register the new incarnation.

RMAN-20004: target database name does not match name in recovery catalog

Cause: name of the target database doesn"t match the one stored in the recovery catalog

Action: This is an internal error.

RMAN-20005: target database name is ambiguous

Cause: two or more databases in the recovery catalog match this name

Action: None

RMAN-20006: target database name is missing

Cause: target database instance is not started or db_name initialization parameter is not set

Action: startup the instance and make sure that db_name parameter is set

RMAN-20009: database incarnation already registered

Cause: this incarnation is already registered in the recovery catalog

Action: No action is required.

RMAN-20010: database incarnation not found

Cause: database incarnation does not match any database incarnation in the recovery catalog

Action: specify a valid database incarnation key

RMAN-20011: target database incarnation is not current in recovery catalog

Cause: the database incarnation that matches the RESETLOGS CHANGE# and time of the mounted target database control file is not the current incarnation of the database

Action: If "reset database to incarnation <key>" was used to make an old incarnation current then restore the target database from a backup that matches the incarnation and mount it. You will need to do "STARTUP NOMOUNT" before you can restore the control file using RMAN. Otherwise use "reset database to incarnation <key>" make the intended incarnation current in the recovery catalog.

RMAN-20012: not authorized to register new database

Cause: You attempted to register a new database with this recovery catalog, but you are using a virtual private catalog, and you have not been granted permission by the catalog administrator to register this database with this recovery catalog

Action: Ask the catalog administrator to grant permission for you to register this database.

RMAN-20013: error upgrading virtual private catalog

Cause: An error occurred while automatically upgrading a virtual private catalog.

Action: Ensure that the virtual private catalog userid has all of the required privileges, such as being granted the RECOVERY_CATALOG_OWNER role.

RMAN-20014: virtual private catalog owner must be granted RECOVERY_ CATALOG_OWNER role

Cause: An attempt was made to establish a virtual private RMAN catalog in a schema that is not granted the RECOVERY_CATALOG_OWNER role.

Action: Grant RECOVERY_CATALOG_OWNER to the virtual private catalog owner.

RMAN-20015: not authorized to share this catalog

Cause: You attempted to share a recovery catalog but were not authorized to do this by the catalog administrator.

Action: Ask the catalog administrator to grant permission for you to share this catalog.

RMAN-20016: virtual private catalog user cannot modify global scripts

Cause: A virtual private catalog user attempted to create, delete, or modify a global script. Virtual private catalog users cannot modify global scripts.

Action: Connect to the catalog owner userid and retry the global script operation.

RMAN-20017: illegal script update operation

Cause: An illegal script operation was performed.

Action: None

RMAN-20018: database not found in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name was not registered in the recovery catalog.

Action: Correct the database name and re-issue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a database that is not yet registered, then re-issue the command using the database ID of the desired database.

RMAN-20019: database name not unique in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name is not unique in the recovery catalog.

Action: Re-issue the command specifying the database ID of the desired database.

RMAN-20029: cannot make a snapshot control file

Cause: another operation that needs the snapshot control file is in progress

Action: try again later if necessary

RMAN-20030: resync in progress

Cause: this procedure cannot be called while a resync is in progress

Action: This is an internal error.

RMAN-20031: resync not started

Cause: this procedure can only be called in a resync

Action: This is an internal error.

RMAN-20032: checkpoint CHANGE# too low

Cause: the checkpoint change# is less than the one of the previous resync or the checkpoint change# is null

Action: make sure that the right control file is used

RMAN-20033: control file SEQUENCE# too low

Cause: the control file sequence is less than the one of the previous resync

Action: make sure that the right control file is used

RMAN-20034: resync not needed

Cause: the control file has not changed since the previous resync

Action: nothing since the recovery catalog is in sync

RMAN-20038: must specify FORMAT for CONVERT command

Cause: No FORMAT was specified when using CONVERT command.

Action: Resubmit the command using FORMAT clause.

RMAN-20039: format requires *character* when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-20045: must specify FORMAT for BACKUP INCREMENTAL FROM SCN command

Cause: No FORMAT was specified when using BACKUP INCREMENTAL FROM SCN command.

Action: Resubmit the command using FORMAT clause.

RMAN-20079: full resync from primary database is not done

Cause: Resync from standby detected that a full resync from primary database is required. One of the following events on primary database may have caused this error: 1) one or more tablespaces or datafiles were added 2) one or more tablespaces or datafiles were dropped 3) one or more datafiles status changed

Action: Perform full resync after connecting to primary database.

RMAN-20081: change stamp for the record

Cause: A record with same recid and stamp is already known to catalog.

Action: None. This error is automatically handled by RMAN client by changing the stamp in control file during resync.

RMAN-20108: control file for remote database cannot be updated

Cause: RESYNC CATALOG FROM DB_UNIQUE_NAME command was attempted, but the control file at the database with DB_UNIQUE_NAME needs to be resynced directly instead of through the current target.

Action: Directly connect as target to the remote database with the specified DB_UNIQUE_NAME and resync.

RMAN-20109: remote database has different database ID

Cause: Command RESYNC CATALOG FROM DB_UNIQUE_NAME was executed and the database ID of the remote database was different than the connected target database.

Action: The remote database should have the same database ID as the database connected as the target database. Fix the connect identifier for the remote database and retry the command.

RMAN-20201: datafile not found in the recovery catalog

Cause: The specified datafile is not found in the recovery catalog

Action: make sure that the datafile name is correct and that the recovery catalog is up-to-date

RMAN-20202: Tablespace not found in the recovery catalog

Cause: the specified tablespace is not found in the recovery catalog

Action: make sure that the tablespace name is correct and that the recovery catalog is up-to-date

RMAN-20203: translation in progress

Cause: this procedure can not be called when name translation is in progress

Action: This is an internal error.

RMAN-20204: translation not started

Cause: GETDATAFILE procedure was called before TRANSLATETABLESPACE

Action: This is an internal error.

RMAN-20205: incomplete UNTIL clause

Cause: The sequence# was NULL

Action: This is an internal error.

RMAN-20206: log sequence not found in the repository

Cause: The specified log sequence does not exists in log history of the current database incarnation

Action: check the thread# and sequence#

RMAN-20207: UNTIL TIME or RECOVERY WINDOW is before RESETLOGS time

Cause: UNTIL TIME and RECOVERY WINDOW cannot be less than the database creation time or RESETLOGS time.

Action: Check the UNTIL TIME or RECOVERY WINDOW. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20208: UNTIL CHANGE is before RESETLOGS change

Cause: UNTIL CHANGE cannot be less than the database RESETLOGS change.

Action: Check the UNTIL CHANGE. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20209: duplicate datafile name

Cause: Two datafiles have the same name

Action: This is an internal error.

RMAN-20211: FROM TIME is before RESETLOGS time

Cause: FROM TIME cannot be less than the database creation time or RESETLOGS time.

Action: Check the FROM TIME. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20212: UNTIL CHANGE is an orphan incarnation

Cause: Specified UNTIL CHANGE was an orphan incarnation.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored or flashed back to an orphan incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20215: backup set not found

Cause: The specified backup set key was not found in the recovery catalog

Action: Specify a different backup set key.

RMAN-20217: datafile not part of the database

Cause: the datafile does not exists or did not exist at until time/scn

Action: check the datafile name or number. This is an internal error. for restore database or tablespace.

RMAN-20218: datafile not found in recovery catalog

Cause: This is an internal error.

Action: Contact Oracle Customer Support.

RMAN-20220: control file copy not found in the recovery catalog

Cause: the specified control file is not in the recovery catalog or it has been marked deleted

Action: check the file name

RMAN-20221: ambiguous control file copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: None

RMAN-20222: datafile name not found in recovery catalog or is ambiguous

Cause: The specified datafile name is not the name of a datafile that is currently part of the target database, or an UNTIL clause has been specified and the file name was for a different datafile at the time specified by the UNTIL clause than it is now.

Action: Use a datafile number to specify the datafile you want to RESTORE or RECOVER.

RMAN-20230: datafile copy not found in the recovery catalog

Cause: the specified datafile is not in the recovery catalog or it has been marked deleted

Action: check the datafile copy name or key

RMAN-20231: ambiguous datafile copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: use the datafile copy key to uniquely specify the datafile copy

RMAN-20240: archived log not found in the recovery catalog

Cause: the specified archived log was not found in the recovery catalog or it has been marked deleted

Action: check the archived log name or key

RMAN-20241: ambiguous archived log name

Cause: more than one archived log in the recovery catalog match the specified name

Action: use the archived log key to uniquely specify the archived log

RMAN-20243: database db_unique_name is not known to the recovery catalog

Cause: the user specified DB_UNIQUE_NAME not known to the recovery catalog.

Action: change the database DB_UNIQUE_NAME to a known database value. To display list of known db_unique_names execute LIST DB_UNIQUE_NAME OF DATABASE

RMAN-20244: can not change currently connected database db_unique_name

Cause: the user specified currently connected DB_UNIQUE_NAME value to unregister.

Action: use the DB_UNIQUE_NAME other than connected target database"s DB_UNIQUE_NAME value.

RMAN-20245: can not specify db_unique_name option in nocatalog mode

Cause: the user specified DB_UNIQUE_NAME in nocatalog mode.

Action: remove the DB_UNIQUE_NAME option from the command.

RMAN-20246: new db_unique_name is already known to the recovery catalog

Cause: the user specified known DB_UNIQUE_NAME value when renaming a DB_UNIQUE_NAME in the recovery catalog.

Action: change the database DB_UNIQUE_NAME to an known DB_UNIQUE_NAME value; or unregister the new DB_UNIQUE_NAME before renaming an old DB_UNIQUE_NAME value for a database. To display the list of all DB_UNIQUE_NAME for the databases LIST DB_UNIQUE_NAME OF DATABASE command can be executed.

RMAN-20250: offline range not found in the recovery catalog

Cause: the specified offline was not found in the recovery catalog

Action: check that recovery catalog is current

RMAN-20260: backup piece not found in the recovery catalog

Cause: the specified backup piece is not in the recovery catalog or it has been marked deleted

Action: check the backup piece handle or key

RMAN-20261: ambiguous backup piece handle

Cause: more than one backup piece in the recovery catalog match the specified handle

Action: use the backup piece key to uniquely specify the backup piece

RMAN-20272: no parent backup found for the incremental backup

Cause: no available backup or copy that could be used as the parent of the incremental backup was found in the recovery catalog.

Action: take a level 0 backup or copy of the datafile first

RMAN-20280: too many device types

Cause: more than 8 device types were allocated

Action: make sure that the job allocates at most 8 different device types

RMAN-20298: DBMS_RCVCAT package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVCAT package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20299: DBMS_RCVMAN package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVMAN package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20310: proxy copy not found in the recovery catalog

Cause: the specified proxy copy is not in the recovery catalog or it has been marked deleted

Action: check the proxy copy handle or key

RMAN-20311: ambiguous proxy copy handle

Cause: more than one proxy copy in the recovery catalog matches the specified handle

Action: use the proxy copy key to uniquely specify the proxy copy

RMAN-20401: script already exists

Cause: a CREATE SCRIPT was issued, but a script with the specified name already exists.

Action: use a different name or use REPLACE SCRIPT.

RMAN-20501: redo logs from parent database incarnation cannot be applied

Cause: A RESTORE or RECOVER of a datafile was requested, but recovery of the datafile would require applying redo logs that were generated before the most recent OPEN RESETLOGS.

Action: If a full backup or datafile copy from the current database incarnation exists, ensure that it is marked AVAILABLE, and that a channel of the correct device type is allocated. It may also be necessary to remove the FROM BACKUPSET or FROM DATAFILECOPY or FROM TAG operands if these have been specified.

RMAN-20502: DELETE EXPIRED cannot delete objects that exist - run CROSSCHECK

Cause: A DELETE EXPIRED command was run, but the object was actually found to exist. This means the recovery catalog or control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20503: DELETE cannot delete expired objects - run CROSSCHECK or DELETE EXPIRED

Cause: A DELETE command was run without EXPIRED option, but the object doesn"t exist. This means the recovery catalog or control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20504: corruption list not found in recovery catalog

Cause: corruption list is empty

Action: make sure that one or more blocks are marked corrupted in v$copy_corruption and v$backup_corruption and recovery catalog is up-to-date.

RMAN-20505: create datafile during recovery

Cause: applying of archived log caused a create datafile redo-entry to to terminate recovery.

Action: none. This message is never displayed. RMAN automatically detects this case and creates the datafile.

RMAN-20506: no backup of archived log found

Cause: during the recover process, no backup was found from which the archived logs could be restored.

Action: this message should be followed by a list of missing archived logs. Please make the necessary archived log backups available and try again.

RMAN-20507: some targets are remote - aborting restore

Cause: during the restore process, one or more backup files were unavailable locally for the restore operation.

Action: This message should be accompanied with the list of remote backup files. Recall these backups from remote location and retry the RESTORE command.

RMAN-20508: temporary resource already in use

Cause: Temporary resource that was allocated for IMPORT CATALOG command was already in use.

Action: Retry IMPORT CATALOG command.

RMAN-20509: temporary resource not found

Cause: Temporary resource that was allocated for IMPORT CATALOG command was not found.

Action: Retry IMPORT CATALOG command.

RMAN-20510: database not found in source recovery catalog database

Cause: Database that was specified in IMPORT CATALOG command was not found in the source recovery catalog database.

Action: Make sure that the database is registered in the source recovery catalog database.

RMAN-20511: database name is ambiguous in source recovery catalog database

Cause: Two or more databases in the source recovery catalog database match this name.

Action: Use DBID option in IMPORT CATALOG command to specify the source database.

RMAN-20512: source database already registered in recovery catalog

Cause: Source database was already registered in the recovery catalog.

Action: If the source database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

46

LRM-00100 to LRM-00123

LRM-00100: internal error [*number*]
    Cause: An internal error has occurred.
    Action: Contact Oracle Support Services and report the error.

LRM-00101: unknown parameter name "*string*"
    Cause: The parameter name was misspelled.
    Action: Spell the parameter name correctly.

LRM-00102: "*string*" is not in the legal range for "*string*"
    Cause: The value of the parameter is not within the legal range.
    Action: Refer to the manual for the allowable values for this parameter.

LRM-00103: "*string*" contains an illegal integer radix for "*string*"
    Cause: An illegal integer radix specification was found.
    Action: Only "d", "h", "D", and "H" may be used as radix specifications.

LRM-00104: "*string*" is not a legal integer for "*string*"
    Cause: The value is not a valid integer.
    Action: Specify only valid integers for this parameter.

LRM-00105: "*string*" is not a legal Boolean for "*string*"
    Cause: The value is not a valid Boolean.
    Action: Refer to the manual for allowable Boolean values.

LRM-00106: out of memory
    Cause: The operating system has run out of memory.
    Action: Take action to make more memory available to the program.

LRM-00107: parameter name abbreviation "*string*" is not unique
    Cause: The given abbreviation was not unique.
    Action: Use a longer abbreviation to make the parameter name unique.

LRM-00108: invalid positional parameter value "*string*"
    Cause: An invalid positional parameter value has been entered.
    Action: Remove the invalid positional parameter.

LRM-00109: could not open parameter file "*string*"
    Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

LRM-00110: syntax error at "*string*"
    Cause: A syntax error was detected.
    Action: Change the input so that the correct syntax is used.

LRM-00111: no closing quote for value "*string*"
    Cause: A quoted string was started but not finished.
    Action: Put a closing quote in the proper location.

LRM-00112: multiple values not allowed for parameter "*string*"
    Cause: An attempt was made to specify multiple values for a parameter which can take only one value.
    Action: Do not specify more than one value for this parameter.

LRM-00113: error when processing file "*string*"
    Cause: A problem occurred when processing this file.
    Action: Examine the additional error messages and correct the problem.

LRM-00114: error when processing from command line
    Cause: A problem occurred when processing the command line.
    Action: Examine the additional error messages and correct the problem.

LRM-00115: error when processing an environment variable
    Cause: A problem occurred when processing an environment variable.
    Action: Examine the additional error messages and correct the problem.

LRM-00116: syntax error at "*string*" following "*string*"
    Cause: A syntax error was detected.
    Action: Change the input so that the correct syntax is used.

LRM-00117: syntax error at "*string*" at the start of input
    Cause: A syntax error was detected.
    Action: Change the input so that the correct syntax is used.

LRM-00118: syntax error at "*string*" at the end of input
    Cause: A syntax error was detected.
    Action: Change the input so that the correct syntax is used.

LRM-00119: unable to obtain a valid value for "*string*"
    Cause: No valid value was obtained for this parameter.
    Action: Rerun the application and enter a valid value.

LRM-00120: "*string*" is not a legal Oracle number for "*string*"
    Cause: The value is not a valid Oracle number.
    Action: Refer to the manual for allowable Oracle number values.

LRM-00121: "*string*" is not an allowable value for "*string*"
    Cause: The value is not a legal value for this parameter.
    Action: Refer to the manual for allowable values.

LRM-00122: value "*string*" for "*string*" must be between "*number*" and "*number*"

    Cause: The value of the parameter is not within the legal range.

    Action: Specify a value that is within the legal range.

LRM-00123: invalid character *number* found in the input file

    Cause: A character that is invalid was found in the input file.

    Action: Specify an input file that contains only valid characters.

47

LFI-00002 to LFI-01523

LFI-00002: Out of memory. *string*

    Cause: The File IO package failed in trying to dynamically allocate memory. function name is used for additional comments to indicate where, when and why the error occured.

    Action: Perform whatever actions necessary to make more memory available to the executing program.

LFI-00003: Internal exception code. icode = [*string***], [***string***].**

    Cause: Unknown - indicated by parameters. The first "%s" gives the internal exception code; the second is for any other additional comments.

    Action: Report to the appropriate development group

LFI-00004: Call to *string* **failed.**

    Cause: A function call has failed. This error is a generic message to show that the exception has occurred in a particular function function name. This allows the client to know the trace runtime calling sequence by examining the exception stack.

    Action: See the accompanying error messages for more information.

LFI-00005: Free some memory failed in *string***.**

    Cause: A call to free some memory in function function name has failed.

    Action: See the accompanying error messages for more information and contact Oracle Worldwide Support immediately.

LFI-00006: Invalid parameter to function *string***.**

    Cause: The function was called with an invalid parameter.

    Action: Check the function call to make sure that the correct parameters are being passed.

LFI-00007: NLSRTL"s call failed. *string***.**

    Cause: LX calls return failure

    Action: Check if our parameters are correct. Contact the appropriate group immediately if we parameters are valid.

LFI-00008: SLTS"s initializing/terminating mutex failed for *string***.**

    Cause: SLTS"s call return failure in function "%s".

    Action: Contact the appropriate development group.

LFI-00100: Unable to perform operation, file not opened in *string***.**

Cause: The file has not been successfully opened at the time the operation is attempted.

Action: Check to make sure that the file exists (for read) or that the program has access to the write a file (for write). It is also possible that the file was just never opened

LFI-00101: Write failed, file cannot be written to.

Cause: The buffer write operation failed. Possibly due to incorrect parameters being passed in.

Action: Check the underlying error for more information.

LFI-00102: Unable to seek in sequentially accessed file.

Cause: The file was opened with the flag LFILFA_SEQ for sequential file operations. Use seek only on files that are opened with the LFILFA_RANDOM flag for random access.

Action: Check to see how the file is being opened and accessed and make the two operations consistent (that is, make them both operations either sequential or random).

LFI-00103: Seek operation failed.

Cause: The buffer seek operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the seek command and retry the operation.

LFI-00104: Read operation failed.

Cause: The buffer read operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the read command and retry the operation.

LFI-00105: Unable to add path.

Cause: One of the following might have caused the error: the current path might not be in the proper format the directory might not be in the proper format the name object might not have been initialized properly

Action: Check the format of the current path and the new directory; check that the name object was initialized properly.

LFI-00106: Path object holds more than one path.

Cause: The path object passed to lfippth() holds more than one path.

Action: Make sure that the path object used in lfippth() holds only one path.

LFI-00107: Open does not expect the file [*string*][*string*] to exist.

Cause: The flags specified for the open indicate that the file does not exist. However, the file does exist.

Action: Check to make sure that the options that were specified for the file are correct and that you do not expect that the file should exist. If so then find out why the file does exist.

LFI-00108: Open expect the file [*string*][*string*] to exist.

Cause: The flags specified for the open indicate that the file the file to exist and it does not.

Action: Check to make sure that the options that were specified for the file are correct and that you expect that the file should exist. If so then find out why the file doesn"t.

LFI-00109: Unable to open file [*string*][*string*]. *string*.

   Cause: Either: the process does not have the proper access rights to open the file the file is already open

   Action: Check to make sure the proper access permissions are assigned. If they are and the file still cannot be opened, then contact Oracle Worldwide Support.

LFI-00110: Unable to initialize the Buffer Manager.

   Cause: The Buffer Manager initialization routine failed; probably because memory was exhausted.

   Action: See the accompanying error messages for more information.

LFI-00111: No other flags allowed in fixed length format.

   Cause: The function lfigfo() was called with an invalid File ID Descriptor. The valid File ID Descriptors are LFISTDIN, LFISTDOUT, and LFISTDERR.

   Action: Check the call to lfigfo() to make sure it is correct.

LFI-00113: Unable to initialize the Standard File object *string*.

   Cause: The call to open the standard file object failed.

   Action: Check the underlying errors for more information.

LFI-00114: Append is not allowed with *string*.

   Cause: Attempting to append using certain options.

   Action: Check the flag options to verify its usage.

LFI-00115: Buffer free failed.

   Cause: Probably do to the buffer flush failing.

   Action: See the accompanying error messages for more information.

LFI-00116: Unable to close file in operation *string*.

   Cause: The file close operation failed.

   Action: See the accompanying error messages for more information.

LFI-00117: Unable to rename file.

   Cause: The rename operation failed. Rename is called when we are protecting a file by operating on a temp file.

   Action: Check to make sure that the process has the correct access rights to perform a rename.

LFI-00118: Unable to change type to Unknown.

   Cause: The function lfichty() was called to change the file extension to LFIEXUNK (Unknown). This is not a valid operation.

   Action: Check why you are doing this. If the extension is already unknown then you do not need to do this. If you just want no extension then use the extension type LFIEXNONE.

LFI-00119: Unable to Abort an Unprotected file.

   Cause: The Abort function lfiabt() was called on a file that was not opened as a protected file. As such the abort operation is not valid.

Action: Check to see if you intended to open the file as a protected file.

LFI-00120: Unable to parse root filename *string*.

Cause: The root filename that was given to lfimknam() is not in a format that this platform understands.

Action: Check the format of the filename and retry the operation.

LFI-00121: Only one of REPLACE, or PROT allowed for opty.

Cause: Two or more of the following open type options were specified for the lfilini() function: LFILOPTY_REPLACE, or LFILOPTY_PROT.

Action: Remove one or more the of options such that you are only passing in one of the three.

LFI-00122: Can only delete a file if we create it.

Cause: The delete file flag was specified for a file that was not created by this file operation. The ability to delete a file is not portable. As such the only deletion that is allowed by this package is if we know we want to delete the file when we create it.

Action: You can only delete a file that you create. If you need to delete a file that you do not create then you will have to find another means of doing so.

LFI-00123: Cannot access file Sequentially and Randomly.

Cause: Both the LFILFA_SEQ (sequential) and LFILFA_RANDOM (random) flags were specified during the file object creation. This is not allowed. Only one of the two may be specified.

Action: Choose how you wish to access the file. If you choose random you can still access sequentially by just not using the repositioning functions.

LFI-00124: No access mode was specified, default is sequential.

Cause: Neither LFILFA_SEQ (sequential) or LFILFA_RANDOM (random) were specified during file object creation.

Action: The default is sequential but this should be explicitly set.

LFI-00125: Random access only allowed on fixed length record files.

Cause: The LFILFA_RANDOM flag was specified on a file that was not organized into fixed-length records. Random access is only allowed on fixed-length record files.

Action: Determine if the organization of your data needs to be in variable-length records and if you need to have random access to the file. If both conditions are true then you might need to buffer the entire file or enough of it to remove your need for random access. Another option is to close and rescan the file although this is not the optimal solution.

LFI-00126: Record format can only be one of Fixed or Variable.

Cause: Both LFILRF_FIXED (fixed) and LFILRF_VAR (variable) were specified during file object creation. Only one of the two is allowed for a given file.

Action: Determine how the file is organized and choose the option that matches.

LFI-00127: No Record Format was specified, default is variable.

Cause: Neither LFILRF_FIXED (fixed) or LFILRF_VAR (variable) were specified for record format. One of the two must be specified for each file.

Action: The default is LFILRF_VAR, but this should be explicitly set during file object creation.

LFI-00128: Carriage Control is only valid for Standard file objects.

Cause: The Carriage Control option is only valid for the standard file objects (LFISTDIN, LFISTDOUT, LFISTDERR). You may not specify this option for any other type of file.

Action: Choose between LFILRF_FIXED and LFILRF_VAR for the record format.

LFI-00129: Invalid option *string* were specified on an input only file.

Cause: The file was opened as input only but the output mode option LFILRF_WR_ASIS or delete option LFLOPTY_DELETE was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00130: Input option specified on output only file.

Cause: The file was opened as output only but one of the input mode options (LFILRF_READ_NL or LFILRF_FORCE_NL) or was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00131: No open type specified.

Cause: The file object was created without an open type (that is, LFILOPTY_INPUT, LFILOPTY_OUTPUT, etc.).

Action: Decide how the file should be accessed and specify one of the open types.

LFI-00132: Record length *string* is greater than max length of *string*.

Cause: The record length specified for the file is greater than the max supported by this platform.

Action: Decrease the record length.

LFI-00133: Trying to create file *string* that already exists.

Cause: The file object was initialized with LFILOPTY_OUTPUT and without LFILOPTY_REPLACE and yet a file by this name already exists.

Action: Check to make sure that you are creating the right file. If you intend to overwrite the file if it exists that specify the replace option LFILOPTY_REPLACE when initializing the file object.

LFI-00134: Unable to protect a file for an append operation.

Cause: The LFILOPTY_APPEND and LFILOPTY_PROT options were both specified for the file. This is currently not allowed because it would require copying the entire file at open time.

Action: Decide if you really need to protect the file for append. If so then think about making a copy of it before appending.

LFI-00135: Unable to remove temporary file.

Cause: A temporary file was created to protect a file and when the the tempfile was nolonger needed it LFI attempted to remove it and was unable to do so.

Action: Check the permissions and where the temp files are being created.

LFI-00136: Unable to change type of open file.

Cause: The function lfichty() was called on an opened file.

Action: This is a bug in the client code. lfichty() cannot be used in this case.

LFI-00137: Unable to perform *string* on a file object that is *string*.

Cause: Unable to perform an LFI operation on a file object for the given reason.

Action: Take the appropriate corrective measure. For example if a file is supposed to be opened before the operation can be performed, client code will need to open the file first.

LFI-00138: Unable to perform *string* **on a name object that is** *string*.

Cause: Unable to perform an LFI operation on a name object for the given reason.

Action: Take the appropriate corrective measure.

LFI-00139: Option *string* **cannot be used with option** *string* **in calling** *string*.

Cause: First option cannot be used with second option in such a function call.

Action: Re-examine code to determine which option is needed.

LFI-00140: Invalid option *string* **were specified on input-output file.**

Cause: The file was opened as input-output and one of the mode options (LFIOPTY_DELETE or non-LFIOPTY_RANDOM) was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00141: Unable to abort file in operation *string*.

Cause: The abort operation failed.

Action: Check the underlying errors for more information.

LFI-00142: Unable to delete an existing file [*string*][*string*] not owned by Oracle.

Cause: The file was not created by Oracle.

Action: Change owner of file to Oracle or give Oracle access privileges to delete it.

LFI-00143: Unable to delete non-existent file *string*.

Cause: The file to be deleted does not exist.

Action: Check the underlying errors for more information.

LFI-00144: File [*string*][*string*] does not exist

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00145: User buffer too short.

Cause: The buffer that was passed is not large enough.

Action: Allocate a larger buffer and retry the operation.

LFI-00146: copy does not expect the file *string.string* **to exist**

Cause: We are expecting the destination file not to exist and it does.

Action: Find out why the file does exist.

LFI-00147: File *string.string* **does not exist**

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00148: *string* **can be called only on files opened in byte mode**

Cause: A routine that should be used only for files in byte mode was called for a file that was opened in record mode

Action: In order to use this function, the file should be opened in byte mode.

LFI-00149: Error on destroying hash table in function *string*

    Cause: We were expecting the cache path object and it does not.

    Action: In order to use this function, the path object should be cache path object.

LFI-00150: Error on creating hash table in function *string*

    Cause: routine failed to create path object hash table

    Action: make sure that startsize <= LHTQMAXSLOTS

LFI-00151: Error on inserting into hash table in function *string*

    Cause: routine failed to insert into hash table

    Action: make sure there is enough memory for allocation and that the hash table exists.

LFI-00152: Read operation (byte mode) failed.

    Cause: Byte mode read operation failed. Probably due to incorrect parameters or flags, or trying to read beyond end of file.

    Action: Check syntax of the read command and size of file.

LFI-01000: Unable to write line to file.

    Cause: The file being written to may no longer be open or we may have reached the end of the file.

    Action: Examine underlying errors for more information.

LFI-01001: Unable to write *string* **bytes to file.**

    Cause: The file being written to may no longer be open or we may have reached the end of the file.

    Action: Examine underlying errors for more information.

LFI-01002: Unable to read line from file.

    Cause: The file being read from may no longer be open.

    Action: Examine underlying errors for more information.

LFI-01003: Unable to read *string* **bytes from file.**

    Cause: The file being read from may no longer be open.

    Action: See the accompanying error messages for more information.

LFI-01004: Unable to empty buffer.

    Cause: The buffer manager is probably unable to write to the underlying file.

    Action: Examine underlying errors for more information.

LFI-01005: Unable to fill buffer.

    Cause: The buffer manager is probably unable to read from the underlying file.

    Action: See the accompanying error messages for more information.

LFI-01006: File ends in partial character in *string***.**

    Cause: A line ends in a partial character.

    Action: Examine underlying errors for more information.

LFI-01007: Line is too long; encountered in function *string***.**

    Cause: The length of the line exceeds the maximum length.

    Action: Examine underlying errors for more information.

LFI-01500: Error condition on call to OSD function *string*.

    Cause: An error condition arises in calling an OSD function. This message occurs if calls to malloc or free functions failed.

    Action: Contact Oracle Worldwide Support.

LFI-01501: tmpnam() fails to generate temporary file name.

    Cause: Operating system was unable to create temporary file name.

    Action: Contact the development organization.

LFI-01502: Base filename does not exist.

    Cause: The filename that was parsed had no base file. It was either all path or extension.

    Action: Check the filename being passed in to make sure it is correct.

LFI-01503: Max filename size exceeded generating filename.

    Cause: While building a filename we exceeded the buffer allocated to hold the new filename.

    Action: Contact the development organization.

LFI-01504: fseek() failed(OSD return value = *string***) in** *string*.

    Cause: The function fseek() returned an error condition.

    Action: Contact Oracle Worldwide Support.

LFI-01505: fclose() failed(OSD return value = *string***) in** *string*.

    Cause: The function fclose() returned an error condition.

    Action: Contact Oracle Worldwide Support.

LFI-01506: fflush() failed(OSD return value = *string***).**

    Cause: The function fflush() returned an error condition.

    Action: Contact the development organization.

LFI-01507: fwrite() failed(OSD return value = *string***) in** *string*.

    Cause: File pointer may be null or may not be opened for write.

    Action: Contact the development organization.

LFI-01508: access() failed.

    Cause: Call to access() failed.

    Action: Contact the development organization.

LFI-01509: fopen() failed(OSD return value = *string***).**

    Cause: Call to fopen() failed.

    Action: Contact Oracle Worldwide Support.

LFI-01510: fread() failed(OSD return value = *string***) in** *string*.

    Cause: Call to fread() failed.

    Action: Contact Oracle Worldwide Support.

LFI-01511: unlink() failed(OSD errno = *string***) in** *string*.

    Cause: Call to unlink() failed.

    Action: Contact the development organization.

LFI-01512: stat() failed

    Cause: Call to stat() failed.

    Action: Contact Oracle Worldwide Support.

LFI-01514: ftell() failed in *string*

    Cause: The ftell() function returned an error.

    Action: Contact Oracle Worldwide Support.

LFI-01515: truncate() failed.

    Cause: The function truncate() returned an error condition.

    Action: Contact the development organization.

LFI-01516: read() failed (OSD return value = *string*) in *string*.

    Cause: Call to read() failed.

    Action: Contact the development organization.

LFI-01517: open() failed(OSD return value = *string*).

    Cause: Call to open() failed.

    Action: Contact the development organization.

LFI-01518: write() failed(OSD return value = *string*) in *string*.

    Cause: Call to write() failed.

    Action: Contact the development organization.

LFI-01519: llseek() failed(OSD return value = *string*) in *string*.

    Cause: The llseek() function returned an error.

    Action: Contact Oracle Worldwide Support.

LFI-01520: close() failed(OSD return value = *string*) in *string*.

    Cause: The function close() returned an error condition.

    Action: Contact the development organization.

LFI-01521: fsync() failed(OSD return value = *string*) in *string*.

    Cause: The function fsync() returned an error condition.

    Action: Contact the development organization.

LFI-01522: opendir() failed.

    Cause: The function opendir() returned an error condition.

    Action: Contact the development organization.

LFI-01523: rename() failed.

    Cause: A call to lficstd() had failed.

    Action: Contact development service

48

PLS-00049 to PLS-01916

PLS-00049: bad bind variable "*string*"

    Cause: The client (caller) of PL/SQL has parsed a bind variable that it has informed to be "bad".

    Action: None

PLS-00102: parser stack overflow because nesting is too deep

    Cause: The parser, which checks the syntax of PL/SQL statements, uses a data structure called a stack; the number of levels of nesting in the PL/SQL block exceeded the stack capacity.

    Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00103: *string*

    Cause: This error message is from the parser. It found a token (language element) that is inappropriate in this context.

    Action: Check previous tokens as well as the one given in the error message. The line and column numbers given in the error message refer to the end of the faulty language construct.

PLS-00104: empty argument list in call of procedure "*string*" must be omitted

    Cause: In a subprogram call, the name of the subprogram was followed by an empty parameter list. For example, procedure P was called as P(). This is not allowed.

    Action: Remove the empty parameter list. In the example, change the procedure call to P.

PLS-00105: at most one forward declaration of type "*string*" is permitted

    Cause: More than one forward declaration of a type is redundant.

    Action: Remove all but one forward declaration.

PLS-00108: declarative units must be a single variable declaration

    Cause: While checking a declarative unit (a top-level declare block without the BEGIN...END), PL/SQL found that there was more than one item declared or that the item was not a variable declaration. A table is a common variable declaration at the unit level. To define a TABLE, compile a DECLARE compilation unit, but only one at a time is allowed.

    Action: Declare variables in separate declarative units.

PLS-00109: unknown exception name "*string*" in PRAGMA EXCEPTION_INIT

Cause: No declaration for the exception name referenced in an EXCEPTION_INIT pragma was found within the scope of the pragma.

Action: Make sure the pragma follows the exception declaration and is within the same scope.

PLS-00110: bind variable "*string*" not allowed in this context

Cause: A bind variable, that is, an identifier prefixed with a colon, was found in an inappropriate context.

Action: Remove the colon or replace the bind variable with the appropriate object.

PLS-00111: end-of-file in comment

Cause: A Comment had a comment initiator (/*), but before the

Action: Remove the Comment initiator or add a comment terminator. The line and column numbers accompanying the error message refer to the beginning of the last legal token before the Comment initiator.

PLS-00112: end-of-line in quoted identifier

Cause: A quoted identifier had a beginning quote ("), but before the ending quote (") was found, an end-of-line marker was encountered.

Action: Remove the beginning quote or add the ending quote. The line and column numbers accompanying the error message refer to the beginning of the quoted identifier.

PLS-00113: END identifier "*string*" must match "*string*" at line *string*, column *string*

Cause: Following the keyword END, which terminates some language constructs (such as loops, blocks, functions, and procedures), you can optionally place the name of that construct. For example, at the end of the definition of loop L you might write END L. This error occurs when the optional name does not match the name given to the language construct. It is usually caused by a misspelled identifier or by faulty block structure.

Action: Make sure the spelling of the END identifier matches the name given to the language construct and that the block structure is correct.

PLS-00114: identifier "*string*" too long

Cause: The name of a PL/SQL variable is longer than 30 characters. Legal identifiers (including quoted identifiers) have a maximum length of 30 characters. A string literal might have been mistakenly enclosed in double quotes instead of single quotes, in which case PL/SQL considers it a quoted identifier.

Action: Shorten the identifier.

PLS-00115: this PRAGMA must follow the declaration of "*string*"

Cause: The pragma refers to a PL/SQL object that was not declared or is not within the scope of the reference. Identifiers must be declared before they are used in a pragma; forward references are not allowed.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00116: Duplicate where-clause in table expression

Cause: Two or more WHERE clauses were found in a DELETE, SELECT, or UPDATE statement. The WHERE clause specifies a condition under which rows in a table are processed. The condition can contain several logical expressions connected by AND or OR, but a statement can contain only one WHERE clause.

Action: Remove one of the WHERE clauses and, if necessary, connect logical expressions by AND or OR

PLS-00117: Duplicate connect-by clause in table expression

Cause: Two or more CONNECT BY clauses were found in a SELECT statement. The CONNECT BY clause defines a relationship used to return rows in a hierarchical order. The relationship can contain two expressions separated by a relational operator (such as = or !=), but a statement can contain only one CONNECT BY clause.

Action: Remove one of the CONNECT BY clauses and, if necessary, separate expressions by a relational operator.

PLS-00118: Duplicate group-by clause in table expression

Cause: Two or more GROUP BY clauses were found in a SELECT statement. The GROUP BY clause lists column expressions used to form a summary row for each group of selected rows. The list can contain several column expressions separated by commas, but a statement can contain only one GROUP BY clause.

Action: Remove one of the GROUP BY clauses and, if necessary, separate column expressions by commas.

PLS-00119: Duplicate having-clause in table expression

Cause: Two or more HAVING clauses were found in a SELECT statement. The HAVING clause specifies a condition under which groups of rows (formed by the GROUP BY clause) are included in the result. The condition can include several logical expressions connected by AND or OR, but a statement can contain only one HAVING clause.

Action: Remove one of the HAVING clauses and, if necessary, connect logical expressions by AND or OR.

PLS-00120: inappropriate argument in OPEN statement

Cause: The asterisk (*) option was used in the argument list of a SQL group function other than COUNT. For example, the code might look like SELECT SUM(*) INTO emp_count FROM emp; -- should be COUNT(*) Only COUNT permits the use of the asterisk option, which returns the number of rows in a table.

Action: Remove the asterisk option from the argument list and replace it with an expression that refers to one or more database columns.

PLS-00122: *string* as separator is allowed only with specific built-in functions

Cause: A few built-in functions use keywords (instead of commas) as argument separators: Built-in function Argument separators -- CHR, TRANSLATE USING CAST AS TRIM TRAILING, LEADING, BOTH, FROM A function different from one of these built-in functions is using a keyword as an argument separator.

Action: Correct the argument list or change the function name.

PLS-00123: program too large (*string*)

Cause: PL/SQL was designed primarily for robust transaction processing. One consequence of the special-purpose design is that the PL/SQL compiler imposes a limit on block size. The limit depends on the mix of statements in the PL/SQL block. Blocks that exceed the limit cause this error.

Action: The best solution is to modularize the program by defining subprograms, which can be stored in an Oracle database. Another solution is to break the program into two sub-blocks. Have the first block INSERT any data the second

block needs into a temporary database table. Then, have the second block SELECT the data from the table.

PLS-00124: name of exception expected for first arg in exception_init pragma

Cause: The first argument passed to the EXCEPTION_INIT pragma was something other than an exception name. The first argument must be the name of a legally declared exception.

Action: Replace the first argument with the name of a legally declared exception.

PLS-00125: type name expected

Cause: When a constant or variable was declared, its datatype was not specified. For example, the code might look like pi CONSTANT := 3.14159; -- should be CONSTANT REAL := 3.14159 Every constant and variable must have a datatype, which specifies a storage format, constraints, and valid range of values.

Action: Supply the type name

PLS-00126: selector ALL is not allowed

Cause: The ALL shortcut for specifying system privileges or statement options was used in a SQL statement. PL/SQL does not support the ALL shortcut.

Action: Remove the ALL shortcut from the SQL statement.

PLS-00127: Pragma *string* is not a supported pragma

Cause: The named pragma (compiler directive) is not among those supported by PL/SQL. The pragma name might be misspelled, or the pragma syntax might be faulty.

Action: Check the spelling of the pragma name, and make sure the proper syntax was used.

PLS-00128: Illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument, or correct the faulty syntax.

PLS-00129: Pragma INTERFACE only supports C as its first argument

Cause: The first parameter passed to pragma INTERFACE specified a host language other than C. Currently, C is the only host language supported. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, which should be C, and make sure the proper syntax was used.

PLS-00130: Pragma *string* expects 1st argument to be a procedure/function/package/cursor

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a subprogram, package, or cursor, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00131: Pragma *string* expects 2nd argument to be a procedure/function

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a procedure or function, as required. The parameter cannot be a non-static method. The parameter might be misspelled or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter and make sure the proper syntax was used.

PLS-00132: Pragma *string* does not support *string*

Cause: One of the parameters passed to pragma RESTRICT_REFERENCES was not among the following, as required: WNDS, WNPS, RNDS, RNPS. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters)

Action: Check the spelling of all the parameters, and make sure the proper syntax was used.

PLS-00133: Pragma *string* expects 1st argument to be an identifier or string-literal

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00134: Pragma *string* expects 2nd argument to be an identifier or string-literal

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter, and make sure the proper syntax was used.

PLS-00135: Pragma *string* expects 3rd argument to be an identifier, string or numeric literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be miscoded, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the coding of the fourth parameter, and make sure the proper syntax was used.

PLS-00138: Precision for a binary type must be one of 8, 16, or 32

Cause: Invalid precision was specified for a signed or unsigned binary type.

Action: Specify precision as one of 8, 16, or 32.

PLS-00139: duplicate external NAME specification in subprogram expression

Cause: The subprogram was found to have two external NAME specifications.

Action: Remove one of the external NAME specifications.

PLS-00140: duplicate external LIBRARY specification in subprogram expression

Cause: The subprogram was found to have two external LIBRARY specifications.

Action: Remove one of the external LIBRARY specifications.

PLS-00141: duplicate external PARAMETER STYLE specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00142: duplicate external PARAMETER list specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00143: duplicate external LANGUAGE specification in subprogram expression

Cause: The subprogram was found to have two external LANGUAGE specifications.

Action: Remove one of the external LANGUAGE specifications.

PLS-00144: duplicate external CALLING STANDARD specification in subprogram expression

Cause: The subprogram was found to have two external CALLING STANDARD specifications.

Action: Remove one of the external CALLING STANDARD specifications.

PLS-00145: duplicate external WITH CONTEXT specification in subprogram expression

Cause: The subprogram was found to have two external WITH CONTEXT specifications.

Action: Remove one of the external WITH CONTEXT specifications.

PLS-00146: duplicate external TRUSTED/UNTRUSTED specification in subprogram expression

Cause: The subprogram was found to have two external TRUSTED/UNTRUSTED specifications.

Action: Remove one of the external external TRUSTED/UNTRUSTED specifications.

PLS-00147: LIBRARY or ASSEMBLY file specification string is empty

Cause: A zero-length string was found for the LIBRARY or ASSEMBLY file specification.

Action: Specify a non-zero length string for the LIBRARY or ASSEMBLY file specification.

PLS-00148: Only 1 pragma of this type is allowed per subprogram

Cause: The subprogram was found to have two PRAGMA RESTRICT_ REFERENCES.

Action: Remove one of the PRAGMA RESTRICT_REFERENCES.

PLS-00150: found: *string* but expected : INTEGER

Cause: This error happens in the creation of a pl/sql external type: [SIGNED | UNSIGNED] BINARY INTEGER (<precision>). It may be referenced only in a create type statement. Such types are non-queryable. Something other than "INTEGER" was supplied.

Action: None

PLS-00151: Expression or Variable is an illegal type to PLS/QL: *string*

Cause: A type was used which does not belong PL/SQL. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: None

PLS-00152: POINTER type may only reference an object type.

Cause: A POINTER type which does not belong to PL/SQL can only refer to an object type. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: None

PLS-00153: A *string* type may only be used as an object type attribute.

Cause: A POINTER or [SIGNED/UNSIGNED] BINARY INTEGER can only be used as attributes of object types. These types can only be referenced in CREATE TYPE statements, and are non-queryable data types. One of these external PL/SQL types outside of an object type.

Action: None

PLS-00154: An object type may have only 1 MAP or 1 ORDER method.

Cause: More than one map or order function was declared. An object type can have only one map function or one order function, but not both.

Action: None

PLS-00155: Only a function may be a MAP, ORDER or CONSTRUCTOR method.

Cause: A procedure was declared as a MAP, ORDER or CONSTRUCTOR method. Only functions can be MAP, ORDER or CONSTRUCTOR methods.

Action: None

PLS-00156: Null constraints not supported for object attributes.

Cause: A null constraint was specified for an attribute in an object. This is not supported.

Action: Remove the constraint.

PLS-00157: AUTHID only allowed on schema-level programs

Cause: An AUTHID clause was specified for a subprogram inside a package or type. These clauses are only supported for top-level stored procedures, packages, and types.

Action: Remove the clause

PLS-00160: AUTHID must specify CURRENT_USER or DEFINER

Cause: The only two allowed options for AUTHID are CURRENT_USER and DEFINER.

Action: Fix the AUTHID clause to specify CURRENT_USER or DEFINER

PLS-00161: Pragma *string* expects 3rd argument to be an identifier or a string literal

Cause: The third argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or a string literal when there is a fourth argument to the pragma. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the third parameter, and make sure the proper syntax was used.

PLS-00162: Pragma *string* expects 4th argument to be a positive integer literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the fourth parameter, and make sure the proper syntax was used.

PLS-00164: cursor subqueries are not supported in this release

Cause: This feature is not yet implemented.

Action: None

PLS-00165: call statement is not supported in PL/SQL

Cause: A CALL statement was found in PL/SQL source.

Action: Use an ordinary PL/SQL function or procedure call.

PLS-00166: bad format for date, time, timestamp or interval literal

Cause: The contents of the date, time, timestamp or interval literal did not match the expected format.

Action: Correct the format for the date, datetime, or interval literal.

PLS-00167: keyword BULK is used in a wrong context

Cause: keyword BULK is used illegally. For example, BULK is used without INTO clause

Action: remove the keyword BULK.

PLS-00168: duplicate modifier specification "*string*"

Cause: A method or object type modifier was specified more than once.

Action: Remove all but one occurence of the duplicate modifier.

PLS-00169: modifier "*string*" conflicts with prior "*string*" specification

Cause: The method or object type modifier specified conflicts with an earlier modifier. For example, a FINAL modifier cannot be combined with a NOT FINAL modifier.

Action: Remove one of the conflicting modifiers.

PLS-00170: the SQL statement in an OPEN statement or FOR loop must be a SELECT

Cause: An OPEN cursor statement or cursor FOR loop can only invoke a SELECT statement, not an UPDATE, INSERT or DELETE.

Action: Use only SELECT statements in OPEN or cursor FOR loops

PLS-00171: duplicate dedicated AGENT specification in subprogram expression

Cause: The subprogram was found to have two dedicated AGENT specifications.

Action: Remove one of the dedicated AGENT specifications.

PLS-00172: string literal too long

Cause: The string literal was longer than 32767 bytes.

Action: Use a string literal of at most 32767 bytes.

PLS-00173: SPACE, TAB or RETURN are disallowed as alternative quote delimiters

Cause: SPACE, TAB or RETURN was used as alternative quote delimiter.

Action: Use a character other than SPACE, TAB or RETURN as the alternative quote delimiter.

PLS-00174: a static boolean expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a boolean type or its evaluation raised an exception.

Action: Write correct static boolean expression.

PLS-00176: unexpected preprocessor token "$*string*"

Cause: A preprocessor token was used inappropriately.

Action: Remove the preprocessor token that is inappropriately used.

PLS-00177: "$*string*" preprocessor directive does not end properly

Cause: A preprocessor directive was not ended properly.

Action: Use $end to end the preprocessor directive properly.

PLS-00178: a static character expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a character type or its evaluation raised an exception.

Action: Write correct static character expression.

PLS-00179: $ERROR: *string*

Cause: $ERROR directive was used. This is an expected error message.

Action: NA

PLS-00180: preprocessor directives are not supported in this context

Cause: A preprocessor directive was used in a compilation unit for which conditional compilation is not supported.

Action: Do not use any preprocessor directives in this compilation unit.

PLS-00181: unsupported preprocessor directive "*string*"

Cause: An unsupported preprocessor directive was used.

Action: Use a supported preprocessor directive.

PLS-00201: identifier "*string*" must be declared

Cause: You tried to reference either an undeclared variable, exception, procedure, or other item, or an item to which no privilege was granted or an item to which privilege was granted only through a role.

Action: 1) Check your spelling and declaration of the referenced name. 2) Verify that the declaration for the referenced item is placed correctly in the block structure. 3) If the referenced item is indeed declared but you don"t have privileges to refer to that item, for security reasons, you will be notified only that the item is not declared. 4) If the referenced item is indeed declared and you believe that you have privileges to refer to that item, check the privileges; if the privileges were granted only via a role, then this is expected and documented behavior. Stored objects (packages, procedures, functions, triggers, views) run in the security domain of the object owner with no roles enabled except PUBLIC. Again, you will be notified only that the item was not declared.

PLS-00202: type "*string*" must be declared

Cause: An attempt was made to reference an undefined type. Either the type specifier was not declared or it is not within the scope of the reference.

Action: Check the spelling and declaration of the type specifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00203: function DECODE must be called with at least 3 non-boolean arguments

Cause: Less than three arguments were passed to the built-in function DECODE. Though DECODE takes a variable number of (non-Boolean) arguments, at least three arguments must be passed.

Action: Call DECODE with three or more arguments

PLS-00204: function or pseudo-column "*string*" may be used inside a SQL statement only

Cause: A pseudocolumn or proscribed function was used in a procedural statement. The SQL pseudocolumns (LEVEL, ROWID, ROWNUM) can be used only in SQL statements. Likewise, certain functions such as DECODE, DUMP, and VSIZE and the SQL group functions (AVG, MIN, MAX, COUNT, SUM, STDDEV, VARIANCE) can be used only in SQL statements.

Action: Remove the pseudocolumn reference or function call from the procedural statement. Or, replace the procedural statement with a SELECT INTO statement; for example, replace bonus := DECODE(rating, 1, 5000, 2, 2500, ...); with the following statement: SELECT DECODE(rating, 1, 5000, 2, 2500, ...) INTO bonus FROM dual;

PLS-00205: Aggregate not allowed here

Cause: An aggregate, that is, a parenthesized list of values such as (7788, "SCOTT", 20), was found in an inappropriate context.

Action: Remove or relocate the aggregate.

PLS-00206: %TYPE must be applied to a variable, column, field or attribute, not to "*string*"

Cause: The program object declared using the %TYPE datatype attribute is not of the appropriate class. It must be a variable, column, record component, subprogram formal parameter, or other object to which values can be assigned.

Action: Declare an object of the appropriate class or define the datatype in another way (for example, use %ROWTYPE).

PLS-00207: identifier "*string*", applied to implicit cursor SQL, is not a legal cursor attribute

Cause: An identifier that is not a cursor attribute was applied to the identifier SQL. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00208: identifier "*string*" is not a legal cursor attribute

Cause: An identifier not declared as a cursor attribute was applied to an identifier declared as a cursor. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00209: table "*string*" is not in FROM clause

Cause: In a query, a table referenced by the select list is not named in the FROM clause.

Action: Check the spelling of the table names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00210: an OTHERS clause is required in this CASE statement

Cause: Unless the clauses of a CASE statement mention all values of the type of the selecting expression, an OTHERS clause must be provided as the last clause of the CASE statement. It is impossible to cover all values of type INTEGER (or NUMBER), so an OTHERS clause is always required when the expression following the keyword CASE is of type INTEGER (or NUMBER).

Action: None

PLS-00211: CASE labels or ranges must not be duplicated in different WHEN clauses

Cause: In this CASE statement, a value appears in more than one WHEN clause. A value may appear in at most one WHEN clause of a CASE statement.

Action: None

PLS-00212: could not obtain enough memory to compile CASE statement

Cause: The CASE statement is too big. The compiler did not have enough storage to process it.

Action: None

PLS-00213: package STANDARD not accessible

Cause: The PL/SQL compiler could not find package STANDARD in the current Oracle database. To compile a program, PL/SQL needs package STANDARD.

Action: Make sure that package STANDARD is available in the current Oracle database, then retry the operation.

PLS-00214: BEGIN...END block nesting is too deep

Cause: The number of levels of nesting in the PL/SQL block is too large. Blocks can be nested up to 255 levels deep, depending on the availability of system resources such as memory.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00215: String length constraints must be in range (1 .. 32767)

Cause: When a character variable was declared, a length outside the legal range was specified. For example, the following declarations are illegal: flag CHAR(0); -- illegal; zero length name VARCHAR2(-10); -- illegal; negative length

Action: Change the length constraint, making sure that it lies in the range 1 .. 32767.

PLS-00216: NUMBER precision constraint must be in range (1 .. 38)

Cause: A NUMBER variable was declared with a precision that is outside the legal range. Declarations such as N NUMBER(800) or N NUMBER(123,10) are not supported.

Action: Change the illegal NUMBER precision constraint, making sure that it lies in the range 1 .. 38.

PLS-00217: NUMBER scale constraint must be in range (-84 .. 127)

Cause: A NUMBER variable was declared with a scale that is outside the legal range. Declarations such as N NUMBER(10,345) or N NUMBER(10,-100) are not supported.

Action: Change the illegal NUMBER scale constraint, making sure that it lies in the range -84 .. 127.

PLS-00218: a variable declared NOT NULL must have an initialization assignment

Cause: In general, variables that have no initialization clause in their declaration are automatically initialized to NULL. This is illogical for NOT NULL variables; therefore, an initialization clause is required.

Action: Add an initialization clause to the variable declaration. If the initilization is too complicated for the syntax, one can add a function call (in a later release).

PLS-00219: label "*string*" reference is out of scope

Cause: A block or loop label was used to qualify a variable (as in outer_ block.date) that was not declared or is not within the scope of the label. The variable name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the variable name. Also confirm that the declaration is placed correctly in the block structure.

PLS-00220: simple name required in this context

Cause: A qualified name such as A.B or A.B.C is not permitted here.

Action: Use a simple name such as A instead.

PLS-00221: "*string*" is not a procedure or is undefined

Cause: An identifier being referenced as a procedure was not declared or actually represents another object (for example, it might have been declared as a function).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00222: no function with name "*string*" exists in this scope

Cause: An identifier being referenced as a function was not declared or actually represents another object (for example, it might have been declared as a procedure).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00223: paramaterless procedure "*string*" used as function

Cause: An identifier being referenced as a parameterless function actually represents a procedure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure. If necessary, change the declaration of the identifier or change the reference so that it does not require a return value.

PLS-00224: object "*string*" must be of type function or array to be used this way

Cause: An identifier being referenced as a function or an array actually represents an object (a number or date, for example) that cannot be referenced in this way.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00225: subprogram or cursor "*string*" reference is out of scope

Cause: The prefix in a qualified name was a subprogram or cursor which was not in an enclosing scope; i.e., a subprogram or cursor name is being used as a scope qualifier for a reference to an entity (within that subprogram or cursor) that is not in scope. Example: declare x number; type t1 is record (a number); function f return t1 is a number; begin x := f.a; -- legal use of function "f" as a scope qualifier; -- resolves to local variable "a" in function "f". x := f().a; -- legal reference to component "a" of returned record end; begin x := f.a; -- illegal use of function "f" as a scope qualifier x := f().a; -- legal reference to component "a" of returned record end;

Action: a) if the intention was to refer to a local variable of a non-enclosing function, this is not allowed; remove the reference b) if this is a parameterless function, and the the intention was to access a field of the result of a call to this function, then use empty parentheses in the call.

PLS-00226: package "*string*" used as variable reference

Cause: A package was referenced in an expression as if it were a variable or function. Either the name of the variable or function is misspelled or the reference is not fully qualified. For example, to call the function my_function, which is stored in package my_package, dot notation must be used, as follows: ... my_package.my_function ...

Action: Correct the spelling of the variable or function name or use dot notation to reference the packaged variable or function.

PLS-00227: subprogram "in" formal *string* is not yet denotable

Cause: When the formal parameters of a subprogram were declared, one parameter was used to initialize another, as in PROCEDURE my_proc (j NUMBER, k NUMBER := j) IS ... The first parameter has no value until run time, so it cannot be used to initialize another parameter.

Action: Remove the illegal formal parameter reference.

PLS-00228: Illegal declaration of variable of type LONG

Cause: The identifier is a formal parameter which is being used in the context of a default expression value for a formal parameter in the same formal parameter list. E.g.: procedure p(j number, k number := j).

Action: Remove the offending variable definition

PLS-00229: Attribute expression within SQL expression

Cause: An attribute expression, such as SQL%NOTFOUND, was used in a SQL statement, but attribute expressions are allowed only in procedural statements.

Action: To workaround this limitation, assign the value of the attribute expression to a variable, then use the variable in the SQL statement. For example, replace the statement INSERT INTO audits VALUES (c1%ROWCOUNT, ...); with the following statements: row_count := c1%ROWCOUNT; INSERT INTO audits VALUES (row_count, ...);

PLS-00230: OUT and IN OUT formal parameters may not have default expressions

Cause: When the formal parameters of a procedure were declared, an OUT or IN OUT parameter was initialized to a default value, as in PROCEDURE calc_bonus (bonus OUT REAL := 0, ...) IS ... However, only IN parameters can be initialized to default values.

Action: Remove the illegal default expression.

PLS-00231: function "*string*" may not be used in SQL

Cause: A proscribed function was used in a SQL statement. Certain functions such as SQLCODE and SQLERRM can be used only in procedural statements.

Action: Remove the function call from the SQL statement. Or, replace the function call with a local variable. For example, the following statement is illegal: INSERT INTO errors VALUES (SQLCODE, SQLERRM); However, you can assign the values of SQLCODE and SQLERRM to local variables, then use the variables in the SQL statement, as follows: err_num := SQLCODE; err_msg := SQLERRM; INSERT INTO errors VALUES (err_num, err_msg);

PLS-00232: nested packages not permitted

Cause: A package was declared inside another package, but package declarations are allowed only at the top level. In other words, packages cannot be nested.

Action: Move the package declaration outside the enclosing package.

PLS-00233: function name used as an exception name in when clause

Cause: The WHEN clause in an exception handler contains a function call instead of an exception name. A valid exception handler consists of a WHEN clause, which must specify an exception, followed by a sequence of statements to be executed when that exception is raised.

Action: Check the spelling of the identifier in the WHEN clause, then replace the function call with an exception name.

PLS-00234: PARAMETER STYLE SQL may not be specified with a PARAMATERS list

Cause: A subprogram cannot specify both PARAMETER STYLE SQL and an explicit PARAMETERS list. Use PARAMETER STYLE GENERAL to supply default PARAMETERS list types.

Action: Change the subprogram specification.

PLS-00235: the external type is not appropriate for the parameter

Cause: An unsuccessful attempt was made to convert a parameter to the specified external parameter type.

Action: Specify a different external type or parameter type.

PLS-00236: Invalid external type specification for *string*.

Cause: The external type specified is not valid for one of the following: INDICATOR, LENGTH, MAXLEN, TDO, DURATION, CHARSETID, or CHARSETFORM.

Action: Check the manual and specify an appropriate external type.

PLS-00237: invalid BY VALUE indicator or length specification

Cause: BY VALUE was specified with an indicator or length parameter that is being passed in OUT or IN OUT mode. Only IN mode parameters may be passed by value.

Action: Remove the BY VALUE specification or change it to IN mode.

PLS-00238: external parameter name *string* not found in formal parameter list

Cause: An external parameter name was specified that does not match one in the formal parameter list.

Action: Correct the external parameter name.

PLS-00239: invalid external type specification for SQLCODE

Cause: An inappropriate external parameter type was specified for the SQLCODE parameter.

Action: Correct the SQLCODE parameter specification.

PLS-00240: Invalid type specification for RETURN indicator, length, tdo, duration

Cause: An inappropriate external parameter type was specified for the RETURN indicator, LENGTH, TDO, or DURATION.

Action: Correct the RETURN parameter specification.

PLS-00241: invalid external type specification for SQLSTATE

Cause: An inappropriate external parameter type was specified for the SQLSTATE parameter.

Action: Correct the SQLSTATE parameter specification.

PLS-00242: invalid external type specification for CONTEXT

Cause: An inappropriate external parameter type was specified for the CONTEXT parameter.

Action: Correct the CONTEXT parameter specification.

PLS-00243: invalid external type specification for SQLNAME

Cause: An inappropriate external parameter type was specified for the SQLNAME parameter.

Action: Correct the SQLNAME parameter specification.

PLS-00244: Multiple declarations in foreign function formal parameter list

Cause: There are multiple declarations of at least one the following FORMAL, INDICATOR, LENGTH, MAXLENGTH, or CONTEXT. PL/SQL allows only one declaration of the above for each formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00245: Formals used in the "parameters" clause must appear exactly once

Cause: There are multiple declarations of the formal parameter in the PARAMETERS clause. PL/SQL allows only one declaration of the formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00246: PARAMETER STYLE is unsupported

Cause: A PARAMETER STYLE clause was placed in the external subprogram body.

Action: Remove the PARAMETER STYLE clause.

PLS-00247: LIBRARY or ASSEMBLY name must be specified

Cause: The LIBRARY or ASSEMBLY name is missing from the external subprogram body.

Action: The LIBRARY or ASSEMBLY name was not specified in the external subprogram body.

PLS-00248: Invalid Library Syntax

Cause: The LIBRARY syntax was entered incorrectly.

Action: Correct the LIBRARY syntax and recompile.

PLS-00249: Invalid WITH CONTEXT Syntax

Cause: CONTEXT was used in a WITH CONTEXT or a PARAMETERS clause. This is invalid.

Action: Check if WITH CONTEXT is used without specifying CONTEXT in the PARAMETERS clause or vice versa. The PARAMETERS clause must be complete. Thus if WITH CONTEXT is specified, then CONTEXT must be referenced in the PARAMETERS clause (if there is one).

PLS-00250: Incorrect Usage of *string* in parameters clause.

Cause: The usage of Keywords such as MAXLEN, LENGTH, CHARSETID, CHARSETFORM RETURN in the parameters clause was incorrect

Action: This error occurs if keywords like MAXLEN, LENGTH, TDO, DURATION, CHARSETID, or CHARSETFORM cannot be used with PL/SQL formal parameters or the mode of the formal parameter. For example, MAXLEN can only be declared for a CHAR or VARCHAR2 PL/SQL variable and its use is allowed only for OUT or INOUT PL/SQL variables. Also, RETURN was specified in the parameters clause for a PL/SQL PROCEDURE. E.g. CREATE PROCEDURE proc IS EXTERNAL NAME ... LIBRARY ... PARAMETERS(RETURN INDICATOR SHORT, RETURN);

PLS-00251: RETURN, for actual function return, must be last in the parameters clause

Cause: RETURN specification for the actual function return, used within the parameters clause must hold the very last position. Example : The following will give this error since the RETURN specification for the actual function return in the parameters clause is not the last. FUNCTION myexternalfunc (var1 BINARY_ INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INT, RETURN INDICATOR SHORT); The correct syntax is the following. Note that RETURN for actual function return is the last specification in the parameters clause. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INDICATOR SHORT, RETURN INT);

Action: Correct the syntax of the RETURN specification in the parameters clause

PLS-00252: reference to the wrong copy of package STANDARD

Cause: A reference is made to the fixed package version of STANDARD when the database is open, or to the on-disk version when the database is closed. Explicit use of a SYS.X$ package name can lead to this. One might also see this from a compilation that begins while the db is closed but has the bad luck to have another session open the db before compilation is complete. Another possible cause is having "set serveroutput on" through svrmgrl when doing an "alter database close".

Action: Make use of on-disk versions of packages when the database is open and fixed (preloaded) versions when the database is closed. Do not attempt to use the wrong set. It should be quite hard to reference the wrong set, except by using SYS.X$ package names explicitly. Also, be sure to "set serveroutput off" before doing an "alter database close".

PLS-00253: Formal parameter *string* missing in the parameters clause

Cause: The parameter clause does not have a matching parameter for a parameter specified in the formal parameter list.

Action: Provide a matching parameter in parameters clause for every formal parameter.

PLS-00254: OUT and IN/OUT modes cannot be used in this context

Cause: actual parameter mode (OUT, or IN/OUT) is not used properly in USING clause. For USING clause in an OPEN statement, only IN mode is allowed.

Action: change the parameter mode in the USING clause to an appropriate mode.

PLS-00255: CALL Specification parameters cannot have default values

Cause: CALL Specification formal parameters default values are disallowed.

Action: Remove the default values in the formal parameter list (spec or body) and compile again.

PLS-00256: *string* is not a valid external library or assembly

Cause: The supplied external library or assembly name in the external clause is not a valid alias library or assembly.

Action: Provide the name of a valid alias library or assembly which is previously declared.

PLS-00257: illegal use of EXTERNAL clause in a TYPE or PACKAGE specification

Cause: An EXTERNAL Clause was detected in a TYPE Specification or a PACKAGE specification.

Action: Remove the EXTERNAL Clause and use the new CALL Specification syntax.

PLS-00258: constrained datatypes disallowed in CALL Specifications

Cause: A call specification for C or Java cannot have constraints on the PL/SQL formal parameter types. PL/SQL types which have have constraints are NATURAL, NATURALN, POSITIVE, POSITIVEN, SIGNTYPE, INTEGER, INT, SMALLINT, DECIMAL, NUMERIC, DEC This includes NOT NULL constraints from POSITIVEN, NATURALN

Action: Use the unconstrained type for that PL/SQL formal declaration i.e NUMBER, BINARY_INTEGER or PLS_INTEGER

PLS-00259: rights model (AUTHID) must be specified

Cause: It is mandatory to specify the rights model if a PL/SQL PROCEDURE, FUNCTION, PACKAGE OR TYPE HAS CALL-Specifications

Action: Add the AUTHID clause indicating the rights model.

PLS-00260: Datetime/Interval constraints must be in range (0 .. 9)

Cause: A Datetime/Interval variable or attribute was declared with a constraint outside the legal range.

Action: Change the illegal constraint.

PLS-00261: Java CALL Specification not yet allowed as a method in an object type

Cause: A call specification declaring that an implementation is in Java has been found for a method of an object or opaque type. This usage is not yet supported.

Action: Implement the method using a language other than Java. A PL/SQL method implementation is permitted to call to Java through a call specification provided as a schema-level procedure or in a package; such a call specification can only target a static Java method, however. ****** errors until 300 are reserved for External Procedures ********** ****** PH2 errors **********

PLS-00302: component "*string*" must be declared

Cause: In a reference to a component (for example, in the name "A.B", "B" is a component of "A"), the component has not been declared. The component might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the component. Also confirm that the declaration is placed correctly in the block structure.

PLS-00303: qualifier "*string*" must be declared

Cause: In a name such as "A.B", "A" is the qualifier, and "B" is a component of the qualifier. This error occurs when no declaration for the qualifier is found.The qualifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the qualifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00304: cannot compile body of "*string*" without its specification

Cause: The compiled package specification required to compile a package body could not be found. Some possible causes follow: --the package name is misspelled --the package specification was never compiled --the compiled package specification is not accessible The package specification must be compiled before compiling the package body, and the compiler must have access to the compiled specification.

Action: Check the spelling of the package name. Compile the package specification before compiling the package body. Also, make sure the compiler has access to the compiled specification.

PLS-00305: previous use of "*string*" (at line *string*) conflicts with this use

Cause: While looking for prior declarations of a cursor, procedure, function, or package, the compiler found another object with the same name in the same scope. Or, the headers of subprogram in a package specification and body do not match word for word.

Action: Check the spelling of the cursor, procedure, function, or package name. Also check the names of all constants, variables, parameters, and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram so that they match word for word.

PLS-00306: wrong number or types of arguments in call to "*string*"

Cause: This error occurs when the named subprogram call cannot be matched to any declaration for that subprogram name. The subprogram name might be misspelled, a parameter might have the wrong datatype, the declaration might be faulty, or the declaration might be placed incorrectly in the block structure. For example, this error occurs if the built-in square root function SQRT is called with a misspelled name or with a parameter of the wrong datatype.

Action: Check the spelling and declaration of the subprogram name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00307: too many declarations of "*string*" match this call

Cause: The declaration of a subprogram or cursor name is ambiguous because there was no exact match between the declaration and the call and more than one declaration matched the call when implicit conversions of the parameter datatypes were used. The subprogram or cursor name might be misspelled, its declaration

might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the subprogram or cursor name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00308: this construct is not allowed as the origin of an assignment

Cause: The construct or expression does not designate a value that can be assigned to a variable. For example, the datatype name NUMBER cannot appear on the right hand side of an assignment statement as in X := NUMBER.

Action: Correct the illegal assignment statement.

PLS-00309: with %LAST attribute, "*string*" must be a variable of an enumerated type

Cause: The "%LAST" attribute must be applied to an identifier that has been declared as a variable of an enumerated type (or subtype of an enumerated type). This error occurs when "%LAST" follows some identifier that has not been so declared.

Action: None

PLS-00310: with %ROWTYPE attribute, "*string*" must name a table, cursor or cursor-variable

Cause: The %ROWTYPE attribute must be applied to an identifier declared as a cursor, cursor variable, or database table. This error occurs when %ROWTYPE follows some identifier that has not been so declared.

Action: Change the declaration or do not apply the %ROWTYPE attribute to the identifier.

PLS-00311: the declaration of "*string*" is incomplete or malformed

Cause: This occurrence of the identifier cannot be compiled because its type has not been properly defined.

Action: Correct the faulty datatype declaration.

PLS-00312: a positional parameter association may not follow a named association

Cause: When a list of parameters is passed to a subprogram or cursor, if both positional and named associations are used, all positional associations must be placed in their declared order and before all named associations, which can be in any order.

Action: Reorder the parameter list to meet the requirements or use named association only.

PLS-00313: "*string*" not declared in this scope

Cause: There is no declaration for the given identifier within the scope of reference. The identifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00314: TABLE declarations are not allowed as PL/SQL local variables

Cause: In a precompiled program, the DECLARE TABLE statement was mistakenly used inside an embedded PL/SQL block. If an embedded PL/SQL block refers to a database table that does not yet exist, use the DECLARE TABLE

statement to tell the precompiler what the table will look like. However, DECLARE TABLE statements are allowed only in the host program.

Action: Move the DECLARE TABLE statement outside the embedded PL/SQL block. If you want a variable that can store an entire row of data selected from a database table or fetched from a cursor or cursor variable, use the %ROWTYPE attribute.

PLS-00315: Implementation restriction: unsupported table index type

Cause: In the INDEX BY clause of a PL/SQL table declaration, a datatype other than BINARY_INTEGER, PLS_INTEGER, or VARCHAR2 was specified. PL/SQL tables can have one column and a primary key. The column can have any scalar type, but the primary key must be either a binary integer type or VARCHAR2.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00316: PL/SQL TABLEs must use a single index

Cause: In the INDEX BY clause of a PL/SQL table declaration, a composite primary key was specified. PL/SQL tables must have a simple, unnamed primary key of a binary integer or VARCHAR2 type.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00317: incomplete type "*string*" was not completed in its declarative region

Cause: An incomplete type declaration was not completed in the declarative region where it was declared.

Action: Complete the type appropriately, then retry the operation.

PLS-00318: type "*string*" is malformed because it is a non-REF mutually recursive type

Cause: A type-declaration such as: -- a non-REF recursive type, for example: type t is record (a t); or -- non-REF mutually dependent types, for example: type t1; type t2 is record (a t1); type t1 is record (a t2); was performed. In these examples, the type is malformed because it participates in a mutually recursive non-REF relationship with itself and possibly other types.

Action: Use another type to remove the recursion.

PLS-00319: subquery in an IN or NOT IN clause must contain exactly one column

Cause: An invalid expression such as X IN (SELECT A,B ...) was used. When a [NOT]IN clause is used with a subquery, it does not test for set membership. The number of expressions in the [NOT]IN clause and the subquery select list must match. So, in the example above, the subquery must specify at most one column.

Action: Change the subquery to select only one column.

PLS-00320: the declaration of the type of this expression is incomplete or malformed

Cause: In a declaration, the name of a variable or cursor is misspelled or the declaration makes a forward reference. Forward references are not allowed in PL/SQL. A variable or cursor must be declared before it is referenced it in other statements, including other declarative statements. For example, the following declaration of dept_rec raises this exception because it refers to a cursor not yet declared: DECLARE dept_rec dept_cur%ROWTYPE; CURSOR dept_cur IS SELECT ... ...

Action: Check the spelling of all identifiers in the declaration. If necessary, move the declaration so that it makes no forward references.

PLS-00321: expression "*string*" is inappropriate as the left hand side of an assignment statement

Cause: The expression does not designate a variable that can have a value assigned to it. For example, the function SYSDATE cannot appear on the left hand side of an assignment statement such as SYSDATE := "01-JAN-1990";

Action: Correct the illegal assignment statement.

PLS-00322: declaration of a constant "*string*" must contain an initialization assignment

Cause: A constant declaration lacks the assignment of an initial value. For example, in the following declaration" := 3.14159" is the initialization clause: "pi constant number := 3.14159;"

Action: Correct the constant declaration by supplying the missing initialization assignment.

PLS-00323: subprogram or cursor "*string*" is declared in a package specification and must be defined in the package body

Cause: A subprogram specification was placed in a package specification, but the corresponding subprogram body was not placed in the package body. The package body implements the package specification. So, the package body must contain the definition of every subprogram declared in the package specification.

Action: Check the spelling of the subprogram name. If necessary, add the missing subprogram body to the package body.

PLS-00324: cursor attribute may not be applied to non-cursor "*string*"

Cause: This error occurs when a cursor-attribute ("%FOUND", "%NOTFOUND", "%ROWS", "%IS_OPEN", etc.) appears following an identifier that is not declared as a cursor or cursor variable. It occurs, for example, if the variable name my_cur in my_cur%FOUND was not properly declared as a cursor or if the variable declaration was placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00325: non-integral numeric literal *string* is inappropriate in this context

Cause: A non-integral numeric literal was used in a context that requires an integer (a number with no digits to the right of its decimal point).

Action: Replace the inappropriate literal with an integer literal.

PLS-00326: IN clause must contain same number of expressions as subquery

Cause: The number of expressions in an IN clause did not equal the number of expressions in a corresponding subquery select list. For example, the following statement is invalid because the IN clause contains two expressions, but the subquery select list contains just one: ... WHERE (ename, sal) IN (SELECT sal FROM emp);

Action: Check the number of expressions in each set, then revise the statement to make the numbers equal.

PLS-00327: "*string*" is not in SQL scope here

Cause: In a SQL statement, a reference was made to an out-of-scope database object. The referenced object might be misspelled, or the reference might be mixed, as in the following example: CURSOR c1 IS SELECT dept.dname FROM emp;

Action: Check the spelling of all database objects in the SQL statement, and make sure all references are to objects within the current scope.

PLS-00328: A subprogram body must be defined for the forward declaration of *string*.

Cause: A subprogram specification was declared, but the corresponding subprogram body was not defined. Write the subprogram specification and body as a unit. An alternative solution is to separate the specification from its body, which is necessary when you want to define mutually recursive subprograms or you want to group subprograms in a package.

Action: Check the spelling of the subprogram name. If necessary, supply the missing subprogram body.

PLS-00329: schema-level type has illegal reference to *string*

Cause: An attempt was made to make a reference from a schema-level type to something other than a schema-level type.

Action: Replace the illegal reference and retry the operation.

PLS-00330: invalid use of type name or subtype name

Cause: A datatype or subtype specifier was mistakenly used in place of a constant, variable, or expression. For example, the code might look like IF emp_count > number THEN ... -- illegal; NUMBER is a datatype specifier

Action: Replace the datatype or subtype specifier with a valid constant, variable, or expression.

PLS-00331: illegal reference to *string*

Cause: You had an EITHER

1. an illegal reference to some object in user SYS. to use one of them in an illegal way OR

2. an illegal reference to a remote object type.

Action: Remove the reference.

PLS-00332: "*string***" is not a valid prefix for a qualified name**

Cause: You have a malformed qualified name because the prefix is not valid.

Action: Remove or change the reference.

PLS-00333: "*string***" must match an object-table alias in this context**

Cause: The name, appearing in the context of a REF or VALUE, did not resolve to an object-table alias.

Action: 1) If there is no object table in the scope, then remove the REF or VALUE; or provide the missing object table reference. 2) If there is an object table in the scope, but you"re not referring to it, add the reference.

PLS-00334: "*string***" matches table or view without an alias**

Cause: You have a reference to a table or view name without an alias.

Action: Replace the reference with a reference to an object-table alias.

PLS-00335: a package name conflicts with an existing object

Cause: In a CREATE PACKAGE statement, a package (which is a database object that groups logically related PL/SQL types, objects, and subprograms) was given the same name as an existing database object.

Action: Give the package a unique name.

PLS-00336: non-object-table "*string***" illegal in this context**

Cause: You have a REF or VALUE modifier for a non-object-table

Action: Replace the reference with a reference to an object-table alias.

PLS-00337: "*string*" matches too many object table aliases

Cause: You have an ambiguous reference to an object-table alias; there are at least two object-table aliases in the same scope.

Action: Remove all but one of the references or change the alias names of the remaining.

PLS-00338: unable to resolve "*string*" as a column or row expression

Cause: You have a reference to a name that could not be resolved as a column or row expression. This occurred in an update or insert statement involving an object-table.

Action: If this is an update statement and you intended to code this as a column reference, fix it as such. If you intended to code this as a row expression, change this to refer to an alias of an object-table.

PLS-00339: "*string*" matches object-table without a REF or VALUE modifier

Cause: You have an object-table name appearing without a REF or VALUE modifier.

Action: If you intended to code this with a REF or VALUE modifier, add the modifier; if you intended to code this as a column reference, change the reference appropriately; otherwise, remove the reference.

PLS-00341: declaration of cursor "*string*" is incomplete or malformed

Cause: A cursor declaration is improper or an identifier referenced in the cursor declaration was not properly declared. A return type that does not refer to an existing database table or a previously declared cursor or cursor variable might have been specified. For example, the following cursor declaration is illegal because c1 is not yet fully defined: CURSOR c1 RETURN c1%ROWTYPE IS SELECT ... -- illegal In this case, a return type does not have to be specified because it is implicit.

Action: Check the spelling and declaration of the cursor name and any identifiers referenced in the cursor declaration. Also confirm that the declaration is placed correctly in the block structure. If a return type was specified, make sure that it refers to an existing database table or a previously declared cursor or cursor variable.

PLS-00351: Not logged onto database "*string*"

Cause: An attempt was made to access an Oracle database without being logged on. Probably, an invalid username or password was entered.

Action: Log on to Oracle with a correctly spelled username and password before trying to access the database.

PLS-00352: Unable to access another database "*string*"

Cause: An attempt was made to reference an object in a database other than the current local or remote Oracle database.

Action: Correct the reference and make sure the object is in the current Oracle database.

PLS-00353: "*string*" must name a user in the database

Cause: This error occurs when the username was misspelled or when the user does not exist in the database.

Action: Check the spelling of the username and make sure the user exists.

PLS-00354: username must be a simple identifier

Cause: A qualified username such as scott.accts is not permitted in this context.

Action: Specify a simple username such as scott instead.

PLS-00355: use of pl/sql table not allowed in this context

Cause: A PL/SQL table was referenced in the wrong context (for example, with a remote link).

Action: Remove the PL/SQL table reference or change the context.

PLS-00356: "*string*" must name a table to which the user has access

Cause: The named table is not accessible to the user. This error occurs when the table name or username was misspelled, the table and/or user does not exist in the database, the user was not granted the necessary privileges, or the table name duplicates the name of a local variable or loop counter.

Action: Check the spelling of the table name and username. Also confirm that the table and user exist, the user has the necessary privileges, and the table name does not duplicate the name of a local variable or loop counter.

PLS-00357: Table,View Or Sequence reference "*string*" not allowed in this context

Cause: A reference to database table, view, or sequence was found in an inappropriate context. Such references can appear only in SQL statements or (excluding sequences) in %TYPE and %ROWTYPE declarations. Some valid examples follow: SELECT ename, emp.deptno, dname INTO my_ename, my_ deptno, my_dept .FROM emp, dept WHERE emp.deptno = dept.deptno; DECLARE last_name emp.ename%TYPE; dept_rec dept%ROWTYPE;

Action: Remove or relocate the illegal reference.

PLS-00358: column "*string*" exists in more than one table; use qualifier

Cause: The statement is ambiguous because it specifies two or more tables having the same column name. For example, the following statement is ambiguous because deptno is a column in both tables: SELECT deptno, loc INTO my_deptno, my_loc FROM emp, dept;

Action: Precede the column name with the table name (as in emp.deptno) so that the column reference is unambiguous.

PLS-00359: assignment target in "*string*" must have components

Cause: An assignment target was declared that lacks the components needed to store the assigned values. For example, this error occurs if you try to assign a row of column values to a variable instead of a record, as follows: DECLARE dept_rec dept%ROWTYPE; my_deptno dept.deptno%TYPE; ... BEGIN SELECT deptno, dname, loc INTO my_deptno -- invalid FROM dept WHERE ...

Action: Check the spelling of the names of the assignment target and all its components. Make sure the assignment target is declared with the required components and that the declaration is placed correctly in the block structure.

PLS-00360: cursor declaration without body needs return type

Cause: A cursor declaration lacks either a body (SELECT statement) or a return type. If you want to separate a cursor specification from its body, a return type must be supplied, as in CURSOR c1 RETURN emp%ROWTYPE;

Action: Add a SELECT statement or return type to the cursor declaration.

PLS-00361: IN cursor "*string*" cannot be OPEN"ed

Cause: A cursor parameter with mode IN cannot be modified, and therefore cannot be opened.

Action: Change the cursor parameter to be IN OUT or OUT

PLS-00362: invalid cursor return type; "*string*" must be a record type

Cause: In a cursor specification or REF CURSOR type definition, a non- record type such as NUMBER or TABLE was specified as the return type. This is not allowed. Only the following return types are allowed: <record_type_name> <record_name>%TYPE <table_name>%ROWTYPE <cursor_name>%ROWTYPE <cursor_variable_name>%ROWTYTPE

Action: Revise the cursor specification or REF CURSOR type definition so that it specifies one of the above return types.

PLS-00363: expression "*string*" cannot be used as an assignment target

Cause: A literal, constant, IN parameter, loop counter, or function call was mistakenly used as the target of an assignment. For example, the following statement is illegal because the assignment target, 30, is a literal: SELECT deptno INTO 30 FROM dept WHERE ... -- illegal

Action: Correct the statement by using a valid assignment target.

PLS-00364: loop index variable "*string*" use is invalid

Cause: An attempt was made to assign the value of an OUT parameter to

Action: Use an IN OUT parameter instead of the OUT parameter. Inside a

PLS-00366: subtype of a NOT NULL type must also be NOT NULL

Cause: After a subtype was defined as NOT NULL, it was used as the base type for another subtype defined as NULL. That is not allowed. For example, the code might look like DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday NULL; -- illegal instead of DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday;

Action: Revise the subtype definitions to eliminate the conflict.

PLS-00367: a RAISE statement with no exception name must be inside an exception handler

Cause: A RAISE statement not followed by an exception name was found outside an exception handler

Action: Delete the RAISE statement, relocate it to an exception handler, or supply the missing exception name.

PLS-00368: in RAISE statement, "*string*" must be an exception name

Cause: The identifier in a RAISE statement is not a valid exception name.

Action: Make sure the identifier in the RAISE statement was declared as an exception and is correctly placed in the block structure. If you are using the name of a PL/SQL predefined exception, check its spelling.

PLS-00369: no choices may appear with choice OTHERS in an exception handler

Cause: A construct of the form WHEN excep1 OR OTHERS => was encountered in the definition of an exception handler. The OTHERS handler must appear by itself as the last exception handler in a block.

Action: Remove the identifier that appears with OTHERS or write a separate exception handler for that identifier.

PLS-00370: OTHERS handler must be last among the exception handlers of a block

Cause: One or more exception handlers appear after an OTHERS handler. However, the OTHERS handler must be the last handler in a block or subprogram because it acts as the handler for all exceptions not named specifically.

Action: Move the OTHERS handler so that it follows all specific exception handlers.

PLS-00371: at most one declaration for "*string*" is permitted

Cause: A reference to an identifier was ambiguous because there were multiple declarations for the identifier. At most one local variable with a given identifier is permitted in the declarative part of a block, procedure, or function. At most one label with a given identifier may appear in a block.

Action: Check the spelling of the identifier. If necessary, remove all but one declaration of the identifier.

PLS-00372: In a procedure, RETURN statement cannot contain an expression

Cause: In a procedure, a RETURN statement contains an expression, which is not allowed. In functions, a RETURN statement must contain an expression because its value is assigned to the function identifier. However, in procedures, a RETURN statement simply lets you exit before the normal end of the procedure is reached.

Action: Remove the expression from the RETURN statement, or redefine the procedure as a function.

PLS-00373: EXIT/CONTINUE label "*string*" must label a LOOP statement

Cause: The label in the EXIT or CONTINUE statement did not refer to a LOOP statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), it must refer to a LOOP statement.

Action: Make sure the label name is spelled correctly and that it refers to a LOOP statement.

PLS-00374: illegal EXIT/CONTINUE statement; must appear inside the loop labeled "*string*"

Cause: The label in the EXIT or CONTINUE statement did not refer to a loop statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), the EXIT or CONTINUE statement must be inside the LOOP statement designated by that label.

Action: Make sure the label name is spelled correctly; if necessary, move the EXIT or CONTINUE statement inside the LOOP statement to which the label refers.

PLS-00375: illegal GOTO statement; this GOTO cannot branch to label "*string*"

Cause: The line and column numbers accompanying the error message refer to a GOTO that branches from outside a construct (a loop or exception handler, for example) that contains a sequence of statements to a label inside that sequence of statements. Such a branch is not allowed.

Action: Either move the GOTO statement inside the sequence of statements or move the labeled statement outside the sequence of statements.

PLS-00376: illegal EXIT/CONTINUE statement; it must appear inside a loop

Cause: An EXIT or CONTINUE statement was found outside of a loop construct. The EXIT statement is used to exit prematurely from a loop and the CONTINUE

statement is used to begin the next iteration of a loop; each must always appear within a loop.

Action: Either remove the EXIT or CONTINUE statement or place it inside a loop.

PLS-00377: internal type PLS_INTEGER is not included in this release of PL/SQL

Cause: The type-name INTEGER was used in a declaration.

Action: None

PLS-00378: invalid compilation unit for this release of PL/SQL

Cause: A compilation unit is a file containing PL/SQL source code that is passed to the compiler. Only compilation units containing blocks, declarations, statements, and subprograms are allowed. This error occurs when some other language construct is passed to the compiler.

Action: Make sure the compilation unit contains only blocks, declarations, statements, and subprograms.

PLS-00379: CASE statements are not included in this release of PL/SQL

Cause: The unit being compiled contains a CASE statement. However, the current release of PL/SQL does not support CASE statements.

Action: Remove the CASE statement from the compilation unit.

PLS-00380: functions and procedures are not included in this release of PL/SQL

Cause: The program being compiled contains a declaration of a FUNCTION or PROCEDURE.

Action: None

PLS-00381: type mismatch found at "*string*" between column and variable in subquery or INSERT

Cause: The datatypes of a column and a variable do not match. The variable was encountered in a subquery or INSERT statement.

Action: Change the variable datatype to match that of the column.

PLS-00382: expression is of wrong type

Cause: An expression has the wrong datatype for the context in which it was found.

Action: Change the datatype of the expression. You might want to use datatype conversion functions.

PLS-00383: type mismatch found at "*string*" inside an IN or NOT IN clause

Cause: In a test for set membership such as X NOT IN (SELECT Y ...), the expressions X and Y do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00384: type mismatch found at "*string*" in UPDATE"s SET clause

Cause: The column to the left of the equal sign in the SET clause of an UPDATE statement does not match in datatype with the column, expression, or subquery to the right of the equal sign, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the SET clause.

PLS-00385: type mismatch found at "*string*" in SELECT...INTO statement

Cause: The expressions to the left and right of the INTO clause in a SELECT...INTO statement do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00386: type mismatch found at "*string*" between FETCH cursor and INTO variables

Cause: An assignment target in the INTO list of a FETCH statement does not match in datatype with the corresponding column in the select list of the cursor declaration, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the cursor declaration or change the datatype of the assignment target. You might want to use datatype conversion functions in the select list of the query associated with the cursor.

PLS-00387: INTO variable cannot be a database object

Cause: An item in the INTO list of a FETCH or SELECT statement was found to be a database object. INTO introduces a list of user-defined variables to which output values are assigned. Therefore, database objects cannot appear in the INTO list.

Action: Check the spelling of the INTO list item. If necessary, remove the item from the INTO list or replace it with a user-defined output variable.

PLS-00388: undefined column "*string*" in subquery

Cause: A subquery contains a column name that was not defined in the specified table.

Action: Change the expression to specify a column that was defined.

PLS-00389: table, view or alias name "*string*" not allowed in this context

Cause: A table, view or alias name <name> corresponding to a regular (non-object) table appeared in an inappropriate context.

Action: Remove the reference, or, if you intended to code this as a column reference, fix it as such.

PLS-00390: undefined column "*string*" in INSERT statement

Cause: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

Action: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

PLS-00391: undefined column "*string*" in UPDATE statement

Cause: An UPDATE statement refers to a column not defined for the table or view being updated.

Action: Check the spelling of the column name, then revise the statement so that it refers only to defined columns.

PLS-00392: Type mismatch in arguments to BETWEEN

Cause: In a comparison such as X BETWEEN Y AND Z, the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00393: wrong number of columns in SELECT...INTO statement

Cause: The number of columns selected by a SELECT...INTO statement does not match the number of variables in the INTO clause.

Action: Change the number of columns in the select list or the number of variables in the INTO clause so that the numbers match.

PLS-00394: wrong number of values in the INTO list of a FETCH statement

Cause: The number of variables in the INTO clause of a FETCH statement does not match the number of columns in the cursor declaration.

Action: Change the number of variables in the INTO clause or the number of columns in the cursor declaration so that the numbers match.

PLS-00395: wrong number of values in VALUES clause of INSERT statement

Cause: The number of columns in an INSERT statement does not match the number of values in the VALUES clause. For example, the following statement is faulty because no column is specified for the value 20: INSERT INTO emp (empno, ename) VALUES (7788, "SCOTT", 20);

Action: Change the number of items in the column list or the number of items in the VALUES list so that the numbers match.

PLS-00396: INSERT statement"s subquery yields wrong number of columns

Cause: The number of columns in an INSERT statement does not match the number of columns in a subquery select list. For example, the following statement is faulty because no corresponding column is specified for col3: INSERT INTO emp (ename, empno) SELECT col1, col2, col3 FROM ...

Action: Change the number of items in the column list of the INSERT statement or the number of items in the select list so that the numbers match.

PLS-00397: Type mismatch in arguments to IN

Cause: In a test for set membership such as X IN (Y, Z), the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00398: wrong number of columns in UNION, INTERSECT, or MINUS expression

Cause: The SELECT clauses to the left and right of a UNION, INTERSECT, or MINUS expression do not select the same number of columns. For example, the following statement is faulty because the select lists do not contain the same number of items: CURSOR my_cur IS SELECT ename FROM emp INTERSECT SELECT ename, empno FROM emp;

Action: Change the select lists so that they contain the same number of items.

PLS-00399: different types of columns in UNION, INTERSECT, or MINUS expression

Cause: The select lists to the left and right of a UNION, INTERSECT, or MINUS expression select at least one column that is mismatched in datatype. For example, the following statement is faulty because the constant 3 has datatype NUMBER,

whereas SYSDATE has datatype DATE: CURSOR my_cur IS SELECT 3 FROM emp INTERSECT SELECT SYSDATE FROM emp;

Action: Change the select lists so that they match in datatype. You might want to use datatype conversion functions in the select list of one or more queries.

PLS-00400: different number of columns between cursor SELECT statement and return value

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but the number of returned column values does not match the number of select-list items.

Action: Change the cursor return type or the select list so that the number of returned column values matches the number of select-list items.

PLS-00401: different column types between cursor SELECT statement and return value found at "*string*"

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but a returned column value and its corresponding select-list item have different datatypes.

Action: Change the cursor return type or the select list so that each returned column value and its corresponding select-list item have the same datatype.

PLS-00402: alias required in SELECT list of cursor to avoid duplicate column names

Cause: A cursor was declared with a SELECT statement that contains duplicate column names. Such references are ambiguous.

Action: Replace the duplicate column name in the select list with an alias.

PLS-00403: expression "*string*" cannot be used as an INTO-target of a SELECT/FETCH statement

Cause: A FETCH statement was unable to assign a value to an assignment target in its INTO list because the target is not a legally formed and declared variable. For example, the following assignment is illegal because "Jones" is a character string, not a variable: FETCH my_cur INTO "Jones";

Action: Check the spelling and declaration of the assignment target. Make sure that the rules for forming variable names are followed.

PLS-00404: cursor "*string*" must be declared with FOR UPDATE to use with CURRENT OF

Cause: The use of the CURRENT OF cursor_name clause is legal only if cursor_name was declared with a FOR UPDATE clause.

Action: Add a FOR UPDATE clause to the definition of the cursor or do not use the CURRENT OF cursor_name clause.

PLS-00405: subquery not allowed in this context

Cause: A subquery was used in an inappropriate context, such as: if (SELECT deptno FROM emp WHERE ...) = 20 then ... Subqueries are allowed only in SQL statements.

Action: The same result can be obtained by using a temporary variable, as in: SELECT deptno INTO temp_var FROM emp WHERE ...; IF temp_var = 20 THEN ...

PLS-00406: length of SELECT list in subquery must match number of assignment targets

Cause: A query select list is not the same length as the list of targets that will receive the returned values. For example, the following statement is faulty because the subquery returns two values for one target: UPDATE emp SET ename = (SELECT ename, empno FROM emp WHERE ename = "SMITH") ...

Action: Change one of the lists so that they contain the same number of items.

PLS-00407: "*" not allowed here; a list of columns is required

Cause: An asterisk (*) was used as an abbreviation for a list of column names. However, in this context the column names must be written out explicitly.

Action: Replace the asterisk with a list of column names.

PLS-00408: duplicate column "*string*" not permitted in INSERT or UPDATE

Cause: An UPDATE or INSERT statement has a column list that contains duplicate column names.

Action: Check the spelling of the column names, then eliminate the duplication.

PLS-00409: duplicate variable "*string*" in INTO list is not permitted

Cause: The same variable appears twice in the INTO list of a SELECT or FETCH statement.

Action: Remove one of the variables from the INTO list.

PLS-00410: duplicate fields in RECORD,TABLE or argument list are not permitted

Cause: When a user-defined record was declared, the same name was given to two fields. Like column names in a database table, field names in a user-defined record must be unique.

Action: Check the spelling of the field names, then remove the duplicate.

PLS-00411: Number of values in aggregate and in subquery don''t match

Cause: In a statement of the form aggregate = subquery, the numbers of values in the aggregate and subquery are unequal. For example, the code might look like ... WHERE (10,20,30) = (SELECT empno,deptno FROM emp WHERE...);

Action: Revise the aggregate or subquery so that the numbers of values match.

PLS-00412: list of values not allowed as argument to this function or procedure

Cause: A parenthesized list of values separated by commas (that is, an aggregate) was used in the wrong context. For example, the following usage is invalid: WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) However, an equal sign can take a list of values and a subquery as left- and right-hand-side arguments, respectively. So, the following usage is valid: WHERE (col1, col2) = (SELECT col3, col4 FROM my_table ...)

Action: Rewrite the expression. For example, the clause WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) can be rewritten as WHERE col1 > (SELECT col3 FROM my_table ...) AND col2 > (SELECT col4 FROM my_table ...)

PLS-00413: identifier in CURRENT OF clause is not a cursor name

Cause: The identifier in a CURRENT OF clause names an object other than a cursor.

Action: Check the spelling of the identifier. Make sure that it names the cursor in the DELETE or UPDATE statement and that it names the cursor itself, not a FOR-loop variable.

PLS-00414: no column "*string*" in table

Cause: A table name or alias was used to qualify a column reference, but the column was not found in that table. Either the column was never defined or the column name is misspelled.

Action: Confirm that the column was defined and check the spelling of the column name.

PLS-00415: "*string*" is an OUT parameter and cannot appear in a function

Cause: An OUT or IN OUT formal parameter was used in a function specification.

Action: None

PLS-00416: The third argument of DECODE cannot be NULL

Cause: The third argument of DECODE is NULL.

Action: Enter an argument with a proper type and value.

PLS-00417: unable to resolve "*string*" as a column

Cause: A database table, view, or column was specified in a SQL statement that does not exist, or the privileges required to access the table or view were not granted.

Action: Check the spelling of the table (or view) and column names; make sure the table and columns exist. If necessary, ask the DBA to grant the privileges required to access the table.

PLS-00418: array bind type must match PL/SQL table row type

Cause: A host array was passed (by an Oracle Precompiler program, for example) to a PL/SQL subprogram for binding to a PL/SQL table parameter. However, the datatypes of the array elements and PL/SQL table rows are incompatible. So, the binding failed.

Action: Change the datatype of the array elements or PL/SQL table rows to make the datatypes compatible.

PLS-00419: reference to remote attribute not permitted

Cause: An attempt was made to reference a remote cursor attribute, which is not allowed. For example, the code might look like IF SQL%NOTFOUND@newyork THEN ...

Action: Do not try to reference a remote cursor attribute.

PLS-00420: can''t call builtin routines remotely

Cause: An attempt was made to call a built-in PL/SQL function remotely, which is not allowed. For example, the code might look like my_sqlerrm := SQLERRM@newyork; or INSERT INTO emp VALUES (my_empno, STANDARD.RTRIM@newyork(my_ename), ...);

Action: Always call built-in functions locally; never specify a database link.

PLS-00421: circular synonym "*string*"

Cause: Directly or indirectly, a synonym was defined in terms of itself, creating a circular definition.

Action: Redefine the synonyms to eliminate the circular definition.

PLS-00422: no PL/SQL translation for the bindtype given for this bind variable

Cause: A host variable was passed (by an Oracle Precompiler program, for example) to PL/SQL for binding. However, its datatype is not compatible with any PL/SQL datatype. So, the binding failed.

Action: Change the datatype of the host variable to make it compatible with a PL/SQL datatype.

PLS-00423: ORDER BY item must be the number of a SELECT-list expression

Cause: A column alias was used in the ORDER BY clause of a SELECT statement that uses a UNION, INTERSECT, or MINUS set operator. This is not allowed. In such cases, expressions in the ORDER BY clause must be unsigned integers that designate the ordinal positions of select-list items.

Action: Change the alias in the ORDER BY clause to an unsigned integer that designates the ordinal position of the select item in question.

PLS-00424: RPC defaults cannot include Package State

Cause: An attempt was made to call a remote subprogram whose defaulted parameters depend on package state, which is not allowed. When calling remote subprograms, the actual parameters must be passed explicitly if the corresponding formal parameters depend on package state.

Action: Call the remote subprogram by passing each actual parameter explicitly.

PLS-00425: in SQL, function argument and return types must be SQL type

Cause: When a cursor variable was declared as the formal parameter of a

Action: Change the parameter mode from OUT to IN or IN OUT.

PLS-00427: RPC defaults cannot use builtins when versions of STANDARD differ

Cause: An attempt was made to call a remote subprogram whose defaulted parameter value is calculated using a builtin operation. If the calling system uses a different version of package STANDARD than does the called system, a defaulted expression must be either a simple numeric or string literal, NULL, or a direct call to a user-written function.

Action: Call the remote subprogram by passing each actual parameter value explicitly.

PLS-00428: an INTO clause is expected in this SELECT statement

Cause: The INTO clause of a SELECT INTO statement was omitted. For example, the code might look like SELECT deptno, dname, loc FROM dept WHERE ... instead of SELECT deptno, dname, loc INTO dept_rec FROM dept WHERE ... In PL/SQL, only a subquery is written without an INTO clause.

Action: Add the required INTO clause.

PLS-00429: unsupported feature with RETURNING clause

Cause:

- INTO clause and RETURNING clause cannot be use in the same statement

- RETURNING clause is currently not supported for object type columns, LONG columns, records, %rowtypes, remote tables and INSERT with subquery. This is as ORA-28815.

Action: Use separate select statement to get the values.

PLS-00430: FORALL iteration variable *string* is not allowed in this context

Cause: FORALL iteration variable can only be used as a subscript. It cannot be used directly or as a part of an expression.

Action: Use FORALL variable only as a collection subscript.

PLS-00431: bulk SQL attributes must use a single index

Cause: More than one index specified to access SQL bulk attribute.

Action: Use a single index of integer datatype.

PLS-00432: implementation restriction: cannot use FORALL and BULK COLLECT INTO together in SELECT statements

Cause: SELECT statement contains both the FORALL and BULK COLLECT INTO phrases.

Action: Dn not use FORALL and BULK COLLECT INTO together in SELECT statements.

PLS-00433: inconsistent package STANDARD

Cause: PL/SQL compiler could not find the entries (such as type declarations) that should exist in the package STANDARD.

Action: Make sure that the correct version of package STANDARD is available in the current Oracle database, then retry compilation.

PLS-00434: record field has unsupported type: "*string*"

Cause: An attempt was made to use an unsupported type for a record field. In this release, the use of the SQL92 datetime types (time, timestamp, time with time zone, timestamp with time zone, interval year to month, interval day to second) are not supported in record fields.

Action: Use only supported types for record fields.

PLS-00435: DML statement without BULK In-BIND cannot be used inside FORALL

Cause: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement does not contain BULK IN-BIND variables.

Action: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement must contain BULK IN-BIND variables.

PLS-00436: implementation restriction: cannot reference fields of BULK In-BIND table of records or objects

Cause: table(bulk_index).field is not supported at run-time.

Action: Use FOR loop with instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE).

PLS-00437: FORALL bulk index cannot be used in *string* clause

Cause: RETURNING table(bulk_index) is not supported.

Action: Use RETURNING BULK COLLECT instead

PLS-00438: value in LIMIT clause: "*string*" use is invalid

Cause: The evaluation value in the LIMIT clause of a bulk fetch was found in an inappropriate context. For example, the following statement is illegal because the LIMIT clause in a bulk fetch expects a numeric value. FETCH c1 BULK COLLECT INTO var_tab LIMIT "22333"; -- illegal

Action: Change the expression of the LIMIT clause so that the evaluation result is compatible to a numeric value.

PLS-00439: A LIMIT clause must be used within a BULK FETCH

Cause: A LIMIT clause is used within a non-bulk fetch

Action: Do not use a LIMIT clause when a non-bulk fetch is used.

PLS-00440: FORALL bulk IN-bind variables cannot be used here

Cause: A reference to a FORALL statement"s bulk IN-bind variable was found in a context in which it is not permitted. For example, such variables are not permitted in expressions in the USING clause of a dynamic SQL statement: forall j in 1..Users.Count() execute immediate " insert into System_Users(Username) values :U" using Upper(Users(j));

Action: In the case described above, move the expression from the USING clause into the SQL statement: forall j in 1..Users.Count() execute immediate " insert into System_Users(Username) values Upper(:U)" using Users(j);

PLS-00441: EXIT/CONTINUE statement may have a label here; "*string*" is not a label

Cause: The specified name was not a label. An EXIT or CONTINUE statement does not require a label, but when the optional name appears, it must be a label.

Action: Check the spelling of the name. Make sure that the name is the label of a loop in which the EXIT or CONTINUE statement is nested. If a label is not needed for this statement, delete the name.

PLS-00442: CONTINUE statement may not have the prefix STANDARD

Cause: The procedure CONTINUE appears in STANDARD but that procedure may not be called either with its name alone or with the prefix STANDARD. It exists only to help in analysis of the CONTINUE statement.

Action: If a CONTINUE statement is intended, remove the prefix. If some other procedure was intended, check the spelling of the prefix and of the procedure name.

PLS-00450: a variable of this private type cannot be declared here

Cause: A variable declaration uses a type that is declared PRIVATE in some other compilation unit.

Action: Do not use this type in a PRIVATE variable declaration.

PLS-00452: Subprogram "*string*" violates its associated pragma

Cause: A packaged function cannot be called from SQL statements unless its purity level is asserted by coding a RESTRICT_REFERENCES pragma in the package specification. The pragma, which is used to control side effects, tells the PL/SQL compiler to deny the packaged function read/write access to database tables, public packaged variables, or both. A SQL statement that violates the pragma will cause a compilation error.

Action: Raise the purity level of the function, or relax the pragma restrictions.

PLS-00453: remote operations not permitted on object tables or user-defined type columns

Cause: A reference to a remote object tables or user-defined type column was found.

Action: Do not refer to it.

PLS-00454: with a returning into clause, the table expression cannot be remote or a subquery

Cause: A reference to a remote table or subquery was found in a sql statement with a returning into clause.

Action: Do not refer to it, or do use a subsequent select statement.

PLS-00455: cursor "*string*" cannot be used in dynamic SQL OPEN statement

Cause: dynamicly OPEN a REF CURSOR that has RETURN type. However, only REF CURSOR without RETURN type can be OPEN"ed by an embebded dynamic OPEN statement.

Action: define a REF CURSOR without return type, and use it in the statement.

PLS-00456: item "*string*" is not a cursor

Cause: the given variable is not a cursor and therefore cannot be OPEN"ed or FETCH"ed from.

Action: check the spelling and declaration for the given variable.

PLS-00457: expressions have to be of SQL types

Cause: an expression of wrong type is in USING or dynamic RETURNING clause. In USING or dynamic RETURNING clause, an expression cannot be of non-SQL types such as BOOLEAN, INDEX TABLE, and record.

Action: change the expression type to a SQL type.

PLS-00458: subprogram "*string*" cannot be called from a REPEATABLE subprogram

Cause: The subprogram is not REPEATABLE and cannot be called from a REPEATABLE subprogram.

Action: delete the call or delete REPEATABLE.

PLS-00459: this feature is not allowed in REPEATABLE subprogram

Cause: Having one of the followings feature in the REPEATABLE subprogram: dynamic SQL statements or autonomous transaction.

Action: delete the statements or delete REPEATABLE.

PLS-00460: REPEATABLE subprogram "*string*" has to be RNDS, WNDS, RNPS, and WNPS

Cause: Repeatable subprogram can neither read database state (RNDS), write database state (WNDS), read package state (RNPS), nor write package state (WNPS).

Action: make the subprogram to be RNDS, WNDS, RNPS, and WNPS or delete REPEATABLE

PLS-00461: mismatch REPEATABLE information between specification and body of "*string*"

Cause: REPEATABLE is declared at the subprogram"s specification, but not at its body, or vice versa.

Action: make sure both specification and body are declared as REPEATABLE

PLS-00462: nested subprogram "*string*" has to be REPEATABLE

Cause: the nested subprogram of a REPEATABLE subprogram is not declared as REPEATABLE. If a subprogram is REPEATABLE, all of its nested subprograms has to be declared as REPEATABLE.

Action: declared the nested subprogram as REPEATABLE

PLS-00483: exception "*string*" may appear in at most one exception handler in this block

Cause: An exception appears in two different WHEN clauses (that is, two different exception handlers) in the exception-handling part of a PL/SQL block or subprogram.

Action: Remove one of the references to the exception.

PLS-00484: redundant exceptions "*string*" and "*string*" must appear in same exception handler

Cause: Using the EXCEPTION_INIT pragma, different exceptions were initialized to the same Oracle error number; then, they were referenced in different exception handlers within the same exception-handling part. Such references conflict.

Action: Remove one of the exceptions or initialize it to a different Oracle error number.

PLS-00485: in exception handler, "*string*" must be an exception name

Cause: An identifier not declared as an exception appears in an exception handler WHEN clause. Only the name of an exception is valid in a WHEN clause.

Action: Check the spelling of the exception name and make sure the exception was declared properly.

PLS-00486: select list cannot be enclosed in parentheses

Cause: In a SELECT statement, the select list was enclosed in parentheses, as in: SELECT (deptno, dname, loc) FROM dept INTO ... This breaks the rules of SQL syntax. Parentheses are not required because the keywords SELECT and FROM delimit the select list.

Action: Remove the parentheses enclosing the select list.

PLS-00487: Invalid reference to variable "*string*"

Cause: A variable was referenced in a way that is inconsistent with its datatype. For example, a scalar variable might have been mistakenly referenced as a record, as follows: DECLARE CURSOR emp_cur IS SELECT empno, ename, sal FROM emp; emp_rec emp_cur%ROWTYPE; my_sal NUMBER(7,2); BEGIN ... total_sal := total_sal + my_sal.sal; -- invalid ...

Action: Check the spelling of the variable name. Make sure the variable was declared properly and that the declaration and reference are consistent regarding datatype.

PLS-00488: "*string*" must be a type

Cause: The datatype specifier in a declaration or expression does not designate a legal type. For example, the %TYPE attribute might not have been added to a declaration, as in DECLARE my_sal emp.sal%TYPE; my_ename emp.ename; -- missing %TYPE ... When declaring a constant or variable, to provide the datatype of a column automatically, use the %TYPE attribute. Likewise, when declaring a record, to provide the datatypes of a row automatically, use the %ROWTYPE attribute.

Action: Make sure the datatype specifier designates a legal type. Remember to use the %TYPE and %ROWTYPE attributes when necessary.

PLS-00489: invalid table reference: "*string*" must be a column in this expression

Cause: In a query, a select-list item refers to a table in the FROM clause but not to a database column.

Action: Check the spelling of the column names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00490: illegal statement

Cause: A constant, variable, function call, or incomplete statement was used where a statement was expected. For example, instead of calling a function from an expression, it might have been called as a statement (as if it were a procedure).

Action: Check the statement, making sure that its commands, identifiers, operators, delimiters, and terminator form a complete and valid PL/SQL statement.

PLS-00491: numeric literal required

Cause: A constant or variable was used where a numeric literal is required. For example, the code might look like my_ename VARCHAR2(max_len); instead of my_ename VARCHAR2(15); When specifying the maximum length of a VARCHAR2 variable, an integer literal must be used.

Action: Replace the identifier with a numeric literal.

PLS-00492: variable or constant initialization may not refer to functions declared in the same package

Cause: If a package spec p declares a function f, that function may not be used in any variable declarations in that same package spec. This is because of a circular instantiation problem: in order to fully instantiate the package spec, the variable must be initialized. To initialize the variable, the function body code in the package body must be executed. That requires that the package body be instantiated. However, the package body cannot be instantiated until the package spec is fully instantiated.

Action: Remove the reference to the function from the variable initialization. A technique which often works is to move the variable initialization from the variable declaration (in the package spec) to the package body initialization block.

PLS-00493: invalid reference to a server-side object or function in a local context

Cause: A reference to a server-side object (e.g. a table column) or function (a group function such as SUM, AVG, MIN, MAX, ...) was found in a context where only PL/SQL objects may be present (such as within the parameter list of a local function or as the index of a (local) PL/SQL table.)

Action: Rewrite the offending statement; or (if a local function call is the problem context), make the function non-local (either packaged or top- level.)

PLS-00494: coercion into multiple record targets not supported

Cause: The INTO list of a SELECT or FETCH specified more than a single record-type target and the column types required coercion into a record to match the INTO list. This is type checked as correct, but not yet supported.

Action: Create a new record type to hold all of the column types or code the SELECT with an INTO target for every source column.

PLS-00495: too many columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough fields in the record for each of the columns.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00496: too few columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough columns to fill all of the fields in the record.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00497: cannot mix between single row and multi-row (BULK) in INTO list

Cause: - When BULK syntax (e.g. BULK COLLECT INTO) is used to retrieve data, every variable in the INTO list has to be of type that is a collection of the type of the corresponding column.

- When BULK is NOT used, every variable in the INTO list has to be of compatible type with the corresponding column.

Action: Change the INTO list so that all variables have correct data types

PLS-00498: illegal use of a type before its declaration

Cause: A variable or constant was declared to be of a type whose declaration appears later in the compilation unit; or, a type or subtype was declared in terms of another type whose declaration appears later in the compilation unit.

Action: Ensure that the type declaration preceeds its use in the variable/constant/type declaration.

PLS-00499: coercion into collection of records not supported

Cause: A SELECT or FETCH may specify a column list to be coerced into a variable which is a collection of records. This is type checked as correct, but not yet supported because of the implicit layout change required.

Action: Express the SELECT with an object constructor around the columns and use a collection of objects as an INTO variable. Or, build the collection one row at a time coercing each row into a record which happens to be an element. Or, use a record of collections.

PLS-00500: invalid operator binding

Cause: An operator binding fucntion cannot be found in the specified scope.

Action: Provide the correct number and types of parameters for the operator binding fucntion. Or, specify the correct names for schema, package, or type containing the operator binding fucntion.

PLS-00503: RETURN <value> statement required for this return from function

Cause: In a function body, a RETURN statement was used that contains no expression. In procedures, a RETURN statement contains no expression because the statement simply returns control to the caller. However, in functions, a RETURN statement must contain an expression because its value is assigned to the function identifier.

Action: Add an expression to the RETURN statement.

PLS-00504: type *string*_BASE may not be used outside of package STANDARD

Cause: In a declaration, the datatype NUMBER_BASE (for example) was mistakenly specified. The datatypes CHAR_BASE, DATE_BASE, MLSLABEL_BASE, and NUMBER_BASE are for internal use only.

Action: Specify (for example) the datatype NUMBER instead of NUMBER_BASE.

PLS-00505: User Defined Types may only be defined as PLSQL Tables or Records

Cause: An attempt was made to define a type other than TABLE or RECORD, but these are the only user- defined types allowed in this release of PL/SQL. For example, the following type definition is illegal: TYPE Byte IS INTEGER(2); --illegal

Action: Remove the type definition, or revise it to specify a TABLE or RECORD type.

PLS-00506: User Defined Constrained Subtypes are disallowed

Cause: An attempt was made to define a constrained subtype, but only unconstrained subtypes are allowed in this release of PL/SQL. For example, the following type definition is illegal: SUBTYPE Acronym IS VARCHAR2(5); -- illegal

Action: Remove the illegal type constraint.

PLS-00507: a PLSQL Table may not contain a table or a record with composite fields

Cause: In a TABLE type definition, a nested record type was specified as the element type. This is not allowed. All fields in the record must be scalars.

Action: Remove the TABLE type definition, or replace the nested record type with a simple record type.

PLS-00508: The expression in a RETURN statement cannot be a type

Cause: A datatype specifier was used instead of an expression in the RETURN statement of a user-defined function, as shown in the example below. Do not confuse the RETURN statement, which sets the function identifier to the result value, with the RETURN clause, which specifies the datatype of the result value. FUNCTION credit-rating (acct_no NUMBER) RETURN BOOLEAN IS BEGIN ... RETURN NUMBER; -- should be an expression END;

Action: Replace the datatype specifier in the RETURN statement with an appropriate expression.

PLS-00509: Implementation Restriction : Pass a returned record to a temporary identifier before selecting a field

Cause: Illegal syntax was used to call a parameter-less function that returns a record or a PL/SQL table of records. When calling a function that takes parameters and returns a record, you use the following syntax to reference fields in the record: function_name(parameters).field_name However, you cannot use the syntax above to call a parameter-less function because PL/SQL does not allow empty parameter lists. That is, the following syntax is illegal: function_name().field_name -- illegal; empty parameter list You cannot just drop the empty parameter list because the following syntax is also illegal: function_name.field_name -- illegal; no parameter list.

Action: Declare a local record or PL/SQL table of records to which you can assign the function result, then reference its fields directly.

PLS-00510: Float cannot have scale

Cause: When a FLOAT variable was declared, its precision and scale were specified, as shown in the following example: DECLARE Salary FLOAT(7,2); However, a scale for FLOAT variables cannot be specified; only a precision can be specified, as in salary FLOAT(7);

Action: Remove the scale specifier from the declaration, or declare a NUMBER variable instead.

PLS-00511: a record may not contain a PL/SQL table of records

Cause: n a RECORD definition, one of the fields was declared as a PL/SQL table of records. This is not allowed. A record can be the component of another record (that is, records can be nested), but a PL/SQL table of records cannot be the component of a record.

Action: Remove the field declaration, or revise it to specify a simple record type.

PLS-00512: Implementation Restriction: "*string*": Cannot directly access remote package variable or cursor

Cause: An attempt was made to reference a remote packaged variable or cursor. This is not allowed. Instead, add to the remote package a function that returns the value of the variable or cursor.

Action: Remove the illegal reference.

PLS-00513: PL/SQL function called from SQL must return value of legal SQL type

Cause: In a SQL statement, do not call a PL/SQL function having a return type that can not be handled by SQL. For example, type BOOLIAN, records and indexed-tables are not supported by SQL and functions returneing such values can not be called from SQL.

Action: None

PLS-00514: INSERT statement with REF INTO clause requires a typed table

Cause: This INSERT statement provides REF INTO clause, which is only legal when the table specified in the INTO clause is an object table.

Action: None

PLS-00515: The type of the REF INTO variable "*string*" must be REF to the table"s type

Cause: In INSERT statement with REF INTO clause, the type of the data item must be REF to the type of the table used in INTO clause.

Action: None

PLS-00516: Type mismatch between object table and value "*string*" in INSERT statement.

Cause: In the INSERT statement operating on typed tables (tables of objects), the type of a non-aggregate value did not match the object type of the table.

Action: None

PLS-00517: Type mismatch between a select list element "*string*" and corresponding table column in INSERT statement with a subquery

Cause: In an INSERT statement with subquery, at lease one of the elements of the select list was not type-compatible with the corresponding column of the table in the INTO clause. This error indicates that the subquery should be rewritten to match the structure of the target table.

Action: None

PLS-00518: This INSERT statement requires VALUES clause containing a parenthesised list of values

Cause: A VALUES clause was entered without a list of SQL data items in parentheses. In all INSERT statements with an explicit column list, the VALUES clause must contain a list of SQL data items in parentheses. For example: INSERT INTO my_tab (a,b,c) VALUES (1,2,my_variable);

Action: Rewrite the statement to include a list of SQL data items in parentheses.

PLS-00519: This INSERT statement requires a VALUES clause containing an object type expression, not a list of values

Cause: In an INSERT statement with typed tables, an aggregate was used when an object type item was expected.

Action: Replace the aggregate with an object constructor or other object type expression.

PLS-00520: MAP methods must be declared without any parameters other than (optional) SELF.

Cause: A MAP member function was declared with a parameter. Map member functions can have only one parameter: the default SELF parameter. Map methods must be declared without any parameters. The compiler adds the SELF parameter.

Action: Remove the parameter from the map member function.

PLS-00521: ORDER methods must be declared with 1 (one) parameter in addition to (optional) SELF.

Cause: An order member function was declared without the user-specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00522: MAP methods must return a scalar type.

Cause: The MAP member function was written such that it returns something other than a scalar type.

Action: Rewrite the MAP function such that it returns a scalar type.

PLS-00523: ORDER methods must return an INTEGER.

Cause: An order member function was written such that it returns something other than an integer type.

Action: Rewrite the ORDER method such that it returns an integer type.

PLS-00524: The parameter type in an ORDER method must be the containing object type.

Cause: An order member function was declared without the user- specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00525: Within SQL statements, only equality comparisons of objects are allowed without a map or order function.

Cause: A map or order function was not provided for a relational comparison. Only equality comparisons may be used when a map or order function is not supplied.

Action: Supply either a map or order function for the object. Otherwise change the program to use only equality comparisons.

PLS-00526: A MAP or ORDER function is required for comparing objects in PL/SQL.

Cause: Within stand alone PL/SQL, an attempt was made to compare objects without a map or order function.

Action: Provide a map or order function and retry the operation.

PLS-00527: MAP or ORDER functions require a PRAGMA RESTRICT_ REFERENCES specifying :WNDS,WNPS,RNPS,RNDS.

Cause: Either a PRAGMA RESTRICT_REFERENCES was not specified or it was specified without one of the following: WNDS, WNPS, RNPS, or RNDS.

Action: Add or correct the PRAGMA and retry the operation.

PLS-00528: The parameters to an ORDER function must have IN mode

Cause: You declared parameter to an ORDER function to have OUT or IN OUT mode.

Action: Correct the parameter to use IN mode only.

PLS-00529: Bad column name *string* in INSERT statement (must be an identifier)

Cause: In an INSERT statement, an attempt was made to use a column name that is not an identifier. In any INSERT statement with explicit column list a column name must be a simple identifier.

Action: Rewrite the INSERT statement, using a simple identifier for the column name.

PLS-00530: Illegal type used for object type attribute: "*string*".

Cause: An attempt was made to use an invalid type for an object type attribute.

Action: Use only supported types for the object type attribute.

PLS-00531: Unsupported type in a VARRAY or TABLE type: "*string*".

Cause: An attempt was made to use an unsupported type in a VARRAY or TABLE type.

Action: Use only supported types in a VARRAY or TABLE type.

PLS-00532: Target of REF must be a complete or incomplete object type.

Cause: The target of a REF can only be a complete or an incomplete object type.

Action: If a REF is to be used, change the type; otherwise, remove the REF.

PLS-00533: Tables of non_queryable types are not supported.

Cause: An attempt was made to create a table of a type which cannot be queried. Tables of such types are not supported.

Action: Create an object type containing the non-queryable type. Then create a table of the object type.

PLS-00534: A Table type may not contain a nested table type or VARRAY.

Cause: An attempt was made to do one of the following: define a table type which contained nested collection types. or define an object table that has (perhaps nested) another table type or VARRAY type.

Action: Check the table definitions to be sure that they do not contain nested tables or VARRAYs.

PLS-00535: A VARRAY type may not contain a NESTED TABLE, VARRAY or LOB

Cause: An attempt was made to do one of the following: define a VARRAY type containing a nested collection type or LOB or define a VARRAY type of an object type that has a nested attribute which is one of NESTED TABLE, VARRAY or LOB type.

Action: Check the VARRAY definitions to be sure that they do not contain nested colection types, LOBs or nested attributes.

PLS-00536: Navigation through REF variables is not supported in PL/SQL.

Cause: The expression of the form refvar.field was entered. This is not supported in PL/SQL, ver 8.0.

Action: None

PLS-00537: A VARRAY must have a positive limit

Cause: A VARRAY type was declared with a non-positive limit, for example VARRAY(0).

Action: Declare the VARRAY with a positive limit and retry the operation.

PLS-00538: subprogram or cursor "*string*" is declared in an object type specification and must be defined in the object type body

Cause: The specified subprogram is declared in an object type"s specification, but is not defined in the object type body.

Action: Define the subprogram in the object type body, or remove the declaration from the specification.

PLS-00539: subprogram "*string*" is declared in an object type body and must be defined in the object type specification

Cause: The specified subprogram is declared in an object type"s body, but is not defined in the object type"s specification. Notice cursor bodies can exist without a specification.

Action: Define the subprogram in the object type"s specification, or remove the declaration from the body.

PLS-00540: object not supported in this context.

Cause: An object was declared inside a local scope (Function, Procedure, or anonymous block), or in a package scope which is not supported.

Action: Declare the type in a global or data base scope.

PLS-00541: size or length specified is too large.

Cause: A length or size that is too large was specified for a data item.

Action: Specify a smaller value and retry the operation.

PLS-00542: CLOB and NCLOB cannot use varying-width character sets in the server

Cause: A server type is being created with an embedded CLOB or NCLOB atttribute which uses a varying-width character set.

Action: Use VARCHAR2 instead of CLOB, or use a fixed-width character set.

PLS-00543: a PLSQL Table may not contain a nested table type or VARRAY.

Cause: An attempt was made to define a PLSQL table that contained a (possibly deeply) nested table type or VARRAY. Nested collection types are not supported.

Action: Remove the nested table type or VARRAY from the table. Then retry the operation.

PLS-00546: SELF may not be declared as a REF parameter.

Cause: SELF was declared as a ref parameter to a member function or procedure. SELF is not supported as a REF.

Action: Redeclare SELF as a value parameter.

PLS-00548: invalid use of operator.

Cause: A name of an operator is used as a qualifier or appears outside from sql context.

Action: Eliminate the use of operator name as a qualifier or place it in a sql clause.

PLS-00550: character set specification is not allowed for this type

Cause: A character set specification was made on a type that does not require one.

Action: Remove the character set specification, or change the type.

PLS-00551: character set ANY_CS is only allowed on a subprogram parameter

Cause: The character set ANY_CS was specified when it is not allowed.

Action: Change or remove the character set specification.

PLS-00552: flexible character set is not allowed on component element

Cause: ANY_CS or %CHARSET was used to reference an ANY_CS parameter which is not a CHAR, VARCHAR2, or CLOB type. ANY_CS or %CHARSET is not allowed for fields of a record , object, elements of a collection, etc.

Action: Change or remove the character set specification.

PLS-00553: character set name is not recognized

Cause: An unrecognized name appears in a character set specification.

Action: Change or remove the character set specification.

PLS-00554: character set has already been determined

Cause: A redundant or conflicting character set was specified.

Action: Remove the CHARACTER SET specification, or change the character set specified.

PLS-00555: default expressions are not allowed for SQL operators

Cause: A default expression has been specified for a SQL operator.

Action: Eliminate the default expression from the operator.

PLS-00560: character set mismatch

Cause: An expression was used that has the wrong character set for this context.

Action: Adjust the expression, using TRANSLATE(... USING ...) or by rethinking the logic.

PLS-00561: character set mismatch on value for parameter "*string*"

Cause: An expression was used that contains an incorrect character set. The actual argument has a character set conflict. If a default argument value is being used, it might be in conflict with some actual argument that must have the same character set.

Action: Adjust the expression, using TRANSLATE(... USING ...) or change the character set.

PLS-00562: a function must return a type.

Cause: The current function was definied to return something other than a data type.

Action: Make sure the function is returning a data type.

PLS-00563: illegal use of CAST expression

Cause: CAST (in PLSQL) was used outside of a DML scope.

Action: Do not use CAST outside DML statements.

PLS-00564: lob arguments are not permitted in calls to remote server

Cause: use of lob argument in call to remote server

Action: Do not use LOBs in call to remote server

PLS-00565: *string* must be completed as a potential REF target (object type)

Cause: Incomplete library units that are potential targets of REF dependencies must be completed so that they continue to remain potential targets of REF dependencies (since there might be library units with REF dependencies on this library unit). Potential REF targets include complete and incomplete object types. This error happened because an attempt was made to complete a potential REF target as something other than a potential REF target.

Action: Use another name for this library unit, or drop the original incomplete library unit.

PLS-00566: type name "*string*" cannot be constrained

Cause: A lob, date, boolean, rowid, or mlslabel type was constrained with a length specification. For example: X BLOB(5);

Action: Remove the constraint.

PLS-00567: cannot pass NULL to a NOT NULL constrained formal parameter

Cause: You attempted to pass NULL to a NOT NULL constrained parameter.

Action: Pass a NOT NULL expression instead.

PLS-00568: cannot access rows from a non-nested table item

Cause: You attempted to use TABLE expression, from a non-nested table

Action: pass the correct parameter

PLS-00569: numeric overflow or underflow

Cause: A constant literal is either too large or too small to fit in an Oracle number

Action: Change the value of the literal

PLS-00570: different number of columns in the multiset and cast expressions

Cause: Number of columns in the collection returned by MULTISET and the number of columns for the CAST type don"t match. For example: create type tab_obj as object (n number); create type tab1 as table of tab_obj; create table tab2 (col1 number, col2 number); select CAST(MULTISET(select col1, col2 from tab2) as tab1) from tab2;

Action: None

PLS-00571: method access through data base link not yet supported on client side

Cause: Remote link is used with on client side

Action: Create a dummy function to call symbolic link on server side or wiat till it is implemented

PLS-00572: improper constraint form used

Cause: "number" types cannot have a range. user-defined aggregate types and integer types cannot have scale or precision specified. Example: "x number(5,3)" is acceptable but "x number range 1..10" is not.

Action: Remove the constraint

PLS-00573: cannot constrain scale, precision, or range of an anchored type declaration

Cause: A variable declared with %TYPE or %ROWTYPE cannot have a scale, precision, or range constraint. Example: x y%TYPE(10) is not acceptable. It is legal to add "NOT NULL" or non-conflicting CHARACTER SET constraints to anchored type declarations.

Action: Remove the constraint or use a type name instead of an anchored type.

PLS-00580: supertype must be an object type

Cause: An attempt was made to declare an object type to have a supertype, but the specified supertype was not itself an object type. Object types can inherit only from other object types.

Action: Remove the supertype specification, or change it to refer to an object type. If the declaration appears correct, make sure the supertype has compiled correctly.

PLS-00581: inheritance is not supported for opaque types

Cause: An attempt was made to declare an opaque type with a supertype.

Action: Remove the supertype specification.

PLS-00582: attribute declarations are not allowed in opaque types

Cause: An attempt was made to declare an attribute in an opaque type.

Action: Remove the attribute declaration.

PLS-00583: size must be specified if opaque type is fixed-length

Cause: An attempt was made to declare a fixed-length opaque type without specifying an explicit size.

Action: Specify an explicit size, or change the declaration to be varying-length.

PLS-00584: size of an opaque type must be between 1 and 4000 bytes

Cause: An attempt was made to specify an explicit size for an opaque type, but the specified size was out of the valid range.

Action: Change the explicit size to be between 1 and 4000 bytes, or change the declaration to be varying-length without an explicit size.

PLS-00585: declared support library for opaque type is not a library

Cause: An attempt was made to name a support library for an opaque type, but the name refers to an object that is not a library.

Action: Change the declaration to name a valid library.

PLS-00586: a static method cannot declare a parameter named SELF

Cause: An attempt was made to name a parameter SELF when declaring a static method. SELF is reserved as a parameter name in methods, to hold the object instance on which the method is applied. A parameter named SELF is not allowed in static methods because static methods do not apply to a particular object instance.

Action: Change the name of the parameter in the declaration.

PLS-00587: a static method cannot be invoked on an instance value

Cause: An attempt was made to use an object instance value, not a typename, as the qualifier of the name of a method invocation, but only a typename can be used as the qualifier when calling a static method.

Action: Use the typename, not an object instance value, to qualify the name of a method if the method is static.

PLS-00588: unqualified instance attribute references allowed only in member methods

Cause: An attempt was made to use the name of an object instance attribute in the body of a static method, or in an initialization default value on another attribute. If the instance attribute is not qualified with a particular object instance that supplies a value, the instance attribute can be named only when it is inside a member method.

Action: Qualify the attribute reference with the name of an object value, or change the containing method to a member method rather than a static method.

PLS-00589: no attributes found in object type "*string*"

Cause: Table of non adt type is defined.

Action: Table of type should be of ADT type only

PLS-00590: attempting to create a subtype UNDER a FINAL type

Cause: An attempt was made to create a subtype UNDER a FINAL type.

Action: Avoid deriving a subtype from this FINAL type.

PLS-00591: this feature is not supported in client-side programs

Cause: One of the following features was used in a wrong context: pragma AUTONOMOUS_TRANSACTION, dynamic SQL statements, (e.g. EXECUTE IMMEDIATE), and bulk binds. These listed features can only be used in server-side programs but not client-side programs.

Action: Remove it or define a server-side subprogram to do the work and call the subprogram from the client.

PLS-00592: the type of a object table must be an object type

Cause: You have defined a typed-table of a non-object type.

Action: Replace the non-object type with an object-type.

PLS-00593: default value of parameter "*string*" in body must match that of spec

Cause: The default value initialization of a parameter in a subprogram body contained in a package body did not match that of the corresponding subprogram specification in the corresponding package specification.

Action: Change the default initialization of the parameter in body to match that of spec.

PLS-00594: the SELF parameter can be declared only as IN or as IN OUT

Cause: The SELF parameter was declared as an OUT parameter.

Action: Declare the SELF parameter as either an IN or an IN OUT parameter.

PLS-00595: the TABLE operator is not allowed in this context

Cause: This feature is not yet implemented.

Action: Don"t use weak ref cursors with bulk binds.

PLS-00597: expression "*string*" in the INTO list is of wrong type

Cause: This exception is raised for the following errors:

- the expression in INTO clause of OPEN or RETURNING statement is neither of legal SQL datatypes nor of PL/SQL RECORD datatype

- a collection of records is used in INTO clause of OPEN or RETURNING statement.

- a record or a collection of records is used in BULK COLLECT INTO

Action: Use expression with correct datatype in the INTO clause

PLS-00598: comparison of object with NULL using "*string*" is not allowed
Cause: An object is compared with NULL using a relational operator.

Action: Use IS NULL comparison operator.

PLS-00599: SAMPLE percentage must be in the range [0.000001,100)
Cause: The percentage number is not in the range [0.000001,100)

Action: Use a percentage number in the range [0.000001,100)

PLS-00600: SAMPLE cannot be applied to a remote object
Cause: SAMPLE applying to a remote object is not supported

Action: Do not use SAMPLE with a remote object

PLS-00601: partition extended object names may only be used with tables
Cause: User attempted to use a partition-extended object name with an object which is not a table.

Action: Avoid using partition-extended name syntax with objects which are not tables

PLS-00602: CUBE and ROLLUP may appear only in a GROUP BY clause
Cause: User attempted to use the keywords CUBE or ROLLUP outside a GROUP BY clause

Action: Avoid using the keywords CUBE and ROLLUP outside the GROUP BY clause

PLS-00603: GROUPING function supported only with GROUP BY CUBE or ROLLUP
Cause: User attempted to use the GROUPING function without GROUP BY CUBE or GROUP BY ROLLUP

Action: Avoid using the GROUPING function without GROUP BY CUBE or ROLLUP

PLS-00604: aggregate function is not allowed here
Cause: One of the functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV or VARIANCE, was used in a WHERE or GROUP BY clause

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

PLS-00605: set operators are not yet supported as an argument to a MULTISET operator
Cause: A set operator was used in a subquery that was the argument to a MULTISET operator.

Action: Rewrite your SQL statement so that it does not use a set operator in the subquery that is the argument to the MULTISET operator.

PLS-00606: cursor subquery is not supported on client side in this release
Cause: A query that contains a cursor subquery is being used from client side.

Action: Use this feature from serevr side only.

PLS-00607: SQLJ Object Types can have only SQLJ Types as its supertype or subtype

Cause: You were trying to create a SQLJ Object Type under a non-SQLJ Object Type.

Action: Recreate the type as a SQLJ Object Type.

PLS-00608: the value of the USING clause must match that of the supertype

Cause: You were trying to create a SQLJ Object Type with a different value of the USING clause from the USING clause specified in its supertype.

Action: Change the value of the USING clause to match the USING clause in its supertype.

PLS-00609: the OVERRIDING clause is not valid for SQLJ Object Types

Cause: You were trying to a SQLJ Object Type method that override an inherited method.

Action: Change the SQLJ Object Type defintion by removing the OVERRIDING method.

PLS-00610: ROW can be used only once in SET clause of UPDATE statement

Cause: You were trying to use ROW more than once in UPDATE statement.

Action: Remove all the additional ROW in set clause of UPDATE statement.

PLS-00611: right hand side can be only the variables of record type

Cause: with ROW on LHS, only PL/SQL records or %ROWTYPE variables are allowed on right hand side..

Action: Make appropriate changes, so that right hande side should only have variables of record or %ROWTYPE.

PLS-00612: Number of attributes do not match in SET clause

Cause: Number of columns do not match with number of attributes on record type on rhs.

Action: Make sure that number of columns match with the number of attributes in record on rhs.

PLS-00613: only one item is allowed, when using variables of record type

Cause: You are trying to use more than one values in VALUES clause or RETURNING INTO clause, when one of the value is of record type..

Action: Specify only one variable of record type, or don"t use variables of record type.

PLS-00614: creating a FINAL NOT INSTANTIABLE type

Cause: An attempt was made to create a FINAL NOT INSTANTIABLE type. No useful operation can be performed with this type.

Action: Avoid using the keywords FINAL and NOT INSTANTIABLE together when creating types.

PLS-00615: type mismatch found at "*string*" between CASE operand and WHEN operands

Cause: In a simple CASE statement or expression, the CASE operand and WHEN operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the CASE operand and WHEN operands so that their datatypes match. Consider using datatype conversion functions in the CASE operand and/or WHEN operands.

PLS-00616: type mismatch found at "*string*" among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their datatypes match. Consider using datatype conversion functions in the result expressions.

PLS-00617: at least one result in the CASE expression must not be NULL

Cause: All the results in the CASE expression are the literal NULL.

Action: Change at least one result in the CASE expression to be non-NULL.

PLS-00618: type mismatch found at "*string*" between operands in a NULLIF expression

Cause: In a NULLIF expression, the two operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00619: the first operand in the NULLIF expression must not be NULL

Cause: The first operand in the NULLIF expression is the literal NULL.

Action: Change the first operand in the NULLIF expression to be non-NULL.

PLS-00620: type mismatch found at "*string*" among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00621: at least one operand in the COALESCE expression must not be NULL

Cause: All the operands in the COALESCE expression are the literal NULL.

Action: Change at least one operand in the COALESCE expression to be non-NULL.

PLS-00622: range constraints must be between -2147483647 and 2147483647

Cause: The range constraints specified for a pls_integer or binary_integer declaration did not fall between -2147483647 and 2147483647.

Action: Use range constraints between -2147483647 and 2147483647.

PLS-00623: FLOAT precision constraint must be between 1 and 126

Cause: The precision specified for a FLOAT, REAL or DOUBLE PRECISION did not fall between 1 and 126.

Action: Use precision constraints between 1 and 126.

PLS-00624: USING clause must be used with either aggregate or pipelined functions

Cause: USING clause cannot be used with functions that are not declared with AGGREGATE or PIPELINED properties.

Action: Define function body in PL/SQL or some other language (using external callout call specification).

PLS-00625: PARTITION/CLUSTER/ORDER-BY clause can only be used with IN parameters

Cause: A PARTITION/CLUSTER/ORDER-BY clause was used with an OUT or IN OUT ref-cursor parameter.

Action: Change the parameter mode to IN or use some other parameter with the PARTITION/CLUSTER/ORDER-BY clause.

PLS-00626: partitioned/clustered/ordered parameter must be a function argument

Cause: A partitioning or clustering/ordering specification specified on an argument that is not one of the function arguments.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00627: "*string*" must be a strongly typed ref cursor

Cause: A partitioning or clustering/ordering specification specified on an argument that is not a strongly typed ref cursor.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00628: "*string*" must be a valid record attribute

Cause: A partitioning or clustering/ordering specification must use only valid record attributes.

Action: Specify partitioning/clustering/ordering based on valid record attributes.

PLS-00629: PIPE statement cannot be used in non-pipelined functions

Cause: A PIPE statement was used in a non-pipelined function.

Action: Use PIPE statement only in pipelined functions.

PLS-00630: pipelined functions must have a supported collection return type

Cause: A pipelined function was specified with an unsupported return type. The following are not supported as return types of pipelined functions:

- non-collections,

- PL/SQL tables,

- associative arrays,

- collections of PL/SQL types: rowid, mlslabel, long, long raw, boolean, binary_ integer, pls_integer, string and urowid The following restrictions apply:

- If the return type is a collection of records, then each of the attributes of the record must be a supported type.

- A collection of records must not contain a record type as one of its attributes.

Action: Specify a supported collection type as the pipelined function return type.

PLS-00631: PARTITION-BY and CLUSTER/ORDER-BY clauses must be used with the same function argument

Cause: PARTITION-BY and CLUSTER/ORDER-BY clauses are specified on different function arguments.

Action: Use the same argument in both PARITITON-BY and CLUSTER/ORDER-BY clauses.

PLS-00632: NOT INSTANTIABLE method cannot have a body

Cause: An attempt was made to provide an implementation for a NOT INSTANTIABLE method.

Action: Remove the implementation for the NOT INSTATIABLE method.

PLS-00633: RETURN statement in a pipelined function cannot contain an expression

Cause: A RETURN statement in a pipelined function contains an expression, which is not allowed. Pipelined functions must send back values to the caller by using the PIPE statement.

Action: Remove the expression from the RETURN statement and use a PIPE statement to return values. Else, convert the function into a non-pipelined function.

PLS-00634: type with NOT INSTANTIABLE methods must be declared NOT INSTANTIABLE

Cause: The type being created contains NOT INSTANTIABLE methods, either declared or inherited. The type must be explicitly declared NOT INSTANTIABLE

Action: Explicitly specify the NOT INSTANTIABLE keyword or provide implementations for all the NOT INSTANTIABLE methods.

PLS-00635: method does not override

Cause: The method specification contains the OVERRIDING keyword but the method does not override a method in the ancestor types.

Action: Check the method specification.

PLS-00636: overriding method requires OVERRIDING keyword

Cause: An attempt was made to provide an overriding method specification, but the OVERRIDING keyword was not specified.

Action: Modify the method specification and specify the OVERRIDING keyword.

PLS-00637: FINAL method cannot be overriden or hidden

Cause: An attempt was made to override a FINAL MEMBER method or hide a FINAL STATIC method.

Action: Avoid overriding FINAL MEMBER methods or hiding FINAL STATIC methods

PLS-00638: cannot overload MAP method

Cause: The MAP method does override the inherited one.

Action: Make the specifications match.

PLS-00639: NCHAR/NVARCHAR2 cannot be byte length semantics

Cause: NCHAR/NVARCHAR can only be codepoint length sematics. BYTE qualifiers used with NCHAR is illegal: nc NCHAR(7 BYTE); name NVARCHAR2(10 byte);

Action: Remove BYTE qualifier to make it as codepoint length semantics

PLS-00640: a pipelined function cannot be called from PL/SQL context

Cause: A pipelined function was invoked from a PL/SQL expression.

Action: Use the pipelined function in the FROM clause of a SQL query.

PLS-00641: INTO clause not allowed for this SELECT statement

Cause: A SELECT statement in a cursor definition, an OPEN statement or a cursor FOR loop has an erroneous INTO clause.

Action: Remove the INTO clause.

PLS-00642: local collection types not allowed in SQL statements

Cause: A locally-defined (i.e. not schema level) collection type was used in a SQL statement. The type must be defined in a schema to be accepted in a SQL statement.

Action: Define the collection type in your schema, not inside a PL/SQL subprogram.

PLS-00643: booleans, index tables, records and cursors not allowed in SQL statements

Cause: Items of type boolean, table of foo index by binary_integer, record and static cursors cannot be used in SQL statements.

Action: Remove expressions of these types from the SQL statement.

PLS-00644: character set mismatch found at "*string*" among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in character set, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their character sets match.

PLS-00645: character set mismatch found at "*string*" among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in character set and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their character sets match.

PLS-00646: MAP or ORDER method must be defined in the root of the subtype hierarchy

Cause: An attempt was made to define a MAP or ORDER method in a subtype.

Action: Define the MAP or ORDER method in the root of the subtype hierarchy. You can override MAP methods in subtypes.

PLS-00647: attribute by name "*string*" conflicts with method by same name

Cause: While creating a subtype some attribute name conflicted with a method name.

Action: Use a different name for attribute or method in the type being created.

PLS-00648: type of supertype attribute "*string*" can not be a subtype or reference to a subtype in this release

Cause: User tried to complete a type, Tsub as a subtype of another type, Tsuper where Tsuper contained an attribute of type Tsub or of type REF to Tsub. This is an implementation restriction.

Action: Change the design of code to not use any type with attribute whose type is of subtype or REF to subtype.

PLS-00649: method "*string*" can be overridden only once per object type

Cause: User tried to override the method more than once in the same subtype.

Action: Either make this an extra overload by removing the OVERRIDING keyword where the method signature is different. The argument types should be reconsidered otherwise.

PLS-00650: invalid type for PARTITION/CLUSTER/ORDER BY clause

Cause: Uer tried to use invalid type for PARTITION/CLUSTER?ORDER BY clause.

Action: Use legal allowed types.

PLS-00651: implementation type in Aggregate/Table function should be a valid type

Cause: User tried to use some other database object like a package to define implementation type of an aggregate/table function.

Action: Use a valid user defined type as implementation type.

PLS-00652: aggregate functions should have exactly one argument

Cause: User tried to create aggregate function with either 0 or more than one arguments.

Action: Do not create aggregate function with 0 or more than one argument.

PLS-00653: aggregate/table functions are not allowed in PL/SQL scope

Cause: User tried to use a table/aggregate function in PL/SQL scope.

Action: Do not use table/aggregate function in PL/SQL scope.

PLS-00654: PARTITION/ORDER/CLUSTER BY are allowed for only with PARALLEL_ENABLE

Cause: User tried partion by order by cluster by without parallel enable clause in table function.

Action: specify parallel enable also when using partion by, cluster by order by clause.

PLS-00655: only functions can be declared as PIPELINED

Cause: user is trying to declare a procedure to be pipeliend function

Action: declare a function instead of a procedure to be a pipelined function

PLS-00656: field "*string*" not available in input argument

Cause: An EXTRACT operation specified a field that was not present. For example, you tried to extract the YEAR field from a TIME variable.

Action: Specify a legal field in the call to EXTRACT.

PLS-00657: Implementation restriction: bulk SQL with associative arrays with VARCHAR2 key is not supported.

Cause: Variable or expression of associative array type was used as bulk SQL bind or define.

Action: Use colleciton types supported by bulk SQL.

PLS-00658: constructor method name must match type name

Cause: The name of the object type constructor does not match the type name.

Action: Change the name of the constructor method to match the type name.

PLS-00659: constructor method must return SELF AS RESULT

Cause: The return clause of the constructor method did not specify SELF AS RESULT.

Action: Change the return clause to include RETURN SELF AS RESULT.

PLS-00660: SELF parameter of constructor method must be IN OUT
Cause: The mode of the SELF parameter of the constructor was not IN OUT.
Action: Change the mode of the SELF parameter to be IN OUT.

PLS-00661: RETURN statement in a CONSTRUCTOR cannot include an expression
Cause: An attempt was made to include an expression in the RETURN statement of a CONSTRUCTOR body.
Action: Remove the expression from the RETURN statement.

PLS-00662: Non-external object types containing external mapped attributes are not allowed
Cause: An attempt was made to create a non-external object, whoose attributes are mapped externally.
Action: Create the object as an external object.

PLS-00663: the NEW keyword is not allowed in this context
Cause: The NEW keyword is not followed by an call to a constructor method.
Action: Remove the NEW keyword, or make sure the expression following it is a constructor call.

PLS-00664: Both ORDER BY and CLUSTER BY can not be specified for the same table function
Cause: An attempt was made to specify both ORDER BY and CLUSTER BY for the same table function.
Action: specify either ORDER BY or CLUSTER BY for a table function, but not both.

PLS-00665: ORDER BY and CLUSTER BY clauses require a PARTITION BY clause
Cause: An attempt was made to specify an ORDER BY or CLUSTER BY clause without also specifying a PARTITION BY clause.
Action: Add a PARTITION BY clause, or remove the ORDER BY or CLUSTER BY clause.

PLS-00666: Only index by binary_integer/pls_integer associative arrays allowed here
Cause: An attempt was made to specify index collection that was not indexed by binary_integer or pls_integer.
Action: Change the index collection variable type to associative array that is indexed by binary_integer or pls_integer.

PLS-00667: Element type of associative array should be pls_integer or binary_ integer
Cause: An attempt was made to specify index collection whos element type was not one of pls_integer or binary_integer.
Action: Change the index collection variable type to associative array whose element type is pls_integer or binary_integer.

PLS-00668: Type of expression should be a collection type
Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause whose type is not a collection type.

Action: Change the index collection expression type to a valid collection type.

PLS-00669: Type of expression should be a valid collection variable

Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause that is not a collection variable.

Action: Change the index collection expression type to a valid collection variable.

PLS-00670: sort columns must be simple column names

Cause: An attempt was made to specify an expression as a sort column in a PARTITION BY, CLUSTER BY or ORDER BY clause. Only simple column names are permitted.

Action: Specify a simple column name.

PLS-00671: this expression is allowed only with instance methods

Cause: The generalized invocation syntax was used in instance method context.

Action: The generalized invocation syntax can only be used in a instance method that is not a constructor

PLS-00672: The expression *string* should be a subtype of the type *string*

Cause: The expression in the generalized expression should be a sub type of the type.

Action: The type of expression should be a subtype of the type name

PLS-00673: Generalized expression is not allowed in this context

Cause: The generalized expression is used in wrong context

Action: Fix the expression and remove the generalized expression syntax.

PLS-00674: references to fields of BULK In-BIND table of records or objects must have the form A(I).F

Cause: The form table(bulk_index).field is the only field selection supported at runtime.

Action: Use a FOR loop instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE) or revise reference to fit the form allowed.

PLS-00675: invalid section for this type of Compound Trigger

Cause: Before and After row sections are not allowed for Compound trigges defined on the Table and instead of row section is not allowed for Compound Triggers defined on a view.

Action: Remove the invalid sections for this context.

PLS-00676: duplicate Compound Triggers section

Cause: Each Compound Trigger Section can appear at most once in a body of the compound trigger

Action: Remove the offending sections.

PLS-00677: Compound Triggers cannot be autonomous transactions

Cause: The Compound Triggers hsd pragma autonomous transaction.

Action: Call autonomous function or procedure, if autonomous transaction behavior is desired from Compound Triggers.

PLS-00678: RETURN statement not allowed inside Compound Triggers

Cause: A return Statement was seen inside a compound trigger

Action: Remove Return statement and use other PL/SQL constructs to transfer flow of control.

PLS-00679: trigger binds not allowed in before/after statement section

Cause: :new or :old were used in this section.

Action: Do not use trigger binds in this section

PLS-00680: BEFORE/AFTER ROW sections were used in a view trigger

Cause: BEFORE/AFTER ROW sections are not allowed with instead of row triggers.

Action: Remove the offending sections.

PLS-00700: PRAGMA EXCEPTION_INIT of *string* must follow declaration of its exception in the same declarative part

Cause: An EXCEPTION_INIT pragma was not declared in the same block as its exception. They must be declared in the proper order in the same block, with the pragma declaration following the exception declaration.

Action: Place the EXCEPTION_INIT pragma directly after the exception declaration referenced by the pragma.

PLS-00701: illegal ORACLE error number *string* for PRAGMA EXCEPTION_INIT

Cause: The error number passed to an EXCEPTION_INIT pragma was out of range. The error number must be in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Use a valid error number.

PLS-00702: second argument to PRAGMA EXCEPTION_INIT must be a numeric literal

Cause: The second argument passed to an EXCEPTION_INIT pragma was something other than a numeric literal (a variable, for example). The second argument must be a numeric literal in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Replace the second argument with a valid error number.

PLS-00703: multiple instances of named argument in list

Cause: Two or more actual parameters in a subprogram call refer to the same formal parameter.

Action: Remove the duplicate actual parameter.

PLS-00704: "*string*" must be declared as an exception

Cause: The exception_name parameter passed to an EXCEPTION_INIT pragma is misspelled or does not refer to a legally declared exception. Or, the pragma is misplaced; it must appear in the same declarative section, somewhere after the exception declaration.

Action: Check the spelling of the exception_name parameter. Then, check the exception declaration, making sure the exception name and the keyword EXCEPTION are spelled correctly. Also make sure the pragma appears in the same declarative section somewhere after the exception declaration.

PLS-00705: exception "*string*" used in expression requiring return type

Cause: An exception was referred to in an expression. Exceptions have names but not values and therefore cannot contribute values to an expression. For example, the following RETURN statement is illegal: FUNCTION credit_limit (cust_no

INTEGER) RETURN NUMBER IS limit NUMBER; over_limit EXCEPTION; ... BEGIN ... RETURN over_limit; -- illegal END;

Action: Check the spelling of the identifiers in the expression, then rewrite the expression so that it does not refer to an exception.

PLS-00706: Exception *string* cannot be used as prefix of a selected component

Cause: An exception name was mistakenly used to qualify a reference to a component. For example, when dot notation was used to specify fields within a record, an exception name might have been coded instead of the record name.

Action: Rewrite the component reference using a valid prefix (for example, the name of a package, record, or schema).

PLS-00707: unsupported construct or internal error [*string*]

Cause: At run time, this is an internal error. At compile time, it indicates one of the following problems: -- A call was made to a remote subprogram that has a parameter type or default expression not supported at the calling site. -- An incomplete upgrade or downgrade was done to a database that has stored procedures. Perhaps incorrect versions of system packages such as STANDARD.SQL were installed. -- A compiler bug was encountered. In such cases, legal PL/SQL syntax will fail to compile.

Action: Either report the internal error to your Customer Support representative or, depending on the problem, take one of the following actions: -- Revise the logic of the application to use parameter types and default expressions that are supported at both the local and remote sites. -- Complete the upgrade or downgrade properly, making sure to install correct versions of all system packages. -- Report the legal-syntax error to your Customer Support representative. If there are line and column numbers displayed with the error message, they might help you find a workaround. For example, try recoding the offending line to avoid the bug.

PLS-00708: Pragma *string* must be declared in a package specification

Cause: The named pragma was not declared in a package specification, as required. For example, the pragma RESTRICT_REFERENCES must be declared in a package specification.

Action: Remove or relocate the misplaced pragma.

PLS-00709: pragma *string* must be declared in package specification and body

Cause: The named pragma was declared in a package specification but not in the corresponding package body or vice-versa, as well as the package body.

Action: Add the pragma to that part of the package declaration that does not have the pragma.

PLS-00710: Pragma *string* cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLS-00711: PRAGMA *string* cannot be declared twice

Cause: The PRAGMA was declared twice in the same block.

Action: remove the duplicate declaration of the PRAGMA

PLS-00712: illegal option for subprogram *string*

Cause: Only top level subprograms or subprogram declarations in PACKAGE or TYPE specifications are allowed to have the options DETERMINISTIC or PARALLEL_ENABLE. For example, this error would be raised if the options are used in PACKAGE or TYPE body.

Action: remove the option.

PLS-00713: attempting to instantiate a type that is NOT INSTANTIABLE

Cause: An attempt was made to instantiate a type that is defined as NOT INSTANTIABLE.

Action: Avoid instantiating variables of this NOT INSTANTIABLE type, instead derive an INSTANTIABLE subtype from it and instantiate variables of the subtype.

PLS-00714: supertypes"s AUTHID is DEFINER but supertype and subtype are not in same schema

Cause: The supertype"s AUTHID is DEFINER, but the supertype and subtype are defined in different schemas. SQL statements executed in dynamically dispatched methods can potentially pick up different values from database tables in the two schemas.

Action: Create the subtype in the same schema as the supertype.

PLS-00715: attribute or method by name "*string*" does not exist

Cause: An attempt was made to drop a nonexistant method or attribute from the type being altered.

Action: Check the spelling of the attribute or method name. Make sure it is locally defined in the type and not inherited.

PLS-00716: Attribute/method "*string*" can occur only once in an ALTER TYPE statement

Cause: User attempted more than one of ADD, DROP or MODIFY on an attribute in single ALTER TYPE statement. User attempted more than one of ADD or DROP on a method in single ALTER TYPE statement.

Action: Do only one ADD, DROP or MODIFY for an attribute in single ALTER TYPE statement. Do only one ADD or DROP for a method in single ALTER TYPE statement.

PLS-00717: method "*string*" does not have matching signature among existing methods

Cause: The method to be dropped matches the name of some existing method but does not match it in signature.

Action: Make sure that a matching method signature is provided for dropping a method.

PLS-00718: type of attribute "*string*" does not allow modifications to the attribute

Cause: The type of the attribute to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW type attributes are allowed to be modified.

PLS-00719: only widening of attribute "*string*" constraints is allowed

Cause: Modification to the attribute did not widen its constraints or attempted to change the type of the attribute. For NUMBER type attributes, scale and precision can be changed to allow increase in number of digits after and before the decimal

point. For VARCHAR2 and RAW type attributes the size can be increased. Other type attributes are not allowed to be modified. Change of type of attribute is also not allowed.

Action: Change the constraint specification so as to widen the existing constraints.To narrow the constraints or to change the type of the attribute, you must drop the attribute and add it with new constraints or new type. In that case you must also take appropriate steps to preserve your existing data based on the type (if you want to preserve it).Typically this will involve backing up the data and restoring it after the ALTER TYPE.

PLS-00720: type "*string*" has evolved

Cause: The type has evolved. The version of the type used by the compiled code is not the same as the latest version of the type.

Action: Recompile the code to use the latest version of the type.

PLS-00721: "*string*" formed a non-REF mutually-dependent cycle with "*string*"

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

PLS-00722: supertypes"s AUTHID is different than subtype"s AUTHID

Cause: The subtype"s"s AUTHID must be same as the supertype"s AUTHID.

Action: Create the subtype with AUTHID of its supertype or do not specify AUTHID for subtype.

PLS-00725: type "*string*" must be a supertype or subtype of the TREAT expression

Cause: In TREAT(<expr> AS <type>), type must be a supertype or subtype of <expr>.

Action: None

PLS-00726: MODIFY ELEMENT is supported only on schema-level varray and nested tables

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray and nested table type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00727: MODIFY LIMIT is supported only on schema-level varray types

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00728: the limit of a VARRAY can only be increased and to a maximum 2147483647

Cause: An attempt was made to decrease the limit or raise it past 2147483647.

Action: This is not a legal limit for this type, change it.

PLS-00729: only widening of the collection element type is allowed

Cause: Modification to the collection element type did not widen its constraints or attempted to change the type of the element. For NUMBER types, scale and

precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased.

Action: Change the constraint specification so as to widen the existing constraints.

PLS-00730: collection element type does not allow modifications

Cause: The element type to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW collection elements can be modified.

PLS-00731: ALTER TYPE is supported only on schema-level types

Cause: An attempt was made to alter a type that was not schema-level.

Action: ALTER TYPE is not legal for this type.

PLS-00732: Illegal overload of ellipsis in formal parameter list

Cause: An ellipsis and a non-ellipsis type appeared at the same position in separate overload candidates. Currently, if ellipsis types are used they must appear in ALL overload candidates with the same name (regardless of the number or types of their formal parameters) at the same position in the formal parameter list.

Action: Make sure that ellipsis types appear at the same position in all overload candidates.

PLS-00733: RPCs to variable argument functions are not allowed

Cause: Attempted to call a vararg function (a function which contains ellipsis in the formal parameter list) as an RPC.

Action: Do not call vararg functions as an RPC.

PLS-00734: Illegal use of an associational parameter with a formal ellipsis

Cause: Attempted to use an associational actual argument for a formal ellipsis type argument.

Action: Remove associational parameters which correspond to formal ellipsis types.

PLS-00735: Attempted to declare more than one formal ellipsis parameter

Cause: More than one ellipsis ("...") was found in a formal parameter specification for a function or procedure

Action: Make sure only one ellipsis appears in a formal parameter specification for any given function or procedure

PLS-00736: user-declared operators are not allowed

Cause: An attempt was made by the user to declare an operator (a function whose name is enclosed in single quotes ("'")). Operators may only be declared in package STANDARD.

Action: Remove the single quotes from around the function name, replacing them with double quotes ("""") only if needed.

PLS-00737: LIBRARY or ASSEMBLY file specification exceeds the maximum allowed length

Cause: A string of more than expected number of chararacters was found for the LIBRARY or ASSEMBLY file specification.

Action: Limit the LIBRARY or ASSEMBLY file specification to the appropriate size for the platform.

PLS-00738: REF target *string* changed during compilation

Cause: The current unit contains a REF to a target object. During compilation, the REF"s target object was simultaneously changed by a different session. The current unit is therefore invalid and needs to be recompiled to pick up the latest definition of the REF target.

Action: Recompile the unit that has this error.

PLS-00739: FORALL INSERT/UPDATE/DELETE not supported on remote tables

Cause: The current statement refers to remote insert/update/delete for remote object.

Action: Use a FOR loop instead of a FORALL loop or call a remote function or procedure that includes the FORALL INSERT/UPDATE/ DELETE statement.

PLS-00740: ASSEMBLY identity specification exceeds the maximum allowed length

Cause: A string of more than expected number of chararacters was found for the ASSEMBLY identity specification.

Action: Limit the ASSEMBLY identity specification to the appropriate size.

PLS-00741: *string* must be specified on subprogram *string*"s declaration and definition

Cause: A property was specified on a subprogram"s declaration but not on its definition or vice-versa.

Action: Certain subprogram properties (e.g., RESULT_CACHE) must be specified as part of the subprogram declaration and definition. For example, if the property RESULT_CACHE is specified on a subprogram declared in a package specification, then it must also be specified on the subprogram"s definition in the package body (and vice-versa).

PLS-00742: field *string* is not yet denotable

Cause: When the fields of a record were declared, one field was used to initialize another, as in: TYPE my_rec IS RECORD (f1 varchar2(10), f2 varchar2(10) := f1); The first field has no value until run time, so it cannot be used to initialize another field.

Action: Remove the illegal field reference.

PLS-00751: cannot find PACKAGE SYS_STUB_FOR_PURITY_ANALYSIS

Cause: A top level subprogram (function or procedure) cannot be created if the system package SYS_STUB_FOR_PURITY_ANALYSIS is missing in the Oracle database.

Action: Make sure the package is in the database, and retry the creation

PLS-00752: Table function *string* is in an inconsistent state.

Cause: Some of the internally generated types prefixed with SYS_ have been dropped. These should never be dropped by the user.

Action: Recompile the table function or the package or type that contains the table function.

PLS-00753: malformed or corrupted wrapped unit

Cause: The format of the wrapped unit being compiled is not understood by the compiler. This may be because the unit was edited or modified after it was wrapped.

Action: Rewrap the unit.

PLS-00754: illegal reference to versionable object *string*

Cause: The unit being compiled was not versionable, but contained a reference to a versionable object. This reference was illegal because the edition name corresponding to the versionable object could not be determined.

Action: Remove the reference.

PLS-00755: SYSAUX tablespace offline while saving identifier data

Cause: The SYSAUX tablespace was offline while attempting to save identifier data. Any identifier data previously collected and saved for the libunit will be invalid.

Action: Bring the SYSAUX tablespace back online and recompile the object. NLS_DO_NOT_TRANSLATE [800,800]

PLS-00801: internal error [*string***]**

Cause: This is a generic internal error that might occur during compilation or execution. The first parameter is the internal error number.

Action: Report this error as a bug to your Customer Support representative.

PLS-00900: can''t find body of unit "*string***"**

Cause: At run time, the body of a program unit could not be found. This can happen for one of two reasons. -- First, there may be a unit "a" which calls a module "b", where the spec for "b" exists but not the body. In this case, since the spec is present, there will be no compile-time errors. -- Secondly, this can occur if there is a reference to a sequence outside of the proper context such as a SQL statement. In this case, the "spec" of the sequence reference can be found, but it is invalid to actually run code which references the sequence outside a SQL statement, as in: i := seq.nextval;

Action: If caused by the first reason, create a body for the object that is being referenced. If caused by the second reason, move the sequence into a SQL statement. For example, i := seq.nextval; can be replaced by: select seq.nextval into temp from dual; i := temp;

PLS-00901: the data type of column "*string***" of table "***string***" is not supported**

Cause: A column in a database table belongs to a datatype that is not supported by the current release of PL/SQL.

Action: Remove the offending column from the table or copy the desired columns to another table.

PLS-00902: A READ-ONLY bind variable used in OUT or IN-OUT context

Cause: A host variable that is protected from update was used in a context that allows an update.

Action: Check the context and change the use of the host variable, or assign the value of the host variable to a PL/SQL local variable, then use the local variable instead.

PLS-00904: insufficient privilege to access object *string*

Cause: An attempt was made to operate on a database object without the required privilege. This error occurs, for example, if an attempt was made to UPDATE a table for which only SELECT privileges were granted.

Action: Ask the DBA to perform the operation or to grant you the required privilege.

PLS-00905: object *string* **is invalid**

Cause: An invalid package specification or stored subprogram was referenced. A package specification or stored subprogram is invalid if its source code or any database object it references has been DROPped, REPLACEd, or ALTERed since it was last compiled.

Action: Find out what invalidated the package specification or stored subprogram, then make sure that Oracle can recompile it without errors.

PLS-00906: Compilation is not possible

Cause: The PL/SQL compiler cannot run properly because its operating environment is corrupted. For example, its error message file might be inaccessible.

Action: Check the PL/SQL operating environment, making sure that all files required by the compiler are accessible.

PLS-00907: cannot load library unit *string* (referenced by *string*)

Cause: PL/SQL is unable to find and load a library unit that was previously available. This typically happens when you try to load a unit which references another library unit that is non-existent or invalid.

Action: Provide the needed library unit.

PLS-00908: The stored format of *string* is not supported by this release

Cause: PL/SQL cannot understand the stored format of a library unit. It has been compiled or shrink-wrapped with a version of PL/SQL either too new or too old for this version to understand it.

Action: Recompile the library unit for this version of PL/SQL.

PLS-00909: object *string* is not declared or insufficient privileges to access object *string*

Cause: An object from the operator declaration is not declared, or it is declared but there is no sufficient privileges to access that object.

Action: Declare the object, or ask the DBA to grant the privileges required to access the object.

PLS-00910: insufficient privilege to inherit from type *string*

Cause: An attempt was made to inherit from a type without the required UNDER privilege.

Action: None

PLS-00920: parameter plsql_native_library_dir is not set

Cause: A PL/SQL program is being compiled natively, but the compiler parameter plsql_native_library_dir, which denotes the directory to store the native shared objects (DLL), is not set.

Action: The DBA should set this parameter.

PLS-00923: native compilation failed: *string*:*string*

Cause: The native compilation of PL/SQL program has failed because the native shared object (DLL) could not be created successfully.

Action: The DBA should ensure that the commands specified in spnc_commands file are correct.

PLS-00924: native compilation is not supported on this platform

Cause: Native compilation of PL/SQL programs is not supported on this platform.

Action: Compile the PL/SQL program to bytecode by setting the parameter plsql_compiler_flags to INTERPRETED.

PLS-00925: native compilation failed: Unable to create file (*string string*)

Cause: Native compilation of a PL/SQL program failed because a file could not be created. It is likely that the system parameter plsql_native_library_dir does not reference a writable, existing directory

Action: Ensure that the system parameter plsql_native_library_dir references a directory which exists, and is writable.

PLS-00950: In this version, PL/SQL tables can not be used in this SQL statement.

Cause: In a SQL statement, a PL/SQL table was referenced incorrectly. For example, the following reference might have been made, but PL/SQL table attributes can only be used in procedural statements: SELECT ename_tab.COUNT INTO name_count WHERE ...

Action: Remove the incorrect reference from the SQL statement.

PLS-00951: *string* Feature is not supported by this release

Cause: PL/SQL cannot understand something in an imported library unit. It uses some feature either too new or too old for this version to understand it.

Action: Recompile the imported library unit with this version of PL/SQL, to discover more precisely what feature is not supported.

PLS-00960: RPCs cannot use parameters with schema-level object types in this release

Cause: Schema-level object types, or types which recursively use such types, were used in an RPC, which is not permitted. For example: create type foo as object (...) create package my_pack is type my_rec is record(v foo); -- on a remote server: x my_pack.my_rec@rpc; -- illegal attempt to use type my_rec

Action: Use only PL/SQL-defined types in RPC calls. It may be necessary to add extra code to element-wise copy schema-level types into local types in order to move such data through an RPC.

PLS-00970: The class name of a method must match that of EXTERNAL NAME clause in the type header

Cause: The class name defined as part of the method signature does not match the one defined in the type header in the EXTERNAL NAME clause. create type foo as object EXTERNAL NAME "foo" LANGUAGE JAVA (... MEMBER FUNCTION my (number) return number EXTERNAL NAME "bar.func(oracle.sql.NUMBER) return oracle.sql.NUMBER", ..);

Action: Either omit the class name from the method signature or use the one defined in the type header.

PLS-00989: Cursor Variable in record, object, or collection is not supported by this release

Cause: 3.0 Implementation Restriction for Ref Cursors

Action: None

PLS-00990: Index Tables of Cursor Variables are disallowed

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: None

PLS-00992: Cursor Variables cannot be FETCH''ed from

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: None

PLS-00993: Cursor variables cannot be passed as forwarded RPC arguments or results

Cause: An attempt was made to pass a cursor variable to or from a remote subprogram by way of a forwarded RPC, which is not allowed. For example, from a client-side tool, a procedure on a remote database cannot be used to open a cursor variable because remote subprograms cannot return the values of cursor variables.

Action: Change the subprogram call to reference the local database.

PLS-00994: Cursor Variables cannot be declared as part of a package

Cause: An attempt was made to declare a cursor variable in a package specification, which is not allowed. Although REF CURSOR types can be defined in a PL/SQL block, subprogram, or package, cursor variables can be declared only in a block or subprogram.

Action: Move the cursor variable declaration into a PL/SQL block or subprogram.

PLS-00995: unhandled exception # *string*

Cause: An exception was raised for which no handler was found. If it cannot find a handler for a raised exception, PL/SQL returns an unhandled exception to the host environment. The number embedded in the message is an Oracle error code listed in this manual.

Action: Fix the condition that raised the exception, write an appropriate exception handler, or use the OTHERS handler. If there is an appropriate handler in the current block, the exception was raised in a declaration or exception handler, and therefore propagated immediately to the enclosing block.

PLS-00996: out of memory

Cause: A request from PL/SQL for more memory failed.

Action: Make sure that you are not referencing the wrong row in a PL/SQL table and that the program is not recursing too deeply.

PLS-00997: no cursor return types allowed in this beta version

Cause: Cursor return types have bugs, and it is best to disable them for now.

Action: None

PLS-01400: Use of "||" token

Cause: Use of "||" token in expressions is not in ANSI''s grammar. This corresponds to the "binary_add_op"''s reduction to a "CAT_" in plsql.y

Action: None

PLS-01401: Identifier over 18 characters long

Cause: Identifiers over 18 characters long are not allowed under the ANSI grammar.

Action: None

PLS-01402: Use of quoted identifier

Cause: The use of quoted identifiers is a PL/SQL extension and is not allowed under the ANSI grammar.

Action: None

PLS-01403: Comment delimiters /* */

Cause: C-style comments (introduced with the "/" and "*" characters) are not part of the ANSI grammar. To conform with ANSI, comments must be preceded by the ANSI comment introducer, "--" , and must not contain a newline. If someone can figure out a way to make this message look less cheesy without ending up with nested comments, be my guest.

Action: None

PLS-01404: ANSI Identifiers can only consist of letters, digits, and the underscore character

Cause: ANSI identifiers can only consist of letters, digits, and the underscore character. PL/SQL allows "#" and "$" in identifiers, but these are not ANSI.

Action: None

PLS-01405: Under ANSI"s grammar, numeric data represented in exponent notationmust use an uppercase E

Cause: Under ANSI"s grammar, numeric data represented in exponent notation must use an uppercase "E". Example: 3.45E-6 is ANSI, but 3.45e-6 is not.

Action: None

PLS-01406: An identifier has been found that is considered a keyword in ANSI"s grammar but not in PL/SQL"s

Cause: An identifier has been found that is considered a keyword in ANSI"s grammar but not in PL/SQL"s.

Action: None

PLS-01407: One of the identifiers CHAR, CHARACTER, or INTEGER has been redefined by the programmer

Cause: One of the identifiers "CHAR", "CHARACTER", or "INTEGER" (all ansi keywords) has been redefined by the programmer.(special case of 1406, above).

Action: None

PLS-01408: Use of "&" token

Cause: Use of "&" token in expressions is not in ANSI"s grammar.

Action: None

PLS-01409: Use of "PRIOR_" token

Cause: Use of "PRIOR_" token in expressions is not in ANSI"s grammar.

Action: None

PLS-01410: Use of "MOD" token

Cause: Use of "MOD" token in expressions is not in ANSI"s grammar.

Action: None

PLS-01411: Use of "REM" token

Cause: Use of "REM" token in expressions is not in ANSI"s grammar.

Action: None

PLS-01412: Use of "EXP" token

Cause: Use of "EXP" token in expressions is not in ANSI"s grammar.

Action: None

PLS-01413: Use of NULL an expression

    Cause: Use of NULL an expression not in ANSI"s grammar.

    Action: None

PLS-01414: Use of qualified expression here

    Cause: Use of qualified expression here is not in ANSI"s grammar.

    Action: None

PLS-01415: Use of aggregate value here

    Cause: Use of aggregate value here is not in ANSI"s grammar.

    Action: None

PLS-01416: Use of <id> (<value>...) here

    Cause: Use of <id> (<value>...) here is not in ANSI"s grammar.

    Action: None

PLS-01417: Use of %attribute

    Cause: Use of %%attribute value here is not in ANSI"s grammar.

    Action: None

PLS-01418: Subquery cannot include set operators in ANSI"s grammar

    Cause: Subquery cannot include set operators in ANSI"s grammar.

    Action: None

PLS-01419: Subquery must have either "*" or exactly one column in its select list

    Cause: Subquery must have either "*" or exactly one column in its select list according to ANSI"s grammar.

    Action: None

PLS-01420: INTERSECT and MINUS set operators are not ANSI

    Cause: INTERSECT and MINUS set operators are not ANSI

    Action: None

PLS-01421: FOR UPDATE clause

    Cause: FOR UPDATE clause is not in ANSI"s grammar.

    Action: None

PLS-01422: Aliases

    Cause: Aliases are not in ANSI"s grammar.

    Action: None

PLS-01423: Subquery on right-hand-side in set clause

    Cause: Subquery on right-hand-side in set clause is not in ANSI"s grammar.

    Action: None

PLS-01424: Non-ANSI order of clauses

    Cause: ANSI specifies an ordering to clauses in a table-expression which PL/SQL doesn"t. The ordering according to ANSI must be: (1) from clause (2) where clause (3) group-by clause (4) having clause In PL/SQL, the from clause must come first, and the clauses after it can appear in any order (with the addition of the non-ansi connect-by clause).

Action: None

PLS-01425: Connect-by clause

Cause: ANSI doesn''t allow connect-by clauses.

Action: None

PLS-01450: This <value expression> contains a nonconforming data type

Cause: This <value expression> contains a nonconforming data type. Section 4.2 of X3H2, "Data types" states that: "A nonnull value is either a character string or a number." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma.

Action: None

PLS-01451: The data types of these <value expressions> must be comparable

Cause: The data types of these <value expressions> must be comparable. Section 4.2 of X3H2, "Data types", states that: "A character string and a number are not comparable values." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma. This warning will be place on data-type coercion functions, for example, TO_CHAR(<number>), that are inserted in OracleSQL to allow non-conforming data type combinations.

Action: None

PLS-01452: This function is not part of the ANSI standard

Cause: This function is not part of the ANSI standard. This warning is used to flag such functions as "POWER" that are not mentioned in the ANSI specifications.

Action: None

PLS-01453: This procedure is not part of the ANSI standard

Cause: This procedure is not part of the ANSI standard. This warning is used to flag such procedures as "STOP" that are not mentioned in the ANSI specifications.

Action: None

PLS-01454: No operator may be used with values of data type CHAR

Cause: No operator may be used with values of data type "character string". Section 5.9, "<value expression>", syntax rule 3, of X3H2 states: "If the data type of a <primary> is character string, then the <value expression> shall not include any operators." This warning is placed on many functions in STDBASE that take CHAR args.

Action: None

PLS-01455: The predicates IS NULL and IS NOT NULL are defined only for column specifications

Cause: The predicates "IS NULL" and "IS NOT NULL" are defined only for column specifications, not for any other expressions. Section 5.15, "<null predicate>", indicates that in the predicate "x IS NULL", x must be a column, and may not be any other kind of expression.

Action: None

PLS-01458: The set clause in an UPDATE statement requires a column name of length 1

Cause: The set clause in an UPDATE statement requires a column name of length 1. Sect. 8.11, 8.12

Action: None

PLS-01460: Cannot access object on a remote host

> **Cause:** Cannot access object on a remote host.
>
> **Action:** None

PLS-01463: STDDEV is not a standard set function

> **Cause:** STDDEV is not a standard set function.
>
> **Action:** None

PLS-01464: VARIANCE is not a standard set function

> **Cause:** VARIANCE is not a standard set function.
>
> **Action:** None

PLS-01466: Null strings are not allowed

> **Cause:** Null strings are not allowed.
>
> **Action:** None

PLS-01467: The value list of the IN predicate, if not a subquery, must contain only value_specifications

> **Cause:** The value list of the IN predicate, if not a subquery, must contain only value_specifications (i.e. literals and PL/SQL or embedded variables).
>
> **Action:** None

PLS-01468: The first argument of the like-predicate must be a column of type character string

> **Cause:** The first argument of the like-predicate must be a column of type character string.
>
> **Action:** None

PLS-01469: ANSI standard does not permit records

> **Cause:** ANSI standard does not permit records.
>
> **Action:** None

PLS-01470: The escape character in the like-predicate must be a literal or a variable of type CHAR

> **Cause:** The escape character in the like-predicate must be a literal or a variable of type character.
>
> **Action:** None

PLS-01471: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_ expr)

> **Cause:** The keyword DISTINCT must be present in a COUNT(DISTINCT sim_ expr). Sect 5.8
>
> **Action:** None

PLS-01472: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification

> **Cause:** In a set_function_specification, if DISTINCT is present, the expression must be a column_specification.
>
> **Action:** None

PLS-01473: Use <> instead of != or ~=

> **Cause:** Use <> instead of != or ~=. Sect 5.11.

Action: None

PLS-01474: Use of ANY is non_ANSI

Cause: Due to the combining of comparison_predicate and quantified_predicate, we may have something like sim_expr = ANY_ sim_expr, which is nonetheless accepted by kernel.

Action: None

PLS-01500: Unions are not allowed in the definition of a view

Cause: Unions are not allowed in the definition of a view. Sect. 6.9

Action: None

PLS-01501: Options in CREATE TABLE statement is non-ANSI.

Cause: CREATE TABLE allows only the definition of the structure of a table. None of the .SPACE__name. .PCTFREE__numeric_literal. .cluster. is ANSI. Sect. 6.2

Action: None

PLS-01502: Constraint name and constraint status are non-ANSI.

Cause: Constraint name and constraint status are non-ANSI. Sect. 6.3

Action: None

PLS-01503: The expression in a SET clause must not include a set function

Cause: The expression in a SET clause must not include a set function. Sect. 8.12.

Action: None

PLS-01504: Use of AS phase in CREATE TABLE statement is non_ANSI

Cause: CREATE TABLE allows only the definition of the structure of a table. Use of AS phase in CREATE TABLE statement is non-ANSI.

Action: None

PLS-01505: ALTER is non-ANSI

Cause: ALTER is non-ANSI

Action: None

PLS-01506: CREATE INDEX is non-ANSI

Cause: CREATE INDEX is non-ANSI

Action: None

PLS-01507: DROP is non-ANSI

Cause: DROP is non-ANSI

Action: Sect. 6.2

PLS-01701: Illegal syntax in ROLLBACK WORK statement

Cause: Illegal syntax in ROLLBACK WORK statement.

Action: None

PLS-01702: Illegal syntax in COMMIT WORK statement

Cause: Illegal syntax in COMMIT WORK statement.

Action: None

PLS-01703: Cursor name in CLOSE statment must be of length 1

Cause: Cursor name in CLOSE statment must be of length 1.

Action: None

PLS-01704: The expressions in a sort clause must be column specs or unsigned integers, with optional ASC or DESC

Cause: The expressions in a sort clause may only be column specifications or unsigned integers, followed by optional ASC or DESC.

Action: None

PLS-01705: table specified by a cursor not updatable if cursor specification has a UNION or ORDER_BY

Cause: Missing keyword FROM.

Action: None

PLS-01707: In positioned DELETE or UPDATE statement, table must be identified in specification of cursor

Cause: In a positioned DELETE or UPDATE statement, the table deleted fromor updated must be identified in the specifictation of the cursor.

Action: None

PLS-01708: In searched DELETE, UPDATE or INSERT, table must not appear in FROM clause of subqueries in search condition

Cause: In a searched DELETE, UPDATE or INSERT statement, the table affected must not appear in a FROM clause in any of the subqueries in the search condition.

Action: None

PLS-01709: value list of INSERT statement, if specified with value list rather than subquery, must be value specification

Cause: In an INSERT statement, the insert value list, if specified with a value list rather than a subquery, must be value specifications, i.e. no compound expressions or column references. Sect 8.7.

Action: None

PLS-01710: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1

Cause: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1.

Action: None

PLS-01711: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause

Cause: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause. Sect. 8.10.

Action: None

PLS-01712: ANSI does not allow bind variables as INDICATORS

Cause: ANSI does not allow bind variables as INDICATORS

Action: None

PLS-01713: The constraints on these types do not match

Cause: The constraints on these types do not match

Action: None

PLS-01714: ANSI expects a column name not a literal value here

> **Cause:** ANSI expects a column name not a literal value here

> **Action:** None

PLS-01900: : character to number conversion error

> **Cause:** There was a failure while converting a character string into a numeric value.

> **Action:** Verify that all character strings assigned to number variables have valid numeric value interpretations.

PLS-01901: : host bind array too small

> **Cause:** PL/SQL was unable to transfer data into a host array because the array is too small.

> **Action:** Increase the size of the host array.

PLS-01902: : hex to raw conversion error

> **Cause:** There was a failure while converting a hexadecimal string to a raw.

> **Action:** Verify that the hexadecimal variable to be converted contains a valid hexadecimal value.

PLS-01903: : non-integer error number

> **Cause:** SQLERRM() was called with a non-integer value.

> **Action:** Make sure SQLERRM() is called with an integer value.

PLS-01904: : NULL index table key value

> **Cause:** An attempt was made to index into an index table with a NULL key value.

> **Action:** Make sure key values used to index into index tables are non-NULL.

PLS-01905: : character string buffer too small

> **Cause:** An error was encountered while moving a character string from a source to a destination. This error occurs if, for example, an attempt is made to move a a character string of 10 characters into a 1 character buffer. The cause of this error may not always be obvious. For example, the following will result in this error: a varchar2(1); b number; b := 10; a := b; An error results because an implicit conversion causes the number 10 to become the character string "10", which does not fit in the character buffer of 1 allocated for the variable a.

> **Action:** First, look for character string assignment statements where the buffer size is mismatched. If there are none found, then consider the implicit conversion case illustrated in the example above.

PLS-01906: : raw variable length too long

> **Cause:** The length of a raw variable being copied or assigned was too long to fit into its destination.

> **Action:** Make sure the raw variable length is correct.

PLS-01907: : number precision too large

> **Cause:** The number begin copied or assigned had too many digits to the left of the decimal and did not fit into its destination. In other words, there is a number precision mismatch. This error may also occur if, for example, an attempt is made to assign a character string to a number, as demonstrated below. a varchar2(4); b number(1,1); a := "10.1"; b := a;

Action: First, check explicit number precision value mismatches. If none are found, then consider implicit conversions of other types to numbers, including conversions performed during binds.

PLS-01908: : RETURNING INTO buffer too small

Cause: PL/SQL determined that a server side DML with a RETURNING INTO clause does not use a buffer that is large enough to hold the data being returned.

Action: Increase the size of the RETURNING INTO clause buffer.

PLS-01909: : cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

PLS-01910: : associative array shape is not consistent with session parameters

Cause: NLS parameters affecting comparison of keys have been altered dynamically. The associative array"s index is invalid.

Action: Avoid using associative arrays with string keys in applications which require frequent changes of NLS_COMP and/or NLS_SORT.

PLS-01911: : associative array key violates its type constraints

Cause: The key value of an element being inserted into an associative array violates the the key type constraints.

Action: Relax the constraints if the key value is meant to be acceptable. Otherwise, apply a valid key value when inserting an element.

PLS-01912: : instance must of be of type "*string*"

Cause: The run-time type of the instance is not the declared type. e.g. If the return value of a user defined constructor is wrong.

Action: Return the correct type.

PLS-01913: : instance must of be of type "*string*" or one of its subtypes

Cause: The run-time type of the instance is the not declared type or one of its subtypes. e.g. TREAT(supertype AS subtype) fails.

Action: Catch the exception.

PLS-01914: duplicate SECURITY specification in subprogram expression

Cause: The subprogram was found to have two SECURITY specifications.

Action: Remove one of the SECURITY specifications.

PLS-01915: duplicate ASSEMBLY specification in subprogram expression

Cause: The subprogram was found to have two ASSEMBLY specifications.

Action: Remove one of the ASSEMBLY specifications.

PLS-01916: SECURITY level specification exceeds ASSEMBLY SECURITY specification

Cause: The security level specified in the callspec exceeds the maximum security level allowed by the assembly.

Action: Lower the security level specified in the callspec to match the maximum security level specified in the assembly.

49

PLW-05000 to PLW-07206

PLW-05000: mismatch in NOCOPY qualification between specification and body

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05001: previous use of "*string*" (at line *string*) conflicts with this use

Cause: While looking for prior declarations of a variable, constant, or label, the compiler found another declaration with the same name in the same scope. Or, the headers of subprogram in a package specification and body were not identical.

Action: Check the spelling of the variable, constant, or label name. Also check the names of all parameters and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram in the package specification or body so that they are identical.

PLW-05003: same actual parameter(*string* and *string*) at IN and NOCOPY may have side effects

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05004: identifier *string* is also declared in STANDARD or is a SQL builtin

Cause: The indicated identifier was also either: o) declared in package STANDARD, or o) a SQL builtin function, or o) a pseudo-column. This situation can result in name resolution issues since the STANDARD/builtin declaration will be chosen over the local declaration in SQL statements; however the local declaration will be chosen over the STANDARD/builtin declaration outside SQL scope. (See the documentation on PL/SQL name resolution.)

Action: Either: o) rename the given identifier, o) qualify any references to the identifier with the containing scope"s name, or o) make sure the intended resolution occurs if using the identifier in SQL scope.

PLW-05005: function *string* returns without value at line *string*

Cause: The function exited without a return value. Return statements are required for all PL/SQL functions.

Action: Inspect the function source code for exit points, and place a return at each point so that no runtime error will be generated when the function exits.

PLW-05006: shadow type generation resulted in warning: *string*

Cause: Compilation of a table function causes the creation of internally- generated types. A problem occurred during creation of these types which was not severe enough to prevent the creation of the types, but which may impact the usage of the table function. See the accompanying error message for more information.

Action: Fix the issue reported in the accompanying error message.

PLW-05007: first parameter to pragma INLINE must be an identifier

Cause: The first parameter to the pragma INLINE must be an identifier denoting a procedure or function.

Action: Use a procedure or function name

PLW-05008: illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument or correct the faulty syntax.

PLW-05009: pragma INLINE may not appear in a declaration list

Cause: Pragma INLINE applies only to the following statement, and can not appear immediately prior to a declaration

Action: Remove the pragma.

PLW-05010: duplicate pragma INLINE on procedure "*string***"**

Cause: Pragma INLINE was applied twice to the same procedure in the same statement. The procedure will be inlined only if all duplicates specify a control value of "YES"

Action: Remove the duplicate pragma.

PLW-05011: pragma INLINE for procedure "*string***" does not apply to any calls**

Cause: A pragma INLINE was provided, but there was no call to the mentioned procedure in the next statement.

Action: Remove the unnecessary pragma.

PLW-05012: pragma INLINE for procedure "*string***" could not be applied**

Cause: A pragma INLINE(<name>, "yes") was used, but the named procedure could not be inlined.

Action: Eliminate the reasons which are blocking the inlining. See the documentation for possible problems. NLS_DO_NOT_TRANSLATE [5400,5401]

PLW-05013: second parameter to pragma INLINE "*string***" is not "YES" or "NO"**

Cause: The second parameter to the pragma INLINE governs whether or not a procedure call can be inlined. The only legal values are "YES", meaning that the compiler should attempt to inline the call, and "NO", meaning that the compiler must not inline the call.

Action: Use "YES" or "NO" as appropriate.

PLW-05014: Pragma *string* **cannot be specified here**

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLW-05015: implementation restriction - too many debug records

Cause: The program is so large that it overflowed a compiler limit on the size of the debug symbol table. The module was compiled with partial debugging information.

Action: Compile the module with PLSQL_DEBUG=FALSE, or split it into multiple modules

PLW-05016: INTO clause should not be specified here

Cause: The INTO clause was incorrectly specified on a cursor declaration. It should have been specified on the FETCH statement.

Action: Relocate the misplaced clause.

PLW-05017: prefix of the expression will be ignored

Cause: Generalized invocation with explicit SELF and a dotted name was used to call the type method causing the prefix of the dotted name to be ignored.

Action: Do not use a dotted name to invoked type method in this context.

PLW-06002: Unreachable code

Cause: d by expression evaluation at compile time.

Action: Inspect program logic for possible defects. Disable the warning if much code is made unreachable intentionally and the warning message is more annoying than helpful.

PLW-06003: unknown inquiry directive "*string***"**

Cause: An unknown inquiry directive was used. The inquiry directive is neither predefined nor user-defined.

Action: Use a predefined inquiry directive or define the inquiry directive.

PLW-06004: inlining of call of procedure "*string***" requested**

Cause: A pragma INLINE(, "YES") referring to the named procedure was found. The compiler will, if possible, inline this call.

Action: None

PLW-06005: inlining of call of procedure "*string***" was done**

Cause: A call to the procedure was inlined.

Action: None

PLW-06006: uncalled procedure "*string***" is removed.**

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06007: procedure "*string***" is removed because optimization removed calls**

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06008: call of procedure "*string*" will not be inlined

Cause: A pragma INLINE(, "NO") referring to the named procedure was found. The compiler is prevented from inlining this call.

Action: None

PLW-06009: procedure "*string*" OTHERS handler does not end in RAISE or RAISE_APPLICATION_ERROR

Cause: The OTHERS handler can exit without executing some form of RAISE or or a call to the standard procedure RAISE_APPLICATION_ERROR.

Action: Good programming practices suggest that OTHERS handlers must always pass an exception upward. Inspect the program logic to determine if the handler code needs revision.

PLW-06010: keyword "*string*" used as a defined name

Cause: A PL/SQL or SQL keyword was used as defined name. Although legal, this is not recommended.

Action: Choose another name for the defined item.

PLW-06011: detailed dependency information discarded due to size limitations

Cause: The compiled unit was so large that the compiler could not store detailed dependency information that could be used to quickly recompile the unit if it was invalidated.

Action: Break up the unit into smaller units.

PLW-06012: SQL statement cannot be inlined. *string*

Cause: The SQL statement could not be inlined.

Action: None

PLW-06013: deprecated parameter PLSQL_DEBUG forces PLSQL_OPTIMIZE_LEVEL <= 1

Cause: The PLSQL_DEBUG parameter was set to TRUE forcing the optimization level to 1 (or 0 if the user selected 0) regardless of the setting of the PLSQL_OPTIMIZE_LEVEL parameter to a higher level

Action: Do not use the PLSQL_DEBUG parameter; it is deprecated. Instead, set the PLSQL_OPTIMIZE_LEVEL parameter to 1.

PLW-06014: PLSQL_OPTIMIZE_LEVEL <= 1 turns off native code generation

Cause: Native code generation was not done because the optimization was set to 1 or less.

Action: The goal of native code generation is high performance and a low optimization level defeats that purpose. Either request a higher optimization level or remove the request for native code generation. Note that using the deprecated parameter PLSQL_DEBUG also forces the optimization level to 1; do not use this parameter when native code generation is desired.

PLW-06015: parameter PLSQL_DEBUG is deprecated; use PLSQL_OPTIMIZE_ LEVEL = 1

Cause: The PLSQL_DEBUG parameter was specified.

Action: The parameter PLSQL_DEBUG no longer controls the generation of debugging information by the PL/SQL compiler; debugging information is always generated and no special parameter is needed.

PLW-07202: bind type would result in conversion away from column type

Cause: The column type and the bind type do not exactly match. This will result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07203: parameter "*string*" may benefit from use of the NOCOPY compiler hint

Cause: The mode of the specified parameter was IN OUT or OUT. Use of the NOCOPY compiler hint may speed up calls to this subprogram.

Action: Change the mode of the parameter to explicitly use the NOCOPY compiler hint. For example, if your subprogram declaration is: PROCEDURE proc(p1 IN OUT CLOB); you can change it to: PROCEDURE proc(p1 IN OUT NOCOPY clob); to get the benefit of the NOCOPY hint. For member procedures or functions in object types, you may have to explicitly declare the SELF parameter as illustrated in the following: MEMBER PROCEDURE proc(SELF IN OUT NOCOPY MY_TYPE);

PLW-07204: conversion away from column type may result in sub-optimal query plan

Cause: The column type and the bind type do not exactly match. This may result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07205: SIMPLE_INTEGER is mixed with BINARY_INTEGER or PLS_ INTEGER

Cause: Using SIMPLE_INTEGER and BINARY_INTEGER or PLS_INTEGER arguments in the same arithmetic expression may inhibit certain optimizations.

Action: Try using SIMPLE_INTEGER values only if the expression is computed on a performance critical path.

PLW-07206: analysis suggests that the assignment to "*string*" may be unnecessary

Cause: This assignment may be unnecessary; the PL/SQL optimizer could not find any further use of the variable which was being set. If the assignment was being done for some side-effect such as raising a specific exception, the compiler may not have been able to understand the side-effect and this warning may be inappropriate.

Action: If the assignment sets a variable whose value will not be used again and there are no side-effects (exceptions or calls) to consider, remove the assignment

for better performance. If the assignment was in place to raise a specific known
exception, replace the assignment with a RAISE statement.

50

AMD-00100 to AMD-00160

AMD-00100: not found: *string* **"***string***"**

    Cause: A metadata entity could not be found in the OLAP Catalog.

    Action: Check that the metadata entity name and owner are properly specified. Refer to the OLAP Catalog union views named with the OLAP2U prefix) for existing OLAP metadata entity names.

AMD-00101: cannot create *string* **"***string***"; metadata entity already exists**

    Cause: A metadata entity could not be created, because it already exists in the OLAP Catalog.

    Action: When creating a new metadata entity, specify an entity name that is unique for the entity owner. Refer to the OLAP Catalog union views (named with the OLAP2U prefix) for existing OLAP metadata entity names.

AMD-00102: invalid metadata entity: *string* **"***string***"**

    Cause: An OLAP metadata entity was found to be invalid.

    Action: Check the mapping to columns in your data warehouse tables or views.

AMD-00103: *string* **"***string***" does not have a** *string*

    Cause: A required child entity was not found for a metadata entity.

    Action: Refer to the Oracle9i OLAP User"s Guide to determine which metadata entities require dependent entities.

AMD-00104: Level "*string***" cannot be added to the hierarchy; parent and child parameters represent the same level**

    Cause: The same level name was specified for both the parent and the child parameters of the ADD_LEVEL_TO_HIERARCHY procedure.

    Action: Determine which level should be the parent of the new level being added to the hierarchy. Specify the parent in the parent parameter and the new level in the child parameter of the ADD_LEVEL_TO_HIERARCHY procedure. Re-run the procedure.

AMD-00105: Level "*string***" cannot be added to the hierarchy; the specified parent level "***string***" is already the parent of "***string***"**

    Cause: The level specified as the parent in the ADD_LEVEL_TO_HIERARCHY procedure could not be used, because it was the parent of another level within the hierarchy.

    Action: In the ADD_LEVEL_TO_HIERARCHY procedure, specify a parent that is not already a parent of another level within a hierarchy.

AMD-00106: parent *string* **"***string***" must be removed before child** *string* **"***string***" can be removed**

Cause: A metadata entity could not be removed, because it was the child of another metadata entity.

Action: Remove the parent metadata entity. All the dependent entities will be removed with the parent.

AMD-00107: no root level in hierarchy: "*string***"**

Cause: A hierarchy was found to have no root level.

Action: Use the ADD_LEVEL_TO_HIERARCHY procedure to add a level to the hierarchy. Specify the root level in the child parameter and leave the parent parameter blank.

AMD-00108: Dimension "*string***" is improperly mapped; the dimension has** *string* **hierarchies mapped, but hierarchy level "***string***" has** *string* **columns mapped**

Cause: Dimension table columns could not be accessed, because dimension hierarchies were incorrectly mapped.

Action: Add or remove dimension hierarchies or hierarchy level mappings. The number of dimension hierarchies must equal the number of hierarchy level columns.

AMD-00109: Parent metadata entity has too many child entities. *string* **"***string***" has more than** *string string*

Cause: A metadata entity was found to have too many dependent entities of another type.

Action: Add the required mapping.

AMD-00110: parameter *string* **of "***string***" not valid**

Cause: A parameter was found to be invalid.

Action: Ensure that the parameter is correctly formed and valid.

AMD-00111: PROCEDURE *string***, invalid directory: "***string***"**

Cause: Directory name provided to a procedure was found to be invalid.

Action: Ensure that the directory name represents a valid directory.

AMD-00112: PROCEDURE *string***, invalid mode**

Cause: UTL_FILE.INVALID_MODE: An error occurred when accessing a file.

Action: Check that files being accessed have correct permissions, then retry.

AMD-00113: PROCEDURE *string***, invalid operation**

Cause: UTL_FILE.INVALID_OPERATION: An error occurred when accessing a file.

Action: Check that the file being accessed is not already opened by another program, then retry.

AMD-00114: PROCEDURE *string***, internal error**

Cause: UTL_FILE.INTERNAL_ERROR: Possible hardware or software problem when accessing a file.

Action: Verify that hardware is functioning normally, then retry. Contact Oracle Support Services if needed.

AMD-00115: PROCEDURE *string***, invalid file handle**

Cause: UTL_FILE.INVALID_FILEHANDLE: Possible software or hardware problem when accessing a file.

Action: Verify that hardware is functioning normally, then retry. Contact Oracle Support Services if needed.

AMD-00116: PROCEDURE *string*, **read error**

Cause: UTL_FILE.READ_ERROR: Possible software or hardware problem when accessing a file.

Action: Verify that hardware is functioning normally, then retry. Contact Oracle Support Services if needed.

AMD-00117: input file "*string*" not found

Cause: The input text file was not found in the specified location.

Action: Copy the input text file to the specified location, then retry.

AMD-00118: output file "*string*" already exists

Cause: The output file already exists in the specified location.

Action: Delete or rename the file, then retry.

AMD-00119: analytic workspace dimensions not specified in input

Cause: Either the input text file or the input string did not specify an analytic workspace dimension.

Action: Add one or more dimensions to the input text file or the input string. At least one dimension is required.

AMD-00120: dimension #*string*: analytic workspace dimension name not specified

Cause: Dimension name was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing dimension name.

AMD-00121: dimension #*string*: analytic workspace hierarchy not specified

Cause: Hierarchy for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing hierarchy.

AMD-00122: dimension #*string*: analytic workspace hierarchy dimension not specified

Cause: Hierarchy dimension for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing hierarchy dimension.

AMD-00123: dimension #*string*: analytic workspace hierarchy dimension value not specified

Cause: Hierarchy dimension value for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing hierarchy dimension value.

AMD-00124: dimension #*string*: analytic workspace GID variable not specified

Cause: Analytic workspace GID variable for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing Analytic Workspace GID variable.

AMD-00125: dimension #*string*: analytic workspace column level dimension not specified

Cause: Analytic workspace column level dimension for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing analytic workspace column level dimension.

AMD-00126: dimension #*string*: analytic workspace column level relation not specified

Cause: Analytic workspace column level relation for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing analytic workspace column level dimension.

AMD-00127: dimension #*string*: RDBMS dimension column not specified

Cause: RDBMS dimension column for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS dimension column.

AMD-00128: dimension #*string*: RDBMS parent column not specified

Cause: RDBMS parent column for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS parent column.

AMD-00129: dimension #*string*: RDBMS GID column not specified

Cause: RDBMS GID column for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS GID column.

AMD-00130: dimension #*string*: RDBMS dimension column data type not specified

Cause: RDBMS dimension column data type for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS dimension column data type.

AMD-00131: dimension #*string*: RDBMS parent column data type not specified

Cause: RDBMS dimension column data type for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS dimension column data type.

AMD-00132: dimension #*string*: RDBMS GID column data type not specified

Cause: RDBMS dimension column data type for this dimension was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS dimension column data type.

AMD-00133: measure #*string*: analytic workspace measure name not specified

Cause: Analytic workspace measure name for this measure was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing analytic workspace measure name.

AMD-00134: measure #*string*: RDBMS measure column name not specified

Cause: RDBMS measure column name for this measure was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS measure column name.

AMD-00135: measure #*string*: RDBMS measure column data type not specified

Cause: RDBMS measure column data type for this measure was not specified in either the input text file or the input string.

Action: Modify the input text file or the input string to include the missing RDBMS measure column data type.

AMD-00136: Generation of SQL script "*string*" failed

Cause: There was a program error or a system resource limit was exceeded.

Action: Verify that sufficient system resources are available, then retry.

AMD-00137: prefix "*string*" exceeds maximum permitted length of *string* characters

Cause: A prefix supplied to an API call was too long.

Action: Change the prefix so that it is within the permitted length, then re-issue the API call.

AMD-00138: level names parameter not null or defaulted

Cause: Level names were provided to the LEVELS_LIST parameter, but the LEVELS parameter did not specify the number of levels.

Action: Either set the LEVELS_LIST parameter to null (the default) or set the LEVELS parameter to the number of levels.

AMD-00139: level names parameter not valid

Cause: The number of names in the LEVELS_LIST parameter did not equal the number specified by the LEVELS parameter.

Action: Ensure that the LEVELS_LIST parameter is correctly formed and that it holds the number of names specified by the LEVELS parameter.

AMD-00140: internal error: [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: This is an internal error.

Action: Contact Oracle Support Services.

AMD-00141: parameter *string* of "*string*" not valid starting around "*string*"

Cause: A parameter was found to be invalid.

Action: Ensure that the parameter is correctly formed and valid.

AMD-00142: Analytic Workspace name "*string*" must be fully qualified with the Owner.

Cause: A parameter was found to be invalid.

Action: Ensure that the parameter is correctly formed and valid. For example, SCOTT.EMP is a fully qualified name.

AMD-00143: View name "*string*" must be fully qualified with the Owner.

Cause: A parameter was found to be invalid.

Action: Ensure that the parameter is correctly formed and valid. For example, SCOTT.EMP is a fully qualified name.

AMD-00144: Custom Measure "*string*" does not exist in Workspace "*string*"

Cause: A required object does not exist in specified Workspace.

Action: Ensure that the parameter is correctly formed and valid.

AMD-00145: error attaching Workspace "*string*" in mode "*string*"

Cause: Either the Workspace does not exist, is already attached in a different mode, or there are insufficient system resources to attach Workspace.

Action: Ensure that workspace name is correct and can be currently attached in the specified mode.

AMD-00146: Custom Measure "*string*" already exists in Workspace "*string*"

Cause: You have attempted to create a Custom Measure when it already exists.

Action: Ensure that the Custom Measure name is correct and does not already exist in the specified Workspace.

AMD-00147: invalid Custom Measure creation mode "*string*" specified

Cause: Custom Measure creation mode must be "PERMANENT" or "TEMPORARY."

Action: Ensure that the Custom Measure creation mode is correct.

AMD-00148: Workspace "*string*" is not currently open. No update done.

Cause: The Workspace must be attached before a Custom Measure can be updated.

Action: Attach Workspace first before attempting to modify Custom Measure.

AMD-00149: Custom Measure to delete "*string*" does not exist in Workspace "*string*"

Cause: The Custom Measure does not exist in specified Workspace.

Action: Ensure that the Custom Measure name is correct and exists in specified Workspace.

AMD-00150: Custom Measure to delete "*string*" not mapped to View "*string*"

Cause: The Custom Measure to delete is not mapped to the View specified.

Action: Ensure that the Custom Measure and View Name name are correct, and mapped to each other.

AMD-00151: Creation of Custom Measure "*string*" in Workspace "*string*" failed

Cause: Invalid parameters were supplied, or a program error occured.

Action: Ensure that API parameters are correct and sufficient system resources are available.

AMD-00152: Workspace "*string*" is not currently open.

Cause: The Workspace must be attached before an operation can be performed on it.

Action: Attach the Workspace first before attempting operation.

AMD-00153: error detaching workspace "*string*"

Cause: The Workspace was not attached or a program error occured.

Action: Ensure the Workspace name is correct and it is attached in the current session.

AMD-00154: Cannot delete session object "*string*" in Workspace "*string*"

Cause: You cannot delete a session object. These are deleted automatically when the session is ended.

Action: Ensure that API parameters are correct.

AMD-00155: Object to delete "*string*" does not exist in Workspace "*string*"

Cause: The Object slated for deletion does not exist in the Workspace specified.

Action: Ensure that API parameters are correct.

AMD-00156: formula "*string*" to modify does not exist in Workspace "*string*"

Cause: Formula does not exist in Workspace specified.

Action: Ensure that API parameters are correct.

AMD-00157: invalid attach mode "*string*" specified when attempting to attach Workspace "*string*"

Cause: An invalid parameter supplied.

Action: Attach mode must be "RO" (read only) or "RW" (read/write).

AMD-00158: The Workspace "*string*" is currently open in read-only mode.

Cause: An invalid parameter was supplied. You may not specify an operation which requires an update when the Workspace is open in read-only mode.

Action: The Creation Mode parameter must be "TEMPORARY" for a Workspace open in read-only mode.

AMD-00159: The Workspace "*string*" is currently attached in read/write mode.

Cause: An invalid parameter was supplied.

Action: The Creation Mode parameter must be "PERMANENT" for a Workspace open in read/write mode.

AMD-00160: Warning! Exceeded maximum Custom Measure number of "*string*"

Cause: The system limit has been reached.

Action: Old Custom Measures created against the specified View have to be deleted before new Custom Measures can be created.

51

CLSR-00001 to CLSR-06507

CLSR-00001: Oracle error *number* **encountered**

    Cause: Oracle-related error is encountered.

    Action: Check alert log and trace file for more detail.

CLSR-00002: Oracle error encountered while executing *string*

    Cause: Oracle-related error is encountered while executing a request.

    Action: Check alert log for more detail.

CLSR-00003: ORACLE_HOME environment variable not set

    Cause: ORACLE_HOME environment variable is not set.

    Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

CLSR-00004: Error encountered at *string*, **category=***number*, **operation=***string*, **OS error=***number*

    Cause: Operating system error occurred.

    Action: Check for the error message for more detail.

CLSR-00005: Error encountered during memory allocation

    Cause: System memory is insufficient.

    Action: Check the availability of memory in the system before retrying.

CLSR-00006: Error encountered when writing file *string*

    Cause: Error when writing file.

    Action: Check the permission of the file and the existence of its path.

CLSR-00007: Error encountered when reading file *string*

    Cause: Error when reading file.

    Action: Check the permission and existence of the file.

CLSR-00501: Error *number* **encountered when connecting to EVM daemon**

    Cause: Error encountered when connecting to EVM daemon.

    Action: Check status of EVM daemon and log file for detail.

CLSR-00502: Error *number* **encountered when subscribing an EVM event**

    Cause: Error encountered when subscribing an EVM event.

    Action: Contact customer support.

CLSR-00503: Error *number* **encountered when creating an EVM event**

Cause: Error encountered when creating an EVM event.

Action: Contact customer support.

CLSR-00504: Error *number* encountered when posting an EVM event

Cause: Error encountered when posting an EVM event.

Action: Contact customer support.

CLSR-00505: Empty event type is specified

Cause: Empty event type is specified.

Action: Try again with a valid event type.

CLSR-00506: Unmatched resource name prefix *string* is specified

Cause: Specified resource name prefix does not match as required.

Action: Try again with a valid resource name prefix.

CLSR-00507: The length of the facility name *string* exceeds the limit (*number*)

Cause: The given facility name is too long.

Action: Try again with a short facility name.

CLSR-00508: Invalid message number *number*

Cause: An incorrect message number is specified.

Action: Try again with a correct message number.

CLSR-00509: Unable to initialize NLS

Cause: Failed to initialize callback structure for NLS.

Action: Contact customer support.

CLSR-00510: Unable to load NLS data

Cause: Failed to initialize NLS data loading.

Action: Not action required as default data loading will be used.

CLSR-00511: Error *number* encountered when handling incoming EVM message

Cause: Error encountered when handling incoming EVM message.

Action: Check log file for detail.

CLSR-00512: Invalid CAA trigger event type [*string*]

Cause: Invalid CAA trigger event type is specified.

Action: Try again with a valid type.

CLSR-00513: Message file is not found

Cause: The requested OCI message file is not found.

Action: Check if the message file is properly installed.

CLSR-00514: Unable to locate PMON [pid=*string*]

Cause: Cannot find PMON with this pid.

Action: Check the existence of PMON.

CLSR-00515: A service member is already running on this node

Cause: There is a service member of the same service running on this node.

Action: No action required as the service member will try to start on another node.

CLSR-00516: No service provider found at this node
    Cause: No suitable service provider is found on this node.

    Action: No action required as the service member will try to start on another node.

CLSR-00517: Failed to register a service name
    Cause: The requested service name cannot be registered.

    Action: Check log file for detail.

CLSR-00518: Failed to register a preconnect service name
    Cause: The requested preconnect service name cannot be registered.

    Action: Check log file for detail.

CLSR-00519: No instance found
    Cause: No instance is found running for the database resource.

    Action: No action required as the database resource will fail itself.

CLSR-00520: No service member found
    Cause: No service member is found running for the composite service resource.

    Action: No action required as the composite service resource will fail itself.

CLSR-00521: Event *string* is rejected by EVM daemon
    Cause: No template has been registered for the event or caller is not authorized to post the event.

    Action: Check if there is a template registered for this event and the authority of posting this event.

CLSR-00522: Resource *string* is not registered
    Cause: CRS resource is not registered.

    Action: Register the CRS resource.

CLSR-00523: Resource *string* is not enabled
    Cause: CRS resource is not enabled.

    Action: Enable the CRS resource.

CLSR-00524: Resource *string* is stopping, resource *string* cannot start
    Cause: Resource cannot start because its composite resource is stopping.

    Action: Retry to start the resource when its composite resource is not stopping.

CLSR-00525: prsr initialization failed
    Cause: See the related error message.

    Action: Run crs_stat to make sure CSS and OCR working properly.

CLSR-00526: Failed to retrieve database configuration in OCR
    Cause: See the related error message.

    Action: Run crs_stat to make sure CSS and OCR working properly and database configuration in ocr is initialized.

CLSR-00527: OCR operation failed
    Cause: See related error messages about the OCR operation.

    Action: Fix the related error. Then try again.

CLSR-00528: RACGONS: host and port number already configured in OCR

    Cause: host and port number already configured in OCR.

    Action: None

CLSR-00529: RACGONS: host and port number to be removed does not exist

    Cause: host and port number to be removed is not configured in OCR.

    Action: None

CLSR-00530: Can not get user name

    Cause: Error caused by OSD layer.

    Action: Contact Oracle support.

CLSR-00531: Can not get primary group name

    Cause: There is no primary group for this OS.

    Action: Not faital. None.

CLSR-01001: Unsupported open mode *number* is specified

    Cause: Unsupported open mode is specified for mounting database.

    Action: Retry again with a valid open mode.

CLSR-01002: Unable to process instance startup

    Cause: ORACLE_HOME environment variable not set.

    Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

CLSR-01003: Error *number* encountered during mounting database

    Cause: Unexpected error occurs when mounting database.

    Action: Check current status of database before retrying.

CLSR-01004: Failed to mount database

    Cause: Database cannot be mounted by an instance.

    Action: Check alert log for error detail.

CLSR-01005: Error *number* encountered during altering database open mode

    Cause: Unexpected error occurs when altering database open mode.

    Action: Check current database status.

CLSR-01006: Unable to process instance shutdown

    Cause: ORACLE_HOME environment variable not set.

    Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

CLSR-01007: Connection to database was not established

    Cause: Connection to database is failed to establish.

    Action: Make sure connection and environment are properly set up.

CLSR-01008: Error *number* encountered during querying for PMON status

    Cause: Unexpected error encountered when querying v$process for PMON.

    Action: Check alert log and connection to database.

CLSR-01009: database management module failed to start

Cause: Error encountered during initializing database management module.

Action: Check previous error message for detail.

CLSR-01010: Unable to record PMON pid to *string*
Cause: Failed to write os pid for PMON to file.

Action: Check file system for disk space and access privilege.

CLSR-01011: Invalid instance startup mode [*string*] is specified
Cause: Invalid startup mode is specified.

Action: Retry again with a valid startup mode.

CLSR-01012: Invalid instance stop mode [*string*] is specified
Cause: Invalid stop mode is specified.

Action: Retry again with a vaild stop mode.

CLSR-06500: Invalid input arguments
Cause: Invalid input arguments are specified.

Action: Retry again with a valid argument.

CLSR-06501: Exceeds maximum number of arguments
Cause: Too many input arguments are specified.

Action: Retry again with correct number of arguments.

CLSR-06502: Failed to connect to database "*string*" as user "*string*"
Cause: Failed to connect to database.

Action: Check database and log file for details.

CLSR-06503: Service name already registered
Cause: Requested service name has been registered by another service.

Action: Choose another service name and retry registration again.

CLSR-06504: Service name not in SERVICE_NAMES
Cause: Requested service name is not registered.

Action: Make sure the correct service name is specified in the request.

CLSR-06505: SERVICE_NAMES found null and fixed
Cause: SERVICE_NAMES parameter becomes null after the delete operation.

Action: Not action required as SERVICE_NAMES is set to default value.

CLSR-06506: Error *number* encountered when executing *string*
Cause: Error occurred when executing the SQL statement.

Action: Check alert log for more detail.

CLSR-06507: Cannot add to SERVICE_NAMES, SERVICE_NAMES will be too long
Cause: Adding the service name will exceed the limit of SERVICE_NAMES.

Action: Change the configuration to avoid SERVICE_NAMES becomes too long.

52

CLSS-00001 to CLSS-03202

CLSS-00001: skgxn not active

    Cause: The skgxn service is required, but is not active

    Action: Verify that the clusterware skgxn is active and restart it if necessary

CLSS-00002: unable to determine local node number. type *string*

    Cause: Either the skgxn service is unavailable, or the OCR configuration is incomplete/inaccurate.

    Action: Verify that the clusterware skgxn is active and restart it if necessary. Additionally validate that the clusterware installation was successful, and that the local node was entered in the node listings.

CLSS-00003: unable to determine cluster name. type *string*

    Cause: Name of the cluster cannot be determined from configuration.

    Action: Verify that the clusterware installation was successful and that the OCR registry is available.

CLSS-00004: unable to allocate memory resources

    Cause: Memory allocation routines failed.

    Action: Validate that the system has sufficient memory resources to use the product.

CLSS-00099: logfile open failed for *string***, err** *string*

    Cause: The log file could not be opened, with error type err

    Action: Verify that the log directory specified during installation exists and that the ocssd executable has permission to create a file in that directory

CLSS-00100: configuration data access failed for key *string*

    Cause: Access of the configuration data indicated by key failed with error code error

    Action: Verify that the clusterware installation was successful and that the OCR registry is accessible

CLSS-00101: Oracle Cluster Repository mismatch with node *string***. (***string* **!=** *string***)**

    Cause: A remote node is accessing a different set of configuration. This situation can be caused by attempting to reinstall while there are active cluster nodes.

    Action: Verify that the local and remote nodes are accessing the same Oracle Cluster Repository.

CLSS-00102: initialization failure: [*string***] [***string***] [***string***] [***string***] [***string***] [***string***]**

Cause: A general initialization failure occurred.

Action: Contact Oracle Customer Service for more information.

CLSS-00103: unable to read configuration information for node *string*

Cause: Incomplete configuration information for the specified node was found.

Action: Validate the integrity of the Oracle Cluster Repository, restoring it from backup if necessary.

CLSS-00200: local node *string* **not listed in configuration**

Cause: The OCR configuration information does not list this node as a member of the cluster

Action: Verify that the clusterware installation was successful and that the node has not been added since installation

CLSS-01200: skgxn errror: category *string*, **operation** *string*, **loc** *string*

Cause: The skgxn service encountered an error, the information in the error message is vendor supplied diagnostic information

Action: Report this error to the vendor who supplied the skgxn

CLSS-02000: reconfiguration successful, incarnation *string* **with** *string* **nodes**

Cause: A rconfiguration has completed successfully

Action: None

CLSS-02001: local node number *string*, **master node number** *string*

Cause: Informational message regarding this incarnation

Action: None

CLSS-02200: Received node deletion request for active node *string*.

Cause: User attempted to delete a node from the configuration before shutting it down.

Action: Shut down the specified node and retry the node deletion.

CLSS-02201: endpoint already in use: *string*

Cause: The specified endpoint is already in use. Another process is using the endpoint.

Action: Shut down the other process, and retry the startup attempt.

CLSS-02202: voting device access took an excessive amount of time. (*string* **sec)**

Cause: A read or write to the voting device took an unacceptable amount of time.

Action: Contact the disk hardware vendor for information on improving the availability of the disk.

CLSS-02203: unable to access voting device: *string*

Cause: The CSS daemon received a failure using the voting device.

Action: Examine the permissions on the voting device. If this failure occurred later than boot time, then access to the voting device was lost.

CLSS-02204: voting device not configured. [*string*] [*string*]

Cause: A voting device was not supplied during configuration.

Action: The voting device assists in ensuring data integrity and is required by the CSS daemon. Configure a voting device and restart the cluster.

CLSS-02205: remote node *string* signaled our eviction via voting device: cause *string*

Cause: A remote node of the cluster evicted the local node due to network failure or due to software failure in the local CSS daemon.

Action: Verify the stability of the private network between the local node and the specified remote node.

CLSS-02206: local node evicted by vendor node monitor

Cause: The Operating System vendor"s node monitor evicted the local node.

Action: Examine the vendor node monitor"s logs for relevant information.

CLSS-02207: error *string* getting status from vendor node monitor

Cause: The CSS daemon received a failure interacting with the vendor node monitor. The local node may have been evicted or the vendor node monitor may have been shut down.

Action: Examine the vendor node monitor"s logs for relevant information.

CLSS-03000: reconfiguration successful, incarnation *string* with *string* nodes

Cause: A rconfiguration has completed successfully

Action: None

CLSS-03001: local node number *string*, master node number *string*

Cause: Informational message regarding this incarnation

Action: None

CLSS-03200: timed out waiting on nested reconfiguration

Cause: The current reconfiguration hung. A network failure may have \ occurred.

Action: The local node will terminate itself to cause remote nodes to enter a nested reconfiguration. This may allow the cluster to continue operation.

CLSS-03201: An attempt to begin a nested reconfiguration failed.

Cause: unable to cancel previous reconfiguration to begin a new one

Action: None

CLSS-03202: out of sync with master: [*string*] [*string*] [*string*] [*string*]

Cause: Consistency checks between the local node and the master failed.

Action: The local daemon will terminate itself to ensure that the surviving cluster is all properly coordinated.

53

CRS-00184 to CRS-02292

CRS-00184: Cannot communicate with the CRS daemon.
> **Cause:** The CRS daemon on the local node is either not running or there was an internal communication error with the CRS daemon.
>
> **Action:** Check if the CRS daemon process is running on the local node.

CRS-00210: Could not find resource "*string*".
> **Cause:** An attempt was made to operate on a resource that is not registered.
>
> **Action:** Check if the resource is registered using crs_stat.

CRS-00211: Resource "*string*" has already been registered.
> **Cause:** An attempt was made to register a resource that is already registered.
>
> **Action:** Check if the resource is registered using crs_stat.

CRS-00213: Could not register resource "*string*".
> **Cause:** There was an internal error while registering the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00214: Could not unregister resource "*string*".
> **Cause:** There was an internal error while unregistering the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00215: Could not start resource "*string*".
> **Cause:** There was an internal error while starting the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00216: Could not stop resource "*string*".
> **Cause:** There was an internal error while stopping the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00217: Could not relocate resource "*string*".
> **Cause:** There was an internal error while relocating the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00218: Could not restart the resource "*string*" on the original node.
> **Cause:** There was an internal error while restarting the resource.
>
> **Action:** Check the CRS daemon log file.

CRS-00219: Could not update resource "*string*".

Cause: There was an internal error while updating the resource.

Action: Check the CRS daemon log file.

CRS-00220: Resource "*string*" has invalid resource profile.

Cause: Invalid attributes in the resource profile.

Action: Run crs_profile -validate to identify the invalid attributes.

CRS-00221: Resource "*string*"'s action script cannot be found.

Cause: The action script has been deleted from the file system.

Action: Run crs_stat -p to determine the action script location and to check for its existence.

CRS-00223: Resource "*string*" has placement error.

Cause: There was no host available to on which failover/start the resource based on the Placement Policy for the resource.

Action: Check the target host for the resource and restart the resource using the crs_start command.

CRS-00230: Member "*string*" is not in the cluster.

Cause: The hostname was not found in the cluster.

Action: Check the hostnames in the cluster.

CRS-00232: Cluster member is down. Cannot perform operation.

Cause: The node on which CRS is attempting to start the resource is down.

Action: Start the node and retry the operation.

CRS-00233: Resource or relatives are currently involved with another operation.

Cause: Another CRS daemon was operating on the same resource.

Action: Wait for a minute and try the command or operation again.

CRS-00253: CRS configuration error, the CRS default directory is not set in Oracle Cluster Registry.

Cause: The Oracle Cluster Registry key which contains the user default CRS key is not initialised.

Action: Check the CRS configuration. If necessary reinstall CRS.

CRS-00254: authorization failure

Cause: The user permissions were insufficient to operate on the resource.

Action: Check the permissions associated with the resource using crs_getperm.

CRS-00255: CRSD is not running in privileged mode. Insufficient permissions to run this command.

Cause: The CRS daemon was not running as the privileged user.

Action: Check if the CRS daemon is running as root (Unix) or Administrator (Windows).

CRS-00256: Username conflicts with the owner of the resource.

Cause: An attempt was made to give separate user level permissions for the owner of the resource.

Action: Check the owner of the resource and the user being given permissions.

CRS-00257: Groupname conflicts with the primary group of the resource.

Cause: An attempt was made to give separate group level permissions for the primary group of the resource.

Action: Check the primary group of the resource and the group being given permissions.

CRS-00258: Invalid ACL string format.

Cause: An invalid permission string (ACL) was supplied.

Action: Check the syntax of the permission string (ACL).

CRS-00259: Owner of the resource does not belong to the group.

Cause: The owner of the resource does not belong to the expected group.

Action: If this resource is owned by the root user, check if the root user belongs to the dba group.

CRS-00271: CRSD shutdown is already in progress.

Cause: crsctl stop command is issued before waiting for a prior stop command to finish.

Action: Wait for the currently running shutdown command to complete before issuing subsequent command.

CRS-00402: Could not make safe dir("*string*")

Cause: Unable to create safe directory("%s")

Action: Please check if you have proper permissions and sufficient space on the disk to create the directory.

CRS-00403: Could not chdir to safe dir("*string*")

Cause: Unable to change directory to safe dir("%s")

Action: Please check if safe dir exists and if you have proper permissions.

CRS-00406: Could not create lock dir ("*string*")

Cause: Unable to create lock directory ("%s")

Action: Please check if you have proper permissions and sufficient space on the disk to create the directory.

CRS-00407: Another CRSD may be running, could not obtain lock file "*string*".

Cause: Unable to obtain lock file as another CRSD may be running

Action: Please stop the existing CRSD before attempting to start CRSD again.

CRS-00413: Could not initialize the Cluster Synchronization Services context

Cause: Unable to communicate with the cluster services.

Action: Verify that the Cluster Synchronization Services Daemon is properly configured and is running.

CRS-00414: Could not establish Event Manager connection

Cause: Unable to communicate with Event Manager daemon

Action: Run the "crsctl check evmd" command to determine whether Event Manager daemon is properly configured and is running.

CRS-00451: CRS configuration error, unable to initialize Oracle Cluster Registry.

Cause: The Oracle Cluster Registry that contains information about the CRS configuration is unavailable.

Action: Check the CRS configuration. If necessary reinstall CRS.

CRS-00452: CRS configuration error, unable to find CRSD Connection Information in Oracle Cluster Registry.

Cause: The Oracle Cluster Registry key which contains the user default CRSD connection is not initialised.

Action: Check the CRS configuration. If necessary reinstall CRS.

CRS-00453: CRS configuration error, unable to find Instance Information in Oracle Cluster Registry.

Cause: The Oracle Cluster Registry key which contains the Instance"s information is not initialised.

Action: Add the instance using srvctl.

CRS-00471: Node number is not found

Cause: Cluster Services is unable to retrieve the node name

Action: Verify your cluster installation, including any vendor cluster ware. If necessary reinstall the cluster.

CRS-00472: Node name is not found

Cause: Cluster Services is unable to retrieve the node name

Action: Verify your cluster installation, including any vendor cluster ware. If necessary reinstall the cluster.

CRS-01005: Failed to get required resources

Cause: There was an internal error while evaluating the required resources for the subject resource.

Action: Check if the status of any resource is UNKONOWN using crs_stat -t.

CRS-01006: No more members to consider

Cause: There was no host found on which to start the resource based on the placement policy.

Action: Check the placement policy and the required resources for the subject resource.

CRS-01007: Failed after successful dependency consideration

Cause: There was no host found on which to start the resource based on the placement policy.

Action: Check the placement policy and the required resources for the subject resource.

CRS-01009: Resource "*string*" is already running on member "*string*"

Cause: An attempt was made to start a resource on a host while it is already running on that host.

Action: This is an insignificant error. Check the operation being performed.

CRS-02001: User does not have permission to start CRSD.

Cause: Unable to start CRSD due to insufficent permissions

Action: Start CRSD as a privileged user.

CRS-02007: Could not communicate with Event Manager.

Cause: Unable to communicate with Event Manager daemon

Action: Run the "crsctl check evmd" command to determine whether Event Manager daemon is properly configured and is running.

CRS-02282: Failure to allocate *number* **bytes for username.**

    Cause: System is out of memory.

    Action: Free up memory on system and retry.

CRS-02283: The requested setting must be between *number* **and** *number*.

    Cause: An attempt to change a setting to an out of bounds value.

    Action: Retry with the setting within the proper limits.

CRS-02284: Unable to lock the configuration before making changes. *number*

    Cause: Failure in a CSS API acquiring a lock.

    Action: Retry or contact support for information on the error code.

CRS-02285: Change to configuration failed, but was successfully rolled back.

    Cause: See accompanying messages for explanation of cause.

    Action: No action is required. This indicates that no damage was done.

CRS-02286: Unable *number* **to mark unformat information on voting disk** *string*

    Cause: Probably an unreadable / unwritable voting disk was being removed.

    Action: If cause is correct, this is ignorable, but not ideal.

CRS-02287: Unable *number* **to apply correct permissions to new voting disk** *string*.

    Cause: Attempted to create and apply permissions changes to new disk.

    Action: Examine OS-specific error and try again with another disk.

CRS-02288: Unable *number* **to undo initialization of voting disk.**

    Cause: Could not roll back format of voting disk.

    Action: Disk should be cleaned out before an attempt to add again.

CRS-02289: Unable *number* **to roll back OCR settings for voting disk.**

    Cause: Could not remove temporary changes to OCR adding voting disk.

    Action: Shut down the cluster and restart. New voting disk must be removed with "crsctl delete css votedisk".

CRS-02290: This could take several minutes.

    Cause: CRS daemons is engaged in an activity take could potentially take a long time.

    Action: None

CRS-02291: Retrying stop resources.

    Cause: crsctl command is trying again to stop resources.

    Action: None

CRS-02292: All resources could not be stopped.

    Cause: CRSD could not stop all resources when trying to shut the stack down.

    Action: The resources may have to be stopped manually.

54

EVM-00001 to EVM-00901

EVM-00001: Cannot write raw events to a terminal

    Cause: Attempted to redirect binary events to a terminal.

    Action: Use evmshow to format events for display.

EVM-00002: Use evmshow to format events for display

    Cause: Attempted to redirect binary events to a terminal.

    Action: Use evmshow instead.

EVM-00003: Failed to open file "*string*": *string*

    Cause: Filename, path or the permisions were not valid.

    Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00004: Failed to open channel config file "*string*"

    Cause: Configuration file name,the path or the permissions were not valid.

    Action: Use a vaild path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00006: Failed to create temporary file

    Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permisions were not valid.

    Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00007: Failed to write to temporary file

    Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permisions were not valid.

    Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00008: Failed to read from temporary file

    Cause: The file being used as a temporary file for evmsort had one of the following issues; filename, path or the permisions were not valid.

    Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00009: Failed to create EVM posting connection

    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00010: Failed to read from EVM posting connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00011: Failed to write to EVM posting connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00012: Failed to create EVM listening connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00013: Failed to read from EVM listening connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00014: Failed to write to EVM listening connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00015: Failed to create EVM service connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00016: Failed to read from EVM service connection
    Cause: Error occured while communicating with the EVM daemon.

    Action: Check log and status of the EVM daemon.

EVM-00017: Failed to start EVM service "*string*"
    Cause: EVM daemon failed to start.

    Action: Check log for the EVM daemon.

EVM-00018: Failed to write to output stream
    Cause: Failed to write to standard output.

    Action: Contact Oracle Customer Support.

EVM-00019: Failed to read event from input stream
    Cause: Bad input file for evmshow/evmsort EOF missing.

    Action: Check the input file.

EVM-00020: Failed to create event subscription
    Cause: Bad network connection between subscriber and EVM daemon.

    Action: Check the network connection and filter string.

EVM-00021: Failed to create filter
    Cause: Used a null filter string or memory allocation failed.

    Action: Use a non null filter string.

EVM-00022: Invalid filter string
    Cause: Used a null or invalid filter string.

    Action: Contact Oracle Customer Support.

EVM-00023: Filter test operation failed

    Cause: Used a null or invalid filter string.

    Action: Use a non null filter string. Otherwise contact Oracle Customer Support.

EVM-00024: Lost connection to EVM daemon

    Cause: Evmlogger lost connection to evmdaemon.

    Action: Check status of evmlogger,evmd daemons and logs.

EVM-00025: Authorization database error

    Cause: Not authorized to post/listen for certain events.

    Action: Check evm.auth file to ensure the current user is authorized to post/listen for specific events.

EVM-00026: Failed to post event "*string*"

    Cause: Evmpost failed to post an event.

    Action: Check the status and log for EVM daemon.

EVM-00027: Memory allocation failure

    Cause: The system is running low on memory.

    Action: Check the availability of memory in the system.

EVM-00029: Event contains invalid values

    Cause: Invalid syntax for an event was used.

    Action: Use a valid syntax for an event.

EVM-00030: Event name is missing

    Cause: Name of the event was missing.

    Action: Use a valid syntax for an event.

EVM-00031: Event name has too few components

    Cause: Invalid syntax for an event was used.

    Action: Use a valid syntax for an event.

EVM-00032: Failed to write event

    Cause: Failed to write event to output file.

    Action: Check the permissions of the file. Otherwise contact Oracle Customer Support.

EVM-00033: Error in input file "*string*", line *number*

    Cause: Failed to parse input file.

    Action: Check input file and the line for possible errors. Otherwise contact Oracle Customer Support.

EVM-00034: Error: *string*

    Cause: Error Occured.

    Action: Look at the error message for details.

EVM-00035: EVM service "*string*" terminated with exit code *number*

    Cause: EVM daemon died.

    Action: Check the EVM daemon log.

EVM-00036: Host "*string*" is unknown

    Cause: Invalid hostname discovered while trying to create a connection to the EVM daemon.

    Action: Check the hostname, on which EVM daemon is running. Otherwise contact Oracle Customer Support.

EVM-00037: Failed to connect to EVM daemon on "*string*"

    Cause: EVM daemon is dead or is not responding.

    Action: Check the status of EVM daemon and logs.

EVM-00038: Failed to create an EVM event

    Cause: Failed to create an EVM event.

    Action: Check the EVM daemon log.

EVM-00039: Invalid port number in host name "*string*"

    Cause: Used an invalid port number.

    Action: Use a valid or a different port number.

EVM-00040: Error occurred while reading from "*string*"

    Cause: Error occured when evmshow was reading from an input file.

    Action: Check the input file.

EVM-00042: Use "*string* -A" to format events, or pipe output to evmshow

    Cause: Invalid use of evmshow command.

    Action: Use evmshow command as instructed.

EVM-00043: Attempting to reconnect to the EVM daemon...

    Cause: Evmwatch trying to reconnect to the evm daemon.

    Action: Not an error message.

EVM-00044: Attempting to reconnect to the EVM daemon on "*string*"...

    Cause: Evmwatch trying to reconnect to the evm daemon on this host.

    Action: Not an error message.

EVM-00045: EVM connection re-established

    Cause: Evmwatch was able to reconnect to the evm daemon.

    Action: Not an error message.

EVM-00104: End of file reached unexpectedly

    Cause: End of event template file reached unexpectedly.

    Action: Check the event template file in evm/admin.

EVM-00105: Missing end-of-group character

    Cause: end-of-group character missing in event template file.

    Action: Check the event template file in evm/admin.

EVM-00106: Missing end-of-string character

    Cause: end-of-string character missing in event template file.

    Action: Check the event template file in evm/admin.

EVM-00107: Value "*string*" is not valid

Cause: Invalid value found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00108: Keyword "*string*" is not valid

Cause: Invalid keyword found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00201: Failed to allocate space for application object

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00202: Failed to allocate space for local lock pathname

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00301: Failed to open logger config file "*string*"

Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00302: Configuration error - using default configuration

Cause: Configuration file had invalid configuration details

Action: Check the configuration file.

EVM-00303: Keyword "*string*" is invalid in this position

Cause: Valid Keyword was used in an invalid position in configuration file.

Action: Use the correct syntax.

EVM-00304: Configuration error in file *string*, line *number*

Cause: Configuration error in configuration file.

Action: Check the configuration file.

EVM-00305: Memory allocation failure for "*string*"

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00306: Failed to create filter for "*string*"

Cause: Failed to create a filter for events for evmlogger.

Action: Check the availability of memory.

EVM-00307: Filter string invalid for "*string*"

Cause: Used a null filter string or memory allocation failed.

Action: Use a non null filter string.

EVM-00308: Failed to open eventlog "*string*": *string*

Cause: Eventlog file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00309: Failed to write to eventlog "*string*"

 Cause: Eventlog had one of the following problems; size or permissions were not valid.

 Action: Check the permissions and the size of the eventlog file. Otherwise contact Oracle Customer Support.

EVM-00310: Invalid suppression filter for eventlog "*string*"

 Cause: Invalid filter was used.

 Action: Use a non null filter. Otherwise contact Oracle Customer Support.

EVM-00311: Invalid entry in eventlog "*string*" (*number* events OK)

 Cause: Evmlogger found an invalid entry in eventlog.

 Action: Check the eventlog file.

EVM-00312: Eventlog "*string*" disabled

 Cause: Events could not be written to the eventlog file.

 Action: Check the permissions,max size of the logfile.

EVM-00313: Eventlog "*string*" re-enabled

 Cause: Events logging is reenabled.

 Action: Not an error message.

EVM-00314: Forwarder "*string*" disabled

 Cause: Forwarding is disabled by the evmlogger.

 Action: Not an error message.

EVM-00315: Forwarder "*string*" re-enabled

 Cause: Forwarding is disabled by the evmlogger.

 Action: Not an error message.

EVM-00316: Suppression disabled for "*string*"

 Cause: Error message filtering supression disabled for this string.

 Action: Not an error message.

EVM-00317: Suppression re-enabled for "*string*"

 Cause: Error message filtering supression reenabled for this string.

 Action: Not an error message.

EVM-00318: Failed to open config info file "*string*"

 Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

 Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00319: Keyword "*string*" is not allowed in a secondary config file

 Cause: Invalid Keyword was used.

 Action: Use a valid Keyword.

EVM-00323: Config file "*string*" has insecure write permission

 Cause: The configuration file had write permissions for the group "other".

 Action: Change the write permissions for the configuration file

EVM-00324: Config file "*string*" has incorrect ownership

    Cause: Configuration file should be owned by root or bin.

    Action: Change the owner of configuration file to root or bin.

EVM-00325: Config file "*string*" is not a regular file

    Cause: Configuration file is not a regular file.

    Action: Check the configuration file.

EVM-00401: Failed to open binary event library file

    Cause: Binary event file had one of the following problems; filename, path or permissions were not valid.

    Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00601: Data read from the input stream is not a valid EVM event

    Cause: evmshow tried to read an invalid EVM event.

    Action: Check the logs for the evm daemon.

EVM-00701: Check that the event is registered and you are authorized to post it

    Cause: Not authorized to post for certain events.

    Action: Check evm.auth file to ensure the current user is authorized to post the specific event.

EVM-00702: Priority must be an integer in the range 0-*number*

    Cause: Used an integer out of the range for priority.

    Action: Use a valid integer.

EVM-00801: Missed *number* subscribed-to event(s)

    Cause: Missed some events during the connection setup phase.

    Action: Not an error message.

EVM-00802: Failed to reconnect within *number* seconds - terminating

    Cause: Failed to establish a connection with EVM daemon.

    Action: Check the logs for EVM daemon.

EVM-00901: Invalid sort specification "*string*"

    Cause: Invalid sort specification used for evmsort.

    Action: Use a valid sort specification. Look at documentation for evmsort using evmsort -h.

55

CLST-01101 to CLST-03203

CLST-01101: assigning default private interconnect name *string* **for node** *string*

    Cause: A private interconnect name was not specified. The node name was used as a default instead.

    Action: Verify that the node name refers to IP addresses on the private interconnect. Using a non-private network can cause performance and stability issues.

CLST-01102: assigning default host name *string* **for node** *string*

    Cause: A host name for the node was not specified. The node name was used as a default instead.

    Action: If the node name is not equal to the host name, the host name must be supplied to clscfg. Failure to do so will cause the Cluster Ready Services daemons not to function.

CLST-01103: existing configuration version (*string***) detected**

    Cause: An existing configuration was detected.

    Action: Informational message only. No action is required. clscfg will not modify the existing configuration unless explicitly requested with the -force flag.

CLST-01104: successfully determined required configuration for all components

    Cause: clscfg was able to determine the proper configuration requirements.

    Action: Informational message only. No action is required. clscfg will attempt to write the configuration next.

CLST-01105: An existing configuration was detected. It was not overwritten.

    Cause: An existing configuration was detected, and clscfg chose not to overwrite it.

    Action: This message may be ignored if it is seen as part of starting any node other than the first one. The -force option can be used to override this decision, but if it is used when there are active cluster members, failure CLSS-0101 and data integrity issues are likely.

CLST-01301: successfully deleted *string* **of** *string* **configuration values**

    Cause: clscfg completed a portion of the delete operation.

    Action: Informational message only. No action is required. If some of the values were not deleted, another error message should be visible with more information.

CLST-01302: successfully deleted *string* **of** *string* **configuration keys**

    Cause: clscfg completed a portion of the delete operation.

Action: Informational message only. No action is required. If some of the keys were not deleted, another error message should be visible with more information.

CLST-01303: successfully rolled back delete operation

Cause: The delete node operation failed, but the configuration was properly restored to its original state.

Action: Informational message only. No action is required.

CLST-01304: node deletion successful

Cause: The delete node operation succeeded.

Action: Informational message only. No action is required.

CLST-01401: formatting voting device: *string*

Cause: clscfg started formatting the voting device.

Action: Informational message only. No action is required.

CLST-01501: tried to delete key *string* **but it was not there**

Cause: clscfg attempted to delete a key as part of a delete operation, but it had already been deleted.

Action: Informational message only. No action is required. This might be an indication of corrupted configuration, or a previous delete operation that did not complete.

CLST-01901: configuring TCP ports *string*, *string*, *string*, **and** *string*

Cause: The specified ports were configured for use with the Cluster Ready Services Daemons.

Action: Informational message only. No action is required. To change the ports used, specify 4 alternate ports with "-t". Example: -t 1001,1002,1003,1004

CLST-01902: configuring node: node number *string*, **node name** *string*

Cause: This node configuration was requested.

Action: Informational message only. No action is required. To alter the list of nodes re-run the install and specify a different set of nodes, or make use of the add and delete node install options after the current install is complete.

CLST-01903: configuring node: host name *string*, **private interconnect name** *string*

Cause: This node configuration was requested.

Action: Informational message only. No action is required. To alter the list of nodes re-run the install and specify a different set of nodes, or make use of the add and delete node install options after the current install is complete.

CLST-01904: creating configuration with user (*string***) and group (***string***)**

Cause: The configuration was set up with the specified user and group.

Action: Informational message only. No action is required. Some configuration information will only be accessible to members of the specified group. Note: On Windows platforms the group may be blank.

CLST-01999: Warning: -force specified. Overwriting existing configuration.

Cause: The -force parameter was supplied.

Action: The -force parameter will cause clscfg to overwrite the existing configuration. If used while a Cluster Ready Services cluster is actively running, this can cause instability and data integrity exposures.

CLST-02101: Too many nodes were specified. limit is *string*

Cause: Too many nodes were specified on command line.

Action: Retry the operation with a smaller number of simultaneous changes.

CLST-02102: Node *string* **specified is out of range. Maximum node number is** *string***.**

Cause: A node was specified with node number out of range.

Action: Retry the operation with a smaller node number.

CLST-02103: Unable to parse TCP port options specified.

Cause: Arguments to the -t flag were not valid port numbers, or some number other than 4 ports were supplied.

Action: Correct the arguments to the -t flag and rerun the operation.

CLST-02104: TCP port *string* **is out of bounds.**

Cause: The TCP port specified was not a valid port number.

Action: Specify an another port. Usually TCP ports need to be between 1001 and 65,535.

CLST-02105: missing required parameter -l with language ID information

Cause: The -l parameter was required for the requested operation.

Action: Supply the -l parameter with the proper language ID.

CLST-02106: missing required parameter -o with path to ORA_CRS_HOME

Cause: The -o parameter was required for the requested operation.

Action: Supply the -o parameter with the proper path.

CLST-02107: failure configuring component *string*

Cause: The Oracle Cluster Repository configuration for the specified component was unsuccessful.

Action: Look for other error information and contact Oracle support.

CLST-02108: missing required parameter -q with path to the voting device

Cause: The -q parameter was required for the requested operation.

Action: Supply the -q parameter with a valid path for the voting device.

CLST-02109: missing required parameter -c with a cluster name

Cause: The -c parameter was required for the requested operation.

Action: Supply the -c parameter with a name for the cluster.

CLST-02110: missing required parameter -nn with the list of nodenames

Cause: The -nn parameter was required for the requested operation.

Action: Supply a list of node names with the format: nodenameA,nodenumA,nodenameB,nodenumB,...

CLST-02201: node *string* **already exists in the configuration with node number** *string*

Cause: A node name specified for the add node operation conflicted with the existing configuration.

Action: Choose an alternate node to add to the cluster, or give the new node a unique name, or delete the previous node, then retry.

CLST-02202: private interconnect name *string* **is already assigned to node number** *string*

Cause: The private interconnect name specified for the add node operation conflicted with the existing configuration.

Action: Choose an alternate node to add to the cluster, or give the new node a unique name, or delete the previous node, then retry.

CLST-02203: Host name *string* is already assigned to node number *string*.

Cause: The host name specified for the add node operation conflicted with the existing configuration.

Action: Choose an alternate node to add to the cluster, or give the new node a unique name, or delete the previous node, then retry.

CLST-02204: Node number *string* is already assigned to node *string*.

Cause: The node number specified for the add node operation conflicted with the existing configuration.

Action: Chose an alternate node to add to the cluster, or give the new node a unique node number, or delete the previous node, then retry.

CLST-02301: failure *string* validating configuration of node *string*

Cause: clscfg was unable to validate existing configuration of the specified node.

Action: Validate the integrity of the Cluster Ready Services install on the local node, or choose another node to delete.

CLST-02302: failure *string* validating configuration of private interconnect name *string*

Cause: clscfg was unable to validate existing configuration of the specified node.

Action: Validate the integrity of the Cluster Ready Services install on the local node, or choose another node to delete.

CLST-02303: failure *string* validating configuration of node with host name *string*

Cause: clscfg was unable to validate existing configuration of the specified node.

Action: Validate the integrity of the Cluster Ready Services install on the local node, or choose another node to delete.

CLST-02304: node name *string* for node *string* does not match existing node name *string*

Cause: The node name specified in a delete operation did not match the existing configuration.

Action: Specify the correct information describing the node you intend to delete, then retry.

CLST-02305: node number *string* for node *string* does not match existing node number *string*

Cause: The node number specified in a delete operation did not match the existing configuration.

Action: Specify the correct information describing the node you intend to delete, then retry.

CLST-02306: private interconnect name *string* for node *string* does not match *string*

Cause: The private interconnect name specified in a delete operation did not match the existing configuration.

Action: Specify the correct information describing the node you intend to delete, then retry.

CLST-02307: host name *string* for node *string* does not match existing host name *string*

Cause: The host name specified in a delete operation did not match the existing configuration.

Action: Specify the correct information describing the node you intend to delete, then retry.

CLST-02308: concurrent node deletion suspected when deleting key *string*

Cause: A key being deleted by the current operation was deleted by another process during the small amount of time between opening it for deletion and actually deleting it. An attempt to execute multiple separate delete operations may have occurred, and may have corrupted the configuration.

Action: Verify the integrity of the Oracle Cluster Repository, and restore from backup if necessary. If only one clscfg process was active on the cluster this may be ignored.

CLST-02309: failure updating the configuration in node deletion

Cause: clscfg was unable to modify the existing configuration for node deletion. The existing configuration was probably not harmed.

Action: Verify the integrity of the Cluster Ready Services install on the local node, and retry.

CLST-02310: CSS daemon refused node deletion, status *string*. attempting rollback

Cause: Cluster Synchronization Services daemon refused the node deletion.

Action: One or more of the designated nodes may still be active. clscfg will now attempt to roll back the deletion process. The Cluster Ready Services daemons must be shut down on a node before any attempt to remove them from the configuration. More information on why the attempt was refused may be available in the Cluster Synchronization Service logfile.

CLST-02311: failure rolling back node deletion. configuration irrecoverable

Cause: clscfg attempted to roll back the deletion process after a failure and was unable to do so. Configuration was partially deleted and left in an inconsistent state.

Action: Shut down the cluster and restore the Oracle Cluster Repository from backup.

CLST-02312: failed to completely delete node configuration

Cause: The node deletion was mostly successful, and should be functional in this state. Some portions of the configuration were not successfully deleted.

Action: This can be ignored. The safer choice is to restore the Oracle Cluster Repository from backup, and attempt the delete again. Adding any of the deleted nodes back to the configuration in the future may fail if this is ignored.

CLST-02401: failure *string* querying maximum configurable node number

Cause: clscfg was unable to determine the legitimate range of node numbers.

Action: Verify the integrity of the Cluster Ready Services install on the local node.

CLST-02402: failure *string* querying existing configured node list

Cause: clscfg was unable to retrieve the list of currently configured nodes.

Action: Verify the integrity of the Cluster Ready Services install on the local node.

CLST-02403: failure *string* querying the maximum node name size

Cause: clscfg was unable to determine the size of the largest node name.

Action: Verify the integrity of the Cluster Ready Services install on the local node.

CLST-02404: failure *string* querying the cluster name

Cause: clscfg was unable to determine the existing cluster name.

Action: Verify the integrity of the Cluster Ready Services install on the local node.

CLST-02405: failure formatting voting device (*string*) at [*string*] [*string*] [*string*]

Cause: clscfg failed to format the voting device.

Action: Verify the path and permissions set on the voting device.

CLST-02501: failure *string* opening configuration for write operation

Cause: clscfg was attempting to open the current configuration for write access.

Action: Verify the integrity of the Oracle Cluster Repository. Shut down the cluster and restore OCR from backup if necessary.

CLST-02502: failure *string* writing new configuration

Cause: clscfg was attempting to write new configuration data.

Action: Verify the integrity of the Oracle Cluster Repository. Shut down the cluster and restore OCR from backup if necessary.

CLST-02503: failure *string* opening configuration for delete operation

Cause: clscfg received an error while attempting to delete part of the existing configuration.

Action: Verify the integrity of the Oracle Cluster Repository. Shut down the cluster and restore OCR from backup if necessary.

CLST-02504: failure *string* writing configuration to disk

Cause: clscfg received a failure writing information to the Oracle Cluster Repository.

Action: Verify the settings for the Oracle Cluster Repository and retry.

CLST-02901: The number of Oracle Cluster Repository keys exceeds limit of *string*.

Cause: clscfg ran out of internal space for keys during install.

Action: Re-run the install and specify a smaller list of nodes. When that completes, use the add node option to add the remaining nodes.

CLST-02902: The number of Oracle Cluster Repository keys exceeds limit of *string*.

Cause: clscfg ran out of internal space for keys during delete node.

Action: Re-run the delete node operation and delete fewer nodes at once.

CLST-02903: unable to allocate *string* bytes of memory at location: *string*

Cause: clscfg was unable to allocate enough memory to service the request.

Action: Ensure that the specified amount of memory will be available and retry the operation.

CLST-02904: failure *string* in SCLS API at *string*

Cause: clscfg was unable to query for information about the system setup.

Action: Contact Oracle support with the additional information printed just after this message.

CLST-02905: add, install, delete, concepts, and local are mutually exclusive

Cause: clscfg was run with two different mode flags. All mode flags are mutually exclusive.

Action: Correct the command line and try again.

CLST-02906: Clustername should be between 1 and *string* letters.

Cause: cluster name supplied with -c argument was the wrong size.

Action: Supply an alternate cluster name of an appropriate length.

CLST-02907: unknown parameter *string* supplied

Cause: An unknown parameter was passed to clscfg.

Action: Use "clscfg -help" or "clscfg -concepts" for more information.

CLST-02908: unable to determine local hostname

Cause: clscfg was unable to determine the local hostname.

Action: Verify the operating system host name configuration.

CLST-02909: The requested operation requires High Availability privileges.

Cause: The current user did not have High Availability privileges.

Action: Log in as a different user and retry the operation.

CLST-02910: Failure *string* contacting the CRS daemon.

Cause: clscfg was unable to communicate with the CRS daemon.

Action: The requested operation must be performed from an active cluster node. Validate the pre-existing installation on the local machine, or perform the operation from another node.

CLST-02911: failure *string* contacting the CSS daemon

Cause: clscfg was unable to communicate with the CSS daemon.

Action: The requested operation must be performed from an active cluster node. Validate the pre-existing installation on the local machine, or perform the operation from another node.

CLST-02999: Untranslated failure: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: A failure with no translation occurred.

Action: Contact Oracle Customer Support for more information.

CLST-03100: See the documentation for usage information.

Cause: Incorrect or insufficient arguments were passed to crsuser.

Action: Read documentation for instructions on how to use this tool.

CLST-03101: Enter the password for user *string*.

Cause: crsuser requires the password to register the user.

Action: Enter the requested password.

CLST-03102: Operation successful.

Cause: The operation succeeded.

Action: None

CLST-03200: internal error: [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: A failure with no translation occurred.

Action: Contact Oracle Customer support for more information.

CLST-03201: unexpected argument: *string*

Cause: crsuser failed to parse the arguments, or an unknown argument was passed.

Action: Supply the correct arguments and try again.

CLST-03202: Memory allocation failure for *string* **bytes.**

Cause: crsuser was unable to allocate memory.

Action: Free up some system memory and try again.

CLST-03203: insufficient privileges for action: *string*

Cause: The current user did not have sufficient privileges.

Action: Log in as another user and try again.

56

CLSD-01001 to CLSD-02009

CLSD-01001: The OCR was formatted using version *number*.

    Cause: Successfully formatted the OCR location(s).

    Action: None

CLSD-01002: The OCR was restored from *string*.

    Cause: The OCR was successfully restored from a backup file as requested by the user.

    Action: None

CLSD-01003: The OCR format was downgraded to version *number*.

    Cause: The OCR was successfully downgraded to an earlier block format as requested by the user.

    Action: None

CLSD-01004: The OCR was imported from *string*.

    Cause: Successfully imported the OCR contents from a file as requested by the user.

    Action: None

CLSD-01005: The OCR upgrade was completed. Version has changed from *number* **to** *number*. **Details in** *string*.

    Cause: The OCR was successfully upgraded to a newer block format.

    Action: None

CLSD-01006: The OCR location *string* **is inaccessible. Details in** *string*.

    Cause: An error occurred while accessing the OCR.

    Action: Use the ocrcheck command to validate the accessibility of the device and its block integrity. Check that the OCR location in question has the correct permissions. Determine whether this behavior is limited to one node or whether it occurs across all of the nodes in the cluster. Use the ocrconfig command with the -replace option to replace the OCR location.

CLSD-01007: The OCR/OCR mirror location was replaced by *string*.

    Cause: The OCR location was successfully replaced as requested by the user.

    Action: None

CLSD-01008: Node *string* **is not responding to OCR requests. Details in** *string*.

    Cause: Error in communicating to the OCR server on a peer node. This OCR did not receive a notification regarding its peer''s death within the specified time.

Action: Contact Oracle Customer Support.

CLSD-01009: The OCR configuration is invalid. Details in *string*.
    Cause: The OCR configuration on this node does not match the OCR configuration on the other nodes in the cluster.

    Action: Determine the OCR configuration on the other nodes in the cluster on which Oracle Clusterware is running by using the ocrcheck command. Run the ocrconfig command with the -repair option to correct the OCR configuration on this node.

CLSD-01010: The OCR mirror location *string* was removed.
    Cause: The OCR location was successfully removed as requested by the user.

    Action: None

CLSD-01011: OCR cannot determine that the OCR content contains the latest updates. Details in *string*.
    Cause: The OCR could not be started. The OCR location configured on this node does not have the necessary votes and might not have the latest updates.

    Action: Ensure that the other nodes in the cluster have the same OCR location configured. If the configuration on the other nodes in the cluster does not match, then run the ocrconfig command with the -repair option to correct the configuration on this node. If the configurations on all of the nodes match, use the ocrdump command to ensure that the existing OCR location has the latest updates. Run the ocrconfig command with the -overwrite option to correct the problem. If the se procedures do not correct the problem, then contact Oracle Customer Support.

CLSD-01012: The OCR service started on node *string*.
    Cause: The OCR was successfully started.

    Action: None

CLSD-01013: The OCR at *string* was successfully formatted using version *number*. Ignore earlier CRS-1006 messages if any.
    Cause: Successfully formatted the OCR location(s).

    Action: Ignore earlier CRS-1006 messages if any.

CLSD-01201: CRSD started on node *string*.
    Cause: CRSD has started, possibly due to a CRS start, or a node reboot or a CRSD restart.

    Action: None Required. You can run the command "crsctl check crsd" to validate the health of the CRSD

CLSD-01202: CRSD aborted on node *string*. Error [*string*]. Details in *string*.
    Cause: Fatal Internal Error. Check the CRSD log file to determine the cause.

    Action: Determine whether the CRSD gets auto-started.

CLSD-01203: Failover failed for the CRS resource *string*. Details in *string*.
    Cause: Failover failed due to an internal error. Examine the contents of the CRSD log file to determine the cause.

    Action: None

CLSD-01204: Recovering CRS resources for node *string*.

Cause: CRS resources are being recovered, possibly because the cluster node is starting up online.

Action: Check the status of the resources using the crs_stat command.

CLSD-01205: Auto-start failed for the CRS resource *string*. Details in *string*.

Cause: This message comes up when the auto-start for the resource has failed during a reboot of the cluster node.

Action: Start the resources using the crs_start command.

CLSD-01206: Resource *string* went into an UNKNOWN state. Force stop the resource using the crs_stop -f command and restart *string*.

Cause: Resource went into an UNKNOWN state because the check or the stop

Action: Force stop the resource using the crs_stop -f command and restart the resource

CLSD-01207: There are no more restart attempts left for resource *string*. Restart the resource manually using the crs_start command.

Cause: The Oracle Clusterware is no longer attempting to restart the resource because the resource has failed and the Oracle Clusterware has exhausted the maximum number of restart attempts.

Action: Use the crs_start command to restart the resouce manually.

CLSD-01401: EVMD started on node *string*.

Cause: EVMD has started either because of a CRS start, a node reboot, or an EVMD restart.

Action: None required. You can run the "crsctl check evmd" command to validate the health of EVMD.

CLSD-01402: EVMD aborted on node *string*. Error [*string*]. Details in *string*.

Cause: EVMD has aborted due to an internal error. Check the EVMD log file to determine the cause.

Action: Determine whether the EVMD is auto-started

CLSD-01601: CSSD Reconfiguration complete. Active nodes are *string*.

Cause: A node joined or left the cluster

Action: None

CLSD-01602: CSSD aborted on node *string*. Error [*string*]. Details in *string*.

Cause: The CSS daemon aborted on the listed node with the listed return code

Action: Collect the CSS daemon logs from all nodes and any CSS daemon core files and contact Oracle Support

CLSD-01603: CSSD on node *string* shutdown by user.

Cause: The CSS daemon on the listed node was terminated by a user

Action: None

CLSD-01604: CSSD voting file is offline: *string*. Details in *string*.

Cause: The listed voting file became unusable on the local node

Action: Verify that the filesystem containing the listed voting file is available on the local node

CLSD-01605: CSSD voting file is online: *string*. Details in *string*.

Cause: The CSS daemon has detected a valid configured voting file

Action: None

CLSD-01606: CSSD Insufficient voting files available [*string* of *string*]. Details in *string*.

Cause: The number of voting files has decreased to a number of files that is insufficient.

Action: Locate previous 1604 messages and take action as indicated for message 1604

CLSD-01607: CSSD evicting node *string*. Details in *string*.

Cause: The local node is evicting the indicated node

Action: Collect the CSS daemon logs from all nodes and any CSS daemon core files and contact Oracle Support

CLSD-01608: CSSD Evicted by node *string*. Details in *string*.

Cause: The local node was evicted by the indicated node

Action: Collect the CSS daemon logs from all nodes and any CSS daemon core files and contact Oracle Support

CLSD-01609: CSSD detected a network split. Details in *string*.

Cause: Heartbeat messages between one or more nodes were not received and one or more nodes were evicted from the cluster to preserve data integrity.

Action: Verify all network connections between cluster nodes and repair any problematic connections. If there do not appear to be any network problems,

1. collect the CSS daemon logs, system messages and any CSS daemon core files from allnodes and

2. contact Oracle Support.

CLSD-01610: node *string* (*number*) at 90% heartbeat fatal, eviction in *number.number* seconds

Cause: Did not receive heartbeat messages from the node. This could be due network problems or failure of listed node.

Action: Check if the private interconnect network used by cluster is functioning properly, including all the cables, network cards, switches/routers etc.. between this node and listed node. Correct any problems discovered.

CLSD-01611: node *string* (*number*) at 75% heartbeat fatal, eviction in *number.number* seconds

Cause: Did not receive heartbeat messages from the node. This could be due to network problems or failure of the listed node.

Action: Check if the private interconnect network used by cluster is functioning properly, including all the cables, network cards, switches/routers etc.. between this node and listed node. Correct any problems discovered.

CLSD-01612: node *string* (*number*) at 50% heartbeat fatal, eviction in *number.number* seconds

Cause: Did not receive heartbeat messages from the node. This could be due to to network problems or failure of listed node.

Action: Check if the private interconnect network used by cluster is functioning properly, including all the cables, network cards, switches/routers etc.. between this node and listed node. Correct any problems discovered.

CLSD-01613: voting device hang at 90% fatal, termination in *number* ms, disk (*number*/*string*)

Cause: Voting device I/O has not completed for a long time. This could be due some error with the device voting file is on or in some element in the path of the I/O to the device.

Action: Verify if the device is working properly including all the I/O paths. Voting file listed will be considered inactive in the number of secs specified. Failure of a majority of devices would result in node reboot.

CLSD-01614: voting device hang at 75% fatal, termination in *number* ms, disk (*number*/*string*)

Cause: Voting device I/O has not completed for a long time. This could be due some error with the device voting file is on or in some element in the path of the I/O to the device.

Action: Verify if the device is working properly including all the I/O paths. Voting file listed will be considered inactive in the number of secs specified. Failure of a majority of devices would result in node reboot.

CLSD-01615: voting device hang at 50% fatal, termination in *number* ms, disk (*number*/*string*)

Cause: Voting device I/O has not completed for a long time. This could be due some error with the device voting file is on or in some element in the path of the I/O to the device.

Action: Verify if the device is working properly including all the I/O paths. Voting file listed will be considered inactive in the number of secs specified. Failure of a majority of devices would result in node reboot.

CLSD-02001: memory allocation error when initiating the connection

Cause: failed to allocate memory for the connection with the target process

Action: None

CLSD-02002: connection by user *string* to *string* refused

Cause: User command cannot connect to the target process.

Action: The user may not have sufficient privilege to connect.

CLSD-02003: error *number* encountered when connecting to *string*

Cause: Connection to the target process failed.

Action: Examine whether the connection is made properly. Retry again at a later time if necessary.

CLSD-02004: error *number* encountered when sending messages to *string*

Cause: User command cannot communicate with the target process properly.

Action: Retry again at a later time.

CLSD-02005: timed out when waiting for response from *number*

Cause: the target process does not return acknowledgement in time.

Action: Retry again at a later time.

CLSD-02006: failed to get response from *number*

Cause: the target process failed to return acknowledgement.

Action: Retry again at a later time.

CLSD-02007: invalid component key name *<string>* used

    Cause: the given component key name could not be recognized.

    Action: re-run the command with a valid component key name.

CLSD-02008: invalid message type *<number>* used

    Cause: an unrecognized message type was sent.

    Action: Retry with a valid command again.

CLSD-02009: unable to get authentication for user *string*

    Cause: current user was not authenticated for connection.

    Action: Log in as another user and try again.

57

PROC-00001 to PROC-00106

PROC-00001: Oracle Cluster Registry cannot be initialized.

    Cause: An invalid init level was passed to initialize Oracle Cluster Registry.

    Action: Initialize Oracle Cluster Registry with a valid init level.

PROC-00002: Cannot perform cluster registry operation at the current init level.

    Cause: Program tried a cluster registry operation which is not permitted at the init level.

    Action: Initialize Oracle Cluster Registry with an appropriate init level.

PROC-00003: Cannot perform cluster registry operation because context is invalid.

    Cause: The Oracle Cluster Registry context passed was invalid.

    Action: Intialize Oracle Cluster Registry and retry the operation.

PROC-00004: The cluster registry key to be operated on does not exist.

    Cause: Program tried a cluster registry operation on a key which does not exist.

    Action: Check to see if the key exists and try the operation again.

PROC-00005: User does not have permission to perform a cluster registry operation on this key.

    Cause: Program tried an operation on a cluster registry key for which it does not have permission.

    Action: Check to see if program is run as the correct user.

PROC-00006: User does not have permission to perform a cluster registry operation on this key.

    Cause: Program tried a cluster registry operation on a key for which it does not have permission.

    Action: Check to see if program is run as the correct user.

PROC-00007: Cannot perform cluster registry operation because key handle is invalid.

    Cause: The cluster registry key handle passed was invalid.

    Action: Open the cluster registry key again, and retry the operation.

PROC-00008: Cannot perform cluster registry operation because one of the parameters is invalid.

    Cause: Program tried a cluster registry operation using an invalid parameter.

    Action: Check the parameters, and retry the operation.

PROC-00009: Cannot perform cluster registry operation because the buffer passed is too small.

Cause: The amount of memory allocated for the buffer was insufficent.

Action: Allocate sufficient memory, and retry the operation.

PROC-00010: Cannot delete the cluster registry key as subkeys exist.

Cause: The program tried to delete a key for which subkeys exist.

Action: retry the operation with the recurse flag set to TRUE.

PROC-00011: Cannot perform cluster registry operation because key is NULL.

Cause: The cluster registry key passed was NULL.

Action: Retry the operation with a valid keyname.

PROC-00012: Out of heap memory.

Cause: The program ran out of heap memory.

Action: Contact Oracle Custmoer Support.

PROC-00013: Cannot perform cluster registry operation because one of the parameters is NULL.

Cause: Program tried a cluster registry operation using an NULL parameter.

Action: Check the parameters, and retry the operation.

PROC-00014: Unknown error occurred

Cause: This is generic internal error for Oracle Cluster Registry.

Action: Contact Oracle Customer Support.

PROC-00015: Failed to initialize the cluster registry successfully

Cause: There are the following possible causes: The backend is not reachable. This could happen if the permissions are not set correctly for a shared device backend. CSS could not be contacted because of communication failure. This could happen if the cluster registry was never initialized at PROCR_INSTALL_LEVEL and one tried to initialize it at other OCR levels.

Action: Make sure that cluster registry was initialized properly. Make sure that the clusterware is working.

PROC-00016: Cannot retrieve any more subkeys for the given keyhandle

Cause: The key has no more subkeys to enumerate.

Action: Call procr_close_key on the key and then procr_open_key again followed by procr_enumerate_key call.

PROC-00017: Unimplemented feature

Cause: Requested feature has not been implemented in the current release.

Action: Try the feature again in the upcoming Oracle release.

PROC-00018: The value size passed is too large

Cause: Cannot set a value of the given size.

Action: Pass a smaller value size to procr_set_value API.

PROC-00019: Cannot create more subkeys for the key

Cause: An attempt was made to create more subkeys under a key that is not permitted by the cluster registry.

Action: Delete some subkeys before creating new subkeys under the key.

PROC-00020: ORACLE_HOME environment not set

Cause: ORACLE_HOME environment not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

PROC-00021: Maximum permitted depth of the OCR tree is reached

Cause: An attempt was made to create subkeys under a key which is already at depth PROCR_MAX_KEY_DEPTH

Action: Create the key under some other key.

PROC-00022: The OCR backend has an invalid format

Cause: An attempt was made to use OCR before initializing it.

Action: Use "srvconfig -init -f" to initialize OCR.

PROC-00023: Error in cluster services layer

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle Customer Support.

PROC-00024: Error in the messaging layer

Cause: An error occurred in the messaging layer while performing a cluster registry operation.

Action: Contact Oracle Customer Support.

PROC-00025: Error in the NLS services

Cause: An error occurred in the NLS services while performing a cluster registry operation.

Action: Contact Oracle Customer Support.

PROC-00026: Error while accessing the physical storage

Cause: An error occurred while accessing the physical storage of the cluster registry

Action: Check that the storage has the correct permissions.

PROC-00027: Error in authentication layer

Cause: An error occurred in the authentication layer while performing a cluster registry operation.

Action: Contact Oracle Customer Support.

PROC-00028: Oracle Cluster Registry already in current version

Cause: An attempt to upgrade the cluster registry which has already been upgraded.

Action: No action required.

PROC-00029: Error in logging layer

Cause: An error occurred in the logging layer while performing a cluster registry operation.

Action: Contact Oracle Customer Support.

PROC-00030: Oracle Cluster Registry IDs do not match

Cause: The cluster registry storage seen by the client was not the same as the one seen by the server. This may be caused by a misconfiguration.

Action: Contact Oracle Customer Support.

PROC-00031: Storage device for the cluster registry is too small

Cause: The configured storage device for cluster registry was too small.

Action: Please follow the documentation and configure a storage device that is large enough for use by cluster registry.

PROC-00032: Cluster Ready Services on the local node is not running

Cause: Cluster Ready Services daemon on the local node was not running

Action: Bring up the Cluster Ready Services on the local node.

PROC-00033: Oracle Cluster Registry is not configured

Cause: Cluster Ready Services did not exist on the node.

Action: Install and configure Cluster Ready Services.

PROC-00034: Oracle Cluster Registry configurations are not compatible

Cause: Cluster registry configuration on two nodes do not match

Action: Fix this issue using ocrconfig -repair

PROC-00035: Cannot perform cluster registry operation due to invalid version

Cause: The operation cannot be performed for this cluster active version

Action: Complete the upgrade before retrying the operation

PROC-00036: No free space to perform this operation

Cause: There is no free space left to perform the requested operation

Action: Free up space and retry the operation

PROC-00037: Oracle Cluster Registry does not support the storage type configured

Cause: The configured storage type for cluster registry is not supported

Action: Change the configuration of the cluster registry to a supported storage type. Refer to Oracle documentation for an exhaustive list for each platform.

PROC-00038: Requested block number is not allocated from Oracle Cluster Registry

Cause: The requested block number is not allocated from Oracle Cluster Registry

Action: Retry the operation with another block number

PROC-00039: Requested block has an invalid header

Cause: The requested block has an invalid header

Action: Retry the operation with another block number

PROC-00101: Operating System error [*string*]

Cause: An error occurred in the operating system layer while performing a cluster registry operation

Action: Contact Oracle customer support.

PROC-00102: Cluster services error [*string*]

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle customer support.

PROC-00103: Messaging error

> **Cause:** An error occurred in the messaging layer while performing a cluster registry operation.

> **Action:** Contact Oracle customer support.

PROC-00104: Authentication error [*string*]

> **Cause:** An error occurred in the authentication layer while performing a cluster registry operation.

> **Action:** Contact Oracle customer support.

PROC-00105: Logging error

> **Cause:** An error occurred in the logging layer while while performing a cluster registry operation.

> **Action:** Contact Oracle customer support.

PROC-00106: Unidentified component error

> **Cause:** An error occurred in an unidentified layer while performing a cluster registry operation.

> **Action:** Contact Oracle customer support.

58

PROT-00001 to PROT-00807

PROT-00001: Failed to initialize ocrconfig

    Cause: Unable to initialize and start ocrconfig

    Action: Check log file for details about the failure

PROT-00002: Export file already exists

    Cause: Requested export file exists in the given path

    Action: Change the location for export file or remove the old export file

PROT-00003: Failed to create export file

    Cause: Unable to create or open file for exporting cluster registry data

    Action: Check access privilege or disk space of the requested path

PROT-00004: Failed to retrieve data from the cluster registry

    Cause: Unable to retrieve necessary information from the cluster registry

    Action: Check the availability of the cluster registry and the details of the failure from the log file

PROT-00005: Clusterware is not running properly

    Cause: Unable to register with clusterware for access to the cluster registry

    Action: Check the status of clusterware running on the machine

PROT-00006: The specified import file cannot be found

    Cause: The import file does not exist

    Action: Check the file and its correct path and try again

PROT-00007: Failed to open the specified import file

    Cause: Unable to access the specified import file

    Action: Check access privilege of the import file

PROT-00008: Failed to import data from specified file to the cluster registry

    Cause: Unable to read data from the import file and import to the cluster registry

    Action: Check availability of the cluster registry and the details of the failure from the log file

PROT-00009: Failed to open the specified import file

    Cause: Unable to access the specified import file

    Action: Check access privilege of the import file

PROT-00010: Failed to open the specified source cluster registry

Cause: Unable to access the specified source cluster registry

Action: Check access privilege and location of the source cluster registry, and the log file for more detail

PROT-00011: Failed to open the specified destination cluster registry

Cause: Unable to access the specified destination cluster registry

Action: Check access privilege and location of the destination cluster registry. Also check the log file for more details

PROT-00012: Oracle Cluster Registry to be upgraded has an unsupported version

Cause: Oracle Cluster Registry to be upgraded has an unsupported version

Action: Upgrade Oracle Cluster Registry to a version supported

PROT-00013: Oracle Cluster Registry is in current version

Cause: Oracle Cluster Registry is in current version

Action: No action required

PROT-00014: Oracle Cluster Registry to be downgraded has an earlier version

Cause: Oracle Cluster Registry to be downgraded has an earlier version

Action: No action required

PROT-00015: Unimplemented feature

Cause: Requested feature has not been implemented in current release

Action: Try the feature again in the next release.

PROT-00016: Internal Error

Cause: This is a generic internal error for ocrconfig

Action: Contact Oracle Customer Support

PROT-00017: Fatal Error

Cause: This is a generic fatal error for ocrconfig

Action: Contact Oracle Customer Support

PROT-00018: Failed to open file

Cause: File does not exist or user does not have permission to open the file

Action: Try with a different file name

PROT-00019: Cannot proceed while clusterware is running. Shutdown clusterware first

Cause: Clusterware is running.

Action: Shutdown clustware on every node in the cluster

PROT-00020: Insufficient permission to proceed. Require privileged user

Cause: User is not a privileged user.

Action: Run the command again using a privileged user.

PROT-00021: Invalid parameter

Cause: Input parameter is not valid

Action: Check log file for more information

PROT-00022: Storage too small

Cause: Specified storage is too small to mirror OCR content

Action: Run the command again using a device with large storage capacity

PROT-00023: Failed to backup OCR

Cause: Unable to take a backup of OCR

Action: Check availability of the cluster registry and the available free space on the file system where the manual backup will be stored. Use ocrconfig -backuploc to specify a new backup location if necessary. Check the CRS log file for more information.

PROT-00119: Please ensure you have file creation privileges in the above directory before running this tool.

Cause: ocrconfig called with incorrect or missing options

Action: Use ocrconfig with correct options

PROT-00301: Dump is not feasible when clusterware is running

Cause: Unable to dump cluster registry data when clusterware is running

Action: Stop the clusterware before retrying ocrdump

PROT-00302: Failed to initialize ocrdump

Cause: Unable to initialize and start ocrdump

Action: Check log file for details about the failure

PROT-00303: Dump file already exists [*string*]

Cause: Requested dump file exists in the given path

Action: Change the location for the dump file or remove the old dump file

PROT-00304: Failed to create dump file [*string*]

Cause: Unable to create or open file for dumping cluster registry data

Action: Check access privilege or disk space of the requested path

PROT-00305: Failed to write to dump file [*string*]

Cause: Unable to write to dump file while dumping cluster registry data

Action: Check access privilege or disk space of the requested path

PROT-00306: Failed to retrieve cluster registry data

Cause: Unable to read cluster registry data

Action: Check log file for details about the failure

PROT-00307: The specified key does not exist in cluster registry

Cause: Unable to retrieve the specified key from cluster registry

Action: Check log file for the key name

PROT-00415: Make sure you have file creation privileges in the above directory before running this tool.

Cause: ocrdump called with incorrect or missing options

Action: Use ocrdump with correct options

PROT-00601: Failed to initialize ocrcheck

Cause: Unable to initialize and start ocrcheck

Action: Check log file for details about the failure

PROT-00602: Failed to retrieve data from the cluster registry

Cause: Unable to retrieve necessary information from the cluster registry

Action: Check the availability of the cluster registry and the details of the failure from the log file

PROT-00715: Device/File integrity check failed

Cause: ocrcheck called

Action: None

PROT-00807: Please ensure you have file creation privileges in the above directory before running this tool.

Cause: ocrcheck called with incorrect or missing options

Action: Use ocrcheck with correct options

59

TNS-00000 to TNS-12699

TNS-00000: Not An Error

Cause: Everything is working as it should.

Action: Don"t worry: Be happy.

TNS-00001: INTCTL: error while getting command line from the terminal

Cause: Improper standard input connection from the terminal.

Action: Normally not visible to the user. Start the INTCTL program again. If error persists, contact Oracle Customer Support.

TNS-00002: INTCTL: error while starting the Interchange

Cause: of the problem. Be sure to turn tracing off when the problem has been rectified.

Action: Check the Interchange configuration files (INTCHG.ORA, TNSNET.ORA and TNSNAV.ORA) for errors and confirm that no other programs are using the ADDRESS(es) specified. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the

TNS-00003: INTCTL: error while sending request to the Interchange

Cause: Improper command sent to the Interchange or the Interchange is not responding. Not normally visible to the user.

Action: Verify that the command sent to the Interchange is valid. Also check that the Interchange is running by using the INTCTL STATUS command. If necessary, start the Interchange using the INTCTL START command.

TNS-00004: INTCTL: error while starting the Navigator

Cause: The Navigator could not be started.

Action: Check to make sure that executables for the Navigator (navgatr) are present in the ORACLE executable directory on your platform. Check the configuration files TNSNET.ORA and TNSNAV.ORA for errors. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00005: INTCTL: error while sending request to the Navigator

Cause: The Navigator is not responding. Either the Navigator is not running or another process is responding.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility. Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files.

TNS-00006: INTCTL: HOST variable is not defined

> **Cause:** The HOST variable was not set.

> **Action:** Set the variable HOST properly and restart the INTCTL program.

TNS-00007: INTCTL: unknown host

> **Cause:** The pointer HOST is set to an unknown hostname.

> **Action:** Set the pointer HOST properly and restart INTCTL program.

TNS-00008: INTCTL: could not contact destination Navigator

> **Cause:** Connection could not be properly established to a Navigator. This may be because the Navigator specified is not running or the Navigator addresses are incorrect.

> **Action:** Check that the Navigator is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Navigator using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00009: INTCTL: could not contact destination Connection Manager

> **Cause:** Connection could not be properly established to a Connection Manager. This may be because the Connection Manager (Interchange) specified is not running or the Connection Manager addresses are incorrect.

> **Action:** Make sure the Connection Manager is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Connection Manager using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00010: Error while flushing NS context

> **Cause:** Internal NS error; connection may be lost.

> **Action:** Make sure the connection is properly established. If the error persists, then contact Oracle Customer Support.

TNS-00011: INTCTL: error while starting the Connection Manager

> **Cause:** The Connection Manager could not be started.

> **Action:** Assure that the executable can be found in the standard Oracle executable area. Check the configuration file INTCHG.ORA for errors and confirm that no other process is using the ADDRESS(es) for this Connection Manager as specified in TNSNET.ORA. Tracing can also be turned on in the Connection Manager and detailed information about the reason for the error determined. Consult the MultiProtocol Interchange Administrator"s Guide and Chapter 2 of this manual for how to turn on tracing.

TNS-00012: INTCTL: error while processing Connection Manager request

> **Cause:** An improper command was sent to the Connection Manager or it is not responding. Not normally visible to the user.

> **Action:** Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files. Also check that the Connection Manager is running by using the STATUS command of the Interchange Control Utility. If the error persists, contact Oracle Customer Support.

TNS-00013: INTCTL: error while performing NS disconnect command

> **Cause:** Internal NS error. Error in closing down connections.

Action: Make sure the networking protocol being used is properly installed on the machine. If the error persists contact Oracle Customer Support.

TNS-00014: INTCTL: error while opening terminal input channel

Cause: Could not open standard terminal input. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00015: INTCTL: error while closing terminal input channel

Cause: Could not close terminal input channel. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00016: INTCTL: error while performing NS send command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00017: INTCTL: error while performing NS receive command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00018: INTCTL: TNS_ADMIN not defined

Cause: The TNS_ADMIN pointer is improperly set.

Action: No action necessary; TNS_ADMIN need only be set if you want to use a different network environment.

TNS-00019: INTCTL: error initializing the national language interface

Cause: The message file could not be found.

Action: Make sure that the ORACLE environment is set and that the message file is in the correct place.

TNS-00020: INTCTL: missing NAVIGATOR_DATA in TNSNAV.ORA

Cause: TNSNAV.ORA does not contain the NAVIGATOR_DATA component.

Action: Define the ADDRESS(es) for the Navigator, then restart the INTCTL program.

TNS-00021: INTCTL: missing INTERCHANGE_DATA in INTCHG.ORA

Cause: INTCHG.ORA does not contain an INTERCHANGE_DATA component.

Action: Define the correct data for the Connection Manager, then restart the INTCTL program.

TNS-00022: INTCTL: missing CMANAGER_NAME in INTCHG.ORA

Cause: INTCHG.ORA does not contain a CMANAGER_NAME component.

Action: Define the correct name for the CMANAGER_NAME, then restart the INTCTL program.

TNS-00023: INTCTL: missing ADDRESS(es) in config files

Cause: Configuration files do not contain an ADDRESS/ADDRESS_LIST component.

Action: Define the Connection Manager ADDRESS(es) in the TNSNET.ORA file and check the Navigator ADDRESS(es) in the TNSNAV.ORA file, then restart the INTCTL program.

TNS-00024: INTCTL: Unable to contact Navigator to obtain Connection Manager address

Cause: The Navigator is not running.

Action: Verify that the Navigator is running by doing a status request on the Navigator (use the Interchange Control Utility command STATUS). If necessaary, start the Navigator using the Interchange Control Utility. Verify that the network is properly configured; if the error persists, contact Worldwide Customer Support.

TNS-00025: INTCTL: The ORACLE environment is not set up correctly

Cause: The ORACLE environment is incorrectly set up.

Action: Refer to the Oracle operating system specific documentation for your platform for information on how the ORACLE environment should be set. Correct it and rerun INTCTL. Make sure the ORACLE environment includes the correct directories.

TNS-00026: INTCTL: TNS_ADMIN directory set, and is being used

Cause: The TNS_ADMIN environment variable is set properly. INTCTL will use the TNS_ADMIN directory. This is only an informative message. If you do not want it to be used, and want the default directory to be used instead, then unset TNS_ADMIN and reexecute.

Action: None

TNS-00027: INTCTL: Could not resolve Navigator"s name/address

Cause: The Navigator"s name to address definition is missing.

Action: Check TNSNAMES.ORA file and make sure to include a definition for the name specified.

TNS-00028: INTCTL: Could not resolve Connection Manager"s name/address

Cause: The Connection Manager"s name does not have a definition that the Navigator knows about, nor is the name/address available in the TNSNAMES.ORA file. The name may also be incorrect in the INTCHG.ORA file.

Action: Verify that the Connection Manager"s name is in the TNSNET.ORA file read by the Navigator or in the TNSNAMES.ORA file. Be sure that INTCHG.ORA is correct.

TNS-00031: INTCTL: internal NT error

Cause: Problem interfacing to the protocol adapters installed.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00032: INTCTL: internal NS error

Cause: Problem interfacing with TNS.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00033: INTCTL: internal NL error

Cause: Problem with internal TNS module NL.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00034: INTCTL: internal NR error

Cause: Problem with internal Interchange routines.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00035: INTCTL: error while constructing full file name

Cause: Problem while constructing the full path for a file name because the path name to the file or the environment variables are incorrect. Files looked up include TNSNAMES.ORA, TNSNAV.ORA, INTCHG.ORA and the error files for the Navigator and Connection Manager.

Action: Check that all environment variables are defined correctly and that all configuration files exist in their correct places.

TNS-00036: INTCTL: error reading from Navigator or Connection Manager error files

Cause: Problem while reading from Navigator or Connection Manager error files generated by the Navigator or Connection Manager when they fail to start.

Action: Check that a standard Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00037: INTCTL: error opening Navigator or Connection Manager error files

Cause: Failed to open Navigator or Connection Manager error files when they have failed to start.

Action: Check that a Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00038: INTCTL: Poorly formed address or command string

Cause: An unacceptable string was encountered while attempting to send a message to either the Navigator or Connection Manager. The addresses provided for either the Navigator or Connection Manager may be incorrectly constructed.

Action: Check all address strings in configuration files (TNSNAMES.ORA, TNSNAV.ORA or TNSNET.ORA) and assure that they are properly formed. Regenerate the files, if possible. If all is correct, please contact Worldwide Customer Support.

TNS-00039: INTCTL: error while spawning a process

Cause: An error was encountered while spawning a process due to an internal operating system dependent problem. Machine resources may be limited.

Action: Retry command. Check permissions on Interchange executables and the current setting of the search path. If necessary, terminate other applications to free up machine resources. If the error persists, contact Oracle Customer Support.

TNS-00040: INTCTL: failed to initialize trace context- Continuing anyway

Cause: Problem while opening specified trace file because of errors in INTCHG.ORA or because the user has incorrect privileges, or the file does not exist.

Action: Check the privileges on the configuration files and ensure that all of them exist in their proper locations.

TNS-00041: INTCTL: Navigator already running. Start operation cancelled

Cause: There is a Navigator already running and listening on the same addresses.

Action: None; the Navigator is already running.

TNS-00042: INTCTL: CMANAGER already running. Start operation cancelled

Cause: There is a Connection Manager already running and listening on the same addresses.

Action: None; the Connection Manager is already running.

TNS-00043: The CMANAGER has active connections, do you still want to stop it (y/n)?

Cause: The CMANAGER that is being stopped has active connections going through. This is the confirmation message.

Action: Respond by pressing y or n. Answering y will cause the active database connection to be dropped; this is not generally recommended.

TNS-00044: INTCTL: You must have an INTCHG.ORA file to contact the Connection Manager

Cause: There was an attempt to contact a default Connection Manager (Interchange) where there was no INTCHG.ORA present in the correct directory.

Action: Create an INTCHG.ORA file. Make sure it is placed in the correct directory and includes the correct name for the Connection Manager you wish to contact.

TNS-00045: INTCTL: Could not contact the Navigator on address

Cause: There was an attempt to contact a Navigator on a specific address which is not responding.

Action: Check the TNSNAV.ORA file for that address. Or check that the Navigator is actually listening on that address.

TNS-00046: INTCTL: Could not contact the CMANAGER on address

Cause: There was an attempt to contact a CMANAGER on a specific address which is not responding.

Action: Verify that the TNSNET.ORA file contains that address. Also check that the CMANAGER is actually listening on that address by using the INTCTL STATUS command. If necessary, start the Connection Manager using the INTCTL START command.

TNS-00060: INTCTL: Bad command: only the STATUS command can be used on remote Interchanges

Cause: The user entered a command that does not exist, or the user tried to make a request other than STATUS to a remote Interchange.

Action: Check the MultiProtocol Interchange Administrator"s Guide for a list of INTCTL commands or type HELP for a list of valid commands.

TNS-00061: INTCTL: Bad command or syntax error: You must specify a trace level

Cause: The user did not specify a trace level.

Action: Specify a trace level and retry command.

TNS-00062: INTCTL: Bad command or syntax error: For help type help/h/?

Cause: The user entered an invalid command.

Action: Check the MultiProtocol Interchange Administrator"s Guide or type HELP for a list of valid commands.

TNS-00063: INTCTL: Failed to allocate memory for buffers

Cause: INTCTL was unable to allocate memory for internal buffers.

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

TNS-00064: INTCTL: Failed to find CMANAGER_NAME in INTCHG.ORA

Cause: INTCTL was unable to find the CMANAGER_NAME parameter in INTCHG.ORA.

Action: Check that the INTCHG.ORA file is properly constructed.

TNS-00065: INTCTL: Command cannot be executed remotely

Cause: A command other than status and version has been attempted remotely.

Action: If you desire execute any command other than status and version, you must run intctl on the interchange machine.

TNS-00070: INTCTL usage: [intctl] <command> <process_name> [argument]

Cause: Help message displayed by INTCTL.

Action: None

TNS-00071: where <command> is one of following:

Cause: Help message displayed by INTCTL.

Action: None

TNS-00072: * start - start up process_name

Cause: Help message displayed by INTCTL.

Action: None

TNS-00073: * stop/abort - stop the process_name

Cause: Help message displayed by INTCTL.

Action: None

TNS-00074: * status - get statistics from the process_name

Cause: Help message displayed by INTCTL.

Action: None

TNS-00075: NOTE: the user may get the status info of a remote

Cause: Help message displayed by INTCTL.

Action: None

TNS-00076: component by specifying the component name in

Cause: Help message displayed by INTCTL.

Action: None

TNS-00077: the argument field

Cause: Help message displayed by INTCTL.

Action: None

TNS-00078: * log_on - ask process_name to turn logging on

Cause: Help message displayed by INTCTL.

Action: None

TNS-00079: * log_off - ask process_name to turn logging off
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00080: * force_log - ask process_name to dump its state
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00081: * trace_on - ask process name to turn tracing on
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00082: NOTE: the user MUST specify a trace level
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00083: (USER or ADMIN) in the argument field
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00084: * trace_off - ask process name to turn tracing off
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00085: * reread - ask the process name to reread parameter files
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00086: * reload - ask the Navigator to reload TNSNET.ORA
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00087: * version - ask the process name to display its version number
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00088: * exit - quit the Interchange controller
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00089: process_name is one of Interchange, CMANAGER, or Navigator
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00090: * Interchange - will ask the Interchange
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00091: * Navigator (or navgatr) - will ask the Navigator only
    Cause: Help message displayed by INTCTL.
    Action: None

TNS-00092: * CMANAGER (or intlsnr) - will ask the Cmanager only

    Cause: Help message displayed by INTCTL.

    Action: None

TNS-00093: argument is only supplied to either status or trace_on

    Cause: Help message displayed by INTCTL.

    Action: None

TNS-00094: * to status - argument is considered the remote process_name

    Cause: Help message displayed by INTCTL.

    Action: None

TNS-00095: * to trace_on - argument is considered the trace level

    Cause: Help message displayed by INTCTL.

    Action: None

TNS-00100: Unable to allocate memory

    Cause: Out of memory on the machine.

    Action: Add more memory or run fewer processes.

TNS-00101: File operation error

    Cause: Error in accessing reading or writing a particular file.

    Action: Check existence of or operating system access to the log and trace file locations.

TNS-00102: Keyword-Value binding operation error

    Cause: Not normally visible to the user. May indicate a shortage of memory.

    Action: If error persists contact Oracle Customer Support.

TNS-00103: Parameter file load error

    Cause: Parameter file process failed.

    Action: Check to make sure that all parameter files necessary for the Interchange are present (TNSNAV.ORA, TNSNET.ORA and INTCHG.ORA). If these files are present and properly configured, turn on tracing and repeat the operation. Turn off tracing when the trace is complete. Look in the trace file for errors in the parameter loading process. If error persists contact Oracle Customer Support.

TNS-00104: Data stream open/access error

    Cause: Unable to open or access data stream for either log or trace files for the Interchange.

    Action: Check read/write permissions on Oracle files and directories.

TNS-00105: Could not initialize tracing

    Cause: The INTCHG.ORA file is improperly configured. Verify the trace parameters specified.

    Action: If error persists contact Oracle Customer Support.

TNS-00106: Failed to open log file

    Cause: Unable to access or obtain write permission to create log file.

    Action: Check existence of or access to log file directory.

TNS-00107: Unable to initialize TNS global data

Cause: Not normally visible to the user.

Action: If error persists contact Oracle Customer Support.

TNS-00108: TNS_ADMIN not defined

Cause: TNS_ADMIN pointer is not set.

Action: Set the TNS_ADMIN pointer before running application

TNS-00109: Message could not be printed; not enough memory

Cause: Printing of message failed due to lack of memory. Not normally visible to user.

Action: Increase the resources on your machine. If error persists contact Oracle Customer Support.

TNS-00110: Could not initialize network from file TNSNET.ORA

Cause: Poorly formed network information in network file.

Action: Fix network configuration data to assure that at least one Interchange is defined in TNSNET.ORA.

TNS-00111: Failed to get configuration data from file

Cause: Poorly formed configuration information in network files TNSNET.ORA or TNSNAV.ORA.

Action: Check TNSNET.ORA and TNSNAV.ORA and confirm that they are correct.

TNS-00112: Failed to find configuration file name

Cause: Name specified for configuration file was incorrect.

Action: Check for presence of the configuration file.

TNS-00113: Failed to open error log file

Cause: Could not open log file during startup of Navigator or Connection Manager due to read or write permission problems or non-existent error directory.

Action: Create the standard error directory or assure that if one is present the Interchange executables can write to it.

TNS-00114: Internal error- Allocation of addresses not performed

Cause: Internal error. Should not normally occur.

Action: Contact Oracle Customer Support.

TNS-00115: Could not allocate pump global buffers

Cause: Not enough memory to allocate pump buffers.

Action: Decrease the number of PUMP_BUFFERS in INTCHG.ORA.

TNS-00116: Pump failed during initial bequeath

Cause: d by insufficient machine resources.

Action: Attempt the connection again. The pump should recover from such a failure. If machine resources appear to be the problem, add more resources // or shut down some active applications. If problem persists, contact Oracle Customer Support.

TNS-00117: Internal error- No data passed through pump

Cause: Internal error. Data expected has not arrived yet.

Action: If error persists, contact Oracle Customer Support.

TNS-00119: Missing PUMP_CONNECTIONS in INTCHG.ORA

> **Cause:** No PUMP_CONNECTIONS parameter specified in INTCHG.ORA.

> **Action:** Add PUMP_CONNECTIONS parameter to INTCHG.ORA.

TNS-00120: Missing PUMPS in INTCHG.ORA

> **Cause:** No PUMPS parameter specified.

> **Action:** Add an appropriate number of PUMPS to INTCHG.ORA.

TNS-00121: Missing CMANAGER_NAME in INTCHG.ORA

> **Cause:** No CMANAGER_NAME parameter specified.

> **Action:** Define the CMANAGER_NAME parameter in INTCHG.ORA; it must match the CMANAGER_NAME parameter used in TNSNET.ORA for that Interchange.

TNS-00122: Missing ADDRESS(es) in TNSNET.ORA file

> **Cause:** No ADDRESS or ADDRESS_LIST parameter specified in TNSNET.ORA.

> **Action:** Define a valid set of ADDRESSes for the Connection Manager in the TNSNET.ORA file.

TNS-00123: Unable to perform a listen on configured ADDRESS(es)

> **Cause:** Another process is already listening on this address or the ADDRESS is incorrectly defined.

> **Action:** Check the ADDRESS(es) defined in TNSNET.ORA (for the Connection Manager) for errors. Verify that another program is not using them.

TNS-00124: Internal error - Unable to create empty address

> **Cause:** - Internal error. Should not normally occur.

> **Action:** If problem persists contact Oracle Customer Support.

TNS-00125: Failed to get number of Interchanges in TNSNET.ORA

> **Cause:** Error in the TNSNET.ORA file.

> **Action:** Check the contents of TNSNET.ORA and eliminate errors. Regenerate the configuration files.

TNS-00126: Missing Connection Manager name and address in TNSNET.ORA

> **Cause:** The Interchange name specified in INTCHG.ORA is not defined in the TNSNET.ORA file.

> **Action:** Define one Connection Manager name and set of addresses for each Interchange in the network. Regenerate the configuration files.

TNS-00127: Missing Connection Manager name in TNSNET.ORA

> **Cause:** One or more Connection Manager names are missing.

> **Action:** Ensure that each Connection Manager name is defined in TNSNET.ORA. Regenerate TNSNET.ORA.

TNS-00128: Missing COMMUNITY in TNSNET.ORA

> **Cause:** One or more ADDRESSes does not have a COMMUNITY assigned.

> **Action:** Ensure that all addresses have a COMMUNITY defined in TNSNET.ORA.

TNS-00129: Internal error - Failed to create new community

> **Cause:** Internal Error. Should not normally occur. There may be a resource limitation problem on the machine.

Action: Stop and restart Interchange. If possible, make more memory available on the machine. If problem persists, contact Oracle Customer Support.

TNS-00130: Failed to create Interchange''s internal address

Cause: There is an error in one of the addresses listed in TNSNET.ORA.

Action: Check the file for errors in defining Interchanges.

TNS-00131: Missing COMMUNITY in COMMUNITY_COST_LIST in TNSNET.ORA

Cause: A COMMUNITY keyword-value pair is missing within the COMMUNITY_COST_LIST in TNSNET.ORA.

Action: Define the communities with a COMMUNITY name and associated COST in COMMUNITY_COST_LIST.

TNS-00132: COST value must be an integer greater than 0

Cause: A community has been defined in TNSNET.ORA with a COST of 0.

Action: Assign an alternate value that is greater than 0.

TNS-00133: Missing LOCAL_COMMUNITIES field in TNSNAV.ORA

Cause: Improperly configured TNSNAV.ORA file.

Action: Define the LOCAL_COMMUNITIES fields correctly in TNSNAV.ORA.

TNS-00134: Missing COMMUNITY component in addresses for the Navigator in TNSNAV.ORA

Cause: The addresses specified for the Navigator have no COMMUNITY name.

Action: Ensure that all addresses in the NAVIGATOR_ADDRESSES field have a COMMUNITY entry in the TNSNAV.ORA file.

TNS-00135: Missing TNS error message file

Cause: No error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00136: Did not register product/facility for TNS error message

Cause: Error message file error.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00137: Failed to get TNS error message file entry

Cause: No TNS error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00138: Failed to find ORACLE executable directory

Cause: The ORACLE environment is not correctly set.

Action: Ensure that the ORACLE environment is correctly set and the error messages file is in the correct place.

TNS-00139: Internal - Data passed from the Interchange listener is poorly formed

Cause: Internal error in Interchange.

Action: Check that you are using compatible components of the Interchange product, using the INTCTL VERSION command. If problem persists call Oracle Customer Support.

TNS-00140: Interchange specified was not found in network tables

Cause: Could not find the Interchange specified in a control request.

Action: Check that the Interchange specified is indeed in TNSNET.ORA.

TNS-00141: Failed to get file stream information

Cause: Error in the file stream package.

Action: None

TNS-00142: Community mismatch in TNSNAV.ORA

Cause: The communities in the LOCAL_COMMUNITIES entry in TNSNAV.ORA do not correspond with all the communities in the NAVIGATOR_ADDRESSES entry.

Action: Assure that all communities in the NAVIGATOR_ADDRESSES correspond to those in the LOCAL_COMMUNITIES component.

TNS-00143: Illegal PREFERRED_CMANAGERS entry in TNSNAV.ORA

Cause: PREFERRED_CMANAGERS entry in the TNSNAV.ORA used by the Connection Manager. There should only be a PREFERRED_NAVIGATORS entry in the TNSNAV.ORA on an Interchange.

Action: Remove the PREFERRED_CMANAGERS entry from TNSNAV.ORA and assure that either no PREFERRED_NAVIGATORS entry is present or that it is correct.

TNS-00144: PUMP_CONNECTIONS value in INTCHG.ORA is too large.

Cause: The number of PUMP_CONNECTIONS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMP_CONNECTIONS.

TNS-00145: PUMPS value in INTCHG.ORA is too large.

Cause: The number of PUMPS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMPS.

TNS-00146: Internal-- Retry data request withing pump.

Cause: The data space provided in order to receive data from the pump is to small.

Action: Operation must be retried with a larger buffer.

TNS-00147: Failed to start a pre-spawned pump.

Cause: The Connection Manager was unable to start a pump during startup.

Action: Check all configuration parameters and assure that they are correct. Turn on tracing to determine the area that the failure ocurred in.

TNS-00200: Unable to do nsanswer on context result=*string*

Cause: Requester of service may have aborted or options negotiation failed.

Action: Try making the connection again. If the problem persists call Oracle Customer Support.

TNS-00201: Unable to read answer connection data :*string*:

Cause: Improperly formed connect data sent to the Interchange listener.

Action: If problem persists, check the application using the Interchange (it may be closing down or crashing). Call Oracle Customer Support if the problem cannot be located.

TNS-00202: Failure in redirecting call : Original to *string* Redirect to *string*

Cause: Internal - error could not redirect call to a pump or other Interchange listener. The cause may be insufficient network or machine resources.

Action: Add resources or close some running applications in order to free up resources. If error persists, call Oracle Customer Support.

TNS-00203: Unable to start tracing in intlsnr

Cause: Failure in setting up tracing for Interchange listener.

Action: Check file permissions in Network trace directory also check to make sure that if trace file names and directories are specified in INTCHG.ORA, they are correct.

TNS-00204: Started tracing in intlsnr

Cause: Internal message- Successfully started tracing information.

Action: None

TNS-00205: Turning off tracing in intlsnr

Cause: Internal message - Turned off tracing in the Interchange listener.

Action: None

TNS-00206: Status Information for Interchange *string*:

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00207: Uptime : *number* days *number* hr. *number* min. *number* sec

Cause: Part of status request.

Action: None

TNS-00208: Logging : *string*

Cause: Part of status request.

Action: None

TNS-00209: Tracing : *string*

Cause: Part of status request Interchange.

Action: None

TNS-00210: Total Pumps Available : *number*

Cause: Part of status request for Connection Manager.

Action: None

TNS-00211: Total Active Pumps : *number*

Cause: Part of status request for Connection Manager.

Action: None

TNS-00212: Total Pumps Started : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00213: Available Connections : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00214: Total Connections in Use : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00215: Total Successful Connections : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00216: Total Failed Connections : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00217: Total Bytes of Data : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00218: Current Bytes/Sec. : *number*

    Cause: Part of status request for Connection Manager.

    Action: None

TNS-00219: Pump Strategy : *string*

    Cause: Part of status request.

    Action: None

TNS-00220: Pump Breakdown --------------

    Cause: Part of status request.

    Action: None

TNS-00221: Pump Connections Total Data Bytes/Second

    Cause: Part of status request.

    Action: None

TNS-00222: ---

    Cause: Part of status request.

    Action: None

TNS-00223: *numbernumbernumbernumber*

    Cause: Part of status request.

    Action: None

TNS-00224: No more connections available

    Cause: More connections were made to the Interchange than are configured in INTCHG.ORA.

Action: Wait until the Interchange is not as busy or change the number of connections allowed in INTCHG.ORA and restart the Interchange.

TNS-00225: Unable to bequeath connection to pump

Cause: Unable to start a pump because either the executable cannot be found or too many processes aare currently running on a particular machine.

Action: Reduce the number of processes on the machine or increase the resources on the machine.

TNS-00226: Unable to contact pump *number* **to send broadcast message** *string*

Cause: Could not call a particular pump.

Action: None, but if the problem persists call Oracle Customer Support.

TNS-00227: Unable to contact pump; Connection Manager declared pump dead

Cause: A pump became an orphaned process. A protocol adapter is not working properly or machine network resources are being over used.

Action: This error is not immediately fatal; the orphaned pump may continue to function. Restart the Interchange when convenient. If the problem persists, call Oracle Customer Support.

TNS-00228: Failure in finding pump data

Cause: Internal problem with data passed back from pump.

Action: None

TNS-00229: Error in call: unable to deliver message :*string***:** *string string string*

Cause: Destination for call is unavailable.

Action: None

TNS-00230: Cannot start new pump process: *string string* **Protocol Adapter errors:***number*

Cause: Unable to create a new process; possibly there are too many processes on the machine.

Action: Free machine resources by exiting other applications on the Interchange machine. If the problem continues you may need more memory on the machine. If you believe there are sufficient resources on the machine but the problem persists, contact Oracle Customer Support.

TNS-00231: Pump is alive

Cause: Pump log message sent to Interchange listener.

Action: None

TNS-00232: Unable to setup connection

Cause: Error log message sent from pump to indicate failure in initiating connection because of errors in the call string: network problem or resource limitations.

Action: None

TNS-00233: Interchange failed to make contact with destination with errors: *string string string*

Cause: Pump call to destination failed.

Action: Check destination.

TNS-00234: Connect data for failed call: CALL DATA = *string* **RECEIVE DATA =** **:***string***:**

Cause: Connect data supplied for error 00233.

Action: None

TNS-00235: Aborting connection: Protocol Apapter errors: *string;number,number* *string;number,number*

Cause: Pump aborting connection because connection has been up too long, or some other network error on the connection.

Action: None

TNS-00236: Failed to initialize tracing

Cause: Pump failed to initialize tracing.

Action: Check that INTCHG.ORA is properly configured.

TNS-00237: Failed to refuse connection

Cause: Connection may have aborted before error took place in Pump.

Action: None

TNS-00238: Pump *number* **@:** *string***:**

Cause: Prepended message to all pump log messages.

Action: None

TNS-00239: Connection Manager has been stopped

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00240: Connection Manager: Logging is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00241: Connection Manager: Logging is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00242: Connection Manager: Tracing is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00243: Connection Manager: Tracing is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00244: Connection Manager: Request Failed

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00245: Connection Manager: Failed to open log file

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00246: Connection Manager: Failed to start tracing

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00247: Unable to allocate memory for configuration data from TNSNET.ORA file

Cause: Navigator failed to allocate enough memory for TNSNET.ORA configuration file.

Action: Increase machine resources available for running the Interchange or remove some other running applications from the machine.

TNS-00248: Unable to get information from file :*string*: Exiting with NR error:*number*

Cause: TNSNAV.ORA poorly configured or addresses provided are already being used by another application.

Action: Check the syntax of the TNSNAV.ORA file; if necessary, assign new addresses.

TNS-00249: Unable to read network configuration data from file *string* with error: *string*

Cause: Network configuration file TNSNET.ORA is missing or poorly configured.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00250: Navigator has been started

Cause: Message to log file on Navigator startup.

Action: None

TNS-00251: Failure in nstest:

Cause: NS test operation failed due to internal error.

Action: If the problem persists there may be a network problem or resource limitations on the machine. If these do not seem to be causing the problem, call Oracle Customer Support.

TNS-00252: Unable to handle route request: *string*

Cause: Command requested did not exist.

Action: None

TNS-00253: Error in reading network configuration data from file *string* with error *string*

Cause: TNSNET.ORA is poorly configured or nonexistent.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00254: Navigator has been stopped

Cause: Message sent to Interchange control program by Navigator confirming it has been stopped.

Action: None

TNS-00255: Closing down log, stopping Navigator

Cause: Log message when Navigator is stopped.

Action: None

TNS-00256: Status of Navigator:

Cause: Navigator status message component

Action: None

TNS-00257: Number of Successful Requests : *number*

Cause: Navigator status message component

Action: None

TNS-00258: Number of Failed Requests : *number*

Cause: Navigator status message component

Action: None

TNS-00259: Disabled Interchange list:

Cause: Navigator status message component

Action: None

TNS-00260: --

Cause: Navigator status message component

Action: None

TNS-00261: Interchange Name Community Link Down Time Remaining (secs)

Cause: Navigator status message component

Action: None

TNS-00262: *stringstringnumber*

Cause: Navigator status message component

Action: None

TNS-00263: Navigator: Request Failed

Cause: Response from Navigator when a particular request failed.

Action: None

TNS-00264: Navigator: Failed to reload configuration data

Cause: Message sent to the Interchange control program when reload of network configuration failed. TNSNET.ORA Poorly configured or missing.

Action: None

TNS-00265: Navigator: Reloaded network configuration data

Cause: Message sent to Interchange control program when reload of network is successful.

Action: None

TNS-00266: Navigator: Unknown Request

Cause: Request was made to Navigator that it knows nothing about.

Action: None

TNS-00267: Navigator: Internal Error

Cause: Generated when a request was made to the Navigator it knows nothing about.

Action: None

TNS-00268: ON

Cause: On component of message.

Action: None

TNS-00269: OFF

Cause: Off component of message.

Action: None

TNS-00270: *string*: **Terminal Error** *string*

Cause: Message put out in error file of executable when it fails to start.

Action: None

TNS-00271: Connection Manager

Cause: Name of the Connection Manager.

Action: None

TNS-00272: Navigator

Cause: Name for the Navigator.

Action: None

TNS-00273: Navigator: Logging is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00274: Navigator: Logging is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00275: Navigator: Tracing is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00276: Navigator: Tracing is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00277: Navigator: Request Failed

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00278: Navigator: Failed to Open Log file

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00279: Navigator: Failed to Start Tracing

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00280: Max Avg Bytes/Sec : *number*

Cause: Part of status request for Connection Manager.

Action: None

TNS-00281: Connection Manager: Forced Log output
    Cause: Message sent back to control program from Connection Manager.
    Action: None

TNS-00282: Connection Manager: Failed to force log, logging is off
    Cause: Message sent back to control program from Connection Manager.
    Action: None

TNS-00283: Listening on the following TNS addresses:
    Cause: Message sent back to control program from Connection Manager.
    Action: None

TNS-00284: Imm Max Avg Bytes/Sec : *number*
    Cause: Part of status request for Connection Manager.
    Action: None

TNS-00285: Avg Connect Time (secs) : *number*
    Cause: Part of status request for Connection Manager.
    Action: None

TNS-00286: Max Connect Time (secs) : *number*
    Cause: Part of status request for Connection Manager.
    Action: None

TNS-00287: Min Connect Time (secs) : *number*
    Cause: Part of status request for Connection Manager.
    Action: None

TNS-00288: Navigator: Failed to Disable Interchange
    Cause: Message sent back to control program from Navigator.
    Action: None

TNS-00289: Navigator: Disabled Interchange
    Cause: Message sent back to control program from Navigator.
    Action: None

TNS-00290: Navigator: Failed to Enable Interchange
    Cause: Message sent back to control program from Navigator.
    Action: None

TNS-00291: Navigator: Enabled Interchange
    Cause: Message sent back to control program from Navigator.
    Action: None

TNS-00292: Log File Name : *string*
    Cause: Message sent back to control program showing log file name
    Action: None

TNS-00293: Trace File Name : *string*
    Cause: Message sent back to control program showing trace file name
    Action: None

TNS-00294: Connection Manager: Security is enabled, you cannot STOP the Interchange

Cause: Message sent back to control program indicating that the connection manager is secure.

Action: None

TNS-00295: Navigator: Security is enabled, you cannot STOP the Navigator

Cause: Message sent back to control program indicating that the Navigator is secure.

Action: None

TNS-00296: Stoppable : *string*

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00297: Logging Level : *string*

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00298: Request to Navigator: *string*

Cause: Log entry for request to Navigator.

Action: None

TNS-00299: Response from Navigator: *string*

Cause: Log entry for request to Navigator.

Action: None

TNS-00300: ***Disabling Interchange : *string*

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00301: ***Enabling Interchange : *string*

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00302: Connection Manager: Unknown Request

Cause: Request sent by Interchange control program is unknown.

Action: None

TNS-00303: Connection Manager: Reread parameter data

Cause: Request sent by control manager to control programming indicating that parameter data was read.

Action: None

TNS-00304: Status Information for Connection Manager:

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00305: The Navigator encountered an invalid/unknown trace level

Cause: Message sent back by the Navigator indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00306: Connection Manager encountered an invalid/unknown trace level

Cause: Message sent back by the Connection Manager indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00307: Navigator: Reread parameter data

Cause: Request sent by the Navigator to control program indicating that parameter data was read.

Action: None

TNS-00308: Navigator: Failed to open log while rereading parameter data

Cause: Request sent by the Navigator to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00309: Connection Manager: Failed to open log while re-reading parameter data

Cause: Request sent by the Connection Manager to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00310: Navigator: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00311: Connection Manager: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00312: Connection Manager: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00313: Navigator: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00314: Protocol Adapter Errors: *number,number*

Cause: Protocol Adapter errors which go with message 233

Action: None

TNS-00315: Failed to allocate larger connect data area for getting pump data: *number*

Cause: Could not allocate a large enough area to get pump statistics; continue without them.

Action: None

TNS-00316: Ran out of data buffers in the pump

Cause: The Interchange is resource limited by having too few data buffers in the pump.

Action: If the problem persists (that is, there are a lot of log messages), increase the number of pump buffers by increasing the value of the parameter PUMP_BUFFERS in INTCHG.ORA. Then shutdown and restart the Interchange to make the changes take effect.

TNS-00317: Failed to contact Connection Manager

Cause: Connection Manager is not running.

Action: Start the Connection Manager and retry

TNS-00501: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-00502: Invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00503: Illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified.

Action: Check the parameters within the ADDRESS section of the TNSNAMES.ORA file. It may be helpful to turn on tracing and look at the addresses specified in the trace file, checking for spelling or other errors. Be sure to turn tracing off when the trace is complete.

TNS-00504: Operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00505: Operation timed out

Cause: The requested operation could not be completed within the timeout period.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00506: Operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-00507: Connection closed

Cause: Normal "end of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-00508: No such protocol adapter

Cause: The protocol adapter requested for this connection does not exist.

Action: Install the protocol adapter or use one that is available. Be sure that the correct protocols are listed in the configuration files.

TNS-00509: Buffer overflow

Cause: Too much data for buffer.

Action: Reexecute with larger receive buffer or smaller send buffer.

TNS-00510: Internal limit restriction exceeded

Cause: Too many files or sockets open simultaneously (or some other resource has been depleted).

Action: For further details, trace the operation for protocol details.

TNS-00511: No listener

Cause: The connect request could not be completed because no application is listening on the address specified, or the application is unable to service the connect request in a sufficiently timely manner.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange. Start the listener on the remote machine.

TNS-00512: Address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with an unused address.

TNS-00513: Destination host unreachable

Cause: Contact cannot be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-00514: Contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00515: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.)

TNS-00516: Permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-00517: Lost contact

Cause: Partner has unexpectedly gone away.

Action: Investigate partner application for abnormal termination.

TNS-00518: Incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00519: Operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-00520: Syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor for correct syntax.

TNS-00521: Missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-00522: Operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00523: Previous operation was busy

Cause: Operation tried could not be successfully completed because the requested resource was busy.

Action: Attempt the operation again. If error persists, contact Oracle Customer Support.

TNS-00524: Current operation is still in progress

Cause: Internal operation is still in progress but will complete.

Action: None; wait for operation to complete.

TNS-00525: Insufficient privilege for operation

Cause: Operating system failed to complete operation because user lacked sufficient privileges.

Action: Check your platform-specific privileges.

TNS-00526: No caller (false async event)

Cause: Internal error.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00527: Protocol Adapter not loadable

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that could not be loaded.

TNS-00528: Protocol Adapter not loaded

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-00530: Protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00532: No previous async operation to wait on

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00533: Connection dissolved or not yet made

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00534: Failed to grant connection ownership to child

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00535: Failed to send or receive disconnect message

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00536: Connection entered inappropriate state

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00537: Index into protocol adapter table is out of legal range

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00539: Network or Protocol services are down

Cause: The Network services on or from your node are not running or have stopped running.

Action: Restart your network or protocol services on this platform. If error persists, contact Oracle Customer Support.

TNS-00540: SSL protocol adapter failure

Cause: The SSL protocol adapter encountered an error.

Action: In most cases, this error should only be pair with a more meaningful ORA- error.

TNS-00541: underlying transport does not exist.

Cause: The SSL protocol adapter was unable to locate an adapter for the protocol that it is going to use as the data transport.

Action: In most cases, the underlying transport is TCP. Make sure that the Oracle Net TCP/IP adapter was installed.

TNS-00542: SSL Handshake failed

Cause: The SSL protocol adapter was unable to connect to another process.

Action: This error can be caused by a variety of problems including the termination of the peer process. Enable Oracle Net tracing and attempt the connection again. The trace file should give some clues as to what the exact problem is.

TNS-00543: internal error

Cause: The SSL protocol adapter encountered an unexpected error.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00544: unsupported operation

Cause: The SSL adapter could not perform a given command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00545: parameter retrieval failure

Cause: The SSL protocol adapter was not able to retrieve a configuration parameter for some reason.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00546: control failure

Cause: The SSL protocol adapter was unable to perform a command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00547: user information retrieval failed

Cause: The SSL protocol adapter was unable to retrieve information about the remote user.

Action: Examine the first error in the error stack. It should describe the error in more detail.

TNS-00548: value specified for client authentication parameter is not boolean

Cause: The value specified for the parameter that specifies that SSL client authentication is to be used was not boolean.

Action: Specify a correct value for the parameter.

TNS-00549: value specified for the SSL version is not valid

Cause: The value specified for the SSL version is not valid.

Action: Specify a valid value for the SSL version.

TNS-00550: disconnection error

Cause: The SSL protocol adapter encountered an error when the underlying transport disconnected.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00551: underlying transport connection failed

Cause: The underlying transport adapter used by the SSL adapter failed to connect.

Action: Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00552: no valid cipher suites were specified

Cause: SSL cipher specs were specified, but none were valid.

Action: Specify correct cipher suites.

TNS-00553: read failed

Cause: The SSL adapter failed to read data from its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00554: write failed

Cause: The SSL adapter failed to send data over its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00555: no directory specified for wallet resource locator

Cause: It was specified that a file was to be used from which to retrieve a wallet, but no directory was specified for the wallet.

Action: Specify the directory where the wallet is located.

TNS-00556: no method specified for wallet retrieval

Cause: A wallet resource locator was specified, but no method was given for the retrieval of the wallet.

Action: Specify the method by which the method is to be retrieved.

TNS-00557: unsupported wallet retrieval method

Cause: The method specified for wallet retrieval is not supported. Currently, only files are supported for wallet retrieval.

Action: Specify "FILE" as the wallet retrieval method.

TNS-00558: Entrust login failed

Cause: Entrust failed to authenticate the username, password, and/or profile name that was presented.

Action: Specify correct values for the username, password or profile name. If no data was prompted for, contact Oracle support.

TNS-00559: load of Entrust certificate failed

Cause: An error occurred while attempting to validate the provided Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00560: extraction of name from Entrust certificate failed

Cause: An error occurred while attempting to extract a name from an Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00580: Read failed due to closed or invalid transport connection

Cause: Read attempt was made on a transport connection which was previously terminated or is somehow deemed to be invalid.

Action: Indicates a substantial transport level failure. Check the O/S configuration for the particular transport or contact the transport provider. For further details, turn on tracing and reexecute the operation.

TNS-00581: Send failed due to timeout
Cause: The send operation did not complete within the allowed time interval.
Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer"s normal operations, the customer may wish to lengthen the timeout.

TNS-00582: Receive failed due to timeout
Cause: The receive operation did not complete within the allowed time interval.
Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer"s normal operations, the customer may wish to lengthen the timeout.

TNS-00583: Valid node checking: unable to parse configuration parameters
Cause: Valid node checking was unable to parse the configuration due to syntactical errors.
Action: Ensure that the configuration syntax matches the Oracle reference manual documented syntax. For further details, turn on tracing and reexecute the operation.

TNS-00584: Valid node checking configuration error
Cause: Valid node checking specific Oracle Net configuration is invalid.
Action: Ensure the hosts specified in the "invited_nodes" and "excluded_nodes" are valid. For further details, turn on tracing and reexecute the operation.

TNS-01000: spawn [<listener_name>] <spawn_alias> [<(ARGUMENTS="arg0, arg1,...")>]
Cause: Control program usage message.
Action: None

TNS-01001: start [<listener_name>] : start listener
Cause: Control program usage message.
Action: None

TNS-01002: stop [<listener_name>] : stop listener
Cause: Control program usage message.
Action: None

TNS-01003: status [<listener_name>] : get the status of listener
Cause: Control program usage message.
Action: None

TNS-01004: reload [<listener_name>] : reload the parameter files and SIDs
Cause: Control program usage message.
Action: None

TNS-01005: trace OFF | USER | ADMIN | SUPPORT [<listener_name>] : set tracing to the specified level

Cause: Control program usage message.

Action: None

TNS-01006: set password : set the password for subsequent calls

Cause: Control program usage message.

Action: None

TNS-01007: quit | exit : exit LSNRCTL

Cause: Control program usage message.

Action: None

TNS-01008: version [<listener_name>] : get the version information of the listener

Cause: Control program usage message.

Action: None

TNS-01009: service [<listener_name>] : get the service information of the listener

Cause: Control program usage message.

Action: None

TNS-01013: set|show trc_{} [<value>]: set|show trace parameters of current listener

Cause: Control program usage message.

Action: None

TNS-01014: set|show log_{} [<value>]: set|show log parameters of current listener

Cause: Control program usage message.

Action: None

TNS-01015: set|show parm_name [<value>]: sets|shows current listener parm values

Cause: Control program usage message.

Action: None

TNS-01016: change_password [<listener_name>]: changes the password of the listener

Cause: Control program usage message.

Action: None

TNS-01017: set|show current_listener [<listener_name>]: sets|shows current listener

Cause: Control program usage message.

Action: None

TNS-01018: save_config [<listener_name>]: saves configuration changes to parameter file

Cause: Control program usage message.

Action: None

TNS-01019: set rawmode ON | OFF: set output mode for services and status commands

Cause: Control program usage message.

    Cause: Listener logging message.

    Action: None

TNS-01098: TIMESTAMP * CONNECT DATA * ADDRESS * [PRESENTATION *] COMMAND * ERROR TIMESTAMP * [INSTANCE NAME *] [ADDRESS *]

[PRESENTATION *] COMMAND * ERROR

Cause: Listener logging message.

Action: None

TNS-01099: *string * string * string * string * number*

Cause: Listener logging message.

Action: None

TNS-01100: TNS returned error *number* **when attempting to start the listener**

Cause: d by the fact that the TNSLSNR executable cannot be found in the place expected in your platform"s ORACLE environment. Verify that the full pathname of the TNSLSNR executable as displayed by LSNRCTL is correct.

Action: If NS error code 12538 is also returned then the BEQ driver is not installed; call Oracle Worldwide Support as the BEQ driver should always be installed. If this is not the problem then the error is probably

TNS-01101: Could not find service name *string*

Cause: The ervice name could not be resolved by name-lookup.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01102: TNS application contacted was not the listener

Cause: Another TNS application such as the Interchange was listening at the address contacted. There may be another TNS application listening at the address contacted and the data returned is not in the appropriate format.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01103: Protocol specific component of the address is incorrectly specified

Cause: The ADDRESS used to contact the listener is not correctly specified. This error occurs because the address fails to specify the destination of the listener. The address is well formed (for example, there are no missing parentheses) but it is missing a protocol specific component. For example, this is the error returned when the HOST component is missing from a TCP/IP address string.

Action: Edit the ADDRESS in LISTENER.ORA to include the required protocol-specific keywords. For more information about the keywords required by different protocol adapters, see the Oracle operating system specific documentation for your platform.

TNS-01106: Listener using listener name *string* **has already been started**

Cause: Another listener is already listening on one of the ADDRESSes specified.

Action: Shutdown the previous listener specified by the listener name before starting this one.

TNS-01107: A valid trace level was not specified

Cause: Failed to specify a valid trace level for the LSNRCTL trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Type "LSNRCTL help trace" for more information or consult Chapter 2 of this manual for an introduction to the concepts of tracing.

TNS-01108: Listener password prompt failed

Cause: Password not entered via tty

Action: Enter the listener password on a tty device

TNS-01109: Listener password encryption failed

Cause: Possibly garbled password entered

Action: Re-enter the listener password, using valid ASCII characters. If problem persists, contact Oracle Customer Support.

TNS-01110: Mismatch - password unchanged

Cause: New password and reentered new password are different"

Action: Re-enter the listener password, make sure that New password and reentered new password are the same

TNS-01111: Log status can either be ON or OFF

Cause: Failed to specify a log status value for the LSNRCTL log_status command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set log_status" for more information or consult Chapter 2 of this manual for an introduction to the concepts of logging.

TNS-01112: Plug and play can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL use_plugandplay command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set use_plugandplay" for more information.

TNS-01113: save_config_on_stop can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL save_config_on_stop command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set save_config_on_stop" for more information.

TNS-01114: LSNRCTL could not perform local OS authentication with the listener

Cause: LSNRCTL failed to obtain system resources (heap memory, or shared memory) needed to perform local OS authentication with the listener.

Action: Make sure that system resources like shared memory and heap memory are available for LSNRCTL tool to execute properly.

TNS-01115: OS error *string* creating shared memory segment of *string* bytes with key *string*

Cause: The shared memory segment could not be created as requested. For example, a segment with the provided key may already exist, or the size may be outside of system allowed range.

Action: Use the error code to determine the exact cause of the problem. In certain cases the problem may be resolved by adjusting the system-imposed limits such as the maximum number of allowed shared memory segments, or their maximum and minimum sizes. In other cases, resources need to be freed up first for the operation to succeed.

TNS-01116: Listener alias name given as connect identifier is too long

Cause: The listener alias name you were attempting to resolve was too long.

Action: The maximum length of a listener alias name is 255 bytes; this limit has been exceeded. Use a smaller listener alias name.

TNS-01150: The address of the specified listener name is incorrect

Cause: The address on which the listener attempted to listen contains a syntax error.

Action: For the listener name or service name specified to LSNRCTL, check that the address or connect descriptor is well-formed. You can find the listener name in LISTENER.ORA, or you can access the listener through the service name is TNSNAMES.ORA.

TNS-01151: Missing listener name, *string*, **in LISTENER.ORA**

Cause: The listener could not find the listener name specified.

Action: Make sure valid addresses on which to listen are specified for the listener name in LISTENER.ORA.

TNS-01152: All addresses specified for the listener name, *string*, **failed**

Cause: The listener failed to listen on any of the specified addresses.

Action: Make sure that another application is not listening on the addresses specified or check that the appropriate protocol adapters are installed. Turn on tracing and execute again for more information.

TNS-01153: Failed to process string: *string*

Cause: The string specified is not well-formed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01154: SID detected in old format that is no longer supported

Cause: One of the SIDs was specified in an obsolete format.

Action: Check LISTENER.ORA for a line of the form: <sid> = (SID=(ORACLE_HOME=<oracle_home>)) OR <sid> = (SID_DESC=(ORACLE_HOME=<oracle_home>)) The above format is no longer supported and SID_LIST_<listener_name> format described in the Oracle9i Net Services Reference Guide should be used. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<sid>)(ORACLE_HOME=<oracle_home>)))

TNS-01155: Incorrectly specified SID_LIST_*string* **parameter in LISTENER.ORA**

Cause: SID_LIST_<listener_name> in LISTENER.ORA has an error in it.

Action: Be sure this parameter is specified as described in the Oracle9i Net Services Reference Guide. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<sid>)(ORACLE_HOME=<oracle_home>)))

TNS-01156: Missing or inappropriate PROTOCOL, TIMEOUT or POOL_SIZE parameter from PRESPAWN_DESC

Cause: PRESPAWN_DESC in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<sid>)(PRESPAWN_MAX=5)(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01157: Can only listen on *number* **addresses - ignoring** *string*

Cause: Too many addresses were given to listen on.

Action: Reduce the number of addresses to listen on and use another listener to listen on the remaining addresses.

TNS-01158: Internal connection limit reached, preventing dispatcher from connecting

Cause: The internal Oracle Net connection list is full. Too many dispatchers are connected to the listener; therefore, no more dispatchers are allowed to connect.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01159: Internal connection limit has been reached; listener has shut down

Cause: The internal Oracle Net connection list is full. The listener is configured to use too many Oracle Net connections.

Action: Reduce the number of listen addresses or services connected to the listener. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01160: Trace level was not specified

Cause: Failed to specify a trace level for the trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Users should not see this error if LSNRCTL is being used.

TNS-01161: Spawn alias *string* was not found. Check listener parameter file

Cause: The alias specified to spawn a program was not found in LISTENER.ORA.

Action: This is not seen in normal use of Oracle Net.

TNS-01162: Syntax error in the address resolved from the spawn alias: *string*

Cause: The alias specified to spawn a program was not a valid NVstring.

Action: This is not seen in normal use of Oracle Net.

TNS-01163: Failed to spawn process: *string*

Cause: The process failed to start correctly.

Action: This is not seen in normal use of Oracle Net.

TNS-01164: No spawn alias sent to listener

Cause: The spawn command was issued without an alias.

Action: This is not seen in normal use of Oracle Net.

TNS-01165: Spawn alias has no program name set in it

Cause: The spawn alias in LISTENER.ORA is incorrectly specified.

Action: This is not seen in normal use of Oracle Net.

TNS-01167: The command *string* is not supported by the listener contacted

Cause: The listener does not recognize the command.

Action: This is caused when a newer version of LSNRCTL contacts an old listener. Upgrade listener if executing this command is important.

TNS-01168: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-01169: The listener has not recognized the password

Cause: The listener has the password security mechanism enabled and requires the correct password to execute any command other than VERSION. The user attempted to issue one of the privileged administrative commands, but could not be successfully authenticated with the password provided.

Action: If an authorized user is attempting the command, then use the SET PASSWORD command at the LSNRCTL prompt with the listener password. If you do not know the password, then you are trying to execute an inappropriate command.

TNS-01170: Event detection broke for address: *string*

Cause: The event detection mechanism for the address specified returned an error.

Action: Future attempts to detect events on this address will fail. The listener will deallocate the listen address and connections will no long be accepted for this address. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01171: Event detection broke for dispatcher: *string*

Cause: The event detection mechanism for the dispatcher specified returned an error.

Action: Future attempts to detect events on this dispatcher will fail. The listener will deallocate the dispatcher and connections will no long be redirected to this dispatcher. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01172: Listener has shut down since all listen addresses have been deallocated

Cause: The event detection mechanism broke and caused all listen addresses to be removed.

Action: Error 1170 has occured and caused all the listen addresses to be deallocated. Since all the listen addresses have been removed, no more connections can be established to this listener so it shuts itself down. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01173: Missing or inappropriate PRESPAWN_MAX parameter from SID_DESC

Cause: PRESPAWN_MAX in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<sid>)(PRESPAWN_MAX=15)(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01174: The sum of the POOL_SIZEs from each PRESPAWN_DESC is greater than the PRESPAWN_MAX

Cause: The minimum value for PRESPAWN_MAX should be the sum of the POOL_SIZEs.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<sid>)(PRESPAWN_MAX=15)(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_

SIZE=10)(TIMEOUT=30))(PRESPAWN_DESC=(PROTOCOL=ipc)(POOL_ SIZE=5)(TIMEOUT=15)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01175: Password unchanged

Cause: Unable to set the new password

Action: Be sure to see that the new password has legal ASCII characters. Try to set the password again.

TNS-01176: Error in loading the new parameter value

Cause: Illegal values given for the parameters

Action: Make sure that the parameter values are valid refer to the manual for the legal values for paramters

TNS-01177: Log Status is OFF. Log file/directory unchanged

Cause: Log status needs to be set ON for changing the log file

Action: use command set log_status ON to set the log status of the listener ON.

TNS-01178: Trace Level is 0. Trace file/directory unchanged

Cause: Trace Level needs to be set for changing the trace file/directory

Action: use command set trc_level ON to set the trace level

TNS-01179: Listener cannot load instance class "*string*"

Cause: Instance tried to register as a class unknown to listener.

Action: check LISTENER.ORA and/or instance configuration, and reference platform documentation to find the instance classes available for the listener on this platform.

TNS-01180: Missing listener object *string* in Directory Server

Cause: The listener could not find the listener object specified.

Action: Make sure the listener object is present in the Directory Server.

TNS-01181: Internal registration connection limit reached

Cause: The number of registration connections has reached the maximum. No more registrations are allowed until some of the existing registration connections are completed.

Action: Disconnect existing registration connections if they are no longer needed.

TNS-01182: Listener rejected registration of service "*string*"

Cause: Received registration information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01183: Listener rejected registration or update of instance "*string*"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01184: Listener rejected registration or update of service handler "*string*"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01185: Registration attempted from a remote node

Cause: It was determined that the registering instance is not located on the same node as the listener. It is required that the instance be colocated with the listener for this type of service registration.

Action: Check the configuration of the registering instance. Ensure that local_ listener parameter specifies only local listeners. Use remote_listener parameter to specify remote listeners.

TNS-01186: Client connection was dropped based on a filtering rule

Cause: Listener was configured with a filtering rule which explicitly specified that the client connection should be terminated without returning an error to the client.

Action: Modify the filtering rules if the client should be allowed access to the requested service.

TNS-01187: No proxy service handler available

Cause: One of the following conditions has occurred:

- the proxy service was not registered

- the proxy service was registered, but was blocking new connections

- all of the registered proxy service handlers were blocking new connections

Action: If the proxy service is not registered it may need to be restarted. If the proxy service handlers are busy and not accepting new connections more of them may need to be started to handle the load.

TNS-01188: Listener cannot operate with incompatible transport protocols

Cause: Listener was configured with multiple listening addresses with different and incompatible transport protocols. Listener cannot operate efficiently in such configuration.

Action: Modify the existing listener configuration by removing the listening address that caused the error. Configure a separate listener to listen on this address.

TNS-01189: The listener could not authenticate the user

Cause: The user attempted to issue a privileged administrative command, but could not be successfully authenticated by the listener using the local OS authentication mechanism. This may occur due to one of the following reasons:

1. The user is running a version of LSNRCTL that is lower than the version of the listener.

2. The user is attempting to administer the listener from a remote node.

3. The listener could not obtain the system resources needed to perform the authentication.

4. The local network connection between the listener and LSNRCTL was terminated unexpectedly during authentication message exchange, such as if LSNRCTL program was suddenly aborted.

5. The communication between the listener and LSNRCTL is being intercepted by a malicious user.

6. The software that the user is running is not following the authentication protocol, indicating a malicious user.

Action: Make sure that administrative commands are issued using the LSNRCTL tool that is of a version equal or greater than the version of the listener, and that the tool and the listener are running on the same node. You can issue the VERSION command to find out the version of the listener. If a malicious user is suspected, use the information provided in the listener log file to determine the source and nature of the requests. Enable listener tracing for more information. If the error persists, contact Oracle Support Services.

TNS-01190: The user is not authorized to execute the requested listener command

Cause: Most of the listener administrative commands are only intended to be issued by privileged users, for example DBAs or system administrators. If the listener password is not set, then the listener only accepts administrative requests from LSNRCTL running with the same OS credentials, or running as a local administrator (also referred to as super user).

Action: If an authorized user is attempting the command, then make sure that LSNRCTL is executed with the same OS user credentials as the running listener, or as a local administrator.

TNS-01191: Failed to initialize the local OS authentication subsystem

Cause: Initialization of the security subsystem failed during listener startup or reload. The listener could not obtain system resources (memory, or file descriptors) needed for local OS authentication security mechanism.

Action: Make sure that system resources like shared memory and heap memory are available for listener to execute properly. For further details, turn on tracing and execute the operation again. If the error persists, contact Oracle Support Services.

TNS-01192: Missing SID_LIST_ value left of equation for SID description in LISTENER.ORA

Cause: SID description in LISTENER.ORA had an error in it.

Action: Make sure the lines of code in LISTENER.ORA containing SID_DESC or SID begin with SID_LIST_<listener_name> on the left side of the equation. For example, SID_LIST_LISTENER =(SID_LIST=(SID_DESC=(SID_NAME=<sid>)(ORACLE_HOME=<oracle_home>)))

TNS-01193: Listener cannot operate with specified secure transport

Cause: Listener was configured with transport protocols which are either invalid or none of the secure transport protocols are present in listening addresses.

Action: Modify the existing listener configuration by specifying a valid tranport protocol in secure transport list.

TNS-01194: The listener command did not arrive in a secure transport

Cause: Most of the listener administrative commands are only intended to be issued in a secure transport, which are configured in secure_control_ parameter. If the parameter is set, then the listener accepts administrative requests only on those secure transports.

Action: Make sure the command is issued using a transport specified in secure transport list.

TNS-01200: The listener must be suid root

Cause: The ownership privileges of the TNSLSNR executable are incorrect.

Action: Contact your DBA or system administrator to change the ownership of the file to be suid root and restart the listener. This action is necessary because the user that started the process should claim ownership.

TNS-01201: Listener cannot find executable *string* for SID *string*

Cause: The executable for the Oracle dedicated server process cannot be found.

Action: Check the appropriate SID_DESC in LISTENER.ORA to make sure that the ORACLE_HOME component is pointing to a valid location. If this component is not set, then check the value of the ORACLE_HOME environment variable.

TNS-01202: Missing the dba group (*string*) specified by DBA_GROUP in SID_DESC

Cause: The dba group specified is missing from /ETC/GROUP.

Action: Check the DBA_GROUP parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /ETC/GROUP.

TNS-01203: Missing the account (*string*) specified by DEFAULT_USER_ACCOUNT in SID_DESC

Cause: The unprivileged OS account is missing from /etc/passwd.

Action: Check the DEFAULT_USER_ACCOUNT parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /etc/passwd. This is the account that the Oracle shadow process will be started with if the the connecting client has database privileges or does not exist on this machine.

TNS-01204: Unprivileged account (*string*) is in dba group (*string*)

Cause: The unprivileged account has DBA privileges. The unprivileged account specified by DEFAULT_USER_ACCOUNT in the SID_DESC in LISTENER.ORA is a member of the dba group specified by DBA_GROUP in SID_DESC. The unprivileged account cannot belong to the dba group because this would be a security violation with OPS$ logins.

Action: Remove the unprivileged account from the dba group.

TNS-01250: Failed to get ADR Path for trace/alert directory

Cause: The diagnosability API to get the service path returned an error

Action: None

TNS-01251: Cannot set trace/log directory under ADR

Cause: ADR trace and log directories cannot be set by the user.

Action: None

TNS-01300: ERROR at *string*

Cause: Listener logging message.

Action: None

TNS-01301: TNS error structure:

Cause: Listener logging message.

Action: None

TNS-01302: nr err code: *number*

Cause: Listener logging message.

Action: None

TNS-01303: ns main err code: *number*

Cause: Control program status message.

Action: None

TNS-01441: Number of filtering rules currently in effect: *number*

Cause: Control program status message

Action: None

TNS-01442: No filtering rules currently in effect.

Cause: Control program status message

Action: None

TNS-02020: set displaymode RAW | COMPAT | NORMAL | VERBOSE: output mode for lsnrctl display

Cause: Control program usage message.

Action: None

TNS-02021: DIRECT_HANDOFF can be either ON or OFF.

Cause: Invalid value for the LSNRCTL direct_handoff parameter.

Action: Specify one of ON or OFF.

TNS-02022: show rules: Show rules that are currently in effect

Cause: Control program usage message.

Action: None

TNS-02401: gbname *string* **too long, allowed** *number* **characters**

Cause: gbname or domain name too long.

Action: Check the gbname parameter in listener.ora, shorten it.

TNS-02402: Bad CLBGNAMES parameter in tnsnames.ora

Cause: CLBGNAMES parameter in tnsnames.ora is bad.

Action: Check the CLBGNAMES parameter format and correct it. Make sure that the tnsnames.ora file is there.

TNS-02403: Bad alias *string* **or alias not present in tnsnames.ora**

Cause: An alias was expected in tnsnames.ora but was not found or was not correctly formed.

Action: Check the tnsnames.ora for the alias and make sure it is correctly formed.

TNS-02404: Service *string* **contains no local handlers**

Cause: The listener found no suitable handler to redirect to.

Action: Make sure that there is at least one handler for this node.

TNS-02405: GMS call failed, check GMS logs.

Cause: A GMS call made by the listener failed.

Action: Check if the GMS is up and running. See GMS-client trace files for more information.

TNS-02501: Authentication: no more roles

Cause: When a process attempted to retrieve a role from the authentication service, no more were available.

Action: None. This error is used internally and occurs in the normal course of events.

TNS-02502: Authentication: unable to find initialization function

Cause: The native authentication service was unable to call the initialization function for the specified service because it does not exist.

Action: If this service adaptor came directly from Oracle, contact Oracle Customer Support, as this error should never happen. Otherwise, add an initialization function for the service being used.

TNS-02503: Parameter retrieval failed

Cause: The native service layer was unable to retrieve a parameter from a configuration file.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02504: Parameter count retrieval failed

Cause: The native service layer was unable to determine the number of arguments given for a configuration parameter.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02505: Authentication: null context pointer provided

Cause: The function nau_ini() was passed a null pointer as the pointer to the context that it is supposed to use.

Action: Call nau_ini() with a pointer to a context structure.

TNS-02506: Authentication: no type string

Cause: An authentication context structure does not contain a string that describes the authentication service being used.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02507: Encryption: algorithm not installed

Cause: After picking an algorithm, the server was unable to find an index for it in its table of algorithms. This should be impossible because the algorithm was chosen (indirectly) from that list.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02508: Encryption: server negotiation response in error

Cause: The server"s response in negotiation was in error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02509: Authentication: invalid process state

Cause: The state in which a process is running does not correspond to any of the values which are valid.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02510: Invalid numeric data type

Cause: The type of a piece of numeric data that was received does not correspond to one of the valid values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02511: Invalid data type

Cause: The type of a piece of data that was received or to be transmitted did not correspond to any of the correct values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02512: Invalid status received

Cause: A process received a value as a status flag which was unknown.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02513: Requested data type does not match retrieved type

Cause: A service requested data whose type does not match that of the segment which was sent from the other process.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02514: Invalid packet received

Cause: A process received a data packet which was not meant for the native services layer.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02515: Encryption/crypto-checksumming: unknown control type

Cause: An encryption or crypto-checksumming algorithm "control" function was called, but did not recognize the "type" argument it was given.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02516: No data available

Cause: A native service attempted to retrieve data but no data was available to be received.

Action: The error is not normally visible as it usually is only used to signal the end of a data stream. If the error becomes visible, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02517: key smaller than requested size

Cause: The key returned by negotiation was smaller than the size requested by some service (either encryption or crypto-checksumming).

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02518: key negotiation error

Cause: An error occurred while the two sides of the connection were negotiating an encryption or crypto-checksumming key.

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02519: no appropriate key-negotiation parameters

Cause: No appopriate key-negotiation parameters are available for the key size requested either by encryption or by crypto- checksumming.

Action: The error is not normally visible. Enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02520: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file for Oracle Advanced Security.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-02521: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Net is too small.

Action: Add more randomly-chosen text to it.

TNS-02524: Authentication: privilege check failed

Cause: An error occurred when the Oracle Advanced Security authentication service attempted to verify that a user had a specific database privilege.

Action: This error should not happen normally. Enable tracing and attempt to repeat the error. Contact Customer Support.

TNS-02525: encryption/crypto-checksumming: self test failed

Cause: The Oracle Advanced Security encryption/crypto-checksumming service detected an error while running tests on the active encryption or checksumming algorithm.

Action: Contact Customer Support.

TNS-02526: server proxy type does not match client type

Cause: The authentication type selected by the server does not match that picked by the client.

Action: Contact Oracle Customer Support

TNS-03501: OK

Cause: The operation succeeded.

Action: No action necessary.

TNS-03502: Insufficient arguments. Usage: tnsping <address> [<count>]

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03503: Could not initialize NL

Cause: The network library could not be initialized.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03504: Service name too long

    Cause: The service name you are attempting to ping is too long.

    Action: Re-enter the command using the correct service name.

TNS-03505: Failed to resolve name

    Cause: The service name you provided could not be found in TNSNAMES.ORA, an Oracle Names server, or a native naming service.

    Action: Verify that you entered the service name correctly. You may need to ensure that the name was entered correctly into the network configuration.

TNS-03506: Failed to create address binding

    Cause: The TNSPING utility found the requested address or service name, but received an internal error when trying to use it.

    Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03507: Failure looking for ADDRESS keyword

    Cause: The TNS address did not contain an ADDRESS keyword.

    Action: If you entered the TNS address on the command line, be sure that the syntax is correct. If you entered a service name on the command line, the address contains the wrong information. You should verify that the information was entered correctly.

TNS-03508: Failed to create address string

    Cause: The TNSPING utility received an internal error when generating an address.

    Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03509: OK (*number* msec)

    Cause: The operation succeeded, in this amount of time.

    Action: No action necessary.

TNS-03510: Failed due to I/O error

    Cause: An I/O operation failed, perhaps due to a resource failure or premature window termination.

    Action: This is an internal error which should not normally be visible. Do not close the TNSPING window before all I/O operations have completed.

TNS-03511: Used parameter files: *string*

    Cause: Prints out the path of the parameter files(sqlnet.ora,tnsnames.ora) used in the process of resolving the NAME.

    Action: None

TNS-03512: Used *string* adapter to resolve the alias

    Cause: Prints out the name of the adapter which resolved the TNS alias.

    Action: None

TNS-03601: Failed in route information collection

Cause: The route could either not connect, or encountered an unsupported version of Oracle Net.

Action: Check if Oracle Net along all nodes is version 2.3 or greater.

TNS-03602: Insufficient arguments. Usage: trcroute <address>

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03603: Encountered a node with a version eariler than SQL*Net 2.3

Cause: Versions of SQL*Net before 2.3 do not support trcroute.

Action: Find the node that isn"t responding to trcroute.

TNS-04001: *string*

Cause: CMCTL general message.

Action: None

TNS-04002: The command completed successfully.

Cause: Not applicable.

Action: None

TNS-04003: Syntax Error.

Cause: The command issued has a wrong syntax.

Action: Check for the command issue syntax, and correct the problem.

TNS-04004: Unable to encrypt the supplied password.

Cause: The password that was supplied to the ADMINISTER command could not be encrypted.

Action: Change the password to something acceptable. See Oracle Net Services documentation for valid password values.

TNS-04005: Unable to resolve address for *string*.

Cause: The alias name supplied with the ADMINISTER command could not be resolved to an Oracle Connection Manager address.

Action: Check if your an entry for the alias is present in either CMAN.ORA file or in TNSNAMES.ORA file.

TNS-04006: Invalid password

Cause: The password given with the ADMINISTER command could not be verified by the Oracle Connection Manager instance.

Action: Retry with the correct password.

TNS-04007: Internal error *number*.

Cause: Not normally visible to the user.

Action: If error persists, contact Oracle Support Services.

TNS-04008: *string | string*

Cause: String parameter value.

Action: None

TNS-04009: *string | number*

Cause: Integer parameter value.

Action: None

TNS-04010: Command cannot be issued before the ADMINISTER command.

    Cause: A command was issued before administering the Oracle Connection Manager instance.

    Action: Enter the ADMINISTER command before retrying this command.

TNS-04011: Oracle Connection Manager instance not yet started.

    Cause: A command was issued when Oracle Connection Manager was not yet started or already shutdown.

    Action: Start Oracle Connection Manager.

TNS-04012: Unable to start Oracle Connection Manager instance.

    Cause: CMCTL was unable to start the Oracle Connection Manager instance. Some of the possible reasons include: cmadmin not present in ORACLE_HOME/bin, Invalid parameter in configuration repository, wrong parameter values, or log directory not present.

    Action: 1. Check whether log directory is present, and is writable. Log directory can be found at ORACLE_HOME/network/log, or as specified by the LOG_DIRECTORY parameter in CMAN.ORA.

    2. Turn on logging or tracing to get more information about this error.

    3. Correct any parameter errors (or mismatched paranthesis), and retry starting Oracle Connection Manager.

    4. If the problem persists, contact Oracle Support Services.

TNS-04013: CMCTL timed out waiting for Oracle Connection Manager to start

    Cause: Oracle Connection Manager internal registrations have not been completed.

    Action: Turn on logging or tracing to get more information about this error. If the problem persists, contact Oracle Support Services.

TNS-04014: Current instance *string* is already started

    Cause: An ADMINISTER command was issued to administer an Oracle Connection Manager instance that is already started.

    Action: None

TNS-04015: Current instance *string* is not yet started

    Cause: An ADMINISTER command was issued to an instance that has not yet been started.

    Action: None

TNS-04016: Connecting to *string*

    Cause: CMCTL is connecting to the the specified Oracle Connection Manager address.

    Action: None

TNS-04017: Please wait. Shutdown in progress.

    Cause: A command which cannot be used while Oracle Connection Manager is shutting down was issued.

    Action: Wait for some time before retrying the command.

TNS-04018: Instance already started

Cause: The STARTUP command was issued to an instance which was already started.

Action: None

TNS-04019: Starting Oracle Connection Manager instance *string*. **Please wait...**

Cause: The STARTUP command was issued for an Oracle Connection Manager instance. CMCTL is waiting for the instance to start.

Action: None

TNS-04021: The SET command is unsuccessful for parameter *string*.

Cause: The value set for the parameter was out of range.

Action: See Oracle Net Services documentation for value ranges for the parameters.

TNS-04022: *string* **parameter** *string* **set to** *string*.

Cause: Parameter value was successfully set.

Action: None

TNS-04023: Command failed.

Cause: The command issued failed to complete successfully.

Action: Retry command. If problem persists, contact Oracle Support Services.

TNS-04037: Connections refer to *string*.

Cause: The ADMINISTER command resolved to the address in the specified message string.

Action: None

TNS-04044: Specified gateways do not exist.

Cause: One or more specified gateway IDs do not exist.

Action: Specify correct gateway IDs.

TNS-04045: Invalid specification of time

Cause: The time specified with the GT (greater than) option was invalid.

Action: Check Oracle Net Services documentation for valid time specification.

TNS-04046: Invalid specification for source

Cause: The source specified with the FROM option was invalid.

Action: Check Oracle Net Services documentation for valid source specification.

TNS-04047: Invalid specification for destination

Cause: The destination specified with the TO option was invalid.

Action: Check Oracle Net Services documentation for valid destination specification.

TNS-04048: Specified service does not exist.

Cause: The service specified with the FOR option did not exist.

Action: None

TNS-04049: Specified connections do not exist

Cause: One or more connection IDs do not exist.

Action: None

TNS-04050: Invalid specification for gateway ID.

    Cause: The gateway ID specified is invalid.

    Action: Check Oracle Net Services documentation for a valid gateway ID specification.

TNS-04063: Remote administration disabled in the Oracle Connection Manager instance.

    Cause: CMCTL attempted to connect to a remote Oracle Connection Manager instance in which remote administration was disabled.

    Action: Set parameter remote_admin=on in the remote instance before starting it.

TNS-04064: The number of CMCTL sessions exceeds MAX_CMCTL_SESSIONS.

    Cause: The Oracle Connection Manager instance already has MAX_CMCTL_ SESSIONS number of CMCTLs connected to it.

    Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04065: The number of remote CMCTL sessions exceeds (MAX_CMCTL_ SESSIONS-1)

    Cause: The Oracle Connection Manager instance already has (MAX_CMCTL_ SESSIONS-1) number of remote CMCTL sessions connected to it.

    Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04067: Number of connections: *number*.

    Cause: Either no information qualifier (COUNT/DETAIL) was present in SHOW CONNECTIONS command, or, COUNT was used as the information qualifier.

    Action: None

TNS-04068: Cannot start an Oracle Connection Manager instance remotely.

    Cause: CMCTL was used to start Oracle Connection Manager instance in a remote host.

    Action: Use a local CMCTL to start the Oracle Connection Manager.

TNS-04069: Sleeping for *number* seconds...

    Cause: CMCTL is idle for specified seconds. This feature is only provided for testing purposes.

    Action: None

TNS-04070: Cannot administer a remote Oracle Connection Manager instance which is not yet started.

    Cause: An attempt was made to administer a remote Oracle Connection Manager instance which is not yet started.

    Action: Use a local CMCTL session to start the Oracle Connection Manager instance before trying to administer it remotely.

TNS-04071: Connections closed successfully. Number closed: *number*.

    Cause: The specified connections were closed successfully.

    Action: None

TNS-04072: Unable to suspend atleast one of the gateways.

Cause: CMCTL was unable to suspend one or more gateways. Possible reason could be suspending a gateway that was already suspended or suspending a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04073: Passwords do not match.

Cause: The new password and its confirmation do not match

Action: Use SET PASSWORD again.

TNS-04074: Invalid value for the parameter *string*.

Cause: The parameter value set using the SET command is invalid.

Action: See Oracle Net Services documentation for the valid values of the parameter.

TNS-04075: Cannot use ADMINISTER directly from the command line.

Cause: ADMINISTER can only be issued from the CMCTL> prompt.

Action: Use the -c option with any command instead of ADMINISTER.

TNS-04076: Invalid specification for state.

Cause: The state specified with "in" option is invalid.

Action: Check Oracle Net Services documentation for valid state specification.

TNS-04077: WARNING: No password set for the Oracle Connection Manager instance.

Cause: A connection to the Oracle Connection Manager instance was made with no password from the user.

Action: Ignore the warning if the Oracle Connection Manager is secure enough. Otherwise, use SET PASSWORD command to set a new password for the instance.

TNS-04078: Unable to resume atleast one of the gateways.

Cause: CMCTL was unable to resume one or more gateways. Possible reason could be resuming a gateway that was ready for connections, or resuming a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04079: Cannot administer Oracle Connection Manager with no CMAN.ORA, and port = *number*.

Cause: CMAN.ORA is not present or address not configured in CMAN.ORA, and the net service name in the TNSNAMES.ORA contains a nondefault Oracle Connection Manager port.

Action: Either change the TNSNAMES.ORA entry to use the default port, or configure the CMAN.ORA file with the Oracle Connection Manager"s address.

TNS-04080: Failed to reload

Cause: Oracle Connection Manager failed to reload the new configuration due to errors in the configuration file.

Action: Set log_level to support and retry operation. Error encountered will be logged in the log file of CMADMIN.

TNS-04082: *string* **event** *string* **set to** *string***.**

    Cause: Event value was successfully set.

    Action: None

TNS-04083: Failed to save password

    Cause: Oracle Connection Manager failed to save the password in the configuration file.

    Action: Check for the permissions on the configuration file. The file should have WRITE permissions.

TNS-04084: WARNING: Non-reloadable parameters have retained their values.

    Cause: Values of non-reloadable parameters were changed, or, one or more non-reloadable parameters having non-default values were added to the parameter file.

    Action: See Oracle Net Services documentation for a list of non-reloadable parameters.

TNS-04085: Password not changed since last save.

    Cause: Password has not been changed since it was last saved.

    Action: None

TNS-04086: Invalid value for the event *string***.**

    Cause: The event value set using the SET EVENT command is invalid.

    Action: See Oracle Net Services documentation for the valid values of the event.

TNS-04087: Unable to shutdown atleast one of the gateways.

    Cause: CMCTL was unable to shutdown one or more gateways. Possible reason could be shutting down a gateway that was not present.

    Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04088: Unable to close atleast one of the connections.

    Cause: CMCTL was unable to close one or more connections. Possible reason could be closing a connection that was not present.

    Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04089: Alias name too long.

    Cause: User entered an alias name that exceeded 64 characters.

    Action: Retry with a shorter alias name. Alias names have to be less than 65 characters.

TNS-04140: Migration completed successfully.

    Cause: CMMIGR has successfully completed the migration of the old CMAN.ORA file to the new format.

    Action: None

TNS-04141: Unable to find CMAN.ORA file.

    Cause: CMMIGR was not able to find CMAN.ORA file.

    Action: Check whether CMAN.ORA file is present in $TNS_NAME/admin, or in $ORACLE_HOME/network/admin, or in the path specified in the command line.

TNS-04142: CMAN.ORA file has an invalid format.

Cause: CMMIGR was unable to recognize the format of CMAN.ORA file.

Action: Check for the syntax errors in CMAN.ORA file, and correct them.

TNS-04143: Unable to write the new CMAN.ORA file.

Cause: CMMIGR was unable to create the new CMAN.ORA file due to insufficient perimissions.

Action: Set WRITE permissions to the directory in which CMAN.ORA file is to be written.

TNS-04144: Nothing to migrate

Cause: CMMIGR did not find anything in the old CMAN.ORA file that has an equivalent in the new format.

Action: None

TNS-04201: Trace Assistant Usage ERROR: Missing File name

Cause: Trace file name argument is missing

Action: Put the trace file name as the last command line argument for for this tool.

TNS-04202: Trace Assistant Usage ERROR: Not enough arguments

Cause: The <file name> and/or the <options> arguments are missing

Action: Put the right number of command line arguments.

TNS-04203: Trace Assistant Usage ERROR: Invalid options

Cause: The options provided are not valid

Action: Check the valid options for this tool.

TNS-04204: Trace Assistant Internal ERROR: Couldn''t Open trace file

Cause: The trace file name given doesn''t exist or it is not accessible for this user.

Action: Check the spelling, and permissions of the trace file.

TNS-04205: Trace Assistant Internal ERROR: Memory

Cause: Possible memory problem

Action: Verify the amount of available memory on the system.

TNS-04206: Trace Assistant Internal ERROR: Packet Type

Cause: The packet type read by trcAsst is not valid.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04207: Trace Assistant Internal ERROR: Packet Length

Cause: The packet being decode is corrupted.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04208: Trace Assistant Internal ERROR: Fatal

Cause: Fatal internal error

Action: Contact World Wide Support.

TNS-04209: Trace Assistant Internal ERROR: Type Error

Cause: Internal type error,

Action: Contact World Wide Support.

TNS-04210: Trace Assistant Internal ERROR: End of File

Cause: Reaching End of File to soon. Not able to decode trace file. Your trace file appears to be truncated.

Action: Generate another trace file. This trace file can not be decoded.

TNS-04211: Trace Assistant Internal ERROR: CORE

Cause: Internal System Error

Action: Contact World Wide Support.

TNS-04212: Trace Assistant Internal ERROR: NACOM Type Error

Cause: Not able to decode Network Authentication information

Action: Contact World Wide Support.

TNS-04231: Trace Assistant WARNING: Assuming Oracle trace format

Cause: This trace file may not be a Network trace file. The default format (Oracle Trace) will be assumed.

Action: None

TNS-04232: Trace Assistant WARNING: Not retrieving all rows

Cause: Trace Assitante won"t retrieve all the rows data.

Action: None

TNS-04233: Trace Assistant WARNING: Going beyond Packet length

Cause: Trying to read beyond packet length. The trace file may be corrupted

Action: None

TNS-04234: Trace Assistant WARNING: won"t decode TTC

Cause: Trace assistant does not have enough information to decode TTC data. This maybe an old trace file or from a platform that trace assistant does not understand.

Action: None

TNS-04235: Trace Assistant WARNING: Unknown TTC protocol

Cause: Trace Assistant has reached a point in which the TTC protocol can not be understood.

Action: None

TNS-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

TNS-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action:

- If you are using local naming (TNSNAMES.ORA file):

- Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA)

- Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible.

- Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file.

- Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable.

- If you are using directory naming:

- Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_ PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Verify that the LDAP directory server is up and that it is accessible.

- Verify that the net service name or database name used as the connect identifier is configured in the directory.

- Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier

- If you are using easy connect naming:

- Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Make sure the host, port and service name specified are correct.

- Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

TNS-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

TNS-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming.

TNS-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name"s connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

TNS-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn"t exist in $ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in $ORACLE_HOME/network/admin or turn off tracing in your ORA file.

TNS-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn"t allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

TNS-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

TNS-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

TNS-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

TNS-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

TNS-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action:

- If you are using local naming (TNSNAMES.ORA file):

- Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA)

- Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible.

- Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file.

- Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable.

- If you are using directory naming:

- Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Verify that the LDAP directory server is up and that it is accessible.

- Verify that the net service name or database name used as the connect identifier is configured in the directory.

- Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier

- If you are using easy connect naming:

- Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA).

- Make sure the host, port and service name specified are correct.

- Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

TNS-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

TNS-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

TNS-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

TNS-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

TNS-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

TNS-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

TNS-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

TNS-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application`s machine, and verify that it lists the correct communities.

TNS-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

TNS-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

TNS-12211: TNS:needs PREFERRED_CMANAGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANAGERS defined.

Action: Add a PREFERRED_CMANAGERS entry to the TNSNAV.ORA file.

TNS-12212: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANAGERS binding in the client"s TNSNAV.ORA file does not have a CMANAGER_NAME specified.

Action: Define the CMANAGER_NAME as part of the PREFERRED_ CMANAGERS binding. Use of the Oracle Network Manager should eliminate this error.

TNS-12213: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANAGERS binding in the client"s TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

TNS-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

TNS-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

TNS-12216: TNS:poorly formed PREFERRED_CMANAGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANAGERS entry in the client"s TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

TNS-12217: TNS:could not contact PREFERRED_CMANAGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANAGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANAGERS entries in the client"s TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

TNS-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_ CMANAGERS entry may have an incorrect CMANAGER_NAME in the client"s

TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_ INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

TNS-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSes in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSes have a COMMUNITY component or all do not.

TNS-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator"s Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

TNS-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

TNS-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

TNS-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

TNS-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

TNS-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

TNS-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

TNS-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

TNS-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are:

- Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator.

- If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

TNS-12505: TNS:listener does not currently know of SID given in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which instances are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the SID parameter in the connect descriptor specifies an instance known by the listener.

- Check for an event in the listener.log file.

TNS-12508: TNS:listener could not resolve the COMMAND given

Cause: d by incompatible Oracle Net or Net8 versions. Do not include in error manual.

Action: This is not seen in normal use of Oracle Net.

TNS-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

TNS-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers" limit on number of connections/sessions that they can accept.

TNS-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

TNS-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

TNS-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which services are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the SERVICE_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener.

- If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener.

- Check for an event in the listener.log file.

TNS-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener"s known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

TNS-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given SERVICE_NAME support the client"s protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

TNS-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

TNS-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

TNS-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

TNS-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action:

- Wait a moment and try to connect a second time.

- Check which instances are currently known by the listener by executing: lsnrctl services <listener name>

- Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener.

- Check for an event in the listener.log file.

TNS-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given

in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

TNS-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

TNS-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener"s tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

TNS-12525: TNS:listener has not received client"s request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

TNS-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

TNS-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

TNS-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

TNS-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

TNS-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

TNS-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

TNS-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

TNS-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

TNS-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

TNS-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

TNS-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

TNS-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

TNS-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-12562: TNS:bad global handle

Cause: Internal error - bad "gbh" argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

TNS-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

TNS-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12574: TNS:redirection denied

Cause: The connect request failed because it would have required redirection and the caller has requested no redirections.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

TNS-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user"s request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

TNS-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

TNS-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

TNS-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

TNS-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

TNS-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

TNS-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

TNS-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

TNS-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user"s roles.

Action: Enable tracing to determine which routine is failing.

TNS-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

TNS-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

TNS-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

TNS-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are:

1. The other process was terminated.

2. The machine on which the other process is running went down.

3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are:

1. The other process was terminated.

2. The machine on which the other process is running went down.

3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

TNS-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions:

1. Change the entry in sqlnet.ora that determines which services are to be used.

2. Relink the client with at least one of the authentication service adapters that the server supports.

3. Relink the server with at least one of the authentication service adapters that the client supports.

4. Disable authentication on both the client and server.

TNS-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

TNS-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

TNS-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

TNS-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

TNS-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

TNS-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

TNS-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

TNS-12648: Encryption or data integrity algorithm list empty

Cause: An Oracle Advanced Security list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

TNS-12649: Unknown encryption or data integrity algorithm

Cause: An Oracle Advanced Security list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

TNS-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client"s algorithm choices to the server"s list or vice versa.

TNS-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

TNS-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

TNS-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

TNS-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

TNS-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

TNS-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn"t match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

TNS-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

TNS-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

TNS-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

TNS-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

TNS-12661: Protocol authentication to be used

Cause: The Oracle Advanced Security authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user"s identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

TNS-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

TNS-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

TNS-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

TNS-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

TNS-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

TNS-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

TNS-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

TNS-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

TNS-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

TNS-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

TNS-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

TNS-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

TNS-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

TNS-12678: Authentication disabled but required

Cause: The configuration parameters that control whether Oracle Advanced Security authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

TNS-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

TNS-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

TNS-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

TNS-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

TNS-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file for Oracle Advanced Security.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-12684: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Advanced Security is too small.

Action: Add more randomly-chosen text to it, perhaps using Network Manager.

TNS-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

TNS-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

TNS-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode:

- The user might not have permission to make up his own pincode.

- The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters.

- The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

TNS-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

TNS-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server''s credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

TNS-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to Oracle Advanced Security Administrator''s Guide on how to do this.

TNS-12699: Native service internal error

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

60

NNC-00001 to NNC-00501

NNC-00001: maximum number of connections already open

Cause: All available name service connections are handling requests.

Action: If the problem occurs when running a name server, increase the values of names.max_open_connections. If the problem occurs in a client program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00002: error listening on stream *string*

Cause: The name server was asked to listen on the specified address, and failed, probably because the address is malformed, or because it uses a SQL*Net protocol adaptor which has not been installed.

Action: Make sure the address is properly formed, and that it uses a protocol adaptor which has been installed on your system.

NNC-00003: error opening stream *string*

Cause: A name server or client program attempted to open a connection to another server and failed, either because the server is down, or because the network path to that server is not working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is listening on the address used, and that there is network connectivity between the two end-points.

NNC-00004: connection is broken

Cause: The connection from a name server or client program to another server has been broken, either because that server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00005: cannot initialization stream subsystem

Cause: The name service stream subsystem could not be started, probably because of a missing TNS error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00050: message format error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00051: message content error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00052: client and server protocol versions are incompatible

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00053: ASN.1 error encountered while sending or receiving message

Cause: The name server or the name server program interface attempted to send or receive a message and failed because of an ASN.1 error.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00400: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NNC-00401: program interface initialization failed

Cause: The name server program interface could not be initialised, probably because of a missing TNS or name server error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00402: program interface de-initialization failed

Cause: An internal error occurred while the name server program interface was being de-initialised by an internal function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00403: program interface has not been initialised

Cause: An internal function has attempted to de-initialise the name service program interface when it has not yet been initialised.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00404: supplied buffer of size *string* is smaller than minimum size *string*

Cause: A caller supplied the name server program interface with a memory buffer too small for the interface''s requirements. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00405: network failure

Cause: The network connection between the client program and the name server has failed, either because the server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Contact your name server administrator to make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00406: name "*string*" does not exist

Cause: The user asked for information associated with a global name that does not exist.

Action: Re-try the failing operation with a global name that exists.

NNC-00407: alias loop in name request

Cause: The name service detected an "alias loop" when trying to retrieve information associated with a global name. An alias loop occurs when an alias name X points to another alias name Y, which in turn points back to X, rather than eventually to a global name which contains data.

Action: Contact your name server administrator to have the alias loop investigated and fixed.

NNC-00408: name "*string*" exists but desired data does not

Cause: The user asked for information associated with a global name. The name in question exists, but does not contain the desired type of information.

Action: Re-try the failing operation with a type which the desired name does contain.

NNC-00409: temporary name service failure

Cause: There are no name servers available to handle a client request, or a name server was temporarily unable to handle a client request. This situation is almost always temporary, and occurs when the program interface has issued a name server request and not received a timely response from any of its preferred servers. Such delays can occur due to transient network or name server outages or heavy load.

Action: Re-try the failing operation. If the error persists, make sure there is network connectivity between the client and its preferred name servers, and contact your name server administrator to make sure that those name servers are running.

NNC-00410: invalid preferred server address list

Cause: The names.preferred_servers parameter in sqlnet.ora is malformed.

Action: Make sure the address list is properly formatted.

NNC-00411: invalid default domain name "*string*"

Cause: The names.default_domain parameter in sqlnet.ora is invalid.

Action: Make sure the parameter value is a valid global name. See your documentation for the characters which may be used in a global name.

NNC-00412: invalid name "*string*"

Cause: The name server program interface was given an invalid global name to process.

Action: Supply a valid domain name. If the error is caused by an internal function, contact Worldwide Customer Support.

NNC-00413: general failure

Cause: A name server program interface error occured which did not fall under the heading of any other more specific error condition. The error will usually be followed by more specific lower-level information.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00414: invalid name-value binding string "*string*"

Cause: A caller provided the name server program interface with an invalid name-value binding string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid name-value binding string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00415: section identifier *string* is invalid, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00416: user callback function returned error number *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00417: name "*string*" already exists

Cause: A caller has attempted to create a new global name, and that name already exists.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that does not already exist. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00418: name "*string*" cannot be modified because it has children

Cause: A caller has attempted to delete or rename a global name, and that name cannot be modified because it has child names underneath it in the name space.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that is a leaf node. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00419: authoritative server is unreachable

Cause: A name server request cannot be processed because the server which received the operation does not own the name specified in the request and cannot locate the server which does own the name. The error is almost always transient, and occurs either because the path between the server receiving the request and the request"s final destination has been interrupted, or because the final destination is down.

Action: Not normally visible to the user, except when using the name server control program. Because the error is typically a transient one, retrying the failing operation will usually work. If the failure persists, the name server which is allowed to process the failing operation is probably shut down or unreachable. Contact your name server administrator to make sure that your site"s name servers are running, and are properly configured.

NNC-00420: operation not allowed

Cause: A name server request cannot be processed because the server which received the operation is not allowed to process it. The problem typically occurs when an administrator has disabled request processing at a particular server for some reason.

Action: Contact your name server administrator to determine why server request processing has been disabled.

NNC-00421: invalid modification directive *string*, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00422: invalid data type name "*string*"

Cause: A caller has provided an invalid data type name to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00423: invalid data item syntax code *string*

Cause: A caller has provided an invalid data type code to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00424: invalid address "*string*"

Cause: A caller provided the name server program interface with an invalid address value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid address argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00425: meta-data violation

Cause: A caller issued a name server modification request and that request cannot be processed because it would violate data type meta-data constraints.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, examine the meta-data constraints for the data type being operated upon and don"t violate them. Examples of typical constraint violations are attempts to add a new data item to a name which already contains alias information, or attempts to add alias information to a name which already contains other data, or attempts to replace a data item with another item that has the wrong syntax. If the error occurs outside the control program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00426: no such data type

Cause: A caller attempted to create a data item, and could not because the data item"s type does not exist.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the operation with an existent data type. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00427: server does not support this version of the protocol

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00428: invalid meta-data data item

Cause: A caller provided the name server program interface with an invalid meta-data data item.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid meta-data argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00429: invalid octet string literal "*string*"

Cause: A caller provided the name server program interface with an invalid octet string string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid octet string argument. Otherwise, turn on tracing

and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00430: Database not accessible

Cause: When a database is used for consistency between different nameservers, any modify operation should not only modify the cache but also the database. And if the database is not accessible, this error occurs.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, make sure database is available and then re-execute the operation. If error persists, contact Worldwide Customer Support.

NNC-00431: NS address does not match any of the current addresses

Cause: When delegating a domain, the address of the Nameserver is provided by the client. If the nameserver already exists, then it already has address(es) associated with it. So, the address supplied by the client must match one of them. Otherwise, this error occurs.

Action: Not normally visible to the user, except when using name server control program. If the error occurs when using the control program, either provide an one of the existing addresses of the name server or delegate the domain to a new nameserver.

NNC-00500: warning: "*string*" parameter value is illegal, setting to *string*

Cause: The named parameter value is invalid.

Action: Make sure the parameter value is formatted correctly. Valid choices for boolean parameter values are TRUE, FALSE, YES, NO, ON, and OFF.

NNC-00501: warning: "*string*" parameter value must be between *number* and *number*, setting to *number*

Cause: The named parameter value is invalid or outside legal boundary values.

Action: Make sure the parameter value is a number, and falls between valid minimum and maximum values, as specified in the error text.

61

NNO-00050 to NNO-00854

NNO-00050: serious errors in configuration data, server cannot run

Cause: The server''s configuration data has a problem of some sort which prevents the server from starting.

Action: Previous error messages in the log file will specify the exact problems leading to the shutdown. The problem most frequently occurs when the network is broken up into multiple administrative regions and the delegation points are incorrect. Read the Oracle Names documentation sections on region delegation and ensure that their directions are being followed correctly.

NNO-00051: domain count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: The server''s configuration contains more domains than the server can support.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00052: invalid domain description list

Cause: The server''s configuration contains an invalid domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00053: duplicate domain description for domain "*string*"

Cause: The server''s configuration contains duplicate domain descriptions in the domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00054: invalid domain name "*string*"

Cause: The server''s configuration contains a domain description with an invalid name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00055: invalid domain minimum TTL "*string*"

Cause: The server''s configuration contains a domain description with an invalid minimum TTL.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00056: warning: domain minimum TTL must be between *number* and *number*, set to *number* seconds

Cause: The server"s configuration contains a domain description with an invalid minimum TTL. This error is not fatal; the server will automatically set the TTL to a default value which is suitable for most uses.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00057: loading and verifying topology data

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00058: cannot load topology data from configuration database

Cause: An error was encountered while trying to load the server"s topology data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00059: cannot construct topology checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00060: loading server topology from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent topology checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00061: loading data for domain "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00062: cannot load domain data from configuration database

Cause: An error was encountered while trying to load the server"s domain data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00063: cannot construct domain checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00064: loading domain data from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent domain checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00065: loading cached data from checkpoint file "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00066: server will perform reload check of administrative region in *number* seconds

Cause: An informational message written to the log file whenever the Oracle Network Manager or the Oracle Names control program send a reload request to the server.

Action: None

NNO-00067: server reload check countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a reload request previously sent to the server

Action: None

NNO-00068: warning: administrative region check failed, next check in *number* seconds

Cause: this warning is issued whenever the server fails to connect to the configuration database to see if any configuration data has changed. The server will automatically begin reissuing reload checks more frequently, and will eventually give up if connections fail continuously for three days.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database.

NNO-00069: warning: too many administrative region check failures, checking disabled

Cause: a warning issued whenever the server has continuously failed for three days in its attempts to connect to the configuration database. The server disables reload checking. Reload checking can later be re-enabled from the Oracle Network Manager or the Oracle Names control program.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00070: administrative region has changed, reloading domain data

Cause: An informational message written to the log file whenever the server"s configuration has changed, and the server is reloading the new configuration from the configuration database.

Action: None

NNO-00071: cannot construct cache checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00072: loading from region database

Cause: normal

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00073: loading server config from region database

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00074: downloading region from server *string*

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00080: domain "*string*" cannot be delegated because its parent is already delegated

Cause: an internal delegation error has occurred. Delegation is controlled by the Oracle Network Manager, which enforces correct delegation rules.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00081: domain "*string*" has no name servers

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00082: domain "*string*" is missing my name "*string*" as a name server

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00083: domain "*string*" server "*string*" has no addresses

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00084: domain "*string*" is not in the authoritative domain list

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00104: line *string*: syntax error, data ignored

Cause: the server found a syntax error its domain data. This message will also appear if the server"s internal checkpoint files become corrupted. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00105: line *string*: invalid name "*string*", data ignored

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00106: line *string*: invalid TTL "*string*", data ignored

Cause: the server found an invalid TTL in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00107: line *string*: ignoring stale checkpoint data

Cause: an informational message which appears during server startup when the server detects out-of-date cached data in its cache checkpoint file. The message is part of normal server startup.

Action: None

NNO-00108: line *number*: TTL of *number* seconds below domain minimum *number*, using minimum

Cause: the server found an invalid TTL value in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00109: line *string*: invalid data type name "*string*", data ignored

Cause: the server found an invalid data type name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00110: line *string*: unknown data type "*string*", data ignored

Cause: the server found an unknown data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00111: line *string*: data type "*string*" has syntax "*string*", should be "*string*", data ignored

Cause: the server found an invalid data type syntax in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00112: line *string*: ignored duplicate data of type "*string*"

Cause: the server found a duplicate record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00113: line *string*: alias data already exists, all other data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00114: line *string*: other data exists, alias data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00115: line *string*: single-value data type "*string*", other instances ignored

Cause: the server found more than one record with the same name and type, when the type allows only a single record with a particular name. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00116: warning: data type "*string*" in *string* load

Cause: the server found a record with an invalid data type in its domain data.

Action: No action required; adjustments to data will eliminate warning.

NNO-00117: line *string*: missing data type, data ignored

Cause: the server found a record with a missing data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00118: line *string*: data length *string* exceeds maximum of *string*, data ignored

Cause: the server found a record whose length exceeds an internal limit. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00119: line *string*: server not authoritative for name "*string*", data ignored

Cause: the server found a global name in its domain data for which it is not authoritative. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00120: line *string*: topology name "*string*" not allowed here

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00121: LDIF file *string* open failed: error = *number*

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00122: invalid name, data ignored: entry: *string*

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00123: node "*string*" has no authoritative parent, data ignored

Cause: an object in the domain data is apparently not in the domain(s) which the server is authoritative for. The record in question is not loaded, but the server continues to load data.

Action: Check for inconsistencies in the data and correct any errors in topology definition or domain data outside of authoritative domains.

NNO-00150: warning: invalid hint list, no hints loaded

Cause: The server"s configuration contains an invalid hint description list. The server will continue to run, but will not load any hints.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00151: warning: ignoring hint for domain "*string*", server is authoritative

Cause: the server"s configuration contained a hint for a domain in the server"s administrative region. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00152: warning: hint count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: There are too many hints in the server"s hint list. The server will load a specified maximum number of hints, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00153: warning: hint domain *number* has invalid name "*string*", hint domain ignored

Cause: The server"s configuration contains a hont domain with an invalid name. The domain is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00154: warning: hint *number* **has invalid server name "***string***", hint ignored**

Cause: The server"s configuration contains a hint with an invalid server name. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00155: warning: hint *number* **has missing address, hint ignored**

Cause: The server"s configuration contains a hint with no server address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00156: warning: hint *number* **address length** *number* **exceeds maximum of** *number*, **hint ignored**

Cause: The server"s configuration contains a hint whose address length exceeds an internal limit. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00157: warning: hint *number* **has invalid address, hint ignored**

Cause: The server"s configuration contains a hint with an invalid address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00158: warning: hint domain count *number* **exceeds maximum of** *number*, **first** *number* **will be loaded**

Cause: The server"s hint domain list is too long. The server will load a specified maximum number of hint domains, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00159: warning: ignoring duplicate hint domain *number* **name "***string***"**

Cause: The server"s hint domain list contains a duplicate domain. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00160: warning: ignoring duplicate hint server "*string***"**

Cause: The server"s hint server list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00250: invalid administrative region description

Cause: The server encountered an invalid administrative region description during startup. This error will prevent the server from starting. The administrative region description is stored in the server"s names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00251: missing administrative region parameter *string*

Cause: The server"s administrative region description is missing a required parameter. This error will prevent the server from starting. The administrative region description is stored in the server"s names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00252: invalid administrative region parameter *string* value "*string*"

Cause: The server encountered an invalid administrative region parameter. This error will prevent the server from starting. The administrative region description is stored in the server"s names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00253: administrative region parameter *string* length *string* exceeds maximum of *string*

Cause: The server encountered an administrative region parameter whose length exceeds an internal limit. This error will prevent the server from starting. The administrative region description is stored in the server"s names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00254: warning: parameter *string* value must be between *number* and *number*, set to *number* seconds

Cause: The server encountered an administrative region parameter with an invalid value. The value is set to a default suitable for most applications, and the server continues running. The administrative region description is stored in the server"s names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00255: cannot initialize ROS

Cause: The server was unable to initialize ROS during startup. The error prevents the server from running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00256: using administrative region "*string*"

Cause: an informational message which appears during server startup, and notes the name of the administrative region for future diagnostic use by administrators. The message is part of normal server startup.

Action: None

NNO-00257: warning: cannot get serial number from region store

Cause: The server encountered an error while trying to get the configuration database"s serial number. The error occurs almost always because time the server is unable to access the configuration database. If the error occurs during server startup, the server will shut down. If the error occurs during server operation (the server checks the serial number periodically to see if it should reload itself), then the server assumes a transient failure has occurred and repeats the operation a short while later. If the repetitions continue to fail for three days, the server will log another error and stop issuing the serial number load operation.

Action: First make sure that the Netadmin program has exported a server configuration for this name server. Next, make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. If the error occurs during server startup, you can force startup anyway, with checkpoint data, by starting the server with the names.no_region_ database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00258: cannot load configuration from configuration database

Cause: An error was encountered while trying to load the server"s configuration from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00259: configuration tables have not been installed or are inaccessible

Cause: The configuration database has not been properly installed.

Action: Make sure the Oracle Network Manager and its database have been properly installed

NNO-00260: loading configuration data from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent configuration checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00261: cannot construct configuration checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00262: warning: cannot write checkpoint file "*string*"

Cause: the server was unable to write the named checkpoint file. This problem is typically due to the file system"s protection settings. The error is not fatal; it simply means the server will not create any checkpoint data. Note, however, that if the configuration database is ever unavailable during a future server startup, the lack of checkpoint data means you will be unable to force a startup from checkpoint data with the names.no_region_database parameter.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00263: error from configuration database

Cause: the server encountered an error while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00264: configuration database query returned no data

Cause: the server attempted to fetch data from the configuration database and no data was found.

Action: The error generally appears underneath a more specific error which will tell you the exact nature of the problem.

NNO-00265: warning: cannot load data from checkpoint file

Cause: the server was started using checkpoint data, and was unable to read that data. The remaining errors below this one on the error stack provide more specific information about the problem.

Action: Check to see that the named file exists and that the server has permission to read it.

NNO-00266: cannot find document "*string*" in configuration database

Cause: The server encountered an error while trying to get its configuration ID from the configuration database. The error can occur any time the server is unable to access the configuration database. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00267: warning: configuration database contains no data for server "*string*"

Cause: the server successfully contacted the configuration database, but was unable to find any configuration information associated with the server"s name. The name is specified in the server"s names.ora configuration file. The error occurs almost always because the server configuration has not been exported from the Netadmin program.

Action: Make sure that the Netadmin program has exported a server configuration for this name server.

NNO-00268: warning: configuration database is not used, using checkpoint data instead

Cause: An informational message indicating that the server has been started with the names.no_region_database parameter set to TRUE, and that it will use checkpoint data rather than attempting to contact the configuration database.

Action: None

NNO-00269: configuration database is version *string*, **server requires at least version** *string*

Cause: The server cannot use the specified configuration database because it is of an incorrect version.

Action: Run the document conversion utility supplied with the Network Manager and re-export your network. The conversion utility will upgrade old documents to a version which can be understood by the name server.

NNO-00270: ORACLE error *string*

Cause: An ORACLE error was encountered while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00271: warning: names.ora region is version *string*, **network definition is version** *string*

Cause: The region description in names.ora is out of synch with the network definition.

Action: No action is required unless the name server cannot run with the network definition. To be safe names.ora should be updated with one which is consistent with the network definition.

NNO-00272: line *string*; **invalid DIT/DN**

Cause: There is a syntax error in the DIT/DN provided in the region description.

Action: Correct the error and restart the server.

NNO-00300: no listen addresses specified, at least one is required

Cause: the server"s configuration is missing addresses on which to listen.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00301: server will shut down in *number* **seconds**

Cause: An informational message written to the log file when the server receives a shutdown request from the Oracle Names control program.

Action: None

NNO-00302: server stopped

Cause: An informational message written to the log file when the server shuts down.

Action: None

NNO-00303: server "*string***" started with process ID** *number*

Cause: An informational message written to the log file when the server successfully starts up.

Action: None

NNO-00304: listen address *string* **length** *string* **exceeds maximum of** *string*

Cause: the length of one of the server"s listen addresses exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00305: trace level changed from *number* **to** *number*

Cause: An informational message written to the log file when the server changes its trace level in response to a request from the Oracle Names control program.

Action: None

NNO-00306: server shutdown countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a shutdown request previously sent to the server

Action: None

NNO-00307: invalid server name "*string***"**

Cause: the server"s name is invalid. The name is specified in the server"s names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00308: server will restart in *number* **seconds**

Cause: An informational message written to the log file when the server receives a restart request from the Oracle Names control program.

Action: None

NNO-00309: server restarting

Cause: An informational message written to the log file when the server restarts.

Action: None

NNO-00310: server restart countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a restart request previously sent to the server

Action: None

NNO-00311: invalid listen address list

Cause: the server"s configuration contains an invalid listen address list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00312: listen address *string* **is invalid**

Cause: the server"s configuration contains an invalid listen address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00313: server password length *string* **exceeds maximum of** *string*

Cause: the server"s password length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00314: error changing trace level from *number* **to** *number***, level change ignored**

Cause: the server encountered an error while changing its trace level in response to a request from the Oracle Names control program.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00315: server is listening on address *string*

Cause: An informational message written to the log file during server startup.

Action: None

NNO-00316: statistic counter reset disabled

Cause: An informational message written to the log file when the server disables statistic counter resetting in response to a request from the Oracle Names control program.

Action: None

NNO-00317: statistic counter reset interval changed to *number* **seconds**

Cause: An informational message written to the log file when the server changes its statistic counter reset interval in response to a request from the Oracle Names control program.

Action: None

NNO-00318: overriding next statistic counter reset, resetting in *number* **seconds**

Cause: An informational message written to the log file when the server resets its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00320: missing server name parameter

Cause: the server could not find a names.server_name parameter. The name is specified in the server''s names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00321: statistic counter dump disabled

Cause: An informational message written to the log file when the server disables statistics dumping in response to a request from the Oracle Names control program.

Action: None

NNO-00322: statistic counter dump interval changed to *number* **seconds**

Cause: An informational message written to the log file when the server changes its statistic dump interval in response to a request from the Oracle Names control program.

Action: None

NNO-00323: overriding next statistic counter dump, dumping in *number* **seconds**

Cause: An informational message written to the log file when the server dumps its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00326: server statistic counter dump follows

    Cause: An informational message written to the log file at the beginning of a statistic dump. The message is followed by a set of server statistics, and ends with another informational message indicating the dump has finished.

    Action: None

NNO-00327: server statistic counter dump ends

    Cause: An informational message written to the log file at the end of a statistic dump. The message is preceded by a set of server statistics.

    Action: None

NNO-00328: server has reset statistic counters to zero

    Cause: An informational message written to the log file when the server resets its statistic counters to zero in response to a request from the Oracle Names control program.

    Action: None

NNO-00329: server will save the config file in *number* **seconds**

    Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

    Action: None

NNO-00330: server saved the config file "*string***".**

    Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

    Action: None

NNO-00331: error saving new value *string* **of** *string* **to the save config table.**

    Cause: An informational message written to the log file when the a set operation is performed and the change cannot be saved in the save config ptable, but should be.

    Action: None

NNO-00332: warning: region store serial number reduced from *number* **to** *number*

    Cause: An informational message written to the log file when the server finds the region database has its serial number set lower than it was when the server previously loaded the region data. This is an unnatural condition- every update to the region should increment the serial number so a reduction of the serial number might reflect tampering or accidental manual alteration this and possibly other region tables.

    Action: Administrators should find out how/why the serial number decreased.

NNO-00333: warning: ROS admin_region types obsolete; using SQL

    Cause: the value set in names.admin_region is an obsolete ROS type

    Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00334: region load failure: ROS admin_region type *number* **unsupported**

    Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00600: warning: forwarder count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: the server"s configuration contains too many default forwarders. The server loads a specified maximum number of forwarders, ignores the rest, and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00601: warning: no forwarders, DEFAULT-FORWARDERS-ONLY mode ignored

Cause: the server"s configuration enables DEFAULT-FORWARDERS-ONLY mode but the configuration contains no default forwarders. The server ignores the request and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00602: warning: forwarder *number* has invalid address, forwarder ignored

Cause: One of the forwarders in the default forwarder list has an invalid address. The forwarder definition is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00603: enabling all request processing

Cause: An informational message written to the log file when the server enables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00604: disabling all request processing

Cause: An informational message written to the log file when the server disables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00605: enabling modification requests

Cause: An informational message written to the log file when the server enables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00606: disabling modification requests

Cause: An informational message written to the log file when the server disables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00607: server will forward to default forwarders only

Cause: An informational message written to the log file when the server"s configuration enables DEFAULT-FORWARDERS-ONLY mode.

Action: None

NNO-00608: received corrupted message

Cause: The server received a corrupted request. The request is ignored.

Action: corrupted requests are usually caused by transient network problems. If many corrupted messages are received, turn on tracing for further information. If the errors persist, contact Worldwide Customer Support.

NNO-00609: warning: forwarder *number* address length *number* exceeds maximum of *number*, ignored

Cause: the server"s configuration contains a forwarder address whose length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00610: detected possible alias loop involving name "*string*"

Cause: the server detected an alias loop involving the specified name. An alias loop occurs when an alias "X" points to another alias "Y", which points back to "X" rather than to an address or other name server data. The loop can contain more hops but the basic idea remains the same. Loops occur when administrators mis-enter network data, particularly when an alias in one administrative region points to data in another administrative region.

Action: Use the Oracle Names control program to query for the specified name. The control program will describe the alias path, and you can use that information to find which names are incorrect and what administrative regions the incorrect data belongs to.

NNO-00611: disabling request forwarding

Cause: An informational message written to the log file when the server disables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00612: enabling request forwarding

Cause: An informational message written to the log file when the server enables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00613: disabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server disables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00614: enabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server enables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00615: disabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server disables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00616: enabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server enables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00617: enabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server enables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00618: disabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server disables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00622: warning: too many auto-refresh failures for name "*string*", query expired

Cause: If an auto-refresh query is issued and continuously returns an error for three days, the query is removed from the auto-refresh queue and a warning logged. The query can be restarted from the Oracle Names control program.

Action: this message will be preceded by numerous warnings that the query in question is failing. Use the Oracle Names control program to describe the failing query. Make sure the server being queried is running and that there is network connectivity between the querying server and the server being queried.

NNO-00623: setting auto-refresh retry interval to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh retry interval in response to a request from the Oracle Names control program.

Action: None

NNO-00624: setting auto-refresh expiration period to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh expiration period in response to a request from the Oracle Names control program.

Action: None

NNO-00625: overriding auto-refresh of name "*string*", type "*string*", refresh in *number* seconds

Cause: An informational message written to the log file when the server changes the time when an auto-refresh query is next issued. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00626: cannot enable DEFAULT-FORWARDERS-ONLY mode, no default forwarders exist

Cause: the Oracle Names control program issued a request to enable DEFAULT-FORWARDERS-ONLY mode, and the request was ignored because the server has no default forwarders.

Action: None

NNO-00627: cancelling auto-refresh of name "*string*", type "*string*"

Cause: An informational message written to the log file when the server removes a query from the auto-refresh queue in response to a request from the Oracle Names control program.

Action: None

NNO-00628: setting maximum reforwards per query to *number*

Cause: An informational message written to the log file when the server changes its maximum-reforward count in response to a request from the Oracle Names control program.

Action: None

NNO-00629: warning: invalid forwarder list, no default forwarders loaded

Cause: The server"s configuration contains an invalid forwarder description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00630: setting request-processing delay to *number* seconds

Cause: An informational message written to the log file when the server sets an artificial request-processing delay in response to a request from the Oracle Names control program.

Action: None

NNO-00631: warning: forwarder *number* has invalid name "*string*", forwarder ignored

Cause: The server"s configuration contains a forwarder description with an invalid server name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00632: warning: forwarder *number* has missing address, forwarder ignored

Cause: The server"s configuration contains a forwarder description with a missing address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00633: detected fatal delegation loop involving server "*string*"

Cause: the server detected a fatal delegation loop while forwarding a request. A loop occurs when the server"s topology data indicates that it should forward a request to itself. The server immediately shuts down in response to this error.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00634: received authoritative name "*string*" when we are its authority

Cause: a server "X" received authoritative data from another server "Y" when server "X" is also authoritative for the data. Such situations should never arise

because if server "X" is authoritative for the requested data, it should never forward the request to another server.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00635: warning: ignoring duplicate forwarder "*string*"

Cause: The server"s default forwarder list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00700: warning: cannot checkpoint the cache, trying again in *number* seconds

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00701: warning: cannot construct checkpoint file name, checkpointing disabled

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00702: cache checkpointing disabled

Cause: An informational message written to the log file when the server disables cache checkpointing in response to a request from the Oracle Names control program.

Action: None

NNO-00703: checkpoint interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its cache checkpoint interval in response to a request from the Oracle Names control program.

Action: None

NNO-00705: warning: cannot open checkpoint file "*string*", checkpointing disabled

Cause: the server was unable to open the named checkpoint file for writing. This problem is typically due to the file system"s protection settings. The error is not fatal; it simply means the server will not checkpoint its cache.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00706: overriding next cache checkpoint, checking in *number* seconds

Cause: An informational message written to the log file when the server checkpoints its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00707: server"s cache will be flushed in *number* seconds

Cause: An informational message written to the log file when the server flushes its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00708: cache flush countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache flush request previously sent to the server

Action: None

NNO-00709: failed delete of cache checkpoint file "*string*", cache flush may not work

Cause: the server attempted to flush its cache, which also deletes the cache checkpoint file. The file deletion failed, although the rest of the cache flush succeeded. Succeeding errors describe the reason for the deletion failure.

Action: This error typically occurs when two cache-flush operations are issued in succession without an intervening cache checkpoint operation (which would recreate the file). The first deletes the cache file, the second attempts to do so, but fails since the file has already been deleted. In such cases, the message is harmless and can be ignored. If, however, the error occurs because the server lacks permission to delete the file, then you must change the file system permissions so the server is allowed to delete the file.

NNO-00710: server''s cache will be dumped to the trace file in *number* seconds

Cause: An informational message written to the log file when the server dumps its cache to the trace file in response to a request from the Oracle Names control program.

Action: None

NNO-00711: cache dump countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache dump request previously sent to the server

Action: None

NNO-00712: warning: group *string* cache checkpoint failed

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00800: Error: cannot read version from config database

Cause: The query for the region database version failed. The database may be shut down, or the tables may not exist in the schema specified in names.ora.

Action: Correct any access problems accordingly.

NNO-00801: Error: OCI_SUCCESS_WITH_INFO: *string*

Cause: Diagnostic information was returned from OCI during region database access.

Action: None

NNO-00802: Error: OCI_NEED_DATA

Cause: The server did not provide sufficient data to the OCI interface while accesing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00803: Error: OCI_INVALID_HANDLE

Cause: The server called OCI with an invalid handle whilc accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00804: Error: OCI_STILL_EXECUTE

Cause: An OCI operation between the server and the database is still in progress.

Action: None

NNO-00805: Error: OCI_CONTINUE

Cause: Not possible.

Action: None

NNO-00806: Error: OCI_ERROR: *string*

Cause: An OCI occurred accessing the region database. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00807: End of Fetch: OCI_NO_DATA

Cause: All rows have been returned from the region table.

Action: None

NNO-00808: Error connecting to region database

Cause: Not possible.

Action: None

NNO-00809: Unknown OCI error: *number*

Cause: Not possible.

Action: None

NNO-00850: Error: LDAP query returns *string*

Cause: The LDAP API returned an error. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00851: LDAP open/bind failed: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00852: failed to get LDAP entry: error = *number*

Cause: the server could not retrieve query entries from the LDAP API.

Action: Find the cause of the error and correct it and restart the server.

NNO-00853: failed to get LDAP attribute/value: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00854: error unbinding LDAP: error = *number*

    Cause: the server failed to connect to the LDAP directory.

    Action: Find the cause of the error and correct it and restart the server.

62

NNL-00001 to NNL-01078

NNL-00001: request argument "*string*" is invalid

Cause: The user entered an invalid request command argument.

Action: Supply a valid argument.

NNL-00002: request argument "*string*" is not allowed with this operation

Cause: The user entered a request command argument which is not valid with the particular request command.

Action: Supply a valid argument.

NNL-00003: memory exhausted

Cause: The program has run out of memory

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

NNL-00004: invalid command argument "*string*"

Cause: The user entered an invalid command argument.

Action: Supply a valid argument.

NNL-00005: no server has been set. Use the "SET SERVER" command first

Cause: The user attempted to issue a command which requires that a default managed Oracle Names server be set first.

Action: Use the SET SERVER command to set your default server, then reissue the command. Alternatively, if the command allows, re-issue it with a specific server name so the control program does not need to use the default.

NNL-00006: timeout, server is not responding

Cause: The control program issued a request to an Oracle Names server and no response arrived in a timely fashion. The network connection between the control program and the server may be faulty, the server may be very heavily loaded, or there may be substantial network delays between the control program and the server. The latter is especially true for WAN links.

Action: Reissue the command; if it continues to fail, check to see that the server being managed is running correctly and that the network connection between the server and the control program is working correctly.

NNL-00007: server responded with an error

Cause: The control program issued a request to an Oracle Names server and the server responded with an error.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00008: request not understood by server

Cause: The control program issued a request to an Oracle Names server and the server did not understand the request.

Action: If the server and the control program have different versions, they may be unable to communicate. Check your documentation for version compatibility constraints. If the server and control program are compatible, turn on tracing for further details, and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00009: encryption of server password failed

Cause: The control program attempted and failed to encrypt a server password, supplied either through the SET PASSWORD command or the namesctl.server_ password configuration parameter.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00010: error getting address for server "*string*"

Cause: s for the failure. The control program"s SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. If the user has changed managed servers with the SET SERVER command, the new server must be running, and must be able to resolve the address or forward the request to another server which can resolve the address. Alternatively, a TNSNAMES.ORA file with valid name server names and addresses must exist in the correct system-specific location.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00011: no server with name "*string*" exists

Cause: The user issued a SET SERVER request and the current managed Oracle Names server was unable to translate that name into an address. Alternatively, the user issued a control program request to a specific server, and that server"s name could not be translated into an address. Both problems are almost always caused by mis-typing the server name.

Action: Re-issue the request with a valid server name.

NNL-00012: invalid "*string*" value "*string*"

Cause: The first argument is a data type, the second is a value. The user supplied an invalid data value of the specified type.

Action: Re-issue the failing operation with correct data.

NNL-00013: not performed, permission denied for supplied password

Cause: The user issued a request to an Oracle Names server, and the password supplied with the request was incorrect.

Action: Check to see that the password sent by the control program to the server is correct for that server. You can set a new password with the SET PASSWORD control program command.

NNL-00014: unknown data type "*string*"

Cause: The user issued a name server request which contained an unknown data type.

Action: It is possible that the server had no information on the type, but automatically fetched it in response to the failing request. Re-issue the failing request; if the server has in the meantime fetched the appropriate data type information, the error will go away. If the error persists, the data type is probably invalid.

NNL-00015: type "*string*" has "*string*" syntax, which has no textual representation

Cause: Not all data type syntaxes can be represented as text. This message indicates that the user issued a name server request for a type with an non-textual representation.

Action: Re-issue the operation with a data type that has a syntax with a textual representation.

NNL-00016: cannot start server, error getting program directory"s name

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the name of the directory where the server executable resides.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00017: cannot start server, program "*string*" does not exist

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the server executable.

Action: Make sure that a copy of the server executable exists in your system"s oracle executable directory.

NNL-00018: warning: could not contact default name server

Cause: The control program was unable to contact its default name server during startup. There are a number of possible causes for this error. The control program"s SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server.

Action: Check to see that all of the above are true. If the control program is still unable to contact its default server, turn on tracing and restart the control program. If the error persists, contact Worldwide Customer Support.

NNL-00019: warning: server either changed or ignored your request

Cause: The user issued a request to an Oracle Names server and that request was altered in some way. Typically the user specified an invalid argument of some sort, and the server either ignored the request, or replaced the invalid argument with a reasonable default.

Action: Use the control program to check the current state of the value that you attempted to change. The server"s log file may also contain information about the exact cause of the problem. Re-issue the operation with correct arguments.

NNL-00020: warning: no TNSNAMES.ORA file and no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find a TNSNAMES.ORA file and was unable to find a default name server in SQLNET.ORA. The control program will

operate in this state, but will be unable to resolve any names until a default server has been set, and that server must be set using its raw TNS address.

Action: The control program"s SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server. Alternatively, a TNSNAMES.ORA file with valid name server information must exist in the correct system-specific location.

NNL-00022: error changing trace level from *string* to *string*, level change ignored

Cause: The user attempted to change the control program"s local trace level, and the program encountered an error while changing the level. Usually the problem is that tracing was enabled for the first time (by changing the trace level from OFF to something else) and the trace file is not writeable by the control program.

Action: Check to see that the trace file is writeable. Your documentation will tell you the name of the trace file.

NNL-00023: SET command is missing an argument

Cause: The user attempted to issue a SET command with no argument.

Action: Supply a valid argument to the SET command.

NNL-00024: warning: no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find any preferred name servers in SQLNET.ORA, and will therefore not connect to a default server.

Action: Make sure that the SQLNET.ORA file contains a valid names.preferred_ servers entry.

NNL-00035: File *string* or nested IFILEs not found.

Cause: Error in loading from the tnsfile.

Action: None

NNL-00036: No records loaded

Cause: No loadable data.

Action: None

NNL-00037: Error *number* while sequencing through parameter table.

Cause: The NL Parameter system reported an error while retrieving the next name from the table.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00038: Distinguished Name syntax error

Cause: Distinguished Name incorrectly specified.

Action: Supply a valid DN.

NNL-00039: no RRs

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00040: Distinguished Name exceeds buffer length: *string*

Cause: Distinguished Name derived from Domain Name is too long.

Action: Either move the object to a domain whose name is shorter or manually update the LDAP object.

NNL-00041: Object *string* **not in domain** *string*

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00042: LDAP bind failure: *number***,** *string*

Cause: Call to ldap_bind failed with return set to given number.

Action: Correct user/pwd parameters or definitions.

NNL-00043: LDAP open failure

Cause: LDAP server could not be contacted.

Action: Correct connect info or server unavailability.

NNL-00044: Unsupported data type *string* **not mapped**

Cause: ONames data type could not be mapped to LDAP attributes

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00045: No host given for LDAP server

Cause: LDAP open will dump core without a host.

Action: Provide appropriate host with "-h" option.

NNL-00046: Name *string* **exceeds DN template depth**

Cause: There are more domains in the name than are specified in the DN template.

Action: Add fields to the template or migrate subdomains with separate dump operations.

NNL-00047: LDAP modify returned error: 0x*number***,** *string*

Cause: LDAP failed with the return code shown.

Action: Refer to LDAP documentation for the meaning of the error.

NNL-00048: Error opening file: *string*

Cause: Named file cannot be opened.

Action: Provide for access to file.

NNL-00049: Output in *string* **cannot be renamed to** *string*

Cause: The given file cannot be created.

Action: Insure that the file specified can be created before running the command. Or use the temporary file itself.

NNL-00201: Shutdown occurs in *string*

Cause: Control program general message.

Action: None

NNL-00202: No shutdown currently scheduled

Cause: Control program general message.

Action: None

NNL-00203: Scheduled shutdown to occur in *string*

Cause: Control program general message.

Action: None

NNL-00204: Cancelled shutdown

Cause: Control program general message.

Action: None

NNL-00205: Reload check occurs in *string*

Cause: Control program general message.

Action: None

NNL-00206: No reload check currently scheduled

Cause: Control program general message.

Action: None

NNL-00207: Scheduled reload check to occur in *string*

Cause: Control program general message.

Action: None

NNL-00208: Cancelled reload check

Cause: Control program general message.

Action: None

NNL-00209: Cache checkpoint interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00210: Cache checkpointing is currently disabled

Cause: Control program general message.

Action: None

NNL-00211: Cache checkpoint interval is now *string*

Cause: Control program general message.

Action: None

NNL-00212: Cache checkpointing is now disabled

Cause: Control program general message.

Action: None

NNL-00213: No entry with specified index number, try "SHOW SYSTEM_ QUERIES"

Cause: Control program general message.

Action: None

NNL-00214: Next auto-refresh for specified index number occurs in *string*

Cause: Control program general message.

Action: None

NNL-00215: Scheduled specified index number''s next auto-refresh to occur in *string*

Cause: Control program general message.

Action: None

NNL-00216: Disabled auto-refresh for specified index number
    Cause: Control program general message.

    Action: None

NNL-00217: Controller is sleeping for *number* seconds
    Cause: Control program general message.

    Action: None

NNL-00218: Ignoring spurious trailing text "*string*"
    Cause: Control program general message.

    Action: None

NNL-00219: Statistic counter logging interval is currently *string*
    Cause: Control program general message.

    Action: None

NNL-00220: Statistic counter logging is currently disabled
    Cause: Control program general message.

    Action: None

NNL-00221: Statistic counter logging interval is now *string*
    Cause: Control program general message.

    Action: None

NNL-00222: Statistic counter logging is now disabled
    Cause: Control program general message.

    Action: None

NNL-00223: Statistic counters are next logged in *string*
    Cause: Control program general message.

    Action: None

NNL-00224: Scheduled statistic counters to be logged in *string*
    Cause: Control program general message.

    Action: None

NNL-00225: Currently managing name server "*string*"
    Cause: Control program general message.

    Action: None

NNL-00226: Current request-processing delay is *string*
    Cause: Control program general message.

    Action: None

NNL-00227: Request-processing delay is currently disabled
    Cause: Control program general message.

    Action: None

NNL-00228: Request-processing delay is now *string*
    Cause: Control program general message.

    Action: None

NNL-00229: Request-processing delay is now disabled
    Cause: Control program general message.
    Action: None

NNL-00230: Controller NOCONFIRM mode is currently *string*
    Cause: Control program general message.
    Action: None

NNL-00231: Controller NOCONFIRM mode is now *string*
    Cause: Control program general message.
    Action: None

NNL-00232: Auto-refresh failure-retry interval is currently *string*
    Cause: Control program general message.
    Action: None

NNL-00233: Auto-refresh failure-retry interval is now *string*
    Cause: Control program general message.
    Action: None

NNL-00234: Auto-refresh failure-retry expiration period is currently *string*
    Cause: Control program general message.
    Action: None

NNL-00235: Auto-refresh failure-retry expiration period is now *string*
    Cause: Control program general message.
    Action: None

NNL-00236: Statistic counter reset interval is currently *string*
    Cause: Control program general message.
    Action: None

NNL-00237: Resetting of statistic counters is currently disabled
    Cause: Control program general message.
    Action: None

NNL-00238: Statistic counter reset interval is now *string*
    Cause: Control program general message.
    Action: None

NNL-00239: Resetting of statistic counters is now disabled
    Cause: Control program general message.

63

NPL-00100 to NPL-00420

NPL-00100: cannot initialize ASN.1 context

Cause: The ASN.1 program interface could not be initialized, probably because its error message file could not be found.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NPL-00101: uninitialized ASN.1 context

Cause: The ASN.1 program interface received an uninitialized ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00102: missing stream functions in ASN.1 context initialization

Cause: An internal function imporoperly attempted to initialize an ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00103: unusable ASN.1 context

Cause: The ASN.1 program interface received an unusable ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00300: maximum ASN.1 element nesting depth *string* exceeded on read

Cause: An ASN.1 construct is too complex for the program interface to read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00301: maximum ASN.1 element nesting depth *string* exceeded on write

Cause: An ASN.1 construct is too complex for the program interface to write.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00302: ASN.1 type tag is greater than maximum of 16383

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00303: uninitialized ASN.1 class attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00304: uninitialized ASN.1 tag attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00305: unsupported ASN.1 "UNIV" type *string*

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00307: ASN.1 sequence has already been ended on write

Cause: An internal function attempted to end an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00308: requested ASN.1 class *string* does not match received class *string*

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00309: requested ASN.1 type tag *string* does not match received type tag *string*

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00310: ASN.1 sequence has already been ended on read

Cause: An internal function attempted to finish reading an ASN.1 construct which has already been completely read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00311: cannot end constructed ASN.1 encoding, *string* encoding octets unread

Cause: An internal function attempted to finish reading an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00312: attempt to put ASN.1 "UNIV" type with illegal tag *string*

Cause: An internal function attempted to create an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00313: requested form *string* does not match actual form *string*

Cause: An internal function received an ASN.1 construct different from that expected.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00410: incoming ASN.1 value too large (*string* octets) to store locally

Cause: The ASN.1 protocol engine was unable to translate an ASN.1 construct to its host representation because the construct was too big.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00411: incoming ASN.1 NULL encoding has nonzero length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00412: incoming ASN.1 BOOLEAN encoding has incorrect length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00413: incoming ASN.1 encoding has length *string*, maximum allowed is *string*

Cause: The ASN.1 protocol engine received an ASN.1 construct too large for it to process.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00414: incoming ASN.1 type tag is greater than maximum of 16383

Cause: The ASN.1 protocol engine received an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00415: received unsupported ASN.1 INDEFINITE-LENGTH encoding

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00416: received illegal ASN.1 encoding length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00417: received ASN.1 length octet count greater than maximum of *string*

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it..

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00418: received malformed ASN.1 object identifier

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00419: received ASN.1 object identifier with sub-identifier that is too large

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00420: received ASN.1 object identifier with more than 256 sub-identifiers

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

64

NNF-00001 to NNF-04009

NNF-00001: Not a TNS address

Cause: While asking to read an address the name service returned a record which was not an address.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00002: Invalid value passed to function call

Cause: An invalid value was passed to an interface function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00003: Naming adapter *string* does not exist

Cause: The requested name service adapter was not found in the current adapter table.

Action: Check the spelling of the adapter reqested. Verify that the adapter runs on this platform, and the adapter is compiled into the adapter table linked into the executable.

NNF-00004: Operation not supported in *string*

Cause: The operation requested is not supported under this adapter.

Action: Verify that the operation being performed is not under restriction, such as writing to read-only name service. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00005: Functionality not implemented

Cause: The operation requested is not supported in this implementation.

Action: If this is retrieved from a production release, contact Worldwide Customer Support. Otherwise, check the release notes as to the restrictions in this release.

NNF-00110: no values exist

Cause: Test program help text.

Action: None

NNF-00540: Failed to insert name: *string*

Cause: Failed to insert name into the native service.

Action: Verify that the name is not already in the native namespace and the appropriate access permissions are set for the namespace.

NNF-01001: ds_initialize: workspace initialization failed

Cause: The DCE workspace as setup by ds_initialize() failed to initialize.

Action: Verify that conditions necessary for a successful ds_initialize() call are present on this platform (e.g is there enough memory?). Check that there is not another workspace user in this program. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01002: DCE could not open configuration file

Cause: A DCE call returned an error that it could not access its configuration file.

Action: Check that the DCE configuration file for this platform is present, and accessable. On Unix this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01003: DCE could not find cell name

Cause: A DCE call returned an error that it could not find the cell name in its configuration file.

Action: Check that this machine has been configured for a DCE cell. Chcek that the DCE configuration file is not corrupted. On Unix, this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01004: DCE returned unspecified error *string*

Cause: A DCE call returned an status that was not in this implementation"s list of possible status values for this DCE call.

Action: Verify that this platform"s DCE release is not beyond those supported by this Oracle application. If the error persists, contact Worldwide Customer Support.

NNF-01005: Internal XOM class violation

Cause: A DCE XOM call returned statuses inconsistent with the class definitions in the DCE documentation.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01006: Attribute *string* not available

Cause: A insertion call attempted to use an attribute which did not have a translation to a DCE attribute.

Action: Use another attribute, or insert the translation into DCE.

NNF-01007: DCE long strings are not supported

Cause: A query returned a object which has a XOM OM_S_LONG_STRING. The current implementation does not support such objects.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01008: XDS attribute syntax *string* incorrect for Oracle Names syntax *string*

Cause: The syntax as specified in the XDS object is different than that which is expected for the given Oracle names syntax.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-02001: NIS client error string: *string*

Cause: A call to an NIS (YP) function failed. This message contains the text of the NIS error code returned.

Action: Should only be visible when returned as part of another error. If the error persists, contact Worldwide Customer Support.

NNF-02002: NIS value does not conform to adapter schema: *string*

Cause: The values in the maps used by the NIS adapter must conform to a specific set of internal formatting rules. This value returned did not conform to those rules.

Action: Should not be visible, unless you are attempting to create your own maps. If the error persists, contact Worldwide Customer Support.

NNF-02003: Unknown NIS error code: *string*

Cause: An error code returned by a NIS (YP) function was not in the list expected by this program.

Action: Verify that the error is generated by the YP functions on this platform. Notify Worldwide Customer Support of the error.

NNF-02004: NIS map *string* **does not exist**

Cause: The requested attribute does not exist.

Action: For an unused attribute, no action is required, as this is the expected error. Otherwise, add the attribute and reload the NIS (YP) maps.

NNF-02005: NIS key *string* **does not exist in map** *string*

Cause: The requested name was not found.

Action: For an unused name, no action is required, as this is the expected error. Otherwise, add the name to the map and reload the NIS (YP) maps.

NNF-03002: Unknown BIND error code: *string*

Cause: The return code in the BIND (DNS) query response did not conform to those values listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03003: Format error parsing server response

Cause: The query response packet returned from the BIND (DNS) API did not conform to the format listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03004: DNS Class mismatch (*string* **)**

Cause: The query response packet returned a class different from the ones expected by the interface.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-04000: File succesfully converted

Cause: The requested conversion is performed.

Action: Normal condition, no action necessary.

NNF-04001: Error converting input file

Cause: The input file contains lines that cannot be converted by the conversion program.

Action: Check that the syntax of the input file is correct.

NNF-04002: Outputfile already exists

Cause: An old output file already exists in the current directory

Action: Remove the existing file, and restart the conversion tool

NNF-04003: Entry in inputfile is too long

Cause: The makedbm program, limits entries in mapfiles to 1017 characters. Therefor, the conversion tool will not process TNS addresses which are longer than 1017 characters.

Action: Shorten the offending entry.

NNF-04004: Invalid string in inputfile

Cause: the input file contains invalid lines.

Action: Check that the syntax of the input file is correct.

NNF-04005: Cannot open inputfile

Cause: The specified input file could not be found.

Action: restart the conversion tool with the correct input file.

NNF-04006: Could not create outputfile

Cause: An output file could not be created in the current working directory

Action: Change the permissions of the current directory and restart the conversion tool.

NNF-04007: Error reading input file

Cause: A problem while reading the input file. This could be caused by an unexpected end of file in the input file.

Action: Check that the file is intact and that the syntax of the input file is correct.

NNF-04008: Error writing outputfile

Cause: An error occured while writing to the output file.

Action: Check available disk space. If the error persists, contact Worldwide Customer Support.

NNF-04009: Usage: tns2nis <filename>

Cause: The conversion tool was not invoked properly. The filename should either be tnsnames.ora or native.ora

Action: Restart the conversion tool with the proper parameter.

65

NMP-00001 to NMP-00011

NMP-00001: value too big

    Cause: The SNMP program interface received a value too large for it to process. This error is usually displayed underneath an error which describes in more detail the value which caused the problem.

    Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00002: no such SNMP variable name

    Cause: An SNMP request was not processed because the one or more of the variable names in the request does not exist. This error is not normally visible to the user except in a trace file, where it is usually part of a "soft" error condition which is normal.

    Action: The error may indicate that a managed server does not support an operation requested by its control program, perhaps because of version incompatibility. For further details, turn on tracing and re-execute the failing operation. If the error persists, and does not occur as part of a "soft" error condition as noted in the trace file, contact Worldwide Customer Support.

NMP-00003: bad SNMP variable value

    Cause: The SNMP program interface received a variable value which has an unsupported data type. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

    Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00004: SNMP variable is read only

    Cause: The user attempted to change a variable value at a remote server, and that variable is read-only. This error is usually displayed underneath an error which describes the problem in more detail.

    Action: Read-only variables may never be modified.

NMP-00005: general SNMP error

    Cause: an SNMP error occured which did not fall under the heading of any other more specific error condition. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00006: uninitialized SNMP context

Cause: An internal function attempted to use an uninitialize SNMP handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00007: I/O failure

Cause: The SNMP program interface attempted to send or receive an SNMP request and was unable to do so because of a network failure of some sort. This error is usually displayed underneath an error which describes the problem in more detail. The problem typically occurs when a control program is attempting to communicate with a service and either that service has unexpectedly terminated or the network path between the control program and the service has been interrupted.

Action: None

NMP-00008: SNMP message has incorrect version, version 0 is required

Cause: The SNMP program interface received a protocol request with an illegal version number. This error may occur if a standard SNMP network monitor is sending malformed requests to an Oracle service through an SNMP-to-TNS gateway.

Action: Ensure that the management platform in question is sending SNMP requests with the correct version number. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00009: SNMP initialization failure

Cause: The SNMP program interface could not be initialized, either because its error message file could not be found, or because there is a malformed snmp.communities parameter value in the parameter table.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations. Turn on tracing and look for parameter table load errors.

NMP-00010: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NMP-00011: internal SNMP program interface error

Cause: An internal error occurred inside the SNMP program interface. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

66

NCR-00001 to NCR-04028

NCR-00001: NCR: Could not allocate memory

    Cause: Insufficient swap space or system memory.

    Action: Increase swap space or system memory.

NCR-00002: NCR: Invalid usage

    Cause: Bad function parameter.

    Action: Check function call.

NCR-00003: NCR: Initialization failure

    Cause: Usually insufficient swap space or system memory.

    Action: Increase swap space or system memory.

NCR-01003: NCRS: Read error.

    Cause: Failed to read data from an input device.

    Action: Check the input device driver return code for further information.

NCR-01004: NCRS: Write error.

    Cause: Failed to write data to an output device.

    Action: Check the output device driver return code for further information.

NCR-01005: NCRS: Failed to flush the output buffer.

    Cause: Failed to write data in the output buffer to an output device.

    Action: Check the output device driver return code for further information.

NCR-01006: NCRS: Data buffer overflow.

    Cause: An attempt to read or write data outside of a given data buffer.

    Action: Check data buffer size.

NCR-01007: NCRS: Operation is not supported in a given mode.

    Cause: Attempt to perform an operation which is not supported for the current mode.

    Action: See documentation for a list of work modes and supported operations.

NCR-01008: NCRS: Failed to obtain transport parameters.

    Cause: Could not identify transport layer parameters.

    Action: Check the transport layer return code for further information.

NCR-01009: NCRS: Record handling error.

Cause: Encountered an invalid record or an attempt to read beyond last record.

Action: See documentation for description of record handling methods.

NCR-01010: NCRS: Invalid network address length.

Cause: Network address size is set to 0.

Action: See documentation for valid network address sizes.

NCR-01011: NCRS: Send message failure.

Cause: Failed to send a message over network.

Action: Check the network interface return code for further information.

NCR-01012: NCRS: Receive message failure.

Cause: Failed to receive a network message.

Action: Check the network interface return code for further information.

NCR-01013: NCRS: Unvalid connection type.

Cause: Connection type is other than stream or message.

Action: See documentation for description of connection types.

NCR-01018: NCRS: Encryption failure.

Cause: Can not do the encryption for the data.

Action: See the SNS documentation for more information.

NCR-01019: NCRS: Checksumming failure.

Cause: Can not add the checksumming for the data.

Action: See the SNS documentation for more information.

NCR-01020: NCRS: Operation would block.

Cause: An I/O operation returned with no data read/written because the transport connection is "non-blocking" and, to succeed, the operation would have needed to block.

Action: This is a soft error; retry the operation.

NCR-02003: NCRF: Invalid type passed to format interpreter.

Cause: The format interpreter was given a data type it did not recognize.

Action: Check the types returned to the interpreter from either the type callback routine or from the type context structure.

NCR-02004: NCRF: Invalid format interpreter type context

Cause: The format interpreter was given an invalid type context.

Action: This error usually happens due to an improperly described aggregate. For example, declaring NCRF_END_STRUCT_DATA_TYPE within a context, without a complementary NCRF_STRUCT_DATA_TYPE, is invalid.

NCR-02005: NCRF: Invalid session mode

Cause: The data format layer received a session mode other than GET,PUT or FREE.

Action: None

NCR-02006: NCRF: Invalid floating point representation received

Cause: The data format layer received a floating point representation it did not recognize.

Action: Check incoming format descriptor for errors.

NCR-02007: NCRF: Invalid format descriptor received

Cause: The data format layer received an improperly formed format descriptor. Subsequent data could not be formatted.

Action: Check for data integrity on receipt from remote host.

NCR-02008: NCRF: Error within stream processing in format interpreter

Cause: An error occured while the interpreter was processing an NCRF_ STREAM_DATA_TYPE.

Action: Check for data integrity, or for stream existence.

NCR-02009: NCRF: Unable to open trace file

Cause: Failure to open tracing file.

Action: Make sure that this is a legal file name and that the user has write access.

NCR-02010: NCRF: Call context is not available

Cause: Call context not passed to format context.

Action: Make sure that create call context has been called.

NCR-02011: NCRF: Exceeded maximum number of rfids.

Cause: Exceeded maximum number of rfids.

Action: Call Oracle Support.

NCR-03002: NCRO: Maximum number of contexts has been reached

Cause: An attempt to create either a call context or a service context has failed because all context slots are in use.

Action: Free-up context slots by destroying those contexts no longer required, or, reconfigure NCRO with more context slots.

NCR-03003: NCRO: Unexpected message

Cause: Message read from service connection is not of the expected type.

Action: Application error - debug and fix.

NCR-03004: NCRO: Unknown message

Cause: Message read from service connection is of unknown type.

Action: Internal error - contact customer support.

NCR-03005: NCRO: Orphan message

Cause: Message read from service connection is for a call context that no longer exists.

Action: Application error - debug and fix.

NCR-03006: NCRO: Invalid operation

Cause: Attempted operation over call context is invalid. For example, attempting to send IN args for a procedure which is defined to have none.

Action: Application error - debug and fix.

NCR-03007: NCRO: Context is busy

Cause: Attempted operation failed because service/call context is busy performing a previous operaion.

Action: Application error - debug and fix.

NCR-03008: NCRO: Call rejected

Cause: An attempt to execute a remote procedure has failed because the server has rejected the procedure id.

Action: If wrong procedure id, send the correct one. If wrong server was contacted, then contact the right one.

NCR-03009: NCRO: Protocol version mismatch

Cause: Client and server NCRO layers are at incompatible versions levels.

Action: Upgrade to latest NCRO version.

NCR-03010: NCRO: Transfer callback error

Cause: Application transfer callback function has returned a "FAILED" status.

Action: Debug the transfer callback function.

NCR-03012: NCRO: Invalid session mode

Cause: Attempted operation has failed because the session context is in an invalid state.

Action: Internal error - contact customer support.

NCR-03013: NCRO: Operation not supportd

Cause: Attempted operation is not supported on this service connection because it is incompatible with the NCRO version level of the remote application.

Action: Link remote application with latest NCR library.

NCR-03014: NCRO: Bad transport address

Cause: A service context cannot be created because the transport address descriptor (contained in the binding context) is invalid.

Action: Application error - initialize the transport address descriptor correctly.

NCR-03015: NCRO: No transport address

Cause: A service context cannot be created because no transport address was provided (in the binding context) and the transport protocol uses datagrams.

Action: Application error - provide a transport address.

NCR-03016: NCRO: Message has bad address

Cause: Message read from service connection has bad address information.

Action: Internal error - contact customer support.

NCR-03017: NCRO: Transport type RSLV not supported

Cause: Support for transport type RSLV has not been built.

Action: Re-compile NCR library with NCR_USE_RSLV defined.

NCR-03018: NCRO: Failed to make RSLV connection

Cause: Failure to make RSLV connection usually means that the name resolution failed or the resolved TNS address is bad.

Action: Make sure that the name is in TNSNAMES.ORA and that it is set to the correct TNS address.

NCR-03019: NCRO: Unable to initialize thread support

Cause: Attempt to initialize the Core thread package has failed.

Action: Internal error - contact customer support.

NCR-03020: NCRO: Invalid call context

Cause: The call context is not an valid call context.

Action: Call context was destroyed, probably because the Break was received

NCR-03021: NCRO: Reset the in-band line

Cause: Our parnter is asking to reset the in-band line, after receiving a break

Action: The in-band line is required to be reset

NCR-03022: NCRO: Cannot send the break

Cause: There is an error occur when sending the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

NCR-03023: NCRO: Cannot receive the break

Cause: There is an error occur when receiving the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

NCR-03024: NCRO: Transport type LIST not supported

Cause: Support for transport type LIST has not been built.

Action: Re-compile NCR library with NCR_USE_LIST defined.

NCR-03025: NCRO: Failed to make LIST connection(s)

Cause: Failure to make LIST connection(s) usually means one of two things: (1) Address list syntax error, (2) Could not connect with supplied addresses

Action: Check address list syntax and make sure that there is a "listener" process for each (or some) of the supplied addresses.

NCR-03026: NCRO: The result buffer has overflowed

Cause: The result buffer for holding the pickling result is too small.

Action: Please enlarge the result buffer and try again.

NCR-03027: NCRO: No remote service session set up yet.

Cause: Sender-makes-right needs the remote FID.

Action: Please set up the remote session before using the Send Make"s Right option.

NCR-03028: NCRO: Partner refused request for sender-makes-right.

Cause: Sender-makes-right was requested by the current side, yet refused by the server.

Action: Check the server side to see why it refused SMR.

NCR-04002: NCRR: Invalid interface descriptor

Cause: An attempt to register an interface has failed because of an invalid interface descriptor.

Action: Check interface descriptor passed into the ncrrri_register_interface call.

NCR-04003: NCRR: Interface exists

Cause: An attempt to register an interface has failed because an interface already exists.

Action: Application error - register a new interface, destroy the old one, or indicate that the old one must be replaced.

NCR-04004: NCRR: Invalid interface instance handle

Cause: A service registration API call has failed because of an invalid instance handle.

Action: Application error - debug and fix.

NCR-04005: NCRR: Invalid procedure handle

Cause: A procedure/object registration has failed because of an invalid procedural handle.

Action: Application error - debug and fix.

NCR-04006: NCRR: Invalid argument descriptor

Cause: A procedure registration has failed because of an invalid argument descriptor.

Action: Application error - debug and fix.

NCR-04007: NCRR: Invalid object handle

Cause: A service registration API call failed because of an invalid object handle, for example, one that does not exist.

Action: Application error - debug and fix.

NCR-04008: NCRR: Procedure exists

Cause: An attempt to register a remote procedure has failed because the procedure already exists in this interface.

Action: Application error - register a new procedure, destroy the old one, or indicate that the old one must be replaced.

NCR-04009: NCRR: Object exists

Cause: An attempt to register an object has failed because the object already exists in this interface.

Action: Application error - register a new object, destroy the old one, or indicate that the old one must be replaced.

NCR-04010: NCRR: Unable to contact Oracle Internet Directory Server

Cause: Service export or import failed to contact Oracle Internet Directory Server.

Action: Ensure Oracle Internet Directory configuration is correct. Otherwise, turn on tracing and/or contact customer support.

NCR-04011: NCRR: Oracle Internet Directory error

Cause: Service export or import failed during interaction with Oracle Internet Directory Server.

Action: Either wrong parameters with respect to the Remote Operations Service Registration Schema were passed in and/or the Oracle Internet Directory server refused to perform the requested operation. Refer the Remote Operations Service Registration Schema and/or turn on Oracle Internet Directory tracing and/or contact customer support.

NCR-04012: NCRR: Invalid address descriptor

Cause: An ncrrei_export_interface call failed because of an invalid address descriptor.

Action: Application error - debug and fix.

NCR-04013: NCRR: Insufficient authorization

Cause: Attempted Oracle Internet Directory Server operation has failed because of insufficient authorization.

Action: Contact customer support.

NCR-04014: NCRR: Invalid instance name

Cause: Service export or import failed because of an invalid instance name

Action: Application error - debug and fix.

NCR-04015: NCRR: Invalid interface name

Cause: Service export or import failed because of an invalid interface name

Action: Application error - debug and fix.

NCR-04016: NCRR: Last interface instance handle

Cause: The instance handle passed in is the last instance handle in the list.

Action: Not an error - means reaching the end of the list.

NCR-04017: NCRR: Unable to find the interface instance handle

Cause: The instance handle corresponding to the instance name was not found.

Action: Application error - debug and fix.

NCR-04018: NCRR: Unable to create the TNS address list

Cause: Unable to create the TNS address list from the interface instance list.

Action: Application error - debug and fix.

NCR-04019: NCRR: Interface or instance name already exists

Cause: Service export failed because the name already exists with the Oracle Internet Directory server

Action: Application error - debug and fix.

NCR-04020: NCRR: Interface or instance name does not exist

Cause: Service expunge/query failed because the name does not exist with the Oracle Internet Directory server

Action: Use Oracle Internet Directory tools on the relevant Oracle Internet Directory instance to verify the same. Otherwise turn on tracing and/or contact customer support

NCR-04021: NCRR: Pickler errors

Cause: Service export/query failed because of pickler errors

Action: Contact customer support

NCR-04022: NCRR: Invalid procedure descriptor

Cause: A procedure registration has failed because of an invalid procedural descriptor.

Action: Application error - debug and fix.

NCR-04023: NCRR: Invalid object descriptor

Cause: An object registration has failed because of an invalid object descriptor.

Action: Application error - debug and fix.

NCR-04024: NCRR: Maximum number of procedures reached

> **Cause:** A procedure registration has failed because the procedures array is filled up.

> **Action:** Re-register the interface increasing the maximum # of procedures.

NCR-04025: NCRR: Operation timed out

> **Cause:** An operation for the Oracle Internet Directory server failed because it exceeded the timeout period.

> **Action:** Retry the operation and/or turn on Oracle Internet Directory tracing.

NCR-04026: NCRR: Operation not supported

> **Cause:** An operation for the Oracle Internet Directory server failed because it met with a server referral to another instance.

> **Action:** Unify the Remote Ops registration entries into the Oracle Internet Directory instance and/or turn on Oracle Internet Directory tracing.

NCR-04027: NCRR: Operation failed

> **Cause:** An operation for the Oracle Internet Directory server failed because the Service Registration interfaces met with invalid parameters.

> **Action:** Contact customer support.

NCR-04028: NCRR: Operation failed

> **Cause:** An operation for the Oracle Internet Directory server failed because the data involved exceeds the maximum allowed size.

> **Action:** Check the entries in the Oracle Internet Directory instance with tools available from Oracle Internet Directory and/or turn on Oracle Internet Directory tracing.

67

O2F-00301 to O2F-00341

O2F-00301: Error attempting to read from the INTYPE file

Cause: An operating system error occurred while attempting to read from the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00302: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2F-00303: No INTYPE file was specified

Cause: The required option INTYPE was not specified.

Action: Set the INTYPE option to the name of the file containing names of types for OTT to translate. The INTYPE option may be specified on the command line or in a CONFIG file.

O2F-00304: Invalid filename for the INTYPE file

Cause: The filename specified for the INTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the INTYPE file correctly.

O2F-00305: Error opening the INTYPE file for reading

Cause: An operating system error occurred while attempting to open the INTYPE file.

Action: Make sure you spelled the filename of the INTYPE file correctly. Try opening the INTYPE file with an editor to make sure you have access to the file.

O2F-00306: Unable to close the INTYPE file

Cause: An operating system error occurred while attempting to close the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00307: Unable to read the INTYPE file

Cause: The first token of the INTYPE file was not read. Either an operating system error occurred while attempting to read from the INTYPE file, or all lines of the INTYPE file are blank lines or comment lines.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file. Make sure the INTYPE file contains one or more type specifications.

O2F-00308: No type specifications were seen in the INTYPE file

Cause: Either there are no type specifications in the INTYPE file, or the first type specification could not be read due to a previously reported error.

Action: Fix any previously reported errors. Make sure there are one or more type specifications in the INTYPE file.

O2F-00309: Name of user-defined type is illegal or missing

Cause: The name of a user-defined type is expected following the keyword TYPE at the beginning of a type specification. No legal type name was seen.

Action: Make sure that the type specification is syntactically correct, and that the type name is spelled correctly.

O2F-00310: Illegal or missing identifier name

Cause: A legal C or C++ identifier was expected following AS, but was not seen.

Action: Use a legal C or C++ identifier, consisting of letters, digits, and underscores not beginning with a digit.

O2F-00311: Illegal or missing file name

Cause: A legal file name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct file name.

O2F-00312: Illegal or missing type version string

Cause: A type version name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct version name.

O2F-00313: Illegal or missing attribute name

Cause: An attribute name was expected in the INTYPE file, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct attribute name.

O2F-00314: AS expected but not seen in the INTYPE file

Cause: Incorrect syntax in the INTYPE file.

Action: Make sure your TYPE file syntax is correct.

O2F-00315: An attribute of a type is listed twice in a type specification

Cause: An attribute of a user-defined type is listed twice in a type specification in the INTYPE file. The second occurrence is ignored.

Action: Remove one of the two occurrences of the attribute.

O2F-00316: An unexpected token was seen at the end of a type specification

Cause: There is a syntax error in the INTYPE file.

Action: Check your documentation to make sure the type specifications

O2F-00317: Error opening the ERRTYPE file for writing

Cause: An operating system error occurred while attempting to open the ERRTYPE file for writing.

Action: Make sure you spelled the ERRTYPE filename correctly. Try creating or modifying the ERRTYPE file to make sure you have write access to the file.

O2F-00318: Error writing to the OUTTYPE file

Cause: An operating system error occurred when attempting to write to the OUTTYPE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2F-00319: No OUTTYPE file specified

    Cause: The required option OUTTYPE was not specified.

    Action: Set the OUTTYPE option to the name of the file to which the TYPE file produced by OTT should be written. The OUTTYPE option may be specified on the command line or in a CONFIG file.

O2F-00320: Invalid filename for the OUTTYPE file

    Cause: The filename specified for the OUTTYPE file is not syntactically correct.

    Action: Make sure you spelled the filename of the OUTTYPE file correctly.

O2F-00321: Error opening the OUTTYPE file for writing

    Cause: An operating system error occurred while attempting to open the OUTTYPE file.

    Action: Make sure you spelled the filename of the OUTTYPE file correctly. Make sure you have operating system permission to open the the file.

O2F-00322: Unable to close the OUTTYPE file

    Cause: An operating system error occurred while attempting to close the OUTTYPE file.

    Action: Try opening the OUTTYPE file with an editor to make sure you are able to access the file.

O2F-00323: Internal error in OTT facility O2F

    Cause: An internal OTT error occurred in the O2F component of OTT.

    Action: Contact ORACLE customer support.

O2F-00324: Unable to convert from the database character set to the compiler character set

    Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

    Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable). Use a client character set that can be translated to the compiler character set. The compiler character set itself is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2F-00325: None of the characters in a name were legal identifier characters

    Cause: None of the characters in the name of a database entity could be translated to a character that may begin a C or C++ identifier, such as a letter or an underscore.

    Action: Specify an explicit translation for the name in the INTYPE file.

O2F-00326: Some characters in this name were not legal identifier characters

    Cause: One or more characters in the name of a database entity could not be translated to a character that may appear in a C or C++ identifier, such as a letter,

an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Make sure that the name is spelled correctly, and that it is terminated by a blank, the end of a line, or an equals sign ("="). You may use the translated name with added underscores, or you may specify an explicit translation for the name in the INTYPE file.

O2F-00327: CASE option has an illegal value

Cause: The value given for the CASE option in the INTYPE file is not legal.

Action: Change the value given for the CASE option to one of the following legal values: SAME, LOWER, UPPER, or OPPOSITE.

O2F-00328: Illegal INITFUNC name

Cause: The function name given for the INITFUNC option in the INTYPE file is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name can be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2F-00329: Type or option specification expected

Cause: A type or option specification was expected in the INTYPE file, but was not seen.

Action: Check the INTYPE file for syntax errors. Supply a type or option specification. A type specification begins with the word TYPE. An option specification begins with the word CASE, INITFILE, or INITFUNC.

O2F-00330: Name exceeds 265 bytes in length

Cause: A name seen in the INTYPE file exceeds 265 bytes in length.

Action: Choose a shorter name.

O2F-00331: A syntactically illegal name was seen in the INTYPE file

Cause: A syntax error occurred in a name used in the INTYPE file.

Action: If the name is quoted, make sure that the quotes are at the beginning and at the end of the name. If a period (which separates a schema name from a type name) appears, make sure that the schema name and the type name are both present.

O2F-00332: A database link may not appear in the name of a user-defined type

Cause: A database link was seen in the name of a user-defined type. This feature is not yet supported.

Action: Declare the user-defined type in the database to which OTT connects.

O2F-00333: An unexpected token appeared where a keyword was expected in the INTYPE file

Cause: A keyword such as TYPE was expected in the INTYPE file, but an incorrect or misspelled keyword was seen.

Action: Verify that your TYPE specification obeys the syntax described in your documentation. Verify that your keyword is spelled correctly.

O2F-00334: A user-defined type is listed more than once in the INTYPE file

Cause: The same name of a user-defined type appears in more than one type specification. The duplicate specifications of the type name will be ignored.

Action: Put all of the information about the type, including all type name and attribute name translations, in a single TYPE specification, and eliminate the duplicate TYPE specifications.

O2F-00335: Internal error in O2F component of OTT

Cause: A request was made that all types in the database schema are to database.

Action: List the types to be processed in an INTYPE file. Contact ORACLE customer support.

O2F-00336: Error reported by subsystem:

Cause: A request was made to generate declarations for all the types in a database schema. An error occurred in a subsystem when accessing the database.

Action: Examine the error message reported by the sybsystem to determine its cause. List the types to be processed in an INTYPE file.

O2F-00337: Schema not found, or no types found in schema

Cause: A request was made to generate declarations for all the types in a database schema. Either the schema was not found, no user-declared types were found in the schema, or unable to connect to Oracle.

Action: Ensure that a login/password string was specified for OTT and that the Oracle database can be accessed with it. Ensure that the USER_TYPES table contains at least one row.

O2F-00338: Illegal or missing package name

Cause: A legal Java package name was expected following IN or PACKAGE or IN PACKAGE, but was not seen.

Action: Use a legal Java package name.

O2F-00339: CODE option has an illegal value

Cause: The value given for the CODE option in the INTYPE file is not legal.

Action: Change the value given for the CODE option to one of the following legal values: C, ANSI_C, KR_C, JAVA, NATIVE_JAVA, ORACLE_JAVA.

O2F-00340: Name was null

Cause: A name had a length of 0 characters.

Action: This error should never be reported to the user. Contact ORACLE customer support.

O2F-00341: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

68

O2I-00101 to O2I-00133

O2I-00101: Invalid value for the USERID parameter

Cause: The value supplied for the USERID parameter is not a legal <username>/<password>[@<databasename>] string.

Action: Set the USERID option to the correct <username>/<password> or <username>/<password>@<database name> combination to use when connecting to the database. If you have an OPS$ account, you may instead omit the USERID option, in which case OTT will attempt to connect to the database using the userid OPS$<username>. The USERID option may be specified on the command line or in a CONFIG file.

O2I-00102: Unable to connect to Oracle

Cause: OTT could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Either the USERID option value was incorrect, or, if the USERID was not supplied, the userid OPS$<username> was not accepted.

Action: Check that the username and password are current and correct. Run another program that connects to Oracle to verify that you can connect using that username and password.

O2I-00103: Two file names refer to the same HFILE file in the INTYPE file

Cause: Two different file names have been used in the INTYPE file to refer to the same HFILE file, or different file names have been used to refer to the same HFILE file on the command line and in the INTYPE file.

Action: Consistently refer to each HFILE file using the same file name.

O2I-00110: Internal error in OTT component O2I

Cause: An internal OTT error occurred in the O2I component of OTT.

Action: Contact ORACLE customer support.

O2I-00111: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2I-00112: Unable to write to the HFILE file

Cause: An operating system error occurred when attempting to write to the HFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00113: No HFILE specified

Cause: The HFILE file to which C declarations generated by OTT are written was not specified.

Action: Specify the global HFILE option on the command line or in a CONFIG file. You may choose a different HFILE for a particular type by specifying a different HFILE in the INTYPE file entry describing the type. If every INTYPE file entry specifies an HFILE, and if none of the types in the HFILE require declarations of types not mentioned there, the global HFILE option may be omitted. An INTYPE file generated by a previous invocation of OTT satisfies these conditions.

O2I-00114: Invalid HFILE file name

Cause: An HFILE file name was specified that is not syntactically correct.

Action: Make sure the HFILE filename is spelled correctly.

O2I-00115: Error opening the HFILE file

Cause: An operating system error occurred while attempting to open the HFILE file for writing.

Action: Make sure the HFILE filename is spelled correctly. Try creating or modifying the HFILE to make sure you have write access to the file.

O2I-00116: Unable to close the HFILE file

Cause: An operating system error occurred while attempting to close the HFILE file.

Action: Try creating or modifying the HFILE file to make sure you are able to access the file.

O2I-00117: Internal error: No message file for component O2U

Cause: The message file for the internal OTT component O2U was not found. OTT may not be correctly installed.

Action: Contact ORACLE customer support.

O2I-00118: This user-defined type was not found in the database

Cause: A user-defined type specified in the INTYPE file was not found in the database.

Action: Make sure the name of the type is spelled correctly. Make sure the type is actually declared in the database.

O2I-00119: Warning reported by subsystem:

Cause: A subsystem invoked by OTT reported a warning. This warning immediately follows the "Warning reported by subsystem" message.

Action: Examine the warning reported by the subsystem to determine its cause.

O2I-00120: Error reported by subsystem:

Cause: A subsystem invoked by OTT reported an error. This error immediately follows the "Error reported by subsystem" message.

Action: Examine the error message reported by the sybsystem to determine its cause.

O2I-00121: No value was specified for the CODE option

Cause: The required CODE option was not specified on the command line or in a configuration file.

Action: Specify the CODE option on the command line or in a configuration file. Currently, the following values of the CODE option are supported: CODE=ANSI_C, CODE=KR_C, CODE=C

O2I-00122: Invalid filename for the INITFILE file

Cause: The filename specified for the INITFILE file is not syntactically correct.

Action: Make sure the filename of the INITFILE file is spelled correctly.

O2I-00123: Unable to close the INITFILE file

Cause: An operating system error occurred while attempting to close the INITFILE file.

Action: Try opening the INITFILE file with an editor to make sure the file can be accessed.

O2I-00124: Error opening the INITFILE file for writing

Cause: An operating system error occurred while attempting to open the INITFILE file for writing.

Action: Make sure the INITFILE filename is spelled correctly. Try creating or modifying the INITFILE file to make sure you have write access to the file.

O2I-00125: Error writing to the INITFILE file

Cause: An operating system error occurred when attempting to write to the INITFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00126: You must specify an INTYPE file with SCHEMA_NAMES=FROM_INTYPE

Cause: The option SCHEMA_NAMES=FROM_INTYPE requests that schema names be written to the OUTTYPE file as given in the INTYPE file. However, an INTYPE file was not specified.

Action: Either supply the name of an INTYPE file, or specify the SCHEMA_NAMES option ALWAYS or IF_NEEDED.

O2I-00127: Illegal INITFUNC name

Cause: The name of the INITFUNC function is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name may be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2I-00128: Unable to write to the Java file

Cause: An operating system error occurred when attempting to write to a Java source file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00129: No Java file specified

Cause: The file to which Java declarations generated by OTT are written was not specified.

Action: This message should never be seen, because Java files are named after the classes declared within them. Contact ORACLE customer support.

O2I-00130: Invalid Java file name

Cause: A Java file name was specified that is not syntactically correct.

Action: Make sure the Java filename is spelled correctly.

O2I-00131: Error opening a Java file

Cause: An operating system error occurred while attempting to open a Java file for writing.

Action: Make sure the filename is spelled correctly. Try creating or modifying the file to make sure you have write access to the file.

O2I-00132: Unable to close a Java file

Cause: An operating system error occurred while attempting to close a Java file.

Action: Try creating or modifying the Java file to make sure you are able to access the file.

O2I-00133: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

69

O2U-00200 to O2U-00212

O2U-00200: Internal error in OTT facility O2U

Cause: An internal OTT error occurred in the O2U facility of OTT.

Action: Contact ORACLE customer support.

O2U-00201: Illegal arguments to function o2upt()

Cause: Illegal arguments were passed to the function o2upt(). This is an internal error that should not be encountered by an end user.

Action: Contact ORACLE customer support.

O2U-00202: Invalid data passed to function

Cause: Arguments with incorrect values were passed to the function o2upt(). This is an internal error that should not be encountered by the end user.

Action: Contact ORACLE customer support.

O2U-00203: Type to be declared must be an object type or a named collection type

Cause: You have asked OTT to generate code for a type it does not support. When generating Java code, OTT will only generate code for object types. When generating C declarations, OTT will only generate declarations for object types and named collection types.

Action: You are probably asking OTT to declare a built-in type, or, if you are generating Java code, a named collection type. Do not ask OTT to generate a declaration for this type.

O2U-00204: Unable to convert from the database character set to the compiler character set

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable.) Use a client character set that includes the character set of the INTYPE file and can be translated to the compiler character set. The database character set is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2U-00205: None of the characters in a type name were legal identifier characters

Cause: None of the characters in the name of a user-defined type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the type name in the INTYPE file.

O2U-00206: Some characters in a type name were not legal identifier characters

Cause: One or more characters in the name of a user-define type could not be translated to a character that can appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Specify an explicit translation for the type name in the INTYPE file, or just use the translated type name with added underscores.

O2U-00207: None of the characters in an attribute name were legal identifier characters

Cause: None of the characters in the name of an attribute of a type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore. To find the affected attribute, look in the declaration generated for this type for data member names that are obviously incorrect.

Action: Specify an explicit translation for the attribute name in the INTYPE file.

O2U-00208: One or more characters in an attribute name were not legal identifier characters

Cause: If an attribute name contains one or more characters that can not be translated to a legal C or C++ identifier character, the characters that can not be translated are replaced with underscores. To find the affected attribute or attributes, look in the declaration generated for this type for data member names that have extra underscores not present in the original attribute names.

Action: Specify explicit translations for the affected attribute names in the INTYPE file, or just use the translated attribute names with added underscores.

O2U-00209: Attribute or function name to be translated was not found

Cause: This name, for which a translation was requested, is not the name of an attribute or a function of the current type.

Action: Make sure that the name is spelled correctly, and is the name of an attribute or function defined in the current type.

O2U-00210: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2U-00211: A type without attributes was translated

Cause: OTT translated a type without attributes. The corresponding C-type will be a struct without any components, which is not legal C. The empty type in the database may be the result of an error during type creation. Additionally, incomplete types may be used temporarily in the creation of types that reference one another.

Action: Re-create a full version of the type in the database and then re-run OTT.

O2U-00212: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

70

PCB-00001 to PCB-00903

PCB-00001: *string*

    Cause: This is a generic error message from the command-line processor.

    Action: Correct the indicated error.

PCB-00002: Command line processor severe error

    Cause: The command line processor encountered a severe error.

    Action: After making sure that all the command-line options are specified correctly, call customer support with a full account of all the options and configuration files used.

PCB-00003: Value of DBMS option invalid with given value of MODE option

    Cause: When MODE={ANSI14 | ANSI13}, DBMS=V7 or V8 was specified, or when MODE=ANSI, DBMS=v6 was specified. These option settings are incompatible. Note that the DBMS option was not available before release 1.5 of the Oracle Precompilers.

    Action: With DBMS=V7 or V8, instead of MODE={ANSI14 | ANSI13}, specify MODE={ANSI | ORACLE}. With DBMS=V6, instead of MODE=ANSI, specify MODE={ANSI14 | ANSI13 | ORACLE}, but MODE=ORACLE is recommended.

PCB-00004: UNSAFE_NULL=YES must be used with DBMS=V7 or V8 and MODE=ORACLE

    Cause: The option UNSAFE_NULL=YES has been used with DBMS=V6 or DBMS=NATIVE (the default) or has been used with MODE=ANSI/ANSI14/ANSI13.

    Action: Use DBMS=V7 or V8 and MODE=ORACLE (the default) when using UNSAFE_NULL=YES or do not use UNSAFE_NULL=YES.

PCB-00005: Command line option MODE=ANSI required with option NLS_LOCAL=YES

    Cause: The precompiler option NLS_LOCAL=YES was used without also specifying MODE=ANSI. The precompiler option MODE=ANSI must be specifiied if NLS_LOCAL=YES.

    Action: Set the precompiler option MODE=ANSI in addition to NLS_LOCAL=YES or do not set NLS_LOCAL=YES.

PCB-00006: Userid only used when SQLCHECK=FULL, userid ignored.

    Cause: The USERID option was specified when SQLCHECK={SYNTAX | NONE}. This is unnecessary.

    Action: Specify the USERID option only when SQLCHECK=SEMANTICS.

PCB-00007: *string*

    Cause: This is a generic error message from the command-line processor.

    Action: Correct the indicated error.

PCB-00008: Must use option SQLCHECK=SEMANTICS(FULL) when there is embedded PL/SQL

    Cause: The precompiler tried to parse an embedded PL/SQL block when SQLCHECK={SYNTAX | NONE}. PL/SQL blocks can be parsed only when SQLCHECK=SEMANTICS is specified.

    Action: Remove the PL/SQL block or specify SQLCHECK=SEMANTICS.

PCB-00009: Cannot change MAXLITERAL after an EXEC SQL statement

    Cause: The MAXLITERAL option has been used in an inline EXEC ORACLE OPTION statement after and EXEC SQL, EXEC TOOLS, or EXEC IAF statement. This is not allowed.

    Action: Use the MAXLITERAL option only on the command line or in an EXEC ORACLE OPTION statement placed at the beginning of the input source file.

PCB-00010: SQLCHECK value in EXEC ORACLE statement exceeds command line value

    Cause: The SQLCHECK option was entered inline and specified a level of checking higher than the level specified (or accepted by default) on the command line. This is not allowed. For example, if SQLCHECK={SYNTAX | LIMITED} is specified on the command line, SQLCHECK={SEMANTICS | FULL} cannot be specified inline. This informational message is; the precompiler ignores the inline value and continues processing.

    Action: Revise the EXEC ORACLE statement or specify a lower level of checking on the command line.

PCB-00011: DBMS=V6 no longer supported; using DBMS=NATIVE

    Cause: V6 compatibility is no longer supported. The precompiler will precompile as though DBMS=NATIVE was specified.

    Action: Revise the specified DBMS option value from v6 to another value as desired.

PCB-00012: Command line option DYNAMIC=ANSI required with option TYPE_CODE=ANSI

    Cause: The precompiler option TYPE_CODE=ANSI was used without also specifying DYNAMIC=ANSI. The precompiler option DYNAMIC=ANSI must be specifiied if TYPE_CODE=ANSI.

    Action: Set the precompiler option DYNAMIC=ANSI in addition to TYPE_CODE=ANSI or do not set TYPE_CODE=ANSI.

PCB-00013: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used

    Cause: The precompiler option OUTLINE was used without also specifying SQLCHECK=SEMANTICS(FULL).

    Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCB-00014: Must use option OUTLINE when option OUTLNPREFIX is used

    Cause: The precompiler option OUTLNPREFIX was used without also specifying OUTLINE=YES|<category_name>. The precompiler option OUTLINE must be specifiied if OUTLNPREFIX is used.

Action: Set the precompiler option OUTLINE=YES|<category_name>

PCB-00015: Must use option OUTLINE when option RUNOUTLINE is used

Cause: The precompiler option RUNOUTLINE was used without also specifying OUTLINE=YES|<category_name>. The precompiler option OUTLINE must be specifiied if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES|<category_name>

PCB-00100: Unable to reopen temporary file *string*

Cause: The precompiler was unable to reopen a temporary file. Some possible causes follow:

o File access privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00101: Could not find or open system configuration file

Cause: The precompiler was unable to open the system configuration file. The system configuration file does not exist or is not in the proper directory.

Action: Check that the system configuration file is in the proper directory. See Oracle installation documentation for where this should be. Put a new copy of pcccob.cfg with desired default options in the proper directory.

PCB-00102: Input file name length exceeds the maximum length

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCB-00103: Unable to open generated outline sql file "*string*"

Cause: The precompiler was unable to open the input file specified in the INCLUDE statement. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges to access the file have been granted, and that it is not locked by another user. Also, check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00104: Unable to open input file "*string*"

Cause: The precompiler was unable to open the input file specified by the INAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00105: Included file name "*string*" exceeds name limit of *number* characters

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCB-00106: Unable to open INCLUDE file "*string*"

Cause: The precompiler was unable to open the input file specified in the INCLUDE statement. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges to access the file have been granted, and that it is not locked by another user. Also, check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00107: Unable to open generated outline log file "*string*"

Cause: The precompiler was unable to open the input file specified in the INCLUDE statement. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges to access the file have been granted, and that it is not locked by another user. Also, check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00108: Unable to open list file "*string*"

Cause: The precompiler was unable to open the list file specified by the LNAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File acces privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager). If a listing file is not needed, specify LTYPE=NONE on the command line.

PCB-00109: Unable to open generated source file "*string*"

Cause: The precompiler was unable to open the output file specified by the ONAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File acces privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCB-00110: Unable to open temporary file "*string*"

Cause: The precompiler was unable to open a file for temporary use. Some possible causes follow:

o File acces privileges are insufficient.

o A file of the same name already exists and is locked.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that sufficient privileges have been granted to access the file, and that it is not locked. Also check that there is enough disk space

and that the limit for open files is set high enough (check with the system manager). "200 - 299, Host variable errors."

PCB-00200: Cannot equivalence PIC N or PIC G variable "*string*"

Cause: A PIC N/G variable, an implicit VARCHAR group item with a PIC N/G elementary item, or a group item with a PIC N/G elementary item was used in an EXEC SQL VAR statement. This is not allowed.

Action: Do not use the PIC N variable in an EXEC SQL VAR statement. If you want an equivalence to an Oracle type using an EXEC SQL VAR statement, use a PIC X variable, instead of a PIC N variable.

PCB-00201: Indicator variable *string* not a group item

Cause: The host variable is a group item containing tables. Indicator variables used with this type of host variable must be group items of tables of indicators corresponding the the tables in the group item host variable.

Action: Change the indicator variable to be a group item of indicator tables.

PCB-00202: Indicator variable *string* not a group item or table

Cause: The host variable is a group item. Indicator variables used with this type of host variable must be a group item or table of indicator variables.

Action: Use a group item or table of indicator variables.

PCB-00203: Nested group item "*string*" not supported

Cause: The variable used as a host variable was a group item which itself contained other group items.

Action: Remove any group items from the group item to be used as a host variable.

PCB-00204: Group items cannot be used except in INTO or VALUES clause

Cause: A group item host variable was used outside of an INTO or VALUES clause. A group item host variable may be used only in an INTO or VALUES clause.

Action: Do not use a group item outside of an INTO or VALUES clause.

PCB-00205: Cannot use PIC N or PIC G variable in PL/SQL when NLS_ LOCAL=YES

Cause: A PIC N or PIC G variable was used in an embedded PL/SQL block when the precompiler option NLS_LOCAL=YES was used. A PIC N or PIC G variable is not supported in this situation.

Action: Do not use the PIC N or PIC G variable within the PL/SQL block or use precompiler option NLS_LOCAL=NO.

PCB-00206: Cannot use N quoted literal in PL/SQL when NLS_LOCAL=YES

Cause: A "N" literal (a literal of the form N"...") was used within a PL/SQL block when the precompiler option NLS_LOCAL=YES was used. N literals are not supported in this situation.

Action: Use an ordinary literal (one without the "N") within the PL/SQL block or use precompiler option NLS_LOCAL=NO.

PCB-00207: Invalid use of PIC N or PIC G table variable when NLS_LOCAL=YES

Cause: A PIC N variable was declared using an OCCURS clause. Tables of PIC N variables are not supported when NLS_LOCAL=YES.

Action: Declare the PIC N variable without an OCCURS clause or, do not use the PIC N variable in any SQL statements.

PCB-00208: Incorrect type for host variable "*string*"

Cause: A variable of unsupported datatype was used in a SQL statement or embedded PL/SQL block.

Action: Use a host variable of a supported datatype.

PCB-00209: Scale is not supported for host variable "*string*"

Cause: A variable whose format does not support scaling was used in a SQL statement or embedded PL/SQL block. The following formats do not support scaling: PIC S9(n) COMP PIC S9(n) COMP-4 PIC S9(n) COMP-5 PIC S9(n) BINARY PIC 9(n) COMP

Action: Remove the scale or use a datatype that support scaling.

PCB-00210: DISPLAY-1 only allowed with PIC G and PIC N variables "*string*"

Cause: A variable declared with DISPLAY-1 in the usage clause without PIC G or PIC N in the picture clause was used in a SQL statement.

Action: Replace DISPLAY-1 with DISPLAY or change the picture clause to use PIC N or PIC G.

PCB-00211: VARYING not supported with PIC N or PIC G variable "*string*"

Cause: The keyword VARYING was used in a PIC N variable declaration.

Action: Remove the keyword VARYING from the variable declaration. If you want to declare a PIC N VARCHAR variable, specify the precompiler option VARCHAR=YES and declare the variable as an implicit VARCHAR group item as illustrated by the following example: EXEC SQL BEGIN DECLARE SECTION END-EXEC. ... 01 ENAME. 05 ENAME-LEN PIC S9(4) COMP. 05 ENAME-ARR PIC N(20). ... EXEC SQL END DECLARE SECTION END-EXEC.

PCB-00212: PICTURE clause not allowed for host variable "*string*"

Cause: A variable declared with a PIC clause and COMP-1 or COMP-2 was used in a SQL statement or embedded PL/SQL block.

Action: Remove the PIC clause or use a datatype other than COMP-1 or COMP-2 in the declaration of the variable.

PCB-00214: JUSTIFIED clause not allowed for host variable "*string*"

Cause: A variable declared with a JUSTIFIED clause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the JUSTIFIED clause from the variable declaration.

PCB-00215: OCCURS TO TIMES clause not allowed for host variable "*string*"

Cause: A variable declared with an OCCURS clause with the TO TIMES subclause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the TO TIMES subclause from the variable declaration.

PCB-00216: OCCURS ASCENDING/DESCENDING clause not allowed for "*string*"

Cause: A variable declared with an OCCURS clause with the ASCENDING or DESCENDING KEY IS subclause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the ASCENDING or DESCENDING KEY IS subclause from the variable declaration.

PCB-00217: OCCURS INDEXED clause not allowed for host variable "*string*"

Cause: A variable declared with an OCCURS INDEXED clause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the OCCURS INDEXED clause from the variable declaration.

PCB-00218: RENAMES clause not allowed for host variable "*string*"

Cause: A variable declared with a RENAMES clause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the RENAMES clause from the declaration.

PCB-00219: Invalid size specified in EXEC SQL VAR statement

Cause: A size which is specified which is not valid for the specified data type.

Action: Specify a size which is valid for the specified type.

PCB-00220: Invalid scale specified in EXEC SQL VAR statement

Cause: A scale which is specified which is not valid for the specified data type.

Action: Specify a scale which is valid for the specified type.

PCB-00221: OCCURS DEPENDING ON clause not allowed for host variable "*string*"

Cause: A variable declared with an OCCURS clause with the DEPENDING ON subclause was used in a SQL statement or embedded PL/SQL block.

Action: Remove the DEPENDING ON subclause from the variable declaration.

PCB-00222: Size for host variable *string* exceeds maximum size

Cause: A variable declared with PIC S9(n), with n greater than what is allowed on the given platform, was used in an embedded sql statement. On 32 bit machines n must not exceed 9, and on 64 bit machines, n must not exceed 18.

Action: Use a smaller number in the picture clause that does not exceed the maximum allowed size on your platform or use COMP-3.

PCB-00223: Undeclared variable "*string*"

Cause: A variable used in a SQL statement was not declared or its name is misspelled or if option DECLARE_SECTION=YES the declaration was not in a DECLARE SECTION.

Action: Add or correct the variable declaration.

PCB-00224: Ambiguously referenced variable "*string*"

Cause: There is more than one variable of the same name and the qualification given was insufficient to determine which variable the reference was to.

Action: Use more complete qualification in the variable reference.

PCB-00225: Undeclared SQL identifier "*string*"

Cause: The name of a descriptor, statement, or cursor was not declared or is misspelled, or was declared as a different kind of SQL identifier.

Action: Add or correct the descriptor, statement, or cursor declaration.

PCB-00226: SQL identifier "*string*" already defined

Cause: The SQL identifier (cursor name, statement name, etc.) has already been defined in another way.

Action: Use a different name for this use of the name.

PCB-00227: Undeclared indicator variable "*string*"

Cause: An indicator variable used in a SQL statement was not declared in the Declare Section or its name is misspelled.

Action: Add or correct the indicator variable declaration.

PCB-00228: Invalid group item variable "*string*"

Cause: An unacceptable group item variable was used in a SQL statement. or its name is misspelled.

Action: Correct the group item variable declaration or its use in the SQL statement.

PCB-00229: Indicator variable "*string*" has wrong type or length

Cause: An indicator variable was not declared in the Declare Section as a 2-byte integer. Indicator variables must be defined as 2-byte integers.

Action: Redefine the indicator variable as a 2-byte integer.

PCB-00230: Indicator table size must not be less than its host variable

Cause: An host variable table was used with an indicator table declared with a smaller dimension. For example: EXEC SQL BEGIN DECLARE SECTION END-EXEC. 01 EMP-NUM OCCURS 4 TIMES PIC S9(4) COMP. 01 EMP-NUM-IND OCCURS 2 TIMES PIC S9(4) COMP. EXEC SQL END DECLARE SECTION END-EXEC. ... SELECT ... INTO EMP-NUM:EMP-NUM-IND ...

Action: Increase the size of the indicator table.

PCB-00231: Host and indicator variables may not have the same name.

Cause: In an EXEC SQL statement, an indicator variable had the same name as a host variable. The names of a host variable and its associated indicator variable must be different. Also, an indicator variable cannot be used as a host variable.

Action: Rename the host or indicator variable.

PCB-00232: Tables not allowed as input bind variables in SELECT statement

Cause: A host table was used in the WHERE clause of a SELECT-INTO statement or in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using tables or use a cursor.

PCB-00233: Table size mismatch in INTO/USING. Minimum is: *number*

Cause: The size of an table variable in an INTO/USING clause is too small for the number of rows processed.

Action: Declare all table variables in the INTO/USING clause to have at least the minimum dimension given.

PCB-00234: FOR variable "*string*" is invalid type

Cause: The count variable in a FOR clause has the wrong datatype. The datatype must be NUMBER or LONG (or be compatible with NUMBER or LONG).

Action: Check the declaration and check that the count variable has a datatype of NUMBER or LONG (or a compatible Oracle or host-language datatype).

PCB-00235: Table size mismatch in INTO/USING. Minimum is: *number*

Cause: The size of a table variable in an INTO/USING clause of a dynamic EXECUTE statement has been ARRAYLEN...EXECUTE"d while the other host variable has not and is not a table of dimension 1 or a plain non-table host variable. Example: 01 X PIC X(10) OCCURS 10. 01 Y PIC S9(4) COMP OCCURS 10.

01 Z PIC S9(4) COMP. ... EXEC SQL ARRAYLEN X (DIM) EXECUTE END-EXEC. ... EXEC SQL EXECUTE S1 USING :X, :Y END-EXEC. <-- error EXEC SQL EXECUTE S1 USING :X, :Z END-EXEC. <-- ok Please note that this error differs from 233 in that it is an ERROR not a WARNING.

Action: ARRAYLEN...EXECUTE all of the table variables in the INTO/USING clause or those host variables not ARRAYLEN...EXECUTEd need to be of dimension 1.

PCB-00236: Cannot use PIC N/G variable. NLS_NCHAR not set or set incorrectly.

Cause: To use PIC N or PIC G variables as host variables, both of the environment variables NLS_LANG and NLS_NCHAR must be set with correct values. One of the following problems has occurred which prevents Pro*COBOL from accepting PIC N and PIC G variables as host variables: 1) One or both of NLS_LANG and NLS_NCHAR are not set at all. 2) NLS_LANG is not set with a valid language, territory, or character set. 3) NLS_NCHAR is not set to a valid NCHAR character set. 4) The character set specified by NLS_NCHAR is not a fixed width character set. Pro*COBOL can only use fixed width character sets for PIC N or PIC G host variables.

Action: Set the NLS_NCHAR environment variable to a valid fixed width character set name. Set NLS_LANG with a valid language, territory, and character set.

PCB-00237: Declaration of "*string*" cannot have a level number greater than 48

Cause: A VARYING or SQL-CURSOR declaration has been encountered which has the level number greater than 48.

Action: Change the level to 48 or less.

PCB-00238: Element of this table group item host variable cannot be a table

Cause: A group item that is a table and having an element that is a table was used in a SQL statement.

Action: Remove the OCCURS clause from the element of the group item.

PCB-00239: Element of a table group item indicator cannot be table or group item

Cause: A group item that is a table and used as an indicator has an element that is a table or group item.

Action: Change the nested table or group item in the indicator so that it is an elementary item.

PCB-00240: Group item containing this host variable cannot be table

Cause: An elementary item belonging to a group item with an OCCURS clause has been referenced. This is not allowed.

Action: Change the elementary item used to an item that is not an element of a table of group items.

PCB-00241: A host variable is required here

Cause: The COUNT item in the dynamic SQL statement must be a host variable but is not.

Action: Use a host variable in the COUNT item of the dynamic SQL statement.

PCB-00242: A host variable or exact numeric constant is required here

Cause: The particular item in the dynamic SQL statement is required to be a host variable or exact numeric (integer) constant, but is not.

Action: Change the item in the dynamic SQL statement to use a host variable or exact numeric constant. "300 - 399: FIPS flagging error messages."

PCB-00300: Datatype for host variable not supported by ANSI "*string*"

Cause: An Oracle extension to the ANSI/ISO standard was used. Specifically, aa pointer or nonconforming datatype such as VARCHAR was used. For example, the offending code might look like: EXEC SQL BEGIN DECLARE SECTION END-EXEC. 01 USERNAME PIC X(10) VARYING. EXEC SQL END DECLARE SECTION END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: None

PCB-00301: Use of non-ANSI function is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a non-ANSI function was used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this function.

PCB-00302: This statement is not supported by ANSI

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a nonconforming SQL statement such as PREPARE was used. For example, the offending code might look like: EXEC SQL PREPARE SQL-STMT FROM :HV END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the nonconforming statement.

PCB-00303: Dynamic SQL and PL/SQL are Oracle extensions to ANSI SQL

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, dynamic SQL or embedded PL/SQL was used. For example, the offending code might look like: EXEC SQL EXECUTE BEGIN SELECT ... END; END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use dynamic SQL or embedded PL/SQL.

PCB-00304: Oracle extension to the WHENEVER statement

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a nonconforming keyword such as NOTFOUND, STOP, RAISE, or DO was used in the WHENEVER statement. (Note that NOT FOUND is ANSI-compliant.) For example, the offending code might look like: EXEC SQL WHENEVER SQLERROR STOP END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the nonconforming keyword.

PCB-00305: Oracle extension to the COMMIT and ROLLBACK statements

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the parameter RELEASE, COMMENT, or FORCE were used in a COMMIT or ROLLBACK statement. For example, the offending code might look like: EXEC SQL ROLLBACK RELEASE END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the nonconforming parameter.

PCB-00306: CREATE FUNCTION/PROCEDURE/PACKAGE/TRIGGER are Oracle extensions

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, one of the following statements was used:

o CREATE FUNCTION

o CREATE PROCEDURE

o CREATE PACKAGE

o CREATE TRIGGER This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use any of these statements.

PCB-00307: DROP TABLE statement is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the DROP TABLE statement was used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use the DROP statement.

PCB-00308: FOR clause is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the FOR clause was used in an table-processing SQL statement. For example, the offending code might look like: EXEC SQL FOR :LIMIT INSERT INTO EMP (EMPNO, JOB, DEPTNO) VALUES (:EMPNUM, :JOB, :DEPTNO) END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the FOR clause.

PCB-00309: The CONNECT statement is Oracle implementation dependent

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the CONNECT statement was used to log on to ORACLE. For example, the offending code might look like: EXEC SQL CONNECT :USERNAME IDENTIFIED BY :PSSWORD END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, specify the AUTO_CONNECT command-line option instead of using a CONNECT statement.

PCB-00310: AT clause is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the AT <db_name> clause was used in a SQL statement. For example, the offending code might look like: EXEC SQL AT oracle3 COMMIT RELEASE END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the AT <db_name> clause.

PCB-00311: Datatype equivalencing is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the EXEC SQL VAR statement was used.

Action: No action required. However, for ANSI/ISO compliance, do not use the EXEC SQL VAR statement.

PCB-00312: Keyword WORK required here by ANSI

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the keyword WORK was used in a COMMIT or ROLLBACK statement. For example, the offending code might look like: EXEC SQL COMMIT WORK RELEASE END-EXEC. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the keyword WORK.

PCB-00313: TO SAVEPOINT clause is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the TO SAVEPOINT <save_id> clause was used in a ROLLBACK statement.

Action: No action required. However, for ANSI/ISO compliance, do not use the TO SAVEPOINT clause.

PCB-00314: DECLARE DATABASE is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the DECLARE DATABASE statement was used.

Action: No action required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00315: DECLARE TABLE is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the DECLARE TABLE statement was used.

Action: No action required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00316: SQL FORMS statements are Oracle extensions

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the one of the following statements was used:

o EXEC IAF GET

o EXEC IAF PUT

o EXEC TOOLS GET

o EXEC TOOLS SET This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use any of these statements.

PCB-00317: Group item host variables are Oracle extensions

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a group item variable was used as a host variable. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use group items as host variables.

PCB-00318: ARRAYLEN is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the ARRAYLEN statement was used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00319: EXEC ORACLE statements are an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, an EXEC ORACLE statement was used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00320: VARYING host variable "*string*" is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a variable declared of VARYING type was used in a SQL statement. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00321: Implicit varchar host variables are an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, an iimplicit varchar variable was used in a SQL statement. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this statement.

PCB-00322: EXEC SQL LOB statements an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, an EXEC SQL LOB statement was used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use this statement. "400 - 499, Tokenizer or parsing errors."

PCB-00400: *string*

Cause: A syntax error was found.

Action: Do the appropriate action to fix the indicated error.

PCB-00401: Character string not properly terminated

Cause: The character string was not terminated with a quote or apostrophe as appropriate or line continuation was not correct.

Action: Check that the character string is terminated properly and that line continuation syntax is correct.

PCB-00402: Pseudo-text not properly terminated

Cause: A block of pseudo-text has not been properly terminated with "==".

Action: Terminate the pseudo-text at the appropriate place with "==". "500 - 649, Other semantic errors grouped by these features: threads, result set cursors, miscellaneous, pl/sql (includes arraylen), exec tools and lobs."

PCB-00403: EXEC statement cannot begin in Area A

Cause: An EXEC statement began in Area A (before column 12).

Action: Shift the EXEC statement to the right to start it in Area B (in or after column 12).

PCB-00404: *string*

Cause: A syntax error was found.

Action: Do the appropriate action to fix the indicated error. "500 - 524, Threads"

PCB-00500: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql-context) has been declared, ALLOCATEd, and USEd prior to any executable SQL statements.

PCB-00501: Runtime context variable "*string*" not of correct type

Cause: The runtime context variable referenced in an EXEC SQL CONTEXT USE statement is not of type sql_context.

Action: Declare your runtime context variable of type sql_context.

PCB-00502: This statement can only be used with THREADS=YES

Cause: EXEC SQL ENABLE THREADS has been used, even though option THREADS is set to NO.

Action: Specify option THREADS=YES or remove the EXEC ENABLE THREADS statement from the source code. "525 - 549, Result Set Cursors"

PCB-00525: Use of the AT clause is not permitted here

Cause: An explicit AT clause was used with an ALLOCATE statement or a FETCH/CLOSE statement also using a sql-cursor declaration.

Action: Remove the AT clause. "550 - 574, Miscellaneous"

PCB-00550: Unable to log on to ORACLE with "*string*". ORACLE error number: *number*

Cause: The precompiler was unable to log on to ORACLE with the specified username and password. An ORACLE error with given number occurred when the logon was attempted.

Action: .

PCB-00551: The SQLCA has already been included

Cause: The precompiler has encountered an include SQLCA statement after SQLCA has already been included. The SQLCA can only be included once.

Action: Remove the duplicate include SQLCA statement.

PCB-00552: The SQLCA and a SQLCODE variable cannot both be used

Cause: The SQLCA has been included and a SQLCODE variable has been declared. This is not allowed as references to the SQLCODE variable are ambiguous and will result in COBOL compiler errors.

Action: Use either the SQLCA or the SQLCODE variable. Remove either the include of the SQLCA or the SQLCODE variable declaration.

PCB-00553: FOR clause not allowed on this statement

Cause: A FOR clause was used with a SELECT, LOB, or DEALLOCATE DESCRIPTOR statement. A FOR clause cannot be used with these statements. In the case of a SELECT statement, data returned from the last loop in the execution of the SELECT would overwrite data returned in a previous loop.

Action: Remove the FOR clause from the statement. Use a host language construct to iteratively execute the statement.

PCB-00554: Must include SQLCA when mode=ANSI and WHENEVER SQLWARNING used

Cause: When MODE={ANSI | ANSI14}, an attempt was made to use the WHENEVER SQLWARNING statement without declaring the SQLCA. When MODE={ANSI | ANSI14}, declaring the SQLCA is optional, but to use the WHENEVER SQLWARNING statement, the SQLCA must be declared.

Action: Remove all WHENEVER SQLWARNING statements from the program or declare the SQLCA by hardcoding it or copying it into the program with the INCLUDE statement.

PCB-00555: Using WHERE CURRENT OF on cursor defined without FOR UPDATE clause

Cause: if mode=ORACLE, then a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCB-00556: Unrecoverable error. Fix previous errors and re-precompile

Cause: A fatal parsing error or token stack overflow error has been encountered.

Action: Fix the syntax error that is causing the parsing error.

PCB-00557: USING clause can only be used on a PREPAREd dynamic statement

Cause: A severe semantics error occurred because the USING clause was used with the OPEN cursor statement and the cursor declaration is not for a PREPAREd statement. The correct sequence of statements should be like: EXEC SQL prepare sv from :sel_stmt END-EXEC. EXEC SQL declare csv cursor for sv END-EXEC. EXEC SQL open csv USING :hv1, :hv2 END-EXEC.

Action: Use the prepare statement for the sql statement and use that in the declare cursor statement.

PCB-00558: Invalid external datatype specified in EXEC SQL VAR statement

Cause: An invalid external datatype was specified in the EXEC SQL VAR statement.

Action: Specify a valid external datatype. "575 - 599, PL/SQL (including ARRAYLEN)"

PCB-00559: Cursor was not declared in scrollable mode

Cause: A cursor which was not DECLAREd in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCB-00560: Value of offset cannot be negative in ABSOLUTE orientation mode

Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCB-00575: PLS-*number*: *string*

Cause: Refer to the indicated PL/SQL error message for the indicated condition.

Action: Refer to the indicated PL/SQL error message to correct the SQL statement or embedded PL/SQL block.

PCB-00576: PLS-*number*: *string*

Cause: The precompiler found an error in an embedded SQL statement or PL/SQL block.

Action: Refer to the indicated PL/SQL error message to correct the SQL statement or embedded PL/SQL block.

PCB-00577: Use of ARRAYLEN with host tables in SQL statements is ignored

Cause: ARRAYLEN is only valid with PL/SQL.

Action: Use an appropriate table type.

PCB-00578: Variable "*string*" must be a table

Cause: In an ARRAYLEN statement, the name of a previously declared host table was not specified. The first host variable in an ARRAYLEN statement must be a table. The second host variable, which specifies an array dimension, must be a 4-byte integer. The correct syntax follows: EXEC SQL ARRAYLEN HTABLE (DIM) END-EXEC. The ARRAYLEN statement must appear along with, but somewhere after, the declarations of host_table and dimension.

Action: Check the spelling of both identifiers in the ARRAYLEN statement. If necessary, supply the missing host table name.

PCB-00579: Invalid ARRAYLEN length variable type for "*string*"

Cause: A valid table dimension was not specified in an ARRAYLEN statement. The table dimension must be specified using a previously declared 4-byte integer host variable, not a literal or expression. For example, the offending code might look like: EXEC SQL ARRAYLEN ETABLE (25) END-EXEC. -- illegal dimension

Action: Supply a valid table dimension. If necessary, declare a 4-byte integer host variable for use in the ARRAYLEN statement.

PCB-00580: Previous use of host variable "*string*" uses different indicator

Cause: Within a PL/SQL statement, a host variable was used with two different indicator variables or was used with an indicator variable in one instance and without an indicator in another instance.

Action: Change all references to the host variable so that they all use the same indicator variable or all use no indicator variable.

PCB-00581: "*string*" used as both host variable and indicator

Cause: Within a PL/SQL statement, the variable was used as both a host variable and an indicator variable.

Action: Use different variables for host variables and indicator variables. "600 - 624, EXEC TOOLS"

PCB-00600: indicators are not allowed in EXEC IAF statements

Cause: Indicator variables associated with host variables cannot be used in EXEC IAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variables. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer"s Guide to the Oracle Precompilers for more information of EXEC IAF and EXEC TOOLS statements.

PCB-00603: An EXEC TOOLS MESSAGE host variable is not a character type

Cause: If a host variable is used to specify the message in an EXEC TOOLS MESSAGE statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type. "625 - 649, EXEC SQL LOB statements"

PCB-00625: An indicator variable is not required with this attribute

Cause: In a LOB DESCRIBE, an indicator variable was used with a host variable when retrieving a LOB attribute that does not require one.

Action: Remove the indicator variable.

PCB-00626: Incompatible LOB types

Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCB-00627: Host variable is not of character type

Cause: The given host variable was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCB-00628: Buffer type is incompatible with LOB type

Cause: This error can occur in either of the following situations

1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type.

2. An attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCB-00629: Host variable is not of Internal LOB type

Cause: The given host variable was not declared to be an internal LOB. BLOB, CLOB or NCLOB are internal lob types.

Action: Redeclare the host variable using one of the internal LOB types.

PCB-00630: Host variable is not of LOB type

Cause: The given host variable was not declared to be any type of LOB, Internal or External. BLOB, CLOB or NCLOB are internal lob types. BFILE is an external type.

Action: Redeclare the host variable using any of the LOB types, Internal or External.

PCB-00631: Host variable is not an External LOB

Cause: The given host variable was not declared to be an External LOB. BFILE is an external type.

Action: Redeclare the host variable using an External LOB type (BFILE).

PCB-00632: Cannot open an External LOB in READ WRITE mode

Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILEs are currently not supported so this operation is considered erroneous.

Action: Do not open BFILEs using READ WRITE mode. BFILEs can only be OPENed in READ ONLY mode.

PCB-00633: Invalid host variable and attribute pairing

Cause: The host variable and attribute pairing in a LOB DESCRIBE was invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCB-00635: This attribute is only valid for Internal LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCB-00636: This attribute is only valid for External LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCB-00637: Host variable is not an exact binary integer

Cause: A host variable was given that was not declared to be of some acceptable exact binary integer type. Generally, when this error occurs, a signed or unsigned integer type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper binary integer type.

PCB-00638: This attribute is only valid for internal or external LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given source was not an internal or external LOB type.

Action: Use a LOB host variable in the LOB DESCRIBE statement.

PCB-00639: Cannot specify destination offset in a LOB WRITE APPEND

Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement. "700 - 725, Dynamic SQL error conditions"

PCB-00700: This statement can only be used with DYNAMIC=ANSI

Cause: One of the following statements was used without specifying DYNAMIC=ANSI:

o EXEC SQL ALLOCATE/DEALLOCATE/GET/SET DESCRIPTOR

o EXEC SQL DESCRIBE OUTPUT/INPUT ... USING ... <descriptor name>

o EXEC SQL EXECUTE ... INTO ...

o EXEC SQL EXECUTE ... USING... <descriptor name>

o EXEC SQL OPEN ... INTO ...

o EXEC SQL OPEN ... USING... <descriptor name>

o SCROLL in DECLARE CURSOR

o EXEC SQL FETCH <orientation> ... where <orientation> is NEXT, PRIOR, FIRST, LAST, ABSOLUTE, or RELATIVE

Action: Specify DYNAMIC=ANSI or remove statement(s) like those above.

PCB-00701: MAX OCCURRANCES must be between 1 and 65535

Cause: The value specified in the WITH MAX clause of an EXEC SQL ALLOCATE DESCRIPTOR statement was less than 1 or greater than 65535

Action: Specifiy a value between 1 and 65535 inclusive

PCB-00702: Out-of-range item number

Cause: The value specified in the VALUES clause of an EXEC SQL GET/SET DESCRIPTOR statement was less than one or greater than 65535.

Action: Specify a value between 1 and 65535.

PCB-00725: Outline name length exceeds the allowed limit of *number* characters

Cause: Outline name <category_name>_<filename>_<filetype>_<seqno> has exceeded the allowed limit.

Action: Use OUTLNPREFIX option to specify the outline name which will be well in the permitted limit.

PCB-00726: Number of outlines has exceeded the limit

Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCB-00727: Outline cannot be created on statement at line *number*, column *number*

Cause: Outline cannot be created as there is a syntax error or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

PCB-00901: Pro*COBOL internal error condition detected (Code = *number*)

Cause: Pro*COBOL had detected an abnormal condition in its internal data structures. This error message should not normally ever be produced. Customer service should be contacted to report the error.

Action: Correct any other errors which have been reported. If the internal error still exist, examine the source code where the condition was detected and try modifying in some way. Possibly this will alleviate the internal error condition.

PCB-00902: Unable to read message file, facility PCB

Cause: Pro*COBOL was unable to access the message file containing message text. The file is possibly corrupt.

Action: Contact customer support for information on reinstalling the Pro*COBOL message files.

PCB-00903: Pro*COBOL is unable to initialize its parser function

Cause: Pro*COBOL was unable to access the message file containing message text. The file is possibly corrupt.

Action: Contact customer support for information on reinstalling the Pro*COBOL message files.

71

PCC-00001 to PCC-01515

PCC-00001: Unable to open file *string*

    Cause: The precompiler was unable to open a temporary file for internal use. There might be insufficient disk space, too many open files, or read-only protection on the output directory.

    Action: Check that there is enough disk space, that the limit for open files is set high enough (check with the system manager) and that protection on the directory allows opening a file for writing.

PCC-00002: Invalid syntax at column *number* **in line** *number* **of file** *string*

    Cause: There is a syntax error in an EXEC statement or the statement is not properly terminated.

    Action: Correct the syntax of the EXEC statement. If the error occurred at the end of the input file, check that the last EXEC statement is properly terminated.

PCC-00003: Invalid SQL Identifier at column *number* **in line** *number* **of file** *string*

    Cause: The symbol in a conditional precompilation statement (such as EXEC ORACLE IFDEF) is invalid, or the name of a SQL descriptor, statement, or cursor is invalid or was not properly declared.

    Action: Check the statement syntax and spelling of the identifier and check that a reserved word was not accidentally used. If necessary, define the identifier in a variable declaration or DECLARE statement ahead of the line in error.

PCC-00004: Mismatched IF/ELSE/ENDIF block at line *number* **in file** *string*

    Cause: There is an EXEC ORACLE ELSE or EXEC ORACLE ENDIF statement without a matching EXEC ORACLE IFDEF statement.

    Action: Add the missing EXEC ORACLE IFDEF statement or deletee or move the EXEC ORACLE ELSE or EXEC ORACLE ENDIF statement.

PCC-00005: Unsupported datatype in line *number* **of file** *string*

    Cause: A host variable defined in the Declare Section has an unsupported datatype or has a scale or precision outside the supported range.

    Action: Redefine the host variable using a supported datatype. Check that the scale and precision of a numeric variable are in the accepted range.

PCC-00007: Invalid WHENEVER condition at column *number* **in line** *number* **of file** *string*

    Cause: A condition other than SQLERROR, SQLWARNING, or NOT FOUND was specified in an EXEC SQL WHENEVER statement, or one of these was used, but spelled incorrectly.

Action: Correct the spelling of the WHENEVER condition or use a host- language IF statement to test the special condition.

PCC-00008: Invalid WHENEVER action at column *number* **in line** *number* **of file** *string*

Cause: At lease one of the following:

o An action other than CONTINUE, DO, GOTO, or STOP was specified in an EXEC SQL WHENEVER statement.

o One of the specified actions was spelled incorrectly.

o The host language does not allow the action (STOP is illegal in Pro*Pascal programs).

o A GOTO label is invalid.

Action: Check that the host language allows the specified WHENEVER action. If necessary, correct the spelling of the WHENEVER action or correct the GOTO label.

PCC-00009: Invalid host variable at column *number* **in line** *number* **of file** *string*

Cause: A host variable used in an EXEC SQL statement was not declared in the Declare Section or has an unsupported datatype.

Action: Declare the host variable in the Declare Section, making sure it has one of the supported datatypes.

PCC-00010: Statement out of place at line *number* **in file** *string*

Cause: An EXEC statement was not placed properly in the host program. For example, there might be a data manipulation statement in the Declare Section. In a Pro*COBOL program, the Declare Section might be outside the WORKING-STORAGE or LINKAGE SECTION.

Action: Remove or relocate the statement.

PCC-00011: Already in a declare section at line *number* **in file** *string*

Cause: A BEGIN DECLARE SECTION statement was found inside a Declare Section.

Action: Remove the extra BEGIN DECLARE SECTION statement.

PCC-00012: Not in a declare section at line *number* **in file** *string*

Cause: An END DECLARE SECTION statement without a matching BEGIN DECLARE SECTION statement was found. Either the BEGIN DECLARE SECTION statement is missing or misspelled or the END DECLARE SECTION statement is an extra.

Action: Add or correct the BEGIN DECLARE SECTION statement or remove the extra END DECLARE SECTION statement.

PCC-00013: Unable to open include file "*string*" at line *number* **in file** *string*

Cause: The precompiler was unable to open the input file specified in the INCLUDE statement. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges to access the file have been granted, and that it is not locked by another user. Also, check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCC-00014: Undeclared SQL Identifier "*string*" at line *number* in file *string*

Cause: The name of a descriptor, statement, or cursor was not declared or is misspelled.

Action: Add or correct the descriptor, statement, or cursor declaration.

PCC-00015: Unrecognized Host Language syntax ignored at line *number* in file *string*

Cause: The host language syntax used to define a host variable in the Declare Section is incorrect.

Action: Check the syntax and the spelling, then correct the declaration.

PCC-00016: Unable to open a cursor at line *number* in file *string*

Cause: The syntax in a SQL statement is faulty. The precompiler was expecting a host variable, but found something else.

Action: Check the syntax and the spelling, then correct the SQL statement.

PCC-00017: Unable to parse statement at line *number* in file *string*

Cause: There is a syntax error in an array declaration. The precompiler was expecting a right bracket (]) but found something else.

Action: Check the syntax, then correct the array declaration.

PCC-00018: Expected "*string*", but found "*string*" at line *number* in file *string*

Cause: The syntax in a SQL statement is faulty. The precompiler found an unexpected or illegal token.

Action: Check the syntax and the spelling, then correct the SQL statement.

PCC-00019: Unable to obtain bind variables at line *number* in file *string*

Cause: The precompiler was unable to find information about an input host variable (bind variable) used in a SQL statement.

Action: Check that the input host variable is declared in the Declare Section and used properly in the SQL statement.

PCC-00020: Unable to obtain define variables at line *number* in file *string*

Cause: The precompiler was unable to find information about an output host variable (define variable) used in a SQL statement.

Action: Check that the output host variable is declared in the Declare Section and used properly in the SQL statement.

PCC-00021: Oracle Error: *string*

Cause: An Oracle error occurred.

Action: Refer to the indicated message in the ORA message chapters of this manual.

PCC-00022: Out of space - unable to allocate *number* bytes

Cause: The precompiler process ran out of memory.

Action: Allocate more memory to the process, then retry.

PCC-00023: Unable to log off from ORACLE

Cause: An Oracle connection error occurred while the precompiler was trying to log off, probably because ORACLE has been shut down.

Action: Check that ORACLE is available, then retry.

PCC-00024: Indicator variable "*string*" has wrong type or length at line *number* in file *string*

Cause: An indicator variable was not declared in the Declare Section as a 2-byte integer. Indicator variables must be defined as 2-byte integers.

Action: Redefine the indicator variable as a 2-byte integer.

PCC-00025: Undeclared indicator variable "*string*" at line *number* in file *string*

Cause: An indicator variable used in a SQL statement was not declared in the Declare Section or its name is misspelled.

Action: Add or correct the indicator variable declaration.

PCC-00026: Invalid host variable "*string*" at line *number* in file *string*

Cause: A host variable used in a SQL statement was not declared properly. Some possible causes follow:

o It was not declared in the Declare Section.

o Its datatype is not supported.

o Its name is misspelled.

o It is a COBOL group item; in Pro*COBOL, only elementary items are allowed in a SQL statement.

Action: Add or correct the host variable declaration.

PCC-00027: Redeclared SQL Identifier "*string*" at line *number* in file *string*

Cause: The name of a SQL descriptor, statement, or cursor was re-declared (that is, declared twice)

Action: Check the spelling of the identifier, then, if necessary, remove the extra declaration.

PCC-00028: Option "*string*" not legal as EXEC ORACLE OPTION

Cause: A precompiler option was specified inline in an EXEC ORACLE statement. Some options can be specified only on the command line. For example, INAME cannot be specified inline.

Action: Respecify the precompiler option on the command line, instead of in an EXEC ORACLE statement. To see an online display of the precompiler options, enter the precompiler command (with no options) at the operating-system prompt.

PCC-00029: Ambiguous option "*string*"

Cause: The name of a precompiler option was abbreviated ambiguously. For example, MAX= might refer to MAXLITERAL or MAXOPENCURSORS.

Action: Respecify the full option name or an unambiguous abbreviation. To see an online display of the precompiler options, enter the precompiler command (with no options) at the operating-system prompt.

PCC-00031: Invalid value given for option "*string*"

Cause: The value specified for a precompiler option is invalid, probably because the value is misspelled (as in LTYPE=HORT) or out of range (as in PAGELEN=-55).

Action: Check the value, making sure it is spelled correctly and within the legal range.

PCC-00032: Invalid option "*string*"

Cause: The precompiler found an invalid precompiler option name. Some possible causes follow:

o The option name is misspelled.

o The specified option does not exist.

o The equal sign (=) between the option name and value is missing or has space around it.

Action: Check that the option exists and that its name is spelled correctly. To see an online display of the precompiler options, enter the precompiler command (with no options) at the operating- system prompt. Also check that there is an equal sign between the option name and value.

PCC-00033: Missing operand for option "*string*"

Cause: No value was specified for a precompiler option. Either the value is missing or there is space around the equal sign (as in LTYPE =SHORT).

Action: Check that a value for each option has been specified and there is no space around the equal sign.

PCC-00036: No input file name specified

Cause: The input file was not specified on the command line.

Action: Use the INAME command-line option to specify the input file.

PCC-00037: Unable to log on to ORACLE with "*string*". ORACLE error number: *number*

Cause: The precompiler was unable to log on to ORACLE with the specified username and password. An ORACLE error with given number occurred when the logon was attempted.

Action: Refer to the indicated message in the ORA message chapters of this manual.

PCC-00038: Unable to open a cursor

Cause: This is an internal error message not usually issued.

Action: Call customer support for assistance. If the application does not require syntactic or semantic checking of SQL statements and does not use PL/SQL, specify SQLCHECK=NONE on the command line.

PCC-00039: Unable to open input file "*string*"

Cause: The precompiler was unable to open the input file specified by the INAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCC-00040: Unable to open listing file "*string*"

Cause: The precompiler was unable to open the listing file specified by the LNAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File acces privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager). If a listing file is not needed, specify LTYPE=NONE on the command line.

PCC-00041: Unable to open output file "*string*"

Cause: The precompiler was unable to open the listing file specified by the ONAME precompiler option. Some possible causes follow:

o The filename is misspelled.

o The file does not exist.

o The search path to the file is incorrect.

o File acces privileges are insufficient.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that the file exists, that the search path to the file is correct, that sufficient privileges have been granted to access the file, and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with the system manager).

PCC-00042: Must EXEC SQL INCLUDE SQLCA when mode=ANSI and WHENEVER SQLWARNING used

Cause: When MODE={ANSI | ANSI14}, an attempt was made to use the WHENEVER SQLWARNING statement without declaring the SQLCA. When MODE={ANSI | ANSI14}, declaring the SQLCA is optional, but to use the WHENEVER SQLWARNING statement, the SQLCA must be declared.

Action: Remove all WHENEVER SQLWARNING statements from the program or declare the SQLCA by hardcoding it or copying it into the program with the INCLUDE statement.

PCC-00044: Array size mismatch in INTO/USING. Minimum is: *string*(*number*:*number*)

Cause: The size of an array variable in an INTO/USING clause is too small for the number of rows processed.

Action: Declare all array variables in the INTO/USING clause to have at least the minimum dimension given.

PCC-00045: *string* **clause inappropriate at line** *number* **in file** *string*. **Ignored.**

Cause: There is a misplaced clause at the end of an EXEC SQL statement (an AT clause at the end of a SELECT statement, for example), or the

Action: Check the statement syntax, then relocate or correct the misplaced or invalid clause.

PCC-00047: Unterminated comment/string constant beginning near line *number* **in file** *string*

Cause: A string constant is missing an ending quotation mark, or a comment is missing an ending delimiter.

Action: Check that all comments are delimited and all string constants are enclosed by quotation marks.

PCC-00050: Unable to generate descriptor in program unit ending line *number* **in file** *string*

Cause: The precompiler was unable to generate a descriptor for the compilation unit. This can occur from either of the following:

o A non-existent or improperly implemented Declare Section

o Undetected syntax errors near the beginning of the source file or just before the END DECLARE SECTION statement

Action: Verify that the Declare Section is properly implemented. Then check for syntax errors at the beginning of the compilation unit and before any END DECLARE SECTION statement, and correct as appropriate.

PCC-00051: Size of VARCHAR *string* **is larger than 65533 in line** *number* **in file** *string*

Cause: The declared size of a VARCHAR host variable exceeds the precompiler limit of 65533 bytes.

Action: Check the Declare Section, making sure the size of each VARCHAR variable does not exceed the limit of 65533 bytes.

PCC-00053: FOR variable *string* **is invalid type at line** *number* **in file** *string*

Cause: The count variable in a FOR clause has the wrong datatype. The datatype must be NUMBER or LONG (or be compatible with NUMBER or LONG).

Action: Check the declaration and check that the count variable has a datatype of NUMBER or LONG (or a compatible Oracle or host-language datatype).

PCC-00054: Expected End-of-Statement at column *number* **in line** *number* **of file** *string*

Cause: The precompiler expected to find a statement terminator at the end of an EXEC statement but found something else. This can happen if tabs were

embedded in the source code (because the precompiler has no way of knowing how many spaces a tab represents).

Action: If tabs are embedded in the source ocde, replace them with spaces. Check the statement syntax and check that each EXEC statement has a terminator. For embedded CREATE {FUNCTION | PROCEDURE | PACKAGE} statements and for embedded PL/SQL blocks, check that the statement terminator is END-EXEC.

PCC-00055: Array "*string*" not allowed as bind variable at line *number* in file *string*

Cause: A host array was used as a bind (input) variable in the WHERE clause of a SELECT statement. This is not allowed.

Action: Remove the host array or replace it with a simple host variable.

PCC-00056: FOR clause not allowed on SELECT statement at line *number* in file *string*.

Cause: A FOR clause was used with a SELECT statement. This is not allowed as data returned from the last loop in the execution of the SELECT overwrites data returned in a previous loop.

Action: Remove the FOR clause from the SELECT statement and use a host-language construct to iteratively execute the SELECT statement.

PCC-00060: Both CURSOR and STATEMENT have AT clauses at line *number* of file *string*.

Cause: Two AT clauses, one in a DECLARE STATEMENT statement, the other in a DECLARE CURSOR statement, pertain to the same SQL statement. The AT clause may be specified with either DECLARE STATEMENT or DECLARE CURSOR, but not with both.

Action: Remove the AT clause from one of the statements.

PCC-00061: Error at line *number*, column *number*. PLS-*number*: *string*

Cause: The precompiler found an error in an embedded SQL statement or PL/SQL block.

Action: Refer to the indicated PL/SQL error message to correct the SQL statement or embedded PL/SQL block.

PCC-00062: Must use option SQLCHECK=SEMANTICS(FULL) when there is embedded PL/SQL

Cause: The precompiler tried to parse an embedded PL/SQL block when SQLCHECK={SYNTAX | NONE}. PL/SQL blocks can be parsed only when SQLCHECK=SEMANTICS is specified.

Action: Remove the PL/SQL block or specify SQLCHECK=SEMANTICS.

PCC-00063: Reached end of file *string* before End-of-Statement at line *number*!

Cause: The precompiler encountered an end-of-file while parsing a PL/SQL block.

Action: Add the appropriate statement terminator (;) or end-of-block statement (END;) to the PL/SQL block.

PCC-00064: All uses of a given host variable must use identical indicator variables.

Cause: Two or more occurrences of a host variable in an EXEC SQL statement were associated with different indicator variables. This is not allowed.

Action: Rename the indicator variables so that each occurrence of the host variable is associated with the same indicator variable.

PCC-00065: Userid required, but not specified.

Cause: The SQLCHECK=SEMANTICS option was specified, but the USERID option on the command line was not specified.

Action: Specify USERID=username/password or enter a username and password when prompted or specify SQLCHECK={SYNTAX | NONE}.

PCC-00066: Userid only used when SQLCHECK = FULL, userid ignored.

Cause: The USERID option was specified when SQLCHECK={SYNTAX | NONE}. This is unnecessary.

Action: Specify the USERID option only when SQLCHECK=SEMANTICS.

PCC-00067: Ireclen exceeded. Line *number* in file *string* truncated.

Cause: While reading the input file, the precompiler found a line longer than IRECLEN.

Action: Either shorten the input line or specify a larger IRECLEN value on the command line.

PCC-00068: Host and indicator variables may not have the same name.

Cause: In an EXEC SQL statement, an indicator variable had the same name as a host variable. The names of a host variable and its associated indicator variable must be different. Also, an indicator variable cannot be used as a host variable.

Action: Rename the host or indicator variable.

PCC-00069: Host variable "*string*" has unsupported datatype at line *number* in file *string*

Cause: A host variable had an unsupported datatype. For a list of supported datatypes, see the language-specific supplement to the Programmer"s Guide to the Oracle Precompilers.

Action: Redefine the host variable in the Declare Section, giving it a supported datatype.

PCC-00070: Illegal syntax, Exponential value in SQL statement: *string*

Cause: The precompiler found a syntax error while parsing a number coded in scientific notation. The precompiler expected to find a signed integer following the exponentiation indicator (E), but found something else.

Action: Reformat the number correctly.

PCC-00071: Unable to open message file.

Cause: The precompiler was unable to open the message file containing the messages that can be issued by the precompiler. This can happen if there are too many open files or if there were problems with installation of the precompiler.

Action: Check that the limit for open files is high enough (check with the system manager). Otherwise, contact customer support.

PCC-00072: Input file name length exceeds the maximum length

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCC-00073: Cursor is declared but never OPENed at line *number* in file *string*.

Cause: A cursor was DECLAREd but was not referenced in an OPEN statement. This is only an informational message.

Action: Remove the cursor declaration or code an OPEN statement for the cursor.

PCC-00075: ":" expected before indicator variable

Cause: An indicator variable was not prefixed with a colon, as required.

Action: Prefix a colon to the indicator variable in question.

PCC-00076: DISPLAY type must be SIGN LEADING SEPARATE

Cause: This message is issued only by Pro*COBOL. DISPLAY SIGN LEADING SEPARATE is the only DISPLAY type supported by Pro*COBOL.

Action: Check the spelling of the variable declaration. If necessary, remove the reference to the unsupported DISPLAY type.

PCC-00077: Colon usage with numeric label in WHENEVER statement is not ANSI

Cause: An Oracle extenstion to the ANSI/ISO SQL standard was used. Specifically, a numeric WHENEVER ... GOTO label was prefixed with a colon. For exammple the code might have looked like EXEC SQL WHENEVER SQLERROR GOTO :99; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, prefix alphanumeric (but not numeric) WHENEVER ... GOTO labels with a colon.

PCC-00078: FIPS warning: Invalid ANSI SQL Identifier

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the name given to a host variable:

o is longer than 18 characters,

o does not begin with a letter, or

o contains consecutive or trailing underscores. In the following Pro*C example, the host variable name is 19 characters long and therefore non-compliant: EXEC SQL BEGIN DECLARE SECTION; int department_location: -- not ANSI/ISO compliant EXEC SQL END DECLARE SECTION; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, change the host variable name so that it is <= 18 characters long, begins with a letter, and does not contain consecutive or trailing underscores.

PCC-00079: ANSI requires colon on label in WHENEVER statement

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, an alphanumeric WHENEVER ... GOTO label was not prefixed with a colon. For example the offending code might look like: EXEC SSQL WHENEVER NOT FOUND GOTO no_more; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, prefix alphanumeric (but not numeric) WHENEVER ... GOTO labels with a colon.

PCC-00080: TYPE identifier already TYPEd

Cause: The identifier being TYPEd in an EXEC SQLY TYPE statement appeared in a previous EXEC SQL TYPE statement. A given identifier can appear in only one EXEC SQL TYPE statement.

Action: Check the spelling of the identifiers. Use different identifiers in the EXEC SQL TYPE statements, or remove one of the EXEC SQL TYPE statements.

PCC-00081: Scale specification not allowed for given datatype

Cause: The Oracle external datatype referenced in an EXEC SQL VAR or EXEC SQL TYPE statement does no allow a scale specification.

Action: Check the precision specification and remove the scale specification.

PCC-00082: Length and scale specifications must be an integer

Cause: A floating point number or a non-number to specify a length or scale was used. Only integers can be used.

Action: Correct or remove the length and/or scale specification.

PCC-00083: Bind and define variables not allowed in CREATE statement

Cause: Host variables cannot appear in a CREATE statement. If the makeup of a CREATE statement cannot be known until run time, a dynamic SQL statement must be used to execute it. That is, the program must accept or build the CREATE statement at run time, store it in a host string, then EXECUTE it.

Action: Correct or remove the erroneous CREATE statement.

PCC-00085: Error writing to file *string*

Cause: The precompiler was unable to write to the named output file. Some possible causes follow:

o Sufficient file access privileges were not defined.

o Another user has locked the file.

o There is not enough disk space.

o There are too many open files.

Action: Check that sufficient privileges exist to access the file and that it is not locked by another user. Also check that there is enough disk space and that the limit for open files is set high enough (check with system manager).

PCC-00086: Source file *string* has zero length

Cause: The source file specified on the command line contains no code. Consequently, there is nothing for the precompiler to process.

Action: Specify a valid source file containing embedded SQL statements.

PCC-00087: EXEC SQL TYPE statement not allowed for this host language

Cause: An EXEC SQL TYPE statement was used with a host language that does not support user-defined datatype equivalencing. This feature is available only in Pro*C and Pro*Pascal.

Action: Remove the offending EXEC SQL TYPE statement.

PCC-00088: User defined type identifier expected

Cause: The user-defined datatype name in an EXEC SQL TYPE statement is missing or misspelled, is a reserved word, is not a legal identifier in the host-language or conflicts with a base datatype in that language.

Action: Check the spelling of the user-defined datatype name. If necessary, declare a valid user-defined datatype. User-defined datatype equivalencing is available only in Pro*C and Pro*Pascal.

PCC-00089: Invalid Oracle TYPE specification

Cause: The Oracle external datatype name in an EXE SQL TYPE or EXEC SQL VAR statement is missing or misspelled.

Action: Check the spelling of the external datatype name. If necessary, supply the missing datatype name.

PCC-00090: Precision/scale specification must be given for DECIMAL datatype

Cause: A precision and/or scale specification for the Oracle external datatype DECIMAL in an EXEC SQL TYPE or EXEC SQL VAR statement was omitted.

Action: Add the precision and/or scale specification to the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-00091: TYPE statement requires format specification for this Oracle datatype

Cause: A length, precision, and/or scale specification for an Oracle external datatype in an EXEC SQL TYPE or EXEC SQL VAR statement was omitted.

Action: Add the length, precision, and/or scale specification for the external datatype to the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-00092: Length and/or scale incompatible with specified Oracle datatype

Cause: An invalid length or scale for an Oracle external datatype in an EXEC SQL TYPE or EXEC SQL VAR statement was specified.

Action: Check that a length large enough to accommodate the external datatype is specified. If a scale is specified, check that it lies in the range -84..99.

PCC-00093: Invalid or obsolete option, ignored

Cause: The precompiler found an option available in a prior version or different host language but not in the current version or host language.

Action: Remove the option specification.

PCC-00094: Array length for char[n] datatype must be >= 2

Cause: When MODE={ANSI | ANSI14}, a length of less than 2 characters for a char[n] host variable was specified or a simple char variable was specified. When MODE={ANSI | ANSI14}, the length must be at least 2 characters. This message is issued only by the Pro*C precompiler.

Action: Correct the declaration so that it specifies a length of at least 2 characters.

PCC-00095: Missing PROGRAM, SUBROUTINE, FUNCTION, or BLOCK DATA statement

Cause: FORTRAN source files are expected to have at least one PROGRAM, SUBROUTINE, FUNCTION, or BLOCK DATA statement, which the precompiler uses to detect the beginning of a routine or compilation unit.

Action: Add one of these statements to the source file.

PCC-00096: Array FETCH not allowed for mode=ANSI14

Cause: When MODE=ANSI14, an array SELECT or FETCH was attempted. However, array operations are not allowed with MODE=ANSI14.

Action: If MODE=ANSI14 must be specified, place the SELECT or FETCH statement in a host-language loop, instead of using the array interface.

PCC-00097: Use of DECIMAL and DISPLAY types allowed only for COBOL and PL/I

Cause: The DECIMAL and DISPLAY external datatype was used in an EXEC SQL VAR or EXEC SQL TYPE statement with an Oracle precompiler other than

Pro*COBOL or PRO*PL/I. These external datatypes are available only in Pro*COBOL and PRO*PL/I.

Action: Remove the reference to the DECIMAL or DISPLAY external datatype from the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-00098: Scale specification cannot be used in this context

Cause: In a Pro*C, Pro*FORTRAN, Pro*Pascal program, scale in an EXEC SQL TYPE or EXEC SQL VAR statement in the current context cannot be specified.

Action: Remove the scale specification from the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-00099: Length cannot be given for types ROWID, DATE, or MLSLABEL

Cause: A length for the ROWID, DATE, or MLSLABEL external datatype was specified in an EXEC SQL TYPE or EXEC SQL VAR statement. This is unnecessary because those are fixed length types.

Action: Remove the length specification from the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-00100: Non integer label is not ANSI

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a non-integer WHENEVER ... GOTO label was in a Pro*Pascal program. For example, the offending code might look like: EXEC SQL WHENEVER NOT FOUND GOTO quit; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, use only integer WHENEVER... GOTO labels in a Pro*Pascal program.

PCC-00101: Lower case "e" in floating point number is not ANSI

Cause: A Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a lowercase "e" was used in scientific notation. For example, the offending code might look like: maxnum = 10e38; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, use an uppercase "E" in scientific notation.

PCC-00102: FOR UPDATE is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the FOR UPDATE OF clause was used in a cursor declaration. For example, the offending code might look like: EXEC SQL DECLARE emp_cursor CURSOR FOR SELECT ENAME, SAL FROM EMP WHERE DEPTNO = :dept_number FOR UPDATE OF SAL; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the FOR UPDATE OF clause.

PCC-00103: AT clause is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the AT <db_name> clause was used in a SQL statement. For example, the offending code might look like: EXEC SQL AT oracle3 COMMIT RELEASE; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the AT <db_name> clause.

PCC-00104: FOR clause is an Oracle extension

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the FOR clause was used in an array-processing SQL statement. For example, the offending code might look like: EXEC SQL FOR :limit INSERT INTO EMP (EMPNO, JOB, DEPTNO) VALUES (:emp_number, :job_title, :dept_number); This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the FOR clause.

PCC-00105: Keyword WORK required here by ANSI

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the keyword WORK was used in a COMMIT or ROLLBACK statement. For example, the offending code might look like: EXEC SQL COMMIT WORK RELEASE; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the keyword WORK.

PCC-00106: RELEASE is an Oracle extension to the COMMIT and ROLLBACK statements

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the parameter RELEASE was used in a COMMIT or ROLLBACK statement. For example, the offending code might look like: EXEC SQL ROLLBACK RELEASE; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the parameter RELEASE;

PCC-00107: The CONNECT statement is Oracle implementation dependent

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, the CONNECT statement was used to log on to ORACLE. For example, the offending code might look like: EXEC SQL CONNECT :username IDENTIFIED BY :password; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, specify the AUTO_CONNECT command-line option instead of using a CONNECT statement.

PCC-00108: This statement is not supported by ANSI

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a nonconforming SQL statement such as PREPARE was used. For example, the offending code might look like: EXEC SQL PREPARE sql_statement FROM :sql_string; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the nonconforming statement.

PCC-00109: Dynamic SQL and PL/SQL are Oracle extensions to ANSI SQL

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, dynamic SQL or embedded PL/SQL was used. For example, the offending code might look like: EXEC SQL EXECUTE BEGIN SELECT ... END; END-EXEC; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use dynamic SQL or embedded PL/SQL.

PCC-00110: Oracle extension to the WHENEVER statement

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a nonconforming keyword such as NOTFOUND, STOP, RAISE, or DO was used in the WHENEVER statement. (Note that NOT FOUND is ANSI-compliant.) For example, the offending code might look like: EXEC SQL WHENEVER SQLERROR STOP; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use the nonconforming keyword.

PCC-00111: SQLCHECK value in EXEC ORACLE statement exceeds command line value

Cause: The SQLCHECK option was entered inline and specified a level of checking higher than the level specified (or accepted by default) on the command line. This is not allowed. For example, if SQLCHECK={SYNTAX | LIMITED} is specified on the command line, SQLCHECK={SEMANTICS | FULL} cannot be specified inline.

Action: Revise the EXEC ORACLE statement or specify a lower level of checking on the command line.

PCC-00112: Datatype not supported by ANSI

Cause: An Oracle extension to the ANSI/ISO standard was used. Specifically, aa pointer or nonconforming datatype such as VARCHAR was used. For example, the offending code might look like: EXEC SQL BEGIN DECLARE SECTION VARCHAR username[20]; EXEC SQL END DECLARE SECTION This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use pointers or nonconforming datatypes.

PCC-00113: Value of DBMS option invalid with given value of MODE option

Cause: When MODE={ANSI14 | ANSI13}, DBMS=V7 was specified, or when MODE=ANSI, DBMS=v6 was specified. These option settings are incompatible. Note that the DBMS option was not available before release 1.5 of the Oracle Precompilers.

Action: With DBMS=V7, instead of MODE={ANSI14 | ANSI13}, specify MODE={ANSI | ORACLE}. With DBMS=V6, instead of MODE=ANSI, specify MODE={ANSI14 | ANSI13 | ORACLE}, but MODE=ORACLE is recommended.

PCC-00114: Length spec required in EXEC SQL VAR statements for VARxxx types

Cause: In an EXEC SQL VAR statement, a VARCHAR or VARRAW external datatype was specified without a length. Unlike other types, the maximum length of the data field must be specified for VARCHAR and VARRAW.

Action: Add a length specification to the EXEC SQL VAR statement.

PCC-00115: Array required here

Cause: In an ARRAYLEN statement, the name of a previously declared host array was not specified. The first host variable in an ARRAYLEN statement must be an array. The second host variable, which specifies an array dimension, must be a 4-byte integer. The correct syntax follows: EXEC SQL ARRAYLEN host_array (dimension); The ARRAYLEN statement must appear in the Declare Section along with, but somewhere after, the declarations of host_array and dimension.

Action: Check the spelling of both identifiers in the ARRAYLEN statement. If necessary, supply the missing host array name.

PCC-00116: This array already given in an ARRAYLEN statement

Cause: The same host array was specified in two different ARRAYLEN statements. A given host array cannot be specified in more than one ARRAYLEN statement.

Action: Check the spelling of the host array names in both ARRAYLEN statements. Change one of the names so that they refer to different host arrays or remove one of the ARRAYLEN statements.

PCC-00117: Invalid ARRAYLEN length variable type

Cause: A valid array dimension was not specified in an ARRAYLEN statement. The array dimension must be specified using a previously declared 4-byte integer host variable, not a literal or expression. For example, the offending code might look like: EXEC SQL ARRAYLEN ename_array (25); -- illegal dimension

Action: Supply a valid array dimension. If necessary, declare a 4-byte integer host variable for use in the ARRAYLEN statement.

PCC-00118: Use of host variable initialization not supported by ANSI SQL

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a host variable was initialized in its declaration, as shown in the following Pro*C example: EXEC SQL BEGIN DECLARE SECTION; int dept_number = 20; -- not ANSI/ISO-compliant EXEC SQL END DECLARE SECTION; This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not initialize host variables in their declarations.

PCC-00119: Value of const variable in INTO clause will be modified

Cause: A variable declared with the type specifier "const" was used in an INTO clause. Such variables should not be modified and should not be used in an INTO clause.

Action: Check the spelling of all identifiers in the INTO clause. If necessary, remove "const" from the host variable declaration or use a different host variable.

PCC-00120: File I/O error during code generation

Cause: d by insufficient disk space.

Action: Check that there is enough disk space.

PCC-00121: Arrays of VARCHAR pointers are not supported

Cause: An array of pointers was declared, which is not allowed. However, pointers to scalar types are allowed. With Pro*C, declare pointers to char[n] and varchar[n] variables as pointers to CHAR or VARCHAR (with no length specification).

Action: Correct or remove the declaration.

PCC-00122: Input file name and output file name are identical

Cause: On the command line, the same pathname for INAME and ONAME was specified, which designates the precompiler input and output files, respectively.

Action: Change one of the path/filenames.

PCC-00123: Entire VARCHAR declaration must be on same line

Cause: In a Pro*C program, a VARCHAR declaration spans more than one line, which is not allowed.

Action: Revise the declaration so that it uses only one line.

PCC-00124: COMMON_NAME option is specified too late

Cause: In a FORTRAN program, subroutine, or function, the precompiler option COMMON_NAME was mistakenly specified after the PROGRAM, SUBROUTINE, or FUNCTION statement. If COMMON_NAME is specified inline, its EXEC ORACLE OPTION statement must precede the PROGRAM SUBROUTINE, or FUNCTION statement.

Action: Relocate the EXEC ORACLE OPTION statement or specify COMMON_ NAME on the command line.

PCC-00126: Could not find or open system configuration file

Cause: The precompiler was unable to find or open the system configuration file (a text file containing preset command-line options, which the precompiler uses by default). Some possible causes follow:

o The file does not exist.

o The search path to the file is incorrect.

o File access privileges are insufficient.

o There are too many open files. However, this message is just a warning. Processing continues even if the system configuration file does not exist.

Action: Check that the file exists, that the search path to the file is correct, and that sufficient privileges exist to access the file. Also check that the limit for open files is set high enough (check with the system manager).

PCC-00127: *string*

Cause: This is a generic error message from the command-line processor.

Action: Correct the indicated error.

PCC-00128: Command line processor severe error

Cause: The command line processor encountered a severe error.

Action: After making sure that all the command-line options are specified correctly, call customer support with a full account of all the options and configuration files used.

PCC-00129: Option "*string*" must be given

Cause: A required command-line option is missing. For example, the INAME option, which specifies the name of the input file, might be missing.

Action: Supply the missing command-line option.

PCC-00132: Indicator array size must not be less than its host variable

Cause: An host variable array was used with an indicator array declared with a smaller dimension. For example: EXEC SQL BEGIN DECLARE SECTION; int dept_no[20]; short dept_no_ind[10]; EXEC SQL END DECLARE SECTION; ... SELECT ... INTO dept_no:dept_no_ind ...

Action: Increase the size of the indicator array.

PCC-00133: Command line option MODE=ANSI required with option NLS_ LOCAL=YES

Cause: The precompiler option NLS_LOCAL=YES was used without also specifying MODE=ANSI. The precompiler option MODE=ANSI must be specifiied if NLS_LOCAL=YES.

Action: Set the precompiler option MODE=ANSI in addition to NLS_ LOCAL=YES or do not set NLS_LOCAL=YES.

PCC-00135: Result Set Cursor usage is not standard SQL

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, an Oracle Result Set Cursor has been used. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action required. However, for ANSI/ISO compliance, do not use Result Set Cursors.

PCC-00136: Invalid SQL_CURSOR declaration

Cause: An array of SQL_CURSOR host variables was declared or, if Pro*COBOL, a PICTURE clause was specified in the SQL-CURSOR declaration. In Pro*FORTRAN, a length specification (i.e. "*n") on the SQL_CURSOR declaration could have been specified. These usages are not supported.

Action: Check that the SQL_CURSOR variable is not declared as an array or, if Pro*COBOL, that no PICTURE clause is specified for the SQL_CURSOR. In Pro*FORTRAN, check that there is no length specification (i.e. "*n") for the SQL_CURSOR.

PCC-00137: Invalid use of SQL cursor host variable

Cause: A SQL_CURSOR variable was used in an INTO or WHERE clause. SQL_CURSOR variables can be used only where ordinary cursor identifiers would be used or, in a PL/SQL block, where a cursor would normally be used.

Action: Remove the SQL cursor variable reference from the INTO clause or WHERE clause, or use a host variable of another type in the INTO or WHERE clause.

PCC-00138: Result Set Cursors are not implemented in this precompiler

Cause: There was an attempt to reference a host variable as a cursor reference. Cursor variables are not implemented in PRO*Pascal or Pro*PL/I.

Action: Rewrite your host-language code to use standard SQL cursors.

PCC-00139: Cannot change MAXLITERAL after an EXEC SQL statement

Cause: The MAXLITERAL option has been used in an inline EXEC ORACLE OPTION statement after and EXEC SQL, EXEC TOOLS, or EXEC IAF statement. This is not allowed.

Action: Use the MAXLITERAL option only on the command line or in an EXEC ORACLE OPTION statement placed at the beginning of the input source file.

PCC-00140: CREATE FUNCTION/PROCEDURE/PACKAGE/TRIGGER are Oracle extensions

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, one of the following statements was used:

o CREATE FUNCTION

o CREATE PROCEDURE

o CREATE PACKAGE

o CREATE TRIGGER These statements are Oracle extensions to the ANSI/ISO SQL standards. This informational message is issued by the FIPS Flagger when FIPS=YES.

Action: No action is required. However, for ANSI/ISO compliance, do not use any of these statements.

PCC-00141: Thread Safety is not implemented in this precompiler

Cause: There has been an attempt to use CONTEXT sql statements. The thread safety feature is not implemented in PRO*Pascal, Pro*PL/I, or Pro*C 1.x.

Action: Rewrite your host-language code to not use contexts.

PCC-00142: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been declared, ALLOCATEd, and USEd prior to any executable SQL statements.

PCC-00143: Runtime context variable not of correct type

Cause: The runtime context variable referecned in an EXEC SQL CONTEXT USE statement is not of type sql_context.

Action: Declare your runtime context variable of type sql_context.

PCC-00144: UNSAFE_NULL=YES must be used with DBMS=V7 and MODE=ORACLE

Cause: The option UNSAFE_NULL=YES has been used with DBMS=V6 or DBMS=NATIVE (the default) or has been used with MODE=ANSI/ANSI14/ANSI13.

Action: Either specify DBMS=V7 and MODE=ORACLE (the default) when using UNSAFE_NULL=YES or do not use UNSAFE_NULL=YES.

PCC-00145: This statement can only be used with THREADS=YES

Cause: EXEC SQL ENABLE THREADS or one of the EXEC SQL CONTEXT statements has been used, even though option THREADS is set to NO.

Action: Specify option THREADS=YES or remove the EXEC ENABLE THREADS or EXEC SQL CONTEXT statement from the source code.

PCC-00146: Illegal value for host option, ignored

Cause: An invalid host language was specified using the command-line host option. The host option valid values are pro* language specific. For example, for profor, the only valid value is FORTRAN. For procob, the only valid values are COBOL and COB74.

Action: Specify a valid host language with the host option.

PCC-00147: DBMS=V6 no longer supported; using DBMS=NATIVE

Cause: V6 compatibility is no longer supported. The precompiler will precompile as though DBMS=NATIVE was specified.

Action: Revise the specified DBMS option value from v6 to another value as desired.

PCC-01000: You are not authorized to run Pro*COBOL

Cause: The authorization or license to run the Pro*COBOL Precompiler has expired.

Action: Call customer support for assistance.

PCC-01001: Your Pro*COBOL authorization is about to expire

Cause: The authorization or license to run the Pro*COBOL Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01002: Invalid character "*character*" in indicator area at line *number* in file *string*

Cause: In a Pro*COBOL Precompiler program, only a blank, hyphen (-), asterisk (*), slash (/), or letter "D" is allowed in the indicator area, but the precompiler found another character.

Action: Remove or replace the invalid character. If the FORMAT=ANSI option is specified, check for an end-of-line in column 7.

PCC-01003: Invalid continuation at line *number* in file *string*

Cause: In a PRO*COBOL program, a continuation line was completely blank, except for the continuation character.

Action: Remove or replace the empty continuation line.

PCC-01004: In an EXEC statement at end-of-file

Cause: In a Pro*COBOL input file, the last EXEC statement was not terminated properly.

Action: Terminate the last EXEC statement with an END-EXEC.

PCC-01005: PROCEDURE DIVISION not found

Cause: The precompiler could not find the PROCEDURE DIVISION header in a Pro*COBOL program. Some possible causes follow:

o A keyword in the header is missing or misspelled.

o There is an apostrophe in the REMARKS section (the precompiler mistook the apostrophe for the beginning of a string literal).

o There is an unterminated literal in the WORKING-STORAGE SECTION.

o The wrong value for the FORMAT option was specified.

Action: Check that the PROCEDURE DIVISION header is in place and spelled correctly, that there is no apostrophe in the REMARKS section, that all literals in the WORKING-STORAGE SECTION are terminated, and that the right value for the FORMAT option is specified.

PCC-01006: EXEC statement cannot begin in Area A at line *number* in file *string*

Cause: In a Pro*COBOL program, EXEC statements must begin in Area B, but the precompiler found a statement beginning in Area A.

Action: Move the statement rightward so that it begins in Area B.

PCC-01007: WORKING-STORAGE SECTION not found

Cause: The precompiler could not find the WORKING-STORAGE SECTION header in a Pro*COBOL program, probably because a keyword is missing or misspelled, or the wrong value for the FORMAT option might have been specified.

Action: Check that the WORKING-STORAGE SECTION header is in place and spelled correctly and that the right value for the FORMAT option is specified.

PCC-01008: Multiple element records not allowed in DECLARE section

Cause: A few COBOL compilers do not allow group items to be passed as parameters in a CALL statement. (Check the COBOL compiler user"s guide.) If the compiler is one of these, group items within the Declare Section can contain only one elementary item.

Action: Assign each host variable its own group item.

PCC-01009: For hostlan = COB74, a SQL statement must be followed by ELSE or "."

Cause: In a Pro*COBOL program, an EXEC SQL statement is followed by another statement in the same sentence. An EXEC SQL statement must be the last statement in a COBOL-74 sentence and so must be terminated by the keyword ELSE or a period.

Action: Change the program logic, making the EXEC SQL statement the last statement in the sentence.

PCC-01010: Invalid use of NULL character in character literal

Cause: A null character (binary zero) was found in a string literal. This is not allowed by Pro*COBOL.

Action: Remove the null character from the string literal.

PCC-01011: USAGE IS BINARY clause must be terminated by "." on same line

Cause: The period terminating the USAGE IS BINARY clause must be on the same line as the USAGE clause. This message only occurs on systems that support the COMP5=YES command line option of Pro*COBOL, where where COMP-5 is substituted for BINARY.

Action: Check that the period terminating the USAGE IS BINARY clause is on the same line as the USAGE clause.

PCC-01012: DATA DIVISION not found

Cause: The Pro*COBOL precompiler did not find a DATA DIVISION in the input source file. Pro*COBOL applications are required to have a DATA DIVISION.

Action: Add a DATA DIVISION to the input source file.

PCC-01013: Invalid use of PIC N array variable "*string*" at line *number* in file *string*

Cause: A PIC N variable was declared using an OCCURS clause. Tables of PIC N variables are not supported by the Pro*COBOL precompiler.

Action: Declare the PIC N variable without an OCCURS clause or, if the PIC N variable is not used in any SQL statements, declare it outside the Declare Section.

PCC-01014: "VARYING" not supported with PIC N PICTURE clause

Cause: The keyword VARYING was used in a PIC N variable declaration.

Action: Remove the keyword VARYING from the variable declaration. If you want to declare a PIC N VARCHAR variable, specify the precompiler option VARCHAR=YES and declare the variable as an implicit VARCHAR group item as illustrated by the following example: EXEC SQL BEGIN DECLARE SECTION END-EXEC. ... 01 ENAME. 05 ENAME-LEN PIC S9(4) COMP. 05 ENAME-ARR PIC N(20). ... EXEC SQL END DECLARE SECTION END-EXEC.

PCC-01015: Cannot equivalence PIC N variable *string*

Cause: A PIC N variable or an implicit VARCHAR group item (with a PIC N variable as an elementary item) was used in an EXEC SQL VAR statement. This is not allowed.

Action: Do not use the PIC N variable in an EXEC SQL VAR statement. If you want an equivalence to an Oracle type using an EXEC SQL VAR statement, use a PIC X variable, instead of a PIC N variable.

PCC-01016: "N" character literals not supported in embedded PL/SQL

Cause: An "N" character literal was used within a PL/SQL block

Action: Remove the "N" character literal from the PL/SQL block.

PCC-01017: The SQLCA and a SQLCODE variable cannot both be used

Cause: The SQLCA has been included and a SQLCODE variable has been declared. This is not allowed as references to the SQLCODE variable are ambiguous and will result in COBOL compiler errors.

Action: Use either the SQLCA or the SQLCODE variable. Remove either the include of the SQLCA or the SQLCODE variable declaration.

PCC-01018: Conversion buffer size can only be specified for character types

Cause: A CONVBUFSZ clause has been used in an EXEC SQL VAR statement where the variable is not of a character datatype.

Action: Remove the CONVBUFSZ clause from the EXEC SQL VAR statement.

PCC-01019: Invalid conversion buffer size

Cause: The size specified in a CONVBUFSZ clause must be an integer in the range 1-32765. Either the size given is not an integer or is outside the required range.

Action: Specify an integer in the range 1-32765.

PCC-01100: You are not authorized to run Pro*FORTRAN

Cause: The authorization or license to run the Pro*FORTRAN Precompiler has expired.

Action: Call customer support for assistance.

PCC-01101: Your Pro*FORTRAN authorization is about to expire

Cause: The authorization or license to run the Pro*FORTRAN Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01102: Invalid label at line *number* in file *string*

Cause: The Pro*FORTRAN Precompiler found an invalid FORTRAN statement label in columns 1 through 6.

Action: Correct or remove the statement label.

PCC-01200: You are not authorized to run Pro*C

Cause: The authorization or license to run the Pro*C Precompiler has expired.

Action: Call customer support for assistance.

PCC-01201: Your Pro*C authorization is about to expire

Cause: The authorization or license to run the Pro*C Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01202: Identifier "*string*" truncated to 31 characters

Cause: A host identifier (the name of a host variable, for example) was truncated to the maximum length (31 characters) allowed by the precompiler.

Action: No action required. This message is just informational.

PCC-01300: You are not authorized to run Pro*PL/I

Cause: The authorization or license to run the Pro*PL/I Precompiler has expired.

Action: Call customer support for assistance.

PCC-01301: Your Pro*PL/I authorization is about to expire

Cause: The authorization or license to run the Pro*PL/I Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01400: You are not authorized to run Pro*Pascal

Cause: The authorization or license to run the Pro*Pascal Precompiler has expired.

Action: Call customer support for assistance.

PCC-01401: Your Pro*Pascal authorization is about to expire

Cause: The authorization or license to run the Pro*Pascal Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01500: You are not authorized to run Pro*Ada

Cause: The authorization or license to run the Pro*Ada Precompiler has expired.

Action: Call customer support for assistance.

PCC-01501: Your Pro*Ada authorization is about to expire

Cause: The authorization or license to run the Pro*Ada Precompiler is about to expire.

Action: Call customer support for assistance.

PCC-01510: No Package, Procedure or Function statement seen in *string*

Cause: Every Ada source file must have a package, procedure, or function statement. The precompiler did not find one.

Action: Add the appropriate statement(s) to the source file and rerun Pro*Ada.

PCC-01511: Identifier on line *number* in file *string* too long for code generated in file *string*

Cause: An identifier used in the host program is of a length that causes precompiler-generated code to exceed the length limitation on source lines.

Action: Use a shorter identifier or use the ORECLEN option to increase the allowed line length.

PCC-01512: Invalid EXEC SQL INCLUDE of file *string* found at line *number* in file *string*

Cause: The EXEC SQL INCLUDE statement is not allowed in Pro*Ada.

Action: Embed required source text directly in the Pro*Ada file. Use the "with" context clause to include required packages.

PCC-01513: FIPS warning: Unsupported datatype in line *number* of file *string*

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a host variable was declared with a non-ANSI/ISO standard type.

Action: No action required. However, for ANSI/ISO compliance, use only ANSI/ISO standard types.

PCC-01515: FIPS warning: Undeclared host variable "*string*" at line *number* in file *string*

Cause: An Oracle extension to the ANSI/ISO SQL standard was used. Specifically, a host variable was declared outside of a Declare Section.

Action: No action required. However, for ANSI/ISO compliance, declare the host variable within a Declare Section.

72

PCC-02010 to PCC-02460

PCC-02010: found end-of-file while scanning string literal

> **Cause:** A string in a SQL statement, which should be delimited by single quotation marks, was not terminated properly.
>
> **Action:** Check that all strings are delimited.

PCC-02011: found identifier greater than 128 characters (truncated)

> **Cause:** The precompiler found an identifier that was too long.
>
> **Action:** Shorten the identifier. SQL identifiers should be limited to 18 characters.

PCC-02012: did not find matching quote for char constant

> **Cause:** A character constant with a single quotation mark was not terminated.
>
> **Action:** Terminate the character constant.

PCC-02013: unknown escape sequence

> **Cause:** The precompiler found an escape sequence that it could not process inside a string literal. This error can arise when multibyte character strings that can contain shift-in or shift-out escape sequences are used.
>
> **Action:** Correct the string representation.

PCC-02014: Syntax error at line *number*, **column** *number*, **file** *string*:

> **Cause:** The precompiler detected an errorin C or embedded SQL syntax. This message is followd by a more specific error message.
>
> **Action:** Correct the syntax error.

PCC-02015: unable to open include file

> **Cause:** The precompiler could not open a header file that was specified using the #include preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read access rights on the file or on one or more of the directories in the path were not granted.
>
> **Action:** Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02016: include file pathname is too long

> **Cause:** The pathname for include files exceeded the maximum length of 80 characters.
>
> **Action:** Move the include file, or create an environment variable or logical to shorten the pathname.

PCC-02017: unable to open output file

Cause: The precompiler could not open an output file. This could be a generated code output file(.c file) or a listing file. This message can result from many causes. For example: o) A pathname for a specified output file contains a non-exixtent directory. o) An operating-system error occured because the file system or disk is full. o) Write permission on the specified directory or directories in the path do not exist.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02018: found end-of-file while scanning comment

Cause: A C comment either in C code or in an embedded SQL statement, was not terminated.

Action: Find the unterminated comment and terminate it with */ .

PCC-02019: Preprocessor warning at line *number*, column *number*, file *string*:

Cause: This message indicates that a warning condition occured as the precompiler was doing the preprocessor pass. A more specific warning message will follow this message.

Action: Correct the condition according to the action specified for the message that follows.

PCC-02020: Preprocessor error at line *number*, column *number*, file *string*:

Cause: This message indicates that an error condition occured as the precompiler was in the preprocessing phase. A more specific error message will follow this message.

Action: Correct the error according to the action specified for the message that follows.

PCC-02021: Found newline while scanning string literal

Cause: A string constant contains a newline character, For example char x[] = "Hello world";

Action: Remove the newline character.

PCC-02022: Found end of file while scanning a SQL statement

Cause: The precompiler encountered an end of file while parsing an EXEC SQL statement.

Action: Add statement terminator(;) or complete the EXEC SQL statement.

PCC-02023: Found end of file while scanning a PL/SQL statement

Cause: The precompiler encountered an end of file while parsing a PL/SQL statement (EXEC SQL EXECUTE ...).

Action: Complete the PL/SQL statement.

PCC-02035: CMD-LINE: CONFIG= option is invalid in a config file

Cause: A user configuration file inside a user configuration file cannot be specified. That is, nested configuration files cannot be nested.

Action: If there are nested configuration files, move the options from the nested files to the top levels.

PCC-02040: CMD-LINE: Option selected, but no value provided

Cause: An option on the command line was specified, but a value for it was not included. For example, the offending code might look like: proc iname=sample1.pc oname=

Action: Provide a value for the option.

PCC-02041: CMD-LINE: Option does not exist:

Cause: A non existent option on the command line was specified.

Action: See the Programmer"s Guide to the Oracle Precompilers, Release 2.2 for a list of the valid command line options and their possible values.

PCC-02043: CMD-LINE: Option syntax is incorrect

Cause: A value for a command line option was incorrectly specified.

Action: See the Programmer"s Guide to the Oracle Precompilers, Release 2.2 for the correct syntax for specifying command line option values.

PCC-02044: CMD-LINE: Illegal or out of range value for option:

Cause: A value specified for a command line option was not within the accepted range. For example,, the range for the MAXOPENCURSORS option is 5 to 256. If a value outside the range is specified, the message is triggered.

Action: See the Programmer"s Guide to the Oracle Precompilers for the ranges that option values can take.

PCC-02045: CMD-LINE: Option is not unique:

Cause: An option name was partially specified on the command line that made it non unique. For example, % proc in=t.pc the "in" option can imply either the INAME or INCLUDE option.

Action: Provide sufficient characters on the command line to make the option name unique.

PCC-02046: CMD-LINE: Unable to open config file:

Cause: A non-existent user configuration file was specified on the command line with the config option.

Action: Provide a valid filename for the configuration file.

PCC-02047: CMD-LINE: Option is not allowed inline:

Cause: An option was entered inline that can only be entered on the command line or in a configuration file. For example, the offending code might look like EXEC ORACLE OPTION (NLS_CHAR=<name>); The NLS_CHAR option can only be entered on the command line or in a configuration file.

Action: Remove the option from the source file, and specify it on the command line.

PCC-02066: CMD-LINE: Could not find or could not open system config file

Cause: The system configuration file has a standard name (pmscfg.h) and a location that is operating system dependent. On UNIX systems, it is located in the ORACLE_HOME/proc directory. If a file named pmscfg.h is not found in the standard location, this warning message is issued.

Action: Create a system configuration file in the standard location. The file can be empty. See also the operating system specific Oracle documentation.

PCC-02081: CMD-LINE: Unterminated option value list or value list was truncated.

Cause: An option that takes a list of values was entered. The value list did not have a closing parenthesis. This error may also occur if the list of values entered on a single line was too long and Pro*C truncated it.

Action: Ensure that all value lists are terminated with a closing parenthesis. Split long value lists into individual entries.

PCC-02100: Unable to initialize PL/SQL

Cause: The precompiler connected to Oracle but could not invoke the PL/SQL engine. This error can result if an earlier release of Oracle7 is used without the Procedural Option.

Action: To use PL/SQL, upgrade to a more recent release of Oracle7.

PCC-02101: Unable to open input file

Cause: The precompiler could not open the input file. This is the .pc file specified in the INAME=option. This means that the file does not exist, that a directory was incorrectly specified in the pathname, or that the person running the precompiler does not have read permission for the file. This message could also result from operating-system errors. For example, an unmounted file system or disk I/O errors, could trigger this error.

Action: Check that permission to read the file exists and that the full pathname has been specified correctly. Check for operating- system problems. See also the operating system-specific Oracle documentation.

PCC-02102: Fatal error while doing C preprocessing

Cause: The precompiler issues this message after a more specific message.

Action: Correct the problem specified in the previous message or messages.

PCC-02103: Password:

Cause: The username was specified on the command line without a password. For example, proc sqlcheck=full iname=sample1.pc userid=scott

Action: Re-enter the command line, and include the password or specify the password when prompted.

PCC-02104: Unable to connect to Oracle

Cause: The precompiler could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Note that this is a precompiler message, not a runtime message. This means that the USERID option value, either on the command line or in a configuration file, was incorrect.

Action: Check that the username and password are current and correct. Run SQL*DBA or SQL*PLUS and verify that connection can be made using that username and password.

PCC-02105: Unable to open list file

Cause: The precompiler could not open the listing file. This message can result from many causes. For example, o) A pathname for a specified listing file contains a non-existent directory. o) An operating-system error occured because the file system or disk is full. o) Write permission on the specified directory has not been granted.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02106: Userid only used when SQLCHECK = FULL, userid ignored.

Cause: The USERID option was specified on the command line, but SQLCHECK was not equal to FULL or SEMANTICS. The USERID has no effect, unless SQLCHECK=FULL or SQLCHECK=SEMANTICS.

Action: This is a warning message only.

PCC-02107: You may not specify PARSE = FULL when CODE = CPP

Cause: The PARSE=FULL and CODE=CPP options were both specified on the command line. The PARSE=FULL option invokes the C parser which does not

understand any C++ constructs generated by the precompiler with CODE=CPP option.

Action: Set the PARSE option to either NONE or PARTIAL if the CODE=CPP option is specified.

PCC-02108: UNSAFE_NULL=YES allowed if MODE=ORACLE and DBMS=V7 or V8

Cause: UNSAFE_NULL=YES was specified on the command line, but but either the MODE was not ORACLE or the DBMS was not V7 or V8.

Action: Specify MODE=ORACLE and DBMS=V7 or V8 when using UNSAFE_NULL=YES.

PCC-02109: SQLCHECK=NONE is no longer supported.. using SYNTAX

Cause: SQLCHECK=NONE was specified on the command line but is no longer a supported option. SQLCHECK=SYNTAX was used instead.

Action: This is a warning message only. To avoid this warning, specify SQLCHECK=SYNTAX or SQLCHECK=SEMANTICS.

PCC-02110: DBMS=V6_CHAR is deprecated. Use CHAR_MAP=VARCHAR2, DBMS=V7 instead

Cause: DBMS=V6_CHAR was specified on the command line but is no longer a supported option. The options CHAR_MAP=VARCHAR2 and DBMS=V7 were used instead.

Action: This is a warning message only. To avoid this warning, specify CHAR_MAP=VARCHAR2 and, if required, DBMS=V7.

PCC-02111: CHAR_MAP option ignored. Only CHAR_MAP=VARCHAR2 allowed for DBMS=V6

Cause: DBMS=V6 was specified, and CHAR_MAP was specified with a value other than VARCHAR2. The CHAR_MAP value is ignored.

Action: This is a warning message only. To avoid this warning, specify a DBMS value other than DBMS=V6 or use CHAR_MAP=VARCHAR2.

PCC-02112: OBJECTS option ignored. OBJECTS=YES is not allowed for DBMS=V6 or V7.

Cause: OBJECTS=YES was specified on the Pro*C command line, but the DBMS option value was not valid.

Action: This is a warning message only. To avoid this warning for OBJECTS=YES, use DBMS=V8 or DBMS=NATIVE with a V8 database.

PCC-02113: DBMS=V6 no longer supported; using DBMS=NATIVE, CHAR_MAP=VARCHAR2.

Cause: DBMS=V6 was specified on the command line, but is no longer a supported option value. The options DBMS=NATIVE and CHAR_MAP=VARCHAR2 were used instead.

Action: Check your program to verify that you are not depending on any V6 behavior. Please refer to the Programmer"s Guide to the Pro*C/C++ Precompiler for effects of specifying DBMS=V6.

PCC-02114: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards.

When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02115: Unable to open output file for writing

Cause: An attempt was made to precompile a header file where the output data file could not be opened (or created) for writing.

Action: Check for appropriate permissions on the directory and possibly file objects (if a data file already exists) to make sure that write permissions have been granted.

PCC-02116: You must specify a file extension using the HEADER option

Cause: An attempt was made to precompile a header file without specifying the name of the extension to use when creating the generated data file.

Action: Use the HEADER option to specify the name of a file extension to use when creating a data file for a precompiled header.

PCC-02129: CMD-LINE: Client supplied static options table is invalid

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02132: CMD-LINE: Could not allocate memory

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02133: CMD-LINE: Error in string processing function

Cause: This is an internal error message not usually issued. It indicates that a C string function, such as strcpy or strlen, returned an error.

Action: Call Oracle customer support.

PCC-02134: CMD-LINE: Null option supplied

Cause: A zero length option was specified on the command line.

Action: Re-enter the command line with a valid option.

PCC-02135: CMD-LINE: User asked for help

Cause: This is a final message that the precompiler issues when information about the command line options has been requested. For example, if the command proc ? is issued to get a list of current default values for the command line options, this message appears at the end of the list.

Action: No action required.

PCC-02138: CMD-LINE: Internal consistency error

Cause: This is an internal message for program exceptions. An unexpected condition was encountered by the command-line processor and a consistency check failed. Some possible causes of this message include: --invalid command-line options --memory corruption

Action: Report this error to Worldwide Support after gathering the following information: --the events that led to the error --the attempted operations that led to the error --any unusual circumstances prior to this error

PCC-02144: CMD-LINE: Blank characters are not allowed on either side of an equal sign (=)

Cause: An equal sign (=) was either immediately preceded or followed by a blank character.

Action: Precompile your program again without blank characters on either side of any equal sign (=) on the command line.

PCC-02146: CMD-LINE: value of option too long

Cause: The length of the user option exceeded 1023 bytes

Action: Reduce the length of the user option

PCC-02150: Error at line *number***, column** *number* **in file** *string*

Cause: An error was encounter at the given location.

Action: Check the named source file and correct the error using the additional information which follows this error message.

PCC-02151: Line *number* **column** *number* **file** *string***:**

Cause: An error was encounter at the given location.

Action: Check the listed source file and correct the error using the additional information which follows this error message.

PCC-02152: Unable to open file *string* **to display or list the source line** *number*

Cause: The file contains an error, but could not be reopened to list or display the incorrect line.

Action: Check that the file is intact and it has read permission. Then rerun the operation.

PCC-02153: Open file: *string*

Cause: A new source file was opened while producing the list file.

Action: No action required; this is an informational message.

PCC-02154: Close file: *string*

Cause: A source file was closed while producing the list file.

Action: No action required; this is an informational message.

PCC-02200: found unrecognized punctuation sequence

Cause: The error indicates that the precompiler parser encountered a badly-formed identifier or keyword.

Action: Correct the syntax.

PCC-02201: Found syntax error

Cause: This general message precedes one or more specific messages that detail the nature of the error.

Action: No action required. Correct the errors diagnosed in the following message(s).

PCC-02202: No typedef name was given

Cause: The precompiler parser encountered a typedef statement that had no name after the type specification. For example, typedef int;

Action: Correct the syntax

PCC-02203: found end of file when not expected

Cause: The parser can emit this message when a general syntax error occurs, for example, an unmatched "{" or "(".

Action: Correct the syntax.

PCC-02204: EXEC SQL INCLUDE not permitted from within an included file

Cause: EXEC SQL INCLUDE statements cannot be nested. Also, EXEC SQL INCLUDE statement cannot be put inside a file that is included using the #include preprocessor command.

Action: Recode the program so that the nested include statement is not required.

PCC-02205: Parser error at line *number*, **column** *number*, **file** *string*:

Cause: The precompiler parser encountered a syntax error, either in C code or in SQL code. A more specific message should follow.

Action: for any following messages.

PCC-02206: Host variables are not permitted within a DDL statement

Cause: A Data Definition Language statement cannot use host variables. For example, the statement CREATE TABLE :table_name (c1 char(10)); is illegal, because the name of the table in a CREATE TABLE statement cannot be represented using host variable.

Action: Use dynamic SQL to create the names of database objects (tables, views, columns, etc.) at runtime. See the Programmer"s Guide to the Oracle Precompilers, Release2.2 for information about dynamic SQL.

PCC-02207: Invalid macro name

Cause: The precompiler parser encountered a #define directive that had no macro name associated with it. For example, #define

Action: Correct the syntax.

PCC-02208: No filename specified in #include statement

Cause: The precompiler parser encountered a #include directive that had no filename associated with it. For example, #include

Action: Specify appropriate filename with the #include directive, or correct the syntax.

PCC-02209: Macro invocation has incorrect number of arguments

Cause: A macro invocation in the source does not have the same number of arguments as the macro definition in the #define line.

Action: Correct the macro reference or the macro definition.

PCC-02210: C++ punctuation sequences are not permitted

Cause: C++ punctuation sequences are not supported by the ProC/C++ precompiler.

Action: Rewrite your C++ code without using punctuation sequences and precompile it again.

PCC-02301: cannot reopen input file for reading

Cause: The semantic analysis phase of the precompiler could not reopen the input file to generate the output code.

Action: Check that the input file and it"s directory protection and priveleges do not change during precompilation.

PCC-02302: cannot open code generation output file "*string***"**

Cause: Pro*C was unable to open one or both temporary files required for code generation. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files in the the directory where you precompile.

PCC-02303: cannot open include file

Cause: The precompiler was not able to open a header file specified using the #INCLUDE preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read-access rights on the file or on one or more of the directories in the path have not been granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02304: invalid declaration of C function

Cause: A C function using invalid syntax was declared.

Action: Consult a C programming manual and correct the declaration.

PCC-02305: illegal mixing of new and old style C function declarations

Cause: All C functions using either the traditional style (K&R style) function declarations or the new (ANSI) style must be declared; the two styles cannot be mixed.

Action: Adopt a consist declaration style for functions.

PCC-02306: illegal name of C function

Cause: A C function was declared with a name that is not a legal C identifier.

Action: Use legal C identifiers for all function names.

PCC-02307: void can only be used when single parameter

Cause: A function can be declared or defined using the following syntax: int func1(void) to indicate that the function has no parameters. void can be used only once in this case.

Action: Remove the extra voids in the function definition or declaration.

PCC-02308: identifier required in this function declaration

Cause: A function definition written in ANSI C must have both the name and the type for all parameters.

Action: Rewrite the function definition so that it contains the name of each parameter.

PCC-02309: illegal formal parameter declaration

Cause: A formal parameter to a function was specified without giving its type.

Action: Rewrite the function declaration and include types of all parameters in function declarations.

PCC-02310: formal parameter VARCHARs should be declared as pointers

Cause: Many C compilers allow structures to be passed to and returned from functions. Although a VARCHAR is implemented as a C struct, VARCHARs must be passed to a function as pointers.

Action: Take the address of a VARCHAR when it is passed to a function. See the example in the section "Referencing VARCHAR Variables" in the Programmer"s Guide to the Oracle Precompilers.

PCC-02311: cannot have VARCHAR bit fields

Cause: Host variables cannot contain bit fields.

Action: Recode the application to remove the bit fields.

PCC-02312: arrays of VARCHAR greater than 2 dimensions not allowed

Cause: A VARCHAR variable having more that 2 dimensions was declared. Multidimensional arrays are not supported as host variables.

Action: Recode the application to remove multidimensional array usage.

PCC-02313: malformed VARCHAR declaration - missing length

Cause: When a VARCHAR is declared, a length specification is mandatory. For example, the following VARCHAR declaration is meaningless, hence illegal: VARCHAR v1[];

Action: Specify the length for each declared VARCHAR.

PCC-02314: cannot evaluate constant sizeof expression

Cause: A SIZEOF operator was used where a precompiler expression was expected. For example, as the length of a varchar.

Action: Eliminate the SIZEOF operator in this instance.

PCC-02315: cannot evaluate expression as constant

Cause: The specified expression does not evaluate to a constant. Such expressions are required, for example, as the length of a VARCHAR.

Action: Replace the expression with one that does evaluate to a constant integer.

PCC-02316: illegal operator in constant expression

Cause: A non-arithmetic operator was present in a constant expression.

Action: Rewrite the expression to eliminate the non-arithmetic operator.

PCC-02317: illegal cast type expression

Cause: An illegal cast is present in the expression.

Action: Remove the illegal cast.

PCC-02318: missing type expression

Cause: The specified expression is missing the declaration of a type.

Action: Specify a type for the expression.

PCC-02319: expression type does not match usage

Cause: The type of a variable does not match is usage. For example, in dynamic SQL, a host variable containing the text of a SQL statement must be declared as a C character type or be equivalenced to the SQL type STRING.

Action: Remove the declaration.

PCC-02320: arithmetic expression does not have correct operand types

Cause: The arithmetic expression must be specified with integral types.

Action: Rewrite the expression using integral types.

PCC-02321: only subtraction between two pointers is permitted

Cause: Pointer values cannot be added, multiplied, or divided. The only arithmetic operation permitted with pointers is subtraction.

Action: Recode to avoid this error message.

PCC-02322: found undefined identifier

Cause: An identifier used in a SQL statement was not defined. For example, a cursor name was referenced that had not been declared, or in a DECLARE CURSOR statement, a statement name was used that had not been PREPAREd.

Action: Provide a declaration for the variable and/or its type identifier.

PCC-02323: found typedef name used in an expression (expecting a value)

Cause: The name of a typedef was found where a variable was expected.

Action: Rewrite the expression and remove the reference to the typedef.

PCC-02324: found variable name used as a typedef name

Cause: The name of a variable was found where a typedef was expected.

Action: Rewrite the expression and specify the correct typedef reference.

PCC-02325: illegal indirection operation

Cause: An attempt was made to use a non-pointer type as a pointer.

Action: Rewrite the expression.

PCC-02326: illegal structure reference operation

Cause: A structure component using invalid syntax was referenced. For example, a -> operator was used instead of a required `." operator.

Action: Correct the invalid reference.

PCC-02327: struct or struct pointer required

Cause: A scalar host variable was used in a context where a structure (or its pointer) is required.

Action: Make the host variable a structure or add more scalar host variables to satisfy the SQL syntax requirements.

PCC-02328: undefined struct member

Cause: A structure component was referenced that was not declared as part of the structure.

Action: Redefine the structure member.

PCC-02329: found reference to undeclared function

Cause: A function was referenced that was not declared. All function references must be declared.

Action: Declare the function.

PCC-02330: expecting an expression of integer type

Cause: The expression does not evaluate to an integer. For example, a SQL FOR expression must evaluate to an integral type.

Action: Rewrite the expression.

PCC-02331: undefined SQL identifier

Cause: All SQL identifiers must be declared before they are used. This message can result when a CURSOR or STATEMENT is not declared (defined) before being referenced.

Action: Define the SQL identifier before it is used.

PCC-02332: attempted to redefine SQL identifier

Cause: A SQL identifier (such as a cursor name) can be defined only once.

Action: Do not redefine the SQL identifier.Use a different name.

PCC-02333: SQL identifier was not declared as a statement

Cause: A SQL statement identifier was referenced in a DECLARE... CURSOR statement that was not PREPAREd.

Action: Check that all SQL statement names have been declared. Remember that SQL statement names are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02334: SQL identifier was not declared as a cursor

Cause: A cursor name was used in an OPEN, FETCH, or CLOSE statement that had not been DECLAREd.

Action: Check that all SQL cursor names have been declared. Remember that cursors are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02335: body of cursor must name statement identifier

Cause: In a Dynamic SQL Method 4 application, the DECLARE... CURSOR statement must name a statement identifier that has been PREPAREd in a preceding statement. The PREPARE statement must physically (not logically) precede the DECLARE command.

Action: This error message is followed by another message that gives the line and column of the reference to the statement. Recode the application.

PCC-02336: host variable expression has invalid type

Cause: The host variable was declared using a C type that is not permitted as a host variable. See the Programmer"s Guide to the Oracle Precompilers for a list of the permissible C types for host variables.

Action: Use a permissible host variable type.

PCC-02337: cannot declare multi-dimensioned array for this type

Cause: Host variable arrays of scalars with more than 1 dimension cannot be declared.The only host variables allowed to be multi-dimensioned are CHAR and VARCHAR.

Action: Rewrite the variable declaration.

PCC-02338: structure contains a nested struct or union

Cause: A structure used as a host variable may not have structures or unions nested within it.

Action: Rewrite the variable declaration.

PCC-02339: host variables cannot be of union types

Cause: A C union as a host variable cannot be used.

Action: This error message is followed by another message that gives the line and column of the reference to the illegal union. Recode, using a struct or individual scalar host variables.

PCC-02340: structure contains a bit field

Cause: Bit fields are not allowed in host variables because they are meaningless for database DML operations.

Action: This error message is followed by another message that gives the line and column of the reference to the offending host variable. Recode the application.

PCC-02341: host variable has illegal type

Cause: A host variable has an unpermitted type (i.e.; enum, void, etc).

Action: Rewrite the host variable declaration, using a permissible host variable type.

PCC-02342: using WHERE CURRENT OF on cursor defined without FOR UPDATE clause

Cause: When MODE=Oracle, a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCC-02343: body of cursor must be a query expression

Cause: A cursor definition must be a SELECT statement.

Action: Rewrite the cursor definition.

PCC-02344: Host variable array size mismatch. Using minimum: *number*

Cause: Host variable arrays in a single statement should all be of equal size.

Action: Redefine the bind variable array lengths to all be the same size.

PCC-02345: SQLCHECK=SEMANTICS must be given when embedded PL/SQL blocks are used

Cause: Embedded PL/SQL blocks require that the command-line flag SQLCHECK=SEMANTICS is used.

Action: Use the SQLCHECK=SEMANTICS option. This also requires that the USERID connect option be given.

PCC-02346: PL/SQL found semantic errors

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in PL/SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02347: PL/SQL found syntax errors

Cause: A PL/SQL statement was used illegally.

Action: Check the PL/SQL User"s Guide and Reference for the correct syntax.

PCC-02348: indicators are not allowed in EXEC IAF statements

Cause: Indicator variables associated with host variables cannot be used in EXECIAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variabls. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer"s Guide to the Oracle Precompilers for more information of EXECIAF and EXEC TOOLS statements.

PCC-02349: precision must be specified for this type

Cause: In a VAR or TYPE statement, certain Oracle types require that the precision be specified. For example, VARCHAR2 or CHAR.

Action: Indicate the precision.

PCC-02350: cannot equivalence this SQL type

Cause: Datatype or variable equivalencing to the datatypes NUMBER or DECIMAL cannot be used. See the "Datatype Equivalencing" section in the Programmer"s Guide to the Oracle Precompilers for more information.

Action: Use the appropriate datatype for the application.

PCC-02351: illegal datatype equivalencing operation

Cause: The datatype specified could not be equivalenced, or the syntax was incorrect in the VAR or TYPE statement.

Action: See the Programmer"s Guide to the Oracle Precompilers for a list of the datatypes that can be equivalenced and the correct syntax of the VAR or TYPE statement.

PCC-02352: out of bounds bind position from PL/SQL

Cause: PL/SQL requested a bind position that does not exist.

Action: Contact ORACLE customer support.

PCC-02353: Semantic error at line *number*, **column** *number*, **file** *string*:

Cause: This error message precedes a more specific error message.

Action: No action required. Correct the error(s) reported in the following message(s).

PCC-02354: A file included with #include may not contain SQL statements

Cause: The Pro*C Precompiler reads header files referenced in #INCLUDE directives and uses the values defined in them. But the precompiler never generates code using statements in header files, so use of SQL statements in these files is illegal.

Action: Move the SQL statement(s) into the main body of the application or use EXEC SQL INCLUDE to check that the included file is precompiled.

PCC-02355: Invalid or obsolete option, ignored

Cause: A command-line option that is not used in Pro*C Release 2.0 was specified. For example, the option AREASIZE is no longer valid with precompilers used with the Oracle7 Server.

Action: No action required. This is an informational message.

PCC-02356: Warning at line *number*, **column** *number*, **file** *string*:

Cause: This is a generic warning message. It precedes a more specific warning.

Action: No action required. Correct the error(s) indicated in the following message(s).

PCC-02357: Function calls may not be used as host variable expressions

Cause: Only objects that are lvalues (that resolve to an address) can be host variables. Because a function call is not an lvalue, one cannot be used in place of a host variable.

Action: Recode the application.

PCC-02358: Identifier following ARRAYLEN must be the name of an array

Cause: A declared array must be specified as the argument for an ARRAYLEN statement. Declare the array textually before the ARRAYLEN statement. See the

Programmer"s Guide to the Oracle Precompilers for the syntax of the ARRAYLEN statement.

Action: Correct the statement, specifying a host array as the argument.

PCC-02359: Identifier specifying ARRAYLEN must be a 4-byte integer

Cause: The expression that specifies the ARRAYLEN dimension must evaluate to an integer. For example, the statement EXEC SQL ARRAYLEN my_array(1,3) cannot be parsed.

Action: Correct the statement, using an integral dimesnsion.

PCC-02360: This array type is invalid for use with ARRAYLEN statement

Cause: Arrays of some host variables types are not allowed and hence also cannot be used in ARRAYLEN statements. VARCHAR and DATE are examples.

Action: Specify an array with a datatype that can be used in host arrays.

PCC-02361: Use of ARRAYLEN with SQL bind arrays is ignored

Cause: ARRAYLEN is only valid with arrays that can be bound in PL/SQL blocks.

Action: Use an appropriate array type.

PCC-02362: Host variable not declared within SQL DECLARE section

Cause: When MODE=ANSI is specified at precompile time, all host variables must be declared inside Declare Sections. Remember that MODE=ANSI refers to ANSI SQL, not ANSI C.

Action: Add the EXEC SQL BEGIN DECLARE SECTION... EXEC SQL END DECLARE SECTION statements around all host variable declarations.

PCC-02363: Indicator variable must be a structure

Cause: If a host variable is a structure, the associated indicator variable must also be a structure.

Action: Recode the application to create an indicator variable as a structure.

PCC-02364: Host struct and its indicator must have the same number of fields

Cause: When a structure containing indicator variables is declared and associated with a host structure, the indicator structure must contain the same number of fields as the host structure. This is so even when some of the indicators will not be used or even when it would not make sense to do so (for fields constrained as NON NULL, for example).

Action: Redeclare the indicator variable with the correct number of fields.

PCC-02365: Indicator array size cannot be smaller than host array size

Cause: An indicator array must have dimension greater than or equal to the corresponding host variable array dimension.

Action: Change the dimension of the indicator array.

PCC-02366: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02367: This indicator variable must be declared as type short

Cause: An indicator for a host variable of this type must have the C type short. An array of such indicators must be an array of shorts.

Action: Declare the indicator variable or indicator array as type short.

PCC-02368: An EXEC TOOLS host variable context name is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Redeclare the context name to a host variable of a char type.

PCC-02369: An EXEC TOOLS host pointer variable is not a pointer

Cause: The host variable specifying an EXEC TOOLS context must be a pointer type.

Action: Redeclare the variable, making sure that it is a pointer.

PCC-02370: An EXEC TOOLS MESSAGE host variable is not type char

Cause: f a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type.

PCC-02371: Illegal FOR clause

Cause: The argument of a FOR clause must be specified as an integer or as an identifier containing an integer.

Action: Rewrite the FOR clause.

PCC-02372: FOR clause not allowed in SELECT statement

Cause: A SQL statement containing a SELECT command cannot contain a FOR clause. The meaning of such a statement would be unclear.

Action: Rephrase the SELECT statement, removing the FOR clause.

PCC-02373: Invalid declaration in EXEC SQL DECLARE section

Cause: An improper declaration was placed in a Declare Section. This message is usually caused by including an EXEC SQL TYPE or EXEC SQL VAR declaration in a Declare Section.

Action: Move the declaration outside of the SQL DECLARE section.

PCC-02374: SQLCHECK value exceeds command line value

Cause: The value given to the SQLCHECK option in an EXEC ORACLE statement in a program was greater than the value given either on the command line or greater than the default value if no SQLCHECK option was given on the command line. The order of the option values is SEMANTICS>SYNTAX>NONE. When this warning message is issued, the original value of SQLCHECK (the default or the command-line value) stays in effect.

Action: Remove or recode the EXEC Oracle option(s) in the .pc source file to avoid this warning message.

PCC-02375: SQL statement found outside the body of a function

Cause: A SQL statement other than a declarative, datatype equivalence or WHENEVER statement was found outside the body of a function when PARSE=FULL.

Action: Move the SQL statement inside the body of a function.

PCC-02376: You may not declare SQLCODE when DEF_SQLCODE = TRUE

Cause: The DEF_SQLCODE option may not be specified if a SQLCODE declaration already explicitly appears in the program.

Action: Remove the SQLCODE declaration from the program or specify DEF_SQLCODE=NO (the default).

PCC-02377: Arrays of implicit varchars are not permitted

Cause: An array of implicit VARCHARS was declared when HOST_VARCHAR=TRUE.

Action: Rewrite the implicit VARCHAR declaration without using arrays.

PCC-02378: Invalid type for National Language character variable

Cause: A variable declared as a National Language character using the NLS_CHAR option was not declared as a char or implicit VARCHAR.

Action: Declare the variable as a char or implicit VARCHAR or do not specify using the NLS_CHAR option.

PCC-02379: Cannot equivalence National Language character variables

Cause: A National Language character variable (specified using the NLS_CHAR option) has undergone datatype equivalencing using either the EXEC SQL VAR or TYPE statements.

Action: Do not equivalence National Language character variables.

PCC-02380: Cannot specify a connect mode when altering a user password

Cause: An attempt was made to connect in either SYSOPER or SYSDBA mode while at the same time trying to change passwords using the ALTER AUTHORIZATION clause in the same CONNECT statement.

Action: Changing passwords while connecting in SYSOPER or SYSDBA mode is prohibited. Rewrite the connect statement by either removing the ALTER AUTHORIZATION cluase or the CONNECT MODE clause.

PCC-02382: You must specify MODE=ANSI when using NLS_LOCAL=YES

Cause: NLS_CHAR was used to specify NLS multi-byte character variables without specifying MODE=ANSI.

Action: Specify MODE=ANSI on the command line when using NLS_LOCAL=TRUE.

PCC-02383: Expecting an expression of type OCIExtProcContext

Cause: The type of the bind variable given in a REGISTER CONNECT USING statement was not (pointer to) OCIExtProcContext.

Action: Declare a variable having type (pointer to) OCIExtProcContext and use it in the REGISTER CONNECT USING statement.

PCC-02384: Missing array length specifier

Cause: An array declaration was given without an array length specifier.

Action: Provide the length for the array declaration.

PCC-02385: CHAR_MAP disallowed when using NLS_CHAR and NLS_LOCAL=TRUE

Cause: The CHAR_MAP option was specified while indicating which host variables are to be treated by the precompiler as NLS multi-byte character

variables. This mapping cannot be performed with the option NLS_
LOCAL=TRUE. This error also occurs when DBMS=V6 is used in conjunction with
NLS_CHAR and NLS_LOCAL=TRUE.

Action: Remove either the CHAR_MAP option or set NLS_LOCAL=FALSE.
Ensure that DBMS is not set to V6.

PCC-02386: Use of the AT clause is not permitted here

Cause: An explicit AT clause was used with an ALLOCATE statement or a
FETCH/CLOSE statement also using a SQL_CURSOR declaration.

Action: Remove the AT clause.

PCC-02387: Expecting an expression of type sql_cursor

Cause: A host bind variable was used in an ALLOCATE, FETCH or CLOSE
statement that was not declared as a result set SQL_CURSOR.

Action: Declare the variable to be of type sql_cursor.

PCC-02388: Arrays not allowed in FROM/WHERE clause of SELECT statement

Cause: A host array was used in the WHERE clause of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays or use a cursor.

PCC-02389: Arrays not allowed as input bind variables in SELECT list

Cause: A host array was used in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays in SELECT list.

PCC-02390: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option
threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been
declared and that has been ALLOCATEd and USEd prior to any executable SQL
statements.

PCC-02391: Runtime context variable not of correct type

Cause: The host variable in a EXEC SQL CONTEXT USE statement or in the
RETURNING clause of a REGISTER CONNECT statement was not declared to be
of type SQL_CONTEXT.

Action: Declare the runtime context variable to be of type SQL_CONTEXT.

PCC-02392: You are already in an EXEC SQL DECLARE SECTION

Cause: A SQL DECLARE SECTION appears nested inside another one.

Action: Do not nest DECLARE SECTIONS. Remove any nested inner ones.

PCC-02393: SQL statement found inside an EXEC SQL DECLARE SECTION

Cause: An executable SQL statement appears inside a DECLARE SECTION.

Action: Move the SQL statement into the body of a function.

PCC-02394: Input file name and output filename are identical

Cause: The values of INAME and ONAME are the same or the default output
filename is the same as that specified by ONAME.

Action: Use ONAME to specify a different filename for the output file.

PCC-02395: Using arrays of structs requires that the struct be named

Cause: An array of some unnamed struct was used as a host variable. When using arrays of structs, the struct requires a name or tag.

Action: Provide a name for the struct.

PCC-02396: Illegal use of arrays inside an array of structs

Cause: An array of a struct that contained arrays of scalars or two-dimensional char or VARCHAR fields was used as a host variable.

Action: Rewrite the struct so that there are no scalar arrays or two-dimensional char or VARCHAR fields.

PCC-02397: VARCHAR declarations not permitted in #include file

Cause: A VARCHAR declaration was found in a file included using a #include form.

Action: Use the EXEC SQL INCLUDE form to include files with VARCHAR declarations instead.

PCC-02398: Indicator ignored in this statement for this type

Cause: An indicator variable was used in a host/indicator variable pair for some type in a statement that did not require or need one. Typically, indicator variables are not used in ALLOCATE and FREE statements for types other than object or collection types. They are also not used in OBJECT CREATE/DEREF statements for REF types.

Action: Remove the use of the indicator for the type in the specified statement. It will be ignored otherwise.

PCC-02399: Illegal CHAR_MAP option value for DBMS=V6. Option ignored.

Cause: A CHAR_MAP option other than CHAR_MAP=VARCHAR2 was specified inline. Since DBMS=V6, this option is ignored for a character or string variable in the offending statement.

Action: Either set DBMS to something other than V6, or specify CHAR_MAP=VARCHAR2.

PCC-02400: This host variable must be declared as a pointer type

Cause: The specified host variable was not declared as a pointer type.

Action: Declare the host variable to be a pointer type.

PCC-02401: Host variable arrays of this type are currently not supported

Cause: Host variable arrays of the specified type are not supported.

Action: Rewrite your program so that there are no arrays of this type.

PCC-02402: Pro*C option OBJECTS=YES is required when using the object cache

Cause: The object cache will be used for this host variable, but OBJECTS=NO was specified on the Pro*C command line.

Action: Specify OBJECTS=YES on the Pro*C command line when using the object cache.

PCC-02403: Invalid indicator variable type for this host variable

Cause: The type of the indicator variable is not appropriate for the specified host variable.

Action: Change the type of the indicator variable to a valid type. Refer to the "Programmer"s Guide to the ORACLE Pro*C/C++ Precompiler" for a discussion of appropriate indicator variable declarations.

PCC-02404: This indicator variable must be declared as a pointer type

Cause: The specified indicator variable was not declared as pointer type.

Action: Declare the indicator variable to be a pointer type.

PCC-02405: Variable is of undefined type

Cause: No declaration was found for the type identifier of the variable.

Action: Provide a valid declaration for the type of the host variable. If using objects in your program, check that the OTT-generated header for the object type was #included and that the typefile was specified in the INTYPE option on the Pro*C command line.

PCC-02406: Expecting the form "RETURN[ING] REF INTO :<ref>" only

Cause: When using the RETURNING clause in an OBJECT CREATE statement, only a single "REF INTO :<host variable>" is expected. This error occurs if the expression list to which REF belongs is greater than one or if there are more than one host variables supplied in the into list.

Action: Rewrite the RETURNING clause as per the given specification.

PCC-02407: Object and REF types do not match

Cause: In an OBJECT CREATE or DEREF statement, the types of the given Object and its associated REF do not match.

Action: Make sure that the Object and its REF have the same type. The type information is generated by OTT and should appear in the header file which OTT creates.

PCC-02408: Expecting an expression of some Object type

Cause: The expression is not an Object type. For example, many host variable expressions in the Navigational statements require that the variable be declared of some Object type.

Action: Rewrite the expression or declare the variable to be an Object.

PCC-02409: Expecting an expression of some REF type

Cause: The expression is not a REF type. For example, some host variables in the Navigational CREATE and DEREF statements are required to be declared of some REF type.

Action: Rewrite the expression or declare the variable to be a REF.

PCC-02410: Expecting an expression of some Collection type.

Cause: The expression is not a Collection type. A VARRAY or Nested Table object was expected, but the given host variable did not resolve to a valid Collection type.

Action: Check that the OTT-generated header for the Collection type was properly #included in the Pro*C/C++ program and that the typefile was specified in the INTYPE option on the Pro*C/C++ command line.

PCC-02411: Invalid type for INDICATOR descriptor item host variable

Cause: The type of the host variable paired with the INDICATOR descriptor item was invalid. The only permissable types for the INDICATOR item are a signed 2 byte numeric type or an indicator struct generated by the Object Type Translator for a user defined object type.

Action: Either replace the INDICATOR host variable with a valid one having an acceptable type or redeclare the existing host variable to be of a valid type.

PCC-02412: FOR clause not permitted in OBJECT GET or SET statement

Cause: An explicit FOR clause was used in an OBJECT GET or OBJECT SET statement. Use of the FOR clause is illegal for these statements.

Action: Remove the FOR clause.

PCC-02413: Number of attributes does not match number of host variables

Cause: The number of attributes supplied in the attribute list of an OBJECT SET of GET statement does not match the total number of host variables also supplied in that statement.

Action: Either remove some attributes or remove some host variables from the statement in order to make the total count for each the same.

PCC-02414: This attribute does not exist in the specified Object

Cause: An attribute given in the attribute list of an OBJECT SET or GET statement is not a member of the specified object in that statement.

Action: Remove the attribute from the list.

PCC-02415: Cannot manipulate Object attributes in an OBJECT GET or SET

Cause: An attempt was made to either GET or SET an attribute of an Object that itself was an Object or REF type.

Action: Remove the attribute from the attribute list in the statement.

PCC-02416: The Object in an OBJECT GET or SET must not be an array

Cause: The Object specified in an OBJECT GET or SET statement is an array which is illegal.

Action: Redeclare the Object so that it is not an array or subscript the Object so that only a single element of the Object array is specified.

PCC-02417: Illegal type conversion between attribute and host variable

Cause: An illegal type conversion was attempted in a Navigational GET or SET statement between the type of the Attribute and the type of the Host Variable.

Action: Change the type of either the Attribute or the Host Variable.

PCC-02418: Array size mismatch between Object and REF host variables

Cause: The array sizes of the Object and REF variables in an OBJECT CREATE or DEREF do not match.

Action: Adjust the array dimensions of the two host variables so that they are equal to one another.

PCC-02419: Host variable arrays not allowed in an OBJECT SET or GET

Cause: An array was found in the host variable list of an OBJECT SET or GET statement.

Action: Only scalars are allowed (except for single dimensioned char or varchar variables) in the host variable list of an OBJECT SET or GET. Make sure to use only scalars in these statements.

PCC-02420: Incomplete (or missing) type specification

Cause: An incomplete or perhaps missing type specification was given when declaring a host variable used in some SQL statement.

Action: Provide a complete type definition when declaring host variables intended for use inside any SQL statements.

PCC-02421: This host variable requires the use of an indicator variable

Cause: No indicator variable was provided (or matched) with a specific host variable where one was explicitly required.

Action: Provide an indicator variable for use with the specified host variable in the given SQL statement.

PCC-02422: Invalid value specified for the given context option

Cause: An illegal value was given for the specified runtime context option in the CONTEXT <option> OPTION SET (or GET) statement.

Action: Use a valid option value in the statement for the specified option being manipulated by the statement.

PCC-02423: Host variable has an invalid type for this option value

Cause: The type of the host variable corresponding to a specific option value in a CONTEXT <option> OPTION SET (or GET) statement is invalid for that particular value.

Action: Use a type suitable for the specific value being manipulated.

PCC-02424: The number of values and host variables does not match

Cause: There is a mismatch between the number of values specified and the number of valid host variables given in a CONTEXT <option> OPTION SET (or GET) statement.

Action: Use the same number of host variables as there are values given in that particular statement.

PCC-02425: An indicator variable is not required with this attribute

Cause: In a LOB or Collection DESCRIBE, an Indicator Variable was used with a Host Variable when retrieving a LOB attribute that doesn"t require one.

Action: Remove the Indicator Variable.

PCC-02426: Incompatible LOB types

Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCC-02427: Expression is not of the correct character string type

Cause: The given host variable expression was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCC-02428: Buffer type is incompatible with LOB type

Cause: This error can occur in either of the following situations

1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type.

2. An attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCC-02429: Expecting an expression of some internal LOB type

Cause: The given host variable was not declared to be an Internal LOB. BLOB, CLOB or NCLOB would have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using one of the Internal LOB types.

PCC-02430: Expecting an expression of some arbitrary LOB type

Cause: The given host variable was not declared to be any type of LOB, Internal or External. In addition to any Internal LOB type, BFILE would also have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using any of the LOB types, Internal or External.

PCC-02431: Expecting an expression of type external LOB (BFILE)

Cause: The given host variable was not declared to be an External LOB. Only BFILE would have been accepted in this case.

Action: Redeclare the host variable using an External LOB type (BFILE).

PCC-02432: Cannot open an external LOB (BFILE) in READ WRITE mode

Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILEs are currently not supported so this operation is considered erroneous.

Action: Do not open BFILEs using READ WRITE mode. BFILEs can only be OPENed in READ ONLY mode.

PCC-02433: Invalid host variable and attribute pairing

Cause: The host variable and attribute pairing in a LOB or Collection DESCRIBE is invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared or is otherwise not provided.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCC-02434: FOR clause not permitted in any LOB statement

Cause: An explicit FOR clause was used in some LOB statement. The use of the FOR clause in LOB statements is erroneous.

Action: Remove the FOR clause.

PCC-02435: This attribute is only valid for internal LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCC-02436: This attribute is only valid for external LOB types (BFILEs)

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCC-02437: Expecting an expression having binary integral type

Cause: A host variable was given that was not declared to be of some acceptable binary numberic integral type. Generally, when this error occurs, a signed or unsigned integral type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper exact numeric integral type.

PCC-02438: Arrays of collection objects are not allowed

Cause: An array of collections was given in a COLLECTION statement. Only scalar (non-array) collection objects are allowed in any of the COLLECTION statements.

Action: Change the declaration of the Collection host variable so that it is not an array.

PCC-02439: FOR clause not allowed in this COLLECTION statement

Cause: An illegal FOR clause was used in a COLLECTION statement that did not allow one, particularly, one of either the TRIM or DESCRIBE COLLECTION statements.

Action: Remove the FOR clause from the statement.

PCC-02440: This attribute is valid for either internal or external LOBs

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB host variable was neither an Internal an External LOB (BFILE) type.

Action: Use either an Internal or External LOB host variable in the LOB DESCRIBE statement.

PCC-02441: Number of attributes does not match number of host variables

Cause: There is a mismatch between the number of attributes and the number of valid host variables in the LOB or Collection DESCRIBE.

Action: Make sure that for each attribute being requested there is at most a single valid host variable given to hold its value.

PCC-02442: Expecting a value between 1 and 65535 inclusive

Cause: The value specified in the WITH MAX clause of an ALLOCATE DESCRIPTOR statement or the VALUE clause of a GET/SET DESCRIPTOR statement was either less than 1 or greater than 65535.

Action: Specify a value between 1 and 65535 inclusive.

PCC-02443: This usage is only valid when DYNAMIC=ANSI is specified

Cause: One of the following statements was used without specifying a DYNAMIC=ANSI command line option setting

o EXEC SQL ALLOCATE/DEALLOCATE/GET/SET DESCRIPTOR

o EXEC SQL DESCRIBE OUTPUT/INPUT ... USING ... <descriptor>

o EXEC SQL EXECUTE ... INTO ...

o EXEC SQL EXECUTE ... USING ... <descriptor>

o EXEC SQL OPEN ... INTO ...

o EXEC SQL OPEN ... USING ... <descriptor>

Action: Specify DYNAMIC=ANSI or remove statements like those above from the program.

PCC-02444: Invalid combination of descriptor and non-descriptor clauses

Cause: There was a mixing of descriptor and non-descriptor clauses in an ANSI Dynamic SQL statement.

Action: Do not mix descriptors and non-descriptors in the ANSI statement in question.

PCC-02445: USING clause valid only on a PREPAREd dynamic statement

Cause: The USING clause was used with an OPEN cursor statement where the cursor declaration was not for a PREPAREd statement. The correct sequence of statements should be as follows EXEC SQL PREPARE s FROM :stmt; EXEC SQL DECLARE c CURSOR FOR s; EXEC SQL OPEN c USING ...;

Action: Use the PREPARE statement for the SQL statement and use that in the DECLARE CURSOR statement.

PCC-02446: FOR clause not allowed in a DEALLOCATE statement

Cause: An explicit FOR clause was used in a DEALLOCATE DESCRIPTOR statement.

Action: Remove the FOR clause from the statement.

PCC-02447: Cannot specify destination offset in a LOB WRITE APPEND

Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement.

PCC-02448: Cannot specify a UCS2 variable in the NLS_NCHAR option

Cause: A variable declared as utext, uvarchar, or longuvarchar was specified in the NLS_NCHAR command line option.

Action: Re-precompile without specifying the variable in an NLS_NCHAR command line option.

PCC-02449: Cannot type equivalence a UCS2 type

Cause: A UCS2 type has been type equivalenced in an EXEC SQL TYPE statement or a variable of UCS2 type has been type equivalenced in an EXEC SQL VAR statement.

Action: Remove the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-02450: Cursor was not declared in scrollable mode

Cause: A cursor which was not DECLAREd in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCC-02451: Value of offset cannot be negative in ABSOLUTE orientation mode

Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCC-02452: Common SQL Front End found semantic error

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in the SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02453: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used

Cause: The precompiler option OUTLINE was used without specifying SQLCHECK=SEMANTICS(FULL).

Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCC-02454: Must use option OUTLINE when option OUTLINPREFIX is used

Cause: The precompiler option OUTLINEPREFIX was used without specifying OUTLINE=YES|<OUTLINENAME>. The precompiler option OUTLINE must be specifiied if OUTLINPREFIX is used.

Action: Set the precompiler option OUTLINE=YES|<OUTLINENAME>.

PCC-02455: Must use option OUTLINE when option RUNOUTLINE is used

Cause: The precompiler option RUNOUTLINE was used without specifying OUTLINE=YES|<OUTLINENAME>. The precompiler option OUTLINE must be specifiied if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES|<OUTLINENAME>.

PCC-02456: Unable to open Outline SQL file

Cause: Pro*C was unable to open the OUTLINE SQL file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02457: Unable to open Outline LOG file

Cause: Pro*C was unable to open the OUTLINE LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02458: Outline name length exceeds the allowed limit

Cause: Outline name <value of outline option>_<filename>_ <filetype>_<seqno> has exceeded the allowed limit.

Action: Use OUTLINPREFIX option to specify the outline name which will be well in the permitted limit.

PCC-02459: Number of outlines has exceeded the limit

Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCC-02460: Outline cannot be created

Cause: Outline cannot be created as there is syntax error; or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

73

SQL-01075 to SQL-02158

SQL-01075: you are currently logged on

Cause: There is already a connection on this host.

Action: Do not attempt the second connection.

SQL-02100: Out of memory (i.e., could not allocate)

Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session, then rerun the program. If the error persists, call customer support for assistance.

SQL-02101: Inconsistent cursor cache. Unit cursor/global cursor mismatch

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02102: Inconsistent cursor cache. No global cursor entry.

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02103: Inconsistent cursor cache. Out of range cursor cache reference

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02104: Inconsistent host cache. No cursor cache available

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02105: Inconsistent cursor cache. Global cursor not found

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02106: Inconsistent cursor cache. Invalid Oracle cursor number

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02107: Program too old for runtime library; please re-precompile it

Cause: The program was precompiled by an older version of the Oracle Precompilers, which is incompatible with this release of SQLLIB.

Action: Precompile the program with a newer version of the Oracle Precompilers.

SQL-02108: Invalid descriptor passed to run-time library

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02109: Inconsistent host cache. Host reference is out of range

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02110: Inconsistent host cache. Invalid host cache entry type

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02111: Heap consistency error

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02112: SELECT..INTO returns too many rows

Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are 3 possible solutions:

1. Use the precompiler option select_error=no.

2. Declare a host variable with a larger array dimension.

3. Declare a cursor or cursor variable for the select statement.

SQL-02113: Unable to open message file

Cause: SQLLIB was unable to find or open the sqllib message file sql*.msb

Action: Check that the file exists in the mesg directory and that it is readable

SQL-02114: Invalid SQL Cursor usage: trying to CLOSE a CLOSEd cursor

Cause: An attempt was made to CLOSE a cursor that was already CLOSEd with MODE={ANSI|ANSI14}. A CLOSEd cursor can be re-CLOSEd only when MODE={ORACLE|ANSI13}.

Action: When MODE={ANSI|ANSI14}, verify that a cursor is not already CLOSEd before trying to CLOSE it. Specify MODE={ORACLE|ANSI13} if a CLOSEd cursor is to be re-CLOSEd.

SQL-02115: Code interpretation problem -- check COMMON_NAME usage

Cause: With PRO*FORTRAN, this error occurs if the precompiler option COMMON_NAME is specified incorrectly. With other Oracle Precompilers, this error occurs when the precompiler cannot generate a section of code.

Action: With Pro*FORTRAN, when using COMMON_NAME to precompile two or more source modules, make sure to specify a different common name for each

module. With other Oracle Precompilers, if the error persists, call customer support for assistance.

SQL-02116: FATAL ERROR: Reentrant code generator gave invalid context

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02117: Invalid SQL Cursor usage: trying to OPEN an OPENed cursor

Cause: An attempt was made to OPEN a cursor that was already OPENed with MODE={ANSI | ANSI14 | ANSI13}. An open cursor can be re-OPENed only when MODE=ORACLE.

Action: When MODE={ANSI | ANSI14 | ANSI13}, verify that a cursor is not already OPENed before trying to OPEN it. Specify MODE=ORACLE if an OPENed cursor is to be re-OPENed.

SQL-02118: Invalid row for a WHERE CURRENT OF operation

Cause: An attempt was made to reference a nonexistent row using the CURRENT OF clause in an UPDATE or DELETE statement. This happens when no FETCH has been executed or when FETCH returns a "no data found" error that the program fails to trap.

Action: Check that the last cursor operation succeeded and that the current row of the cursor is valid. The outcome of a cursor operation can be checked in two ways: implicit checking with the WHENEVER statement or explicit checking of SQLCODE in the SQLCA.

SQL-02119: Invalid HSTDEF argument

Cause: A non-null ptr was given for a hstdef as the second argument to a call to sqlrcn when the first argument was also used. Either the first or the second argument to SQLRCN must be null.

Action: Pass a null pointer in either the first or second argument to SQLRCN. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02120: First and second arguments to SQLRCN both null

Cause: Both the first and second arguments to sqlrcn were null. An HSTDEF must be passed into SQLRCN in either the form of an OCI lda (first argument) or as an HSTDEF pointer itself (second argument).

Action: Pass in either an OCI LDA or an HSTDEF, but not both. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02121: Invalid host name

Cause: The host name passed into a SQLFCN call was not used in a previous call to SQLRCN.

Action: Use the same identifier used in the corresponding SQLRCN call. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlfcn if this error occurs.

SQL-02122: Invalid OPEN or PREPARE for this database connection

Cause: An attempt was made to execute an OPEN or a PREPARE statement using a cursor that is currently open for another database connection and, therefore, cannot be used for this connection.

Action: Close the cursor to make it available for this connection or use a different cursor for this connection.

SQL-02123: Context referenced in EXEC TOOLS GET CONTEXT statement not found

Cause: The context name given in the EXEC TOOLS GET CONTEXT statement was never stored with an EXEC TOOLS SET CONTEXT statement.

Action: Use the EXEC TOOLS SET CONTEXT statement to save any contexts to be retrieved later.

SQL-02124: NULL value returned by EXEC TOOLS statement

Cause: A NULL value was returned by EXEC TOOLS for a host variable that lacks an indicator variable. This error is returned only when MODE=ANSI. When MODE=ORACLE, although the value of the host variable is indeterminate, no error is generated.

Action: Associate an indicator variable with each host variable to which nulls might be returned.

SQL-02125: Connect error, can''t get error text

Cause: No connection (not even to the default host) was available, so SQLLIB could not get the message text for the Oracle error that occurred. However, SQLLIB returns the Oracle error number, which can be used to look up the message.

Action: Look up the appropriate message in the Oracle7 Server Messages manual, and follow the Cause and Action information provided.

SQL-02126: Count of array elements cannot be negative (i.e. < 0)

Cause: The precompiler found a negative number of array elements in the the N or F element of the SQLDA (SQL Descriptor Area, which is used with dynamic SQL Method 4). Before executing the DESCRIBE statement, N must be set to the dimension of the descriptor arrays. After executing the DESCRIBE statement, N must be reset to the actual number of variables DESCRIBEd, which is stored in the F variable.

Action: Check that the N or F variables are set to non-negative values.

SQL-02127: Precompiler/SQLLIB version mismatch

Cause: The program was linked to an older version of SQLLIB, which is incompatible with this release of the Oracle Precompilers.

Action: Relink the program with a newer version of SQLLIB

SQL-02128: Sessions still exist, not logged off

Cause: A host was not removed ("logged off") from SQLLIB because XA still has sessions associated with that host.

Action: Before calling SQLXDH to drop a host, XA must either drop all sessions for that host or set the "doit_anyway" flag. *Note: This error *msg* is never actually used. The error *number* is used, given as a possible return value to the sqllib xa function sqlxdh.

SQL-02129: Fetched number of bytes is odd.

Cause: The program tried to FETCH an invalid column value into a multi-byte NLS host variable. Specifically, the column did not contain valid double-byte data.

Action: Make sure the column contains only double-byte data. To verify this, use SQL*Plus or Server Manager.

SQL-02130: EXEC TOOLS interface is not available.

Cause: An attempt was made to link with a version of an Oracle tool that does not support the EXEC TOOLS interface. EXEC TOOLS interface.

Action: Either upgrade the Oracle tool, or use the EXEC IAF interface.

SQL-02131: Runtime context in use

Cause: Your application attempted to execute a SQL statement using a runtime context that is already in use.

Action: Rewrite the application to either wait for one thread to complete before executing another SQL statement with the same runtime context, or to allocate and use a separate runtime context for each thread.

SQL-02132: Unable to allocate runtime context sdfla asdjklfajs jfja ajsdf

Cause: An attempt to allocate a runtime context failed.

Action: This error typically occurs when the process memory is low. Allocate more memory and run the application again.

SQL-02133: Unable to initialize process for use with threads

Cause: This is an internal error.

Action: Call customer support.

SQL-02134: Invalid runtime context

Cause: The runtime context associated with this statement has not been properly allocated.

Action: Rewrite the application to execute the EXEC SQL CONTEXT ALLOCATE statement before executing any SQL statements.

SQL-02135: Unable to initialize date format using supplied mask

Cause: The runtime library was unable to issue a set date format statement with the date format mask supplied.

Action: Check the validity of the date format and correct if necessary. Check the ORA error number for further information.

SQL-02136: Invalid NCHAR character set id

Cause: An attempt was made to bind or define an NCHAR host variable, and the NLS_NCHAR variable was not set correctly.

Action: Set the NLS_NCHAR environment variable to a valid fixed width character set id and run the application again.

SQL-02137: Multi-threaded agent with no RETURNING clause present

Cause: The EXEC SQL REGISTER CONNECT statement does not contain a RETURNING clause and the agent is running in threaded mode.

Action: Re-code the statement to use a RETURNING clause that references a declared sql_context host variable.

SQL-02138: No external procedure context exists

Cause: The external procedure context passed in the EXEC SQL REGISTER CONNECT statement is not valid.

Action: Ensure that you have done the following:

1. Created the PL/SQL procedure/function with a CONTEXT parameter.

2. Included OCIExtProcContext in the formal parameter list of the external procedure

3. Correctly passed the OCIExtProcContext to the EXEC SQL REGISTER CONNECT statement.

SQL-02139: Unable to get the OCI handles

Cause: The call to OCIExtProcGetEnv failed.

Action: Ensure that the OCIExtProcContext that the external procedure has been created with a CONTEXT parameter and that this context is correctly referenced in the EXEC SQL REGISTER CONNECT statement.

SQL-02140: An unnamed connection already exists

Cause: An attempt to register an external procedure context was made when an unnamed connection already exists for the runtime context.

Action: Do not attempt to establish any connections with the EXEC SQL CONNECT statement from external procedures.

SQL-02141: Collection descriptor has not been allocated

Cause: An unallocated collection descriptor was referenced in a COLLECTION SET or COLLECTION GET statement.

Action: Allocate the collection descriptor with the EXEC SQL ALLOCATE statement. e.g. EXEC SQL ALLOCATE :coldesc_p;

SQL-02142: Collection is NULL

Cause: The collection referenced in an EXEC SQL COLLECTION statement is null.

Action: Check the status of the associated indicator variable prior to executing an EXEC SQL COLLECTION statement.

SQL-02143: Target object has not been properly allocated

Cause: An attempt was made to retrieve elements from a collection into an unallocated object pointer.

Action: Allocate the object pointer with the EXEC SQL ALLOCATE statement.

SQL-02144: Invalid ANSI dynamic usage

Cause: An ANSI allocate, deallocate, get or set descriptor statement was encountered when dynamic option was not set.

Action: Precompile your source with option dynamic=ansi.

SQL-02145: Invalid dynamic descriptor

Cause: An attempt to access an unallocated or invalid descriptor was encountered.

Action: For ANSI descriptors, check that descriptor name is valid and descriptor has been allocated and not previously deallocated. Or if using Oracle descriptors (sqlda) with mode=ansi also use dynamic=oracle.

SQL-02146: Attempt to allocate an existing descriptor

Cause: An attempt allocated a descriptor which has previously been allocated was encountered.

Action: Use and unique descriptor name or deallocate the descriptor before attempting to reallocate it.

SQL-02147: ANSI Dynamic occurrence value out of range

Cause: The value clause in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the VALUE clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02148: ANSI Dynamic count value out of range

Cause: The count in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the COUNT clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02149: ANSI Dynamic insufficient item descriptor areas

Cause: The SQL statement being described contains more output items (or columns) than were allocated in the descriptor.

Action: Increase the MAX number of occurrences when allocating the descriptor.

SQL-02150: Encountered zero length in ANSI dynamic SET statement

Cause: An invalid length of zero was encountered in an ANSI dynamic statement.

Action: Set the length to a non-zero value

SQL-02151: Invalid host variable for exact numeric SET statement item

Cause: An host variable with an invalid type or length was used to get or set an exact numeric item in an ANSI dynamic statement.

Action: Make sure your host variable is and int or short for C or for COBOL, S9(4) or S9(9) binary/comp/display sign leading separate.

SQL-02152: Invalid numeric variable for use in an array GET/SET statement

Cause: An host variable with type other than int or short for C or S9(4) or S9(9) binary or comp was used for an exact numeric with and array size > 1.

Action: Use only int or short for C or S9(4) or S(9) binary or comp for COBOL when supplying an exact numeric in conjunction with the for clause to indicate arrays. Specifically, display sign leading separate is not allowed in this context.

SQL-02153: Invalid character variable for use in a GET/SET statement

Cause: An host variable with type other than character, string or varchar was found as an item name (other than DATA item) in an ANSI Dynamic GET or SET descriptor statement.

Action: Host variable types for character items (other than the DATA item) in ANSI dynamic GET or SET descriptor statements must not be of type LONG or LONG VARCHAR. Redeclare the variable to be character, string or varchar type

SQL-02154: Invalid or unset data type for host variable in ANSI Dynamic

Cause: An ANSI Dynamic SET statement with item name DATA was encountered with out a valid TYPE having been previously set and option mode=ansi was used

Action: With mode=ansi, you must set the TYPE before setting the DATA. Issue a SET statement with correct item TYPE or, for output issue a DESCRBE to set the item type. Or use mode=oracle which allows the type to default to the type of the bind/define host variable

SQL-02155: Date Time Interval only valid with Dynamic=ANSI

Cause: An attempt to access the datetime interval code or precision was encountered when type_code option not set to ANSI

Action: Use precompiler option type_code=ansi to access the date time interval code or date time interval precision

SQL-02156: Invalid type for Indicator or Returned Length

Cause: A host variable associated with the item Indicator or Returned Length must be of type short or s9(4) comp. If value semantics and scalar they may also be gotten into display sign leading separate host variables

Action: Use signed short for indicator, ref indicator and returned length, ref returned length host variables in C. For COBOL use s9(4) comp. for GETs only with non-arrays and you may use display sign leading separate host variables

SQL-02157: Source or destination lob is invalid

Cause: One of the lobs used in the lob append call is invalid or possibly null.

Action: Make sure the lobs used in the append call are non-null.

SQL-02158: Unable to establish savepoint

Cause: An internal error occurred while establishing an internal savepoint.

Action: Check trace files for errors and rerun your application.

74

AUD-00611 to AUD-00809

AUD-00611: unable to access the BLOB for reading

    Cause: The BLOB could not be opened for reading.

    Action: Contact Oracle Support Services.

AUD-00612: unable to open export destination file

    Cause: The file could not be created or opened.

    Action: Check that the file does not refer to an existing directory. Check that the file is not locked by another application.

AUD-00613: export destination access denied

    Cause: Permission to write to destination file was denied.

    Action: Refer to the Oracle Multimedia documentation for information on granting privileges for the export() method.

AUD-00614: I/O error during export

    Cause: The export operation failed because of an I/O error.

    Action: Check OS logs and contact Oracle Support Services.

AUD-00702: unable to initialize audio processing environment

    Cause: The initalization of the audio processing procedure failed.

    Action: See the database administrator to make sure that enough memory has been allocated to JServer. If JServer does have enough memory, contact Oracle Support Services.

AUD-00703: unable to read audio data

    Cause: An error occurred while accessing the audio source.

    Action: Make sure the audio source is valid. For external sources, make sure all access priviliges are granted.

AUD-00704: invalid input format

    Cause: The audio data in the source was not in the format specified by the format field of the audio object. In some unusual cases, the audio data is actually corrupted.

    Action: Provide a correct value in the format field. If the correct value is unknown, put NULL in the format field to invoke the DEFAULT format plug-in.

AUD-00705: unsupported input format

    Cause: The file format of the audio data was not supported. This error can only occur in the DEFAULT format plug-in package.

Action: Refer to the Oracle Multimedia documentation for supported formats.

AUD-00706: unsupported or corrupted input format

Cause: The audio data was either corrupted or the file format was not supported.

Action: Refer to the Oracle Multimedia documentation for supported formats. If the audio data is not corrupted and is in a supported file format, contact Oracle Support Services.

AUD-00707: unable to read empty audio data

Cause: There is no data in the audio object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate the audio object with audio data.

AUD-00713: internal error while parsing audio data

Cause: An internal error occurred during parsing.

Action: Contact Oracle Support Services.

AUD-00714: internal error

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

AUD-00721: unable to find format plug-in package ORDPLUGINS.ORDX_*string*_ AUDIO

Cause: Custom audio plug-in for user-specified format was not found.

Action: Ensure correct audio format is specified or proper custom audio plug-in package is installed.

AUD-00802: name of index is limited to 22 characters

Cause: The user specified an index name that is more than 22 characters long.

Action: Drop this index, and issue the CREATE INDEX statement again with a name that is at most 22 characters long.

AUD-00803: internal error while processing WHERE clause

Cause: The WHERE clause could not be properly processed.

Action: Contact Oracle Support Services.

AUD-00806: first argument to SpeechContains must be a column

Cause: The first argument to SpeechContains is not a column. This is not allowed.

Action: Make sure that the first argument to SpeechContains is a column in a database table.

AUD-00807: SpeechContains: index of indextype ORDSpeechIndex is required

Cause: SpeechContains was used without an associated index of indextype ORDSpeechIndex.

Action: Make sure that SpeechContains is used in the context of an index of indextype ORDSpeechIndex. See the Oracle Multimedia documentation for sample usage scenarios.

AUD-00808: ORDSpeechIndex: unable to CREATE internal Text index

Cause: CREATE INDEX for ORDSpeechIndex failed when trying to create internal Text index.

Action: Make sure that you are supplying a valid parameter string. See SpeechIndexing and Oracle Text documentation for descriptions of a valid parameter string for CREATE INDEX. To return to a consistent state, issue a DROP INDEX command.

AUD-00809: ORDSpeechIndex: unable to ALTER REBUILD internal Text index

Cause: ALTER INDEX REBUILD for ORDSpeechIndex failed when trying to alter rebuild internal Text index.

Action: Make sure that you are supplying a valid parameter string. See SpeechIndexing and Oracle Text documentation for descriptions of a valid parameter string for ALTER INDEX REBUILD. To return to a consistent state, issue a ALTER INDEX REBUILD PARAMETERS("optimize full") command.

75

IMG-00001 to IMG-02014

IMG-00001: unable to initialize Oracle Multimedia environment
    Cause: The image processing external procedure initialization process failed.
    Action: Contact Oracle Support Services.

IMG-00002: unrecoverable error
    Cause: This is an internal error.
    Action: Contact Oracle Support Services.

IMG-00003: exhausted memory while processing image
    Cause: Oracle Multimedia exhausted available Java memory during processing.
    Action: Increase the JAVA_POOL_SIZE initialization parameter setting.

IMG-00201: unsupported metadata type
    Cause: The requested metadata type could not be read from or written to this image format.
    Action: Refer to the Oracle Multimedia documentation to select the proper metadata type for this image.

IMG-00202: unsupported character encoding
    Cause: The character encoding was not supported for this image format.
    Action: Refer to the Oracle Multimedia documentation to select the proper encoding for this image.

IMG-00203: xmlData is invalid
    Cause: The XML document was NULL or not schema valid.
    Action: Create a schema valid document for input.

IMG-00204: input metadata too long
    Cause: The metadata was too long to embed in this image format.
    Action: Trim the metadata, or use a different image format.

IMG-00205: cannot add a TIFF directory entry
    Cause: No new entries could be added to this directory.
    Action: Use a different image format.

IMG-00206: unsupported image format for putMetadata
    Cause: Metadata could not be written to this image format.
    Action: Use a different image format.

IMG-00207: input parameter is not valid

Cause: The input parameter value contained an invalid value.

Action: Correct the input parameter value.

IMG-00208: metadata format parse error

Cause: The parser detected an error in the embedded metadata.

Action: Verify that the metadata conforms to proper standards.

IMG-00209: error parsing metadata

Cause: There was an internal error while parsing the metadata.

Action: Contact Oracle Support Services.

IMG-00210: unable to get metadata from an empty image

Cause: There was no data in the input image.

Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00211: metadataType value "*string*" is invalid

Cause: The metadataType parameter value was NULL or invalid.

Action: Correct the metadataType parameter value.

IMG-00212: encoding value "*string*" is invalid

Cause: The encoding parameter value was NULL or invalid.

Action: Correct the encoding parameter value.

IMG-00213: xmlData does not contain an <RDF> element

Cause: The XML document did not contain an <RDF> element as a child of <xmpMetadata>.

Action: Create a schema valid document with an <RDF> element.

IMG-00502: invalid scale value

Cause: An invalid scale value was found while parsing the parameters for the image process function.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00505: missing value in CUT rectangle

Cause: An incorrect number of values was used to specify a rectangle.

Action: Use exactly four integer values for the lower-left and upper- right vertices.

IMG-00506: extra value in CUT rectangle

Cause: An incorrect number of values was used to specify a rectangle.

Action: Use exactly four integer values for the lower left and upper right vertices.

IMG-00510: *string*

Cause: A syntax error was found while parsing the parameters for the image process function.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00511: *string*

Cause: An error was found while accessing image data.

Action: Contact Oracle Support Services.

IMG-00512: multiple incompatible scaling parameters found

Cause: Multiple incompatible scaling parameters were found in the image process command string. With the exception of XSCALE and YSCALE, which can be used together in a process command string, scaling functions are mutually exclusive and cannot be combined.

Action: Remove scaling functions until only one remains (or two, if they are XSCALE and YSCALE).

IMG-00513: missing value in scaling operation

Cause: An incorrect number of values was used to specify image dimensions. fixedScale and maxScale require exactly two integer values for the X and Y dimensions of the desired image.

Action: Use two values for fixedScale and maxScale.

IMG-00514: extra value in scaling operation

Cause: An incorrect number of values was used to specify image dimensions. fixedScale and maxScale require exactly two integer values for the X and Y dimensions of the desired image.

Action: Use two values for fixedScale and maxScale.

IMG-00515: incorrect number of input channels

Cause: An incorrect number of values was used to specify input channels. InputChannels requires either one or three channels numbers for the gray or red, green, and blue channel assignments.

Action: Use either one or three values to specify the input channels.

IMG-00516: default channel out of range

Cause: An incorrect value was used to specify the default channel selection.

Action: Use a channel number which is less than or equal to the number of bands and greater than zero.

IMG-00517: height or width not present in parameter string

Cause: Height and/or width were not specified in the setProperties parameter string.

Action: Specify both the height and width.

IMG-00518: invalid value for height or width

Cause: Height and/or width were not positive integers"

Action: Specify both the height and width as positive integers"

IMG-00519: illegal combination of parameters

Cause: Other than height, width, dataOffset, and userString no other parameters may be specified in the setProperties parameter string when CCITTG3 or CCITTG4 is used as the compressionFormat.

Action: Supply only the height and width when compessionFormat is either CCITTG3 or CCITTG4. The dataOffset and userString may optionally be supplied as well.

IMG-00520: invalid value for numberOfBands

Cause: NumberOfBands was not a positive integer"

Action: Specify numberOfBands as a positive integer"

IMG-00521: invalid value for dataOffset

Cause: DataOffset was not a positive integer"

Action: Specify dataOffset as a positive integer"

IMG-00522: invalid format for parameter value

Cause: A floating point value was specified where an integer is required, or a character value was specified where a numeric value is required.

Action: Specify the correct type of values for process parameters.

IMG-00523: invalid process verb

Cause: A process verb was specified that is not understood by Oracle Multimedia.

Action: Refer to the Oracle Multimedia documentation for a description of valid process verbs.

IMG-00524: mismatched quotes

Cause: Quotation marks used within a process command string were not matched.

Action: Ensure that quotation marks occur in pairs.

IMG-00525: locale error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00526: error parsing foreign image description

Cause: An internal error occurred while processing a foreign image.

Action: Contact Oracle Support Services.

IMG-00530: internal error while parsing command

Cause: An internal error occurred while parsing the command passed to the image processing function or the foreign image setProperties function.

Action: If you are certain that your command is correct, then contact Oracle Support Services.

IMG-00531: empty or null image processing command

Cause: An empty or null image processing command was passed to the image process function.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00540: contentFormat and interleave conflict

Cause: Interleave values were specified using both the contentformat and interleave verbs.

Action: Specify interleave using either contentformat or interleave, but not both.

IMG-00541: invalid contentFormat specified

Cause: The specified contentFormat was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid contentFormat specifications.

IMG-00542: contentFormat includes invalid extra information

Cause: The specified contentFormat included invalid characters at the end of the parameter string.

Action: Refer to the Oracle Multimedia documentation for a description of valid contentFormat specifications.

IMG-00543: invalid compressionFormat specified

Cause: The specified compressionFormat was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid compressionFormat specifications.

IMG-00544: invalid compressionQuality specified

Cause: The specified compressionQuality was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid compressionQuality specifications.

IMG-00545: invalid cut values specified

Cause: An invalid value was found while parsing the parameters for the cut operation.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00546: invalid page number specified

Cause: An invalid page number was specified.

Action: Specify page numbers that are not negative.

IMG-00547: invalid channelOrder specified

Cause: The specified channelOrder was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid channelOrder specifications.

IMG-00548: invalid interleave specified

Cause: The specified interleave was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid interleave specifications.

IMG-00549: invalid pixelOrder specfied

Cause: The specified pixelOrder was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid pixelOrder specifications.

IMG-00550: invalid scanlineOrder specified

Cause: The specified scanline order was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid scanlineOrder specifications.

IMG-00551: invalid quantize method specified

Cause: The specified quantization method was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid quantization method specifications.

IMG-00552: invalid inputChannels specified

Cause: An invalid value was specified for the inputChannels verb.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00553: invalid rotate value

Cause: An invalid value was specified for image rotation. Rotation values must be a floating point number.

Action: Correct the statement by providing a valid rotation value.

IMG-00554: extra value in rotate operation

Cause: Multiple arguments were used to specify image rotation. The rotate operation accepts only a single value.

Action: Provide a single value for the rotate operation.

IMG-00555: invalid value for gamma correction

Cause: An invalid value was specified for gamma correction. Gamma values must be positive.

Action: Correct the statement by providing a positive gamma value.

IMG-00556: incorrect number of gamma values

Cause: An incorrect number of values were used to specify gamma correction. Gamma correction requires either one or three gamma values.

Action: Provide either one or three values to specify the gamma correction.

IMG-00557: invalid value for contrast enhancement

Cause: An invalid value was used to specify contrast enhancement.

Action: To specify contrast enhancement using percentages, provide values between 0 and 100. To specify contrast enhancement using bounds, provide values greater than 0.

IMG-00558: incorrect number of contrast values

Cause: An incorrect number of values were used to specify contrast enhancement. Contrast enhancement requires one, two, three, or six contrast values.

Action: Provide one or three values to specify contrast enhancement using percentages; provide two or six values to specify contrast enhancement using contrast bounds.

IMG-00559: invalid frame number

Cause: An incorrect number was used to specify frame in Dicom image. The number should be greater than 0 and less than total frames in Dicom image.

Action: Provide one number greater than 0 and less than total frames in Dicom image.

IMG-00560: input format does not support page selection

Cause: The page verb was specified for an input format that does not support selecting pages.

Action: Refer to the Oracle Multimedia documentation for a description of which image formats support page selection.

IMG-00561: input format does not support channel selection

Cause: The inputChannels verb was specified for an input format that does not support selecting channels.

Action: Refer to the Oracle Multimedia documentation for a description of which image formats support input channel selection.

IMG-00577: invalid quantize argument

Cause: A quantize value was specified that accepts an argument, but the argument provided was not valid.

Action: Provide a valid, non-negative argument for the quantize value.

IMG-00578: missing quantize argument

Cause: A quantize value was specified that requires an argument, but no argument was provided.

Action: Provide an argument for the quantize value.

IMG-00579: extra quantize argument

Cause: An extra argument was provided for a quantize value. Some quantize values accept no arguments, while others accept a single argument.

Action: Provide an argument only for quantize values that accept an argument.

IMG-00580: specified format does not support output

Cause: The output format specified by fileFormat does support output.

Action: Refer to the Oracle Multimedia documentation for a description of which formats support output.

IMG-00581: output format does not support the specified contentFormat

Cause: The specified contentFormat is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which contentFormat values are supported for each output format.

IMG-00582: output format does not support the specified interleave

Cause: The specified interleave is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which interleave values are supported for each output format.

IMG-00583: output format does not support the specified compressionFormat

Cause: The specified compressionFormat is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which compressionFormat values are supported for each output format.

IMG-00584: output format does not support the specified compressionQuality

Cause: The specified compressionQuality is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which compressionQuality values are supported for each output format.

IMG-00585: output format does not support the specified channelOrder

Cause: The specified channelOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which channelOrder values are supported for each output format.

IMG-00586: output format does not support the specified pixelOrder

Cause: The specified pixelOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which pixelOrder values are supported for each output format.

IMG-00587: output format does not support the specified scanlineOrder

Cause: The specified scanlineOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which scanlineOrder values are supported for each output format.

IMG-00599: internal error

Cause: An internal error has occurred.

Action: Contact Oracle Support Services.

IMG-00601: out of memory while copying image

Cause: Operating system process memory has been exhausted while copying the image.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00602: unable to access image data

Cause: An error occurred while reading or writing image data.

Action: Ensure that the source image can be read from and the destination can be written to.

IMG-00603: unable to access source image data

Cause: The source image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the source image is populated with image data.

IMG-00604: unable to access destination image data

Cause: The destination image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the destination image is populated with image data.

IMG-00606: unable to access image data

Cause: An attempt was made to access an invalid image.

Action: Ensure that the SOURCE attribute of the image is populated with image data.

IMG-00607: unable to write to destination image

Cause: The destination image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the destination image is initialized correctly and that you have sufficient tablespace.

IMG-00609: unable to read image stored in a BFILE

Cause: The image stored in a BFILE cannot be opened for reading.

Action: Ensure that the access privileges of the image file and the image file"s directory allow read access.

IMG-00611: unable to access the BLOB for reading

    Cause: The BLOB could not be opened for reading.

    Action: Contact Oracle Support Services.

IMG-00612: unable to open export destination file

    Cause: The file could not be created or opened.

    Action: Check that the file does not refer to an existing directory. Check that the file is not locked by another application.

IMG-00613: export destination access denied

    Cause: Permission to write to destination file was denied.

    Action: Refer to the Oracle Multimedia documentation for information on granting privileges for the export() method.

IMG-00614: I/O error during export

    Cause: The export operation failed because of an I/O error.

    Action: Check OS logs and contact Oracle Support Services.

IMG-00701: unable to set the properties of an empty image

    Cause: There is no data in the image object.

    Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00702: unable to initialize image processing environment

    Cause: The image processing external procedure initialization process failed.

    Action: Contact Oracle Support Services.

IMG-00703: unable to read image data

    Cause: There is no image data in the image object.

    Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00704: unable to read image data

    Cause: There is no image data in the image object.

    Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00705: unsupported or corrupted input format

    Cause: This is an internal error.

    Action: Contact Oracle Support Services.

IMG-00706: unsupported or corrupted output format

    Cause: This is an internal error.

    Action: Contact Oracle Support Services.

IMG-00707: unable to access image data

    Cause: An error occurred while reading or writing image data.

    Action: Contact your system administrator.

IMG-00710: unable to write to destination image

    Cause: The destination image is invalid.

Action: Ensure that the SOURCE attribute of the destination image is initialized and that you have sufficient tablespace.

IMG-00711: unable to set properties of destination image

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00712: unable to write to destination image

Cause: The destination image is invalid.

Action: Ensure the row containing the destination image has been locked (this does not apply to temporary BLOBs).

IMG-00713: unsupported destination image format

Cause: A request was made to convert an image to a format that is not supported.

Action: Refer to the Oracle Multimedia Documentation for supported formats.

IMG-00714: internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00715: unable to open image stored in a BFILE

Cause: The image stored in a BFILE could not be opened for reading.

Action: Ensure that the access privileges of the image file and the image file''s directory allow read access.

IMG-00716: source image format does not support process options

Cause: A request was made to apply a processing option not supported by the source image format.

Action: Refer to the Oracle Multimedia Documentation for a discussion of supported processing options.

IMG-00717: destination image format does not support process options

Cause: A request was made to apply a processing option not supported by the destination image format.

Action: Refer to the Oracle Multimedia Documentation for a discussion of supported processing options.

IMG-00718: the same Temporary LOB cannot be used as both source and destination

Cause: A call was made to processCopy with the same Temporary LOB being specified as both the source and destination.

Action: Specify a different LOB for parameter "dest".

IMG-00719: image processing internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00720: image processing internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00721: unable to find source plug-in package ORDPLUGINS.ORDX_*string*_ SOURCE

Cause: Custom source plug-in for user-specified source type was not found.

Action: Ensure correct source type is specified or proper custom source plug-in package is installed.

IMG-00722: incorrect value of bitsAllocated, bitsStored or highBit for output Dicom image

Cause: incorrect value of bitsAllocated, bitsStored or highBit for output Dicom image.

Action: Ensure correct value of bitsAllocated, bitsStored or highBit for output Dicom image.

IMG-00730: unable to process empty image

Cause: There is no data in the input image object.

Action: Refer to the Oracle Multimedia documentation for information on how to put image data into the image object.

IMG-00731: specified page could be found in input image

Cause: The specified page does not exist in the input image.

Action: Restrict the value of the page parameter to values specifying pages that exist within the input image object.

IMG-00732: specified inputChannels could not be found in input image

Cause: The specified inputChannel parameter does not exist in the input image.

Action: Restrict the value of the inputChannels parameter to values specifying channels that exist within the input image object.

IMG-00800: internal error while parsing attribute string

Cause: An internal error occurred while parsing the attribute string containing the weights of the attributes.

Action: If you are certain that your command is correct, then contact Oracle Support Services.

IMG-00801: cannot extract height and width

Cause: Height and width are not set in the image object.

Action: Set the properties of the image object by calling setProperties and then generate signature.

IMG-00802: empty or null attribute string

Cause: An empty or null attributes string was passed to the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax of the attributes string.

IMG-00803: invalid attribute value

Cause: An invalid value was found while parsing the attribute string for the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the attributes string. The weight values should be between 0.0 and 1.0.

IMG-00804: Syntax error in attribute string

Cause: A syntax error was found while parsing the attribute string for the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax of the attributes string.

IMG-00805: SIGNATURE data has been corrupted or is invalid

Cause: The data in the signature is not a valid signature.

Action: Re-create the signature using the generateSignature method.

IMG-00806: invalid input image

Cause: The image data is either corrupt or is in an unsupported format.

Action: Repopulate the image object, set properties of the image, and generate the signature.

IMG-00807: no weights specified in weight string

Cause: All weights passed were zero. At least one attribute must be weighted.

Action: Specify a non-zero weight for at least one attribute

IMG-00808: unable to read an empty image

Cause: There is no data in the image object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate the image object with image data.

IMG-00809: usage of IMGSimilar is incorrect

Cause: Syntax error while using IMGSimilar

Action: Refer to the Oracle Multimedia documentation for information on how to use the IMGSimilar operator. Check whether the value returned by IMGSimilar is compared to the value 1.

IMG-00810: boundary queue initialization failed

Cause: Operating system process memory has been exhausted while initializing the boundary queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00811: fail queue initialization failed

Cause: Operating system process memory has been exhausted while initializin the fail queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00812: merged area queue initialization failed

Cause: Operating system process memory has been exhausted while initializing the merged area queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00813: boundary queue free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00814: fail queue free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00815: merged area queue free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00820: area 0 queue clear failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00821: area N queue clear failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00822: area queue reset failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00823: boundary queue pop failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00824: fail queue pop failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00825: merged area queue pop failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00830: boundary queue is full

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00831: boundary queue size exceeds expected size

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00832: fail queue is full

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00833: boundary queue size exceeds expected size

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00834: merged area queue is full

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00835: merged area queue size exceeds expected size

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00836: area queue merge failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00840: image structure allocation failed

Cause: Operating system process memory has been exhausted while initializing the image structure.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00841: image data allocation failed

Cause: Operating system process memory has been exhausted while initializing the image data.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00842: image index allocation failed

Cause: Operating system process memory has been exhausted while initializing the image index.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00843: internal image structure allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image structure.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00844: internal image data allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image data.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00845: internal image index allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image index.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00846: adjacency matrix allocation failed

Cause: Operating system process memory has been exhausted while initializing the adjacency matrix.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00847: area list allocation failed

Cause: Operating system process memory has been exhausted while initializing the area list.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00850: image structure free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00851: image data free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00852: image index free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00853: internal image structure free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00854: internal image data free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00855: internal image index free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00856: adjacency matrix free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00857: area list free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number.

IMG-00860: assert failure, number of region exceeds allocated

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00861: assert failure, inconsistency in area merge operation

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00862: assert failure, inconsistency in merged area labels

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00870: unsupported aspect ratio or image size

Cause: Signature generation was attempted on an image smaller than the supported size.

Action: Try scaling the image up to have a larger height and width, the suggested size is greater than 21 pixels each. If signature generation still fails, contact Oracle Support Services with the error number and the image causing this problem.

IMG-00871: unexpected number of seeds

Cause: An internal error has occured.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00872: unsupported image model

Cause: Signature generation was attempted on an image with an image model that Oracle Multimedia is unable to support.

Action: Try scaling the image down. If signature generation still fails, contact Oracle Support Services with the error number and the image causing this problem.

IMG-00899: signature cannot be generated

Cause: generateSignature could not generate the signature.

Action: Verify that the input image is a format supported by Oracle Multimedia.

IMG-00901: VIR signature version mismatch

Cause: Two signatures to be compared have different versions.

Action: Recompute signatures on the same platform and repeat signature comparison.

IMG-00902: VIR signature free failed

Cause: An internal error has occured.

Action: Contact Oracle Support Services.

IMG-00910: allocation of basic data structure failed

Cause: Operating system process memory has been exhausted while copying the image.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00911: free basic data structure failed

Cause: Operating system process memory has been exhausted while copying the image.

Action: Contact Oracle Support Services.

IMG-00921: threshold out of range

Cause: Threshold is not between 0 and 100

Action: Use a threshold between 0 and 100 and retry query.

IMG-00922: location specified without feature

Cause: only location was specified.

Action: Specify at least one other parameter (color, texture or shape) along with location. Refer to the Oracle Multimedia documentation for more details.

IMG-00923: signature is empty

Cause: Signature has not been generated.

Action: Generate the signature for the image by calling the generateSignature method.

IMG-00924: Incorrect parameter specification during CREATE INDEX

Cause: There is a spelling error, or duplicate parameter specification, or incorrect specification of parameters while creating an index of type ORDIMAGEINDEX.

Action: Refer to the Oracle Multimedia documentation for correct specification of CREATE INDEX parameters.

IMG-00925: unable to write to the ORDImageSignature object

Cause: The signature object was not valid and therefore the write operation failed. This problem is commonly caused by an attempt to invoke the generateSignature method on an uninitialized ORDImageSignature object.

Action: Ensure that the ORDImageSignature object has been initialized and inserted into a table. Also ensure that the row containing the signature object is locked. (The two previous actions do not apply to signature objects created using temporary BLOBs). Ensure that there is sufficient tablespace to contain the signature.

IMG-00926: tablespace specified during CREATE INDEX is not valid

Cause: A tablespace specified in the parameter string of a CREATE INDEX operation did not exist or the current user did not have sufficient privileges on the tablespace.

Action: Create the tablespace, grant appropriate privileges on the tablespace to the current user, or choose a different tablespace.

IMG-01000: unsupported option string

Cause: The function was invoked with an invalid option string.

Action: Ensure that correct option string is passed to the PL/SQL function. Refer to the Oracle Multimedia documentation for more information.

IMG-01001: not a DICOM object

Cause: The input was not a valid DICOM standalone object.

Action: Use an object that conforms to the DICOM standard. Refer to the Oracle Multimedia documentation for more information.

IMG-01002: unsupported DICOM version

Cause: The object header could not be parsed, possibly because the object header did not conform to the DICOM standard release 2003.

Action: Use an object that conforms to the DICOM standard release 2003. Refer to the Oracle Multimedia documentation for more information.

IMG-01003: unsupported DICOM object type

Cause: The category of DICOM objects is not supported by Oracle Multimedia.

Action: Use a DICOM image is supported by Oracle Multimedia. Oracle Multimedia supports image types defined in the DICOM standard release 2003. Refer to the Oracle Multimedia documentation for more details.

IMG-01004: input DICOM object is not an image

Cause: The DICOM object was not a DICOM image. DICOM object types such as structured reporting are not allowed by this function.

Action: Invoke this function with a DICOM image. Refer to the Oracle Multimedia documentation for more details.

IMG-01005: unsupported DICOM transfer syntax

Cause: The operation failed because the transfer syntax in the DICOM object, which describes the binary encoding of the DICOM object, was not supported by Oracle Multimedia.

Action: Use a DICOM object with a transfer syntax supported by Oracle Multimedia. Refer to the Oracle Multimedia documentation for more details.

IMG-01006: DICOM object cannot be parsed

Cause: The DICOM object could not be parsed by Oracle Multimedia, possibly due to an incorrect format or corrupted object.

Action: Verify that the DICOM object is not corrupted. If the DICOM object is valid, contact Oracle Support Services.

IMG-02001: 2FF01 - incorrect image format

Cause: There was a SQL/MM Still Image exception. Either the supplied image BLOB format did not match the image format or the image format is unsupported.

Action: For supported image formats, specify an input BLOB that has the same format as the image. For unsupported image formats, this method is not supported. Refer to the Oracle Multimedia documentation for more information.

IMG-02002: 2FF02 - incorrect average color feature specification

Cause: There was a SQL/MM Still Image exception. The specified average color value was not a valid SI_Color value.

Action: Specify an average color value that is not null and contains valid SI_Color values. SI_Color attribute values must be integers from 0 to 255. Refer to the Oracle Multimedia documentation for more information on constructing valid SI_Color objects.

IMG-02003: 2FF03 - incorrect color histogram feature specification

Cause: There was a SQL/MM Still Image exception. This exception was caused by one of the following.

- The specified color value was null or invalid.

- The specified frequency value was null or invalid.

- The input color and frequency arrays were not equal in size.

- The SI_ColorList array attribute had reached the maximum size.

Action: Ensure that the following are true(as applicable to your case):

- The color and frequency values are not null.

- The SI_Color attribute values are integers from 0 to 255.

- The frequency value is a double precision number from 0 to 100.

- The color and frequency arrays are equal in size and the size of the arrays is less than the SI_MaxHistogramLength value listed in the SI_VALUES view in the SI_INFORMTN_SCHEMA. Refer to the Oracle Multimedia documentation for more information on constructing SI_ColorHistogram objects.

IMG-02004: 2FF04 - incorrect feature list specification

Cause: There was a SQL/MM Still Image exception. Either the specified feature values were invalid or the specified feature weights were invalid.

Action: Check the values of feature and featureweight pairs. For a non null feature value, the corresponding feature weight value must be a double precision number greater than 0.0. Refer to the Oracle Multimedia documentation for more information on the SI_FeatureList object type and its methods.

IMG-02005: 2FF05 - incorrect color specification

Cause: There was a SQL/MM Still Image exception. The specified red/green/blue value was null or invalid.

Action: Specify red, green and blue values as integers from 0 to 255.

IMG-02006: 2FF06 - average color feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the average color feature was not supported by the specified image format

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image formats and image features.

IMG-02007: 2FF07 - positional color feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the positional color feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02008: 2FF08 - color histogram feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the color histogram feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02009: 2FF09 - texture feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the texture feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02010: 2FF10 - illegal image format specification

Cause: There was a SQL/MM Still Image exception. The specified format name was null or invalid.

Action: Specify a format name that is not null. For supported image formats, specify a format name that matches the image BLOB format. For unsupported image formats, specify a format name that is not listed as supported image format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image formats.

IMG-02011: 2FF11 - unsupported image format conversion specified

Cause: There was a SQL/MM Still Image exception. Either the specified target format value was null, the specified image had a null format value, or the conversion from the specified image format to the specified target format was not supported.

Action: Specify an image with a supported image format and specify a target format value that is supported for conversion. Refer to the SI_INFORMTN_ SCHEMA views and the Oracle Multimedia documentation for a list of supported image format conversions.

IMG-02012: 2FF12 - illegal specification for thumbnail generation

Cause: There was a SQL/MM Still Image exception. Either the specified image format did not support thumbnail generation, the specified thumbnail height or width was greater than the image height or width respectively, or the default thumbnail size 80 X 80 was greater than the image height or width respectively.

Action: Specify an image for which thumbnail generation is supported and specify thumbnail height and width values that are less than the image height and width values. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported thumbnail formats.

IMG-02014: 2202D Data exception - Null image value

Cause: There was a SQL/MM Still Image exception. The function was invoked using a null image value.

Action: Specify an image whose image data is not null. Refer to the Oracle Multimedia documentation for more information on constructing SI_StillImage objects.

76

VID-00611 to VID-00721

VID-00611: unable to access the BLOB for reading

    Cause: The BLOB could not be opened for reading.

    Action: Contact Oracle Support Services.

VID-00612: unable to open export destination file

    Cause: The file could not be created or opened.

    Action: Check that the file does not refer to an existing directory. Check that the file is not locked by another application.

VID-00613: export destination access denied

    Cause: Permission to write to destination file was denied.

    Action: Refer to the Oracle Multimedia documentation for information on granting privileges for the export() method.

VID-00614: I/O error during export

    Cause: The export operation failed because of an I/O error.

    Action: Check OS logs and contact Oracle Support Services.

VID-00702: unable to initialize video processing environment

    Cause: The initalization of the video processing procedure failed.

    Action: See the database administrator to make sure that enough memory has been allocated to JServer. If JServer does have enough memory, contact Oracle Support Services.

VID-00703: unable to read video data

    Cause: An error occurred while accessing the video source.

    Action: Make sure the video source is valid. For external sources, make sure all access priviliges are granted.

VID-00704: invalid input format

    Cause: The video data in the source was not in the format specified by the format field of the video object. In some unusal cases, the video data is actually corrupted.

    Action: Provide a correct value in the format field. If the correct value is unknown, put NULL in the format field to invoke the DEFAULT format plug-in.

VID-00705: unsupported input format

    Cause: The file format of the video data was not supported. This error can only occur in the DEFAULT format plug-in package.

    Action: Refer to the Oracle Multimedia documentation for supported formats.

VID-00706: unsupported or corrupted input format

Cause: The video data was either corrupted or the file format was not supported.

Action: Refer to the Oracle Multimedia documentation for supported formats. If the video data is not corrupted and is in a supported file format, contact Oracle Support Services.

VID-00707: unable to read empty video data

Cause: There is no data in the video object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate the video object with video data.

VID-00713: internal error while parsing video data

Cause: An internal error occurred during parsing.

Action: Contact Oracle Support Services.

VID-00714: internal error

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

VID-00721: unable to find format plug-in package ORDPLUGINS.ORDX_*string*_ VIDEO

Cause: Custom video plug-in for user-specified format was not found.

Action: Ensure correct video format is specified or proper custom video plug-in package is installed.

77

DRG-10000 to DRG-52305

DRG-10000: failed to read column *string.string*

    Cause: Error during read of specified text column

    Action: check existence and privs of column

DRG-10001: can not access result table *string*

    Cause: specified table does not exist or server does not have write privileges

    Action: check result table

DRG-10002: can not insert into result table

    Cause: text server is not privileged to insert, tablespace exhausted

    Action: check privileges and tablespace

DRG-10011: invalid object name *string*

    Cause: a table, column or procedure name specified had an invalid format. It is either too long or contains illegal characters. Probably you are passing in incorrect parameters.

    Action: check parameter values

DRG-10015: id exceeds limit(2147483642) of a number

    Cause: the limit of an id is 2147483642

    Action: use an id with value 214748364 or under

DRG-10016: you must be the owner to modify this object

    Cause: you tried to modify an object which you do not own

    Action: have the owner modify the object

DRG-10017: you must be *string* **to do this:** *string*

    Cause: you tried to modify an object which you have no privilege

    Action: have the owner modify the object

DRG-10100: invalid argument found: *string*

    Cause: invalid command argument was specified

    Action: check the documentation for the legal arguments and re-execute the command

DRG-10101: no value for argument: *string*

    Cause: this argument requires value(s)

    Action: re-execute the command with the correct argument value(s)

DRG-10102: mandatory argument missing: *string*

    Cause: this argument is mandatory

    Action: re-execute the command and specify the argument

DRG-10103: illegal value for argument: *string*

    Cause: an illegal value was passed to this argument

    Action: check the documentation for the legal values for this argument

DRG-10200: invalid server personality mask: *string*

    Cause: the specification for the server personality mask is invalid

    Action: check the documentation and specify the correct mask

DRG-10202: server failed to register

    Cause: the server failed to register itself with the data dictionary

    Action: look at the next error on the stack

DRG-10203: server named *string* **does not exist**

    Cause: update was called with the name of a server that does not exist

    Action: correct the name of the server

DRG-10204: server update failed

    Cause: the attempt to update the server failed

    Action: look at the next error on the stack

DRG-10205: server deregister failed

    Cause: the attempt to deregister the server from the data dictionary failed

    Action: look at the next error on the stack

DRG-10206: failed to perform recovery for a server or client

    Cause: Contact oracle support

    Action: Contact oracle support

DRG-10301: timed out waiting for responses from servers

    Cause: Not enough servers are running to handle the current system load, and a large backlog of commands has accumulated; perhaps no servers are running. This message could also indicate an internal error where one of the servers has crashed trying to process a given request

    Action: Check that enough servers are running, and that they are processing commands of the correct type. For instance, a DDL command might timeout if all the servers are setup to exclusively process query commands. Also, check the server log files.

DRG-10302: interrupted waiting for responses from servers

    Cause: User interrupted the request before it was completed

    Action: Restart the request

DRG-10303: could not queue given commands to be processed

    Cause: The given command or commands could not (all) be queued. This could indicate an extremely high system load, but it is more likely an internal error.

    Action: Check if any servers are running to process the command.

DRG-10304: unexpected error sending command(s) to Oracle Text server

Cause: There was an unexpected error sending command(s) to server

Action: Call customer support.

DRG-10305: pipe *string* is full

Cause: Could not send command to pipe, because the pipe was full

Action: Check if any servers are running to process the commands on that pipe

DRG-10306: server terminated unexpectedly while processing command

Cause: The server shutdown during execution of your command. This could be caused by a shutdown abort, or by an internal error in the server.

Action: If the server terminated had an internal error, contact customer support.

DRG-10307: no servers running

Cause: Could not process command because no servers are running with the correct personality mask.

Action: Start some servers with correct personality mask.

DRG-10308: no server with the required *string* personality mask is running

Cause: Could not process command because no servers are running with the correct personality mask.

Action: Start some servers with correct personality mask.

DRG-10309: not enough job queue processes

Cause: Could not process command because no servers with the correct personality mask are running.

Action: increase the JOB_QUEUE_PROCESSES initialization parameter or reduce the parallel degree for this statement.

DRG-10310: servers were shutdown before processing request

Cause: The command could not be completed because the servers were shut down or terminated before processing the request.

Action: Start another server with the correct personality mask.

DRG-10311: remote send not supported

Cause: You tried to specify a database link in an index specification

Action: Specify only local index names

DRG-10312: logfile name must be specified

Cause: You tried to start logging without specifying a logfile name

Action: Specify a logfile name

DRG-10313: logging has already been started

Cause: You tried to start logging even though logging has already been started

Action: Stop logging first, or ignore

DRG-10314: logging has not been started

Cause: You tried to stop logging even though logging has not been started

Action: Start logging first, or ignore

DRG-10315: logging is not supported on MTS

Cause: You tried to start logging on MTS

Action: None

DRG-10500: CREATE_INDEX failed: column spec *string*

Cause: failed to create text index on the specified column

Action: See the next errors on stack and take appropriate action

DRG-10501: invalid stopword: *string*

Cause: The stopword specified cound be lexed into multiple tokens with current lexer preference

Action: Check lexer preference and Respecifies the stopword

DRG-10502: index *string* **does not exist**

Cause: the specified index does not exist or you do not have access to it.

Action: Specify an existing index

DRG-10503: table *string* **cannot be indexed because it has no primary key**

Cause: a textkey needs to be a single column unique key whose length does not exceed 64 bytes. no such key was defined as an unique index or declared as a primary or unique key constraint

Action: create a suitable textkey for the table or specify it explicitly in this procedure call

DRG-10504: primary key is required when using the DETAIL_DATASTORE

Cause: you tried to use the detail datastore to index a table with no primary key constraint

Action: add a primary key constraint on the table

DRG-10506: table does not exist: *string*

Cause: The table, view, or synonym specified does not exist. There may also be a permissions problem reading the table.

Action: Reinvoke the operation with the correct table name

DRG-10507: duplicate index name: *string*

Cause: the specified index already exists in the dictionary

Action: this index can be updated or deleted, however this is only allowed if there is no text index available on the text column

DRG-10509: invalid text column: *string*

Cause: the column specified is not valid

Action: check that the followings are valid: a) text column is of supported datatype b) valid table name, column name in the specification.

DRG-10510: stopword is missing

Cause: The stopword to be added was not specified.

Action: Specify the stopword

DRG-10511: index *string* **does not exist or is incomplete**

Cause: index creation is not complete

Action: create index before performing this operation

DRG-10513: index *string* **metadata is corrupt**

Cause: dictionary contains bad preferences for this index

Action: contact you DBA

DRG-10516: failed to perform DDL operation due to an Oracle error
  Cause: the ddl operation requested has failed because of an Oracle error
  Action: see the Oracle error on the stack and take the appropriate action

DRG-10517: index *string* is already valid
  Cause: The index was in a valid state and did not need the requested operation.
  Action: Check the requested operation

DRG-10518: an operation is in progress which conflicts with *string* request
  Cause: another session is operating on this index. it could be: a) DML is requested and DDL is in progress or b) DDL is requested and DML is in progress operation on the index
  Action: try again later

DRG-10520: failed to drop index: *string*
  Cause: Failed to drop index on the specified index
  Action: see the Oracle error on the stack and take the appropriate action

DRG-10525: missing REBUILD keyword
  Cause: all Oracle Text alter index options require the REBUILD keyword
  Action: specify alter index with the REBUILD keyword

DRG-10528: primary keys of type *string* are not allowed
  Cause: you tried to create an index on a table with an illegal primary key datatype
  Action: change the textkey to one of the followings: VARCHAR2, NUMBER, VARCHAR, DATE, CHAR, MLSLABEL

DRG-10531: parallel parameter must be > 0
  Cause: you called create index with parallel = 0
  Action: specify with value > 0

DRG-10532: table is not partitioned
  Cause: you called parallel create index on non-partitioned table
  Action: recreate the table with partitions or remove the PARALLEL clause

DRG-10533: invalid user name: *string*
  Cause: you specified a user name that is invalid
  Action: specify the correct user name

DRG-10535: failed to optimize text index *string*
  Cause: the optimize operation requested has failed because of an Oracle error
  Action: see the Oracle error on the stack and take the appropriate action

DRG-10549: length of the object name *string* exceeded the limit
  Cause: object name has exceeded the maximun length of 30 bytes
  Action: Reduce the length of the object name if you want to re-create it

DRG-10550: illegal syntax for index, preference, source or section name
  Cause: name may have additional periods(.)

Action: check the syntax of the name

DRG-10553: illegal syntax for column specification *string*
    Cause: column specification may have additional periods(.)
    Action: check the syntax of column specification if you want to re-create it

DRG-10561: index *string* **is not valid for requested operation**
    Cause: The index was not in a valid state due to some prior error.
    Action: Drop index and create index again.

DRG-10562: missing alter index parameter
    Cause: The parameter string was missing
    Action: Provide correct parameter string with regard to the requested alter index operation.

DRG-10569: table or column does not exist: *string*
    Cause: The table, view, synonym or column specified does not exist. There may also be a permissions problem reading the table.
    Action: Reinvoke the operation with the correct table name or column name

DRG-10573: index *string* **is obsolete**
    Cause: you specified an obsolete index
    Action: perform upgrade_index on the index

DRG-10574: failed to upgrade text index *string*
    Cause: the upgrade operation has failed because of an Oracle error
    Action: see the Oracle error on the stack and take the appropriate action

DRG-10579: must provide text query criteria
    Cause: text query criteria is mandatory
    Action: provide text query criteria

DRG-10580: parallel indexing is not supported: *string*
    Cause: attempted to create index with parallel servers
    Action: Drop index and set parallel to 1 in create index

DRG-10581: indirect datastores cannot be used with long or lob text columns
    Cause: You tried to create an index on a long or lob column using an indirect datastore such as the file or url datastores
    Action: Use direct datastore or a varchar column

DRG-10582: column *string* **does not exist in table** *string*
    Cause: you specified an invalid column
    Action: specify valid column

DRG-10583: TRUNCATE INDEX failed: *string*
    Cause: Failed to truncate index
    Action: See the next errors on stack and take appropriate action

DRG-10584: failed to *string string string* **due to an Oracle error**
    Cause: a DDL operation on an index object failed due to SQL error

Action: see following error

DRG-10595: ALTER INDEX *string* **failed**

    Cause: failed to alter index

    Action: See the next errors on stack and take appropriate action

DRG-10597: invalid rebuild online operation

    Cause: REBUILD ONLINE is not supported for requested operation.

    Action: Alter index without the online option.

DRG-10598: invalid parallel operation

    Cause: PARALLEL is not supported for requested operation.

    Action: Alter index without the parallel option

DRG-10599: column is not indexed

    Cause: The column specified is not indexed.

    Action: Create index on the column before performing this operation

DRG-10601: failed to remove pending DML for this index

    Cause: The system could not remove triggers setup to monitor updates to the requested table

    Action: See next error on stack to determine course of action. Call Oracle support if necessary. Until this error is fixed, updates to all text columns in the given table may not be indexed.

DRG-10602: failed to queue DML change to column *string* **for primary key** *string*

    Cause: The system could not record that a change had been made to the given column

    Action: See next error on stack to determine course of action. Call Oracle support if necessary. Until this error is fixed, updates to all text columns in the given table may not be indexed.

DRG-10606: server failed to access the DML Queue

    Cause: The server was had an error accessing the DML Queue

    Action: See next error on stack.

DRG-10700: preference does not exist: *string*

    Cause: the preference name specified does not exists

    Action: retry with the correct preference name

DRG-10701: preference *string.string* **already exists**

    Cause: the specified preference already exists

    Action: must drop the preference if you want to re-create it.

DRG-10702: cannot create or modify preference in another user''s schema

    Cause: you tried to create a preference for another user

    Action: owner or CTXSYS or a user who has CTXADMIN role should create preference

DRG-10703: invalid framework object *string*

    Cause: you specified an invalid object type

    Action: use a valid framework object

DRG-10704: preference *string* does not have an attribute named *string*
    Cause: you tried to set value for a invalid attribute (not supported by the object.

    Action: specify the correct attribute name

DRG-10705: invalid value *string* for attribute *string*
    Cause: you tried to set an illegal value for an attribute

    Action: specify the correct attribute value for the datatype of the attribute

DRG-10706: length of *string* exceeds maximum size of *string*
    Cause: Parameter is too many bytes

    Action: Correct preference setting and resubmit

DRG-10707: a value is required for attribute *string* of preference *string*
    Cause: A required attribute was not provided

    Action: Correct preference setting and resubmit

DRG-10708: invalid class id *string* for preference *string*
    Cause: the specified class id is not correct for the specified preference

    Action: specify the correct class id

DRG-10709: this preference is referenced by *string* and cannot be dropped
    Cause: the specified preference is used as part of another preference and cannot be dropped until the referring preference is modified

    Action: modify the referring preference

DRG-10750: unknown parameter *string*
    Cause: Unrecognized parameter

    Action: Specify correct parameter

DRG-10751: invalid value for parameter
    Cause: Wrong data type or out of range

    Action: Specify correct parameter value

DRG-10752: DEFAULT_INDEX_MEMORY cannot be greater than MAX_INDEX_ MEMORY
    Cause: You tried to set DEFAULT_INDEX_MEMORY to a value higher than the maximum set in MAX_INDEX_MEMORY

    Action: Specify a lower value

DRG-10753: invalid memory size string *string*
    Cause: You specified an incorrectly formatted memory string

    Action: Specify a correctly formatted memory string

DRG-10754: memory size must be between *string* and *string*
    Cause: You specified a memory size which is outside the allowed range

    Action: Specify a memory size within the allowed range

DRG-10755: *string* and *string* have characters in common
    Cause: the join character sets cannot have characters in common

    Action: Correct the attribute values and resubmit

DRG-10756: neither text indexing nor theme indexing has been selected

Cause: INDEX_TEXT and INDEX_THEMES preferences both cannot be FALSE.

Action: Set either of INDEX_TEXT or INDEX_THEMES or both to TRUE.

DRG-10757: stoplist cannot have more than 4096 stopwords

Cause: a stoplist cannot have more than 4096 stopwords. This includes stopthemes.

Action: none required

DRG-10758: index owner does not have the privilege to use this preference

Cause: index owner does not have the role defined in FILE_DATATSTORE_ROLE

Action: grant index owner the appropriate role

DRG-10759: invalid role

Cause: the role does not exist in the database

Action: check the role name or create the role

DRG-10760: illegal format for procedure name

Cause: the procedure name specified is invalid. For instance, it may have a semicolon

Action: check the procedure name

DRG-10761: procedure *string* does not exist

Cause: the specified procedure could not be found

Action: check input. Try a fully-specified format such as OWNER.OBJECT

DRG-10762: index owner does not have access to procedure *string*

Cause: the index owner does not have execute privilege on the specified procedure

Action: grant index owner execute permission on the procedure

DRG-10763: value *string* is not a valid character set

Cause: the value specified for the filename_charset attribute of the file datastore is not a valid character set name

Action: specify a valid Oracle character set name

DRG-10800: query failed: *string string string*

Cause: Failed to process the query

Action: Check the errors on stack and take appropriate action

DRG-10801: cannot create an SQE for another user

Cause: You tried to create an SQE for another user

Action: Remove owner from SQE name specification

DRG-10816: display/highlight call failed

Cause: See the next error on the stack.

Action: See the next error on the stack.

DRG-10817: CONTAINS term consists of stopword or phrase of stopwords: *string*

Cause: One or more terms within a CONTAINS query consist of just a stopword or a phrase of just stopwords

Action: Replace the stopword or use stopwords within phrases containing non-stopwords.

DRG-10819: could not open contains cursor

Cause: An error occurred while trying to open a contains cursor

Action: See accompanying error messages in the stack

DRG-10820: invalid contains cursor id

Cause: You tried to fetch or close a contains cursor with an id which does not exist.

Action: Review fetch or close invocation

DRG-10821: contains cursor is not open

Cause: You tried to fetch from a contains cursor which was not open.

Action: Open cursor first

DRG-10822: duplicate query name

Cause: You tried to create a stored query with a name already used.

Action: Use different name

DRG-10823: invalid query name

Cause: The query name specified is not valid

Action: Check the query name

DRG-10825: stored query does not exist: *string*

Cause: The specified stored query does not exist.

Action: Check the query name

DRG-10826: no document with the specified textkey is found

Cause: There is no document with the specified textkey.

Action: Check the textkey

DRG-10827: open_con must be performed before count_last

Cause: last_count returns hit from in-memory query,so an in-memory query must be run before you can use count_last

Action: execute open_con before run count_last

DRG-10828: token *string* **is longer than maximum length for column** *string*

Cause: A token to be inserted in the feedback table is longer than the maximum allowed column size.

Action: Modify the query, or the column size for feedback table, or feedback procedure arguments accordingly.

DRG-10829: feedback id *string* **is longer than the maximum length of** *string* **bytes**

Cause: Feedback id is longer than the maximum allowed length for the feedback_ id column.

Action: Use a smaller feedback_id.

DRG-10830: SHARELEVEL is not 0 or 1

Cause: You specified a sharelevel which is not 0 or 1

Action: Use sharelevel equal to 0 or 1 only.

DRG-10831: can not insert into feedback table *string*

    Cause: Not privileged to insert.

    Action: Check privileges.

DRG-10832: can not delete from feedback table *string*

    Cause: Not privileged to delete.

    Action: Check privileges.

DRG-10833: feedback failed

    Cause: Failed to process feedback request

    Action: Check the errors on stack and take appropriate action

DRG-10834: upper-case form of section name *string* **too long**

    Cause: upper-case form of the section name is longer then supported length

    Action: reduce length of section name when adding section

DRG-10835: WITHIN operator not supported for theme index

    Cause: WITHIN operator used in theme index query

    Action: Rewrite query without WITHIN operator

DRG-10836: field section and attribute section can not be nested

    Cause: A field section or a attribute section is specified in a nested section search

    Action: Rewrite query without nested field sections

DRG-10837: section *string* **does not exist**

    Cause: The given section name does not exist in USER_SECTIONS

    Action: Rewrite query with valid section name

DRG-10838: invalid SPAN argument supplied to NEAR

    Cause: An invalid value was supplied for SPAN argument to NEAR

    Action: Provide a valid SPAN. Valid values are integers from 0 to 100.

DRG-10839: invalid ORDER argument supplied to NEAR

    Cause: An invalid value was supplied for ORDER argument to NEAR

    Action: Provide a valid ORDER. Valid values are T, TRUE, F, FALSE (case insensitive).

DRG-10840: CONTAINS predicate including 0 is not supported by FIRST_ROWS hint

    Cause: User attempts to issue a query with CONTAINS predicate including 0 while giving FIRST_ROWS hint.

    Action: remove FIRST_ROWS hint.

DRG-10841: invalid SCORE argument supplied to FUZZY

    Cause: An invalid value was supplied for SCORE argument to FUZZY

    Action: Provide a valid SCORE. Valid values are integers from 0 to 80.

DRG-10842: invalid NUMRESULTS argument supplied to FUZZY

    Cause: An invalid value was supplied for NUMRESULTS argument to FUZZY

    Action: Provide a valid NUMRESULTS. Valid values are integers from 0 to 5000.

DRG-10843: invalid WEIGHT argument supplied to FUZZY

Cause: An invalid value was supplied for WEIGHT argument to FUZZY

Action: Set WEIGHT to WEIGHT or NOWEIGHT.

DRG-10844: index cannot execute this structured predicate efficiently

Cause: You specified a combination of condition and order by columns in a catsearch query which cannot be executed by the index"s index set efficiently

Action: None

DRG-10845: column *string* is not indexed

Cause: You specified a column in a condition or order by which is not part of the ctxcat index

Action: None

DRG-10846: order by columns must be all ascending or all descending

Cause: You specified an order by clause which has some columns ascending and some descending. This is not currently supported by catsearch

Action: None

DRG-10847: catsearch requires prefix index for this type of queries

Cause: For efficient execution of this Vgram query we require presence of a prefix index.

Action: create a prefix index

DRG-10848: invalid structured clause

Cause: you have specified an invalid structured clause

Action: None

DRG-10849: catsearch does not support functional invocation

Cause: the query plan for your query is invoking a catsearch operator functionally rather than as an index rowsource. The catsearch operator does not support functional invocation

Action: add optimizer hints so that all catsearch operators are performed through index scans

DRG-10850: CTXRULE indextype does not support the operator

Cause: Used an operator not supported by CTXRULE. Currently it only supports AND, NEAR, phrase, NOT, WITHIN, OR, ABOUT, EQUIVALENCE, STEM and THESAURUS operators

Action: Rewrite query without this operator

DRG-10851: Invalid grammar *string* specified for query template

Cause: incorrect grammar specification

Action: Rewrite query specifying valid grammar name

DRG-10852: Invalid scoring type *string* specified for query template

Cause: incorrect scoring type specification

Action: Rewrite query specifying valid scoring type (integer/float)

DRG-10853: Catsearch does not support this operator

Cause: unsupported operator specified

Action: Rewrite query using valid operators

DRG-10854: Invalid scoring algorithm *string* specified for query template

Cause: incorrect scoring algorithm specification

Action: Rewrite query specifying valid scoring algorithm (default/count)

DRG-10855: CTXRULE indextype does not support the token type

Cause: Unsupported VGRAM token type 1.

Action: None

DRG-10856: SDATA section *string* does not exist

Cause: The given SDATA section name does not exist in USER_SECTIONS

Action: Rewrite query with valid SDATA section name

DRG-10857: literal is not compatible with the data type of the SDATA section

Cause: The given literal is not compatible with the data type of the specified SDATA section.

Action: Rewrite query with a compatible literal

DRG-10858: SDATA operator is not allowed in WITHIN

Cause: A field section or a attribute section is specified in a nested section search

Action: Rewrite query without nested field sections

DRG-10859: Only one predefined scoring component can be used in DEFINESCORE

Cause: More than one predefined scoring component (i.e. RELEVANCE, OCCURRENCE, etc.) is used in the scoring expression of the DEFINESCORE operator

Action: Rewrite query using only one predefined component

DRG-10860: All expressions under the same WITHIN must use the same predefined scoring component

Cause: The query side of the same within mixes different types of scoring components(i.e. RELEVANCE, OCCURRENCE, etc.)

Action: Rewrite query using only one type of predefined component

DRG-10861: COMPLETION score must be used with WITHIN operator

Cause: The completion score is used without using the WITHIN operator

Action: Rewrite query to include a within operator

DRG-10862: *string* attribute cannot be used with CTXRULE indexes

Cause: Used an attribute not supported by CTXRULE. This restriction is due to lack of wildcard support for CTXRULE indexes.

Action: Rewrite query without this attribute

DRG-10863: invalid ORDER argument supplied to NDATA

Cause: An invalid value was supplied for ORDER argument to NDATA

Action: Set ORDER to ORDER or NOORDER.

DRG-10864: invalid PROXIMITY argument supplied to NDATA

Cause: An invalid value was supplied for PROXIMITY argument to NDATA

Action: Set PROXIMITY to PROXIMITY or NOPROXIMITY.

DRG-10865: invalid datatype in user scoring expression

Cause: The scoring expression specified in DEFINESCORE or NORMALIZATION_EXPR in the query template either contains components with unsupported datatypes or does not return numerical values.

Action: Rewrite the scoring expression.

DRG-10866: The right hand operand of MINUS cannot use IGNORE score

Cause: The IGNORE score is used as the right hand operand of MINUS

Action: Rewrite the scoring expression.

DRG-10867: OCCURRENCE and COMPLETION score cannot be used with ABOUT in DEFINESCORE

Cause: The OCCURRENCE and COMPLETION score cannot be used with ABOUT queries

Action: Rewrite the scoring expression.

DRG-10900: out of memory

Cause: can not allocate more memory

Action: Contact your system adminstrator

DRG-11000: invalid keyword *string*

Cause: A keyword was invalid.

Action: Respecify the parameter string with correct keyword

DRG-11001: missing keyword when expecting one of *string*

Cause: A keyword was missing.

Action: Respecify the parameter string with keyword

DRG-11002: missing value for *string*

Cause: A value for the argument was missing.

Action: Respecify the parameter string with value

DRG-11003: invalid value *string* **for** *string*

Cause: An invalid value was given for the argument

Action: Specify a valid value

DRG-11004: duplicate or conflicting value for *string*

Cause: More than one value has been specified for the argument

Action: Check parameter string and correct the problem parameter

DRG-11005: invalid create index parameter string

Cause: the supplied parameter string is not correct

Action: drop index and recreate index with correct parameters

DRG-11006: invalid alter index parameter string

Cause: The parameter string was invalid.

Action: Reissue the statement with the correct parameter string.

DRG-11007: multiple stopwords specified

Cause: Tried to add more than one stopword

Action: Specify one stopword at a time

DRG-11008: invalid create index partition parameter string

Cause: The parameter string was invalid

Action: drop index and recreate index with correct parameters

DRG-11100: unable to connect to the database

Cause: failed to connect to Oracle database

Action: check the Oracle error and connect string

DRG-11101: failed to open file *string*

Cause: failed to open a file

Action: check whether the file exist or access permission available

DRG-11102: assigned lexer can not operate on *string* **language setting**

Cause: Single byte lexer selected in multibyte language setting

Action: check RDBMS language setting or text columns lexer setting

DRG-11104: Oracle Text error:

Cause: See the next error on stack

Action: See the next error on stack

DRG-11106: user database session has terminated during this operation

Cause: this database session does not exist or has terminated

Action: determine why the user database session terminated while the operation was still being carried out.

DRG-11107: invalid path specification: *string*

Cause: the path specified is not valid

Action: check the path specification

DRG-11108: invalid filename specified: *string*

Cause: the filename specified is not valid

Action: check the filename for beginning or trailing spaces, invalid characters, or other such problems.

DRG-11109: assigned lexer does not support *string* **query operator**

Cause: This lexer does not support this query operator

Action: do not use the operator in your query

DRG-11111: value of *string* **must be between** *string* **and** *string*

Cause: You specified a value for the parameter which is out of range

Action: Specify a value which is in the allowed range

DRG-11112: length of *string* **exceeds maximum of** *string*

Cause: You specified a value for the parameter which is too long

Action: Specify a value which is less than or equal to the maximum length

DRG-11113: value of *string* **must be one of** *string*

Cause: You specified a value for the parameter which is invalid

Action: Specify a valid value for the parameter

DRG-11114: result table format is not correct for this operation

Cause: You specified a result table which has the wrong number, type, or names of columns for this operation.

Action: Check result table. Refer to the documentation for the correct format for each operation

DRG-11115: a value for *string* must be specified

Cause: You did not specify a value for the parameter

Action: Specify a value for the parameter

DRG-11116: value of *string* must be less than or equal to value of *string*

Cause: You specified values for the two parameters which are invalid

Action: Specify valid values for the parameters

DRG-11117: name is already used by an existing object

Cause: You tried to create an object whose name conflicts with an object of that type which already exists

Action: Specify a new name

DRG-11118: object *string* does not exist

Cause: You tried to modify or drop an object which does not exist

Action: Specify correct object name

DRG-11119: operation is not supported by this index type

Cause: You tried to invoke an operation on an index which is not supported by the index type

Action: None

DRG-11120: failed to write to file *string*

Cause: failed to write to a file

Action: check whether the file exist or access permission available

DRG-11121: failed to read from file *string*

Cause: failed to read from a file

Action: check whether the file exist or access permission available

DRG-11122: unsupported section group

Cause: unsupported section group is specified for functional contains

Action: change the section group to NULL_SECTION_GROUP

DRG-11123: theme indexing is not supported

Cause: theme indexing is on in the lexer preference for functional contains

Action: turn off theme indexing

DRG-11124: invalid value *string*

Cause: you specified an invalid value

Action: specify a valid value

DRG-11125: invalid format of existing log file *string*

Cause: the file specified by START_LOG already exists, and is not a previously written log file

Action: specify a new file, or remove the existing file

DRG-11126: context index is empty

    Cause: the training table is empty or the context index of training table is not populated

    Action: populate the training table or context index

DRG-11127: inconsistent index policy with trained rule

    Cause: the ctxrule index policy is inconsistent with the policy in which the rule was trained

    Action: change the ctxrule index policy

DRG-11128: invalid format of rule

    Cause: the rule format is not valid for this operation

    Action: check the rule type and operation type

DRG-11129: the rule table is empty

    Cause: the rule table is empty

    Action: populate the rule table by training

DRG-11130: no data found in the collection

    Cause: feature preparation program can not find any feature in the specified collection

    Action: check the setting for extracting features.

DRG-11131: Error from Oracle XML parser: *string*

    Cause: The Oracle XML parser reported an error

    Action: Check the document for the error, and fix if necessary

DRG-11132: Invalid character in logfile name

    Cause: The logfile parameter to CTX_OUTPUT.START_LOG or CTX_OUTPUT.START_QUERY_LOG contains an invalid character (such as a forward slash)

    Action: Remove the invalid character

DRG-11133: failed to convert a datatime value [ora-*number***]**

    Cause: Failed to convert the datetime value.

    Action: Check the error code

DRG-11134: The file *string* is currenly being used for logging by another process

    Cause: The file is currently being used by another process.

    Action: Give a different file name.

DRG-11135: feature not generally available

    Cause: You tried to use a feature not generally available.

    Action: Contact customer support

DRG-11203: INSO filter not supported on this platform

    Cause: You tried to use the INSO filter on a platform which does not support it

    Action: Do not use the INSO filter

DRG-11204: user filter command is too long

    Cause: The user filter command must be 32 characters or less

Action: Specify a shorted user filter command

DRG-11205: user filter command contains illegal characters

Cause: The user filter command cannot contain special characters such as slashes, parentheses, semicolons, etc.

Action: Correct command specification

DRG-11206: user filter command *string* could not be executed

Cause: The user filter command could not be executed.

Action: Check that the command exists in $ORACLE_HOME/ctx/bin, and that it is executable.

DRG-11207: user filter command exited with status *string*

Cause: The user filter command exited with the given error status.

Action: See any DRG-11220, DRG-11221, DRG-11222, DRG-11223, DRG-11224, DRG-11225, or DRG-11227 error message on the error stack otherwise see error status.

DRG-11208: ORACLE_HOME is not set

Cause: ORACLE_HOME is not set

Action: make sure ORACLE_HOME is set when running ctxsrv

DRG-11209: filename for *string* exceeds maximum length of *string*

Cause: Value of the file name is too long

Action: Specify a shorter filename

DRG-11210: format column must be a char, varchar, or varchar2 type

Cause: you specified a format column which is not a char, varchar, or varchar2 type.

Action: specify a format column of correct type

DRG-11211: charset column must be a char, varchar, or varchar2 type

Cause: you specified a charset column which is not a char, varchar, or varchar2 type.

Action: specify a charset column of correct type

DRG-11212: procedure filter procedure name contains a semicolon

Cause: the procedure name specified had a semicolon

Action: remove semicolon or rename procedure name. The correct format is PACKAGENAME.PROCEDURE_NAME

DRG-11213: CTXSYS does not own procedure filter stored procedure: *string*

Cause: CTXSYS does not have execute privilege to the procedure filter stored procedure

Action: make sure the package is owned by CTXSYS and the procedure exist

DRG-11214: execution of procedure filter stored procedure has failed

Cause: an error occur while executing the proedure filter stored procedure

Action: check or debug the stored procedure

DRG-11215: index owner does not have access to filter stored procedure: *string*

Cause: the index owner does not have execute privilege of the procedure

Action: CTXSYS to grant execute privilege of the procedure to index owner

DRG-11216: length of datastore data exceeds limit

Cause: the length of the datastore data passed to the filter stored procedure is longer than the maximum length (32767 bytes)

Action: check primary key parameter

DRG-11217: INSO safe callout failed

Cause: The INSO safe callout cannot be executed

Action: check the Oracle errpr

DRG-11218: malformed mail line, line *string*

Cause: The mail message has an error at the indicated line

Action: manually edit mail message, if possible

DRG-11219: malformed mail configuration file, line *string*

Cause: mail filter configuration file has an error at the indicated line

Action: manually edit mail filter configuration file, if possible

DRG-11220: Third-party filter is out of memory.

Cause: Third-party filter could not filter this document because it was unable to allocate sufficient virtual memory.

Action: Increase virtual memory provided by the Operating System and reindex this document.

DRG-11221: Third-party filter indicates this document is corrupted.

Cause: Third-party filter could not filter this document because this document is corrupted.

Action: Fix the corruption and reindex this document.

DRG-11222: Third-party filter does not support this known document format.

Cause: Third-party filter was able to recognize the format of this document but could not filter it because this format is not supported.

Action: Remove this document or specify it to be ignored.

DRG-11223: Third-party filter indicates this document is password protected or encrypted.

Cause: Third-party filter encountered a password protected or encrypted document and could not filter it because this level of password protection or encryption is not supported.

Action: Remove this document or specify it to be ignored.

DRG-11224: Third-party filter is unable to create or write to temporary file.

Cause: Third-party filter could not filter this document because it was unable to create a temporary file or unable to write to a temporary file.

Action: Make sure that the Operating System specified temporary directory has enough space and that the Operating System Oracle user has the privileges to create files in this temporary directory.

DRG-11225: Third-party filter timed out.

Cause: Third-party filter could not filter this document because the filter timed out.

Action: Increase the value of the TIMEOUT attribute of INSO_FILTER filter type and reindex this document. When TIMEOUT attribute is set to 0 and the session hangs then contact Oracle Support.

DRG-11226: Error initializing third-party filter: *string*

Cause: There was an error initializing the third-party filter.

Action: Check the following messages for details

DRG-11227: Third-party filter does not support this document format.

Cause: Third-party filter does not support the format of this document.

Action: Remove this document or specify it to be ignored.

DRG-11301: error while indexing document

Cause: An error was encountered while indexing the document. The error may have occurred during lexing, parsing for sections, or other

Action: review document and update with valid data. Note that the document contents may have been partially indexed, so it may be returned by some queries.

DRG-11303: secondary indexes are not supported by this indextype

Cause: You attempted to create an index on an index-organized table, but the indextype does not support this action.

Action: None

DRG-11304: function-based indexes are not supported by this indextype

Cause: You attempted to create a function-based index but the indextype does not support this action.

Action: None

DRG-11305: create/alter index *string* **is in progress in another session**

Cause: you attempted to mark the index from INPROGRESS to FAILURE but create/alter on the same index is in progress in another session

Action: None

DRG-11306: operation cannot be performed on a policy

Cause: you attempted to perform an operation on a policy, but the operation is only valid for an index.

Action: None

DRG-11307: operation cannot be performed on an index

Cause: you attempted to perform an operation on an index, but the operation is only valid for a policy.

Action: None

DRG-11308: unsupported column expression *string*

Cause: You attempted to create an index with an unsupported column expression.

Action: None

DRG-11309: invalid filter by column: *string*

Cause: the column specified is not valid

Action: check that the followings are valid: a) column is of supported datatype b) valid table name, column name in the specification.

DRG-11310: invalid order by column: *string*

    Cause: the column specified is not valid

    Action: check that the followings are valid: a) column is of supported datatype b) valid table name, column name in the specification.

DRG-11400: failed to parse document with key *string*

    Cause: The document specified for linguistic extraction could not be parsed. This could indicate that the document is not well-formed English

    Action: check the document contents

DRG-11403: primary key value too long

    Cause: the primary key value parameter passed to the service request is longer than the maximum primary key length (64 bytes)

    Action: check primary key parameter

DRG-11404: no primary key value specified

    Cause: the primary key value parameter passed to the service request is null

    Action: check primary key parameter

DRG-11410: could not insert into *string* **result table**

    Cause: an ORACLE error occurred while linguistic output was being inserted into the result table

    Action: take action appropriate to the ORACLE error code.

DRG-11418: insufficient document content for linguistic parser

    Cause: the document specified for linguistic extraction was parsed but the document content was insufficient for linguistic extraction by the specified parser.

    Action: check the document contents or try modifying linguistic settings

DRG-11422: linguistic initialization failed

    Cause: linguistic services initialization failed

    Action: Check to see if knowledge base files present for the language

DRG-11425: gist level *string* **is invalid**

    Cause: invalid gist level

    Action: Specify a valid gist level

DRG-11427: valid gist level values are *string*

    Cause: Invalid gist level

    Action: Specify a valid gist level

DRG-11428: document contains invalid characters

    Cause: The document contains invalid characters

    Action: Remove invalid characters

DRG-11432: file error while accessing knowledge base

    Cause: An oracle error was encountered during knowledge base access

    Action: Check to see if knowledge base files present for the language

DRG-11435: primary key value is invalid

    Cause: the primary key value parameter passed to the service request is not valid

Action: check primary key parameter

DRG-11439: index name length exceeds maximum of *string* bytes
    Cause: the length of the index name is longer than the maximum index name size
    Action: drop the index and recreate the index with a shorter index name

DRG-11440: operation not supported for the *string* language
    Cause: the requested operation is not supported for the current language
    Action: Do not request this operation

DRG-11441: gist numParagraphs *string* is invalid
    Cause: invalid gist numparagraphs
    Action: Specify valid gist numparagraphs

DRG-11442: valid gist numParagraphs values are *string*
    Cause: invalid gist numparagraphs
    Action: Specify valid gist numparagraphs

DRG-11443: gist maxPercent *string* is invalid
    Cause: invalid gist max percent
    Action: Specify valid gist max percent

DRG-11444: valid gist maxPercent values are *string*
    Cause: invalid gist max percent
    Action: Specify valid gist max percent

DRG-11445: rowid value is invalid: *string*
    Cause: the rowid value parameter passed to the service request is not valid
    Action: check rowid parameter

DRG-11446: supplied knowledge base file *string* not installed
    Cause: Either using Oracle Express edition or supplied Knowledge Base was required but was not installed.
    Action: If using Oracle Express edition then upgrade to Oracle Enterprise or Oracle Standard edition. Otherwise see post-installation tasks section of the Database Installation Guide for instructions to install supplied Knowledge Base.

DRG-11480: ctxkbtc memory allocation error: %(1)
    Cause: Unable to allocate memory
    Action: Contact your system administrator

DRG-11500: column name expected, found *string* on line *string*
    Cause: possibly miss-spelt column name or keyword
    Action: check spellings and punctuation around specified line

DRG-11501: identifier *string* found in place of column name on line *string*
    Cause: possibly miss-spelt column name
    Action: check spellings around specified line

DRG-11502: read of file failed at line *string* for file *string*
    Cause: bad file name, wrong file_type or file system error

Action: check file name, type and/or file integrity

DRG-11503: insert statement overflows maximum statement size
    Cause: total length of statement exceeds database maximum
    Action: reduce length of column names or number of columns

DRG-11504: invalid longsize parameter of *string* specified
    Cause: invalid option argument
    Action: specify long buffer size in kbytes above 0

DRG-11505: long data on line *string* not found or invalid
    Cause: either bad data or bad data file
    Action: check file exists and is accessible, if separate

DRG-11506: record ignored on line *string* because of error(s)
    Cause: an error occured parsing this row"s data
    Action: move and amend line in error to alternate load file

DRG-11507: file error trying to read file *string*
    Cause: file not found or could not be read
    Action: check name and location of file

DRG-11508: bad or missing *string* token on line *string*
    Cause: token expected was not found
    Action: move and amend record affected to error load file

DRG-11509: value expected on line *string*
    Cause: could not make sense of text where value expected
    Action: move and amend record affected to error load file

DRG-11510: encountered unrecoverable error on line *string*
    Cause: see previous messages
    Action: see previous errors

DRG-11511: specified table does not contain a LONG RAW column
    Cause: text must be inserted into a LONG RAW type column
    Action: check table and type of data

DRG-11512: bad syntax for thesaurus load file at line *string*
    Cause: load file must have specific format for loading thesaurus
    Action: check documentation for description of correct format

DRG-11513: unable to open or write to file *string*
    Cause: an attempt to open or to write to the given file failed
    Action: check with system administrator

DRG-11514: user *string* does not have UPDATE or SELECT privilege on *string*
    Cause: user has not been granted UPDATE or SELECT privilege
    Action: check privilege on the user

DRG-11515: not enough text key values

Cause: number of values provided does not match the number of text keys

Action: provide same number of values as the number of text keys

DRG-11516: user must be at least in role CTXUSER to perform this operation

Cause: user does not have CTXUSER, CXAPP or CTXADMIN role

Action: grant user the proper role

DRG-11517: error when validating text objects

Cause: see accompanying Oracle error

Action: see accompanying Oracle error

DRG-11518: text table *string* does not have a LONG or LONG RAW column

Cause: table specified does not have a LONG or LONG RAW column

Action: check the table

DRG-11519: encounter error when exporting a LONG or LONG RAW column

Cause: see accompanying error message

Action: see accompanying error message

DRG-11520: error writing to file

Cause: file does not exist

Action: make sure file exists

DRG-11521: encounter error when updating a LONG or LONG RAW column

Cause: see accompanying error message

Action: see accompanying error message

DRG-11522: no row exists for the text key(s) specified

Cause: no row in the table has the text key(s) specified

Action: use a valid text key(s)

DRG-11523: unable to lock the specified row for update

Cause: some other process has a lock on the row

Action: release the lock or wait until the lock is released

DRG-11524: primary key value is missing

Cause: primary key value is not provided

Action: provide the primary key value(s)

DRG-11525: invalid commitafter parameter of *string* specified

Cause: invalid option argument

Action: specify commitafter above 0

DRG-11526: filename exceeds maximum length

Cause: value of the file name is too long

Action: Specify a shorter file name

DRG-11527: end token not found on line *string*

Cause: <TEXTEND> not found at end of record

Action: processing discontinued - amend record

DRG-11528: LONG or LONG RAW column defintion found in structure data
    Cause: could be misplaced
    Action: remove reference to LONG or LONG RAW column from structure data

DRG-11529: token exceeds maximum length
    Cause: value of the column name or value is too long
    Action: processing discontinued - amend record

DRG-11530: token exceeds maximum length
    Cause: value of the phrase or relation word is too long
    Action: processing discontinued - amend record

DRG-11531: start token not found on line *string*
    Cause: <TEXTSTART: not found at start of record
    Action: processing discontinued - amend record

DRG-11532: error reading through end of line *string* for file *string*
    Cause: characters encountered while reading through end of line
    Action: remove extraneous characters

DRG-11533: improper value of column *string*
    Cause: value of the column is too long or mismatched quote
    Action: processing discontinued - amend record

DRG-11534: invalid column *string*
    Cause: column does not exist or it"s misspelled
    Action: processing discontinued - amend record

DRG-11535: error writing phrase or qualifier: *string* on line *string* to memory
    Cause: not enough memory
    Action: allocate more memory, contact WorldWide Support if problem persists

DRG-11600: URL store: *string* has permanently moved
    Cause: the document referred to by the URL has permanently moved
    Action: find the new address, if any, of the document

DRG-11601: URL store: bad syntax on request for *string*
    Cause: client did not make correct request
    Action: contact support

DRG-11602: URL store: access to *string* requires authentication
    Cause: user has to provide password or other authentication
    Action: get required access, or check URL

DRG-11603: URL store: payment required to access *string*
    Cause: payment is required before the URL can be accessed
    Action: check URL, or pay if required if access necessary

DRG-11604: URL store: access to *string* is denied
    Cause: access to the URL is denied
    Action: check URL; if correct, do not try to access URL again

DRG-11605: URL store: document specified by *string* not found
    Cause: the document can not be found on the host specified
    Action: check URL

DRG-11606: URL store: access to *string* timed out waiting for client request
    Cause: client did not make response within timeout period
    Action: check URL

DRG-11607: URL store: access to *string* was denied due to garbled response
    Cause: Web server identified in URL doesn"t obey HTTP protocol
    Action: contact the Web administrator of the remote host

DRG-11608: URL store: host portion of *string* specified incorrectly
    Cause: host portion of the URL could not be parsed
    Action: check URL

DRG-11609: URL store: unable to open local file specified by *string*
    Cause: attempt to open local file failed
    Action: check URL

DRG-11610: URL store: unable to read local file specified by *string*
    Cause: attempt to read local file failed
    Action: contact system administrator

DRG-11611: URL store: unknown protocol specified in *string*
    Cause: the protocol parsed is neither http or file
    Action: check URL

DRG-11612: URL store: unknown host specified in *string*
    Cause: the address of the host specified could not be resolved
    Action: check URL

DRG-11613: URL store: connection refused to host specified by *string*
    Cause: attempt to connect to host was forcibly refused
    Action: check URL

DRG-11614: URL store: communication with host specified in *string* timed out
    Cause: a network operation timed out
    Action: try again later; network connection may be down to Web server

DRG-11615: URL store: write failed sending to *string* over network
    Cause: unknown error writing request to Web server
    Action: check network connection

DRG-11616: URL store: too many redirections trying to access *string*
    Cause: too long a chain of HTTP redirections given the URL
    Action: contact the Web administrator of the remote host

DRG-11617: URL store: URL *string* is too long
    Cause: The length of the URL string is longer than URLSIZE
    Action: set URLSIZE attribute to a larger value

DRG-11618: URL store: document identified by *string* **is too large**

    Cause: document larger than user-set maximum size

    Action: do not access URL, or increase document size limit

DRG-11619: URL store: row in table is empty

    Cause: row deleted or otherwise missing

    Action: check table if necessary

DRG-11620: URL store: thread operation error

    Cause: thread operation failed

    Action: contact system administrator

DRG-11621: URL store: socket open error for *string*

    Cause: socket open failed; probably too many open file descriptors

    Action: reduce the maximum number of threads started

DRG-11622: URL store: unknown HTTP error getting *string*

    Cause: an unexpected HTTP error has occurred

    Action: consult HTTP error codes; if valid, contact support

DRG-11623: URL store: unknown error getting *string*

    Cause: unexpected error

    Action: contact support

DRG-11624: invalid attribute *string* **for** *string*: **proper range** *string* **to** *string*

    Cause: unexpected error

    Action: change attribute value

DRG-11625: MAXURLS * URLSIZE must be less than *string*

    Cause: MAXURLS * URLSIZE cannot be larger than the limit

    Action: Lower either MAXURLS or URLSIZE

DRG-11626: URL store: unknown protocol specified during redirect from *string*

    Cause: the URL redirected to a site with neither http nor file protocol

    Action: check URL

DRG-11700: thesaurus *string* **already exists**

    Cause: thesaurus with same name exists

    Action: use another name

DRG-11701: thesaurus *string* **does not exist**

    Cause: thesaurus does not exist

    Action: use another thesaurus or create it

DRG-11702: *string*

    Cause: error while parsing thesaurus operator in query term. see error message for details.

    Action: see error message

DRG-11703: user *string* **must have at least CTXAPP role to execute this function**

    Cause: privilege is not sufficient

Action: grant user CTXAPP role

DRG-11704: phrase *string* does not exist

    Cause: phrase does not exist

    Action: use another phrase or create it

DRG-11705: multilevel jump from *string* to *string*

    Cause: the thesaurus load file has a multilevel jump which could not be parsed.

    Action: correct thesaurus file

DRG-11706: invalid relation *string*

    Cause: You specified an invalid relation. The set of valid relations will be displayed. Additionally, you may be able to specify a translation, which has the syntax languagename: where languagename can be any string up to 10 bytes

    Action: Specify a valid relation

DRG-11707: valid relations: *string*

    Cause: You specified an invalid relation. The set of valid relations will be displayed. Additionally, you may be able to specify a translation, which has the syntax languagename: where languagename can be any string up to 10 bytes

    Action: Specify a valid relation

DRG-11708: too many thesauri

    Cause: ctxkbtc cannot compile more than 16 thesauri

    Action: Specify fewer thesauri

DRG-11709: too many terms in thesaurus

    Cause: number of thesaurus terms exceeds maximum

    Action: Use a thesaurus with fewer terms

DRG-11710: thesaurus term *string* too long

    Cause: knowledge base does not permit terms longer than 80 characters

    Action: Correct thesaurus

DRG-11711: too much data for term *string*

    Cause: internal limit on size of data per term

    Action: redesign thesaurus

DRG-11712: multiple Broader Terms for term *string*

    Cause: There is a term in the thesaurus with multiple broader terms

    Action: make sure each term has only one broader term

DRG-11713: multiple Preferred Terms per synonym ring

    Cause: There is a synonym ring in the thesaurus with multiple preferred terms

    Action: make sure each synonym ring has only one preferred term

DRG-11714: synonyms have different Broader Terms

    Cause: Some synonyms in a synonym ring have different broader terms

    Action: make sure all synonyms have the same broader term

DRG-11715: attempt to add a BT relation between 2 KB categories *string* and *string*

    Cause: BT relation cannot be between two existing knowledge base categories

Action: redesign the BT hierarchy

DRG-11716: attempt to add Narrower Term *string* for non-Preferred Term *string*
Cause: only a PT can have NTs

Action: attach the NT to the preferred term

DRG-11717: attempt to add Related Term *string* to non-Preferred Term *string*
Cause: only a PT can have RTs

Action: attach the RT

DRG-11718: multiple Preferred Terms for term *string*
Cause: There are multiple preferred terms for this term

Action: Correct thesaurus

DRG-11719: Broader Term hierarchy too deep
Cause: The broader term hierarchy in this thesaurus is too deep

Action: flatten the hierarchy for best results

DRG-11720: too many synonyms per synonym ring
Cause: too many synonyms for a single preferred term

Action: introduce further distinctions to deepen the hierarchy

DRG-11721: thesaurus *string* is empty
Cause: no entries in thesaurus

Action: add some entries or drop the thesaurus

DRG-11722: invalid language specification
Cause: language specification cannot be more than 10 characters

Action: reduce language specification to less or equal to 10 char

DRG-11723: phrase cannot be NULL
Cause: you tried to add a NULL phrase to the thesaurus

Action: specify a valid phrase

DRG-11724: phrase *string* already exists
Cause: phrase with same name exists

Action: use another name

DRG-11725: phrase does not have any synonyms
Cause: you tried to nominate a phrase with no synonyms to be the preferred term, or you tried to drop SYN from a phrase with no synonyms

Action: None

DRG-11726: phrase is not a preferred term
Cause: you tried to remove the preferred term relation from a phrase which is not a preferred term.

Action: None

DRG-11727: phrase does not have any related terms
Cause: you tried to drop a relation which does not exist

Action: None

DRG-11728: phrase does not have any broader terms of this type

 Cause: you tried to drop a relation which does not exist

 Action: None

DRG-11729: phrase does not have any narrower terms of this type

 Cause: you tried to drop a relation which does not exist

 Action: None

DRG-11730: relation does not exist

 Cause: you tried to drop a relation which does not exist

 Action: None

DRG-11731: translation does not exist

 Cause: you tried to drop a translation which does not exist

 Action: None

DRG-11732: phrase does not have any translations

 Cause: you tried to drop translations which does not exists

 Action: None

DRG-11733: more than one translation for the term in the specified language

 Cause: the term has more than one translation in the specified language

 Action: specified a translation

DRG-11801: Continue

 Cause: Enquire user to decide if continue is necessary HTTP_ERROR = 100

 Action: Upon positive response, continue the original operation

DRG-11802: Switching Protocols

 Cause: Telling client a protocol switching just happened HTTP_ERROR = 101

 Action: The user agent takes proper actions

DRG-11803: OK

 Cause: Telling client things are ok HTTP_ERROR = 200

 Action: The user agent takes proper actions

DRG-11804: Created

 Cause: Telling client things are created HTTP_ERROR = 201

 Action: The user agent takes proper actions

DRG-11805: Accepted

 Cause: Telling client things are accepted but not commited HTTP_ERROR = 202

 Action: The user agent takes proper actions

DRG-11806: Non-authoritative Information

 Cause: The returned metainformation is not the definitive set HTTP_ERROR = 203

 Action: The user agent knows the information is Non-authoritative

DRG-11807: No Content

Cause: request has been fulfilled but no new information found HTTP_ERROR = 204

Action: The user agent takes proper actions

DRG-11808: Reset Content

Cause: Telling client to reset the document view HTTP_ERROR = 205

Action: The user agent takes proper actions

DRG-11809: Partial Content

Cause: Telling client document content is a patial content HTTP_ERROR = 206

Action: The user agent takes proper actions

DRG-11810: Partial Update OK

Cause: Telling client document is partially updated HTTP_ERROR = 207

Action: The user agent takes proper actions

DRG-11811: Multiple Choices

Cause: Telling client multiple choices of resources is possible HTTP_ERROR = 300

Action: The user agent takes proper actions

DRG-11812: Moved Permanently

Cause: The URI has been assigned a new permanent URI HTTP_ERROR = 301

Action: The user agent takes proper actions

DRG-11813: Moved Temporarily

Cause: The URI resides temporarily under a different URI. HTTP_ERROR = 302

Action: The user agent takes proper actions

DRG-11814: See Other

Cause: The URI can be found using GET METHOD under a different URI HTTP_ERROR = 303

Action: The user agent takes proper actions

DRG-11815: Not Modified

Cause: Response to conditional GET, indicating document not modified. HTTP_ERROR = 304

Action: The user agent takes proper actions

DRG-11816: Use Proxy

Cause: The client should use specified proxy to repeat the request HTTP_ERROR = 305

Action: The user agent takes proper actions

DRG-11817: Proxy Redirect

Cause: Proxy redirection. Not used HTTP_ERROR = 306

Action: Outdated due to HTTP evolution

DRG-11818: Temporary Redirect

Cause: The resource is temporarily under a different URI. HTTP_ERROR = 307

Action: The takes proper actions

DRG-11819: Bad Request

Cause: The URL syntax is incorrect. Request rejected by server. HTTP_ERROR = 400

Action: The user agent takes proper actions

DRG-11820: Unauthorized

Cause: The request requires further authentication. HTTP_ERROR = 401

Action: The user agent takes proper actions

DRG-11821: Payment Required

Cause: Reserved for future use. HTTP_ERROR = 402

Action: The user agent takes proper actions

DRG-11822: Forbidden

Cause: The server refuses to fulfil the request from client HTTP_ERROR = 403

Action: The user agent takes proper actions

DRG-11823: Not Found

Cause: The server can not find the requested URI HTTP_ERROR = 404

Action: The user agent takes proper actions

DRG-11824: Method Not Allowed

Cause: The user agent specified method not allowed HTTP_ERROR = 405

Action: The user agent reads allow header to decide alternatives.

DRG-11825: Not Acceptable

Cause: Requested resource is not acceptable according to request header HTTP_ERROR = 406

Action: The user agent should query the user for the next action.

DRG-11826: Proxy Authentication Required

Cause: The client must authenticate itself with the proxy. HTTP_ERROR = 407

Action: The user agent takes proper actions

DRG-11827: Request Timeout

Cause: The server is tired of waiting for the requst HTTP_ERROR = 408

Action: The user agent repeat the request

DRG-11828: Conflict

Cause: The request conflicts with the current state of the URI HTTP_ERROR = 409

Action: The user agent takes proper actions

DRG-11829: Gone

Cause: The resource is no longer available and no forwarding address. HTTP_ERROR = 410

Action: The user agent takes proper actions

DRG-11830: Length Required

Cause: The server must receive a content-length header. HTTP_ERROR = 411

Action: The user agent takes proper actions

DRG-11831: Precondition Failed

> **Cause:** Telling the user agent that the resource failed preconditions HTTP_ERROR = 412

> **Action:** The user agent takes proper actions

DRG-11832: Request Entity Too Large

> **Cause:** Request rejected because request entity is too large. HTTP_ERROR = 413

> **Action:** If Retry-After header found, the user agent should retry.

DRG-11833: Request-URI Too Big

> **Cause:** The server is refusing to accept the URI which is too big. HTTP_ERROR = 414

> **Action:** The user agent takes proper actions

DRG-11834: Unsupported Media Type

> **Cause:** The server is refusing the request because of media type HTTP_ERROR = 415

> **Action:** The user agent takes proper actions

DRG-11835: Requested Range Not Satisfiable

> **Cause:** The byte range request can not be satisfied by the resource extent. HTTP_ERROR = 416

> **Action:** The user agent reads content-range header in the response.

DRG-11836: Expectation Failed

> **Cause:** Server can not meet the user agent"s expectation. HTTP_ERROR = 417

> **Action:** The user agent takes pro

DRG-11837: Reauthorization Required

> **Cause:** Reserved HTTP_ERROR = 418

> **Action:** Reserverd

DRG-11838: Proxy Reauthentication Required

> **Cause:** Reserved HTTP_ERROR = 419

> **Action:** Reserved

DRG-11839: Internal Server Error

> **Cause:** The server encountered internal error in fulfilling the request. HTTP_ERROR = 500

> **Action:** The user agent takes proper actions

DRG-11840: Not Implemented

> **Cause:** The server can"t support a request feature which has yet to be implemented. HTTP_ERROR = 501

> **Action:** The user agent takes proper actions

DRG-11841: Bad Gateway

> **Cause:** In serving the request, the server received invalid response from gateway. HTTP_ERROR = 502

> **Action:** The user agent takes proper actions

DRG-11842: Service Unavailable

Cause: Server overloaded or in maintenance mode. HTTP_ERROR = 503

Action: If retry-after header is in the response, retry the request.

DRG-11843: Gateway Timeout

Cause: Upstream server did not timely respond to the gateway server. HTTP_ERROR = 504

Action: The user agent takes proper actions

DRG-11844: HTTP Version Not Supported

Cause: The HTTP version in the request header is rejected by the server. HTTP_ERROR = 505

Action: The user agent takes proper actions

DRG-11845: No Partial Update

Cause: Reserved HTTP_ERROR = 506

Action: Reserved

DRG-11846: Response Is Stale

Cause: The the user agent knows the returned reponse is stale. HTTP_CACHE_ERROR = 10

Action: The user agent client takes proper actions.

DRG-11847: Revalidation Failed

Cause: User agent"s attempt to revalidate a stale response failed. HTTP_CACHE_ERROR = 11

Action: The user agent client takes proper actions

DRG-11848: Disconnected Operation

Cause: The cache is intentionally disconnected for a time period. HTTP_CACHE_ERROR = 12

Action: The user agent client takes proper actions

DRG-11849: Heuristic Expiration

Cause: Cache freshness lifetime and response age both greater than 24 hours. HTTP_CACHE_ERROR = 13

Action: The user agent client takes proper actions

DRG-11850: Transformation Applied

Cause: Telling cache manager, content encoding/media type has been changed in cache. HTTP_CACHE_ERROR = 14

Action: The user agent takes proper actions

DRG-11851: Cache Related Warning

Cause: Arbitrary information about cache to be presented to logger. HTTP_CACHE_ERROR = 99

Action: The user agent client must not take any automated action.

DRG-11852: Can"t Locate Remote Host

Cause: connection to remote host failed USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11853: No Host Name Found

Cause: The host name is not specicied in URI. USER_AGENT_ERROR

Action: The user agent client takes proper action.

DRG-11854: No File Name Found Or File Not Accessible

Cause: Unable to open the file specified USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11855: FTP Server Replies

Cause: FTP server responds to the agent request USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11856: FTP Server Doesn"t Reply

Cause: No response from FTP server during operation. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11857: Server Timed Out

Cause: Server operation timed out USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11858: Gopher Server Replies

Cause: Gopher server responds to the agent request. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11859: Data Transfer Interrupted

Cause: Processing of URL request was interrupted USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11860: Connection Establishment Interrupted

Cause: Connection operation was interupped USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11861: CSO-server Replies

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11862: This Is Probaly A HTTP Server 0.9 Or Less

Cause: A very old web server USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11863: Bad, Incomplete, Or Unknown Response

Cause: The server is mumbering something not understandable USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11864: Unknown Access Authentication Scheme

Cause: The server is using an unkown access authentication scheme USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11865: News Server Replies

Cause: News Server is responding USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11866: Please Try `ftp://" Instead Of `file://"

Cause: wrong access scheme is used. USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11867: Method Not Suited For Automatic Redirection

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11868: Too Many Redirections

Cause: The web server setup configured too many redirections USER_AGENT_
ERROR

Action: The user agent client should take proper actions

DRG-11869: Premature End Of File Detected

Cause: Detected end of file is unexpected USER_AGENT_ERROR

Action: The user agent client takes proper actions

DRG-11870: Response From WAIS Server Too Large -- Extra Lines Ignored

Cause: Response from WAIS caused buffer overflow USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11871: WAIS Server Doesn"t Return Any Data

Cause: Bad WAIS Server USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11872: Can"t Connect To WAIS Server

Cause: Connect to WAIS server failed USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11873: System Call Replies

Cause: register what system call replies USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11874: Wrong Or Unknown Access Scheme

Cause: Protocol class is wrongfully connected to ther server USER_AGENT_
ERROR

Action: The user agent takes proper actions

DRG-11875: Access Scheme Is Not Allowed

Cause: Telling client things are ok USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11876: When Your Are Connected, You Can Log In

Cause: Pass information to telnet agent USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11877: This Cache Version Has Expired And Will Be Automatically Reloaded

Cause: Need to tell user that cache entry has been reloaded USER_AGENT_
ERROR

Action: The user agent takes proper actions

DRG-11878: Loading New Rules Must Be Explicitly Acknowledged
Cause: Let user agent client be aware of new rule loading USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-11879: Automatic Proxy Redirection Msut Be Explicitly Acknowledged
Cause: Let user agent client be aware of proxy redirection USER_AGENT_ERROR

Action: The user agent takes proper actions

DRG-12001: Please enter username:
Cause: Prompt user for name W3CLIB_MSG = 0

Action: The user agent client takes proper actions

DRG-12002: Please enter username for proxy authentication:
Cause: Prompt user for name W3CLIB_MSG = 1

Action: The user agent client takes proper actions

DRG-12003: Please enter username for this FTP server:
Cause: Prompt user for name W3CLIB_MSG = 2

Action: The user agent client takes proper actions

DRG-12004: Password:
Cause: Prompt user for password W3CLIB_MSG = 3

Action: The user agent client takes proper actions

DRG-12005: Please give name of file to save in:
Cause: Prompt user for file name W3CLIB_MSG = 4

Action: The user agent client takes proper actions

DRG-12201: section group *string* already exists

> **Cause:** Section group with the same name already exists
>
> **Action:** Use another name or delete the existing one first

DRG-12202: error while creating section group

> **Cause:** detect an Oracle error while creating section group
>
> **Action:** see the accompanying Oracle error and take appropriate action

DRG-12203: section group *string* does not exist

> **Cause:** section group provided does not exist
>
> **Action:** provide an existing section group

DRG-12204: error while dropping section group *string*

> **Cause:** detect an Oracle error while dropping a section group
>
> **Action:** see the accompanying Oracle error and take appropriate action

DRG-12206: tag *string* already exists in section group *string*

> **Cause:** the start tag provided already exists in the same Section
>
> **Action:** provide another start tag

DRG-12210: error while adding section *string*

    Cause: detect an Oracle error while adding a section

    Action: see the accompanying Oracle error and take appropriate action

DRG-12211: section or section id *string* **does not exist**

    Cause: Section name or Section id to be dropped does not exist

    Action: provide an existing Section name or Section id

DRG-12212: error while dropping section *string*

    Cause: detect an Oracle error while dropping a Section

    Action: see the accompanying Oracle error and take appropriate action

DRG-12213: cannot create/drop section group or sections for other user

    Cause: You can only create/drop section group objects of your own

    Action: have the other user create/drop his/her own objects

DRG-12217: tags cannot be more than 64 bytes

    Cause: max limit of start and end tag is 64 bytes

    Action: provide a shorter start and end tag

DRG-12218: section group name missing

    Cause: must provide section group name

    Action: provide a section group name when creating Section or section group

DRG-12219: section name missing

    Cause: must provide Section name when creating a Section

    Action: provide a Section name

DRG-12220: a valid tag must be provided

    Cause: must provide tag when adding a section to a section group

    Action: provide a tag

DRG-12223: section name *string* **is a reserved name**

    Cause: you tried to name a section a reserved name

    Action: Specify a different name for the section

DRG-12224: use ctx_ddl.create_section_group to create section groups

    Cause: you tried to use ctx_ddl.create_preference to create a section group

    Action: use ctx_ddl.create_section_group

DRG-12225: this type of section cannot be added to this section group

    Cause: You tried to add sections to the null section group, add a stop section to a non-auto section group, or add a zone or field section to the auto section group

    Action: Do not add this type of section to this section group

DRG-12226: a field section named *string* **already exists in this section group**

    Cause: you tried to name an attribute or zone section the same name as an existing field section

    Action: use another name

DRG-12227: a zone section named *string* **already exists in this section group**

Cause: you tried to name an attribute or field section the same name as an existing zone section

Action: use another name

DRG-12228: maximum number of field sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique field sections

Action: no action required

DRG-12229: special section *string* already exists in this section group

Cause: you tried to add a special section which already exists

Action: no action required

DRG-12230: special section name must be one of *string*

Cause: you tried to add an invalid special section

Action: specify a valid special section

DRG-12231: an attr section named *string* already exists in this section group

Cause: you tried to name a field or zone section the same name as an existing attribute section

Action: use another name

DRG-12232: invalid attribute tag format

Cause: you specified a tag for use as an attribute tag which did not have the correct format. An attribute tag must have the form TAG@ATTR

Action: use correct format

DRG-12233: xml sections cannot co-exist with other section types

Cause: you tried to add an xml section to a section group or index which already has zone, field, attr, or special sections, or you tried to add a zone, field, attr, or special section to a section group or index which already has xml sections

Action: None

DRG-12234: column *string* already mapped in section group *string*

Cause: you tried to add a column section which already exists

Action: use correct format

DRG-12235: an sdata section named *string* already exists in this section group

Cause: you tried to name a non-sdata section the same name as an existing sdata section

Action: use another name

DRG-12236: an mdata section named *string* already exists in this section group

Cause: you tried to name a non-mdata section the same name as an existing mdata section

Action: use another name

DRG-12237: a section named *string* already exists in this section group

Cause: you tried to map a column but the section name is already being used by another section

Action: use another name

DRG-12238: maximum number of mdata sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique mdata sections

Action: no action required

DRG-12239: maximum number of sdata sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique sdata sections

Action: no action required

DRG-12240: ORDER BY column *string* must be indexed as an SDATA section

Cause: an order by column has been mapped to an MDATA section

Action: adjust section group

DRG-12241: column name *string* is not a valid section name

Cause: an order by or filter by column cannot be implicitly mapped to an SDATA section because the name is not valid as a section name

Action: adjust section group to map column name to a valid section name

DRG-12242: value of *string* is too large for section *string*

Cause: the value of a filter by or order by column is too large to be indexed

Action: update the row

DRG-12243: invalid datatype

Cause: the datatype specified for a sdata or mdata section is invalid

Action: specify a supported datatype

DRG-12244: data conversion error for sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12245: SDATA operator not compatible with the sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12246: SDATA operand not compatible with the sdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-12247: maximum number of NDATA sections (*string*) exceeded

Cause: a section group has more than the maximum number of unique NDATA sections

Action: no action required

DRG-12248: a NDATA section named *string* already exists in this section group

Cause: you tried to name a non-NDATA section the same name as an existing NDATA section

Action: use another name

DRG-12300: an index with this column list already exists in the index set

Cause: You tried to add an index to an index set, but an index with the specified column list already exists

Action: None

DRG-12301: index does not exist in index set

Cause: You tried to remove an index from an index set, but the specified index was not found

Action: None

DRG-12302: invalid column list

Cause: You specified an invalid column list -- it may have a syntax error, duplicate columns, or invalid column names

Action: None

DRG-12303: cannot add more than 99 indexes to an index set

Cause: You tried to add too many indexes to the index set

Action: None

DRG-12304: index set *string* does not exist

Cause: You specified an invalid index set name

Action: None

DRG-12305: column *string* data type is not supported for index set columns

Cause: You specified a column in the column list of an index of an index set which does not have a valid datatype

Action: use only DATE, NUMBER, CHAR, or VARCHAR2 columns in index column lists

DRG-12306: column *string* is too long for index set columns

Cause: You specified a column in the column list of an index of an index set which is too long

Action: CHAR and VARCHAR2 columns must be 30 bytes or less max length

DRG-12307: column *string* is NULL and cannot be indexed

Cause: You tried to index a row where at least one of the meta columns was NULL.

Action: provide a value for the meta column and reindex the row

DRG-12308: use ctx_ddl.create_index_set to create index sets

Cause: you tried to use ctx_ddl.create_preference to create an index set

Action: use ctx_ddl.create_index_set

DRG-12400: template *string* is empty

Cause: The template is empty.

Action: Check the template was installed successfully.

DRG-12401: invalid template: query within a loop

Cause: A CTX EXEC tag cannot occur within a CTX REPEAT tag.

Action: Remove the CTX EXEC tag.

DRG-12402: error processing template *string*, line *string*

Cause: An error occurred when processing a template.

Action: See other errors on the stack and take the appropriate action.

DRG-12403: template *string* was not found

Cause: The template does not exist.

Action: Check the name of the template and check that it is installed.

DRG-12404: more than one template *string* found

Cause: More than one template with the same name was found.

Action: Remove templates as appropriate.

DRG-12405: error occurred processing CTX REDIRECT or CTX LABEL tag

Cause: Error in syntax of a tag.

Action: Correct the syntax of the tag.

DRG-12406: invalid CTX EXEC tag attribute (*string*)

Cause: The specified attribute is incorrectly specified.

Action: Check the sytax of the specified attribute.

DRG-12407: invalid CTX REPEAT tag attribute (*string*)

Cause: The specified attribute is incorrectly specified.

Action: Check the sytax of the specified attribute.

DRG-12408: invalid variable reference: *string.string*

Cause: The variable referenced does not exist.

Action: Check the label and column name.

DRG-12409: syntax error for label in *string*

Cause: The SQL in a CTX EXEC tag has incorrect syntax for a label or label type.

Action: Check the SQL attribute of the CTX EXEC tag.

DRG-12410: could not process CTX EXEC tag

Cause: An error occurred when processing the SQL attribute of a CTX EXEC tag.

Action: See other errors on the stack and take the appropriate action.

DRG-12411: SQL processing error: *string*

Cause: Error executing SQL from SQL attribute of CTX EXEC tag.

Action: Check the SQL in the SQL attribute.

DRG-12412: missing or invalid Template Processor attribute (*string*)

Cause: The specified attribute was missing or invalid in a HTML input field.

Action: Check the Template Processor-specific attributes in the INPUT, SELECT, RADIO and CHECKBOX tags of the template.

DRG-12422: write to client failed

Cause: See the following messages.

Action: Contact the administrator.

DRG-12430: mandatory argument missing: *string*

Cause: This argument is mandatory.

Action: Re-submit the URL with this argument supplied.

DRG-12431: configuration section *string* **not found**

    Cause: Specified conf argument is invalid.

    Action: Re-submit the URL with this argument corrected.

DRG-12432: configuration file *string* **not found or unreadable**

    Cause: An error occurred when processing the configuration file.

    Action: Contact the administrator.

DRG-12433: load of *string* **JDBC driver class failed**

    Cause: Driver class is invalid.

    Action: Contact the administrator to modify configuration.

DRG-12434: connection failed using configuration *string* **information**

    Cause: Configuration information is not correct.

    Action: Contact the administrator to modify configuration.

DRG-12435: highlight table allocation failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12436: document table allocation failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12437: highlight table release failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12438: document table release failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12439: highlight table read failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12440: document table read failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12441: counting the number of highlights failed

    Cause: See the following messages.

    Action: Contact the administrator.

DRG-12500: stoplist *string* **already exists**

    Cause: the specified stop list already exists

    Action: must remove the duplicate stop list if you want to re-create it.

DRG-12501: null stoplist is not allowed

    Cause: the specified stop list is null

    Action: mustspecify a valid stop list

DRG-12502: cannot modify stoplists owned by other users

Cause: You can only create/drop Stop List or Stop Word objects of your own

Action: have the other user create/drop his/her own objects

DRG-12503: error while creating or dropping stoplist

Cause: detect an Oracle error while creating Stop List

Action: see the accompanying Oracle error and take appropriate action

DRG-12504: stoplist *string* does not exist

Cause: the specified stop list does not exist

Action: check that the Stop List is valid

DRG-12505: error while adding or removing a stop word

Cause: detect an Oracle error while adding or removing Stop Word

Action: see the accompanying Oracle error and take appropriate action

DRG-12506: stop word *string* does not exist in stoplist *string*

Cause: the specified Stop Sord does not exist

Action: check that the Stop Word is valid

DRG-12507: stop word *string* already exists in this stoplist

Cause: the specified stop word already exists

Action: must remove the duplicate word if you want to re-create it.

DRG-12508: null stop words are not allowed

Cause: the specified stop word is null

Action: must remove the null stop word if you want to re-create it.

DRG-12509: length of the stop word *string* exceeded the limit of *string* bytes

Cause: A stop list entry has exceeded the maximun length

Action: Reduce the length of the stop list entry

DRG-12511: use ctx_ddl.create_stoplist to create stoplists

Cause: you tried to use ctx_ddl.create_preference to create a stoplist

Action: use ctx_ddl.create_stoplist

DRG-12512: invalid stop class *string*

Cause: you specified an invalid stop class

Action: specify a valid stop class

DRG-12513: valid stop classes are: *string*

Cause: You specified an invalid stop class

Action: Specify a valid stop class

DRG-12514: languages must be specified for stopwords in a MULTI_STOPLIST

Cause: You tried to add a stopword to a multi_stoplist without specifying the language of the stopword

Action: Specify the language of the stopword

DRG-12515: cannot specify language for stopwords in a BASIC_STOPLIST

Cause: You tried to add a language-specific stopword to a basic stoplist.

Action: Do not specify language for the stopword

DRG-12516: language column must be specified when using the multi stoplist

Cause: you tried to create an index using a multi stoplist but you did not specify a language column

Action: specify a language column

DRG-12517: cannot add stopthemes to a MULTI_STOPLIST

Cause: you tried to add a stoptheme to a MULTI_STOPLIST. This is not supported in this version.

Action: None

DRG-12600: user datastore procedure name contains a semicolon

Cause: the procedure name specified had a semicolon

Action: remove semicolon or rename procedure name. The correct format is PACKAGENAME.PROCEDURE_NAME

DRG-12601: invalid user datastore procedure name: *string*

Cause: the format of the procedure name is invalid. It should be in the form PACKAGENAME.PROCEDURENAME or PROCEDURENAME

Action: make sure PROCEDURE attr has the format PACKAGENAME.PROCEDURENAME or PROCEDURENAME

DRG-12602: index owner does not have access to user datastore procedure: *string*

Cause: the index owner does not have execute privilege of the procedure

Action: CTXSYS to grant execute privilege of the procedure to index owner

DRG-12603: CTXSYS does not own user datastore procedure: *string*

Cause: CTXSYS does not have execute privilege to the user datastore procedure

Action: make sure the package is owned by CTXSYS and the procedure exist

DRG-12604: execution of user datastore procedure has failed

Cause: an error occur while executing the user datastore procedure

Action: check or debug the datastore procedure

DRG-12605: datatype of column *number* **in COLUMNS list is not supported**

Cause: one or more of the columns in the column list of the multi datastore are of a type which the multi datastore is unable to process

Action: change the column list of the multi datastore to contain only supported types. PL/SQL functions can be used in the comlumn list to convert unsupported types to supported types.

DRG-12606: error encountered while parsing COLUMNS list

Cause: An oracle error was encountered while parsing the columns list of the multi datastore.

Action: See next error on stack and take appropriate action

DRG-12607: only ctxsys can create MULTI_COLUMN preferences

Cause: In order to create a multi column datastore preference, the effective user must be ctxsys.

Action: contact your DBA to create the preference as ctxsys

DRG-12700: seed word must be a single word
    Cause: seed word is not a single word

    Action: use a single-word seed word

DRG-12800: Attribute NESTED_TYPE must have owner name as prefix
    Cause: the attribute NESTED_TYPE does not have an owner name prefix

    Action: reset the attribute NESTED_TYPE to include owner name prefix

DRG-12801: invalid type: *string*
    Cause: invalid nested_type or

    Action: check the owner and the type attribute names

DRG-12802: invalid type column: *string*
    Cause: column specified does not exist in the type table

    Action: check the type table

DRG-12803: invalid text datatype
    Cause: LONG and LONG RAW are not supported in nested table

    Action: change text column to a supported data type

DRG-12900: Operation:*string* **for index:** *string* **has already been started**
    Cause: the specified operation has been started

    Action: None

DRG-13000: error while adding or removing a sub lexer
    Cause: see next error

    Action: None

DRG-13001: sub lexer and multi lexer must have the same owner
    Cause: you specified a sub lexer which is not owned by the owner of the enclosing multi-lingual lexer preference

    Action: specify a sub lexer owned by the owner of the multi-lexer preference

DRG-13002: preference *string* **is not a MULTI_LEXER**
    Cause: you tried to add a sub lexer to a lexer preference which cannot accept sub lexers. Only multi-lingual lexers can accept sub lexers.

    Action: specify a multi lingual lexer

DRG-13003: preference *string* **cannot be used as a sub lexer**
    Cause: you specified a preference for sub lexer which is not a lexer, or is a multi-lingual lexer

    Action: specify a sub lexer which is not a multi-lingual lexer

DRG-13004: language is invalid
    Cause: you specified an invalid language for the sub lexer or stopword

    Action: specify a valid language -- see NLS Support Guide for a list of valid languages

DRG-13005: alt_value cannot be an NLS language name
    Cause: you specified an NLS language name as the alt value

    Action: specify a non-NLS value

DRG-13006: sub lexer for this language is not defined

Cause: you tried to remove a sub lexer for a language, but no sub lexer was defined for that language

Action: None

DRG-13007: cannot define an alternate value for the DEFAULT sub lexer

Cause: you tried to define an alternate value for the DEFAULT sub lexer

Action: None

DRG-13008: cannot remove the DEFAULT sub lexer

Cause: you tried to remove the DEFAULT sub lexer

Action: None

DRG-13009: multi lexer preference does not have a DEFAULT sub lexer

Cause: you tried to use a multi lexer preference which does not have a DEFAULT sub lexer defined

Action: add a DEFAULT sub lexer to the multi lexer preference and retry

DRG-13010: alt_value is already used by another sub lexer

Cause: you tried to specify an alt value which is already in use by another sub lexer in the lexer preference

Action: specify a different alt value

DRG-13011: language column must be specified when using the multi lexer

Cause: you tried to create an index using a multi lexer preference, but you did not specify a language column

Action: specify a language column

DRG-13012: language column must be a char, varchar, or varchar2 type

Cause: you specified a language column which is not a char, varchar, or varchar2 type.

Action: specify a language column of correct type

DRG-13100: index is not partitioned

Cause: you attempted to invoke a partition-level operation on an index which is not partitioned

Action: invoke appropriate index-level operation

DRG-13101: partition *string* does not exist in this index

Cause: you specified a partition name which does not exist

Action: specify correct partition name

DRG-13102: index partition name must be specified

Cause: you attempted to invoke a partition-level operation on a partitioned index but did not specify the partition name

Action: None

DRG-13103: index table *string* is partitioned

Cause: you attempted to perform an exchange partition including indexes, but one or more of the internal index tables are partitioned.

Action: specify EXCLUDING INDEXES on the exchange partition, then manually rebuild the indexes.

DRG-13104: indexes do not have equivalent settings for *string*

Cause: you attempted to perform an exchange partition including indexes, but the specified metadata setting is not equivalent across the two indexes, so the data cannot be exchanged

Action: specify EXCLUDING INDEXES on the exchange partition, then manually rebuild the indexes.

DRG-13200: failed to load dictionary file *string*

Cause: failed to load a dictionary file

Action: check whether the dictionary file exists in $ORACE_HOME/ctx/data/kolx or access permission is available

DRG-13201: KOREAN_LEXER is desupported

Cause: Using lexer type KOREAN_LEXER which is desupported.

Action: Use lexer type KOREAN_MORPH_LEXER instead.

DRG-13300: document size bigger than *string* **bytes**

Cause: size of the document being indexed is larger than the maximum supported size for the VARCHAR2 interface of stored procedure

Action: use the CLOB interface for the stored procedure

DRG-13301: syntax error in token data when expecting *string***, at line** *string*

Cause: token data returned by the user-defined lexer procedure is incorrect

Action: modify user-defined lexer procedure to return expected data

DRG-13302: number of wildcard offsets must be in the range *string..string***, at line** *string*

Cause: number of wildcard offsets specified as value for the wildcard attribute does not meet the supported range

Action: modify user-defined lexer query procedure to return valid number of wildcard offsets

DRG-13303: value of wildcard offset must be in the range *string..string***, at line** *string*

Cause: value of pre-normalized wildcard offset or post-normalized wildcard offset specified as value for the wildcard attribute does not meet the supported range

Action: modify user-defined lexer query procedure to return valid value for wildcard offset

DRG-13304: character referenced by wildcard attribute is not a wildcard character, at line *string*

Cause: The wildcard attribute value specified the offset of a wildcard character. The character at the specified offset is neither the "%" character nor the "_" character.

Action: Modify user-defined lexer query procedure.

DRG-13305: "off" attribute value must be in the range *string..string***, at line** *string*

Cause: value of "off" attribute does not meet the supported range

Action: modify user-defined lexer index procedure to return valid value for "off" attribute

DRG-13306: "len" attribute value must be in the range *string..string*, **at line** *string*

Cause: value of "len" attribute does not meet the supported range

Action: modify user-defined lexer index procedure to return valid value for "len" attribute

DRG-13307: "off"=*string* **and "len"=***string* **references character past end-of-file of** *string* **character document, at line** *string*

Cause: value of "off" attribute plus value of "len" attribute is greater than the number of characters in the document

Action: modify user-defined lexer index procedure to return valid values for "off" and "len" attributes

DRG-13308: query operator ABOUT not supported by USER_LEXER

Cause: the query contains an ABOUT operator while using USER_LEXER lexer type

Action: remove ABOUT operator from query or use lexer type other than USER_LEXER

DRG-13309: operation not supported by USER_LEXER

Cause: USER_LEXER does not support this operation

Action: stop the operation or use alternate lexer type

DRG-13310: index owner does not have EXECUTE privilege on USER_LEXER stored procedure *string*

Cause: user CTXSYS did not grant EXECUTE privilege on USER_LEXER stored procedure to the index owner

Action: user CTXSYS grant EXECUTE privilege on USER_LEXER stored procedure to index owner

DRG-13311: USER_LEXER stored procedure name contains a semicolon

Cause: the procedure name contains a semicolon character

Action: remove semicolon from procedure name or rename stored procedure

DRG-13312: user CTXSYS does not own USER_LEXER stored procedure *string*

Cause: CTXSYS does not have EXECUTE privilege on the USER_LEXER stored procedure

Action: make sure the stored procedure exists and is owned by CTXSYS

DRG-13400: Oracle Data Mining was not installed

Cause: The function you used depends on Oracle Data Mining, which has not been installed yet.

Action: make sure the Oracle Data Mining is installed

DRG-13500: Parameter_string must start with REPLACE

Cause: Wrong syntax for parameter_string.

Action: Make sure the parameter_string has the correct syntax

DRG-13501: Shadow Index Already Exists

Cause: A shadow index was previously created already

Action: Drop the shadow index and try again

DRG-13502: NOPOPULATE is not allowed in recreate_index_online
    Cause: Specify NOPOPULATE in parameter_string in recreate_index_online
    Action: Don"t specify NOPOPULATE.

DRG-13503: POPULATE is not allowed for a local index in create_shadow_index
    Cause: Specify POPULATE for a local index during create_shadow_index
    Action: Don"t specify POPULATE.

DRG-13504: *string* has no shadow index
    Cause: Tried to perform exchange shadow without creating shadow index first
    Action: create a shadow index before doing exchanges_shadow_index

DRG-13505: Keyword *string* is not allowed here in parameter_string
    Cause: Wrong syntax for parameter_string
    Action: Make sure the parameter_string has the correct syntax

DRG-13506: *string* has no shadow part
    Cause: Tried to perform exchange shadow part without creating shadow part first
    Action: create a shadow part before doing exchanges_shadow_index on the partition.

DRG-13507: SWAP and NOPOPULATE is incompatible
    Cause: Specified SWAP and NOPOUPLATE in parameter string
    Action: Correct the parameter string setting

DRG-13508: Not all partitions for index *string* are swapped
    Cause: try to swap an local partitioned index when not all partitions are swapped
    Action: Swap all partitions first, then swap the (local) index.

DRG-13600: Syntax error in the result set descriptor
    Cause: The result set descriptor has a syntax error
    Action: check the syntax of the result set descriptor

DRG-13601: Syntax error in the order attribute
    Cause: The order attibute has a syntax error
    Action: check the syntax of the order attibute

DRG-13602: Number parsing error in *string*
    Cause: The number string is malformed
    Action: check the syntax of the number string

DRG-13603: To many sort keys
    Cause: Too many sort keys are specified
    Action: reduce the number of sort keys

DRG-13604: To many items to select
    Cause: Too many select items are specified
    Action: reduce the number of select items

DRG-13605: Too many group tags

Cause: Too many group tags are specified

Action: reduce the number of group tags

DRG-13606: start_hit_num is not specified or out of valid range *number..number*

Cause: start_hit_num is not specified or out of valid range

Action: set a correct start_hit_num value

DRG-13607: end_hit_num is not specified or out of valid range *number..number*

Cause: end_hit_num is not specified or out of valid range

Action: set a correct end_hit_num value

DRG-50000: requested size larger than pagesize

Cause: The requested memoery size is larger than page size,

Action: Contact support

DRG-50100: CORE LSF error: *string*

Cause: detect a CORE LSF error

Action: look up the core error and take appropriate action

DRG-50101: CORE LEM error: *string*

Cause: detect a CORE LEM error while reading the error stack

Action: Contact support

DRG-50200: Third-party filter internal error

Cause: Third-party filter could not filter this document because of an internal error.

Action: Contact Oracle Support.

DRG-50300: error sending message from server to client

Cause: internal database error or internal Text error

Action: Call customer support

DRG-50301: server error reading request queue

Cause: database error or internal Text error

Action: Call customer support

DRG-50302: server error reading OOB break queue; cannot detect interrupts

Cause: database error or internal Text error

Action: Call customer support

DRG-50303: error in bufout

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50304: error in execute()

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50305: getcmd() called when one of the queue names is NULL

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50400: maximum number of fuzzy match candidates exceeded: *string*
    Cause: Internal error, probably result of large number of indexed words
    Action: Contact Oracle support

DRG-50401: failed to retrieve fuzzy match candidates from db: *string*
    Cause: Internal error
    Action: Contact Oracle support

DRG-50600: assertion failed
    Cause: An internal check-condition has been violated
    Action: Contact Oracle support for assistance

DRG-50601: fatal error
    Cause: A fatal error has occurred
    Action: Contact Oracle support for assistance

DRG-50603: unrecognized operation code *string*
    Cause: Bad operation code was encountered (reached switch default:)
    Action: check .h files versions

DRG-50607: failed to obtain column info for cid *string*
    Cause: internal error, probably a bug
    Action: call customer support

DRG-50608: unexpected end of data
    Cause: internal error, probably a bug
    Action: call customer support

DRG-50609: pipe internal error
    Cause: internal error, probably a bug
    Action: call customer support

DRG-50610: internal error: *string*
    Cause: internal error, probably a bug
    Action: call customer support

DRG-50611: Third party lexer internal error: *string*
    Cause: internal error from inxight lexer
    Action: call customer support

DRG-50700: unknown command (args=queue, command)
    Cause: this is an internal error
    Action: Contact Oracle support to report a bug

DRG-50701: error in listener.get_cmd()
    Cause: this is an internal error
    Action: Contact Oracle support to report a bug

DRG-50702: error in drtlsleep()

Cause: this is an internal error in a testing function

Action: Contact Oracle Support

DRG-50703: listener startup error

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50704: Net8 listener is not running or cannot start external procedures

Cause: Oracle Text needs to call external code to complete your request, and could not start the extproc agent process.

Action: Start listener if it is configured for external procedures and is not running. If your listener is running, configure it for starting external procedures and restart it. Consult Oracle documentation for details.

DRG-50800: failed to open cursor

Cause: Too many cursors open for internal queries

Action: implement cursor cleanup routine

DRG-50801: failed to parse cursor

Cause: parse error on an internal query

Action: check versions of code

DRG-50802: failed to bind input

Cause: bind error on an internal query

Action: check versions of code

DRG-50803: failed to define output

Cause: define error on an internal query

Action: check versions of code

DRG-50804: failed to exec cursor

Cause: exec error on an internal query

Action: debug code

DRG-50805: failed to close cursor

Cause: cursor close error on an internal query

Action: check versions of code

DRG-50806: failed to rollback

Cause: transaction rollback error

Action: contact support

DRG-50807: failed to commit

Cause: internal error

Action: contact support

DRG-50850: *string*

Cause: This is an oracle error

Action: See RDBMS documentation

DRG-50851: SQL execute failed

Cause: failed to execute a sql statement

Action: please report this as a bug

DRG-50852: failed to turn SQL trace on

Cause: internal error,

Action: Please contact Oracle support

DRG-50853: fetch error

Cause: fetch error on an internal query

Action: check versions of code

DRG-50855: logoff fail

Cause: Fail to logoff from the database

Action: check versions of code

DRG-50857: oracle error in *string*

Cause: this is an informational message

Action: See error

DRG-50858: OCI error: *string*

Cause: a generic OCI error occurred

Action: Please contact Oracle support

DRG-50859: failed to allocate statement handle

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50860: failed to prepare statement

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50861: failed to obtain type descriptor

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50862: failed to create new Oracle object

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50863: string assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50864: number assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50865: failed to append to collection

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50866: failed to resize string

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-50867: failed to free Oracle object

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-50868: failed to free statement handle

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-50900: text query parser error on line *string*, column *string*

    Cause: bad query

    Action: fix query

DRG-50901: text query parser syntax error on line *string*, column *string*

    Cause: bad query

    Action: fix query

DRG-50902: unexpected character *string*

    Cause: bad query

    Action: fix query

DRG-50903: invalid weight *string*

    Cause: invalid weight

    Action: fix query

DRG-50904: weight *string* outside valid range 0.1 to 10.0

    Cause: invalid weight

    Action: fix query

DRG-50905: invalid score threshold *string*

    Cause: invalid score threshold

    Action: fix query

DRG-50906: score threshold *string* is not an integer

    Cause: invalid score threshold

    Action: fix query

DRG-50907: score threshold *string* outside valid range 1 to 100

    Cause: invalid score threshold

    Action: fix query

DRG-50908: invalid maximum number of documents *string*

    Cause: invalid maximum number of documents

    Action: fix query

DRG-50909: maximum number of documents *string* is not an integer

    Cause: invalid maximum number of documents

    Action: fix query

DRG-50910: max documents requested *string* **outside valid range 1 to 65535**

    Cause: invalid maximum number of documents

    Action: fix query

DRG-50911: invalid first document number *string*

    Cause: invalid first document number

    Action: fix query

DRG-50912: first document number *string* **is not an integer**

    Cause: invalid first document number

    Action: fix query

DRG-50913: first document requested *string* **is not a positive number**

    Cause: invalid first document number

    Action: fix query

DRG-50914: invalid last document number *string*

    Cause: invalid last document number

    Action: fix query

DRG-50915: last document number *string* **is not an integer**

    Cause: invalid last document number

    Action: fix query

DRG-50916: last document *string* **is less than first document**

    Cause: invalid last document number

    Action: fix query

DRG-50917: escape on at end of text query string

    Cause: unbalanced escape characters

    Action: turn escape off

DRG-50918: mismatched close escape character

    Cause: no matching open escape character for close escape

    Action: match open and close escapes

DRG-50919: NEAR operand not a phrase, equivalence or another NEAR expression

    Cause: invalid operand type for NEAR operator

    Action: correct operand type

DRG-50920: part of phrase not itself a phrase or equivalence

    Cause: invalid type of expression which is part of phrase

    Action: fix query

DRG-50921: EQUIV operand not a word or another EQUIV expression

    Cause: invalid operand type for EQUIV operator

    Action: correct operand type

DRG-50922: PL/SQL execution failed for *string*

    Cause: PL/SQL function may not exist or is returning bad value

    Action: PL/SQL may not exist or is returning bad value

DRG-50923: could not rewrite PL/SQL for execution
   Cause: parser internal
   Action: call support

DRG-50924: PL/SQL inside PL/SQL not supported
   Cause: PL/SQL function call returned another PL/SQL call
   Action: remove recursive PL/SQL

DRG-50925: could not parse return value of PL/SQL
   Cause: string returned by PL/SQL function could not be parsed
   Action: fix PL/SQL function being called

DRG-50926: invalid text query string
   Cause: query string empty or made up of invalid characters
   Action: fix query

DRG-50927: parser failed on line *string* on column *string*
   Cause: bug
   Action: call support

DRG-50928: reserved failure on line *string* on column *string*
   Cause: bug
   Action: call support

DRG-50929: parser internal on line *string* on column *string*
   Cause: bug
   Action: call support

DRG-50930: parser memory failure on line *string* on column *string*
   Cause: memory allocation or freeing error
   Action: call support

DRG-50931: parser not opened
   Cause: bug
   Action: call support

DRG-50932: parser preference initialization failed
   Cause: bug
   Action: call support

DRG-50933: parser hash insert failure
   Cause: bug
   Action: call support

DRG-50934: parser hash create failure
   Cause: bug
   Action: call support

DRG-50935: parser component failure
   Cause: bug
   Action: look for other errors

DRG-50936: query word *string* **is too complex for index**

   Cause: bug

   Action: look for other errors

DRG-50937: query too complex

   Cause: query is too complex for our query evaluator

   Action: make query smaller

DRG-50938: parser already bound

   Cause: internal coding mistake

   Action: call support

DRG-50939: parser not set

   Cause: bug

   Action: call support

DRG-50940: parser not parsed

   Cause: bug

   Action: call support

DRG-50941: PL/SQL function *string* **cannot be executed**

   Cause: PL/SQL function may not exist or cannot be executed by user

   Action: rewrite PL/SQL function specified in query

DRG-50942: errors: *stringstring*

   Cause: PL/SQL function encountered error -- this is the error message

   Action: See error message

DRG-50943: query token too long on line *string* **on column** *string*

   Cause: A query token is longer than 256 bytes

   Action: Rewrite query

DRG-50944: NEAR operator not supported for theme index

   Cause: NEAR operator used in theme index query

   Action: Rewrite query without NEAR operator

DRG-50945: Illegal phrase in query for theme index

   Cause: Phrase incorrectly defined in theme index query

   Action: Rewrite query

DRG-50946: Invalid unary operator for theme index

   Cause: Stemming, fuzzy match and soundex not allowed for theme index

   Action: Rewrite query

DRG-50947: ABOUT clause not allowed without a theme index

   Cause: The query contains an ABOUT clause, but there is no theme index to support it

   Action: Rewrite query

DRG-50948: ABOUT clause required in the absence of a text index

Cause: There is no text index, but the query does not contain any about clause. With only a theme index present, each query term must belong to an ABOUT clause

Action: Rewrite query

DRG-50949: too many SQEs

Cause: Too many SQEs to expand

Action: Rewrite query or SQE

DRG-50950: circular SQE found

Cause: Circular SQE reference is found.

Action: Rewrite query or SQE

DRG-50951: Unable to resolve element name for attribute *string*

Cause: XPATH expression such as A/*/@B or A//@B is not supported.

Action: Rewrite query

DRG-50952: Section is not PATH section group

Cause: XPATH expression has section which is not created using PATH section group.

Action: Rewrite query not to use XPATH expression or create the index with PATH section group

DRG-50953: Unable to determine section name

Cause: XPATH expression should not end with . or *

Action: Rewrite the path expression not to use . or * at the end

DRG-50954: Theme index is required for CTXCAT about queries

Cause: There is no theme index, but the catsearch query contains about clause. You must create a theme index before using ABOUT query against CTXCAT index

Action: create theme index

DRG-50955: Missing comma in transform clause *string*

Cause: A transform clause in a query template is missing a comma

Action: Add the comma in the appropriate position

DRG-50956: Theme index is required for THEMES transform queries

Cause: There is no theme index, but the operator TRANSFORM is used with THEMES as its parameter. You must create a theme index before using THEMES in TRASNFORM operator.

Action: create theme index

DRG-50957: Missing <textquery> element in query template *string*

Cause: The <textquery> tag is missing or misspelled in a query template

Action: Correct the missing tag

DRG-50958: Missing quote in transform clause *string*

Cause: A transform clause in a query template is missing a quote

Action: Add the quote in the appropriate position

DRG-50959: Query length exceeds *string* bytes

Cause: the query length exceeds the maximum allowed length

Action: reduce the length of the query

DRG-51002: unexpected component failure

Cause: Internal error

Action: Contact Oracle support

DRG-51017: unable to open storage buffer for fuzzy match candidates

Cause: Internal error, probably insufficient memory

Action: Contact Oracle support

DRG-51019: unable to open or illegal format for fuzzy match data file: *string*

Cause: Unable to open OS file containing fuzzy matching information or the file was not of the correct format

Action: Consult the documentation for correct location of the fuzzy match information files and check for file damage

DRG-51020: out of memory in fuzzy matcher

Cause: Cannot allocate more memory

Action: Contact your system adminstrator

DRG-51021: undefined error in fuzzy matcher

Cause: Internal error

Action: Contact Oracle support

DRG-51022: undefined error in stemmer

Cause: Internal error

Action: Contact Oracle support

DRG-51023: stemmer file cannot be opened

Cause: Unable to open OS file containing stemmer lexicon, or the file contents were not correct

Action: Consult documentation for for correct location of the stemmer lexicons and check for file damage

DRG-51024: out of memory in stemmer

Cause: Cannot allocate more memory

Action: Contact your system administrator

DRG-51025: an invalid character was passed to the stemmer

Cause: Invalid character in word input to the stemmer

Action: Remove invalid character from word to be stemmed

DRG-51028: unexpected error in fuzzy match expansion: %(1)

Cause: Internal error

Action: Contact Oracle support

DRG-51029: unexpected error in stemmer expansion: %(1)

Cause: Internal error

Action: Contact Oracle support

DRG-51030: wildcard query expansion resulted in too many terms

Cause: User error

Action: Make wildcard query narrower

DRG-51100: invalid program argument index
> **Cause:** This is an internal error
>
> **Action:** Contact Oracle Support to report a bug

DRG-51101: argument processing callback failed
> **Cause:** this is an internal error
>
> **Action:** Contact Oracle support to report a bug

DRG-51200: open keymap failed for index id = *string*
> **Cause:** Failed to initialize the keymap for the column id specified.
>
> **Action:** Check index ID. Contact support if caused by internal errors

DRG-51201: failed to perform DDL operation: database object *string*
> **Cause:** Textkey mapping service failed on DDL operation
>
> **Action:** Check Oracle error and take corrective action

DRG-51202: invalid key mapping operation mode : *string*
> **Cause:** invalid keymap mode value found. This is an internal error
>
> **Action:** Contact Oracle support

DRG-51203: found doc ids without mappings during get maps
> **Cause:** found doc ids without mappings during get mapping by doc ids, the index data and keymap service are out of synch.
>
> **Action:** Contact Oracle support

DRG-51300: error getting dml Queue lock
> **Cause:** a server must have hung while processing the dml Queue, leaving it locked
>
> **Action:** Contact Oracle support

DRG-51301: error releasing dml Queue lock
> **Cause:** internal database error, or perhaps someone dropped the lock while we were using it
>
> **Action:** Contact Oracle support

DRG-51311: DML lock handle previously allocated
> **Cause:** internal error
>
> **Action:** Contact Oracle support

DRG-51312: DML lock internal error *string*
> **Cause:** internal error
>
> **Action:** Contact Oracle support

DRG-51313: timeout while waiting for lock
> **Cause:** most likely an internal error
>
> **Action:** Contact Oracle support

DRG-51314: index is not empty
> **Cause:** you attempted to invoke populate_pending against an index which already has or has had indexed documents.

Action: populate pending manually, or recreate the index NOPOPULATE

DRG-51403: New index name not provided by kernel
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-51801: failed to seek in file: %(1)
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-51802: failed to read from file: %(1)
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-51803: failed to open file: %(1)
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-51804: failed to write to file: %(1)
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52100: *string* **returned internal error code** *string*
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52101: an invalid session handle was passed to Oracle Text
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52102: an invalid transaction handle was passed to Oracle Text
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52103: the Oracle Text environment could not reset
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52104: the Oracle Text environment could not initialize
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52105: no delete function found
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52106: Oracle Text service results could not be committed
    Cause: this is an internal error
    Action: Contact Oracle support

DRG-52107: ctxkbtc internal error

Cause: this is an internal error

Action: Contact Oracle support

DRG-52108: failed to delete knowledge base user extension

Cause: this is an internal error

Action: check file permissions or contact Oracle support

DRG-52109: error in reading thesaurus

Cause: this is an internal error

Action: Contact Oracle support

DRG-52110: error in writing extended knowledge base

Cause: this is an internal error

Action: Contact Oracle support

DRG-52111: error in knowledge base cache

Cause: this is an internal error

Action: Contact Oracle support

DRG-52112: improper Chinese string *string* of length *number*

Cause: this is an internal error

Action: None

DRG-52113: improper Japanese string *string* of length *number*

Cause: this is an internal error

Action: None

DRG-52200: invalid state during export

Cause: this is an internal error

Action: Contact Oracle support

DRG-52201: imcompatible Oracle Text versions

Cause: attempting to import an incompatible version of Oracle Text data

Action: make sure source and target Oracle Text versions are compatible

DRG-52202: invalid class name: *string*

Cause: the specified class name is not valid

Action: Contact Oracle Support

DRG-52203: invalid object name: *string*

Cause: the specified object name is not valid

Action: Contact Oracle Support

DRG-52204: error while registering index

Cause: this is an internal error

Action: Contact Oracle support

DRG-52205: class *string* and object *string* already exists for this index

Cause: duplicate entry of class and object

Action: Contact Oracle support

DRG-52206: error while registering index object

    Cause: this is an internal error

    Action: Contact Oracle support

DRG-52207: the specified attribute does not exist: *string*

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-52208: the specified attribute already exist: *string*

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-52210: error while registering value for attribute: *string*

    Cause: This is an internal error

    Action: Contact Oracle Support

DRG-52300: Index *string.string* **does not exist**

    Cause: The given index does not exist for the current user

    Action: Give a valid index name

DRG-52301: Query Stats is already enabled for this index

    Cause: attempting to enable the query stats for an index for which it is already enabled

    Action: None. No need to enable again

DRG-52302: Query Stats is not enabled for this index

    Cause: attempting to disable the query stats for an index for which it is not enabled

    Action: None. No need to disable if it is not already enabled

DRG-52303: Option String is full

    Cause: Index option string is full

    Action: None

DRG-52304: This operation requires Query Stats to be enabled for the index

    Cause: attempting to do an operation which required query stats option for the index to be enabled

    Action: Enable query stats option for the index using ctx_output.enable_query_stats()

DRG-52305: Unknown value, *string*, **passed in to stat_type**

    Cause: An invalid value is passed in to the parameter stat_type

    Action: Give a valid value

78

LPX-00000 to LPX-01093

LPX-00000: normal, successful completion

    Cause: Normal exit

    Action: No action required.

LPX-00001: NULL pointer

    Cause: A NULL pointer was detected as an internal error condition.

    Action: This is a programming error by the caller of the XML parser. Please contact someone who can fix the problem.

LPX-00002: out of memory

    Cause: The operating system has run out of memory.

    Action: Make more memory available to the program.

LPX-00003: duplicate entry in hash table

    Cause: An internal error has occurred (a key was requested to be placed in a hash table but was already there).

    Action: Contact Oracle Support Services and report the error.

LPX-00004: internal error "~s"

    Cause: An internal error has occurred.

    Action: Contact Oracle Support Services and report the error.

LPX-00005: ~1s buffer overflow, maximum size is ~2u bytes

    Cause: A name, quoted string, URL, or other document component was too long.

    Action: Restrict the component to the maximum size shown.

LPX-00006: invalid child type for parent node

    Cause: An attempt was made to add an invalid node-type to a parent node.

    Action: Correct the code.

LPX-00007: unexpected end-of-file encountered

    Cause: The documented ended unexpectedly, perhaps due to truncation.

    Action: Verify that the document is complete.

LPX-00008: invalid memory callback

    Cause: The memory callback structure passed to xmlinit was missing the allocate or free functions (or both).

    Action: Provide both functions in the callback structure.

LPX-00011: In line ~1u of ~2s [general entity ~3S]:

> **Cause:** Error message prefixes, not errors themselves. These are the possible banner messages which appear before an XML error to describe the position (line#) and source (buffer or URI) in which the error occurred, as well as the entity"s name (if the source is an entity). Parameter entity banner must be at +1 to non-entity banner, general entity at +2 (see lpxerr.c).

> **Action:** No action required. This is not an error message.

LPX-00012: Unicode data alignment error

> **Cause:** An input Unicode (UCS2) datum was not aligned properly.

> **Action:** UCS2 data consists of an array of shorts (ub2) which must be aligned on an even-byte boundary.

LPX-00013: wrong node type

> **Cause:** The wrong node type was given as argument to a DOM call.

> **Action:** Review the failing function call, consult the documentation, and make sure the node types passed as correct.

LPX-00014: context is not clean

> **Cause:** An operation was performed on a context that has already been used (so is not "clean").

> **Action:** Some functions must be performed on a newly initialized context before being used for parsing. For example, setting a shared DTD. Change the code and do the call before parsing.

LPX-00017: ~1sNodeName: <~2S>

> **Cause:** More error message boilerplate.

> **Action:** No action required. This is not an error message.

LPX-00018: internal error "nested open strings"

> **Cause:** An internal error has occurred.

> **Action:** Contact Oracle Support Services and report the error.

LPX-00019: property "~s" unknown

> **Cause:** An unexpected error has occured in a subsystem used by XML. Subcode is the error code returned by that failing subsystem.

> **Action:** Contact Oracle Support Services and report the error and subcode.

LPX-00050: initialization error: NLS mismatch

> **Cause:** A language ID was specified without the matching global area.

> **Action:** Internal error, contact Oracle Support Services and report the error.

LPX-00051: NLS initialization failed

> **Cause:** The NLS (National Language Support) package initialization failed.

> **Action:** Internal error, contact Oracle Support Services and report the error.

LPX-00052: LEH initialization failed

> **Cause:** The LEH (Library Exception Handling) package initialization failed.

> **Action:** Internal error, contact Oracle Support Services and report the error.

LPX-00053: LML initialization failed

> **Cause:** The LML (Low-Level Memory manager) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00054: LPU initialization failed, error ~u

Cause: The LPU (URL Parser/Loader) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00100: root element "~1S" does not match DTD root "~2s"

Cause: Validity Constraint 2.8 failed: "The Name in the document type declaration must match the element type of the root element." *Example: <?xml version="1.0"?> <!DOCTYPE greeting [<!ELEMENT greeting (#PCDATA)>]> <salutation>Hello!</salutation> *Explanation: The document"s root element, salutation, does not match the root element declared in the DTD (greeting).

Action: Correct the document.

LPX-00101: parameter-entity markup cannot be split up

Cause: Validity Constraint 2.8 failed: "Parameter-entity replacement text must be properly nested with markup declarations." *Example: <?xml version="1.0"?> <!DOCTYPE greeting [<!ENTITY % e "<!ELEMENT "> %e; greeting (#PCDATA)>]> <greeting>Hello!</greeting> *Explanation: The parameter entity "e" contains markup which may not be split up; the entire ELEMENT (or ATTLIST or ENTITY) definition must be present in one piece.

Action: Correct the document.

LPX-00102: standalone document declaration should be "no"

Cause: Validity Constraint 2.9 failed: "Standalone document declaration must have the value "no" if any external markup declarations contain declarations of:

* attributes with default values - or -

* entities - or -

* attributes with values subject to normalization - or -

* element types with element content"

Action: Correct the document.

LPX-00103: document structure does not match DTD

Cause: Validity Constraint 3 failed: "An element is valid if there is a declaration matching elementdecl where the Name matches the element type, and one of the following holds:

* The declaration matches EMPTY and the element has no content

* The declaration matches children and the sequence of child elements belongs to the language generated by the regular expression in the content model, with optional white space (characters matching the nonterminal S) between each pair of child elements.

* The declaration matches Mixed and the content consists of character data and child elements whose types match names in the content model.

* The declaration matches ANY, and the types of any child elements have been declared."

Action: Correct the document.

LPX-00104: element "~S" is not declared in the DTD

Cause: Validity Constraint 3 failed: The named element has no matching elementdecl in the DTD

Action: Correct the document.

LPX-00105: element "~S" is not empty as required by the DTD

Cause: Validity Constraint 3 failed: The named element is declared as EMPTY in the DTD but contains sub-elements in the document.

Action: Correct the document.

LPX-00106: attribute "~1S" of element "~2S" is undefined

Cause: Validity Constraint 3.1 failed:

Action: Correct the document.

LPX-00107: element "~S" has multiple declarations

Cause: Validity Constraint 3.2 failed: "No element type may be declared more than once."

Action: Correct the DTD.

LPX-00108: parameter-entity parenthetical cannot be split up

Cause: Validity Constraint 3.2.1 failed: "Parameter-entity replacement text must be properly nested with parenthesized groups. For interoperability, if a parameter-entity reference appears in a choice, seq, or Mixed construct, its replacement text should not be empty, and neither the first nor last non-blank character of the replacement text should be a connector (| or ,). *Example: <?xml version="1.0"?> <!DOCTYPE foo [<!ELEMENT greeting (#PCDATA)> <!ENTITY % e "(#PCDATA |"> <!ELEMENT foo %e; greeting)>]> <greeting>Hello!</greeting> *Explanation: The parenthetical content of the "e" entity may not be split up into sections: both open and close parentheses must be in the same declaration.

Action: Correct the DTD.

LPX-00109: duplicate name "~S" in mixed-content declaration

Cause: Validity Constraint 3.2.2 failed: "The same name must not appear more than once in a single mixed-content declaration." *Example: <!ELEMENT p (#PCDATA|a|b|c|d|a)> *Explanation: "a" occurs more than once in the mixed-content declaration.

Action: Correct the DTD.

LPX-00110: invalid ~1s "~2S" (not a Name)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Name

Action: Correct the document.

LPX-00111: invalid ~1s "~2S" (not a Nmtoken)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Nmtoken

Action: Correct the document.

LPX-00112: element "~S" has multiple ID attributes

Cause: Validity Constraint 3.3.1 failed: "No element type may have more than one ID attribute specified."

Action: Correct the document.

LPX-00113: element "~1S" ID attribute "~2S" must be #IMPLIED or #REQUIRED

Cause: Validity Constraint 3.3.1 failed: "An ID attribute must have a declared default of #IMPLIED or #REQUIRED."

Action: Correct the document.

LPX-00114: element "~1S" attribute "~2S" has invalid enumeration value "~3S"

Cause: Validity Constraint 3.3.1 failed: "Values of this type must match one of the Nmtoken tokens in the declaration."

Action: Correct the document.

LPX-00115: element "~1S" is missing required attribute "~2S"

Cause: Validity Constraint 3.3.2 failed: "If the default declaration is the keyword #REQUIRED, then the attribute must be specified for all elements of the type in the attribute-list declaration."

Action: Correct the document.

LPX-00116: element "~1S" attribute "~2S" has invalid value "~3S", must be "~4S"

Cause: Validity Constraint 3.3.2 failed: "If an attribute has a default value declared with the #FIXED keyword, instances of that attribute must match the default value."

Action: Correct the document.

LPX-00118: undefined entity "~S"

Cause: Validity Constraint 4.1 failed: "In a document with an external subset or external parameter entities with "standalone="no"", the Name given in the entity reference must match that in an entity declaration."

Action: Correct the document.

LPX-00119: element "~1S" attribute "~2S" must be an unparsed entity

Cause: The attribute value must be an unparsed entity.

Action: Correct the document.

LPX-00120: entity "~1S" NDATA (notation) "~2S" is undefined

Cause: Entity"s NDATA (notation) is undefined

Action: Correct the document.

LPX-00121: undefined notation "~S"

Cause: Notation is not known.

Action: Correct the document.

LPX-00122: undefined ID "~S" in IDREF

Cause: Validity Constraint 3.3.1 failed: "A name must not appear more than once in an XML document as a value of this type; i.e., ID values must uniquely identify the elements which bear them."

Action: Correct the document.

LPX-00123: duplicate ID "~S"

Cause: An ID was used twice, they must be unique.

Action: Correct the document.

LPX-00124: attribute value should be one or more tokens

Cause: An attribute with tokenized type (IDREFS, ENTITIES, NMTOKENS) did not contain any tokens.

Action: Value must contain one or more tokens, separated by spaces.

LPX-00125: duplicate entity "~S" (ignored)

Cause: Warning returned by XmlDomGetDecl when original document did not contain an XMLDecl

Action: This is a warning, not an error. The value XMLERR_NO_DECL is used by the programmer to detect whether a document had an XMLDecl or not. It does not indicate a problem.

LPX-00200: could not convert from encoding ~1s to ~2s

Cause: The conversion cannot be made between the specified encodings.

Action: Choose a data encoding which can represent all expected input encoding (such as a Unicode-based encoding, UTF-8 or UTF-16).

LPX-00201: unknown encoding "~s"

Cause: The specified encoding was not known. It should be an IANA or Oracle encoding name.

Action: Use an appropriate encoding.

LPX-00202: could not open "~s" (error ~u)

Cause: The named input (file, URL, etc) does not exist.

Action: Make sure the named input is available and can be opened.

LPX-00203: could not read from "~s" (error ~u)

Cause: Data could not be read from the named input.

Action: Take appropriate action to allow data to be read.

LPX-00204: syntax error

Cause: A syntax error was found.

Action: Check the XML document line and correct it.

LPX-00205: expected "<!--" at the start of comment

Cause: Bad syntax detected when processing a comment.

Action: Fix the comment syntax.

LPX-00206: invalid CDATA section

Cause: Bad syntax detected when processing CDATA. Proper format is "<![CDATA[" data "]]>".

Action: Correct the CDATA syntax.

LPX-00207: expected "[" at the start of conditional section

Cause: Bad syntax detected when processing a conditional section.

Action: Fix the conditional section syntax.

LPX-00208: unknown DTD keyword "~s"

Cause: An unknown keyword was found in the DTD.

Action: Use a proper keyword.

LPX-00209: PI names starting with XML are reserved

Cause: Processing instruction starting with XML was found.

Action: Use another name for the processing instruction.

LPX-00210: expected "~1c" instead of "~2c"

Cause: A syntax error was detected.

Action: Use proper syntax.

LPX-00211: attribute default must be REQUIRED, IMPLIED, or FIXED

Cause: Attribute default was invalid.

Action: Default must be REQUIRED, IMPLIED, or FIXED.

LPX-00212: comment must not contain "--"

Cause: A syntax error was detected in the comment.

Action: Use "--" only when specifying the end of the comment.

LPX-00213: comment did not end in "-->"

Cause: A syntax error was detected in the comment.

Action: Be sure to end the comment with "-->".

LPX-00214: CDATA section did not end in "]]>"

Cause: A syntax error was detected in the CDATA section.

Action: Be sure to end the CDATA section with "]]>".

LPX-00215: processing instruction did not end in "?>"

Cause: A syntax error was detected in the PI section.

Action: Be sure to end the PI with "?>".

LPX-00216: invalid character ~1u (~2X)

Cause: An invalid multibyte character was found.

Action: Use only characters allowed by the XML specification.

LPX-00217: invalid character ~1u (~2x)

Cause: An invalid Unicode character was found.

Action: Use only characters allowed by the XML specification.

LPX-00218: invalid character ~1u ("~2c")

Cause: An invalid native (ASCII/EBCDIC) character was found.

Action: Use only characters allowed by the XML specification.

LPX-00219: invalid digit "~c" in character reference

Cause: An invalid digit was found in a character reference.

Action: Character references are either &#DDD; where D"s are decimal digits, or &#xHHH; where H"s are hexadecimal digits.

LPX-00220: the string "]]>" cannot occur in character data

Cause: Found "]]>" in character data.

Action: Do not use "]]>" in character data.

LPX-00221: the character "<" cannot occur in attribute values

Cause: Found "<" in an attribute value.

Action: Do not use "<" in attribute values.

LPX-00222: error received from SAX callback function

Cause: An error was received from the SAX callback function.

Action: Examine the additional error messages and take corrective action.

LPX-00223: external entity "~s" found in an attribute value

    Cause: An external entity reference was found in an attribute value.

    Action: Use only references to internal or character entities in attribute values.

LPX-00224: multiple occurrences of attribute "~S" found

    Cause: An attribute occurred multiple times in the same start-tag or empty-element tag.

    Action: Make sure that the attributes are unique.

LPX-00225: end-element tag "~1S" does not match start-element tag "~2S"

    Cause: An element tag was not ended properly.

    Action: Make sure that the correct end element tag is used.

LPX-00226: entity "~S" is not declared

    Cause: An entity is not declared.

    Action: Declare the entity before referencing it.

LPX-00227: entity "~S" is not a parsed entity

    Cause: An entity reference contained the name of an unparsed entity.

    Action: Only reference parsed entities.

LPX-00228: entity reference "~S" refers to itself

    Cause: An entity reference contains a recursive reference to itself.

    Action: Modify the contents of the entity reference to remove this recursion.

LPX-00229: input source is empty

    Cause: An XML input file has no contents.

    Action: The XML file representing a document must contain at least one element.

LPX-00230: invalid character ~1u (~2x) found in a Name or Nmtoken

    Cause: An invalid character was found in a NAME or NMTOKEN.

    Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00231: invalid character ~1u ("~2c") found in a Name or Nmtoken

    Cause: An invalid character was found in a NAME or NMTOKEN.

    Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00232: invalid use of a parameter entity reference

    Cause: A parameter entity reference was found in an improper location in the internal DTD subset.

    Action: Use a parameter entity reference only where markup declarations can occur in the internal DTD subset, in the external DTD subset, or in an external entity.

LPX-00233: namespace prefixes starting with "xml" are reserved

    Cause: Namespace prefix starting with XML was found.

    Action: Use another name for the namespace prefix.

LPX-00234: namespace prefix "~S" is not declared

Cause: Namespace prefix is not declared.

Action: Declare the prefix in an attribute list.

LPX-00235: invalid XML version, must be 1.0 or 2.0

Cause: Only versions 1.0 and 2.0 of the XML specification are supported.

Action: Use the 1.0 or 2.0 specification & set version# accordingly.

LPX-00236: invalid character ~1u ("~2c") found in public identifier

Cause: An invalid character was found in a public identifier.

Action: Use only the characters allowed for public identifiers by the XML specification.

LPX-00237: invalid condition section keyword, must be INCLUDE or IGNORE

Cause: A conditional section <![keyword [markup]]> had invalid keyword, must be either "IGNORE" or "INCLUDE"

Action: Correct condition section usage in document.

LPX-00238: unterminated conditional section

Cause: A conditional section was not properly terminated with]]>.

Action: Verify conditional nesting in document and correct.

LPX-00239: invalid attribute type "~s"

Cause: The attribute type is not valid. Options are CDATA, ID, IDREF, IDREFS, ENTITY, ENTITIES, NMTOKEN, or NMTOKENS.

Action: Check and correct attribute declaration.

LPX-00240: element-start tag is not well formed

Cause: A start-element tag was improperly formed.

Action: Check and correct the start-element syntax.

LPX-00241: entity reference is not well formed

Cause: An entity reference (general or parameter) was not formed properly.

Action: Form entity reference correctly as "&name;" or "%name;".

LPX-00242: invalid use of ampersand ("&") character (use &)

Cause: The ampersand character is used only to start entity or character references.

Action: To include an ampersand character as data, use the built-in & general entity.

LPX-00243: element attribute value must be enclosed in quotes

Cause: An attribute defined in an element"s start-tag must be enclosed in single ("") or double ("") quotes.

Action: Enclose the attribute value in quotes.

LPX-00244: invalid use of less-than ("<") character (use <)

Cause: The less-than character ("<") is not permitted as data.

Action: Use the built-in entity < instead. Check for mismatched quotes ("") in case the "<" is part of subsequent markup.

LPX-00245: extra data after end of document

Cause: After the close of the top-level element, more data was found.

Action: The end-element tag for the top-level element must be the last thing in the document.

LPX-00246: missing system ID after public ID

Cause: In an external ID declaration, the public ID literal was not followed by the system ID literal as required.

Action: Provide with public *and* system IDs for "PUBLIC" type.

LPX-00247: invalid Document Type Declaration (DTD)

Cause: Problems were encountered in the DTD declaration.

Action: Review the DTD and correct the problems.

LPX-00248: invalid entity declaration

Cause: Problems were encountered parsing an entity declaration.

Action: Check and correct the declaration syntax.

LPX-00249: invalid external ID declaration

Cause: Problems were encountered parsing an external ID declaration.

Action: Check and correct the declaration syntax.

LPX-00250: invalid attribute declaration

Cause: Problems were encountered parsing an attribute declaration.

Action: Check and correct the declaration syntax.

LPX-00251: conditional sections are valid only in external DTDs

Cause: A condition section is not permitted in internal DTDs.

Action: Remove the condition section.

LPX-00252: invalid entity replacement-text nesting

Cause: Markup included from an entity must nest/group properly. That is, open/close markup must occur within the same entity. For example, <!DOCTYPE doc [<!ENTITY e "</foo><foo>">]> <doc><foo>&e;</foo></doc> Is invalid since foo''s start-tag occurs in the top-level document, but the close-tag is provided by the "e" entity. Both start and end must be provided by the same source.

Action: Examples, such as the ones above, are not permitted.

LPX-00253: missing required version number in XML declaration

Cause: An XML declaration was missing the required version#.

Action: Always provide a version#, which must come first in the declaration. XML is case sensitive, so only "version" (not "Version", and so on) is valid.

LPX-00254: invalid XML declaration

Cause: Problems were encountered parsing an XML declaration.

Action: Check and correct the declaration syntax.

LPX-00255: XML standalone declaration must be "yes" or "no"

Cause: The "standalone" parameter in the XML declaration had an invalid value.

Action: standalone must be set to either "yes" or "no". Case is sensitive, so "Yes", "YES", and so on, are invalid.

LPX-00256: invalid element declaration

Cause: Problems were encountered parsing an element declaration.

Action: Check and correct the declaration.

LPX-00257: invalid children specification in element declaration

Cause: The "children" specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00258: invalid "Mixed" specification in element declaration

Cause: The "Mixed" specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00259: invalid notation declaration

Cause: Problems were encountered parsing a notation declaration.

Action: Check and correct the declaration syntax.

LPX-00260: invalid xml:space attribute declaration

Cause: The xml:space attribute must be declared as an enumeration with choices "default" and "preserve". For example, <!ATTLIST foo xml:space (default|preserve) "preserve").

Action: Declare the special attribute as above.

LPX-00261: invalid URL ~s

Cause: The specified URL was invalid and could not be parsed.

Action: Correct the URL; consult RFC-2396.

LPX-00262: unsupported protocol ~s

Cause: An URL was encountered which requested a protocol not supported by the XML parser. Only HTTP and file are currently allowed.

Action: Make the data available through the filesystem or HTTP.

LPX-00263: couldn"t connect to host ~s port ~d

Cause: A TCP connection couldn"t be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00264: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00265: read failed from to host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00266: invalid language specification ~s

Cause: The given language specification was invalid.

Action: Language specification has the format <language>_<territory>.<character set>. For example, "French_France".

LPX-00267: could not resolve relative URL ~s

Cause: The named relative URL couldn"t be resolved against its parent.

Action: Make sure the relative makes sense in relation to its parent URL; see RFC-2396 sections 4, 5, and appendix C.

LPX-00268: invalid access method ~1d, must be 0 to ~2d

Cause: The provided access code was not in the valid range.

Action: The code should be one of the XMLACCESS_xxx codes defined in oraxml.h, in the range shown in the error message.

LPX-00269: all three access functions (open/close/read) must be provided

Cause: An attempt was made to set the access method callbacks, but all three functions were not provided.

Action: All three callback functions (open, close, and read) are required. They must all be provided, even if they are stub functions which do nothing.

LPX-00270: FTP error: ~s

Cause: An error was returned from the FTP server while trying to retrieve a file. See the specific message for details.

Action: Corrective action depends on the error.

LPX-00271: FTP login failed: ~s

Cause: The username/password combination was invalid for FTP login.

Action: Specify a valid pair.

LPX-00272: FTP server unavailable: ~s

Cause: The FTP server is unavailable for use.

Action: No action is possible from the client side. See server"s error message.

LPX-00273: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00274: can"t import node type

Cause: Some node types (DOCUMENT_NODE & DOCUMENT_TYPE_NODE) cannot be imported with importNode().

Action: No action required.

LPX-00275: can"t set output/data encoding AFTER parsing

Cause: Output/data encoding must be set after initialization but BEFORE any parsing has taken place.

Action: Set encoding before parsing any documents.

LPX-00276: bad HTTP/Mime header

Cause: An HTTP reply contained an invalid Mime header.

Action: Verify HTTP reply for accuracy. See RFC 2616.

LPX-00277: no closing quote was seen

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LPX-00278: invalid ~s proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00279: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct it. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00280: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error..

LPX-00281: unsupported encoding "~s"

Cause: The specified encoding is known but not supported by the parser.

Action: Try a different encoding.

LPX-00282: document cannot have both internal/external and shared DTDs

Cause: A parser context which had a shared DTD set was used to parse a document which also contained a DTD. You cannot use both a shared DTD and and internal/external one.

Action: If a shared DTD is to be used, then the documents parsed must not contain or reference a DTD.

LPX-00283: document encoding is ~s-based but default input encoding is not

Cause: The input document was detected to be ASCII (or EBCDIC) based, but no encoding was specified in the XMLDecl and the default input coding was not ASCII (or EBCDIC) based, so could not be applied.

Action: Add an explicit encoding specification to the XMLDecl so the default input encoding is not needed, or pick a default encoding which matches the input document.

LPX-00284: namespace prefix to NULL URI is not allowed

Cause: An element"s namespace prefix declarations was for a NULL URI, e.g. <foo xmlns:bar=""/> This is illegal presently in XML 1.0, but will be legal in XML 1.1

Action: Remove erroneous prefix definition.

LPX-00285: invalid Unicode surrogate ~X ~X

Cause: A Unicode document contained an invalid surrogate. If the first (high) surrogate is in the correct range 0xD800 to 0xDBFF, then the second (low) surrogate must be in the range 0xDC00 to 0xDFFF.

Action: Correct the document.

LPX-00286: Exceeded max depth for recursion

Cause: The depth of embedded elements in the document exceeded the limit of 2000.

Action: Correct the document.

LPX-00300: no name in attribute set

Cause: The name attribute was not found in the attribute-set element.

Action: Add a name attribute for this element.

LPX-00301: error in XPATH evaluation

Cause: The XPATH evaluation returns an error.

Action: Check specified XPATH expression to determine the error.

LPX-00302: Incorrect stylesheet. The node is not valid.

Cause: The child node is of invalid type or has invalid name for this particular location in stylesheet, rendering the stylesheet as invalid XSLT.

Action: Fix the stylesheet by using valid nodes only.

LPX-00303: attribute value "~S" not expected for ~S

Cause: Attribute is found but its value is not the expected value.

Action: Set the attribute value to the correct value.

LPX-00304: input parameter to function is null

Cause: An input parameter passed into this function is null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00305: missing token

Cause: An expected token is not found.

Action: Check the input string to make sure the expected token is present.

LPX-00306: inputed string ended with no corresponding closing "}"

Cause: A closing "}" is expected.

Action: Add the closing "}" to the input string or remove the extra opening "{".

LPX-00307: namespace prefix ~S used but not declared

Cause: Namespace prefix is used but not declared.

Action: Either declare the namespace or don"t use this namespace prefix.

LPX-00308: attribute ~S not found in ~S

Cause: The expected attribute for this node is not found.

Action: Need to add this attribute to the node.

LPX-00309: cannot initialize XPATH

Cause: XPATH context could not be initialized.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00310: element ~S not found in ~S

Cause: The expected element is not found.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00311: unsupported feature: ~s

Cause: This feature is not supported.

Action: Do not use this feature.

LPX-00312: cannot construct XML PI with content: ~S

Cause: The content of XML PI node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00313: cannot construct XML comment with content: ~S

Cause: The content of XML comment node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00314: an internal failure occurred

Cause: An internal error occurred in the code.

Action: Contact appropriate developer.

LPX-00315: extension function ~S not supported

Cause: This extension function is not supported.

Action: Either contact appropriate developer for more information or don"t use this extension function.

LPX-00316: invalid value ~S for ~S attribute ~S

Cause: The value for the specified attribute is invalid.

Action: Consult the XSL spec, use only legal values.

LPX-00317: undefined decimal-format "~S"

Cause: The named decimal-format is undefined (the name "#default" means the default format).

Action: Define the desired decimal-format before trying to use it.

LPX-00318: duplicate xsl:decimal-format "~S"

Cause: The named decimal-format was declared more than once.

Action: Make sure there is only a single declaration.

LPX-00319: The node specified is not valid

Cause: The node specified is not of expected type.

Action: Use only the nodes of legal type.

LPX-00320: No more attributes can be added to a non empty element

Cause: The element to which an attribute was being added is non empty and hence can not add anymore attributes to it.

Action: Modify the XSLT stylesheet so that all the attributes are added to an element before anything else is added to it. If you absolutely can not do that then select your output method to be DOM based rather then a stream or SAX based output which you are using presently.

LPX-00321: None of the output method (DOM, SAX, Stream) is selected

Cause: User is trying to process an XML file with out selecting any mechanism for output.

Action: User must select one of the output mechanisms (SAX/DOM/Stream) before attempting to process the XML file.

LPX-00322: A doc referred by XSLT stylesheet could not be opened : ~s

Cause: Either an import,include or document() function tried to open a document and failed.

Action: Make sure that document is present and can be opened.

LPX-00323: illegal apply-imports because of no current template: ~s

Cause: apply-imports was used even when there was no current template possibly with in for-each.

Action: Make sure that apply-imports are invoked only if there is a current template and it is not in a xsl:for-each.

LPX-00324: "~S" is not a valid value for the lang attribute of xsl:sort

Cause: An invalid language name was specified for sorting.

Action: Provide a valid value for the lang attribute of xsl:sort.

LPX-00400: an internal error has occurred in XPATH
    Cause: An internal error has occurred in XPATH.
    Action: Contact the appropriate developer.

LPX-00401: invalid QName in the XSL file
    Cause: An invalid QName was passed to the XPATH parser.
    Action: See whether there are any invalid QNames in the XSL file.

LPX-00402: invalid axisname in the XSL file
    Cause: An invalid axis name was passed to the XPATH parser.
    Action: See whether all axis names in the XSL file are correct.

LPX-00403: unmatched quote in the XSL file
    Cause: An unmatched quote was found in the XSL file.
    Action: Check for unmatched quotes in the XSL file.

LPX-00404: unable to resolve namespace URI
    Cause: The namespace URI may not be valid.
    Action: Make sure that the name space URIs are valid.

LPX-00405: unable to allocate memory
    Cause: May be out of memory.
    Action: Try increasing virtual memory.

LPX-00406: object of incorrect type passed to the function
    Cause: An object of incorrect type was passed to the XPATH/XSL function.
    Action: Do the required conversion before passing in an object of type which is different from the expected type.

LPX-00407: right square bracket missing in the XSL file
    Cause: Right square bracket missing in the XSL file.
    Action: Check for unmatched square bracket in the XSL file.

LPX-00408: right parenthesis missing in the XSL file
    Cause: Right parenthesis missing in the XSL file.
    Action: Check for unmatched parenthesis in the XSL file.

LPX-00409: incorrect token encountered while parsing
    Cause: An unexpected token encountered while parsing the expression/ pattern.
    Action: Check the syntax of the expressions/patterns.

LPX-00410: unable to resolve the variable reference
    Cause: Variable reference may not be valid.
    Action: Check whether the variable references are valid.

LPX-00411: unknown function name encountered
    Cause: The function is not supported at this time or the name is invalid.
    Action: Check the function names. If valid and this error occurs, then avoid using them at this time.

LPX-00413: loss of precision due to excessively large numerical constant
    Cause: The numerical constant in the XPath expression is too big.

    Action: None

LPX-00601: Invalid token in: "~S"
    Cause: Invalid token in XPath expression.

    Action: Check the expression.

LPX-00602: Invalid child element "~1S" of element "~2S".
    Cause: Invalid child element in this stylesheet context.

    Action: Check the stylesheet.

LPX-00603: Invalid attribute value "~1S": {element "~2S", attribute "~3S"}.
    Cause: Invalid attribute value in this stylesheet context.

    Action: Check the stylesheet.

LPX-00604: Invalid attribute value "~1S", for attribute "~2s".
    Cause: Invalid attribute value for this attribute.

    Action: Check the stylesheet.

LPX-00605: Invalid attribute "~1S" in element "~2S".
    Cause: Invalid attribute for this element.

    Action: Check the stylesheet.

LPX-00606: Missing attribute "~1s" in element "~2S".
    Cause: Missing attribute for this element.

    Action: Check the stylesheet.

LPX-00607: Invalid reference: "~S".
    Cause: Invalid variable or parameter or template reference.

    Action: Check the stylesheet.

LPX-00608: Repeated declaration of "~1S" in element "~2S".
    Cause: Only one declaration is allowed at this level.

    Action: Check the stylesheet.

LPX-00609: Function call with invalid number of arguments in "~1S".
    Cause: Invalid number of arguments.

    Action: Check the function signature.

LPX-00651: VM Stack overflow.
    Cause: The XML data is too large.

    Action: Increase the size of VM stacks in XmlXslVMCreate().

LPX-00652: SAX callback returns with error.
    Cause: SAX callback returns an error.

    Action: Check the callback function.

LPX-00653: Output attribute "~S" doesn''t have a parent element.
    Cause: Attribute is generated in a wrong context.

    Action: Check the XSLT stylesheet.

LPX-00654: Output namespace attribute "~S" doesn"t have a parent element.
> **Cause:** Attribute generated in the wrong context.
>
> **Action:** Check the XSLT stylesheet.

LPX-00655: Invalid output comment "~S".
> **Cause:** Invalid comment node.
>
> **Action:** Check the XSLT stylesheet.

LPX-00656: XSLTVM terminate.
> **Cause:** VM terminates.
>
> **Action:** No action.

LPX-00657: Invalid output PI "~S".
> **Cause:** Invalid PI node.
>
> **Action:** Check the XSLT stylesheet.

LPX-00658: Invalid XSLT object type.
> **Cause:** Invalid object type in XPath evaluation.
>
> **Action:** Check the XSLT stylesheet.

LPX-00659: Output write failed.
> **Cause:** Write operation failed.
>
> **Action:** Check the write method.

LPX-00660: Not a well-formed document or external entity.
> **Cause:** The generated document is not well-formed.
>
> **Action:** Check the XSLT stylesheet.

LPX-00661: Failed to load: "~s".
> **Cause:** Failed to load a document.
>
> **Action:** Check the XSLT stylesheet.

LPX-00662: Invalid encoding.
> **Cause:** Invalid encoding specified.
>
> **Action:** Check the encoding string.

LPX-00663: VM String-Stack overflow.
> **Cause:** The string data is too large.
>
> **Action:** Increace the size of VM StringStack in XmlXslVMCreate().

LPX-00664: VM Node-Stack overflow.
> **Cause:** Too many XML nodes.
>
> **Action:** Increace the size of VM NodeStack in XmlXslVMCreate().

LPX-00690: Invalid argument.
> **Cause:** Invalid or missing argument.
>
> **Action:** Check the function signature.

LPX-00700: invalid SOAP context
> **Cause:** The SOAP context passed to an XmlSoap function was invalid.

Action: Make sure the context passed is an xmlsoapctx and is still valid (has not been destroyed).

LPX-00701: invalid SOAP role

Cause: An invalid SOAP role was specified.

Action: Only xmlsoaprole enum values should be used (see xml.h).

LPX-00702: invalid SOAP connection binding

Cause: An invalid SOAP connection binding was specified.

Action: Only xmlsoapbind enum values should be used (see xml.h).

LPX-00703: SOAP POST failed

Cause: A SOAP message sent with an HTTP binding failed.

Action: See the returned HTTP error to determine the problem.

LPX-00704: elem has no mustUnderstand

Cause: Header block does not have a mustUnderstand attribute.

Action: This is legal, no action required.

LPX-00705: elem has no role

Cause: Header block does not have a role attribute.

Action: This is legal, no action required.

LPX-00706: message has no fault

Cause: Message body has no Fault child.

Action: This is legal, no action required.

LPX-00707: no Fault reason w/given language

Cause: Fault element does not have a reason with given language.

Action: This is legal, no action required.

LPX-00708: SOAP failed to make HTTP connection

Cause: SOAP failed to make an HTTP connection to the given URL.

Action: Possible cause is invalid URL or memory exhaustion.

LPX-00709: SOAP reply not valid XML

Cause: The reply to a SOAP call was not a valid XML document.

Action: Check the calling URL for validity; otherwise the problem is likely to be on the reply side.

LPX-00711: invalid SOAP version

Cause: The version string specified at SOAP creation time was invalid.

Action: Specify a valid version string, either "1.1" or "1.2".

LPX-00712: failed to set HTTP header

Cause: Connection does not exists, or header is badly formed, or maximum number of headers is exceeded.

Action: Check that connection exists, header has ":", decrease number of headers.

LPX-00713: body has more than one fault

Cause: Message body has multiple Fault children.

Action: Most likely bug in the server.

LPX-00714: fault is not a single child

Cause: Message body has additional children besides Fault.

Action: Most likely bug in the server.

LPX-00715: badly formed fault elemen

Cause: Fault element does not have one of mandatory children or has children, which are not allowed.

Action: Most likely bug in the server.

LPX-00716: badly formed Text subelement

Cause: Mandatory text child is missing from the requested message subelemt.

Action: Most likely bug in the server.

LPX-00717: badly formed Value subelement

Cause: Mandatory Value child of the Code child of the Fault badly formed or absent.

Action: Most likely bug in the server.

LPX-00718: message has no envelope

Cause: The message has no envelope element child.

Action: Most likely bug in the server.

LPX-00719: prefix too long

Cause: The maximum size of encoded namespace attribute name is 1022.

Action: Use shorter prefix.

LPX-00720: envelope has no header

Cause: The message envelope does not have header.

Action: This is legal, no action required

LPX-00721: envelope has no body

Cause: The message envelope does not have body.

Action: Most likely bug in the server.

LPX-00722: elem has no relay

Cause: Header block does not have a relay attribute.

Action: This is legal, no action required.

LPX-00723: no such element

Cause: The element with requested namespace name and local part does not exists.

Action: This is legal, no action required.

LPX-00750: arguments "~1s" to function "~2s" are null

Cause: Input arguments passed into this function are null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00751: arguments "~s" are exclusive

Cause: Input arguments passed into this function are exclusive. Specify only one of them.

Action: Specify only one of the exclusive arguments.

LPX-00752: invalid ~1s, must be ~2s

Cause: Invalid value was specified for attribute.

Action: Correct the value with one of the suggested values.

LPX-00753: invalid proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00754: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct the specification. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00755: missing required argument "~s"

Cause: A required argument was missing.

Action: Provide the missing argument to the function.

LPX-00756: Etags and tokens must be either all tagged or all untagged

Cause: The list of condition factors need to be either all tagged with absoluteURI"s or all untagged with absoluteURI"s.

Action: If all condition factors were applied to the resource receiving the request, make them all untagged. Otherwise, make them all tagged with appropriate resource"s URI"s.

LPX-00757: maximum XML document size (~s bytes) exceeded

Cause: The input XML document"s size exceeded the limit set by "max_xml_size" attribute set in XmlDavCreate().

Action: Raise the value set for max_xml_size attribute in XmlDavCreate() if this does not create problems with security.

LPX-00758: user-provided callback returns null

Cause: Null was returned from user-provided callback function.

Action: Check error(s) encoutered within the callback function.

LPX-00759: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with your system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00760: couldn"t connect to host ~s port ~u

Cause: A TCP connection couldn"t be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00761: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity.

LPX-00762: read failed from host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity.

LPX-00763: exceeded maximum TCP connections

Cause: The maximum allowable number of TCP connections were exceeded. This happens only if too many pending HTTP responses have not been properly ended or destroyed.

Action: End a pending response session or destroy response objects that have been processed.

LPX-00764: TCP connection was broken

Cause: Either the server terminated the TCP connection or the TCP connection is in a bad state.

Action: Analyze the error. After cleanup, retry the method.

LPX-00765: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error.

LPX-00766: unsupported transfer-coding values: ~s

Cause: Only "chunked" and "identity" transfer-coding values are supported.

Action: This is WebDAV implementation"s shortfall. There is no workaround for this problem.

LPX-00767: not a text media type

Cause: A text media type was expected. But other media types were found.

Action: Since this data cannot be read as a text type, use another routine to read it.

LPX-00768: no entity body found

Cause: No entity body was found when it was read.

Action: Check the HTTP status code and headers to see why the entity body was not found.

LPX-00769: not xml media type

Cause: An XML media type was expected. But other media types were found.

Action: Since this data cannot be read as an XML type, use another routine to read it.

LPX-00770: missing lock token in lock refresh request

Cause: A LOCK request to refresh a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00771: missing lock token in UNLOCK request

Cause: An UNLOCK request to remove a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00772: wrong object type

Cause: The wrong object type was given as argument to a WebDAV call.

Action: Review the failing function call, consult the documentation, and make sure the object types pass as correct.

LPX-00773: protocol violation: ~s

    Cause: The entity body sent by the server in Chunked Transfer Encoding violated protocol.

    Action: Either this is an internal implementation error or a server implementation error. Users should file a bug agaist either the server"s or the client"s implementation.

LPX-00800: XQuery invalid token

    Cause: Invalid XQuery query.

    Action: Correct the query.

LPX-00801: XQuery syntax error at

    Cause: Invalid XQuery query.

    Action: Correct the query.

LPX-00802: Too many arguments

    Cause: Invalid XQuery query.

    Action: Correct the query.

LPX-00803: Too few arguments

    Cause: Invalid XQuery query.

    Action: Correct the query.

LPX-00804: Invalid token: "~S"

    Cause: Invalid program.

    Action: Correct the program.

LPX-00805: Syntax error at "~S"

    Cause: Invalid program.

    Action: Correct the program.

LPX-00825: Can"t compile the element:

    Cause: XSLT Stylesheet can"t be compiled to XQuery query.

    Action: Correct the the stylesheet.

LPX-00826: Can"t compile the attribute:

    Cause: XSLT Stylesheet can"t be compiled to XQuery query.

    Action: Correct the the stylesheet.

LPX-00827: Namespace conflict for prefix:

    Cause: XSLT Stylesheet can"t be compiled to XQuery query.

    Action: Correct the the stylesheet.

LPX-00903: Invalid flags specified for XmlDiff or XmlPatch

    Cause: Invalid value supplied to flags parameter for XmlDiff or XmlPatch functions.

    Action: Specify valid flags (see xmldf.h).

LPX-00904: Invalid inputs were supplied to XmlDiff or XmlPatch

    Cause: Data could not be read from inputs to XmlDiff or XmlPatch functions.

    Action: Specify valid inputs (see xmldf.h).

LPX-00910: The root nodes in input documents to XmlDiff did not match

Cause: The root nodes in input documents do not match.

Action: Make sure the root nodes have same qualified name in both input documents. XmlDiff can be called only if the root nodes are same in input documents.

LPX-00913: XmlPatch could not process the XML PI oracle-xmldiff

Cause: The diff document either did not specify the XML Processing Instruction "oracle-xmldiff" or did not specify all data required by XmlPatch. The PI should be the first child of the top-level xdiff element. This error is also thrown when the output-model is "snapshot" and operations-in-docorder is "false".

Action: Specify the "oracle-xmldiff" PI correctly. See documentation for XmlPatch C function in xmldf.h.

LPX-00918: XmlPatch encountered an error in translating XPATH using XmlXVM

Cause: XmlPatch encountered an invalid XPATH in the diff document.

Action: If you handcoded the diff document, make sure all the XPATHs in the diff document are valid.

LPX-01001: [XPST0001] Static context component "~S" has no value

Cause: It is a static error if analysis of an expression relies on some component of the static context that has not been assigned a value.

Action: None

LPX-01002: [XPDY0002] Dynamic context component "~S" has no value

Cause: It is a dynamic error if evaluation of an expression relies on some// part of the dynamic context that has not been assigned a value.

Action: None

LPX-01003: [XPST0003] Syntax error at "~s"

Cause: It is a static error if an expression is not a valid instance of the grammar defined in A.1 EBNF

Action: None

LPX-01004: [XPTY0004] Expression type does not match a required type

Cause: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Action: Check the expression type.

LPX-01005: [XPST0005] Invalid empty-sequence() expression

Cause: During the analysis phase, it is a static error if the static type assigned to an expression other than the expression () or data(()) is empty-sequence().

Action: None

LPX-01006: [XPTY0006]

Cause: Not currently used.

Action: None

LPX-01007: [XPTY0007]

Cause: Not currently used.

Action: None

LPX-01008: [XPST0008] Invalid reference

Cause: It is a static error if an expression refers to an element name, attribute name, schema type name, namespace prefix, or variable name that is not defined in the static context, except for an ElementName in an ElementTest or an AttributeName in an AttributeTest.

Action: None

LPX-01009: [XQST0009] Schema Import Feature not supported

Cause: An implementation that does not support the Schema Import Feature must raise a static error if a Prolog contains a schema import.

Action: None

LPX-01010: [XPST0010] Axis "~S" not supported

Cause: An implementation must raise a static error if it encounters a reference to an axis that it does not support.

Action: None

LPX-01012: [XQST0012] Invalid XML schema

Cause: It is a static error if the set of definitions contained in all schemas imported by a Prolog do not satisfy the conditions for schema validity specified in Sections 3 and 5 of [XMLSchema] Part 1 i.e., each definition must be valid, complete, and unique

Action: None

LPX-01013: [XQST0013] Invalid pragma content

Cause: It is a static error if an implementation recognizes a pragma but determines that its content is invalid.

Action: None

LPX-01014: [XQST0014]

Cause: Not currently used.

Action: None

LPX-01015: [XQST0015]

Cause: Not currently used.

Action: None

LPX-01016: [XQST0016] Module Feature not supported

Cause: An implementation that does not support the Module Feature raises a static error if it encounters a module declaration or a module import.

Action: None

LPX-01017: [XPST0017] Invalid function call

Cause: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Action: None

LPX-01018: [XPTY0018] Path last step contains both nodes and atomic values

Cause: It is a type error if the result of the last step in a path expression contains both nodes and atomic values.

Action: None

LPX-01019: [XPTY0019] Path step contains atomic values

Cause: It is a type error if the result of a step (other than the last step) in a path expression contains an atomic value.

Action: None

LPX-01020: [XPTY0020] The path step context item is not a node

Cause: It is a type error if, in an axis step, the context item is not a node.

Action: None

LPX-01021: [XPDY0021]

Cause: Not currently used.

Action: None

LPX-01022: [XPDY0022]

Cause: Not currently used.

Action: None

LPX-01023: [XPDY0023]

Cause: Not currently used.

Action: None

LPX-01024: [XQTY0024] Attribute node out of context

Cause: It is a type error if the content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: None

LPX-01025: [XQDY0025] Repeated attribute name

Cause: It is a dynamic error if any attribute of a constructed element does not have a name that is distinct from the names of all other attributes of the constructed element.

Action: None

LPX-01026: [XQDY0026] Processing instruction content contains "?>"

Cause: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string "?>".

Action: None

LPX-01027: [XQDY0027] Invalid PSVI validity property of the root element

Cause: In a validate expression, it is a dynamic error if the root element information item in the PSVI resulting from validation does not have the expected validity property: valid if validation mode is strict, or either valid or notKnown if validation mode is lax.

Action: None

LPX-01028: [XQDY0028]

Cause: Not currently used

Action: None

LPX-01029: [XQDY0029]

    Cause: Not currently used

    Action: None

LPX-01030: [XQTY0030] Expression should evaluate to exactly one node

    Cause: It is a type error if the argument of a validate expression does not evaluate to exactly one document or element node.

    Action: None

LPX-01031: [XQST0031] Version not supported by the implementation

    Cause: It is a static error if the version number specified in a version declaration is not supported by the implementation.

    Action: None

LPX-01032: [XQST0032] Repeated base URI declaration

    Cause: A static error is raised if a Prolog contains more than one base URI declaration.

    Action: None

LPX-01033: [XQST0033] Multiple bindings for the namespace prefix "~s"

    Cause: It is a static error if a module contains multiple bindings for the same namespace prefix.

    Action: None

LPX-01034: [XQST0034] Repeated function declaration

    Cause: It is a static error if multiple functions declared or imported by a module have the number of arguments and their expanded QNames are equal (as defined by the eq operator).

    Action: None

LPX-01035: [XQST0035] Repeated schema components

    Cause: It is a static error to import two schema components that both define the same name in the same symbol space and in the same scope.

    Action: None

LPX-01036: [XQST0036] Schema type "~s" not defined

    Cause: It is a static error to import a module if the importing module"s in-scope schema types do not include definitions for the schema type names that appear in the declarations of variables and functions (whether in an argument type or return type) that are present in the imported module and are referenced in the importing module.

    Action: None

LPX-01037: [XQST0037]

    Cause: Not currently used

    Action: None

LPX-01038: [XQST0038] Invalid collation

    Cause: It is a static error if a Prolog contains more than one default collation declaration, or the value specified by a default collation declaration is not present in statically known collations.

    Action: None

LPX-01039: [XQST0039] Repeated parameter name

Cause: It is a static error for a function declaration to have more than one parameter with the same name.

Action: None

LPX-01040: [XQST0040] Repeated attribute name

Cause: It is a static error if the attributes specified by a direct element constructor do not have distinct expanded QNames.

Action: None

LPX-01041: [XQDY0041] Expression can''t be cast to the type xs:NCName

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor cannot be cast to the type xs:NCName.

Action: None

LPX-01042: [XQST0042]

Cause: Not currently used.

Action: None

LPX-01043: [XQST0043]

Cause: Not currently used.

Action: None

LPX-01044: [XQDY0044] Invalid attribute namespace

Cause: It is a dynamic error if the node-name property of the node constructed by a computed attribute constructor is in the namespace http://www.w3.org/2000/xmlns/ (corresponding to namespace prefix xmlns), or is in no namespace and has local name xmlns.

Action: None

LPX-01045: [XQST0045] Invalid function namespace

Cause: It is a static error if the function name in a function declaration is in one of the following namespaces: http://www.w3.org/XML/1998/namespace, http://www.w3.org/2001/XMLSchema, http://www.w3.org/2001/XMLSchema-instance, http://www.w3.org/2005/xpath-functions.

Action: None

LPX-01046: [XQST0046] Invalid URILiteral

Cause: An implementation MAY raise a static error if the value of a URILiteral is of nonzero length and is not in the lexical space of xs:anyURI.

Action: None

LPX-01047: [XQST0047] Repeated import module target namespace

Cause: It is a static error if multiple module imports in the same Prolog specify the same target namespace.

Action: None

LPX-01048: [XQST0048] Namespace should be as the module target namespace

Cause: It is a static error if a function or variable declared in a library module is not in the target namespace of the library module.

Action: None

LPX-01049: [XQST0049] Repeated variable declaration

Cause: It is a static error if two or more variables declared or imported by a module have equal expanded QNames (as defined by the eq operator.)

Action: None

LPX-01050: [XPDY0050] Invalid dynamic type

Cause: It is a dynamic error if the dynamic type of the operand of a treat expression does not match the sequence type specified by the treat expression. This error might also be raised by a path expression beginning with "/" or "//" if the context node is not in a tree that is rooted at a document node. This is because a leading "/" or "//" in a path expression is an abbreviation for an initial step that includes the clause treat as document-node().

Action: None

LPX-01051: [XQST0051] AtomicType not defined

Cause: It is a static error if a QName that is used as an AtomicType in a SequenceType is not defined in the in-scope schema types as an atomic type.

Action: None

LPX-01052: [XQDY0052]

Cause: Not currently used.

Action: None

LPX-01053: [XQDY0053]

Cause: Not currently used.

Action: None

LPX-01054: [XQST0054] The variable depends on itself

Cause: It is a static error if a variable depends on itself.

Action: None

LPX-01055: [XQST0055] Repeated copy-namespaces declaration

Cause: It is a static error if a Prolog contains more than one copy-namespaces declaration.

Action: None

LPX-01056: [XQST0056]

Cause: Not currently used.

Action: None

LPX-01057: [XQST0057] Missing schema import target namespace

Cause: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string.

Action: None

LPX-01058: [XQST0058] Repeated schema import target namespace

Cause: It is a static error if multiple schema imports specify the same target namespace.

Action: None

LPX-01059: [XQST0059] Can''t find schema or module with namespace "~s"

Cause: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace.

Action: None

LPX-01060: [XQST0060] Function name should have a namespace

Cause: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI).

Action: None

LPX-01061: [XQDY0061] Invalid document node

Cause: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order.

Action: None

LPX-01062: [XQDY0062]

Cause: Not currently used.

Action: None

LPX-01063: [XQST0063]

Cause: Not currently used.

Action: None

LPX-01064: [XQDY0064] Processing instruction name contains "XML"

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case).

Action: None

LPX-01065: [XQST0065] Repeated ordering mode declaration

Cause: A static error is raised if a Prolog contains more than one ordering mode declaration.

Action: None

LPX-01066: [XQST0066] Repeated default declaration

Cause: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration.

Action: None

LPX-01067: [XQST0067] Repeated construction declaration

Cause: A static error is raised if a Prolog contains more than one construction declaration.

Action: None

LPX-01068: [XQST0068] Repeated boundary-space declaration

Cause: A static error is raised if a Prolog contains more than one boundary-space declaration.

Action: None

LPX-01069: [XQST0069] Repeated empty order declaration

Cause: A static error is raised if a Prolog contains more than one empty order declaration.

Action: None

LPX-01070: [XQST0070] Invalid (prefix, URI) combination

Cause: A static error is raised if a namespace URI is bound to the predefined prefix xmlns, or if a namespace URI other than http://www.w3.org/XML/1998/namespace is bound to the prefix xml, or if the prefix xml is bound to a namespace URI other than http://www.w3.org/XML/1998/namespace.

Action: None

LPX-01071: [XQST0071] Repeated namespace attribute

Cause: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names.

Action: None

LPX-01072: [XQDY0072] Element content contains invalid hyphens combination

Cause: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen.

Action: None

LPX-01073: [XQST0073] Cyclic import sequence

Cause: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace.

Action: None

LPX-01074: [XQDY0074] Invalid element QName

Cause: It is a dynamic error if the value of the name expression in a computed element or attribute constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Action: None

LPX-01075: [XQST0075] Validate expression not supported

Cause: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression.

Action: None

LPX-01076: [XQST0076] Invalid collation

Cause: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations.

Action: None

LPX-01077: [XQST0077]

Cause: Not currently used.

Action: None

LPX-01078: [XQST0078]

Cause: Not currently used.

Action: None

LPX-01079: [XQST0079] Invalid extension expression

Cause: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces.

Action: None

LPX-01080: [XQST0080] Invalid target type

Cause: It is a static error if the target type of a cast or castable expression is xs:NOTATION or xs:anyAtomicType.

Action: None

LPX-01081: [XQST0081] Invalid prefix

Cause: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Action: None

LPX-01082: [XQST0082]

Cause: Not currently used.

Action: None

LPX-01083: [XQST0083]

Cause: Not currently used.

Action: None

LPX-01084: [XQDY0084] Missing top-level element declaration

Cause: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict.

Action: None

LPX-01085: [XQST0085] The namespace URI shouldn''t be a zero-length string

Cause: It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Action: None

LPX-01086: [XQTY0086] No-preserve mode conflict

Cause: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve.

Action: None

LPX-01087: [XQST0087] Invalid encoding

Cause: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0].

Action: None

LPX-01088: [XQST0088] Target namespace string shouldn''t be of zero length

Cause: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length.

Action: None

LPX-01089: [XQST0089] Repeated variable name

Cause: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames).

Action: None

LPX-01090: [XQST0090] Invalid character reference

Cause: It is a static error if a character reference does not identify a valid character in the version of XML that is in use.

Action: None

LPX-01091: [XQDY0091] Invalid xml:id

Cause: An implementation MAY raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id.

Action: None

LPX-01092: [XQDY0092] Invalid xml:space value

Cause: An implementation MAY raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default.

Action: None

LPX-01093: [XQST0093] Module depends on itself

Cause: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Action: None

79

LSX-00001 to LSX-00344

LSX-00001: NULL pointer

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the Schema processor. Contact someone who can fix the problem.

LSX-00002: root element is not <schema>

Cause: The top-level element of an XML Schema must be <schema>.

Action: Correct the Schema; consult the Schema specification.

LSX-00003: invalid attribute "~1S" for element "~2S"

Cause: The named Schema element had an invalid attribute.

Action: Correct the Schema; consult the Schema specification.

LSX-00004: unexpected XML node type

Cause: Schema contains an XML node other than element, text (or CDATA),

Action: Other node types are not permitted; remove them.

LSX-00008: feature "~s" is not implemented

Cause: An attempt was made to use a feature that is not yet implemented.

Action: Make an enhancement request for the feature.

LSX-00009: data missing for type "~S"

Cause: Data is missing for an element or attribute of a simple type.

Action: Add data in the element or attribute.

LSX-00010: extra element(s) at end of "~S"

Cause: Extra elements exist at the end of schema component declarations.

Action: Remove the extra elements.

LSX-00011: internal error: ~s

Cause: Implementation error.

Action: File a bug.

LSX-00013: element "~S" not from Schema of Schemas

Cause: Bogus element exists in the schema file. Its name is not from Schema of Schemas.

Action: Remove the bogus element.

LSX-00014: empty instance document

Cause: Instance document to be Schema validated was empty (no top-level element).

Action: Provide a complete XML instance document.

LSX-00015: failed to parse document

Cause: Failed to parse the schema document using the given URI.

Action: Provide the correct URI and make sure that the schema document is valid.

LSX-00016: schema and instance document have incompatible character sets

Cause: Parsed schema components were in a simple-type character set while the parsed instance document data was not. A simple-type character set is single-byte, not shift sensitive, and has no linguistic specials in use.

Action: Reinitialize the schema global context with appropriate parser context settings, i.e. pass a parser context with its output encoding set to be a multibyte or Unicode character set.

LSX-00018: invalid schema context

Cause: An invalid schema context was provided to the processor. Multiple schema documents were loaded and assembled into the schema context. At least one of them is not fully valid with respect to a schema corresponding to the Schema for Schemas.

Action: Check the errors reported when schema documents were loaded, mapped, or validated. Correct errors found in the identified schema documents and reload them into a new schema context. Then provide the new schema context to the processor.

LSX-00020: unknown type "~S"

Cause: A specified type was unknown (not defined in any loaded Schemas).

Action: Make sure the type was defined and that the type usage referenced the correct Schema.

LSX-00021: undefined element "~S"

Cause: Element is undefined in the specified namespace.

Action: If the element name is misspelled, correct the spelling.

LSX-00022: unknown namespace prefix "~S"

Cause: Prefix in a QName is undefined in the current scope.

Action: Correct the prefix name if it"s misspelled.

LSX-00023: unknown namespace URI "~S"

Cause: Namespace URI is unknown to the schema processor.

Action: Correct the namespace URI if it"s misspelled.

LSX-00024: unknown attribute group "~S"

Cause: The name of attribute group is unknown to the schema processor in the current scope.

Action: Correct the name of attribute group if it"s misspelled.

LSX-00025: unknown group "~S"

Cause: The name of group is unknown to the schema processor in the current scope.

Action: Correct the name of group if it"s misspelled.

LSX-00026: unknown attribute "~S"

    Cause: The name of attribute is unknown to the schema processor in the current scope.

    Action: Correct the name of attribute if it"s misspelled.

LSX-00027: property "~s" unknown

    Cause: The named validation property was unknown.

    Action: Refer to the documentation for the complete list of validation properties.

LSX-00102: duplicate element "~S"

    Cause: Element declaration is not unique within its scope.

    Action: Rename the element.

LSX-00103: duplicate group "~S"

    Cause: Group declaration is not unique within its scope.

    Action: Rename the group.

LSX-00104: duplicate type "~S"

    Cause: Type definition is not unique within its scope.

    Action: Rename the type.

LSX-00105: duplicate attribute group "~S"

    Cause: Attribute group declaration is not unique within its scope.

    Action: Rename the attribute group.

LSX-00106: duplicate attribute "~S"

    Cause: Attribute declaration is not unique within its scope.

    Action: Rename the attribute.

LSX-00110: facet "~S" should have single value attribute

    Cause: A facet declaration did not have a value attribute.

    Action: Each facet declaration must contain one and only one value attribute.

LSX-00111: type "~S" contains invalid facets

    Cause: A specified facet was invalid for a type. Each datatype has a different set of facets which may apply.

    Action: Use only applicable facets for the type.

LSX-00112: facet "~S" duplicated

    Cause: A facet (other than "enumeration") was specified more than once.

    Action: Only the enumeration facet may be used more than once for a type.

LSX-00113: facet "~1S" has invalid value "~2S"

    Cause: Facet value contained illegal characters or its value was out of range.

    Action: Remove illegal characters.

LSX-00114: facet "~S" not in schema schema

    Cause: Facets are not defined in the XMLSchema namespace.

    Action: Remove illegal facet declarations.

LSX-00116: mutually exclusive facets are not allowed

Cause: Mutual exclusiveness violations were found for facets. For example, both "length" and either "minLength" or "maxLength" are not allowed to be facets.

Action: Remove the facets that are at fault.

LSX-00117: "minLength" should not be greater than "maxLength"

Cause: The value of "minLength" must be less than or equal to the value of "maxLength".

Action: Correct either "minLength" or "maxLength".

LSX-00118: fixed facet value cannot be changed

Cause: The value of a fixed facet in the base type definition should remain the same.

Action: Remove the fixed facet specification in the parent"s type for the erroneous facet component.

LSX-00119: value is not valid restriction of parent"s minLength

Cause: There was an error in that minLength was among the members of {facets} of {base type definition} and {value} was less than the {value} of the parent minLength.

Action: Increase the {value} of minLength.

LSX-00120: value is not valid restriction of parent"s maxLength

Cause: There was an error in that maxLength was among the members of {facets} of {base type definition} and {value} was greater than the {value} of the parent maxLength.

Action: Increase the {value} of maxLength.

LSX-00121: value is not valid restriction of parent"s length

Cause: There was an error in that length was among the members of {facets} of {base type definition} and {value} was not equal to the {value} of the parent length.

Action: Make {value} the same as parent"s.

LSX-00122: value is not valid restriction of parent"s whiteSpace

Cause: There was an error in that whiteSpace was among the members of {facets} of {base type definition} and at least one of the following conditions was true: 1 {value} is replace or preserve and {value} of the parent whiteSpace is collapse 2 {value} is preserve and the {value} of the parent whiteSpace is replace

Action: Change the {value} of whiteSpace.

LSX-00123: base type is required

Cause: Missing base type declaration in the type definition.

Action: Define a base type.

LSX-00124: "list" element is improperly defined

Cause: A "list" element either must have its "itemType" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00125: "restriction" element is improperly defined

Cause: A "restriction" element either must have its "base" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00126: facet "~1S" has invalid value "~u"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00130: attribute "processContents" has invalid value "~S"

Cause: Attribute "processContents" in the "any" element or "anyAttribute" declaration has an invalid value.

Action: Specify one of the following values: lax, skip, or strict.

LSX-00132: attribute "~1S" has invalid occurrences value "~2S"

Cause: A minOccurs or maxOccurs attribute had an invalid value (not a integer or less than zero).

Action: Use a legal "occurs" value.

LSX-00133: attribute "use" has invalid value "~S"

Cause: A "use" attribute had an invalid value. Choices for "use" are "default", "fixed", "optional", "prohibited", or "required".

Action: Change the attribute to one of the above values.

LSX-00134: attribute "~1S" has invalid qualification "~2S"

Cause: An attribute that specifies qualification (form, attributeFormDefault, elementFormDefault) was invalid; it must be one of "qualified" or "unqualified".

Action: Change the attribute to one of the above values.

LSX-00135: invalid min/max Occurs for <all> element, must be 0/1

Cause: "minOccurs" has a value other than 0/1 or "maxOccurs" has a value other than 1.

Action: Specify 0/1 for "minOccurs" or "maxOccurs".

LSX-00136: "maxOccurs" is less than "minOccurs"

Cause: The value of the "maxOccurs" specification is less than the value of the "minOccurs" specification.

Action: Correct "minOccurs" or "maxOccurs".

LSX-00141: ID type may only be used in attributes

Cause: For backward compatibility with DTD, ID type may only be used in attributes.

Action: Remove the ID type.

LSX-00142: invalid sub-element "~1S" for element "~2S"

Cause: There was an invalid sub-element in the content of either the attribute or the element declaration. This was because the sub-element was either at the wrong position or out of context.

Action: Remove the sub-element or move it to the correct position.

LSX-00143: element "~S" must have type or ref

Cause: A Schema element was declared but was neither type or reference.

Action: One of type or reference must be specified.

LSX-00144: attribute "~1S" invalid derivation-restriction value "~2S"

Cause: An attribute which specifies a derivation-restriction setting (block, content, final) had an invalid value. Choices are "#all", "extension", or "restriction".

Action: Change the attribute to one of the above values.

LSX-00145: attribute "~1S" invalid derived value "~2S"

Cause: A derivedBy attribute had an invalid value. Choices are "extension" or "restriction".

Action: Change the attribute to one of the above values.

LSX-00146: element or attribute is improperly defined

Cause: An element or attribute definition must have either its "type" attribute set or must have one of its children be a "simpleType" or "complexType" element but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00147: "~1S" cannot contain "~2S"

Cause: An invalid schema component exists in the current declaration.

Action: Remove the schema component.

LSX-00148: annotation must come first in "~S"

Cause: "annotation" element must be the first in the content.

Action: Make "annotation" the first element.

LSX-00149: duplicated ID specified in "~S"

Cause: An attempt was made to specify two distinct members of {attribute uses}with {attribute declaration}s, both of whose {type definition}s are from ID or are derived from ID.

Action: Declare only one member of the {attribute uses} whose {type definition} is from ID or will be derived from ID.

LSX-00150: attributeGroup reference shouldn"t have children

Cause: A reference-to-attributeGroup element has children. It is suppose to be empty except for annotations.

Action: Remove the children.

LSX-00151: invalid combination of attributes "ref" and "name"

Cause: If the item"s parent is not <schema>, then either the "ref" or the "name" attribute must be present, but not both. Top-level elements or attributes must have a name.

Action: Specify either the "ref" or "name" attribute.

LSX-00152: only "minOccurs", "maxOccurs", or "id" is allowed

Cause: If the item"s parent is not <schema> and "ref" is present, then "complexType", "simpleType", "key", "keyref", "unique", "nillable", "default", "fixed", "form", "block", and "type" must be absent.

Action: Remove the prohibited attribute.

LSX-00153: invalid combination of default and fixed attributes

Cause: It is an error for a declaration to contain both fixed and default attributes.

Action: Remove either the default or the fixed attributes.

LSX-00154: attribute "use" must have its value set to "optional"

Cause: If "default" and "use" are both present, use must have its value set to "optional".

Action: Remove the default attribute or change the value of the "use" attribute.

LSX-00155: invalid use of attribute "ref"

Cause: If the item"s parent is not <schema> and the attribute "ref" is present, then the element "simpleType" and the attributes "form" and "type" must be absent.

Action: Remove the prohibited items.

LSX-00156: type is final and no derivations are allowed

Cause: Derivation from a type that is declared to be final occurred.

Action: Remove the final declaration from the base type.

LSX-00157: "~S" is abstract and cannot be used in an instance document

Cause: The element declaration or the type definition was abstract.

Action: When an element is declared to be abstract, a member of that element"s substitution group must appear in the instance document. When an element"s corresponding type definition is declared as abstract, all instances of that element must use xsi:type to indicate a derived type that is not abstract.

LSX-00158: base type of "~S" must be simple type or primitive datatype

Cause: The derivation constraint was violated.

Action: Use complexType instead of simpleType.

LSX-00159: list content of multiple simple types is not allowed

Cause: Two or more simple types were specified within the list content .

Action: Specify only one simple type.

LSX-00160: invalid substitution group affiliation between "~S" and "~S"

Cause: There was an error in that {substitution group exclusions} prevented substitution group affiliation by type restriction or type extension.

Action: Remove the offending deriving method from the {substitution group exclusions} list.

LSX-00161: disallowed type substitution between "~S" and "~S"

Cause: There was a substituted type whose deriving method falls in the union of the {disallowed substitutions} and the {type definition}"s {prohibited substitutions}.

Action: Remove the offending deriving method from the element"s {disallowed substitutions} list or the {type definition}"s {prohibited substitutions} list.

LSX-00162: string "~S" is an invalid default for the complex type

Cause: If the {content type} is a simple type definition, then the string must be valid with regard to the simple type definition as defined by String Valid (3.14.4). If the {content type} is mixed, then the {content type}"s particle must be emptiable as defined by Particle Emptiable (3.9.6). However, one of these conditions was not met, resulting in this error.

Action: Make the default string a valid default with regard to the complex type definition.

LSX-00163: duplicated content specification in "~S"

Cause: There was a duplicate content specification in the children of complexType.

Action: Remove the duplicate content specification.

LSX-00164: no content specified in "~S"

Cause: In a simpleContent specification, either "restriction" or "extension" was not specified as a child.

Action: Add either a "restriction" or an "extension" element information item.

LSX-00165: content type of "~S" must be simple type

Cause: The content type of the type definition was not a simple type definition.

Action: Use complexContent instead of simpleContent .

LSX-00166: both content types must be mixed or both must be element-only

Cause: If the content types of the derived type and base type are not the same simple type definition and the content type of the base type is not empty, then both content types must be mixed or both must be element-only. This was not the case, resulting in this error.

Action: Add attribute mixed="true" or remove it.

LSX-00167: defining form of "~S" must occur at the top level

Cause: The defining form did not occur at the top level of a schema.

Action: Move attributeGroup or group definition to the top level of the schema.

LSX-00168: referring form of "~S" must NOT occur at the top level

Cause: The referring form did not occur within a complex type definition or an attribute group definition.

Action: Move the attributeGroup definition to within a complex type definition or an attribute group definition. Or, move the group definition to within a complex type, restriction, extension, choice, or sequence.

LSX-00169: circular group reference is disallowed outside <redefine>

Cause: There was a circular group reference.

Action: One of the group references needs to be changed to a group definition.

LSX-00170: union must have memberTypes attribute or some simpleType children

Cause: There was no member type definition for the union declaration.

Action: Add memberTypes attribute or simpleType children.

LSX-00171: missing required sub-element "~S"

Cause: The sub-element specified in the error message was required.

Action: Add the required sub-element.

LSX-00172: "~S" is not a valid restriction of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, Complex) or Particle Valid (Restriction), was violated.

Action: Modify the base type (particle) or the restricted type (particle) definition.

LSX-00173: ~S of ~S type is not a valid restriction of ~S of ~S type

Cause: The schema component constraint, Particle Restriction OK (Elt:Elt -- NameAndTypeOK), was violated.

Action: Modify either or both element declaration particles.

LSX-00174: "~S" is not a valid derivation of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, simple), (Restriction, complex) or (Extension), was violated.

Action: Modify the base type or the derived type definition.

LSX-00175: a complex base within "simpleContent" must have simple content

Cause: A complex base within "simpleContent" was not restricted to contain only simple content.

Action: Modify the base type or the derived type definition.

LSX-00176: circular reference detected in schema component named "~S"

Cause: An attempt was made to use a circular reference. This is not allowed. For example, it is not possible to return to an element declaration by repeatedly following the {substitution group affiliation} property. Or, within the {particles} of a group there must not be at any depth a particle whose {term} is the group itself.

Action: Modify one of the schema components in the loop.

LSX-00200: element "~S" not empty

Cause: Content of the element must be empty.

Action: Remove any schema components in the content.

LSX-00201: contents of "~S" should be elements only

Cause: Node with type other than "element", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00202: contents of "~S" should be text only

Cause: Node with type other than "text", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00204: extra data at end of complex element

Cause: Extra nodes exist at the end of an element with a complex type definition.

Action: Remove the offending nodes or check the definition of the complex type.

LSX-00205: element "~1S" value "~2S" is wrong (must be "~3S")

Cause: The element had a value other than its fixed value.

Action: Use the fixed value as its value.

LSX-00206: substitution for element "~S" is disallowed

Cause: An attempt was made to substitute an element that violated a constraint.

Action: Change to a valid new element that can be substituted for the headElement.

LSX-00210: value "~1S" out of range for type "~2S"

Cause: Value is out of range for the data with a specific type.

Action: Fix the value.

LSX-00211: value "~1S" whose fractional digits exceeds ~2d

Cause: Too many fractional digits after the decimal point.

Action: Remove the extra fractional digits.

LSX-00212: value "~1s" whose total digits exceeds ~2d

Cause: Too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00213: only ~1d occurrences of particle "~2S", minimum is ~3d

    Cause: Too few occurrences of particles in the node.

    Action: Specify more particles.

LSX-00214: too many occurrences of particle "~1S", maximum is ~2d

    Cause: Too many occurrences of particles in the node.

    Action: Remove extra ones.

LSX-00215: value "~1S" whose total digits exceeds ~2d

    Cause: There were too many digits in the decimal data.

    Action: Remove the extra digits.

LSX-00220: "~1S" is wrong length, should be ~2d

    Cause: Data of simple type has invalid length.

    Action: Fix the length of the data.

LSX-00221: "~1S" is too short (minimum length is ~2d)

    Cause: The length of the data is too short.

    Action: Prepend extra characters (such as zeros or blank characters) to make the data longer.

LSX-00222: "~1S" is too long (maximum length is ~2d)

    Cause: The length of the data is too long.

    Action: Remove extra characters from the data.

LSX-00229: item type is not a valid type for a list simple type

    Cause: The specified item type must not itself be a list type, and must be one of the types identified in [XML Schemas: Datatypes] as a suitable item type for a list simple type.

    Action: Change the list schema component"s declaration.

LSX-00230: invalid integer "~S"

    Cause: Illegal characters exist in the "integer" or its derivative type declarations.

    Action: Remove illegal characters.

LSX-00231: invalid unsigned integer "~S"

    Cause: Illegal characters exist in the "unsignedLong", "unsignedInt", "unsignedShort", or "unsignedByte" declarations.

    Action: Remove illegal characters.

LSX-00232: invalid unsigned long "~S"

    Cause: Illegal characters exist in the "unsignedLong" declaration.

    Action: Remove illegal characters.

LSX-00233: invalid long "~S"

    Cause: Illegal characters exist in the "long" declaration.

    Action: Remove illegal characters.

LSX-00234: invalid decimal "~S"

    Cause: Illegal characters exist in the "decimal" declaration.

    Action: Remove illegal characters.

LSX-00235: invalid URI "~S"

Cause: Invalid URI specification for data of "anyURI" type.

Action: Remove illegal characters.

LSX-00237: invalid Name "~S"

Cause: Invalid XML name.

Action: Remove illegal characters.

LSX-00238: invalid Nmtoken "~S"

Cause: Invalid Nmtoken.

Action: Remove illegal characters.

LSX-00240: bad float "~S"

Cause: Invalid value for "float" type data.

Action: Remove illegal characters.

LSX-00241: bad double "~S"

Cause: Invalid value for "double" type data.

Action: Remove illegal characters.

LSX-00242: bad Boolean "~S"

Cause: Boolean data must have a value from the following set: "1", "0", "true", or "false".

Action: Specify one of "1", "0", "true", or "false".

LSX-00243: invalid date "~S"

Cause: Invalid value for data of "date" type.

Action: Remove illegal characters.

LSX-00244: invalid NCName "~S"

Cause: Invalid value for data of "NCName" type.

Action: Remove illegal characters.

LSX-00245: invalid ID "~S"

Cause: Data specified is not of "NCName" type.

Action: Remove illegal characters.

LSX-00246: invalid QName "~S"

Cause: Invalid value for data of "QName" type.

Action: Remove illegal characters.

LSX-00247: invalid language specification "~S"

Cause: Invalid value for data of "language" type.

Action: Remove illegal characters.

LSX-00248: invalid duration "~S"

Cause: Invalid value for data of "duration" type.

Action: Remove illegal characters.

LSX-00249: invalid date or time "~S"

Cause: Invalid value for data of "dateTime", "time", "gYearMonth", "gYear", "gMonthDay", "gDay", or "gMonth" type.

Action: Remove illegal characters.

LSX-00250: invalid normalizedString "~S"

Cause: Invalid value for data of "normalizedString" type.

Action: Remove illegal characters.

LSX-00251: invalid token "~S"

Cause: Invalid value for data of "token" type.

Action: Remove illegal characters.

LSX-00252: invalid union "~S"

Cause: Data of simple type is not one of the union type.

Action: Use one of the union type as its type.

LSX-00253: branch is empty

Cause: The pattern specification "branch1 | branch2" has either "branch1" or "branch2" missing.

Action: Remove "|" or add either "branch1" or "branch2".

LSX-00255: mismatched parentheses

Cause: ")" found without a matching "(" in a pattern specification.

Action: Add "(" to the pattern specification.

LSX-00256: empty character class expression

Cause: "[]" found when processing a character class expression.

Action: Specify the character group within the brackets.

LSX-00257: atom specification is missing

Cause: A quantifier was found without an atom specification.

Action: Add an atom specification in front of the quantifier.

LSX-00258: invalid escape character

Cause: "x" in "\x" is not a valid escape character.

Action: Change "x" to a valid escape character.

LSX-00259: invalid character found in the pattern

Cause: An unexpected character was found in the pattern.

Action: Fix the pattern.

LSX-00260: unexpected end of pattern

Cause: Something is missing at the end of the pattern.

Action: Fix the pattern.

LSX-00261: invalid character property

Cause: An error occurred when processing the character property. For example, "{" is missing after "\p" or "\P".

Action: Fix the character property.

LSX-00262: attribute "~1S" cannot have complex type "~2S"

Cause: The type of the attribute is "complex".

Action: Specify the type of the attribute to be "simple".

LSX-00263: undefined attribute "~S"

Cause: Violating attribute is not defined in the current scope.

Action: Correct the attribute name if it"s misspelled.

LSX-00264: attribute "~S" is prohibited (may not occur)

Cause: Global declarations cannot contain the attributes "ref", "minOccurs", or "maxOccurs", or the use of this attribute is explicitly declared as "prohibited" by the schema.

Action: Remove the attribute.

LSX-00265: attribute "~1S" value "~2S" is wrong (must be "~3S")

Cause: Attribute has a value other than its fixed value.

Action: Use fixed value as its value.

LSX-00266: missing required attribute "~S"

Cause: A required attribute is missing.

Action: Add the required attribute.

LSX-00270: hex-encoded binary has odd length

Cause: Data of "hexBinary" type has odd number of digits.

Action: Add missing digits as appropriate.

LSX-00271: invalid character "~c" in hex-encoded binary

Cause: Data of "hexBinary" type has invalid characters.

Action: Remove illegal characters.

LSX-00272: BASE64-encoded binary grouped improperly (not 4"s)

Cause: Number of digits is not a multiple of four.

Action: Add missing digits as appropriate.

LSX-00273: invalid character "~c" in base64-encoded binary

Cause: Data of "base64Binary" type has invalid characters.

Action: Remove illegal characters.

LSX-00274: invalid padding in base64-encoded binary

Cause: Invalid padding characters at the end of data.

Action: Use "=" as the padding characters.

LSX-00280: duplicate ID "~S"

Cause: ID name is not unique within the schema scope.

Action: Rename the ID.

LSX-00281: referenced ID "~S" is not defined

Cause: Referenced ID name is not defined within the schema scope.

Action: Define the ID.

LSX-00282: duplicate notation name "~S"

Cause: The name of the "notation" element is not unique within the schema scope.

Action: Rename the element.

LSX-00283: referenced notation "~S" is not defined
> **Cause:** Referenced notation name is not defined within the schema scope.
>
> **Action:** Define the element.

LSX-00284: duplicate constraint name "~S"
> **Cause:** Each constraint declaration has a name which exists in a single symbol space for constraints.
>
> **Action:** Choose a different name.

LSX-00285: referenced key "~S" is not defined
> **Cause:** Referenced key name is not defined within the schema scope.
>
> **Action:** Define the key.

LSX-00286: duplicate key "~S" for {"~S"}"~S"
> **Cause:** The key value was not unique within its scope.
>
> **Action:** Change the key value.

LSX-00287: duplicate key "~S"
> **Cause:** The key value was not unique within its scope.
>
> **Action:** Change the key value.

LSX-00290: invalid enumeration choice "~S"
> **Cause:** The value of the data is not one of the enumeration choice.
>
> **Action:** Select one of the enumeration choice as its value.

LSX-00291: value "~1S" is less than minimum "~2S" (~3S)
> **Cause:** Data has a value less than required minimum.
>
> **Action:** Increase the value.

LSX-00292: value "~1S" is greater than maximum "~2S" (~3S)
> **Cause:** Data has a value greater than maximum.
>
> **Action:** Decrease the value.

LSX-00293: missing one or more fields from element "~S"
> **Cause:** The required fields were missing from the content of the element.
>
> **Action:** Add the fields.

LSX-00294: field "~S" produced multiple hits
> **Cause:** XPath expressions relative to each element selected by a {selector}are specified by {fields}. These XPath expressions must identify a single node (element or attribute) whose content or value was used in the constraint. This content or value must be of a simple type.
>
> **Action:** Remove duplicate elements or attributes.

LSX-00295: field element "~S" is not a simple type
> **Cause:** The field element evaluated to a node-set with a member that was not a simple type.
>
> **Action:** Change the field element"s type.

LSX-00300: group must have name or ref but not both

Cause: "ref" or "name" attributes are either both missing or have both been specified.

Action: Specify either "ref", "name", but not both.

LSX-00310: local element or attribute should be namespace qualified

Cause: Element or attribute name is not namespace qualified.

Action: Add prefix or default namespace URI declaration.

LSX-00311: local element or attribute shouldn''t be namespace qualified

Cause: Element or attribute name is namespace qualified.

Action: Remove prefix or default namespace URI declaration from itself or ancestors.

LSX-00320: missing required elements in <all>

Cause: Some required elements in "all" particle are missing.

Action: Add the missing elements.

LSX-00330: missing range start character

Cause: Missing range start character in a character range specification.

Action: Add the missing characters.

LSX-00331: missing comma

Cause: A comma is missing in a range specification.

Action: Add the missing characters.

LSX-00332: bad decimal digits in a quantifier specification

Cause: Quatifier has invalid characters.

Action: Remove illegal characters.

LSX-00333: literal "~S" is not valid with respect to the pattern

Cause: Literal is not valid with respect to the pattern.

Action: Choose correct characters in the literal.

LSX-00340: improper namespace value for the imported element

Cause: If the namespace attribute is present, then its actual value must not match the actual value of the enclosing schema''s targetNamespace attribute. If the namespace attribute is not present, then the enclosing schema must have a targetNamespace attribute.

Action: Match namespace value.

LSX-00341: ENTITY or ENTITIES type may only be used in attributes

Cause: For compatibility, ENTITY or ENTITIES should be used only on attributes.

Action: Remove the ENTITY or ENTITIES.

LSX-00342: value of attribute "base" must be a complex type definition

Cause: If the "complexContent" alternative is chosen, then the type definition resolved to by the actual value of the attribute "base" must be a complex type definition.

Action: Choose a complex type definition as its base type.

LSX-00343: "~S" is not nillable

Cause: Attribute nillable was set to be "false" in element''s declaration.

Action: Remove attribute xsi:nil from the instance document.

LSX-00344: namespace values "~1S" and "~2S" differ

Cause: The targetNamespace specified in the schema document differed from either: a) the value of the enclosing schema"s namespace attribute, or b) the value of the namespace attribute identified in the import element information item.

Action: Match the namespace value to the enclosing schema"s targetNamespace attribute or the actual value of the namespace attribute identified in the import element information item.

80

PGA-20900 to PGA-22014

PGA-20900: unable to obtain *number* **bytes of storage for** *string*

    Cause: Memory shortage in the gateway server process.

    Action: Ensure your system has enough available memory to support the number of concurrent users you are running.

PGA-20901: internal gateway error: *string*

    Cause: Internal error in the gateway server process.

    Action: Reproduce the error with debugging enabled to produce a log file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-20905: invalid conversation id: no active conversations were found

    Cause: There were no APPC conversations active for the user.

    Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20906: invalid conversation id: no matching conversation was found

    Cause: The conversation id received from the caller is not a valid active conversation id.

    Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20907: preceding error occurred during gateway *string* **processing**

    Cause: An error occurred processing the Oracle function <func>. This message is preceded by additional messages providing more detailed information about the error.

    Action: Refer to the messages preceding this one to determine the course of action to take.

PGA-20910: communication error: CPI-C *string* **failed, rc =** *number***, errno =** *number*

    Cause: An unexpected communication error occurred while executing the specified CPI-C function <func>. The CPI-C function return code <rc> and system error number <errno> are provided in the message text. The CPI-C function return codes and system error numbers are described in the vendor documentation.

    Action: Determine the cause of the communications error, correct it, and rerun the transaction.

PGA-20911: update transaction is already active with TP *string* **at LU** *string*

Cause: Transaction <tpname> has already been started at LU <luname> by a PGAINIT call with synclevel set to 1 or 2. Only one transaction at synclevel 1 or 2 is allowed at any given time.

Action: The new transaction is not started. Change your application to start the second update transaction after the first one has completed, or to use a different gateway database link for the second update transaction.

PGA-20912: send and receive buffer lengths cannot both be zero

Cause: Both the send and receive buffer lengths passed to PGAXFER were zero. This is invalid.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20914: send buffer length of *number* exceeds actual send buffer size of *number*

Cause: The send buffer length <len> passed to PGAXFER was larger than the actual size <size> of the send buffer passed to PGAXFER.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20915: receive buffer length of *number* exceeds the maximum of *number*

Cause: The receive buffer length <len> passed to PGAXFER was larger than the maximum allowed length <max>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20916: send count is *number* but only *number* send lengths were specified

Cause: The first value <count> in the send lengths array passed to PGAXFER specified more elements than the send lengths array contained. Only <num> elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20917: receive count is *number* but only *number* receive lengths were specified

Cause: The first value <count> in the receive lengths array passed to PGAXFER specified more elements than the receive lengths array contained. Only <num> elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20918: send length number *number* **is** *number* **but only** *number* **bytes are left in the buffer**

Cause: The length <len> specified in send lengths array element number <num> exceeded the number of bytes <bytes> of data remaining in the send buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20919: receive length number *number* **is** *number* **but only** *number* **bytes are left in the buffer**

Cause: The length <len> specified in receive lengths array element number <num> exceeded the number of bytes <bytes> of space remaining in the receive buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20920: unexpected request-to-send received

Cause: The remote transaction program requested to send data when the gateway was still sending data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20921: buffer overflow on receive: requested *number* **bytes, received** *number* **bytes**

Cause: The remote transaction program sent <len> bytes of data when the gateway was expecting to receive only <num> bytes.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20922: no data available to receive: *number* **bytes were requested**

Cause: The remote transaction program has either requested to receive or deallocated the conversation, but the gateway is still expecting to receive more data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20923: unexpected status, *number* **(***string***), received after** *string*

Cause: An unexpected status code <stat> was received from the remote transaction program following the CPI-C <func> call. The descriptive name of the status code is <desc>. <func> is the CPI-C function receiving the status.

Action: This is usually a problem with the remote transaction program or a network problem. The status codes for each CPI-C function call are documented in the platform-specific SNA software documentation for your system. Refer to the "System Requirements" chapter of the Oracle Database Gateway for APPC Installation and Configuration Guide for your platform for titles of SNA software documentation.

PGA-20924: unable to enter send state for deallocate, state = *number* (*string*)

Cause: The gateway was unable to enter send state to perform a normal deallocation. The conversation state is <state>, and its descriptive name is <desc>. The conversation states are documented in the /usr/include/cmc.h header file.

Action: This is usually a problem with the remote transaction program or a problem with the network. Check the remote system for diagnostic information. The gateway will perform an abnormal deallocation after this error has been encountered.

PGA-20925: missing LU/TP/MODE name parameter and no side info profile specified

Cause: PGAINIT was called with no Side Information profile name specified but the LU name, TP name, and MODE name parameters were not all filled in with non-blank values.

Action: Check the PGDL used to define the transaction program to PGAU to ensure that either a valid Side Information profile name is specified (SIDEPROFILE keyword), or that the LU name, TP name, and Mode name (LUNAME, TPNAME, LOGMODE keywords) are all specified with valid values. If no Side Information profile is specified, the LU name, TP name, and Mode name parameters are all required.

PGA-20926: userid *string* length of *number* is invalid; maximum length is *number*

Cause: The userid <uid> is too long (<len>) to be used with APPC conversation security. The maximum allowable length for the userid is <max> characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20927: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (<len>) to be used with APPC conversation security. The maximum allowable length for the password is <max> characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20928: cannot open parameter file *string*

Cause: The gateway cannot locate or open the file specified.

Action: Make sure that the file exists in a location expected by the gateway and can be opened.

PGA-20930: invalid SYNCLEVEL, *number*, specified; valid range is *number:number*

Cause: The synclevel, <sync>, passed to PGAINIT is not a valid value. This value is specified by the SYNCLEVEL keyword in the DEFINE TRANSACTION statement used to define the transaction to PGAU.

Action: The value for SYNCLEVEL must fall within the range <min>:<max>. Correct the value specified in the DEFINE TRANSACTION statement for the SYNCLEVEL keyword, and regenerate the PL/SQL TIP using PGAU.

PGA-20931: send buffer length of *number* exceeds the maximum of *number*

Cause: The send buffer length, <len>, passed to PGAXFER was larger than the maximum allowed, <max>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU do not define any data items larger than the maximum size allowed by APPC. Correct the data item(s) in error and regenerate the PL/SQL TIP using PGAU.

PGA-20932: invalid function code, *string*, passed to pgatctl

Cause: The function code, <func>, passed to the PGATCTL function was invalid.

Action: Correct the function code in the PL/SQL procedure, recompile it, and retry the operation.

PGA-20933: invalid value specified by initialization parameter *string=string*

Cause: The keyword parameter <keyword>=<value> specifies an invalid value.

Action: Refer to the Oracle Database Gateway for APPC, Installation and Configuration Guide, documenting gateway initilization parameters for the keyword and correct the error.

PGA-20934: side information profile *string* not defined; cannot establish conversation

Cause: The Side Information profile <profile> is not defined to the SNA software. Either the profile name was misspelled, or no profile has been defined.

Action: Correct the profile name if it was misspelled, or have the profile defined to the SNA software if it was not already defined.

PGA-20935: synclevel *number* is not allowed when PGA_CAPABILITY=*string*

Cause: The synclevel parameter <sync> passed to PGAINIT was incompatible with the setting of the PGA_CAPABILITY gateway initialization parameter, <cap>.

Action: If the synclevel passed to PGAINIT is correct, then the gateway initialization parameter PGA_CAPABILITY must be changed to allow the desired synclevel to be supported. If the synclevel is not correct, the TIP should be changed to specify the correct sync- level in the call to PGAINIT. If the TIP was generated by PGAU, the SYNCLEVEL keyword of the DEFINE TRANSACTION statement should be changed to specify the correct synclevel and the TIP should be regenerated. The table below shows which synclevels are valid with each PGA_ CAPABILITY setting. PGA_CAPABILITY Value SYNCLEVELs Allowed ---------------------- ------------------ READ_ONLY 0 SINGLE_SITE 0, 1 COMMIT_ CONFIRM 0, 1

PGA-20936: send buffer length is *number* but no send lengths were specified

Cause: The send buffer length passed to PGAXFER was <len>, but the send lengths array was either null or contained a send count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20937: receive buffer length is *number* but no receive lengths were specified

Cause: The receive buffer length passed to PGAXFER was <len>, but the receive lengths array was either null or contained a receive count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20938: send lengths array too small (*number*) to contain a valid send count

Cause: The send lengths array passed to PGAXFER was too small to contain a valid send item count. The actual length of the send lengths array was <len>. The minimum length of the send lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the send lengths array passed to PGAXFER.

PGA-20939: receive lengths array too small (*number*) to contain a valid receive count

Cause: The receive lengths array passed to PGAXFER was too small to contain a valid receive item count. The actual length of the receive lengths array was <len>. The minimum length of the receive lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the receive lengths array passed to PGAXFER.

PGA-20945: unable to log on to Oracle for transaction logging

Cause: The gateway server was unable to connect to the Oracle server where the transaction log table is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. If the protocol is SNA: also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_ LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. If the protocol is TCP/IP: also check the PGA_TCP_DB, PGA_TCP_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20947: unable to bind variable *string* for transaction logging

Cause: The gateway server was unable to bind variable <var> for use in performing transaction logging functions. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20948: unable to prepare the statement for transaction logging

Cause: The gateway server was unable to prepare the statement to be used to call the transaction logging PL/SQL stored procedure. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL procedure has been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS and that it is executable. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20949: unable to define variable *string* for transaction recovery

Cause: The gateway server was unable to define variable <var> to be used in accessing the transaction log table during recovery processing. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20950: unable to perform *string* on transaction log

Cause: The gateway server was unable to insert, update, or delete a pending transaction row in the transaction log table. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL stored procedure and the transaction log table have been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS. Refer to the Oracle Server Message and Codes Manual for information on the Oracle server message.

PGA-20960: missing *string* parameter, required when PGA_CAPABILITY=*string*

Cause: The PGA_CAPABILITY parameter specified <cap>, but another required parameter, <parm>, was omitted.

Action: Add the missing parameter to the gateway initialization file. Refer to Appendix A, "Gateway Initialization Parameters", in the Oracle Database Gateway for APPC Installation and Configuration Guide for information on required parameters.

PGA-20961: synclevel 1 conversations not allowed when PGA_CAPABILITY=2_PHASE

Cause: A conversation was requested at synclevel 1. The gateway init file specified PGA_CAPABILITY=2_PHASE. When 2-phase commit is enabled, synclevel 1 conversations are not supported, since they are not protected by 2-phase processing.

Action: Either use synclevel 2 for the conversation (if the remote transaction program supports it) or use a different gateway SID for this conversation.

PGA-20962: synclevel 2 conversations not currently allowed

Cause: A conversation was requested at synclevel 2, but the SNA software allocated the conversation at synclevel 0 or 1. This means that the SNA software is not configured to support synclevel 2, or has no RRM enabled.

Action: Correct the SNA software configuration to support synclevel 2 and to enable RRN processing.

PGA-20963: side profile *string* specifies the wrong local LU name (*string*)

Cause: The Side Information profile <profile> specified for this conversation has a local LU name <lu> that is different from the local LU name specified by the PGA_LOCAL_LU gateway initialization parameter.

Action: This message will be accompanied by message PGA-20984, which provides the local LU name that was specified by the PGA_LOCAL_LU gateway initialization parameter. The Side Information profile must be changed to use the same local LU name.

PGA-20964: local LU name specified by PGA_LOCAL_LU is *string*

Cause: Message PGA-20963 was issued. This message always follows.

Action: See message PGA-20963.

PGA-20965: syncpoint error: expecting *string* PS header, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response was received from the remote transaction program following a syncpoint control command. The response received was <rcv> and not a <pstype> PS header as expected.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20966: syncpoint error: sent *string*, expecting *string*, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response <resp> was received from the remote transaction program following a syncpoint control command <psh>. The expected response was <exp>.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20967: 2-phase commit recovery attempted, DBA action required

Cause: The recovery process of the Oracle integrating server has connected to the gateway to perform recovery. However, the gateway cannot perform automatic recovery for this transaction due to unknown heuristic action taken by the target OLTP.

Action: The DBA must attempt to manually resolve the in-doubt transaction. Detailed information on how to proceed is contained in Chapter 8 of the Oracle Database Gateway for APPC Installation and Configuration Guide, in the section titled "Manual Recovery of In-Doubt Transactions".

PGA-20995: communication error: "*string*" failed, rc = *number*, errno = *number*

Cause: An unexpected communications error occurred while executing the AIX SNA Server API <func> function. The function return code is <rc> and the system error number is <errno>. The AIX SNA Server LU6.2 API function return codes and system error numbers are described in the vendor documentation. The SNA system error numbers can also be found in the /usr/include/luxsna.h header file on AIX systems.

Action: Determine the cause of the communications error, correct it, and rerun the transaction. If you need assistance, contact your system adminstrator.

PGA-20999: SIGDANGER received from system - all conversations deallocated

Cause: The system sent a SIGDANGER signal to the server, indicating that there is a shortage of paging space. All currently active conversations are deallocated abnormally.

Action: Contact your system administrator.

PGA-21001: internal error: *string*

Cause: Internal error in the gateway RRM process.

Action: Reproduce the error with tracing enabled to produce a trace file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-21002: unable to obtain *number* **bytes of memory for** *string*

Cause: Memory shortage in the gateway RRM process. A request failed to allocate <bytes> of memory for the <usage> area.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21003: memory allocation error in lxlinit

Cause: Memory shortage in the gateway RRM process.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21004: invalid *string* **specified by NLS_LANG**

Cause: The <comp> component of the NLS_LANG environment variable was not valid. The component can be the language, territory, or character set.

Action: Correct the invalid component and restart the RRM process.

PGA-21005: no message file found for language "*string***"**

Cause: There was no message file available for the language <lang> specified by the NLS_LANG environment variable.

Action: Refer to Appendix J, National Language Support, for a list of message file languages supported by the RRM. If the language required is supported, ensure that the ORACLE_HOME environment variable specifies the gateway"s home directory and that the message files are properly installed.

PGA-21006: RRM initialization failed

Cause: The initialization of the gateway RRM process failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed before it could initialize the message facility or before it could determine the local LU name for which it was started.

PGA-21010: missing fully-qualified local LU name argument

Cause: The fully-qualified local LU name was not passed as the first argument to the pg4arrm program on the command line.

Action: The fully-qualified local LU name must be specified as the first argument to the pg4arrm program. Reenter the command line with the fully-qualified local LU name specified.

PGA-21011: invalid network name length (*number***), valid range is** *number:number*

Cause: The network name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (<len>).

Action: The valid range of lengths for the network name is given in the message text by <min>:<max>. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21012: invalid LU name length (*number*), valid range is *number:number*

Cause: The LU name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (<len>).

Action: The valid range of lengths for the LU name is given in the message text by <min>:<max>. Reenter the command line with a valid LU name specified in the fully-qualified local LU name.

PGA-21013: missing period(.) in fully-qualified local LU name

Cause: There is no period (.) in the fully-qualified local LU name specified as the first argument to the pg4arrm program.

Action: A fully-qualified local LU name must contain a network name and an LU name, separated by a period (.). Reenter the command line with a valid fully-qualified local LU name specified.

PGA-21014: invalid character(s) found in network name "*string*"

Cause: One or more invalid characters were found in the network name portion <net> of the fully-qualified local LU name.

Action: The network name must begin with an upper-case alphabetic character or one of the national characters $, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21015: invalid character(s) found in LU name "*string*"

Cause: One or more invalid characters were found in the LU name portion <lu> of the fully-qualified local LU name.

Action: The LU name must begin with an upper-case alphabetic character or one of the national characters $, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21016: RRM initialization failed for LU *string*

Cause: The initialization of the gateway RRM process for local LU <lu> failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed for the local LU.

PGA-21017: RRM already active for LU *string*

Cause: The RRM has already been started for the local LU <lu>. A second RRM cannot be started for the same local LU.

Action: Determine whether the RRM is still active and functioning. If it is not, then it may have terminated without cleaning up. On AIX systems, the /tmp/o/e<luname> file may still exist. This will prevent a new RRM from being started. If you have verified that the original RRM is no longer running, you can delete the file to allow a new copy of the RRM to be started.

PGA-21020: error creating path object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21021: error creating name object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21022: error creating file object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21023: error opening init file *string*

Cause: An error occurred opening the init file <ifn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21024: error reading init file *string*

Cause: An error occurred reading the init file <ifn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21025: error closing init file *string*

Cause: An error occurred opening the init file <ifn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21030: invalid keyword in line *number*

Cause: An invalid keyword was encountered in the init file in line number <line>.

Action: Correct the invalid line in the init file and restart the RRM process.

PGA-21031: length of *string* **value (***number***) not within valid range (***number:number***)**

Cause: The length <len> of the value specified in the init file by the keyword <key> is not within the valid range <min>:<max>.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21032: invalid value specified by *stringstring*

Cause: The value <val> specified in the init file by the keyword <key> is invalid.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21033: error(s) found in init file

Cause: One or more errors were found in the init file during RRM initialization. The RRM process has terminated.

Action: Correct all init file errors and restart the RRM process.

PGA-21034: too many errors in init file, cannot continue

Cause: The init file contained more errors than the RRM initialization code could process.

Action: Correct all errors that have been processed so far, and restart the RRM process. Any additional errors will then be processed. This error is received only when the init file contains a very large number of invalid lines.

PGA-21035: value of *string* (*number*) not within valid range (*number:number*)

Cause: The value <val> specified in the init file by the keyword <key> is not within the valid range <min>:<max>.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21040: error creating path object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21041: error creating name object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21042: error creating file object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21043: error opening log file *string*

Cause: An error occurred opening the log file <lfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21044: error writing to log file *string*

Cause: An error occurred writing to the log file <lfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21045: error closing log file *string*

Cause: An error occurred closing the log file <lfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21046: logging switched to system log due to error on log file

Cause: An error occurred writing to the log file, and logging as been switched to the system log facility for the remainder of this RRM execution.

Action: Correct the problem that cause d the error on the log file, so that the next restart of the RRM will be able to write to the log file. A common cause for this message is unavailable disk space for the file.

PGA-21050: error creating path object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21051: error creating name object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21052: error creating file object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21053: error opening trace file *string*

Cause: An error occurred opening the trace file <tfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21054: error writing to trace file *string*

Cause: An error occurred writing to the trace file <tfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21055: error closing trace file *string*

Cause: An error occurred closing the trace file <tfn>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21056: tracing suspended due to error on trace file

Cause: An error occurred writing to the trace file, and tracing has been suspended for the remainder of this RRM execution.

Action: Correct the problem that cause d the error on the trace file, so that the next restart of the RRM will be able to write to the trace file. A common cause for this message is unavailable disk space for the file.

PGA-21060: system errno = *number*

Cause: The system error number was <errno> following a failure in a file operation.

Action: The system error codes are documented in the header file /usr/include/errno.h. Determine the cause of the file error and correct it.

PGA-21100: RRM initializing for local LU *string*

Cause: The RRM is initializing for the local LU <llu>.

Action: Informational message.

PGA-21101: initialization parameters read from *string*

Cause: Init parameters were read from the file <ifn>.

Action: Informational message.

PGA-21102: log messages written to *string*

Cause: Log messages will be written to the file <lfn>.

Action: Informational message.

PGA-21103: trace information written to *string*

Cause: Trace information will be written to the file <tfn>.

Action: Informational message.

PGA-21104: trace level currently set to *number*

Cause: The trace level specified by the TRACE_LEVEL parameter is <trc>.

Action: Informational message.

PGA-21105: startup for local LU *string* **is warm**

Cause: The RRM is warm-starting for the local LU <llu>. The RRM will attempt to restore all LU6.2 log states from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21106: warm start complete for local LU *string*

Cause: The RRM has warm-started for the local LU <llu>. This means that all state information for the local LU and partner LUs with which the RRM has previously communicated was restored from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21107: startup for local LU *string* **is cold**

Cause: The RRM is cold-starting for the local LU <llu>. The RRM will not retain any LU6.2 log states from the previous execution.

Action: Informational message.

PGA-21108: cold start complete for local LU *string*

Cause: The RRM has cold-started for the local LU <llu>. The RRM has a new local LU6.2 log name and all LU6.2 log names for partner LUs have been erased.

Action: Informational message.

PGA-21109: local log name is x"*string*"

    Cause: The local LU"s LU6.2 log name is <llog>. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

    Action: Informational message.

PGA-21110: XLN received from partner LU *string*

    Cause: An Exchange Log Names (XLN) GDS variable has been received from the RRM at the partner LU <plu>. This is the first thing that occurs when communication is established with a partner LU for the first time since either the local RRM or the partner RRM was last started.

    Action: Informational message.

PGA-21111: partner log name is x"*string*"

    Cause: The partner LU"s LU6.2 log name is <plog>. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

    Action: Informational message.

PGA-21112: creating new log entry for partner LU *string*

    Cause: The RRM is creating an entry in its LU6.2 log for the partner LU <plu>. This happens only the first time that the partner LU"s RRM contacts the local RRM since the last cold start of the local RRM.

    Action: Informational message.

PGA-21113: warm starting for partner LU *string*

    Cause: The RRM is warm starting for the partner LU <plu>. This happens when the partner LU"s RRM is warm starting and is contacting the local RRM for the first time since the local RRM was started.

    Action: Informational message.

PGA-21114: cold starting for partner LU *string*

    Cause: The RRM is cold starting for the partner LU <plu>. This happens when the partner LU"s RRM is cold starting and is contacting the local RRM for the first time since the local RRM was started.

    Action: Informational message.

PGA-21115: shutdown request received

    Cause: A shutdown request has been received by the RRM.

    Action: Informational message.

PGA-21116: RRM termination complete for local LU *string*

    Cause: The RRM has terminated for the local LU <llu>.

    Action: Informational message.

PGA-21200: connect to Oracle Server as *string* failed

    Cause: The RRM was unable to connect as user <user> to the Oracle server where its LU6.2 log information is stored. An Oracle server message will follow this message.

    Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the LOG_DB, LOG_USER, and LOG_PASS parameters in the RRM init file and ensure that they specify the correct database string, userid, and password, respectively.

PGA-21201: error selecting PGA_2PC_LUS row for local LU *string*

Cause: The RRM was unable to read its local LU6.2 log entry. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21202: error updating PGA_2PC_LUS row for local LU *string*

Cause: The RRM was unable to update its local LU6.2 log entry during warm start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21203: error inserting PGA_2PC_LUS rows for local LU *string*

Cause: The RRM was unable to create its local LU6.2 log entry during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21204: error deleting PGA_2PC_PENDING rows for local LU *string*

Cause: The RRM was unable to delete the pending transaction entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21205: error deleting PGA_2PC_LUS rows for partner LUs

Cause: The RRM was unable to delete the partner LU entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21206: error selecting PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to read its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21207: error inserting PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to create a local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21208: error updating PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to update its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21209: error selecting PGA_2PC_PENDING rows for partner LU *string*

Cause: The RRM was unable to read the pending transaction entries from its LU6.2 log for the partner LU <plu>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21210: unable to open connection with SNA services

Cause: The RRM was unable to initialize its connection with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21211: unable to allocate LU6.2 listen for RRM TP

Cause: The RRM was unable to allocate an LU6.2 listen with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21212: incorrect data received from partner LU *string*

Cause: A partner LU has sent incorrect data in its initial communication with the local RRM. The first data received should be an Exchange Log Names (XLN) GDS variable, but was not.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21213: received x"*string***"**

Cause: This message follows message PGA-00208, and dumps out the first 32 bytes of the data received from the partner LU.

Action: If the data in this message is not sufficient for determination of the problem at the partner LU, use SNA traces on either side of the connection to gather more detailed information, or use the TRACE_LEVEL parameter in the RRM init file to enable SNA data tracing to the trace file.

PGA-21214: incorrect service flag in XLN

Cause: The service flag in the Exchange Log Names (XLN) GDS variable received from the partner LU"s RRM is not correct. The XLN is expected to have the REQUEST flag set.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21215: partner log name mismatch on warm start

Cause: The Exchange Log Names (XLN) GDS variable received from the partner LU"s RRM contains an LU6.2 log name that is different from that known by the local LU"s RRM.

Action: This can happen if the partner LU was cold started and later warm started, all between the times the local LU"s RRM was last shut down and warm started. The local LU"s RRM is not aware that the partner LU was cold started, and therefore assumes that the partner LU"s RRM is using the wrong LU6.2 log name. Verify that this is what happened, and if so, the local LU"s RRM can be forced to accept the new LU6.2 log name from the partner LU"s RRM by deleting the local RRM"s LU6.2 log entry for the partner LU, and then forcing the partner LU to reinitiate the connection to the local LU. For further information on recovery from this error, refer to "RRM Recovery" in Chapter 12, "2-Phase Commit".

PGA-21216: last stored log name x"*string*"

Cause: This message always follows message PGA-00213, and lists the last partner LU LU6.2 log name <plog> saved by the local LU"s RRM.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21217: partner sent log name x"*string*"

Cause: This message always follows message PGA-00214, and lists the LU6.2 log name <plog> sent by the partner LU"s RRM in the warm start Exchange Log Names (XLN) GDS variable.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21218: cold start for partner LU *string* rejected, *number* pending transactions exist

Cause: A cold start was requested by the partner LU"s RRM, but the local RRM determined that there are still unresolved pending transactions for that LU in the local RRM"s LU6.2 log.

Action: If the pending transactions have been resolved, then they must be manually deleted from the local RRM"s LU6.2 log before the partner LU"s cold start request will be accepted. If the pending transactions have not been resolved, then they must be resolved and then manually deleted from the local RRM"s LU6.2 log before the partner LU"s cold start request will be accepted.

PGA-21219: recovery action by DBA required for local LU *string*

Cause: A condition has occurred which requires action by the DBA. This message is also sent to the system log as an alert message.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file show what event has occurred that makes DBA action necessary, and their descriptions in this appendix provide the DBA with a course of action. For further information on recovery, refer to "RRM Recovery" in Chapter 8, "Implementing Two-Phase Commit", of the Oracle Database Gateway for APPC Installation and Configuration Guide.

PGA-21220: logging error limit (*number*) exceeded, RRM shutting down for LU *string*

Cause: The limit of <lim> Oracle errors while accessing the RRM"s local LU6.2 log tables has exceeded. The RRM for the local LU <llu> is shutting down.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file will show what Oracle errors have occurred, and the DBA should take whatever corrective action is required.

PGA-21221: commit failed during cold start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of local LU <llu>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21222: commit failed during warm start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a warm start of local LU <llu>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21223: commit failed during first-time processing for partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a first-time processing for partner LU <plu>. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21224: commit failed during cold start of partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of partner LU <plu>. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21300: received no data when expecting data

Cause: The RRM was expecting to receive data from a partner RRM, but received none.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21301: invalid control received: *string*

Cause: The RRM received an invalid control flag <control> from a partner RRM.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21400: ORACLE_HOME environment variable not set

Cause: The ORACLE_HOME environment variable was not set before the RRM was started.

Action: The ORACLE_HOME environment variable must be set to the gateway"s ORACLE_HOME directory before the RRM is started.

PGA-21401: ORACLE_HOME environment variable set to null string

Cause: The ORACLE_HOME environment variable was set to a null value.

Action: The ORACLE_HOME environment variable must be set to the gateway"s ORACLE_HOME directory before the RRM is started.

PGA-21402: error opening file *string*, **fopen errno =** *number*

Cause: An error occurred opening the RRM enqueue file <fn> for writing. The error number from fopen is <errno>.

Action: Use the <errno> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21403: error writing to file *string*, **fputs errno =** *number*

Cause: An error occurred writing to the RRM enqueue file <fn>. The error number from fputs is <errno>.

Action: Use the <errno> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21404: error closing file *string*, **fclose errno =** *number*

Cause: An error occurred closing the RRM enqueue file <fn>. The error number from fclose is <errno>.

Action: Use the <errno> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21405: error deleting file *string*, **remove errno =** *number*

Cause: An error occurred deleting the RRM enqueue file <fn> during shutdown. The error number from remove is <errno>.

Action: Use the <errno> value to determine the cause of the problem and correct it before restarting the RRM. The file <fn> must be manually deleted before attempting to start the RRM.

PGA-21450: communication error: "*string***" failed, errno =** *number*

Cause: The AIX SNA function <func> failed with a system error number of <errno>.

Action: The AIX SNA error codes are documented in the IBM manual AIX SNA Server: Diagnosis Guide and Messages. Use this manual to determine the cause of the problem and correct it. AIX SNA system error numbers are also documented in the /usr/include/luxsna.h header file on AIX systems.

PGA-21451: SNA Server is shutting down

    Cause: SNA Server is being shut down and sent a SIGUSR1 to the RRM.

    Action: The RRM must terminate when this occurs. Contact the system administrator to determine the cause of the SNA Server shutdown. Restart the RRM after SNA Server has been restarted.

PGA-22001: remote host name is null.

    Cause: TCP/IP protocol has returned "null" for the remote host name.

    Action: Verify the remote host name via the pg4tcpmap tool and re-execute your PL/SQL statement. If the problem cannot be resolved, supported customers should contact Oracle Support Services.

PGA-22002: communication error: TCP/IP *string* failed, rc = *number*

    Cause: The function <func> has failed with the return code of <rc>.

    Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22003: communication error: TCP/IP *string* failed, rc = *number*, for, *string*

    Cause: An unexpected communications error occurred while executing the specified TCP/IP function <func>. The TCP/IP function return code is <rc> and the function <func> parameter is <parm>.

    Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22004: length of the total message value (*number*) not within valid range (*number*:*number*)

    Cause: The length <len> for the value is not within the valid range <min>:<max>.

    Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22005: invalid socket file descriptor: no active conversations were found

    Cause: There were no TCP/IP conversations active for the user.

    Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-22006: Parameter *string* is not specified.

    Cause: Parameter <parm> is missing from the gateway initialization file.

    Action: Add the missing parameter to the gateway initialization file. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required initialization parameters for gateways using TCP/IP.

PGA-22007: user ID *string* length of *number* is invalid; maximum length is *number*

    Cause: The user id <uid> is too long <len> to be used. The maximum allowable length for the user ID is <max> characters.

    Action: The user id must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22008: password length of *number* is invalid; maximum length is *number*

    Cause: The password is too long <len> to be used. The maximum allowable length for the password is <max> characters.

Action: The password must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22009: database name *string* **length of** *number* **is invalid; maximum length is** *number*

Cause: The database name <db name> is too long <len> to be used. The maximum allowable length for the database name is <max> characters.

Action: The database name must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22010: userid *string* **length of** *number* **is invalid; maximum length is** *number*

Cause: The userid <uid> is too long (<len>) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the userid is <max> characters. This restriction is imposed by RACF, not by the gateway.

PGA-22011: password length of *number* **is invalid; maximum length is** *number*

Cause: The password is too long (<len>) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the password is <max> characters. This restriction is imposed by RACF, not by the gateway.

PGA-22012: IMS Connect error: return code = *string***, reason code =** *string*

Cause: An unexpected IMS Connect error occurred while executing the "recv" function. The return code <rc> and reason code <rsc> are provided in the message text. For more information, look at the OLTP SDSF log and IMS Connect error message which starts with HWS. The messages are documented in the IBM IMS Connect Guide and Refrence manual.

Action: Determine the cause of the error, correct it, and rerun the transaction.

PGA-22014: Transaction code length of *number* **exceeds the maximum of** *number*

Cause: The transaction code length <len> passed to PGAINIT or PGAINIT_SEC was larger than the maximum allowed length <max>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

81

PGU-00100 to PGU-50101

PGU-00100: invalid SPOOL file name

    Cause: When using the SPOOL command, you specified the name of a file that already exists.

    Action: Specify a valid name for a file that does not currently exist.

PGU-00101: extraneous text at end of command

    Cause: There were unrecognized commands or other text on the command line.

    Action: Check the syntax of the command, then issue the command again.

PGU-00106: invalid ECHO switch

    Cause: An invalid option for the SET ECHO command was specified.

    Action: Use either ON or OFF as an option for the SET ECHO command.

PGU-00107: invalid TERMOUT switch

    Cause: An invalid option for the SET TERMOUT command was specified.

    Action: Use either ON or OFF as an option for the SET TERMOUT command.

PGU-00108: invalid TIMING switch

    Cause: An invalid option for the SET TIMING command was specified.

    Action: Use either ON or OFF as an option for the SET TIMING command.

PGU-00110: illegal SET option

    Cause: An invalid option for the SET command was specified.

    Action: Check the syntax of the SET command and issue the command again.

PGU-00111: illegal SHOW option

    Cause: An invalid option for the SHOW command was specified.

    Action: Check the syntax of the SHOW command and issue the command again.

PGU-00115: unexpected end of command

    Cause: An option was specified without the required arguments.

    Action: Check the syntax of the command and enter the command again with the appropriate arguments for options that require values.

PGU-00120: invalid STOPONERROR switch

    Cause: An invalid options switch was specified for the SET STOPONERROR command.

Action: Use either ON or OFF as an option for the SET STOPONERROR command.

PGU-00122: invalid SET numeric parameter

Cause: A character or an invalid value was specified when a number was expected as a value for a SET command option.

Action: Check the syntax of the command, use an appropriate number for the option, and enter the command again.

PGU-00125: integer value overflow

Cause: A numeric value was specified that was too large.

Action: Use a smaller number.

PGU-00129: value out of range (1 - *number***)**

Cause: The specified value was out of range. The valid range is given by the error message.

Action: Use a number within the range specified by this message.

PGU-00132: null hostname/password specified

Cause: The hostname/password was not specified.

Action: Specify the correct hostname/password.

PGU-00136: bad variable specification

Cause: A variable was incorrectly specified using the VARIABLE command.

Action: Check the syntax of the command, then issue the command again.

PGU-00137: syntax error in PL/SQL Block

Cause: The PL/SQL block contains a syntax error.

Action: Correct the syntax error.

PGU-00142: cannot recognize object type, owner or name

Cause: The specified object type, owner, or name was not recognized.

Action: Specify a legal object type, owner, or name.

PGU-00143: variable has not been defined

Cause: The specified variable was not recognized.

Action: Specify an existing variable.

PGU-00144: invalid object type for DESCRIBE

Cause: The specified object type was not TABLE, VIEW, or PROCEDURE.

Action: Check that the object is a table, view, or procedure. If so, check that you specified the correct name and try again. If not, you describe the object.

PGU-00145: invalid object name for DESCRIBE

Cause: The specified table, view, stored procedure, or function was not recognized.

Action: Check the spelling and be sure to specify an existing table, view, stored procedure, or function.

PGU-00149: invalid SERVEROUTPUT switch

Cause: An invalid option was specified for the SET SERVEROUTPUT command.

Action: Check the syntax of the command, then issue the command again.

PGU-00300: internal error code; arguments: [*number*], [*string*]

Cause: You have encountered an internal error.

Action: Supported customers should contact Oracle Worldwide Support and provide the circumstances leading to the error and the complete set of messages.

PGU-00302: not connected to a database

Cause: You must be connected to the database for the requested operation.

Action: CONNECT to the database using a valid username and password before retrying the operation.

PGU-00304: input file I/O error [*number*] - input aborted

Cause: A command file used as input to PGAU is corrupt or invalid.

Action: Check the file before retrying the operation.

PGU-00305: command size exceeds internal buffer size (*number*)

Cause: The SQL statement size exceeds PGAU"s buffer size.

Action: Shorten the SQL statement by removing extra blanks or by using intermediate statements as views, if necessary.

PGU-00306: monitor cycle interval time out of range (1 - *number*)

Cause: You entered an invalid number for the cycle interval.

Action: Enter a number between 1 and 3600 for the cycle interval. The number indicates seconds.

PGU-00307: cannot open spool file *string*

Cause: PGAU tried to open a spool file after you entered SPOOL filename, but could not open the file. Possible causes are not enough disk space or inadequate privileges to create a file.

Action: Determine why PGAU could not create a new file and retry.

PGU-00308: no spool file opened

Cause: You entered SPOOL OFF, but you were not spooling currently so there was no file to close.

Action: If you wish to capture session output, first use the SPOOL command to open a file, and then enter your commands before closing the file with SPOOL OFF.

PGU-00309: cannot close spool file *string*

Cause: SPOOL OFF could not close the currently open spool file.

Action: Check for an operating system reason that the spool file could not be closed.

PGU-00310: cannot open parameter file *string*

Cause: PGAU cannot locate or open the file specified by the PFILE option, either because the file does not exist or because PGAU has insufficient privilege to open the file.

Action: Make sure that the file exists in a location expected by PGAU and can be opened.

PGU-00311: data exceeds internal buffer size

Cause: The results returned by a SQL query exceed the internal PGAU buffer.

Action: Use the SET command to increase MAXDATA or decrease ARRAYSIZE.

PGU-00314: invalid parameter given on PGAU command line

Cause: An unrecognzed parameter was given on the PGAU command line.

Action: Check the parameters given on the PGAU command line.

PGU-00315: cannot open command file *string*

Cause: PGAU cannot locate the specified command file.

Action: Verify the file"s name and PGAU"s access to it before retrying.

PGU-00317: version of tool conflicts with version [*string*] of DATA

Cause: This version of the PGAU tool cannot process the DATA in the database.

Action: You are attempting to use a tool that might cause damage to the current database. If the version of DATA is greater than the version of the tool, then you are using the wrong version of the tool. If the version of the tool is greate than the version of the DATA, check to see if there is an ORACLE-supplied SQL script to update the DATA to the correct version level.

PGU-00318: PGAU command line error [*number*]

Cause: You made a syntax or typing error while entering a PGAU command line.

Action: Check the syntax and try again.

PGU-00319: cannot locate pgau configuration file, *string*

Cause: File mentioned cannot be located.

Action: Make sure that the specified file exists before re-running PGAU.

PGU-00320: cannot open pgau configuration file, *string*

Cause: File mentioned cannot be opened.

Action: Make sure that the specified file is available for use by PGAU.

PGU-00322: total size of command line parameters exceeds buffer size

Cause: You entered too many command line arguments and the PGAU buffer was exceeded.

Action: Reduce the number of command line arguments.

PGU-00325: pfile too large

Cause: The file you specified using PFILE is too large (exceeds 8K).

Action: Reduce the size of the parameter file before specifying it again with PFILE.

PGU-00327: command not available in this mode

Cause: You have specified a command that is not available in this mode.

Action: Do not specify the command.

PGU-00328: insufficient privilege for this display

Cause: You attempted to display a MONITOR display without sufficient privileges.

Action: Contact the DBA to obtain the required privileges.

PGU-00331: cannot allocate enough memory for SQL Buffer

Cause: There is not enough memory for the current SQL buffer.

Action: Use the SET command to reduce MAXDATA.

PGU-00337: missing instance name

Cause: The instance name was not specified in the connect statement.

Action: Use "connect username/password@instance" or "connect username/password".

PGU-00341: "*string*" is an undefined bind variable

Cause: The SQL statement refers to an undefined bind variable.

Action: Use the VARIABLE statement to define the bind variable and re-execute the query.

PGU-00347: no offline tablespaces exist

Cause: The list box of set tablespace online contained 0 elements.

Action: No action is required.

PGU-00359: monitor already active

Cause: An instantiation of this monitor is already active.

Action: Cycle through windows until this monitor becomes visible.

PGU-00360: object to be described does not exist

Cause: The object in a DESCRIBE FUNCTION/PROCEDURE/PACKAGE statement does not exist.

Action: check that the object name and owner are correct and that the object exists.

PGU-00361: error during describe

Cause: An unexpected error occurred during a describe.

Action: Check the following error and correct the problem.

PGU-00362: object *string* is a package; use "DESCRIBE <package>.<procedure>"

Cause: The named object is a package. DESCRIBE does not currently describe an entire package specification.

Action: Describe the package specification, as indicated in the message text.

PGU-00363: procedure or function *string* not found in the package

Cause: The named package does not contain the procedure or function specified.

Action: Specify a procedure or function within the package.

PGU-00364: object *string* is a remote object, cannot further describe

Cause: The specified object name contains a database link, or is a synonym that resolves to a name with a database link. Such objects cannot currently be described.

Action: Specify a local object.

PGU-00365: object *string* is invalid, it may not be described

Cause: The object must have been successfully compiled.

Action: Fix any errors in the object and recompile.

PGU-00366: name *string* is malformed, it must be of form [[a.]b.]c@dblink

Cause: The name may have at most 3 parts and a dblink.

Action: Use a well-formed object name.

PGU-00370: mandatory field/list needs to be filled in

Cause: You tried to execute the dialog before filling in all required items.

Action: Fill in all required items and retry.

PGU-00371: cannot open/locate input help file, *string*
   Cause: You pressed the Help Key or chose an item from the Help Menu.
   Action: Put the help file in the location specified.

PGU-00372: cannot open/locate input index file, *string*
   Cause: You pressed the Help Key or chose an item from the Help Menu.
   Action: Put the index help file in the location specified.

PGU-00373: cannot allocate memory of size *number* **from toolkit**
   Cause: You pressed the Help Key or chose an item from the Help Menu.
   Action: Exit PGAU and re-enter and try again.

PGU-00374: could not set file position in *string* **directly**
   Cause: You pressed the Help Key or chose an item from the Help Menu.
   Action: The fseek() routine failed. Alternate chosen - no action is necessary.

PGU-00375: unexpected end of file, *string*
   Cause: You pressed the Help Key or chose an item from the Help Menu.
   Action: Exit PGAU and install the correct help file.

PGU-00376: mandatory field has to be filled in before navigation is possible
   Cause: Attempted to navigate to the next/previous item.
   Action: Fill in current field and then go to the next/previous item.

PGU-00377: mandatory list item has to be selected before navigation is possible
   Cause: Attempted to navigate to the next/previous item.
   Action: Select an item and then go to the next/previous item.

PGU-00378: an item has to be selected before help can be sought for it
   Cause: Attempted to obtain help before selecting an item.
   Action: Select an item first and re-execute.

PGU-00379: variable(s) not defined
   Cause: Attempted SHOW VAR[IABLES] [var-name] and the variable was not defined, or no variables were specified or defined.
   Action: Ensure the variables are correctly defined.

PGU-00380: procedural option required for this statement
   Cause: Attemt to execute a statement that requires the Procedural option was made, but the Procedural option is not installed.
   Action: This statement cannot be issued without the Procedural option. Install the Procedural option to execute this statement.

PGU-00381: error in the SERVEROUTPUT option
   Cause: Most likely the package DBMS_OUTPUT not installed. Check the accompanying messages for more information.
   Action: Check accompanying messages and take appropriate action.

PGU-00382: value *string* **is not a recognizable file name for** *string*

Cause: The value for the PGAU initialization variable (which points to the initialization file) is not a recognizable file name.

Action: Specify a valid file name or do not define the variable to avoid running the initialization file.

PGU-00383: file name *string* **pointed to by** *string* **could not be opened**

Cause: The file name pointed to by the PGAU initialization variable could not be opened.

Action: Specify an available file or do not define the variable to avoid running the initialization file.

PGU-00384: could not open pgau resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00385: could not locate pgau resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00386: could not open toolkit resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00387: could not locate toolkit resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00388: cannot start PGAU in screen mode; check if values are legal:

Cause: A variable was not properly set.

Action: Check the values listed by PGAU to see if they are correct.

PGU-00389: toolkit resource file name is defined to *string*

Cause: The specified file could not be located.

Action: Ensure the file specified exists and can be accessed.

PGU-00390: terminal type *string* **is defined by** *string*

Cause: Terminal type specified by <variable> may not be valid.

Action: Ensure the terminal specification is correct.

PGU-00391: value *string* **is defined to** *string***; legal values:** *string* **or** *string*

Cause: The PGAU mode has been incorrectly defined.

Action: Define the value of the variable as one of the legal values.

PGU-20000: *string* **of** *string* **statement failed for table** *string***, rc=***number*

Cause: PGAU encounterred a syntax error during parse operation <oper> of the statement <statement> for the table <table> with the indicated return code <rc>.

Action: Check the PGAU statement identifier names for proper spelling and punctuation, or other syntax errors.

PGU-20001: *string* **of** *string* **variable of** *string* **statement failed for table** *string***, rc=***number*

Cause: The operation <oper> on the variable <varname> for the statement <statement> against the PG DD table <table> failed with return code <rc>.

Action: A semantic error has occurred. Check all the identifier names in the PGAU script.

PGU-20002: unable to login to Oracle

Cause: An error occurred attempting to logon to the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational.

PGU-20003: unable to open the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred opening an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20004: unable to close the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred closing an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20005: unable to commit PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attemtping to commit changes to the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20006: unable to logout from Oracle

Cause: Internal PGAU logic error - should not occur. An error occurred during logoff from the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20007: unable to rollback PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attemtping to rollback changes from the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30000: transaction *string*, version *string* specification generated to file *string*

Cause: PGAU successfully completed generation of the TIP specification for transaction <tranname> and version <version> into file <fileid>.

Action: None required. This is an informational message.

PGU-30001: PGAU internal error - *string*

Cause: An internal PGAU operation error has occurred.

Action: Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30002: >>> Initialization of *string* File Header <<<

Cause: This record is written to the Trace or Log file upon initialization.

Action: This is an informational message only.

PGU-30003: transaction *string*, version *string* body generated to file *string*

Cause: PGAU successfully completed generation of the TIP body for transaction <tranname> and version <version> into file <fileid>.

Action: None required. This is an informational message.

PGU-30008: failure to open file *string*

Cause: Before complete initialization of LMS functions, PGAU tracing or logging to disks was requested, but PGAU failed to open the indicated trace or log file. <fileid>.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30009: failure to close file *string*

Cause: After termination of LMS functions, PGAU tracing or or logging to disks had been requested, but PGAU failed to close the indicated trace or log file. <fileid>.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30010: failure to obtain *string* bytes of storage for *string*

Cause: Before complete initialization of LMS functions, PGAU failed to obtain <bytes> of storage for <use>, commensurate with LMS initialization.

Action: Increase the total amount of private storage available to PGAU during operation.

PGU-30012: invalid language environment (*string*), default used

Cause: Before complete initialization of LMS functions, the environment variable LANGUAGE specified an invalid Oracle NLS language <lang>. The language environment variable SSTDLANG setting was used as the default.

Action: Correct the LANGUAGE environment variable to specify a valid Oracle NLS Language.

PGU-30014: pgau message file *string* not found

Cause: Before complete initialization of LMS functions, the PGAU message file <fileid> could not be located.

Action: Ensure that the Oracle message file resides in $ORACLE_ HOME/pg4appc/mesg directory and is not damaged. Valid fileid"s are of the form pguxx.msb where xx is the country code.

PGU-30024: memory allocate failure: *string* for *string* bytes

Cause: Insufficient memory available. Storage failed to be allocated for the reason <purpose> of the size <len> specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30026: open failure: file *string* in *string* mode

    Cause: Error during fopen processing <file> for <mode> access.

    Action: Ensure PGAU has access to the file specified, and write acccess if file is used for output.

PGU-30028: file *string* failure: *string* rc *string*

    Cause: An error occurred during <oper> processing for the file <fileid> with return code <rc>. File operations include: "fclose" to close input or output files "remove" to erase, delete, or remove output files

    Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30030: read failure: *string* from *string* after offset *string*

    Cause: Error during fgets <oper> processing for <file> at <offset> bytes into the file.

    Action: Ensure PGAU has access to the file specified.

PGU-30031: write failure: *string* to *string* at *number* for *string* bytes

    Cause: Error during fputs <oper> processing for <file> from buffer at <addr> for <len> bytes of data.

    Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30032: write log failure: rc %4li, message no was *string*

    Cause: fprintf returned the error code <rc> attempting to print PGAU error message number <msgno>. The indicated event message was being written when the error occured.

    Action: Check to insure that PGAU has write access to the pgau.log file and that disk space is available for file growth.

PGU-30033: write trace failure: rc %4li, message no was *string*

    Cause: fprintf returned the error code <rc> attempting to print PGAU trace message number <msgno>. The indicated trace message was being written when the error occured.

    Action: Check to insure that PGAU has write access to the pgau.trc file and that disk space is available for file growth.

PGU-30035: file control failure: *string* for *string*, rc *string*

    Cause: Error during control function <oper> processing for <file> with error code <rc> returned.

    Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30036: no ORACLE_HOME environment variable available

    Cause: The ORACLE_HOME environment variable setting is missing or invalid.

    Action: Correct the ORACLE_HOME environment variable to specify the current Oracle home directory.

PGU-30120: missing *string* attribute for parm *string*, field *string* f#*string*

Cause: The parameter <parm> specifies an aggregate data record for which field <field> with PG DD field id number <f#> was being processed, but the field had no relative level attribute <attr>. Typical relative level attributes are: nn ... COBOL-clauses for IBMVSCOBOLII "LEVEL" attribute Each attribute is stored as a separate row in the PG DD, and the missing attribute"s row may have been deleted from the PG DD.

Action: Check the PG DD to ensure that the failing field has a level attribute assigned.

PGU-30122: level limit: field f#=*string* nest level *string* exceeds *string* of *string*

Cause: PGAU was processing nested records when the next field <f#> for nest level <lev> exceeded the product defined minimum or maximum nest level <limit>.

Action: Simplify the data record definition to reduce nest levels.

PGU-30123: level limit: level *string* field *string* can"t follow level *string*

Cause: PGAU was processing nested records when the next field at at level <levN>, identified by <fld#>, occurred after fields at current level <levC>. Additional fields at intermediate levels should have preceded this field. This error happens when special fields such as COBOL RENAMES (at LEVEL 66) appear next after the level 01 definition.

Action: Correct the data record definition to place the special fields in theire proper sequece, and/or insert fields being modified ahead of the special modifying field.

PGU-30220: allocate failure: *string* storage of *string* bytes

Cause: Insufficient memory available for the specified purpose. Requestor attempted to allocate a <type> control block of <len> size specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30233: control block load failure: *string* block from PG DD

Cause: Control block of the specified <type> was being loaded with a row from the PG Data Dictionary when an error occurred. A preceding message issued specifies the cause.

Action: Refer to the Action for the preceding message.

PGU-30234: attribute array for *string* exceeded by PG DD rows > *string*

Cause: A control block of the specified <type> was being loaded with attribute rows from the PG Data Dictionary when the <limit> was exceeded.

Action: Reproduce the error with tracing enablead and attempt to determine what PG DD rows are exceeding the attribute limit and delete any possible duplicates. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30300: work file output error writing *string*

Cause: PGAU encountered an error writing a PL/SQL code segment to the indicated work file <fileid>.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30301: TIP output error appending *string* to *string*

Cause: PGAU encountered an error appending the work file <infile> to the TIP output file <outfile>.

Action: Ensure PGAU has access to both files specified, and that disk space is available for TIP output file growth.

PGU-30302: TIP output error writing function *string* **to file** *string*

Cause: PGAU encountered an error appending the TIP function definition <func> to the work output file <file>. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30303: TIP generation error writing variable *string* **to file** *string*

Cause: PGAU encountered an error appending the TIP variable definition <var> to the work output file <file>. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30304: TIP generation warning: *string* **name truncated to** *string* **characters**

Cause: This is a warning of possible non-unique PL/SQL names. PGAU encountered record field names which combined exceed the maxmimum PL/SQL name length, and the last field name specified <field> was truncated to the length <len>. The condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30305: TIP generation error defining record type *string* **for** *string*

Cause: An occured during generation of a nested record type <type> for the indicated field name <name>. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30306: TIP generation: invalid PL/SQL parameter mode *string* **for** *string*

Cause: The parameter call mode <mode> specified for the parameter <parm>. Valid parameter modes are IN, OUT or IN OUT. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and correct the PL/SQL parameter call mode for the indicated parameter.

PGU-30307: TIP generation: invalid PL/SQL variable type *string* **for** *string*

Cause: An invalid PL/SQL record type <type> was encountered while generating conversion statements for the data field <field>. The indicated <type> is neither valid PL/SQL nor a nested record type, for the indicated record field <field>. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and either correct the PL/SQL variable type for the field, or define a corresponding nested record for the field.

PGU-30308: TIP generation: name *string.string* **exceeds max length of** *string* **characters**

Cause: The number of nested groups and lengths of their field names in the input data, when concatenated to form a fully qualified PL/SQL record field variable name <recname.varname>, exceeded the maximum length allowed by PL/SQL

<maxlen>. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30309: TIP generation: call *string* parm *string* exceeds PGAXFER *string* limit (*string*)

Cause: The TIP function call <cname> at parm <pname> exchanges too many parameters for the <type> buffers on a PGAXFER RPC. The PGAXFER parameter limit is <limit>. The indicated <type> is either "SEND" or RECEIVE". Probable PGAU DEFINE CALL error, coding too many parameters. Note also that IN OUT mode parameters are present in both send and receive buffers and may be causing the excess.

Action: Revise the transaction and call to specify the excessive parameters on an additional function call and include that added call in the transaction definition.

PGU-30314: TIP generation: failure converting record type *string* for *string*

Cause: An occured during generation of PL/SQL statements for conversion of a nested record type <type> for the indicated field name <name>. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30315: TIP generation: parameter conversion error for *string*, *string*

Cause: Failure to generate PL/SQL conversion statements for the indicated parameter data <dname> for function <call>. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30316: TIP generation: PL/SQL *string* control logic for *string string*

Cause: Failure to generate PL/SQL statement <stmt> used to control TIP processing of the field <fname> for compiler clause <clause>. Typical IBMVSCOBOLII clauses are: OCCURS (requires FOR/LOOP logic) OCCURS DEPENDING ON (requires FOR/LOOP logic) REDEFINES (requires IF/END IF logic) This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30317: TIP generation: PL/SQL *string* statements for *string string*

Cause: Failure to generate PL/SQL control logic <stmt> to process TIP parameter <dataname> in function <callname>. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30318: TIP generation: *string string*, **PL/SQL** *string* **for** *string*

Cause: Data field <d-field> <f#> was referenced by other fields which required PL/SQL statements <stmt> be generated for the value <num>, but an error occurred during the generation of the statements. This message may be preceeded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is alllowed to output work files.

PGU-30319: TIP generation: *string string*

Cause: TIP execution diagnostics for PG Data Dictionary References PKGEX(DR) was requested on the PGAU GENERATE statement, but the PG DD reference for <type> <id#> couldn"t be generated. This message may be preceeded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is alllowed to output work files.

PGU-30600: TIP generation: invalid COBOL syntax in *string*:

Cause: The COBOL data field <field> specifies conflicting or invalid PIC <mask> and USAGE <maskopts> clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for <mask> and 30602 for <maskopts> .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the stated field in the PG DD.

PGU-30601: COBOL mask: *string*

Cause: Issued to identify <mask> for the preceding message.

Action: See preceding message.

PGU-30602: COBOL maskopts: *string*

Cause: Issued to identify <maskopts> for the preceding message.

Action: See preceding message.

PGU-30604: missing *string* **attribute for** *string*

Cause: A COBOL field <field> containing a clause of the form <syntax> required a missing attribute <attr> corresponding to <token>. PGAU issues messages 30603 and 30604 consecutively for <field>, <syntax>, <attr>, and <token>. Typical IBMVSCOBOLII required token attributes are: field OCCURS int-1 TIMES where "int-1" is the token for attribute "repgrpff" field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 where "int-1" is the token for attribute "repgrpvf" "int-2" is the token for attribute "repgrpvl" "name-1" is the token for attribute "repgrpvm" field RENAMES name-1 THRU name-2 where "name-1" is the token for attribute "renamemf" "name-2" is the token for attribute "renameml" field REDEFINES name-1 WHEN name-2 = value where "name-1" is the token for attribute "remapsmf" "name-2" is the token for attribute "remapsml" "value" is the token for attribute "remapswc" or for attribute "remapswn" field LENGTH IS name-1 where "name-1" is the token for attribute "length" Each attribute is stored as a separate row in the PG DD, and the missing attribute"s row may have been deleted from the PG DD.

Action: In the PG DD, redefine the referencing data item to restore the missing attribute row.

PGU-30605: TIP generation: invalid COBOL syntax in unknown field:

Cause: An unidentified COBOL field specifies conflicting or invalid PIC <mask> and USAGE <maskopts> clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify global TIP conversion variables. PGAU also issues messages 30601 for <mask> and 30602 for <maskopts> .

Action: Use the pgddsxf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the invalid row in the PG DD.

PGU-30606: TIP generation: missing multi-byte NLS name for *string*:

Cause: The COBOL data field <field> specifies character data in the the PIC <mask> and USAGE <maskopts> clauses which require translation with a multi-byte character set (MBCS), but no Oracle MBCS NLS name was specified. The MBCS-oriented PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for <mask> and 30602 for <maskopts> .

Action: Use the pgddsxa.sql script to reproduce the selected rows and then either correct the mask and maskopts columns for the stated field in the PG DD to not require MBCS translation, or use the PGAU REDEFINE DATA FIELD NLS_ LANGUAGE(nlsname) parameter to specify an Oracle MBCS NLS name for the field, or specify the NLS_MBCS(nlsname) parameter on the PGAU DEFINE TRANSACTION statement.

PGU-30611: references missing field *string* specified for *string*

Cause: The data field <d-field> containing a clause of the form <syntax> references a missing field <r-field> specified by the clause word <token>. PGAU issues messages 30610 and 30611 consecutively for <d-field> <syntax> <r-field> and <token>. Typical IBMVSCOBOLII clause syntax for this error includes: d-field OCCURS int-1 TIMES d-field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 d-field RENAMES name-1 THRU name-2 d-field REDEFINES name-1 WHEN name-2 = value d-field LENGTH IS name-1 The clause references a field <r-field> specified by the word <token>. PGAU GENERATE searched previous fields within the current parameter but failed to find the named field <r-field>. The word <token> may be misspelled in the defining clause or the referenced field whose name should match <token> may be missing from, or misspelled in the PG DD.

Action: In the PG DD, redefine the entry for <d-field> to change its clause <token> to specify the correct name of the intended field <r-field>, or redefine the data name of the intended field <r-field> to match the subsequent clause"s <token> reference. Also ensure the data field <d-field> containing the clause follows the intended field <r-field> in the data definition.

PGU-30622: unable to insert *string* value for field *string*

Cause: During TIP generation, an attempt to insert a new attribute value for the <attr> attribute for the named field <fname> failed.

Action: Check for an Oracle error message preceding this message to determine the cause of the problem.

PGU-30631: no alignment for environment *string string*, datatype *string string*

Cause: The data field <d-field> <f#> specified an attribute which specifies remote host boundary alignment. The PG DD environment tables were searched for alignment information for environment <ename> compiler <compno> datatype <dtype> datatype alignment group <dagno>, but no entries were found matching these characteristics. PGAU issues messages 30630 and 30631 consecutively for <d-field> <f#> and <ename> <compno> <dtype> <dagno>. PGAU requires the

alignment information to properly align the remote host data in the TIP transfer buffers. Supported: envronment and compilers are; IBM370 for compiler IBMVSCOBOLII alignment attributes are; <d-field> ... PIC S9(n) <dtype> SYNC <d-field> ... PIC S9(n) <dtype> SYNCHRONIZE datatype values <dtype> may be; COMP COMPUTATIONAL COMP-4 COMPUTATIONAL-4 datatypes grouped under <dagno> by length/alignment: dagno = 1 for 2-byte length aligned on 2-byte boundary dagno = 2 for 4-byte length aligned on 4-byte boundary Possible causes are:

- The TRANSACTION entry in the PG DD for the TIP being generated may have specified an invalid ENVIRONMENT.

- The DATA entry in the PG DD being referenced in the TIP function call being generated may have specified an invalid LANGUAGE.

- The field datatype and/or length within the DATA entry may be invalid or unsupported.

- The PG DD may be unavailable, in which case previous error messages will indicate problems accessing the PG DD.

Action: In the PG DD, redefine the TRANSACTION or DATA entries to correct the specification of ENVRIONMENT, LANGUAGE or the field datatype and attributes. Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-30632: TIP generation: *string string*, *string* **ignored for** *string*
Cause: The data field <d-field> <f#> specified a modifying clause <clause> which is ignored for datatype <dtype> by thecompiler in the remote host environment. For supported: envrionment and compilers; IBM370 for compiler IBMVSCOBOLII <clause> is ignored when <dtype> is; SYNC | SYNCHRONIZE COMP-3 | COMPUTATIONAL-3 SYNC | SYNCHRONIZE DISP | DISPLAY

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30635: TIP generation: *string string*, **nested repeating group for** *string*
Cause: The data field <d-field> <f#> specified a repeating group clause <clause> while a previous repeating group is active. The repeating group in <d-field> cannot be nested within a previous repeating group. TIP"s use PL/SQL tables to implement repeating groups, and PL/SQL tables are limited to a single key or subscript which cannot support nested repeating groups (a table of tables).

Action: Redefine the data such that the previous repeating group is ended before beginning another repeating group.

PGU-30636: TIP generation: *string string*, *string* **attribute value (***string***) ignored**
Cause: The data field <d-field> <f#> specified an attribute <attr> whose value <attrval> is being ignored. Attribute values are ignored for supported: envrionment and compilers; IBM370 for compiler IBMVSCOBOLII when <attr> is the <attrval> is ignored: SYNC | SYNCHRONIZE LEFT JUST | JUSTIFY LEFT

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30637: TIP generation: *string string*, *string* **attribute value (***string***) invalid**

Cause: The data field <d-field> <f#> specified an attribute <attr> whose value <attrval> is invalid or unsupported.

Action: In the PG DD, redefine the FIELD entry to correct the attribute clause to specify a supported value.

PGU-35002: failure to open cursor for statement *string*: rc *string*

Cause: Open of an Oracle cursor for the PGAU SQL statement <stmtname> failed with Oracle error <rc>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35003: failure to parse SQL statement *string* for cursor *string*: rc *string*

Cause: Parsing of the PGAU SQL statement <stmtname> for Oracle cursor <curno> failed with Oracleerror <rc>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35004: failure to bind *string* for cursor *string* statement *string*: rc *string*

Cause: Binding input variable <invar> for Oracle cursor <curno> to the PGAU SQL statement <stmtname> failed with Oracle error <rc>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35005: failure to define *string* for cursor *string* statement *string*: rc *string*

Cause: Defining output variable <outvar> for Oracle cursor <curno> to the PGAU SQL statement <stmtname> failed with Oracle error <rc>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35006: failure to execute for cursor *string* statement *string*: rc *string*

Cause: Executing Oracle cursor <curno> PGAU SQL statement <stmtname> failed with Oracle error <rc>. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35007: failure to fetch for cursor *string* statement *string*: rc *string*

Cause: Fetch using Oracle cursor <curno> PGAU SQL statement <stmtname> failed with Oracle error <rc>. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the

PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35008: failure to close cursor *string* for statement *string*: rc *string*

Cause: Close of Oracle cursor <curno> for PGAU SQL statement <stmtname> failed with rc <rc>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35009: no transaction rows for statement *string*, *string string*: rc *string*

Cause: No Transaction rows were fetched from the PG DD for PGAU SQL statement <stmt> with transaction name <tname> and transaction version <tver>. The Oracle error code is <rc>. Either the transaction name and version supplied on the GENERATE statement were invalid or the transaction entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35010: no *string* rows for statement *string*, id no *string*: rc *string*

Cause: No <type> rows were fetched from the PG DD for PGAU SQL statement <stmt> with id number <idno>. The Oracle error code is <rc>. Either the parent PG DD entry references an invalid subordinate entry or the entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35011: no environment rows for statement *string*, *string string*: rc *string*

Cause: No Environment rows were fetched from the PG DD for PGAU SQL statement <stmt> with environment name <ename> and compiler number <compno>. The Oracle error code is <rc>. Either the environment specified for the transaction or the compiler specified for the data entry in the transaction were invalid, or the entries are missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35012: missing transaction entry *string string*

Cause: The transaction <tname> <tver> was not found in the PG DD. Either the transaction name and version requested in the GENERATE statement were invalid or the transaction specified in a previous DEFINE TRANSACTION <tname> may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and version definitions in the PG DD or correct the GENERATE statement.

PGU-35013: missing call entry for transaction *string string* **(***string***)**

Cause: A call entry under transaction definition <tname> <tver> (<tin>) was not found in the PG DD. The call entry associated with the transaction (as specified in a previous DEFINE TRANSACTION ... CALL(cname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35014: missing parm entry for transaction *string string* **(***string***) call** *string string* **(***string***)**

Cause: A parameter or data entry for transaction <tname> <tver> (<tin>), call <cname> <cver> (<cin>) was not found in the PG DD. The parm or data entry associated with the call (as specified in a previous DEFINE CALL <cname> ... PARMS(dname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35015: missing field entry for transaction *string string* **(***string***) call** *string string* **(***string***) parm** *string* **data** *string string* **(***string***)**

Cause: A data field entry for transaction <tname> <tver> (<tin>), call <cname> <cver> (<cin>), parm <relno> data <dname> <dver> (<din>) was not found in the PG DD. The field entry associated with this data (as specified in the input file field position or FIELD(fname) of a previous DEFINE or REDEFINE DATA statement) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35016: missing formatted conversion entry for transaction *string string*

Cause: For transaction <tname> <tver>, the data field usage, mask, and maskopts entries were not found in the PG DD. PG DD field entries are selected with usage="PASS" and not null mask and maskopts columns, to identify which data fields will use UTL_RAW MAKE_..._FORMAT conversions. Possible invalid entries in pga_fields(usage,mask,maskopts) columns. This message may be preceded by specific messages describing the error.

Action: Correct the data definitions for the requested transaction in the PG DD.

PGU-35017: missing environment *string string* **for t#** *string* **d#** *string*

Cause: The combined environment <ename> <compno> was not found in the PG DD for transaction id# <tin> and data id# <din>. The environment name stored in the transaction entry and the compiler no stored in a call parameter data entry have no environment rows stored in the PG DD environment tables. This message may be preceded by specific messages describing the error.

Action: Ensure the Oracle server supporting the PG DD is active, and that the TRANSACTION ENVIRONMENT name and the DATA LANGUAGE name are defined in the PG DD with supported values. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35018: failed select for statement *string*, *string string*: **rc** *string*

Cause: No information was fetched from Oracle dual for SQL statement <stmt> with date format <dfmt> and time format <tfmt>. The Oracle error code is <rc>. Either the date and time formats specified are invalid or some other Oracle server error occurred. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting PGAU is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

    Action: None

PGU-39607: TG %8ls=> **a#***string string string*

    Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

    Action: None

PGU-39608: TG %8ls=> **a#***string string string*

    Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

    Action: None

PGU-39609: TG %8ls=> **a#***string string string*

    Cause: TIP package generation tracing active. Successful syntax check of cobol field date attribute This trace entry is supplemental to 39605.

    Action: None

PGU-39610: TG *string* **for** *string* **#***string string, string*

    Cause: TIP package generation tracing active. Successful generation of TIP Function. This trace entry is written at the completion of generation for every TIP public function. There should be one trace of this type for every Call defined in the Transaction.

    Action: None

PGU-39620: TG rc %4li, *string*

Cause: TIP package generation tracing active. Successful alignment/offset computation

Action: None

PGU-41000: invalid field definition syntax

Cause: An field definition is invalid. There may be invalid punctuation or an invalid keyword present.

Action: Delete invalid punctuation; replace invalid keyword.

PGU-41001: unexpected end of input

Cause: An unexpected end-of-file condition has occurred in the PGAU command stream.

Action: Check the PGAU statement for proper syntax and premature ending on the last line.

PGU-41002: improper REPORT statement

Cause: There is a syntax error in the REPORT statment.

Action: Check for mispelled items or unbalanced parentheses within the REPORT statement.

PGU-41003: invalid data field definition name

Cause: A DEFINE or REDEFINE DATA statement has specified an invalid field name for a field definition. The field name may be missing. A field name must begin with an alphabetic character and contain only alphanumeric characters or an underscore ("_"). Syntax checking only continues with the next statement.

Action: Correct the specification of the field name or its delimiters. Supply the field name if it is missing.

PGU-41004: invalid delimiter

Cause: An invalid delmiter has been found (such as a parenthesis or comma in the wrong place.

Action: The delimiter may have to be deleted. Or there may be tokens missing before the delimiter.

PGU-41005: invalid PGAU statement syntax

Cause: A token has been found which is not a valid PGAU keyword, delimiter, or identifer name. Syntax checking only continues with the next statement.

Action: Correct the PGAU statement.

PGU-41006: value for parameter "*string*" missing

Cause: The parameter keyword <keyword> was properly specified but parameter value was not found. Syntax checking only continues with the next statement.

Action: Supply the missing parameter value or remove the keyword from the PGAU statement. PGAU parameter values should be enclosed in parentheses immediately following the keyword with no intervening space. statement.

PGU-41007: parameter "*string*" was previously specified

Cause: The parameter <dupparm> has been specified earlier in a PGAU statement and is only allowed once. Syntax checking only continues with the next statement.

Action: Remove one of the duplicated specifications from the statement.

PGU-41008: invalid DATA definition dname specified

Cause: An invalid token has been specified for the data name for a DEFINE DATA or REDEFINE DATA statement. A DATA identifier dname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the DATA dname identifer in the statement.

PGU-41012: invalid PLSDNAME parameter

Cause: The parameter specified in the PLSDNAME clause of a DEFINE or REDEFINE DATA statement does not comply with PL/SQL syntax for PL/SQL variable names. Syntax checking only continues with the next statement.

Action: Correct the PLSDNAME parameter to use a name which complies with PL/SQL syntax for data variables.

PGU-41013: invalid LANGUAGE parameter

Cause: The LANGUAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGA Compiler Language. Syntax checking only continues with the next statement.

Action: Correct the LANGUAGE parameter to specify a valid PGA Compiler language. Valid languages are: "IBMVSCOBOLII"

PGU-41014: invalid USAGE parameter

Cause: The USAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGAU usage. Syntax checking only continues with the next statement.

Action: Correct the USAGE parameter to specify a valid use. Valid use choices are SKIP, ASIS, PASS, and NULL.

PGU-41015: USAGE parameter was previously specified

Cause: The USAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of USAGE from the PGAU statement.

PGU-41016: LANGUAGE parameter was previously specified

Cause: The LANGUAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LANGUAGE from the PGAU statement.

PGU-41017: PLSDNAME parameter was previously specified

Cause: The PLSDNAME parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PLSDNAME from the statement.

PGU-41018: invalid COMPOPTS parameter

Cause: The COMPOPTS parameter in a DEFINE or REDEFINE DATA statement is not a valid compiler option string recognized by PGAU. Syntax checking only continues with the next statement.

Action: Correct the COMPOPTS parameter to specify valid options. The only valid option is "TRUNC(BIN)".

PGU-41019: COMPOPTS parameter was previously specified

Cause: The COMPOPTS parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of COMPOPTS from the PGAU statement.

PGU-41020: invalid CALL definition cname specified

Cause: The token is not a valid call identifier name for a DEFINE CALL statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the CALL cname identifer in the statement.

PGU-41021: PKGCALL parameter was previously specified

Cause: The PKGCALL parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGCALL from the statement.

PGU-41022: invalid PKGCALL parameter

Cause: The function name specified in the PKGCALL parameter of a DEFINE CALL statement does not comply with PL/SQL syntax for PL/SQL function names. Syntax checking only continues with the next statement.

Action: Correct the PKGCALL parameter to use a name which complies with PL/SQL syntax for function calls.

PGU-41025: invalid VERSION number specified

Cause: The token is not a valid version number in a PGAU DEFINE or UNDEFINE CALL or TRANSACTION statement, or in a GENERATE statement. Valid version numbers are all numeric and must match a the Oracle sequence object value reported by a previous DEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the VERSION number in the statement.

PGU-41026: PARMS parameter was previously specified

Cause: The PARMS parameter has already been specified in a DEFINE CALL statement and is only allowed once once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PARMS from the statement.

PGU-41029: invalid TRANSACTION CALL cname specified

Cause: The token is not a valid call identifier name for specifying CALLs in a DEFINE TRANSACTION statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE CALL statement. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION CALL cname parameter in the statement.

PGU-41030: NLS_LANGUAGE parameter was previously specified

Cause: The NLS_LANGUAGE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of NLS_LANGUAGE from the statement.

PGU-41031: parameter "*string*" specifies undefined Oracle NLS name "*string*"

Cause: The PGAU parameter <parm> specifies an Oracle NLS language name <nlsname> which is not defined on the Oracle server to re PGAU executes. which PGAU is connected. The language <nlsname> is not defined possibly because it was not selected when Oracle was installed, or the GENERATE"d TIPs are intended to execute on another Oracle, or it is not a valid Oracle NLS Language, i.e. misspelled or unsupported. Syntax checking only continues with the next statement.

Action: Correct the parameter value to specify a valid Oracle NLS Language, or install the language, or ensure the TIPs execute on a server which has the NLS language installed, (in which case this message may be considered a warning). Valid languages must begin with an alphabetic character, contain only alphanumeric characters, not exceed 40 characters in length. Supported customers may contact Oracle Worldwide Support for assistance with installing or determining NLS language support for your platform.

PGU-41032: ENVIRONMENT parameter was previously specified

Cause: The ENVIRONMENT parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of ENVIRONMENT from the statement.

PGU-41033: invalid ENVIRONMENT parameter

Cause: The ENVIRONMENT parameter in a DEFINE TRANSACTION statement is not a valid PGA ENVIRONMENT. Syntax checking only continues with the next statement.

Action: Correct the ENVIRONMENT parameter to specify a valid PGA ENVIRONMENT. Valid environments are: "IBM370"

PGU-41034: SIDEPROFILE parameter was previously specified

Cause: The SIDEPROFILE parameter as already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SIDEPROFILE from the statement.

PGU-41035: invalid SIDEPROFILE name specified

Cause: The token is not a valid name for specifying an SNA Side Profile in a DEFINE TRANSACTION statement. A Side Profile name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SIDEPROFILE parameter in the statement.

PGU-41036: LUNAME parameter was previously specified

Cause: The LUNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LUNAME from the statement.

PGU-41037: invalid LUNAME name specified

Cause: The token is not a valid name for specifying an SNA LU name in a DEFINE TRANSACTION statement. An LU name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LUNAME parameter in the statement.

PGU-41038: TPNAME parameter was previously specified

Cause: The TPNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of TPNAME from the statement.

PGU-41039: invalid TPNAME name specified

Cause: The token is not a valid name for specifying an SNA TP name in a DEFINE TRANSACTION statement. A TP name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION TPNAME parameter in the statement.

PGU-41040: LOGMODE parameter was previously specified

Cause: The LOGMODE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LOGMODE from the statement.

PGU-41041: invalid LOGMODE name specified

Cause: The token is not a valid name for specifying an SNA logmode in a DEFINE TRANSACTION statement. A logmode must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LOGMODE parameter in the statement.

PGU-41042: SYNCLEVEL parameter was previously specified

Cause: The SYNCLEVEL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SYNCLEVEL from the statement.

PGU-41043: invalid SYNCLEVEL value specified

Cause: The token is not a valid value for specifying an APPC SYNC level in a DEFINE TRANSACTION statement. The only values allowed for SYNC level are 0 and 1. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SYNCLEVEL parameter in the statement.

PGU-41044: invalid TRANSACTION name

Cause: The token is not a valid transaction identifier name in a DEFINE TRANSACTION statement. A transaction name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION name parameter in the statement.

PGU-41045: missing call name in DEFINE TRANSACTION

Cause: PGAU DEFINE TRANSACTION syntax requires a call name which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify a call name.

PGU-41046: SIDEPROFILE omitted: all of LUNAME, TPNAME, and LOGMODE required

Cause: If the SNA SIDEPROFILE parameter is not specified, then all three of the LUNAME, TPNAME and LOGMODE parameters must be specified in a DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify either (1) the SIDEPROFILE parameter, (2) all three of the LUNAME, TPNAME and LOGMODE parameters, or (3) the SIDEPROFILE parameter and any combination of the LUNAME, TPNAME, and LOGMODE parameters.

PGU-41048: CALL parameter was previously specified

Cause: The CALL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of CALL parameter from the statement.

PGU-41049: DEFINE TRANSACTION parameter *string* previously specified

Cause: The parameter <parm> has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of the parameter <parm> from the DEFINE TRANSACTION statement.

PGU-41053: VERSION parameter was previously specified

Cause: The VERSION parameter has already been specified, and is only allowed once in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Remove the second specification of VERSION from the statement.

PGU-41054: invalid version number in VERSION parameter

Cause: The version number must follow the VERSION keyword enclosed in parenthesis in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the version number specification in the VERSION parameter.

PGU-41055: invalid FIELD or PLSFNAME name for indicated language

Cause: The token is not a valid field identifier name in the specified language for specifying a FIELD or PLSFNAME parameter in a REDEFINE DATA statement. A field identifier name must obey the naming conventions of the specified language. In COBOL, only alphamerics may be used in addition to the hyphen character and the first character must be alphabetic. Syntax checking only continues with the next statement.

Action: Correct the FIELD or PLSFNAME identifier name in the statement.

PGU-41058: invalid transaction name specified

Cause: The token is not a valid transaction identifier name for a GENERATE statement. A transaction identifier name must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous

DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the transaction identifier name in the statement.

PGU-41059: PKGNAME parameter was previously specified

Cause: The PKGNAME parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGNAME from the statement.

PGU-41060: invalid PKGNAME name specified

Cause: The token is not a valid identifier name for specifying the PL/SQL TIP package name in a GENERATE statement. A package name identifier must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the GENERATE PKGNAME parameter in the statement.

PGU-41061: OUTFILE parameter was previously specified

Cause: The OUTFILE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OUTFILE from the statement.

PGU-41063: DIAGNOSE parameter was previously specified

Cause: The DIAGNOSE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of DIAGNOSE from the statement.

PGU-41064: PGANODE parameter was previously specified

Cause: The PGANODE parameter <keyword> has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PGANODE from the statement.

PGU-41065: invalid PGANODE name specified

Cause: The token is not a valid PGA node identifier name in a GENERATE statement. A PGA node identifier name must begin with an alphabetic character and contain only alphanumeric characters, and be a valid Oracle DB link name. Syntax checking only continues with the next statement.

Action: Correct the PGANODE parameter in the statement.

PGU-41068: unable to open the input definition file

Cause: An error occurred opening the input definition file specified with the INFILE parameter in a DEFINE or REDEFINE DATA statement. Syntax checking only continues with the next statement.

Action: Ensure that the input definition file exists and read access is allowed to the input definition file.

PGU-41070: COBOL inline definition must start with left-paren at line end

Cause: A COBOL inline definition starts with a left parenthesis. The left parenthesis must be the last character on the line preceding any COBOL data definition statements.

Action: Make sure an inline COBOL data definition starts on a line following a left parenthesis

PGU-41071: missing LANGUAGE parameter

Cause: PGAU DEFINE or REDEFINE DATA syntax requires a LANGUAGE parameter which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE or REDEFINE DATA statement to specify a LANGUAGE parameter.

PGU-41072: OPTIONS parameter was previously specified

Cause: The OPTIONS parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OPTIONS from the statement.

PGU-41073: repeated OPTIONS subparameter

Cause: The indicated subparameter was previously specified in an OPTIONS parameter. The only valid OPTIONS subparameter is UDF. It may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate subparameter from the OPTIONS specification.

PGU-41075: TRACE parameter was previously specified

Cause: The TRACE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of TRACE from the statement.

PGU-41076: repeated TRACE or PKGEX parameter

Cause: The indicated parameter was previously specified in a DIAGNOSE TRACE or PKGEX parameter. The valid TRACE parameters are SE, IT, QM, IO, OC, DD, and TG. The valid PKGEX parameters are DC and DR. Each may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate parameter from the TRACE/PKGEX specification.

PGU-41077: PKGEX parameter was previously specified

Cause: The PKGEX parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request.

Action: Remove the second specification of PKGEX from the statement.

PGU-41079: data definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the data definition <dname> with version number <dver> as the result of processing a DEFINE DATA statement.

Action: Note the VERSION number of the data definition for future reference.

PGU-41080: call definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the call definition <cname> with version number <cver> as the result of processing a DEFINE CALL statement.

Action: Note the VERSION number of the call definition for future reference.

PGU-41081: transaction definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the transaction definition <tname> with version number <tver> as the result of processing a DEFINE TRANSACTION statement.

Action: Note the VERSION number of the transaction definition for future reference.

PGU-41082: data definition *string* **version** *number* **updated in PG DD**

Cause: PGAU updated the data definition <dname> with version number <dver> as the result of processing a REDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41083: data definition *string* **version** *number* **deleted from PG DD**

Cause: PGAU deleted the data definition <dname> with version number <dver> as the result of processing an UNDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41084: call definition *string* **version** *number* **deleted from PG DD**

Cause: PGAU deleted the call definition <cname> with version number <cver> as the result of processing an UNDEFINE CALL statement.

Action: None required. This is an informational message.

PGU-41085: transaction definition *string* **version** *number* **deleted from PG DD**

Cause: PGAU deleted the transaction definition <tname> with version number <tver> as the result of processing an UNDEFINE TRANSACTION statement.

Action: None required. This is an informational message.

PGU-41086: length of *string* **token exceeds maximum allowed length of** *number*

Cause: The object name of type <var> is longer than the maximum length <len> allowed by PGAU. Only syntax checking continues with the next statement.

Action: Reduce the length of the indicated name.

PGU-41087: data name *string* **does not exist**

Cause: A DEFINE CALL references a data definition name <dname> that does not exist.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41088: data name *string* **or specified version (***number***) of data name** *string* **does not exist**

Cause: A DEFINE CALL references a data definition name <dname> that does not exist, or specified a non-existent version <dver> of the data definition <dname>.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41089: call name *string* **does not exist**

Cause: A DEFINE TRANSACTION references a call definition name <cname> that does not exist.

Action: Use only previously defined call definitions in a DEFINE TRANSACTION statement.

PGU-41090: call name *string* **or specified version (***number***) of call name** *string* **does not exist**

Cause: A DEFINE TRANSACTION references a call definition name <cname> that does not exist, or specified a non-existent version <cver> of the call definition <cname>.

Action: Use only previously defined data definitions in a DEFINE TRANSACTION statement.

PGU-41091: data name *string* does not exist
Cause: An UNDEFINE DATA references a data definition name <dname> that does not exist.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41092: data name *string* or specified version (*number*) of data name *string* does not exist
Cause: An UNDEFINE DATA references a data definition name <dname> that does not exist, or specified a non-existent version <dver> of the data definition <dname>.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41093: call name *string* does not exist
Cause: An UNDEFINE CALL references a call definition name <cname> that does not exist.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41094: call name *string* or specified version (*number*) of call name *string* does not exist
Cause: An UNDEFINE CALL references a call definition name <cname> that does not exist, or specified a non-existent version <cver> of the call definition <cname>.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41095: transaction name *string* does not exist
Cause: An UNDEFINE TRANSACTION references a transaction definition name <tname> that does not exist.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41096: transaction name *string* or specified version (*number*) of transaction name *string* does not exist
Cause: An UNDEFINE TRANSACTION references a transaction definition name <tname> that does not exist, or specified a non-existent version <tver> of the transaction definition <tname>.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41097: language parameter given in REDEFINE DATA conflicts with DEFINE DATA
Cause: The LANGUAGE parameter in a REDEFINE DATA statement for a given dataname specifies a language different than the language originally specified in the DEFINE DATA statement for the given dataname.

Action: Change the LANGUAGE parameter in the REDEFINE DATA statement to that of the original DEFINE DATA statement. The associated language-dependent field definitions must also be changed.

PGU-41100: FIELD parameter on REDEFINE specifies unknown field name (*string*)

Cause: A REDEFINE with the FIELD parameter specifies a field name <fname> that does not currently exist in the data object being REDEFINEd.

Action: Specify the correct field name on the FIELD parameter. Use the REPORT DATA statement to list current field names.

PGU-41101: INFILE parameter given on DEFINE DATA with inline data

Cause: An INFILE parameter was found on a DEFINE DATA statement, but an inline data definition was also found. Only one of the two forms is allowed in a single DEFINE DATA statement.

Action: Remove the INFILE specification or the inline data definition.

PGU-41102: data definition missing on *string* DATA

Cause: Neither an inline data definition nor an INFILE parameter was found in a DEFINE DATA or REDEFINE DATA statement. One of these is required in a DEFINE DATA. One of these may be required in a REDEFINE DATA depending on other parameters given.

Action: Specify either an INFILE parameter or an inline data definition.

PGU-41103: INFILE parameter was previously specified

Cause: The INFILE parameter has already been specified in a DEFINE DATA or REDEFINE DATA statement and is only allowed once per data definition or redefinition. Syntax checking only continues with the next statement.

Action: Remove the second specification of INFILE from the statement.

PGU-41105: memory exhausted

Cause: An attempt to allocated memory failed.

Action: Supported customers should contact Oracle Worldwide Support for assistance.

PGU-41106: missing left parenthesis in a GROUP

Cause: Left parenthesis must immediately follow a GROUP verb

Action: Examine source for missing left parenthesis.

PGU-41107: GROUP within a GROUP not allowed

Cause: A GROUP was found within a GROUP.

Action: There is no need to have a recursive GROUP. Delete the inner GROUP along with its enclosing parentheses.

PGU-41108: data definition *string* does not exist

Cause: A data name, <name>, was specified but does not exist.

Action: Check <name> for a misspelling or, if an explicit version was specified, recheck for a misnumbering. Use the REPORT verb to find out what really exists.

PGU-41109: field name *string* does not exist in data definition *string*

Cause: The field name <fld> does not exist in the data definition named <dnm>.

Action: Check the data definition named <dnm> for the existence of a field named <fld>. Use the REPORT verb to find out what really exists in the data definition named <dnm>.

PGU-41110: field name *string* **appears multiple times in data definition** *string*

Cause: A REDEFINE specifies the field name <fld>; this field name is multiply defined in the data definition <dnm>. The field name must be sufficiently qualified to remove the ambiguity so that a unique field may be referenced.

Action: Replace the ambiguous field name <fld> with a sufficiently qualified field name. An example of a qualified field name is SUBFIELD2 OF FIELD1 (or the generic equivalent, FIELD1.SUBFIELD2). It may be easier to just spool the output for a REPORT of the DATA definition for <dnm> into an output file, edit the output file, and DEFINE the DATA object named <dnm> anew.

PGU-41111: missing *string* **name**

Cause: A DEFINE or REDEFINE statement is missing the name of a transaction object, a call object, or a data object. <token> is the type of object.

Action: Supply the missing name (as well as any other parameters that are surely needed).

PGU-41112: invalid name for UNDEFINE *string*

Cause: The identifier name in an UNDEFINE statement is invalid. An identifier name must begin with an alphabetic character and contain only alphanumeric characters. <token> is the type of object.

Action: Check the name for illegal characters in the identifier name.

PGU-41113: invalid WITH operand

Cause: The token is not a valid operand in a WITH phrase. Only DATA and CALLS are valid.

Action: WITH must be followed by DATA or CALLS.

PGU-41114: duplicate WITH operand

Cause: An identical WITH phrase has been previously found in this statement.

Action: Delete one of the identical phrases.

PGU-41115: invalid WITH operand in this context

Cause: A WITH phrase has been found in an invalid context. The phrase WITH CALLS can appear only in an UNDEFINE TRANSACTION; the phrase WITH DATA cannot appear in an UNDEFINE DATA.

Action: Delete the offending WITH phrase

PGU-41119: expecting one of DATA, CALL, or TRANSACTION in a DEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be defined.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41120: VERSION parameter conflicts with UNDEFINE ALL

Cause: A VERSION parameter was found in an UNDEFINE ALL.

Action: Either delete the ALL (in UNDEFINE ALL) or delete the VERSION parameter.

PGU-41121: invalid DIAGNOSE parameter

Cause: An invalid sub-parameter was found within a DIAGNOSE parameter.

Action: Check the sub-parameter for mispelling.

PGU-41122: no transaction name given in a GENERATE statement

Cause: The transaction name is missing.

Action: Provide a transaction name.

PGU-41123: expecting DATA (type of object)

Cause: DATA was expected to be found at this point in the REDEFINE.

Action: Examine the REDEFINE statement for the missing DATA token and insert if necessary.

PGU-41124: expecting one of DATA, CALL, or TRANSACTION in an UNDEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be deleted.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41125: expecting the name of a *string* object

Cause: The type of object (DATA, CALL, or TRANSACTION) must be followed by a name for the object.

Action: Insert the name of a DATA, CALL, or TRANSACTION object.

PGU-41126: WITH token immediately followed by another WITH token

Cause: There are two succesive WITH tokens in the command input stream.

Action: Insert DATA or CALLS after the WITH token depending on which type of referenced objects should also be UNDEFINEd or REPORTed.

PGU-41127: a DATA or CALLS token was found but not preceded by a WITH token

Cause: There is a missing WITH token before DATA or CALLS

Action: Insert the WITH token in the proper place.

PGU-41128: a WITH token ends *string*

Cause: A WITH token was found as the last token in an UNDEFINE or REPORT command.

Action: The WITH token must be followed either by DATA or CALLS to delete or REPORT all referenced DATA or CALLS.

PGU-41129: parameter *string* invalid without FIELD parameter

Cause: The FIELD parameter is a pre-requisite to specify the <parm> parameter because <parm> applies to FIELDs within a DATA redefinition. PGAU REDEFINE parameters which require FIELD are:

- PLSFNAME

- CODEPAGE

Action: Include the FIELD parameter in the REDEFINE statement to indicate to which FIELD the redefinition of <parm> applyes, or remove the <parm> specification.

PGU-41131: FIELD specified, but USAGE, PLSFNAME, or language input absent

Cause: The FIELD keyword must be accompanied by at least one of the following keywords: USAGE, PLSFNAME, INFILE.

Action: Make sure at least one of the above keywords is specified.

PGU-41132: language input defines more than one field

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. The language input contained definitions for more than one field.

Action: Delete the extra field definitions.

PGU-41133: language input defines no data field for REDEFINE ... FIELD(...)

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. However, the language input contained no field definitions.

Action: Supply the (single) field defintion in the language input.

PGU-41134: no *string* PGAU objects satisfied the REPORT request

Cause: A REPORT command requested information about a group of unnamed PGAU data objects with a type specified by <token>. But there were no objects of that type.

Action: This is an informational message.

PGU-41135: no PGAU *string* objects named *string* satisfied the REPORT request

Cause: A REPORT command requested information about a PGAU data object with a type specified by <type> and a name of <name>. But there were no objects of that <type> with the given <name>.

Action: This is an informational message.

PGU-41136: no *string* PGAU object named *string* at version *number* satisfied the REPORT request

Cause: A REPORT command requested information about a specific PGAU data object with a type specified by <type>, a name of <name>, and a version of <vsn>. But there is no object with that name and version.

Action: This is an informational message.

PGU-41137: too many version requests; maximum of *number* allowed

Cause: The VERSION parameter of a REPORT request has too many sub-parameters; the <maximum> is specified in the message.

Action: split the request into multiple REPORTs.

PGU-41138: missing *string* name

Cause: The <object> name is missing in a REPORT statement.

Action: suppluy the missing name.

PGU-41139: use of VERSION parameter conflicts with ALL parameter

Cause: A VERSION parameter has been found. But an ALL parameter has also been found (denoting all versions)

Action: Delete the ALL parameter or the VERSION parameter.

PGU-41140: version number expected

Cause: A version number was expected at this point.

Action: supply a version number or delete the entire VERSION parameter.

PGU-41141: an invalid version number was found

Cause: A non-numeric string was found when scanning for a version number.

Action: Inspect statement for missing delimiters.

PGU-41142: version parameter has already been specified

Cause: The VERSION parameter has already been found.

Action: Delete a VERSION parameter so there is only one left.

PGU-41143: this type of WITH operand invalid with a *string* object

Cause: The WITH phrase is invalid with respect to an object of type <type>. For example, REPORT DATA ... WITH DATA is invalid,

Action: Delete the offending WITH phrase.

PGU-41144: default PKGCALL parameter truncated to *string*

Cause: The PKGCALL parameter was defaulted in a DEFINE CALL statement and normally takes the value of the CALL object name. However, the length of the CALL object name is greater than the maximum length allowed for the PKGCALL parameter (which is 30). The default value actually used is <value>.

Action: None. This is an informational message.

PGU-41145: default PLSDNAME parameter truncated to *string*

Cause: The PLSDNAME parameter was defaulted in a DEFINE DATA statement and normally takes the value of the DATA object name. However, the length of the DATA object name is greater than the maximum length allowed for the PLSDNAME parameter (which is 30). The default value actually used is <value>.

Action: None. This is an informational message.

PGU-41146: invalid INFILE parameter

Cause: The INFILE parameter in a DEFINE or REDEFINE DATA statement does not designate a valid filename. Syntax checking only continues with the next statement.

Action: Correct the INFILE parameter to specify a valid filename.

PGU-42001: ALL not valid in VALUE(S) clause at level 88

Cause: ALL cannot be specified in a level 88 (condition-names) entry

Action: Delete the reserved word ALL

PGU-42002: COPY statement: ended prematurely

Cause: There are missing operands in the COPY clause

Action: Supply missing operands

PGU-42003: COPY reserved word found within a COPY clause

Cause: COPY clause found embedded within another COPY clause

Action: Examine COPY clauses. Statment terminator may be missing.

PGU-42004: COPY not allowed as operand-1 or operand-2 in COPY REPLACING

Cause: COPY reserved word not allowed as operand-1 or operand-2 in the REPLACING clause of a COPY statement.

Action: If operand-1 replace COPY by some other word here and in the copied source file. If operand-2, examine offending COPY clause for missing terminator or reserved words.

PGU-42005: COPY statement: nothing to copy

Cause: No filename operand given in COPY clause

Action: Supply filename operand in COPY clause

PGU-42006: invalid token *string*

Cause: An unrecognzied token <token> was found when checking for a COBOL reserved word

Action: Check source around the unrecognzied token for other missing reserved words or for a missing statment terminator.

PGU-42007: invalid EJECT statement

Cause: An EJECT statement cannot be given with operands

Action: Delete the extraneous text after EJECT up to the statement terminator

PGU-42008: invalid SKIPn statement

Cause: A SKIP1, SKIP2, or SKIP3 statment cannot have operands

Action: Delete the extraneous text after the SKIPn up to the statement terminator.

PGU-42009: *string*

Cause: This is an echo of the offending source line, <sourceline>.

Action: Peruse this line with respect to a previous error message

PGU-42010: level-number with *number* **digits exceeds maximum of two**

Cause: A level-number was found with <number> digits. Level-numbers are restricted to a maximum of two digits

Action: Make sure level number is in range 01-49, 66, 77, or 88

PGU-42011: invalid level number of *number* **found**

Cause: Level numbers are restricted to 01-49, 66, 77, or 88; <number> was found.

Action: Change level number.

PGU-42012: level 01 or 77 has yet to be found

Cause: Record definition must start at level 01 or 77; a level other than 01 or 77 has been found.

Action: Examine source for missing level 01 or 77 definition; if offending definition is a top-level for a record, then renumber it to level 01 or 77.

PGU-42013: level 01 or 77 not yet found or begun between columns *number* **and** *number*

Cause: Missing level 01 or 77 in source file or the 01 or 77 did not start within the column limits specified by <margin-A> and <margin-B>.

Action: If level 01 or 77 appears, make sure it starts before <margin-B> and after <margin-A>. If level 01 or 77 does not appear, a renumbering of levels may be appropriate.

PGU-42014: RENAMES clause must be at level 66

Cause: The RENAMES reserved word may be used ONLY at level 66.

Action: Renumber the level to 66.

PGU-42015: multiple *string* **clauses found**

Cause: Multiple instances of a clause of type <type> were found.

Action: Make sure there is only one instance of the type of clause given.

PGU-42016: invalid figurative_type value passed

Cause: This is an internal error.

Action: Supported customers should contact Oracle Worldwide Support.

PGU-42017: VALUES can be used only at level 88

Cause: The VALUES keyword can only be specified in a data definition describing a condition and only at level 88.

Action: If the defintion describes a condition, make sure it is at level 88; if the definition does not describe a condition, then use VALUE IS rather than VALUES ARE.

PGU-42018: could not open input file *string*

Cause: The specified input file <file> could not be opened for reading.

Action: Make sure the file exists and allows read access.

PGU-42019: REDEFINES clause should be first clause

Cause: A REDEFINES clause must appear before any other clause in a data definition.

Action: Move the REDEFINES clause to the beginning of the data definition immediately after the data definition name.

PGU-42020: RENAMES dn-1 (THROUGH) dn-2 must stand alone

Cause: If a RENAMES clause appears in a data definition, it must be the ONLY clause.

Action: Delete other clauses.

PGU-42021: unterminated record definition found

Cause: An end-of-file was found before the ending statement terminator. This also results from COBOL definitions which extend beyond column 72.

Action: Check last records in input file for a missing statement terminator. Also check to ensure that the data definitions reside within their proper starting and ending columns.

PGU-42022: VALUES clause must be the only clause at level 88

Cause: The only clause allowed at level 88 is a VALUE or VALUES clause.

Action: Delete any clauses other than a VALUE or VALUES clause at level 88.

PGU-42024: missing period-separator in TITLE statement

Cause: A TITLE statement is not ended by a period separator.

Action: Check for missing period separator.

PGU-42025: invalid TITLE statement

Cause: Invalid format for TITLE statement.

Action: Check format of TITLE statement.

PGU-42026: COPY copies a COPY REPLACING or vice versa

Cause: The source file copied by a COPY statement cannot contain a COPY ... REPLACING statment; or the source file copied by a COPY ... REPLACING statement cannot have a COPY statement.

Action: Correct the file in error.

PGU-42027: in line *number* **of file** *string* **as follows**

Cause: This message follows another message that describes the actual error. The line following this message echoes the input COBOL source line. The source line was found in line <line> of file <filename>.

Action: Peruse messages immediately before and after this message.

PGU-42028: invalid USAGE token: *string*

    Cause: An invalid word, <token> follows USAGE in a USAGE clause. <token> may be valid in some COBOL dialects.

    Action: Replace <token> in the USAGE clause with a valid USAGE operand for the IBMVSCOBOLII COBOL dialect.

PGU-42029: reserved word *string* **is invalid as a PICTURE**

    Cause: A reserved word, <token>, was used as a PICTURE operand.

    Action: Check PICTURE clause for missing PICTURE operand.

PGU-42030: a *string* **clause has been prematurely terminated**

    Cause: A clause of type <type> has ended but there are missing operands.

    Action: Check the clause for missing operands.

PGU-42031: *string* **phrase is misplaced after** *string* **phrase**

    Cause: A phrase introduced by <key-word-1> cannot come after a phrase introduced by <key-word-2>. Certain phrases must precede other phrases in a data definition. For instance, an ASCENDING [KEY] phrase must appear before an INDEXED phrase.

    Action: Reverse the placement of the phrases.

PGU-42032: state value *string* **is** *string*

    Cause: An internal error has occurred in the PGAU COBOL parser. State <state> is either valid or invalid according to <validity>.

    Action: Reproduce the error with full diagnostics enabled and save all related input and output files and listings. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-42033: extraneous text at column *string*

    Cause: Extraneous text has been found at the end of a record definition. It starts in column <column> of the source input record.

    Action: The only source text that can follow the terminating "." of a record definition is a COPY, EJECT, or SKIPn statement. Check to see if the terminating "." has been misplaced.

PGU-42034: COPY for file *string* **is recursive**

    Cause: A COPY statement for file <filename> has been found while processing a previous occurrence of a COPY specifying the same file.

    Action: Check the COBOL source for recursive COPY. A single COPY file may need to be replaced with multiple, uniquely-named COPY files to achieve the desired results.

PGU-42035: invalid null operand in pseudo-text in a COPY REPLACING clause

    Cause: The first operand in a REPLACING clause of a COPY statment is pseudo-text but the pseudo-text is null.

    Action: Replace the null pseudo-text string with a non-null string.

PGU-42036: invalid input in *string* **clause or paragraph**

    Cause: Invalid syntax in a <special> clause or paragraph.

    Action: Check the indicated source line(s) for syntactical errors.

PGU-42037: missing END-EXEC token

Cause: An END-EXEC was not found while processing an EXEC clause.

Action: Insert an END-EXEC where appropriate. If the COBOL source input was generated by another product, regenerate the source using that product.

PGU-42038: invalid use of reserved word *string*

Cause: A reserved word, <reserved>, was found in an illegal context.

Action: Check to see if a reserved word is perhaps being used where a user dataname would normally appear.

PGU-42039: in line as follows

Cause: This message follows another message that describes the actual error. The line following this message echos the input COBOL source line.

Action: Refer to messages immediately before and after this message.

PGU-42040: DEPENDING ON phrase missing in OCCURS clause

Cause: An OCCURS clause describes a variable length table. One needs a DEPENDING ON phrase to tell how large is the current instance of the table. The DEPENDING ON clause is missing. DEPENDING ON phrase that tells how large the current instance

Action: Supply the DEPENDING ON clause or make the table a fixed length table.

PGU-42041: missing or invalid USAGE clause for DBCS PIC clause

Cause: A PICTURE clause specifies a DBCS datatype, but the required USAGE IS DISPLAY-1 clause is misisng or inavlid.

Action: Supply the USAGE clause or revise the PIC datatype to noth required DBCS.

PGU-42042: LENGTH IS clause not allowed for numeric or edited data

Cause: A LENGTH IS clause was specified for a data item that is not non-edited character data.

Action: Remove the LENGTH IS clause or change the PICTURE clause for the data item to specify a non-edited, character data mask.

PGU-50001: error reading the log file.

Cause: An error occured reading the log file.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50002: no data found.

Cause: The predicate that was chosen to delete the row from the PGA_TCP_IMSC table is not found.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50003: *string* length of *number* exceeds the maximum of *number*.

Cause: The parameter, <parm> length, <len>, passed to PG4TCPMAP tool was larger than the maximum allowed, <max>.

Action: Correct the parameter in error and recall PG4TCPMAP tool. For more information, refer to Oracle Database Gateway for APPC, User"s Guide.

PGU-50004: PG4TCPMAP has ended with a failure.

Cause: An error occured processing pg4tcpmap tool. This message is preceded by additional messages providing more information about the error.

Action: Refer to the messages preceding this one to determine the course of action.

PGU-50101: You have entered an invalid value.

Cause: This is a warning that you have entered an invalid value.

Action: The question will be asked again. Enter a valid value.
